LITERATURE.

Shakespeare Commentaries. By Dr. G. G. Gervinus. Translated, under the Author's superintendence, by F. E. Bunnett. 2 vols. (Smith, Elder & Co.)

Dr. Gervinus's work represents the present impression of Shakspeare on the German mind. The Doctor knows not only all about Shakspeare, but all that has been said about him in Germany and England by every description of critic, from the most unqualified encomiast down to that unhappy Mr. Birch who stigmatized the Poet as an atheist. With an industry only equalled by his immense erudition, he has done for all Shakspeare's plays what Goethe did for 'Hamlet' in the best-known episode of 'Wilhelm Meister,' and proved in detail, what has long been generally conceded, that Shakspeare is as much an artist as a genius, and that in every one of his pieces a certain unity prevails which was overlooked by those who dwelt on his supposed irregularities. We are not sure that Mr. Bunnett has improved the original title of the book, which was simply 'Shakspeare,' by adding to it the word 'Commentaries.' Dr. Gervinus certainly comments, and that very elaborately, but he does a great deal more. He gives a succinct biography of the Poet; he takes a comprehensive survey of the condition of the English stage before the appearance of its greatest contributor; and he endeavours to show that Shakspeare so exactly represented his age, that if he had been born half a century sooner or later his peculiar sphere of operation would not have presented itself. The 'Shakspeare' of Gervinus is a massive work, and looks well with a massive name.

The opinion that Shakspeare has been more highly appreciated by the Germans than by the English has long been current in some parts of the world; it appears once more in Dr. Gervinus's Preface; where, to make us some slight amends, it is accompanied by the supplementary observation that Handel is in a nearly analogous predicament. If, on the one hand, Shakspeare has been so completely assimilated to the German mind that he has deprived it of delight in much other poetry, and led it to doubt even the greatness of Goethe and Schiller, on the other hand, England has been more just than Germany to the greatness of Handel. At the same time, he admits that the English have not suffered themselves to be robbed of their great poet in the same manner as the Germans have been robbed of their great musician.

This predilection of the Germans for Shakspeare is, in the belief of Dr. Gervinus, extremely advantageous to the national character, and he wishes that it were accompanied by a corresponding fervour for Bacon, who would be a most wholesome counterpoise to Teutonic Idealism. German poetry, now romantic and fantastic, now homely and domestic, and German spiritual philosophy, have failed in preparing "for life as it is, for that life in which exclusively the words of policy are concerned." It was not by chance, the great critic thinks, that this particular poet and this particular philosopher, Shakspeare and Bacon, were cast upon the land of political supremacy; but the same national spirit, the same practical, hearty sense of life which has created the English State and English popular freedom, has also fashioned a poetry full of life and a philosophy rich in experience. From these premises it follows

that the more the Germans cultivate feeling and delight in such mental productions, the more will they ripen towards a capacity for fashioning the active life into conformity with that of their emigrated forefathers. The last expression, which Mr. Bunnett has not correctly rendered by "departed forefathers," is, in the mouth of Dr. Gervinus, full of significance. He is one of the foremost of those German thinkers who would always point to England as the head of that Teutonic race, the members of which should be bound together by a common nationality. No one has more thoroughly carried out the work begun by Lessing, when he pointed out to his countrymen the superiority of the English to the French poets as models of imitation. In fact, Dr. Gervinus and the writers of his school consider us English as the proper chiefs of the Teutonic race, and England as the proper home of its highest literature, philosophy and law.

On the other side, they hold that if the highest literature of that race has been produced in England, it has been best appreciated in Germany. Perhaps this result was inevitable: it certainly is undeniable. We had in this country no criticism on Shakspeare worthy of the name before Lessing and Goethe taught us how to understand and admire. It would be idle to assert that we have anything, even now, to compare with the commentaries of Tieck, Schlegel, and Gervinus. The truth is, that in England Shakspeare had not, up to a recent period, won much attention from the higher race of critics. Coleridge was the first real poet who paid any attention to his plays critically, and Coleridge drew his inspirations from a German source. Up to that time, Shakspeare was mainly in the hands of the antiquaries,—very respectable old gentlemen, full of learning and goodwill, but deficient in brightness, humour and penetration. Hence arises a question full of interest. How was it that the Germans got the start of the English in an appreciation of Shakspeare, when the revival of his plays had taken place in both countries at the same time? The work that was done by Garrick in London was done by Schroeder in Germany, and both artists seem to have been actuated by the same principle of choosing a play on account of the effectiveness of a single part. If the two nations were simultaneously familiarized with a previously-neglected poet, how was it that an opportunity turned to so much account by one was comparatively slighted by the other?

The answer to this question must be found in the name of Lessing, to whom indeed we are led back as to a fountain-head, whenever we would trace to its source any department of German literature. Shakspeare's plays had been already known as well adapted for "starring" purposes; but it was Lessing who first decided on the Poet's supremacy, and endeavoured to prove that he accorded with the precepts of Aristotle. Now as the English were governed by the French taste, just when Lessing was freeing his countrymen from the Gallic literary yoke, the first advance made by the Germans is easily explained. Fortunately, too, the teachings of Lessing were followed by a revived passion for nationality in those choice spirits among the German youth of whom we have such memorable types in Goethe's autobiography. From our knowledge of the remains of Leng, one of the most prominent of the set, we may, however, reasonably doubt whether the admiration felt by these youths for Shakspeare, whom they read through the medium of Eschenling's translation, was always regulated by an appreciation of his beauties, and whether

it did not in some measure correspond to the views of those "fast" young men of our own time who regard Shakspeare as "slow." As to our own hopeful youths, with whom burlesque is the region of freedom, Shakspeare seems a conventional writer,—so to the *Burschen* of the storm-and-passion period Racine and Corneille were the conventional poets patronized by hateful courtiers, while Shakspeare was to them the dashing innovator. When we find Leng especially admiring the quibbles of the Clown, and evidently regarding an incessant change of scene not only as permissible, when subservient to a high purpose, but as in itself desirable, we cannot avoid the conclusion that he would have perfectly agreed with the French critics, that Shakspeare was rude and irregular, with the addition that he particularly liked him on account of his irregularity and rudeness. However, the veneration for Shakspeare which prevailed among the Strasburg youth was the concomitant of that revived longing for a national literature which led to great results, and is therefore to be remembered with respect, whether based upon true or false principles. We may look upon the merry set by whom Goethe was surrounded as part of the crude mixture out of which the mature Goethe was himself to be distilled, and accept the famous critique on 'Hamlet' in 'Wilhelm Meister' as the precious essence emanating, no doubt, from a world of chaotic nonsense.

When Shakspeare became the object of serious study in Germany, the manner in which he was there studied was diametrically opposite to that pursued in England. The earlier English critics treated their national poet much as a philological scholar treats Sophocles, laboriously striving to expound or amend his text, without troubling themselves much about his inner meaning. For this preference of the dry-as-dust realities of text, they have been visited by the German Romantics with a scorn which, as Prof. Gervinus justly remarks, they did not deserve, inasmuch as they paved the way for more spiritual exponents. The Germans, on the other hand, wrote no critical notes on the poet, but translated him, and, reading a text unaccompanied by any mutation whatever, rather chronicled the beauties of entire works than of separate passages. For much that they wanted the translation of A. W. Schlegel was amply sufficient, and so far made an epoch in the history of Shakspeare in Germany that it rendered the plays of Shakspeare a German book, just as 'Don Quixote' became an English book through the medium of Jarvis's version. The process of verbal criticism and antiquarian comment is still carried on in England, while a higher appreciation of the great poets is, perhaps, traceable to a reaction from Germany.

So far so good. It cannot, perhaps, be denied that literary Germany takes a more lively interest in Shakspeare than literary England. But there is one fact of which Prof. Gervinus, as a foreigner resident in his own country, cannot be aware to its full extent, and that is, the unsophisticated love of Shakspeare existing among the English populace. By persons who move in educated society the classic poets of a country are often praised as a matter of duty. One does not wish to be thought indifferent when one is born to admire. But when we descend in the social scale we come to a class to which this law does not apply, and it is precisely among this class that the most zealous worshippers of Shakspeare may be found. In fact, the Poet is not so much a fashion of our class-room as a necessity of our nature. During Mr. Phelps's admirable management of Sadler's Wells it was

worth while to visit the theatre, if only for the sake of observing how heartily the humour of passages written two hundred and fifty years ago was relished by the gallery; and we are informed, on competent authority, that the great tragedies of Shakspeare (say 'Hamlet' and 'Othello') are always found attractive when performed even at the humblest provincial houses. If Shakspeare ceases to fascinate the West-End public, except with the aid of new adventitious charms, it is because the taste for the poetical drama in general has declined. No one in London dreams of preferring any other dramatic poet to Shakspeare; but the love of poetry on the stage has been superseded, in some degree, for the passing hour, by a taste for works of a more frivolous or realistic kind.

It is worthy of remark, that Prof. Gervinus prefers the English mode of performing Shakspearian comedies to that which is common in Germany. Speaking in evident reference to 'Twelfth Night,' he observes that the German actors miss the English tradition, and, above all, the ease of movement and the absence of all artificial and affected histrionic action. "On the English stage, even at the present day," he says, "all is in the most lively action, and every player appears in his simple, easy nature. As no prompter suggests, the actor is compelled to possess himself of his part, so that, as it were, he lives rather than acts that which he has to perform. The protraction of the answers, the heavy lengthening of light scenes, which ought to pass on rapidly, thus cease; the answer of the one addressed interrupts the last word of the speaker; the exit off the stage is so that the speakers pass off with the last syllable; with their departure one scene changes and a new one begins; the intervals of the different acts last but a few minutes: thus, such a piece passes quickly before us and carries us with it. The exact delineation of any single situation is, nevertheless, stamped deeply on the soul."

We are somewhat curious to know what was the cast of 'Twelfth Night' when thus satisfactorily performed in the presence of the learned Professor, and the exact date indicated by "the present day." To those who are acquainted with the demerits of our theatrical companies the above must seem rather an ideal description, though, doubtless, the general assertion is correct, that the English are quicker in their movements than the Germans. From the absence of a prompter's box in the middle of the stage, the Professor hastily inferred the non-existence of a prompter. Alas! Prof. Gervinus, we have a prompter, and though he modestly conceals himself behind one side of the proscenium, his office is no sinecure, as the author of a new play frequently discovers to his cost.

Extremely interesting is the chapter on English "Dramatic Poetry before Shakspeare," not so much from the facts which it contains, since this was more or less familiar to any literary Englishman, as from the lucid manner in which Gervinus shows how the Poet, while soaring high above any one of his predecessors, availed himself of their labours, and in a certain manner turned to account the peculiarities of them all:—"No great dramatist," says the German critic, "of any other nation has met with a foundation for his art of such enviable extent and strength, with such a completeness of well-prepared materials for its construction as ancient traditions and present practice proffered them to Shakspeare,—from the Mysteries, the necessity for epic fullness of matter,—from the Moralities, the ideal ethical thought,—from the Comic Interludes, the characteristic

of realistic truth to nature,—from the Middle Ages, the romantic, epic-poetic, and historical literature,—from the present, the strong passions of a politically-excited people, and of a private society deeply stirred by the religious, scientific and industrial movements of the age."

To show that Shakspeare was pre-eminently a man of his age is, as we have already shown, one of the Professor's objects. When the Poet flourished Italy had exhausted the luxury of her inward powers, and Spain all the exuberance of her outward strength, while in the Northern German lands, under the influence of a free religion, free political schemes were developed, and a civilization which promised long continuance. But even here, everything seemed to turn in favour of England alone. Germany was exclusively occupied with religious matters; the Netherlands were absorbed in their struggle with Spain; whereas England, under Elizabeth, enjoyed the blessings of peace and endured the horrors of war, and as representatives of every species of eminence could point to Bacon, Spenser, Sydney, Raleigh, Burleigh, Camden, Gresham, Howard and Drake. Important, too, is the fact that Shakspeare came at the moment of mental freedom which followed the struggle with Catholicism and preceded the fanaticism of the Puritans. Whereas the fathers of modern German poetry in the last century were born in an age of rouge and powder, of hoops and wigs, of stiff manners, rigid proprieties, narrow ideas and cold impulses, the age of Shakspeare maintained a happy medium between crudeness and vitiated taste. Life was not insipid and colourless as at present; men still ventured to appear what they were; there was still poetry in reality.

The parallel between Shakspeare and Bacon, which is implied in the Preface, is elaborately carried out in a section on the age of Shakspeare,—Prof. Gervinus observing that, as the Poet interpreted the secrets of human nature, those of lifeless nature were interpreted by the philosopher. As Shakspeare went from instance to instance in his judgment of moral actions, so did Bacon avoid leaping from an experience to general principles. As Shakspeare balanced the one-sided errors of the imagination by reason, reality and nature, so did Bacon lead philosophy from the one-sided errors of reason to experience. As Bacon is linked on the one hand with the natural science of Greece and Rome, and on the other with the latter period of philosophy in Western Europe, so does Shakspeare's drama stand in relation to the comedies of Plautus and to the stage of his own day. Shakspeare bids farewell to conceits and effete phrases, Bacon to the old formal logic and syllogisms; yet, at times, one fell back into the forced wit of the Italian, the other into the subtleties of the old school. Bacon banished superstition from science, and Shakspeare banished it from art; both, too, have been dubbed infidels, one by Le Maistre, the other by Birch.

In arguing the question of Shakspeare's adherence to rules, Prof. Gervinus takes a moderate view, explaining that Shakspeare did not so much forsake as enlarge the Aristotelian law of unity, in compliance with the exigencies of the times; but there is this essential difference between the Shakspearian and Aristotelian theories of dramatic poetry, that, according to the latter, character is secondary to action, whereas, according to the former, the reverse is the case. Hence, his elaborate reviews of the single plays are essentially refined descriptions of character, and the unity he would establish is that of the combination of various figures, by means of similarity and contrast, into one harmony.

Mr. Bunnett's translation of this valuable book has been made under the superintendence of the author, and contains much that will not be found in the German edition of 1849. Possibly the additions have been made by Prof. Gervinus for the express use of the English public. Certainly no English library ought to be without it.

No Name. By Wilkie Collins. 3 vols. (Low & Co.)

'No Name,' which for some nine months past has fixed and retained curiosity in no common degree, is finished. Magdalen, the perverse heroine, whose heart-wrongs and strong desire to right a cruel injustice caused by her and her sister's illegitimacy led her into crime, falsehood, imposture, to the verge of theft even, is let off with a punishment gentle in proportion to the unscrupulous selfishness of her character: a period of agonized remorse and admitted failure—an illness which brings her to death's door; but she is then dismissed to restored fortune, and marriage with a man worth ten thousand of the fickle and feeble creature on whom her affections had at first fixed fast. This may be all right enough so far as the novelist's aims and ends are concerned, so far as the maintenance of suspense till the final hour of relief has been his purpose;—whether it be "true to truth" is another matter, far less easy to decide in a phrase or two. The novel is, however, and in one sense deservedly, a great success, if not altogether a sound one; and this, not because of its total disregard of the artificial laws of poetical justice, but from certain faults and flaws which we shall attempt to indicate. Meanwhile, it is only fair to credit the author with increase of vigour and brightness. Passages of the story are admirably told, with a succinct clearness not to be over-estimated. The characters, if not always probable and too seldom agreeable, are painted in livelier colours than any in the former novels of Mr. Collins, *Count Fosco*, in 'The Woman in White,' excepted. The work, in brief, is a work of Art; and doing, as we do, every credit to its author's skill, to his steady and unflinching continuity in the contrivance and arrangement of incident, it is for the interest of artists that it should be looked into with a closeness of scrutiny which it would be absurd to apply to the heap of novels of its class which so rapidly accumulates at the time present. It would be superfluous minutely to trace out the story, point by point, while offering a few remarks which bear on the amount of its permanent value.

'No Name' must be pronounced incomplete as a work of Art if the character of Magdalen (which is, virtually, the book) fails to interest those who read the tale. Her deeds and expedients pique curiosity;—her good qualities, exhibited, not described, resolve themselves into beauty, great talent for personation, and indomitable will. She begins in the hour of prosperity by mimicry, in private theatricals, of the sister whom she loves most dearly. She chooses for her lover a weak pretty youth, that her fancy may deck and garland him, and her obstinacy take his part. She makes herself wretched on his account, because the event of her father's death, with its revelation of her illegitimacy and consequent pauperism, sends him away from beneath her protection. Friends are raised up for her: she will accept none of them. She will struggle out into action and revenge for herself; she will employ her beauty, her theatrical adroitness, her courage, to grasp back a fortune. In order to carry out her purposes she enlists into her service an unblushing

scoundrel, whom she knows to be such. In reckless determination to carry through her purposes, she remains this man's associate and pupil for months, reckless of the agony she has caused to the affectionate sister and friend from whom she hides herself. She connives at every conceivable cheat and imposture to entrap into marriage a man whom she loathes as though he were a reptile. There must be surely coarseness, as well as meanness, in one capable of such actions and expedients as these. It is true that Mr. Collins indicates, and very powerfully, the inward repugnance which convulsed her during her solitary hours. The scene before her marriage, when she approaches the idea of self-destruction as an alternative, is most forcible. But her persistence in her evil purposes can only be explained by admitting that there existed in the heroine's character hard and (we repeat) coarse elements, which deprive her of our sympathy. Nor is this all. On being widowed, and finding the fortune, to regain which she had sacrificed her purity, placed beyond her reach by the machinations of craft and cunning more potent than her own, she degrades herself by entering a family in the disguise of a menial, with a settled purpose of discovering and carrying away a document, which, if found, might still enable her to protract the struggle. It is true that she fails, lamentably; that she does all but pay the penalty of her recklessness with her life: but this is to bring about her regeneration, in the love of an honest and nobly-natured man, who suddenly appears for her rescue at the moment when she is over the edge of the precipice. Supposing such a change possible—supposing such a return from wilful and hardening guilt to those habits of mind and feeling which make an honest woman worthy of an honest man could be,—it is here disproportionately abrupt. Mr. Collins delights in the intricacies of incident. More than two-thirds of the tale are devoted to Magdalen's stratagems, with all their hopes and fears. The "favour and prettiness" with which it closes are too rapid, too unchequered, to be natural: even though a good novel, like every other good thing, must come to an end at last.

It may be suggested, then, that Mr. Collins has been so possessed with his story as to be unaware that its necessities give his heroine a colour and a character which he neither intended, nor may be able to perceive. More certain, however, is the fact, that too many of his leading characters are detestable. Capt. Wragge, though spiritedly hit off, is at the outset too transparent in the confessions of scoundrelism, made by him to Magdalen. His huge, half-witted wife, with her slatternly ways, her love of fine clothes, and her tender heart, is good. But too much time is spent with these people, and with the parties they are engaged to cozen and to blind,—Noel Vanstone, the weak miser, and Mrs. Lecount, his diabolically prudent housekeeper. Too small is the amount of healthy air let into the picture. The lovable characters—Norah, Miss Garth, and Kirke, Magdalen's redeemer,—are little more than sketches. Among the minor persons, Mazey, the tipsy old sailor, is the best.

Now, as to construction and incident. Few, if any other, novels could be named in which unforeseen death is so frequently appealed to as an incident necessary to carrying out the author's purpose. There are no fewer than five such catastrophes, each indispensable to the author's illustration of the conflict betwixt good and evil in Magdalen. It was necessary, perhaps, to avoid too long-drawn a strain on the woman who had contaminated herself by leaguering with a confessed scoundrel to carry out her

plans of vengeance—and yet worse, by seducing into marriage and will-making the relative she loathed and had cause to loathe—that that man should be moved away, in order that a new argument for her wilfulness should be found in the failure of her purpose to possess a share of his fortune of which she had been despoiled. But are outlets like these broken so opportunely in real life? Mr. Collins being all for truth (as his Preface tells us), and being so largely true in many points, must bear the question, What is every man's experience? Do the husbands, to whom women sacrifice their truth and purity by fearful sale and barter for money, set their slaves free as soon as did Magdalen's husband? Did not Mr. Wilkie Collins make a summary end of Noel Vanstone because he felt that his wife could not have endured the consequences of her crime in wooing and wedding him, had he lived longer than to make the first will as she chose he should do, and the second one as her enemy the housekeeper, Mrs. Lecount, insisted on his doing? There are other "sensational" effects than the stage ones of the 'Colleen Bawn' and the 'Peep o' Day'; and among these is the too profuse employment of the Destroyer. Mr. Collins pays sedulous attention to the weaving of his plot, and therefore, on reflection, or when weaving his next, may possibly feel that the amount of timely catastrophe is too large for the ease (which implies perfect credence) of the reader. We have a right to look to him for advance and progress, because, in his case, the earnest spirit of an artist is combined with no common creative and constructive powers.

BOOKS OF TRAVEL.

Four Years in British Columbia and Vancouver Island. An Account of their Forests, Rivers, Coasts, Gold Fields and Resources for Colonisation. By Commander R. C. Mayne, R.N. (Murray.)

The public mind is gradually becoming bewildered about our new West American colonies. Some accounts represent British Columbia and Vancouver Island in the most glowing colours and with a great future before them; whilst others, apparently written with equally good faith, paint the gloomiest picture of their actual condition, and prophesy misery in days to come. Care should be taken to inquire into the antecedents of those who tender information. A person who, mistaking the meaning of "surface-digging," flattered himself that by merely scratching the ground for a season he could pick up nuggets enough to make him comfortable for life, and has just discovered his mistake, can hardly be in a proper condition of mind for a calm survey of a settlement in which he has experienced such mortification. Yet it is emphatically from disappointed gold-diggers and similar sources that we have received complaints. Those most familiar with the nature of the new countries are unanimous in thinking that, for the last century at least, no finer territory than that under consideration has been offered for British colonization, or is better suited to the genius of our race. The climate closely resembles our own, the soil is fertile in the extreme, and either covered with magnificent timber or clad in a garb of park-like scenery difficult not to believe the work of art. All our fruits, vegetables and cereals flourish, all our domestic animals thrive. The rivers and adjacent seas abound in fish, salmon of superior quality being the staple food of the Indians, whilst game of every description is everywhere met with. Wood, water, grass-land and snow-capped mountains make up landscapes scarcely surpassed in grandeur in any

part of the world. Coal is plentiful, gold abundant. An acre of good land may be bought for four shillings and twopenny, paid in instalments spread over three years, in any part of the colony the new settler may fix upon. By a timely proclamation most of the errors which the Australians committed in dealing with the land question are avoided. The right of selecting land before it has been surveyed by Government, for which the people of New South Wales fought well-contested battles, is here conceded in the very outset, and the miserable dealings of unscrupulous land speculators, by which in the States and Australia large tracts of country fell into the hands of people who only held them to get their per-centage out of the poorer immigrants, are nipped in the bud by the judicious provisions that no pre-emption land can be legally sold or mortgaged without the owner having previously expended at least ten shillings on the improvement of every acre. On surveying all these conditions, and moreover bearing in mind the geographical position of the country, the magnificent strait dividing Vancouver Island and British Columbia, and communicating by deep inlets and large rivers with the interior, one cannot escape the conclusion that none of our colonies, not even excepting the United States, ever had a fairer chance of success or held out more favourable prospects to any new settlers who bring with them stout hearts and a strong arm. Nor does it require the eye of a prophet to predict that the rise of our youngest offsprings will be rapid in an unprecedented degree. Emigration from Europe never ceases, and the tide, unable to flow at present to the States and New Zealand, will set towards British Columbia and Vancouver Island; and ere long Victoria, Esquimalt and New Westminster will outstrip in size, population and wealth many a large town in the Old World where at present their very names have scarcely been heard.

There is only one thing that looks like a formidable obstacle to the rapid rise of these new countries. The sea passage, from England, round Cape Horn, and thence to the Straits of Juan de Fuca, is both long and tedious, and will probably deter a good many faint-hearted souls from embarking on it, whilst an overland journey through British territory is for the present impracticable; indeed, whatever facilities may exist for building a railway from Canada to the foot of the Rocky Mountains, the most trustworthy explorers hold out no hope that it can ever be taken over or through that great barrier unless works are undertaken similar to those of the Soemmering or Mont Cenis. Those who wish to shorten their sea voyage at present go *via* New York to St. Louis, and thence through the Humboldt territory and the dominions of Brigham Young to the coast, or they go by way of Panama. The overland route by New York, St. Louis and Deseret is recommended as the safest for passengers and letters, and has been subsidized in preference to the Panama one. So far so good, but it must be remembered that both these lines are in the hands of Americans; and it is much to be regretted that, in the event of a war, our communication with two of our rising colonies may be cut off at any moment the enemy chooses by our not having a road of our own or there not existing a general highway of nations to the Pacific. During the late Trent difficulty our Government was unable to communicate with the new colonies for more than six weeks, because there was a chance of despatches being intercepted. Surely such a state of things ought to be remedied. If we cannot for the present establish a communication across our own North-American possessions, then we ought

to take into earnest consideration the scheme so energetically advocated by Capt. Pim, of opening a highway across Central America.

War with America may arise any moment the civil strife in the States is terminated; and there is a hornet's nest at the very entrance of British Columbia. By a treaty concluded in 1844 between the English and American Governments, it was set forth that the boundary line between our West American possessions and the States should follow the parallel of 49° lat. to the centre of the Gulf of Georgia, and thence through the channel which separates the Continent from Vancouver Island to the Strait of Juan de Fuca. The first part of this stipulation was clear enough, but that relating to the channel gave rise to serious misunderstandings. The fact is there are *three* channels. Were the most eastward meant, all the islands in the Gulf would belong to Great Britain: were the most western intended, they would fall to the United States. The American General Harney, acting on the principle that possession is nine points of the law, boldly occupied San Juan, one of the largest of these islands, and unpleasant consequences have for the present been averted by quartering a mixed garrison of British and American soldiers on the place. Commander Mayne was engaged in the survey of these troublesome islands; but he informs us that certain reasons prevent him from making any remarks on the merits of the dispute. Such over-prudence was surely out of place when he once made up his mind to write. His volume is simply a narrative of these surveys and the labours of the Boundary Commission, and a plain unbiassed statement of both sides of the question was due to those who have waded through his book in search of definite information.

The great attraction in these parts are, of course, the Cariboo gold-diggings, at present reached with difficulty by the Fraser river, and thence over a mere apology for a road. Hopes, however, are entertained of finding a more ready access to them by means of some of those deep inlets on the coast, and explorations for that purpose have been undertaken. Should a more practicable route be discovered, the centre of gravity would at once shift from Victoria and New Westminster to more northern ports. Commander Mayne did not visit Cariboo; but he penetrated a good distance up the Fraser, and one of the most readable passages in his book gives a description of how the American captain overcomes the difficulties of its navigation:—

"Upon one occasion, when I was going up the river in the *Enterprise*, no less than three times after we had struggled past the snag the strong current caught and swung us broadside across the stream; and it was only by running the vessel's bow into the muddy bank without a moment's hesitation, and holding her there by the nose, as it were, until she recovered breath to make another effort, that we escaped impalement. There was something very exciting in this struggle between the forces of steam and water. Each time, as we hung by the bank, the engineer might be heard below freshening his fires, and getting up as much steam as the boilers could, or might not, bear for the next effort. The wheel-house in these vessels is situated forward, so that there is almost direct communication between it and the engine-room. By the helm stands the captain. 'Ho! Frank,' he hails down the tube, 'how much steam have you?'—'So many pounds,' is Frank's reply.—'Guess you must give her ten pounds more, or we shan't get past that infernal snag.' And then more stoking is heard below, and the unpleasant feeling comes over the listener that the boilers lie just beneath his feet, and that, if anything should happen to them, there can be no doubt about his fate. But, presently, Frank's voice sounds again.

'All ready, cap'en: can't give her any more!' The skipper loses no time; 'Stand by, then!' is his response. Then, to the men forward, who have made a rope fast to some stump on the bank to keep the boat from dropping off, 'Let go!' and she falls off for a second or two; her bow cants out a little: 'ting! ting! ting!' goes the engine-room bell, the signal for full speed ahead; every timber of the lightly-built vessel trembles. We watch the trees on the bank eagerly to see if she moves ahead. Presently she drops a little, but her head is still kept up; then the stream catches her on one bow. 'Stand by with the trip-pole!' is heard, and, as she swings round, 'Trip!' is shouted from the wheel-house. Into the swift shallow water the heavy pole plunges, and perhaps she is brought up by it and run into the bank again."

We wish we could find more passages as amusing as the following:—

"In a book on Americanisms, published last year, a Baltimore young lady is represented as jumping up from her seat on being asked to dance, and saying, 'Yes, sirree; for I have sot, and sot, and sot, till I've nigh tuk root!' I cannot say I have heard anything quite equal to this; but I very well remember that at a party given on board one of the ships at Esquimalt, a young lady declined to dance a 'fancy' dance, upon the plea, 'I'd rather not, sir; I guess I'm not *fixed up* for waltzing';—an expression the particular meaning of which must be left to readers of her own sex to decide. * * Perhaps one of the most whimsical of these curiosities of expression, combining freedom of manner with that of speech, was made use of to Capt. Richards by a master-caulker. He had been vainly endeavouring to persuade the captain that the ship required caulking, and at last he said in disgust, 'You may be liberal as a private citizen, captain, but you're mean to an almighty pump-tack!'—in his official capacity, of course. Again, an American gentleman on board one of our mail-packets was trying to recall to the recollection of the mail-agent a lady who had been fellow-passenger with them on a former occasion. 'She sat opposite you at table all the voyage,' he said.—'Oh, I think I remember her; she ate a great deal, did she not?'—'Eat, sir!' was the reply; 'she was a perfect gastronomic filibuster!' One more example, and I have done with a subject upon which I might enlarge for pages. The boys at the school at Victoria were being examined in Scripture, and the question was asked, 'In what way did Hiram assist Solomon in the building of the Temple?' It passed two or three boys, when at last one sharp little fellow triumphantly exclaimed, 'Please, sir, he *donated* him the lumber.'"

Paragraphs like these are few and far between, and those who take up the book for amusement will be disappointed. The greater number of chapters are heavy reading, though valuable to those who make these two new colonies their special study or future home.

The Land of Inheritance; or, Bible Scenes Revisited. By Lady Tobin. With Illustrations. (Quaritch.)

THE number of travellers who visit Egypt and Palestine from year to year is constantly increasing, so that we may soon hope to be as familiar with cities and interesting places as with those of Italy. Few, however, add much to our existing knowledge. The Relands, Robinsons and Eli Smiths are rare; while the Bonars and Buchanans are common enough. Lady Tobin traverses well-known localities, and has given a light and readable narrative of her personal adventures—what she saw, heard, thought and felt, as she moved about. Her book contains nothing new. It is in the form of a journal, in which the occurrences of each day are carefully recorded. She is too minute in her descriptions; and therefore the reader is liable to lose his interest in the narrative unless he peruses the volume piecemeal. Nor are her powers of description

great. The painting is not graphic, and leaves no vivid impression. It is not unpleasant at the time, but soon passes and is forgotten. It is a pity that there is no Table of Contents—nothing to indicate the route taken and places described. An Index was hardly needed; but some outline of the contents might and ought to have been prefixed. The illustrations are lithographic and few, having no particular excellence to recommend them. The work is got up in an expensive style of type and paper, large size and gilt edges, as if it were meant for aristocratic readers or drawing-rooms. Beyond the circle of the fair author's friends and those who partake of her peculiar views of the prophecies relating to the future of the Jews, we should not think that it will attract many readers. Its general tone and spirit are good; but there is a pervading tameness which the size of the book materially increases. We are not so enthusiastic or confident about the conversion of the Jews as the fair authoress. Though we do not sympathize in her Millenarian opinions, which are, indeed, very modestly kept in abeyance, yet we readily allow that her mind is of a deep and warm religious cast. Lady Tobin and her husband went to Alexandria and thence to Cairo, sailed up the Nile, traversed a part of the peninsula of Sinai, including, of course, a visit to Jebel Mousa, entered Palestine at Beersheba, and went on to Jerusalem, from which various excursions were made. From the capital of the Holy Land she came northward to Damascus and Beirut, returning home by Malta. An extract will give the reader a general idea of the character of the book:—

"Friday, January 11th (1861). A little girl of seven years old, perhaps, stood trembling on the bank (of the Nile) this morning—an irresistible feeling of curiosity had brought her there; but in vain did my readily-accepted gift of a small copper coin and a string of beads serve to allay her fears. The poor child's terror was extreme lest we should carry her off as a slave. Her only garment was a leathern fringed girdle round the loins; and throughout Nubia it is customary for young unmarried females to appear everywhere thus scantily attired; while their persons are thickly smeared from head to foot with castor-oil to protect them from the burning heat of a tropical sun. When these women marry, they always wear a long, wide shirt of coarse blue cotton cloth. We had not far to go in visiting the temple of Esné, whose splendid portico cleared out by order of Mohammed Ali Pacha is all that has yet been excavated. It is very much to be lamented that the whole of this fine building has not long ago been brought to light. The elegant though massive columns of its portico—each 17 feet in circumference at the base—and the elaborate, well-executed sculpture with which the lofty walls, and these beautiful columns also, are completely covered, afford undoubted evidence of an architectural grandeur that ought not to lie forever buried and concealed. A zodiac that once adorned the ceiling of this portico has been removed to France within the last few years. That these sculptures were originally embellished by rich and vivid colouring, is still quite manifest through every portion of them. The subjects represent dedications and offerings to Kneph, the presiding deity; and wherever these do not occur, the space is filled either by a *cartouche* or a row of sharply-cut hieroglyphics. The present Viceroy has sufficient wisdom to forbid desecration of this magnificent portico, by its being any longer used, as heretofore, for a common granary."

Lady Tobin chronicles some curious notions, which she evidently believes because told her by a genuine converted Israelite, Prof. Levisohn, respecting the Samaritan Pentateuch, such as, "omissions in the Hebrew copies of the Mosaic law of prophecies which foretold, in clearest and most emphatic words, the Saviour that should come into the world. One of these momentous passages occurs immediately after the delivery

of the law upon Mount Sinai, &c. He declares his firm conviction that in reality the Samaritans are nothing more than Hebrews of the tribe of Ephraim, and agrees with them in considering Mount Gerizim as the place where Abraham was commanded to offer up his son Isaac for a burnt-offering, founding his belief upon the name—Moreh." All this is baseless, and of the same nature with "Mr. Reichardt's (another converted Jew) theory of accounting for the Ark of the covenant and many other things connected with Israelitish history never having yet come to light in these latter days" . . . "they are intended by the Almighty to remain hidden from mankind until our blessed Lord's second advent draws nigh, when they will all be brought forth as indisputable evidences of the truth of Holy Writ, which even the most sceptical of human beings will not dare to gainsay or deny."

Had the matter been condensed into half its present bulk, and many minute details been omitted, it would have possessed more interest for the reader. At present, it is rather overloaded with little circumstances. Still Lady Tobin is a pleasing writer, possessing a cultivated mind, good taste, simple faith in the facts of Christianity, a fair amount of knowledge derived from the perusal of books elucidating the history and geography of the countries she travelled through, and a tolerant spirit. The peculiar circumstances of sorrow which led her to revisit the hallowed scenes of Scripture story, and induced her to yield to a husband's request in writing out her notes for the press after returning home, demand sympathy, and will, we trust, receive it.

The Tropical World: a Popular Scientific Account of the Natural History of the Animal and Vegetable Kingdoms in the Equatorial Regions. By Dr. G. Hartwig. With Plates and Woodcuts. (Longman & Co.)

ENCOURAGED by the success of his popular description of 'The Sea and its Living Wonders,' Dr. Hartwig has ventured to publish a familiar account of 'The Tropical World,' which, first appearing in German about two years ago, is now before us in an English dress. Dr. Hartwig has apparently never been in the Tropics, and relies for his materials solely upon those found in well-known works of travel; nor does he seem to have arrived at any general results or ideas in dealing with the parts he collected. But he is undoubtedly an able compiler, possessing the gift to cull the most telling extracts from the works at his command, and, like a skilful reviewer, arrange them in such a manner that the reader obtains a fair insight into the subject under discussion.

The work is divided into three parts, viz., Aspects of Tropical Nature, Tropical Plants, and Tropical Animals. After explaining the diversity of climates in equinoctial regions, the author takes us to the Llanos of South America, so ably described by Humboldt and Schomburgk, and thence to the high tableland of Peru and Bolivia, and the sand coasts of those republics, where Tschudi becomes the chief guide. By way of contrast, we are then introduced to the Amazon, the largest river of the torrid zone, where

"the magical beauty of tropical vegetation reveals itself in all its glory to the traveller who steers his boat through the solitudes of these aquatic mazes. Here the forest forms a canopy over his head; there it opens, allowing the sunshine to disclose the secrets of the wilderness; while on either side the eye penetrates through beautiful vistas into the depths of the woods. Sometimes, on a higher spot of ground, a clump of trees forms an island worthy of Eden. A chaos of bushrope and

creepers flings its garlands of gay flowers over the forest, and fills the air with the sweetest odour. Numerous birds, partly rivaling in beauty of colour the passifloras and bignonias of these hanging gardens, animate the banks of the lagune, while gaudy macaws perch on the loftiest trees; and, as if to remind one that death is not banished from this scene of paradise, a dark-robed vulture screeches through the woods, or an alligator rears, like a black log of wood or a sombre rock, on the tranquil waters. Well he knows that food will not be wanting; for river tortoises and large fish are fond of retiring to these lagunes. * * If the Nile—so remarkable for its historical recollections, which carry us far back into the bygone ages—and the Thames, unparalleled by the greatness of a commerce which far eclipses that of ancient Carthage or Tyre—may justly be called the rivers of the past and the present, the Amazon has equal claims to be called the stream of the future; for a more splendid field nowhere lies open to the enterprise of man."

From this exuberance of vegetation we are transported to Africa, to regions successfully explored by Anderson, Livingstone, Barth, Burton and Russegger. Finally, a virgin forest, the Mexican table-land, the slopes of Sikkim, and a mangrove vegetation, are delineated.

The second part includes chapters on giant trees, palms, the spicy nutritive plants, sugar, coffee, cocoa, vanilla, cotton, caoutchouc, spices and vegetable dye-stuffs; whilst the third part, opening with an account of the insect tribe, embraces descriptions of all the most prominent and popular animals. The frontispiece gives a spirited illustration of condor-catching in South America, effected, as the author correctly describes it, by allowing these birds of prey to gorge themselves to such an extent that, unable to take wing, the Indians hasten to surprise them by throwing either their ponchos or lassos over them, and thus conduct them in triumph to the village. But the author does not believe that condors will ever attack man; we know, however, several well-authenticated accounts of men being attacked whilst exploring the lofty summits of the Andes. Dr. Pickering, of the United States Exploring Expedition, was not the only one who had to fight for his life with these kings of birds. Mr. Bollaert, a trustworthy English traveller, has given us full particulars of the peril in which the condors placed him and his companion: so that we should be sorry to see the paragraph that condors are "contemptible cowards" copied into a guide-book to the Andes.

Those who from glowing descriptions have a longing for the tropics should carefully read the long list of annoying insects which render life in some of the most beautiful countries a perfect torment. We have been subjected to the irritating operations of every one of those Dr. Hartwig enumerates, and fully agree with him in the following conclusions:—

"Among the plagues of Guiana and the West Indies we must not forget a little insect in the grass and on the shrubs, which the French call *bête-rouge*. It is of a beautiful scarlet colour, and so minute that you must bring your eye close to it before you can perceive it. It abounds most in the rainy season. Its bite causes an intolerable itching, which, according to Richard Schomburgk, who writes from personal experience, drives by day the perspiration of anguish from every pore, and at night makes one's hammock resemble the gridiron on which St. Lawrence was roasted."

Dr. Hartwig's work will be read with interest by that great body of the public who desire to learn something about the strange habits of tropical animals and plants when conveyed in a popular garb, and who will gladly welcome the numerous woodcuts in which this English version abounds, though they may have done

duty on previous occasions. We notice, especially in the second part, a good many misprints of scientific names, and might point out several minor mistakes, such as that Cocaine was discovered by Wohler, and that Peireskia is the only genus of Cactuses having true leaves, did, we think it worth while to look more closely into a popular book; but we have not noticed any such glaring mistakes as might be expected from one who derives his knowledge of the Tropics from the accounts of others, and therefore have no hesitation in recommending the book as a readable and instructive publication.

Daniel Manin, and Venice in 1848-49. By Henri Martin. Translated by Charles Martel. With an Introduction by Isaac Butt, Q.C., M.P. 2 vols. (Skeet.)

Two years ago, the collection of memorials published by M. Planat de La Faye enabled us to trace the career of one among the great men whose virtue, honour and endurance have adorned Italy. The words and the deeds of Manin, whether in expectation, in action or in retirement, were without a flaw. He rose superior to the passion, the bitterness, the desire for self-assertion, which too often mar the efforts of those devoting themselves to their country's good. He could wait as well as act. He was earnest, without rashness; hopeful, but not visionary; high-minded in modesty and achievement. When misconstrued by his inferiors, he was not petulant. Success never tempted him into arrogance, nor failure into complaint. He had the courage of a martyr, without a touch of fanaticism. Such a life and such a death as his claim from the world its best reverence. Their influence, as also their glory, is undying. The man of meditation or the man of action, who is girding himself up to take a serious part in life's business, be the form and the scene of his effort what they will, cannot but receive strength, instruction and encouragement from such a story. What the name and recollection of Manin must be to every worthy Italian, is hardly to be expressed in language. The country of Dante and Michael Angelo has one sacred household word more. The brightest, if also the saddest, page of the story of Venice is that on which is written the tale of his heroic resistance, and his long-drawn death in a strange land.

The above are no vain words, but the expression of convictions which we are too seldom allowed to entertain, especially when the object is a political leader, and when the time present brings into prominence those personalities and failings which must partly fade out of sight and recollection before the historian for posterity has to take account of great and generous deeds, and gladly overlook the weaknesses of poor humanity. This book, by M. Henri Martin, however, is merely a reminder; calling for a repetition of that which in reverence and sincerity was expressed when the former tribute to Manin's heroism came before us. It has the advantage of being more readable than its predecessor, and though containing little, if any, new matter, cannot be laid down by those who take it up, let them be ever so familiar with its subject. M. Martin's style is good, and he has found a judicious translator. The introductions prefixed to the two volumes, by Mr. Butt, add value to the work, as concisely outlining some of the features of the Italian movement, and calling attention to that which is so little understood abroad, the limits and views of British policy as regards sympathy and intervention. What is said, either by our countryman as annotator, or M. Martin as biographer, will fail to satisfy the Red party, or those, if

such there be, who still cling to the dreams of Socialism as a panacea for misery. But the book, though moderate in tone, is not cold. Having thus characterized it, there cannot remain here much to be said unless our extended narrative derived from the former work were to be repeated. We have already pointed out the rare union of sobriety with enthusiasm which distinguished the advocate destined to play so remarkable a part; his abhorrence of intrigue, conspiracy, of every mean and mistaken practice, which gives to the Despot, not merely a show, but a substance of excuse for coercing those who attempt to work out new ideas by the old machinery of barbarous times. The story has already been told of his hearty household affections for the warm-hearted wife who brought him children; for the afflicted and gifted daughter, to whom he clung all the more dearly because of the strange malady which wore her life away. But here are Manin's Emilia and Teresa, to tell their own feelings at the great moment when Venice fondly thought she was free:—

"We find in the notes of Emilia Manin a page which, amid the narratives of this happy day, resembles a knell sounding sadly among festal chimes. The poor child, analyzing her feelings with a singular vigour of thought and expression, expresses remorse at not being 'filled with an ineffable joy' when she found herself, for the first time after his deliverance, under the majestic arches of St. Mark, in presence of her father, proclaimed liberator of his country. 'I ought to be at the summit of happiness, but a weight continually oppresses my heart.' This burden never left her for a moment except when she saw the battalions of the civic guard, called into existence by her father, defile past in imposing array. All the emotions of the daughter found their echo in the heart of her father. Manin never passed a day of unmingled happiness.—We place in connexion with the daughter's notes a letter written by her mother, which, although different in sentiment, is not inferior in character.

"Teresa Manin to Madam C.—

"Venice, 3rd April, 1848.

"Dear Friend,—The delirium in which we have lived for some days past, and from which we have not yet escaped, has not permitted me to occupy myself with anything, and this has delayed my replying to you. Everything, even my own family, of which I generally take such care, has been neglected. Thinking of the marvellous events which have delivered us from a tyranny of thirty-three years has been my only occupation. These events are like a dream; our present position is like a vision. Oh! dear friend, understand our felicity! To rise from our bed *slaves*, and return to it at night *free*! If that does not seem like a dream, what can be so? Dear friend, why are you not here on this day of our redemption? Such days never occur twice in the course of one human existence. I suffered much before this day of recompense arrived, for I knew perfectly well to what dangers my husband exposed himself. But I never said to him—Stop! And yet, I assure you, seeing him almost beside himself from the great pressure on his mind in meditating on the form of government it would be advisable to adopt, I have sometimes trembled for his reason. But my anxiety and terror were greatest when he informed me that Venice might possibly be bombarded that day..... When I saw him write to the different consuls to protest against this measure, and when I heard him call George, and say to him, 'Come with me to the arsenal!' what I suffered at that moment you can imagine much better than I can describe. I think few women would have conducted themselves as I did. I embraced neither my husband nor my son, so that I should not delay them. What hours were those, from one till five! I felt sure that if either of my beloved were killed, the other would certainly share his fate. At last, at about five o'clock, the shouts of a great crowd approaching our house delivered my heart from its anguish. I

distinctly heard cries of *Viva Manin!* From this moment I felt sure of success. *Viva San Marco!* *Viva la Republica!* I cried in my turn, for I was sure that my husband would not return until he had proclaimed the Republic in the Square of St. Mark. For the second time in five days I saw my husband brought in triumph to his house. Twice in five days! that was too much for my nerves! Still I sustained myself in my joy as I had done in my grief. I embraced my husband as the liberator, the chief among all, of my country. I embraced my son, who, at the age of sixteen, had displayed the courage and coolness of mature years..... And I was proud of both. I have a thousand things to say, but have not time. I read your letter, and that of citizen Louis, to my husband, and he was greatly moved. For your son also, he bids me tell you, a great and glorious career is opened in our Republic. Whoever combines honesty with talent, will find honour and recompense. That is indisputable. The future of your son is therefore assured, dear friend. I must conclude.—Your TERESA."

The above is Italian, every line of it—Italian of the best kind; and it will be found doubly impressive in all the glow of its truth and pride and participation when the fate of its writer is recollected. Teresa Manin survived for only a few days that departure from Venice which followed on the capitulation of the city, and its fall back into the hated chains of Austria. She was stricken with cholera at Marseilles:—

"She was wounded to the heart upon abandoning her country, as is shown by a touching letter written two days before quitting the sacred hearth, which neither herself, nor her daughter, nor her husband, were destined ever again to see. 'All is over, all is lost, save honour! I am going to a foreign land, where I shall hear a language not my own. My beautiful language, I shall never hear it again; never more!' She had no resource to bear up against that plague which had no pity either for broken hearts or exhausted frames. On the 12th of October, on returning from the funeral ceremony where friends unexpectedly found among strangers had assembled to attend the exile to her tomb, Manin wrote the following letter to Dr. Baral, a surgeon of Marseilles:—'Pray accept, monsieur, yourself and the other noble hearts who have associated themselves with you in your generous action, my warmest thanks for all that has been done to preserve the mortal remains and honour the memory of the cherished companion who has shared all my long sufferings. Accept my sincerest gratitude, which proceeds from the depths of a heart broken by innumerable misfortunes: wounded in its sincerest affections, both in country and family. I did not deceive myself when I chose France for an asylum. She is ever the land of noble sentiments and generous efforts. Adieu, monsieur; permit me to press your hand as that of an old friend!'"

The daughter lingered longer, worn out by exile and disease,—beloved in proportion as clouds gathered round her and decay spread, and as her father wrestled with dejection, exile and misconstruction, to cheer the few painless hours which her epileptic malady left her.—

"A letter from Béranger shows the impression this painful condition produced upon the mind of the great poet, who gave so many proofs of his sympathy for Manin, and who preceded his daughter but a few weeks to the grave. 'What most affects me is Manin. I have seen his unfortunate daughter in a state which it is impossible to describe. It pained me too much to describe it to Bretonneau. Can you imagine the mind to remain intact amid such sufferings? Can you picture to yourself this poor girl thinking of the pain her disorder gave her worthy father, clasping him with her withered hands, and asking his forgiveness for the martyrdom she caused him?'"

The death of this beloved invalid in Paris, under the eyes of her father, who wearily earned his bread there as a language-master (he who had held St. Mark's City as none before him had done!), would be almost too melancholy a

catastrophe to be endured when contemplated, had not there been some mitigation in the abiding friendships which the exile attracted to himself in Paris. With the name of Emilia Manin is united for ever that of Ary Scheffer. She was not laid in the grave of the stranger when her wasted life at last died out, but sleeps in the family tomb of that great painter, where he too and her father are also lying. But Manin's ashes will be one day borne home to Venice as sainted relics.

The Handbook of Autographs: being a Ready Guide to the Handwriting of Distinguished Men and Women of every Nation; designed for the Use of Literary Men, Autograph Collectors, and others. By Frederick G. Netherclift. With a Biographical Index, by Richard Sims. (J. R. Smith.)

"Running-hand" was an accomplishment which could not have existed when men wrote on oyster-shells, sheets of lead, or, like the Arab chroniclers, on the shoulder-blades of sheep. The amorous shepherds must have pricked their fingers when they wrote their songs with thorns on straps of leather. The masters who introduced the fashion of writing with iron bodkins, or stiles, on tablets of wax, were not thanked for the facilities they afforded in the attainment of caligraphic excellence—their refractory pupils turned on their instructors and gave them a couple of inches of the sharp end of their stiles under the fifth rib. The waxen tablets were called "pugilares": that name seems to have been quite as applicable to those who wrote on them.

Pen, ink and paper are three simple things; but in combination, and in the hands of a true master, for the time, they have been powerful agents. We do not mean masters like Peter Bales, who was a teacher of writing in the reign of Elizabeth, and wrote the whole Bible in a little volume which he put in a nutshell, and which nobody in the world could read. From the earliest period, England was famous for her writing-masters. Secretary's hand, fine Italian, whatever the character, few could equal, none surpass them as instructors and as manual writers. They challenged each other, wrote, instead of fighting, single matches, and sometimes held tournaments, whereat they tilted with their pens for lances; and great was the glory of him who came off conqueror, where there was a host of competitors, and every man a master, but only one master of the masters.

Of the lithographed specimens of handwriting which Mr. F. Netherclift has brought together, those of authors are often the best for clearness and beauty, even when hurriedly written. Addison's is as sharp, graceful and legible as Horace Walpole's or Mrs. Piozzi's. Akenside, too, wrote a hand which must have excited some respect for his character in every office where his "copy" penetrated. There is sensibly felt the value of a readable handwriting; and occasionally one that cannot be rendered familiar to the compositor, even by constant practice with it, will arouse a feeling akin to mutiny. Perhaps the worst "hand" ever written by author was that of the late Rev. Mr. Mitford. Lady Morgan's was copper-plate, beauty and lucidity, when compared with it. In the *old* office of the *Gentleman's Magazine*, Mr. Mitford's "copy" was constantly to be seen and never to be understood. Apprentices shook their heads at it, as though it were something in the Ogham character written by a crazy Druid. The more experienced attempted to set it up with reluctance, and were generally half wild before their

attempt had perhaps partially succeeded. At length, at sight of the well-known hieroglyphics, more uninterpretable than ever, the compositors united in declaring that they would prefer resigning their posts to losing their senses over the reverend gentleman's pot-hooks.

Occasionally the literary men are loose in their orthography, and even so careful an individual as Ayscough spells *references* with three *r*'s; and writers in the last century, quite at sea as to the use of capitals, inserted them capriciously, depriving nouns of their dignity by omitting them, and conferring them on mean little adjectives, and upstart prepositions which look pert and pretentious by their aid.

We do not attach much value to the system of detecting personal character under handwriting, though clever impostors have made a tolerable living by it. It is easier, knowing the character, to find some relation to it in the writing. The tremendous power in the "down-stroke" and the light grace in the "hair-line" in the writing of Richard the Third remind one of the determination of his character, and the refinement, when he chose to assume it, of his manner. So here, in a few words written by Admiral Blake, to the effect that "you will be pleased to advance twenty pounds unto him," there is a look of confidence in the letters, some of which raise their heads like pike-staves, while the *y* in the "twenty" dashes off excentrically, like a rocket which intends to strike somewhere, but the whereabouts being less certain than the fact.

There is plain matter of fact in the writing of Burns—a plainness not without a sort of pride in the simple sentence of his writing, which says, "I have not the most distant pretensions to what the pye-coated guardians of escutcheons call a Gentleman,—

*My ancient but ignoble blood
Has crept through secondals since the Flood;*"

and to this he appends a bold "Robt. Burns," as if he were proud of the descent and eager to acknowledge it.

On the other hand, Braham scrawls through an excuse for not singing, and the words seem dying away in feeble quavers, the *m* in his name having hardly strength to assert itself. Again, almost the only capital in the subjoined note after the first letter is given to the word France, the National Assembly therein not being deemed worthy of the distinction:—"Will you be kind enough to contradict the report of my intention to become a candidate for a seat in national assembly of France. Believe me yours, Napoleon Louis Bonaparte. King Street, the 20th of March, 1848." A month afterwards, the writer was a special constable in St. James's Street on the famous intended day of the Chartists, when he is said to have playfully prophesied to one or two lords, his fellow-constables, that the end of all these things will be the Empire, with a friend of yours for Emperor! And speedily he became a member of that despised National Assembly; and the little account disappeared from Farquhar's books, and, subsequently, "Believe me yours" became exactly what he had prophesied, in spite of the honesty and the ridicule of Changarnier.

In the hundreds of samples here given there is much matter for speculation and amusement; and there is much usefulness in this volume as a book of reference to test the genuineness of autographs, those here published being warranted as authentic! Mr. Sims has, in a few concise words, given a biographical outline of each writer, and thereby added considerably to the value of the volume.

History of Frederick the Second, Emperor of the Romans. By T. L. Kington, M.A. 2 vols. (Macmillan & Co.)

UNTIL the publication of Dr. Milman's 'History of Latin Christianity,' there existed no work in our language which enabled the English reader rightly to comprehend the character of the greatest of the German Cæsars—Frederick the Second. Slight notices of him were, indeed, to be found in Hallam's 'History of the Middle Ages,' in Mill's 'History of the Crusades,' and in a few other works of a similar kind; but these served only to render more evident the void in our historical literature. The subject of Dr. Milman's work was, of course, too extensive to permit him to enter at length into the details of any particular subject; and, moreover, since he wrote, two valuable documents—'The Chronicle of Fra Salimbene' and the 'Chronicon de Rebus in Italiâ Gestis' (discovered in the British Museum by M. Huillard Bréholles)—have been published, and tend to throw considerable light on the events of Frederick's reign. The ground, therefore, which Mr. Kington has taken possession of in the present volumes may be fairly considered unoccupied, and the work deserves a warm welcome from the historical student. The author has evidently sought out with the utmost diligence and industry every available source of information; and the style, though somewhat diffuse, is vigorous and flowing. Had Mr. Kington, however, studied condensation a little more,—had he omitted petty details, in themselves unimportant,—had he concentrated his attention more on the great Emperor himself, and less on his accessories,—the book would, we think, have been improved. Few great monarchs have received so scant an allowance of justice from posterity as Frederick the Second; nor is it difficult to account for this result when we consider that he was the most formidable antagonist the Papal power had ever encountered, that he died while still under the ban of excommunication, and that the writers of the immediately succeeding age were, for the most part, warm partisans of the Papal as opposed to the Imperial party. The commencement of the thirteenth century has always appeared to us one of the most interesting periods of mediæval history, and one fraught with many instructive lessons to the modern student. Then it was that the last great struggle took place between Rome and the Empire, and that Lombardy made its most desperate effort to recover that independence which it was not destined fully to obtain till our own days. Important as were the events, the men were worthy of them. Innocent the Third, perhaps the ablest pontiff who ever filled the Papal chair, having finally established that temporal power which the feebleness of his successors seems likely soon to destroy, proceeded to arrogate to himself universal supremacy; and so powerful was his influence, that almost every European kingdom was awed by the mere threat of a Papal interdict. Rome's power was now at its zenith, when it suddenly received an unexpected check from the daring hand of Frederick the Second. One might almost call the House of Hohenstaufen the hereditary antagonist of Rome; and the support which Innocent afforded to Frederick in his efforts to obtain the Imperial crown was the one great error of that Pope's policy. It is difficult, even with the ample means supplied to us by Mr. Kington, to form a just conception of a character so strange, and in some respects contradictory, as is that of Frederick the Second. From one point of view, he appears closely to resemble his grandfather Barbarossa. Like him, he was a brave soldier,

a stern disciplinarian, cruel in revenge, of boundless ambition, patient and hopeful even under defeat, and jealous of every particle of the authority he believed to be vested in him. But, on the other hand, he was what his rough grandfather never had been—a model of knightly courtesy, an ardent cultivator of the "gay science," an enthusiastic patron of those arts which were destined to render Italy famous, and the brightest ornament of the most luxurious and intellectual Court of the Middle Ages. These qualities, however, he shared with others, for they were characteristic of the age. But Frederick was something more than a model of chivalrous attributes: he was in advance of his age, and that to an extent which appears at first sight almost startling. As a legislator, we find him in Sicily aiming at the abolition of the more oppressive feudal burthens, simplifying suits, rendering the process of law more economical and accessible, watching scrupulously over the purity of the judges, and, to use his own words, "watering the domain of justice with the streams of mercy." He lightened taxation as far as possible, and, what is still more extraordinary, gave to his Southern kingdom a representative form of government many years before the Commons of England first met at Westminster. "It is just possible," suggests Mr. Kington, "that Simon de Montfort, who is known to have visited the Imperial Court, may have borrowed his famous improvement on the old English Constitution from an Apulian source." Frederick was, moreover, an active and shrewd trader, and seems to have had a thorough comprehension of the advantages of unrestricted commerce. His ideas of toleration were peculiar. To Jews and Saracens he extended the most complete protection; but of heretics he was a merciless persecutor. It has been suggested by Dr. Milman that this arose from the fact that the better known schismatics of that age, such as the Paterins and Catharists, were remarkably common in Lombardy, and that Frederick may have punished them as rebels rather than as heretics. One of the noblest points of Frederick's character was the encouragement he gave to education by establishing seminaries of learning in various parts of his dominions. He founded the University of Naples, and took a deep interest in the famous medical school of Salerno; and even the University of the Guelfic city of Bologna received gifts of books from him for its library. He accompanied his present, in 1232, with the following interesting letter, which we quote from Mr. Kington:—

"We have always [he writes] loved knowledge from our youth; whatever time we can steal from State affairs we cheerfully dedicate to reading the many volumes stored in our library. We have stripped the works written by the Greek and Arabic philosophers of their old garb; we have had them translated by chosen men, maintaining faithfully the virginity of the words. We do not wish to keep them all to ourselves; you are the first to whom we send them, since you are the illustrious nurslings of philosophy, who skilfully draw new waters out of old cisterns. Do you make them public for the use of students, to the glory of your friend Cæsar."

Such is a faint outline of the character of this man. "Troubadour," to use Mr. Kington's words, "Crusader, Lawgiver; German by blood, Italian by birth, Arab by training; the pupil, the tyrant, the victim of Rome; accused by the world of being, by turns, a Catholic persecutor, a Mohanmedan convert, an Infidel free-thinker: such is Frederick the Second." The two objects of the Emperor's policy were to combat the ambition of the Popes, and to reduce to submission the independent republics of Northern Italy. Most men must

sympathize with the gallant fight which Milan and her sister towns made for liberty, and we heartily concur in Mr. Kington's expressions of admiration for the sturdy Lombard citizens who contended against such overwhelming odds for their hereditary immunities. Still we must recollect, in justice to Frederick, that the Lombard towns were by no means model republics; that anarchy and internecine strife had become chronic among them; that the burghers were fierce, rude and uncultivated; and that the oppressive spirit of feudalism was everywhere exerting its baneful influence. It might be almost necessary, therefore, that the transition period of despotic rule should be gone through, so that by this means public order might be restored, the evil-working power of the nobles might be crushed, and a foundation laid for a more liberal and peaceable government. Might not the example Frederick had set in his Sicilian dominions be considered a sufficient guarantee for his adoption of a liberal and progressive policy in other parts of his vast possessions? Although the hereditary feud existing between the Papal and Imperial parties was undoubtedly one cause of Rome's continued persecution of Frederick, still the lukewarm support he gave to the Crusades added fuel to the hatred borne to him by the Popes. His unwillingness to enter on the Holy War probably arose from two distinct causes. The first was a natural fear of the consequences which might result from his absence in the East. In Lombardy, the revived factions of Guelf and Ghibelline were engaged in perpetual strife. Town waged war with town—Genoa with Milan, Venice with Genoa, Mantua with Cremona, Ravenna with Ferrara; and the Emperor feared that if his watchful eye were removed, still more disastrous events might ensue. Such appears to us the political reason which for a long time prevented Frederick from fulfilling the pledge he had given, at the time of his coronation, to Honorius. But there existed a religious obstacle also. Infidelity was a common charge made against Frederick in his lifetime. The Christian world was scandalized by the number of learned Saracens and Jews who surrounded the Emperor in his Sicilian Court, and by the interest which he himself displayed in Oriental studies. "The Guelfs," says Mr. Kington, "denounced him as an Epicurean, who searched the Scriptures in the hope of upsetting the existence of a future state." In the preceding century, in Languedoc, and in a Court second only in brilliancy and refinement to that of Sicily under Frederick, we find existing the same intercourse with the East, the same liberality of sentiment, the same toleration, the same animosity to the clergy, and the same spirit of scepticism. And we imagine that the causes which produced the Albigenian heresy were in action, though in a modified form, in the Court of Apulia. The daring defiance of Rome contained in the Letter to the King of England, written by Frederick at Capua, in 1227 (and which might, from its tone, have been the production of the German reformers of an after-age), is a proof of the prevalence of a particular style of thought at the Imperial Court. This curious document is given by Mr. Kington, and we here extract it entire:—

"Take warning [he says] by the past: did not the Pope hard press the Court of Toulouse and others by an unjust excommunication, until they bowed before him? Did not Innocent the Third stir up the English Barons against King John as being a foe of the Church? As soon as the King had crouched like a coward and handed over his realm to Rome, the Pope, who only hungered for the fat of the land, gave the Barons up to misery

and death. The Roman Church is like a leech: she calls herself my mother and nurse; but she is a stepmother, and the root of all evils. Her legates go throughout all lands, binding, loosing, punishing; not to sow the seed of the Word, but to subdue all men and to wring from them their money. Neither churches nor hospitals are now spared. This Church was founded on poverty and innocence at first, as its catalogue of saints proves; but other foundation can no man lay than what Christ has laid. Now she wallows in riches; and it is to be feared that riches will overthrow her. All the wicked are eager for the fray, and hope to riot on the ruin of the kingdoms of the earth. Unite yourselves, then, and overturn this unheard-of tyranny, this danger common to all. Remember that when your neighbour's wall is on fire, your own property is at stake."

It could not be expected that a monarch holding such opinions should be very enthusiastic in regard to the Crusades; and the advantageous treaty which he concluded with the Sultan of Babylon, and his own coronation at Jerusalem, would seem to prove that zeal and ardour are not always requisite in order to command substantial success. The year 1248 may be considered the turning-point of the Imperial fortunes; the disastrous defeat at Parma being the first signal of the fast-approaching downfall of the great Suabian House. The defeat and captivity of Enzo, his favourite son, was another crushing blow administered to the Emperor in his latter days, and tended most probably to hasten his death, which took place at Fiorentino on the 13th of December, 1250.

Genealogical and Historical Diagrams, illustrative of the History of Scotland, England, France, and Germany, from the Ninth Century to the Present Time. By William Graham, LL.D. Simpkin, Marshall & Co.)

Malcolm's Genealogical Tree of the Royal Family of Great Britain. (Malcolm.)

Dr. Graham's Genealogical and Historical Diagrams are lucid in arrangement and sufficiently accurate; but it may be questioned if good would follow from their general introduction into schools, which is the object of the arranger. "Even our greatest historians," says Dr. Graham, "have felt the value of such tables; Hallam and Lingard have had recourse to them, and Dr. Arnold recommends them as necessary to a clear view of certain periods of history." All this the reader will admit; but it does not follow that pupils should have the tables put into their hands ready made, when one of the most useful historical exercises to which an intelligent boy can be put is to draw a genealogical chart or chronological diagram from facts contained in the text of the book which he is studying. We admit the utility of such tables, but we think the student should make them for himself.

Mr. Malcolm's Genealogical Tree is a picturesque work of art. From a grass-covered plain, on which appear the rose and the thistle, a few shamrock-leaves and three leeks (washed, and all ready for eating) rise up above a company of fruitless stems, the three grand trunks—Rogwald, Egbert, Kenneth the Second,—of the mighty tree, whose topmost leaf is Albert Edward Prince of Wales. A marriage is indicated where two leaves lap. When a leaf lies across the trunk or limb of the tree, the name on it is the progenitor of the next higher name or names; and when the green leaf does not lie across the trunk or limb of the tree, no descent (or rather, ascent) is traced from it. A leafy tendril-twined framework separates this picture of an unbraveous forest-king from the white margin of the liberal sheet; and at proper points are emblazoned the arms of England,

Scotland, Ireland and Wales, while down either side are notes referring to the principal leaves of the tree. There is, however, one serious and flagrant error in the chart,—an error of such magnitude that until it has been removed by hewing down a very handsome piece of timber, the rest of the tree should not be admitted into the school-room. Misled by the famous false pedigree of the Cambridgeshire Stewards, Mr. Malcolm gives Oliver Cromwell a royal descent, and justifies himself for doing so in a marginal note that runs thus: "He was, on his mother's side, descended from the Lord High Steward of Scotland; but it was in no wise owing to this circumstance that he attained the highest position in the nation." Thus laughably does this hoary genealogical fiction ever and again peep out like a rat from its hole. It never sneaks or runs out from its lurking-place without exciting derision and being summarily knocked on the head; but neither laughter nor blows kill it. Once upon a time, Mr. D'Oyly Bayley did his best to destroy the absurd creature, which wanders about the world to put heralds to the blush, and be a satire on that family arrogance which invariably is a feature of the vulgar. In the *Athenæum* (No. 1782) we had occasion to expose the fabrication, which doubtless will be brought forward again, before six months have passed, as "a fact." Mr. Malcolm may see the exact nature of his blunder, by reference to the *Athenæum* article, and to Mr. D'Oyly Bayley's paper on 'Genealogical Fictions,' in the *Gentleman's Magazine* for 1846. By all means let Cromwell have a statue in Westminster Palace, and an equestrian statue in St. James's Park; but to endow him with a royal descent is beyond the power of the historian, and even of the genealogist.

OUR LIBRARY TABLE

The Earth and its Mechanism: being an Account of the various Proofs of the Rotation of the Earth. By H. Worms. (Longman & Co.)—This is one of those books for which the Greek *monobible* would have been altered to order, if it were not that, as often happens, the adjective in "holy bible" has walked off, leaving its meaning imbedded in the substantive. So we are introducing the word *monograph* instead, and it means a complete handling of some one single branch of a subject. In a monograph we expect to find fuller development of the single point selected than can be given in a polygraph; and on this point we are well satisfied with Mr. Worms, who gives everything, from Galileo to Foucault, in all his phases. He has accordingly produced a work which must be at hand to any one who desires to study the rotation of the earth. But should a second edition be required, we recommend the able author to reconsider his general notion of physics and his historical accounts. He should not reject anything, however improved, as "incompatible with the dignity of true science"; it was this dignity notion which operated strongly against the motion of the earth. When he tells us that Riccioli "states" that "the celestial bodies are carried round daily by intelligences called angels," he gives a very inaccurate idea of what Riccioli says in the page cited, and which he perhaps never saw. Riccioli states this opinion as the most common one of all time, namely, that the stars are moved "intelligentiis, seu ab angelis," for which he quotes Aquinas, Bonaventura, Scotus, Durandus, and many others. But worse than this is the view given of the purpose of Copernicus. Mr. Worms cannot find room for Ptolemy's name when speaking of astronomers "combining different eccentric and epicyclical motions, so as to represent the phenomena of the heavens." He says, "the bigotry of the Middle Ages accepted and protected willingly these heathen notions, rendering it most dangerous to confute them." He represents Copernicus as writing gently to refute these opinions. Now, whether it would have been dangerous to refute

epicycles, no one knows; certainly neither Copernicus nor Galileo attempted it. Copernicus changed the centres of the epicycles. We take a chance opening of his great work, and within two pages of it we find "inquirendum nobis jam est, in quâ sint rationes epicyclus primus ad secundum" (folio 111). Let Mr. Worms stand informed, not only that Copernicus used epicycles, but that the astronomers of our day use twenty where Ptolemy used one: but not under the old name, nor precisely in the same way. With these objections to its historical accounts, we dismiss a good book.

Recollections of the Conversation Parties of the Rev. Charles Simeon. By A. W. Brown, M.A. (Hamilton, Adams & Co.)—These are recollections of conversation parties, but are not sufficiently conversation recollections to enable us to present Simeon as he was. Those to whom they are dedicated, the Cambridge men who, as undergraduates, attended the parties, will clothe the notes here presented with their own recollections, and will find them very valuable resuscitators. To all the rest of the world they might be, for the most part, extracts from Simeon's note-book, but not from his diary. Nevertheless, now and then, we find such bits as the book ought to be full of. Simeon was a character who especially wanted a Boswell: a full account of his doctrines and labours, with the personal character and manner omitted, might as well be his contemporary Rowland Hill as Simeon. Both had a point in common,—eccentricity of the form of thought, and a certain occasional jocularity of manner. But no two men were more different. Simeon lived through an age which began by calling him a crack-brained enthusiast, and ended by acknowledging him as the leader of a recognized and influential religious party. The work before us gives, to use a common idiom, a *notion*, but not an *idea*, of his character of mind. We have, for instance, much of his Attic; but we want more of his Doric.

Through Algeria. By the Author of 'Life in Tuscany.' (Bentley.)—Why Miss Crawford could not print the pleasant record of her travelling adventures,—one which may safely be commended as an acceptable fireside book,—without tilting at a windmill, by way of preliminary exercise, it would be hard to explain. Her apology for single women who prefer foreign travel to aimless home-gossip, her depreciation of their being thought ridiculous, are simply superfluous and uncalled for. Assuredly, no man with any humanity in his composition will like the idea of his female relatives and friends rushing into real peril, and gratuitously exposing themselves to mischance, for the gratification of restless curiosity. There may be something more inconsiderate than heroic or admirable in the desire to gratify a roving propensity; and the woman who will force her way, in spite of proprieties, relying on her sex as an excuse and protection, thereby unsexes herself; but beyond these old truths the voice of society has never gone in denunciation of roaming spinsters or widows, and Miss Crawford has solaced herself with the notion of a grievance which has no existence. Her book, we have said, is a pleasant one. She has seen more of Algeria than the generality of women contrive to see—not being repelled by the frightful orgies of the Aissoua, not deterred by the difficulties of land-travelling in districts where rest at night was little better than a bivouac, and where panthers sat by the way, like *Pope* and *Pagan* in Bunyan's allegory, waiting for pilgrims to come by. Nevertheless, a good moiety of life as it exists in so rude a land cannot have come under the ken of any woman, be she ever so intrepid. This fact limits the value of the book, though not its amusement.

The Graver Thoughts of a Country Parson. By the Author of 'Recreations of a Country Parson.' (Strahan.)—In other words, a volume of sermons, with a picturesque and pensive sort of preamble, showing that side of the "Country Parson's" talent which we like the least—namely, the presence of a certain egotism and affectation which are not pleasant, even if they be assumed for the purpose of amusing and retaining an audience. True, a volume of sermons is a pill which may be thought to require some gilding; and yet the discourses of

Robertson, Maurice and others, put forth in all simplicity, have not lacked readers. These sermons, too, stood in no need of a symphony. They are earnest, interesting, practical rather than profound, and with just that touch of intimacy in appeal which, by endearing the preacher to his audience, gives weight to every word, adds persuasion to every suggestion. Their writer has wrought in the spirit of the good Methodist preacher whose device was, "Never provoke those you aim to profit."

The Meaning of History: Two Lectures. By Frederick Harrison, M.A. (Trübner & Co.)—Of these two lectures, which were delivered to what the patrons of Mechanics' Institutes term "mixed audiences," the author says, with equal modesty and truth, "It will be seen that they belong to the most elementary kind of popular instruction, and they will have little interest for the general reader, much less for the regular student of history." Mr. Harrison speaks with the confidence which becomes a popular lecturer; but we are inclined to think that five minutes' brisk cross-examination would reduce him to confusion and uncertainty as to his own views of the "meaning of history."

Three Years in Melbourne. By Clara Aspinall. (Booth.)—Three years' residence in Melbourne with an affectionate brother doubtless gave Miss Aspinall many and sufficient causes for the gratitude which she expresses to him for "his more than brotherly kindness"; but she has done wrong to offer her Australian experiences to the public in a volume that neither instructs nor amuses,—that says nothing of Melbourne life which has not been better said over and over again. In her concluding pages Miss Aspinall prints the bill of fare of the steam-clipper on board of which she made her homeward voyage, and also one of Dibdin's best and most popular sea-songs. These portions of it excepted, there is not a line in her book worth reading.

Problems in Human Nature. By the Author of 'Morning Clouds.' (Longman & Co.)—'The Source of Vanity,' 'The Decline of Sentiment,' and 'Disappointment in the Religious World,' are the titles of three essays in which, with equal modesty and thoughtfulness, the author of 'The Romance of a Dull Life' places before the world opinions which, even when they are superficial or erroneous, arouse the reader's sympathy for the simple and earnest mind from which they flow. Of the source and nature of vanity all that is said is mere scratching on the surface of metaphysical knowledge. In the second paper the writer takes ground which we are so happy as to deem untenable. We do not believe that "sentiment of almost every kind is becoming faint and feeble." Schiller's words were but a repetition of one of those "vanitas vanitatum" cries, which from earliest history to the present time have been ever and again wrung from poetic minds, sorrowing over the wide chasm that separates the "actual" from the "ideal." Modern literature—the literature to which Schiller contributed vast treasures, that met with enthusiastic appreciation from the hard work-a-day world—proclaims the sentiment unjust and false. The writer of 'Morning Clouds' must look more at the sunshine and less at the dark masses of rolling vapour, and must form her estimate of human nature from its highest, not its inferior, representatives. 'Disappointment in the Religious World' would be an excellent essay if it could be relieved of its needless despondency. We would encourage its author to be more hopeful, and have more lively confidence in the wisdom that governs the affairs of men.

Italy, &c.—[L'Italie en 1861: Politique, Littérature, Biographie, Beaux-Arts, par Charles Grün]. (Brussels, Kiessling & Co.; London, Trübner & Co.)—This is a heavy book, with much pretension on the part of the writer, who would fain be acute, profound, sarcastic and prophetic. What reader of the day, be he ever so superficial, has not made acquaintance with the third-class French literary traveller, who fills off grave questions without a misgiving—who sets right mistakes in reputation with the confidence of a *Minos*—who is ponderous or plaintive, should he meet a dinner cooked accord-

ing to other canons than those of the Palais-Royal—who is satisfied that every English "Miss" drinks rum, and that London's *Milord Maire* can send our sovereign "to the right-about" whenever he pleases? But there is a companion even more lightly heavy and more heavily light than Monsieur Aristide: this is the German trying to be French when travelling in foreign parts—such a German as this is M. Charles Grün. In politics he may have seen to the centre of every movement,—he may have laid his fingers on every leader's pulse; but in place of offering new facts or arresting conclusions, he treats us to the veriest commonplaces. Any reader of last year's newspapers (even German ones) is as wise regarding Italian affairs as M. Grün can make him.—In Arts and *Belles Lettres* he is not less oracular.—The glories of the South, whether they be ancient or recent, are dismissed by him with the proper show of enthusiasm or rapture, but with a want of tact and truthful observation which is made doubly tiresome by the affected vivacity of his style. Take one specimen of this. While hard at work on his description of Pisa, "The gas," says M. Grün, "shines by its absence in the streets." *Madelon* and *Cathos*, themselves, could not have turned the phrase with a more brilliant ingenuity.—The entire book sparkles with sallies no less happy than the above, and may be accordingly commended to those whom they suit.

The subjunctive mood is only a part of Latin grammar, and not the whole of this part is discussed in *The Functions of Si and Qui, with Special Reference to German Theories*, by Gavin Hamilton. (Hamilton & Co.), which is nevertheless a volume of considerable size. Nearly the whole of it is devoted to a refutation of the views of others, rather than the enunciation and establishment of those entertained by the author on the much-vexed question under discussion, which, so far as we can see, remains pretty much in the same position as before. Surely Mr. Hamilton does not suppose he is the first to point out that the indicative mood in Latin is employed to express actual fact, and the subjunctive what is only conceived in the mind, and may or may not be matter of fact. Much as he insists upon the necessity of discovering a common affinity in the different usages of the subjunctive mood, it does not appear to us that he has advanced beyond this general principle, which is to be met with in any grammar. He finds great fault with Carson's rules for the use of the subjunctive, after such phrases as *sunt qui*, but does not give any of his own, though he lays down laws for other usages of that mood. It is a pity he should have spent so much time and strength in the negative operation of confuting others, and still more so that he could not have written in a less discursive manner and a more sober tone. He is perpetually wandering from his subject for the sake of bringing in some anecdote, saying or allusion, which seems to serve no other purpose than to display his smartness,—a quality rather out of place than otherwise in a work of this nature. Wit and brilliancy are very good things, but are hardly in keeping with a discussion about the use of the subjunctive mood in Latin.—*An Elementary Latin Grammar*, by H. J. Roby, M.A. (Macmillan), is a school grammar derived from the best sources, and drawn up on a superior plan. The author acknowledges himself indebted to Madvig, Donaldson, Key, Kennedy and Morell. From Madvig he has derived the facts of the accidence, and from Morell assistance in expounding the syntax according to the analysis of sentences; but the arrangement as well as the selection of his materials is entirely his own, and the work is to all intents and purposes an original production, differing materially from all others. Our only fear is, that it may be found almost too hard for those who have not already acquired some familiarity with the laws of language.

Of religious publications, we have to announce *The Model Church*, by the Rev. L. B. Brown (Freeman),—*Conscience for Christ: a Lecture*, by the Rev. W. Roaf (Freeman),—*Is the Pentateuch Historically True?* by J. B. Marsh (Simpkin),—*The Nemesis of Excess in Faith and Worship: a Sermon*, by the Rev. J. Jackson (Skeffington),—*Hints for Open-air Preaching*, by One who has

Proved Them (Faithfull).—*The Fatherhood of God*, by the Rev. T. Griffith (Hatchard & Co.).—*Forgiveness after Death: Does the Bible or the Church of England affirm it to be Impossible? A Review of the alleged Proofs of the Hopelessness of the Future State*, by a Clergyman (Longman).—*A Few Words with Bishop Colenso on the Subject of the Exodus of the Israelites and the Position of Mount Sinai*, by Dr. Beke (Williams & Norgate).—*Speech delivered by the Right Hon. B. Disraeli in aid of the Oxford Diocesan Society for the Augmentation of Small Benefices* (Rivington).—*"The Workmen, they are of Men": A Sermon on behalf of the Lancashire Distress*, by the Rev. T. G. Hatchard (Hatchard & Co.).—*Bear ye One Another's Burdens: a plain Sermon on the Lancashire Distress*, by the Rev. J. G. Cowan (Skeffington).—*What is the New Book of Bishop Colenso's against the Bible? What are the Bishop's Objections? Have they been Answered? Or Can they be Answered?* (Pitman).—*A Review of the Rev. H. Venn on St. Francis Xavier and Christian Missions* (Burns & Lambert).—*England under God*, by the Venerable Archdeacon Evans (Smith, Elder & Co.).—*The Pentateuchal Narrative Vindicated from the Absurdities charged against it by the Bishop of Natal*, by J. C. Knight (Bagster & Sons).—*Hints for Internal Unity: a Sermon*, by the Rev. J. E. Kempe (Skeffington).—*The Teacher's Office an Administration of the Spirit: a Sermon*, by Samuel, Lord Bishop of Oxford (Parker).—and *The Bishop of Labuan: a Vindication of the Statements respecting the Borneo Mission, contained in the last Chapter of 'Life in the Forests of the Far East'*, by Spencer St. John, late H. M.'s Consul-General in Borneo, by the Author (Ridgway).

LIST OF NEW BOOKS.

Bonar's (H., D.D.) Family Sermons, cr. 8vo. 6s. cl.
Deene's Christmas at the Cross Keys, post 8vo. 7/6 cl.
Duda's Prayer that teaches to Pray, 18mo. 2/6 cl.
Entomologist's Annual for 1863, fc. 8vo. 2/6 bds.
Farrar's History of Free Thought, Hampton Lecture, 1862, 8vo. 16s.
Farrar's Eric, or Little by Little, 6th edit. cr. 8vo. 5s. cl.
Garrod's Nature and Treatment of Gout, &c., 2nd ed. post 8vo. 15s.
Howe's Works, new edit. Vol. 4, 8vo. 8s. cl.
Hubbuck's The Mistakes of a Life, 3 vols. post 8vo. 31/6 cl.
Hudson's Secret of Free Thought, Hampton Lecture, 1862, 8vo. 7/6 cl.
Hughes's Prayer and the Divine Order, cr. 8vo. 4/6 cl.
Jackson's Etymology and Phrenology, cr. 8vo. 4s. cl.
Littlewood's Essentials of English History, fc. 8vo. 3/6 cl.
Longfellow's Poetical Works, illustrated, new edit. fc. 8vo. 3/6 cl.
Lytton's Novels, Library Edit., Night and Morning, Vol. 2, 5/6 cl.
McDonald's David Elginbrod, 3 vols. post 8vo. 31/6 cl.
Marshall's Rose Bryant, her Maiden and Married Life, fc. 8vo. 1/6
Mary M'Neill, or the Word Remembered, 18mo. 1/6 cl.
Melville's The Queen's Marries, 2nd edit. cr. 8vo. 6/6 cl.
Mining and Smelting Magazine, Vol. 2, 8vo. 7/6 cl.
Mystery of Money Explained and Illustrated, 8vo. 7/6 cl.
Naville's Life Eternal, from the French, royal 16mo. 3/6 cl.
O'Dowd's Merchant Shipping Amendment Act, 1862, 12mo. 7/6 cl.
Oliver & Boyd's New Edinburgh Almanac, 1863, 18mo. 5/6 bds.
Parlor Lib.: "Hook's" Jack Brag, new edit. fc. 8vo. 2s. bds.
Poems, an Offering to Lancashire, cr. 8vo. 3/6 cl. gt.
Punch, 8-issue, Vol. 23, 4to. 5/6 bds.; and Vol. for 1853, 4to. 10/6 cl.
Reeve's Land and Freshwater Mollusca, the British Islands, 10/6
Reeve's Romance of Reality, 12mo. 4/6 cl.
Remarkable Adventures from Real Life, cr. 8vo. 1/6 swd.
Royal and other Historical Letters, Hen. 3, by Shirley, V. 1, 10/
Thomson's Seasons, Pt. 1, Spring, with Notes, by Mason, 12mo. 2/6 cl.
Wilson's (F. C.) Short Poems, cr. 8vo. 5/6 cl.
Yates's After Office Hours, new edit. fc. 8vo. 1/6 swd.
Zschokke's Handbook of Family Devotion, from German, 8vo. 8/

[ADVERTISEMENT.]—MISS COULT'S CLOCK TOWER.—A NEW VOLUME.—THE BUILDER, an Illustrated Weekly Journal, addressed to all Classes, conducted by Mr. GEORGE GODWIN, Architect, F.R.S. is published every Friday Morning, price 4d., or per post, 5d. The First Number of the New Volume will contain fine Engravings of Clock Tower, Bethnal Green—The National Provident Institution, Gracechurch Street—Stained Glass Windows for Garrison Church, Woolwich—Numerous Papers—Halicarnassus Restored—Errors in our Memorials—New Materials for Lives of Sculptors—Cottage Building—News from the Provinces, from Ireland, Scotland, Paris, Italy and elsewhere.

MAGNETO-ELECTRIC LIGHTHOUSES.

Northfleet, Jan. 1, 1863.

MAY I ask your permission to offer a few observations on the notice of the magneto-electric light which appeared in the *Athenæum* of the 29th of November last? The details therein given were correct at the dates referred to, and the well-wishers of the light cannot but welcome so clear and concise an account of the application of the invention to lighthouses; but the time which has elapsed since has been occupied in perfecting the efficiency of the light, and it is hoped that you will allow the result to be recorded.

The improvement has arisen from using a different lamp. That instrument is no longer a deli-

cate piece of complicated clockwork, but so simple an affair that the movement of the carbons is entirely accomplished with one wheel and one pinion; and the lamps which have been in use at Dungeness for nearly seven months, and for some time before that on my own premises, have never been even opened to be oiled. When to this is added the fact that the light, if arbitrarily extinguished, will now instantly re-light itself, a certainty of action has been arrived at which leaves little to be desired. The liability to sudden and spontaneous extinction has also disappeared. The light was burnt every day in the International Exhibition from half-past one o'clock to five without once going out; and there is reason to believe that at Dungeness a steadiness and continuity practically complete has been obtained.

The only element of interruption that remains arises from certain impurities, silica or metallic residuum, in the carbons; and when they have decomposed to a point where iron or antimony occurs, there is a slight change of colour, an absolutely momentary flicker (not an extinction), which, though it would cease to exist if carbons could be obtained quite pure, is practically of no consequence whatever.

This improvement in the lamp has of course altered the relative simplicity of the two systems of oil and electricity enormously. There is really nothing now to look after in the latter that the customary attendant on a steam-engine could not learn efficiently in a few hours; and the chance of break-down to that which has now become ordinary mechanism is no greater than exists every day, without (as a rule) occurring, in every engine-room in the kingdom, and is, of course, less than a sea-going steam-vessel risks with impunity for months together. If, in addition to this, it is considered that oil, although in a sense simple, is liable to an adulteration very difficult to detect; and that in proportion to adulteration is the necessity for frequent trimming; and that, with the best oil known, every four-wicked lamp must be trimmed at least once every night, during which time,—from five to fifteen minutes,—the only light in the lantern proceeds from the hand-lamps of the keepers, it follows that the Magneto-Electric Light is preferable to the oil-lamp on account, amongst other things, of its unbroken continuity. The question of expense, even if that were very much greater than it is, is one that could hardly affect its use in a country which, from its wealth of life and merchandise afloat, has such need to employ the best light that can be had; but, although where the large and very costly apparatus and lantern for the oil system have been already procured, there would be no set-off to the cost of the small engine and the magneto-electric machine itself, yet at a new station, where the whole thing had to be done from the beginning, the saving in the difference of size of lantern and of apparatus, and the easiness with which the machinery could be placed in the light-house tower immediately under the lantern, so that no more than the customary two men would be necessary, would reduce the excess of outlay to a minimum: the proportions being for the magneto-electric light,—first cost, about one-sixth more, and for maintenance about half as much again. When there were two lights adjacent, a portion of the machinery necessary for one could be applied to both, and the working expenses would then be, for the two lights, in the proportion of 1:142 magnetic to 1:000 oil, or thereabouts.

The great questions involved are quality, intensity, and efficiency of light. Regarded from this point, the magneto-electric is very much the cheaper; that is to say, it gives a great deal more for the money. Moreover, the intensity and penetrative power of the light can be increased indefinitely, at a very small ratio of increased cost.

If space could be afforded to me, I should have no difficulty in showing, by considerations of pure science, that from the very nature of light itself, the magneto-electric light must be enormously greater in penetrative power than the flame of the oil-lamp; but it is sufficient for the present to express my thanks that through the medium of your pages the attention of the general public has

been directed to the facts by which this is being practically proved. F. H. HOLMES.

THE POSTAGE-STAMP.

January 1, 1863.

I am always unwilling to obtrude myself upon public attention with regard to any personal matter; but I venture to trouble you with the statement of a few facts connected with the subject of the Postage-Stamp.

In the *Athenæum* of December the 13th you gave an extract from Dr. Gray's 'Hand Catalogue of Postage-Stamps,' in which he says, "I believe I was the first who proposed the system of small uniform rates of postage, to be prepaid by stamps." Some remarks upon Dr. Gray's statement having been made in the *Athenæum* of the 20th, by Sir Rowland Hill, Dr. Gray, in a letter of the 27th, enters into an explanation to this effect:—that "in the year 1834, when the Newspaper Postage Act was under discussion, the idea occurred to him that as the postage of newspapers was prepaid by means of stamps, the readiest mode of applying those stamps would be by means of stamped covers"; that he "came to the conclusion that the new system of newspaper postage should be extended to letters also"; and that his idea was "in fact, the mere application of the system used with regard to newspapers to letters in general."

I have first to observe, that "the new system of newspaper postage,"—that is, as I understand the expression to mean, the system of paying the postage of an unstamped newspaper by a stamp on its cover,—did not come into operation at all till 1855, when it was enacted that "it shall not be compulsory (except for the purpose of free transmission by the post) to print any newspaper on paper stamped." A really new system was then inaugurated, which is now universally adopted.

Secondly, upon referring to Hansard's Parliamentary Debates, I find no record in the five volumes for the year 1834, that in that year "the Newspaper Postage Act was under discussion." But I do find in Hansard, and also in the 'Mirror of Parliament,' a Report of a debate on the 22nd of May, 1834, upon a resolution moved by Mr. Edward Lytton Bulwer, "That it is expedient to repeal the Stamp Duty on Newspapers at the earliest possible period." In that debate, Mr. Matthew Davenport Hill, then Member for Hull, in advocating the payment of a penny upon an unstamped newspaper sent by post, said as follows: "To put an end to any objections that might be made as to the difficulty of collecting the money, he would adopt the suggestion of a person well qualified to give an opinion on the subject,—he alluded to Mr. Knight, the publisher. That gentleman recommended that a stamped wrapper should be prepared for such newspapers as it was desired to send by post, and that each wrapper should be sold at the rate of a penny by the distributors of stamps, in the same way as receipt stamps." (Hansard, vol. 23, p. 1214.)

I have to add that the recommendation alluded to by Mr. M. D. Hill was made by me in a private letter to Lord Althorp, then Chancellor of the Exchequer.

In 1837, in their Ninth Report, the Commissioners appointed to inquire into the management of the Post-office recommended "the free circulation of letters by the *two-penny post* under stamped covers." Mr. Rowland Hill was examined before these Commissioners, having then published the second edition of his celebrated pamphlet, disclosing his project for penny postage. In that second edition (to which Dr. Gray refers in his last letter) is the following statement: "A few years ago," says Mr. R. Hill, "when the expediency of entirely abolishing the newspaper stamp, and allowing newspapers to pass through the Post-office for a penny each, was under consideration, it was proposed by Mr. Charles Knight, the publisher, that the postage on newspapers might be collected by selling stamped wrappers at a penny each. Availing myself of this excellent suggestion, I propose the following arrangement: Let stamped covers and sheets of paper be supplied to the public from the Stamp office or Post-office, as may be most

convenient, and sold at such a price as to include the postage: letters so stamped might be put into the letter-box, as at present."

CHARLES KNIGHT.

THE DEATH OF ADMIRAL VILLENEUVE.

January 1, 1863.

THE accusation brought by some persons against Napoleon, that the death of Admiral Villeneuve must have happened with his sanction, "and even under his very orders" (which has been rejected by Sir Edward Cust), would receive a strong contradiction if the letter, said to have been written to Napoleon by the Admiral when detained at Rennes, were genuine, as the following extracts from it will show:—

"Sir,—You ought to recall to your recollection that when Latouche died at Toulon, I held the command at Rochefort, and hesitated to take his place. I was at that time fully convinced that, whosoever might have to execute the dangerous and badly-conceived plan of operations for the combined fleets of France and Spain, he would be disgraced as well as defeated, should his unlucky star cause him to outlive an action (almost inevitable) with an enemy who were accustomed to conquer, and whose cruisers covered every sea. . . . On the orders which were given me the 24th of September last, to return to Toulon with the combined fleet (and we were watched by the English fleet), I replied that these orders should be executed; at the same time I reminded the Minister of my first resignation, and of my fears of the doubtful results of any engagement by sea; and I informed him of my resolution, whether I should prove to be victorious or vanquished, to retire for good from a post of danger, which my principles and your harsh and impetuous character would not suffer me to hold. . . . When, in the midst of your fortunate and ambitious operations in Germany, my report was laid before you, did you not, with your usual warmth and rigour, exclaim: 'I see it is absolutely necessary to make an example of this French Byng before victory will become the order of the day with my fleets'? A thousand voices have repeated these harsh expressions—this sentence of death pronounced upon a French admiral by a foreign and savage usurper, while my despatches are kept behind, and have, perhaps, never been read at all: despatches containing some unpleasant truths, which would not have added to the lustre of your military and nautical talents, but which would have shown that the same incapacity, the same ambition, which had caused the loss of one French squadron at Aboukir had also caused the loss of another squadron at Trafalgar. . . . During the four years which your tyranny has lasted, my country and its allies have already lost a greater number of war-ships than the royal marine possessed during a great part of the long reigns of Louis XIV. and Louis XV.; and if France should long remain under your iron rule her marine will go the way of her commercial marine; and we shall find in our seaports only infamous pirates and ruined merchants. . . . The tone of this letter will convince you that the writer is beyond the reach of your vengeance, and has no reason to fear your dungeons, chains or executioners. The order given me by your Minister not to come near Paris without your express permission has deferred the moment of your punishment and the deliverance of the human race. I was resolved not to survive the ruin of the French Navy, and I had decided to kill you before destroying myself for having been your instrument, and for having contributed, by forgetfulness of my duty and my birth, to my own personal dishonour and the disgrace of my profession. . . . As you are one of the greatest criminals on the earth your death will be sudden and terrible. An avenger or executioner will put an end to a career of atrocities which to the shame of our age you have too long pursued. In order that future generations, who may blame some parts of my life, may not be ignorant of the sincere repentance and patriotic feelings which I feel at the hour of death, copies of this letter have been sent to several officers of the French Navy.

If your death had preceded my suicide, not only the present generation, but all future time would have proclaimed me a liberator and revered me as a deliverer. Altars and statues would have risen in memory of me. Tremble, tyrant! You are abhorred, and the curses of mankind will follow you to the grave!"

This letter is copied from the 'Tableau de l'Histoire de France,' vol. ii., pp. 484-487, published in 1815; but I do not find any notice of it either in the 'Biographie Maritime,' by Hennequin, published in 1837, nor in the Article 'Villeneuve,' written by Hennequin in the 'Biographie Universelle,' in 1827; nor in the 'Annales Maritimes,' nor in the work of Admiral Julien de La Gravière; nor is it noticed by the 'Sergent Guillemard,' though it must be confessed that such a testimony would be very questionable, since the statements he made respecting Villeneuve's reported assassination, enlarged upon by Ladier in 1825, are allowed by the same Ladier to be false, together with his own embellishments, in a letter he wrote in 1830, which is published by Hennequin in the 'Biographie Maritime,' vol. iii. p. 508. The story reported by O'Meara, in 'A Voice from St. Helena,' vol. i. p. 56, on the authority of Napoleon, of Villeneuve's having studied anatomical drawings, in order to ascertain the exact position of the heart, and of the "spiggle" he used, does not appear of much weight; but some might think it singular that Napoleon should make no mention of the above letter, nor of that written by Villeneuve to his wife, which proclaims the same intention of committing suicide, a copy of which is given by Hennequin in the 'Biographie Maritime,' and is said to be taken from the registers of the police. The former letter indeed Napoleon might not have been inclined to notice, but why ignore the latter? Are they both forgeries? Is the story of the six wounds true? It is remarkable that, though Hennequin mentions the letter to his wife, and admits the suicide, he speaks of the Admiral's death being caused by "six coups de couteau"; there is, therefore, a difficulty in reconciling these statements and omissions; but if either of the two letters of Villeneuve be genuine, it will suffice to establish the probability of his death having been caused by his own hand.

GARDNER WILKINSON.

BISHOP COLENZO ON THE PENTATEUCH.

Brandon Towers, Belfast, Jan. 1, 1863.

OF late I have frequently heard the remark made by thoughtful men, that many of the replies to 'Bishop Colenso on the Pentateuch' are calculated to do more harm than good. It strikes me this is the case with the letter which appears in your last number. Your correspondent, Dr. Forbes, affirms that the Bishop "has demonstrated a consistency in error pervading every part of the Exodus narrative which absolutely forbids our accepting its arithmetic in the form in which it is now presented to us"; but he avoids the conclusion, that "the narrative is therefore *unhistorical* and *uninspired*," by a theory which, though certainly ingenious, receives no support from the Bible or from the history of the Hebrew text. It would have been well had both he and Bishop Colenso examined the Scripture passages, and the facts and numbers recorded in them, with a little more attention, ere they charged them with error. I have no hesitation in affirming that a sound and searching criticism will be found triumphantly to establish the authenticity of the whole Pentateuch in spite of all the arithmetic of Bishop Colenso. Your Correspondent instances three points in the sacred narrative which the Bishop has proved to be positively and palpably erroneous. Truth and justice demand that we give them a full and fair examination before we agree with him.

The first point is, "the improbability, not to say impossibility, of seventy souls multiplying in the course of 215 years into a population of about or over two millions." I maintain that there is no impossibility here; and I also maintain that there can be no error in the numbers, because the whole tenor of the narrative leads us to expect an enormous increase.

Let us look at a few facts. We are told that a

special blessing of vast increase of his seed was repeatedly promised to Abraham (Gen. xii. 2, xv. 5, xvii. 6, xxii. 17), and renewed to Isaac (xxv. 23) and Jacob (xxviii. 14, xxxii. 12, xli. 3). We are told that this blessing rested specially on the Israelites in Egypt (Exod. i. 7). We are told that "Joseph saw Ephraim's children of the third generation; the children also of Machir, the son of Manasseh, were brought up upon Joseph's knees" (Gen. l. 23). Joseph was about 34 years old when his sons were born (Gen. xli. 46-50), and he died aged 110 (l. 26). Hence it follows that in this instance the fourth generation was born, and four generations were alive together, only 75 years after the descent into Egypt. We are told (1 Chron. vii. 22-27) that Joshua was the tenth in descent from Joseph; that is, there were ten generations within the 215 years' residence in Egypt. Again, Nahshon, who was prince of the tribe of Judah at the exodus, was of the sixth generation, and not through the line of eldest sons (1 Chron. ii. 3-10). We have many incidental proofs that the Israelites married very young, and that three and four generations were often alive together (cf. Num. ii. 18, Exod. xvii. 8-16).

These facts prepare the way for a true estimate of the Israelites at the exodus. We are not to form our estimate according to what is probable or usual under ordinary circumstances, but according to what is possible under such extraordinary circumstances. Now suppose that the Israelites remained in Egypt only 215 years. This will give seven generations of nearly 31 years each. Suppose that each man had, on an average, four sons at the age of 30; Benjamin had ten before that age. Suppose further, the number of the males who went down, and afterwards became fathers, to be 67. Calculating upon these data, the number of souls at the exodus would amount to 2,195,456. And this does not include the descendants of Jacob's servants, who were doubtless numerous, nor does it take into account additional children born after the father attained the age of thirty, nor the more rapid increase of those born before that age. In many cases besides that of Joshua there may have been ten generations instead of seven. Bishop Colenso cannot deny that this is possible, nor can he deny that the whole tenor of the narrative warrants us in supposing an enormous and even unparalleled increase.

The second point supposed to "demonstrate" an error in the sacred narrative is the estimated size of the camp in the wilderness,—"not much inferior in compass, we must suppose, to London." It is assumed that the whole two millions of people were grouped close together in a camp. This is opposed alike to the whole tenor of the narrative and to common sense. Any one who has had an opportunity of visiting the great Arab tribes of the Syrian desert can see that the Bishop's difficulties are here purely imaginary. The Israelites had immense flocks and herds (Exod. xii. 38); these, from the necessity of the case, and like the flocks of the modern Bedawin, were scattered far and wide over the peninsula, and probably over the plain northwards. On one occasion I rode for two successive days in a straight line through the flocks of a section of the Anazeh tribe, and the encampment of the chief was then at a noted fountain thirty miles distant at right angles to my course; yet the country was swarming with men and women, boys and girls, looking after the cattle. In like manner the great bulk of the Israelites would be scattered over the desert. The camp would thus be a mere nucleus; large, no doubt, but not approaching the exaggerated estimate of Bishop Colenso. Yet, being the head-quarters of the nation, containing the Tabernacle, the priests and the chiefs, and forming the rallying-point for the warriors, it was the only place with which the sacred historian was concerned. This view, which is natural, Scriptural, and in accordance with the universal practice of Oriental nomads, sweeps away a host of difficulties conjured up by the imagination and then supported by the arithmetic of Bishop Colenso.

The third point is thus stated by your Correspondent:—"But the climax of inconsistency between facts and figures is reached, when we come

to the notice by the Lord to Israel contained in Exod. xxiii. 29, 'I will not drive them (the nations of Canaan) out from before thee in one year, lest the land become desolate, and the beast of the field multiply against thee,' and are reminded that by the present numbers (without reckoning the aboriginal Canaanites, 'seven nations greater and mightier' than Israel itself) Canaan would be as 'thickly peopled as the counties of Norfolk, Suffolk and Essex' at the present day. It is impossible not to see that on the very face of the narrative a population is pre-supposed widely at variance with the numbers at present existing in the text." It was with no little astonishment I found such an acute writer indorsing this argument of Bishop Colenso. The argument is,—The Israelites numbered *two millions*. Canaan contained only 11,000 square miles. To suppose that with such a population the land could become desolate, or the beast of the field multiply, is absurd. It is further stated, by way of illustration and proof, that Natal contains 18,000 square miles and only 150,000 souls, yet most of the wild beasts have been exterminated.

Here is at once the greatest and most inexcusable blunder in the Bishop's whole book. He takes his estimate of the size of the land from Dr. Kitto, and it is accurate so far as concerns the portion divided among the tribes by Joshua, but that is not the land referred to in Exod. xxiii. 29. Had he looked at verse 31 of that chapter he might have been saved from a blunder of which he may well feel ashamed. The boundaries of the land alluded to are there given:—"From the Red Sea unto the sea of the Philistines, and from the desert unto the river." They were defined before in the promise to Abraham (Gen. xv. 18):—"From the river of Egypt unto the great river, the river Euphrates." That land is 500 miles long by 100 broad, and contains about 50,000 square miles; or nearly *five times* Bishop Colenso's estimate!

Further, the population of that country at the present moment is about two millions, or about equal to the number of the Israelites at the exodus; and I can testify that *more than three-fourths* of the richest and the best of the country lies *completely desolate*. The vast plains of Moab and Esdrælon and the whole valley of the Jordan are without an inhabitant. In the plains of Philistia, Sharon, Bashan, Coelosyria and Hamath, not *one-tenth* of the soil is under cultivation. In one section of Bashan I saw upwards of seventy *deserted* towns and villages. Bishop Colenso says that though the population of Natal is so small, most of the wild beasts have long ago disappeared, and the inhabitants are perfectly well able to maintain their ground against the rest. He forgets, however, to thank gunpowder and the rifle for this. Had the people of Natal contended against the wild beasts as the ancient Jews did, with spears and arrows and slings; had the chiefs of the colony been forced to fight African lions as David fought the lion that attacked his sheep, when he caught him by the beard, and smote him and slew him (1 Sam. xvii. 34), the Bishop would have had a different tale to tell this day. Many of the wild beasts have disappeared from Syria, but many still infest the country. In the plain of Damascus wild swine commit great ravages on the grain. This is the case along the banks of the Jordan and in other places. On the sides of Anti-Lebanon I have known the bears to destroy whole vineyards in a single night. When travelling through some districts of the country my tent was surrounded every night by troops of jackals and hyenas, and more than once they have left me without a breakfast. With my own eyes I have seen jackals dragging corpses from the graves beneath the very walls of Jerusalem. Were it not that the peasants are pretty generally armed with rifles, the grain crops and vineyards in many parts of Syria would be completely destroyed by wild beasts.

The public will now see how very little Bishop Colenso knows of Bible lands, and how wise and good was the Divine promise, "I will not drive them out from before thee in one year, lest the land become desolate, and the beast of the field multiply against thee."
J. L. PORTER.

Edinburgh, Jan. 1, 1863.
WOULD you permit me a word of explanation in reference to my letter on Bishop Colenso in the *Athenæum*? I wish to state—lest I should mislead others to trust on what I myself was misled to place reliance, by finding repeated in so respectable a work as Carpenter's 'Scripture Difficulties,' the quotations from Sir William Jones and Diodorus Siculus made by the Author of 'Scripture Illustrated by Natural Science'—that on verifying these (which want of leisure had before prevented me from doing), I find that most of the quotations are inaccurate and cannot with fairness be adduced as lending much confirmation to the explanation suggested of the numerical difficulties. The strongest undoubtedly is the discrepancy between the two statements in Diodorus Siculus of 470 native kings from the time of Moeris and only 47 tombs, which are at once brought into harmony by cutting off the cipher from the larger number.

But let the argument be rested on the internal evidence derived from the Mosaic narrative itself, and the perfect consistency which the proposed explanation introduces into all the details, and I have no fear of the decision to which every candid mind will come.
JOHN FORBES.

ABRAHAM SOLOMON.

A few notes from a friend of Abraham Solomon, the clever young artist who died the other day at Biarritz, will be read with interest. He was born in London, of a respectable but not wealthy Jewish family, with artistic tastes; his brother, Simeon Solomon, and his sister, Rebecca Solomon, both being professional painters. Abraham Solomon was educated at the Royal Academy, of which he was a pupil. The pictures of his which are best known are 'The Rival Beauties,' 'Waiting for the Verdict,' 'The First and Second Class' (2), and 'Found Drowned.' His stay at Biarritz was partly to paint a picture the scene of which is in the locality, but more from the desirability of spending the winter in a warm climate. His health had been failing for some months from heart disease; but his death was unexpected at last, and occurred from a sudden aggravation of serious symptoms, with inflammation of both lungs. He was very much beloved by his private friends, being peculiarly sympathetic, genial and lively, and most peculiarly and remarkably modest; devoted to his art, yet always diffident as regarded himself, and cheerfully and heartily recognizing and proclaiming merit in all others. His conduct in all the relations of life was most exemplary. He leaves a widow to regret her irreparable loss, but no children. Subjoined are some extracts from a letter which he wrote on the 10th of November, in which he inclosed some admirable little sketches illustrative of Biarritz life,—almost his last letter and last sketches. The aspirations in it, and the way in which he speaks of his work in hand, have a deep and melancholy interest, when one thinks of the few days that passed between the date of that letter and the closing of his loved labours in death. "All, indeed, I look for is the *picturesque*, as I trust a large picture I am painting here may in some way testify. It will take me some time, as there are a great number of figures in it; and as we have only been settled here three weeks, it is not as yet more than commenced. The weather is so lovely (bright and sunny as possible, almost summer), that I hope it is likely I may make more way with my work than in London just now, in the midst of November fogs. I am wonderfully better, but still not quite well. I was so unwell on my return from Ilfracombe, that even with the advice I have respecting diet, &c. (which, I believe, is the principal), I can hardly expect to be quite rid of what you heard me complain of, and which, from my usually *robust exterior*, I fancy hardly called, or, indeed, could call forth the sympathy I craved for. I shall be only too glad to be quite well and say no more about it. We are capably housed, right on the sea, which is splendid here always,—earlier in the season, particularly, when one sees, as I hear, four to five hundred fair bathers inducted into the briny ocean something in the manner my sketches attempted to delineate.

I also send another sketch of 'How they teach the young idea,' not to shoot, but to walk. The construction is simple, and certainly not dangerous. The last sketch is the recollection of the only swell left here; I think her rather fine, and the costume might be imitated with advantage. The news here is not, as you may believe, plentiful. All the houses are 'à louer,' which scarcely looks cheerful; but as our art is all-interesting, it hardly affects us. With such wonderful weather, it is astonishing that the season should be over so soon. My wife finds no want of employment looking after me, obstinate as I am; wanting to work ten hours a day, when she will only let me do so half as much. Although the costume here is not specially remarkable, there is a great deal most suggestive, from which I trust to glean some little. The girls are very pretty, and most useful for my style of art,—very Spanish, which in my large picture I have to avoid. It must be essentially French; but I hope to use that characteristic in some smaller work."

OUR WEEKLY GOSSIP.

A chance reference to the *Athenæum* for January, 1833, suggested a brief comparison of the things which excited attention thirty years ago with the affairs which occupy us now. We found the process rather amusing. In the first week of January, 1833, the President of the United States communicated a warlike message to Congress, in answer to a conditional declaration of independence promulgated by the Legislature of South Carolina on the 24th of November, 1832. The quarrel was soothed for the time by a compromise upon the terms of the obnoxious tariff; but the fire never ceased to burn. Thirty years hence, if, as seems likely, the present disunion should become permanent, historians will talk about the progress towards a rupture as if the struggle had been imminent since the time of Washington; but few indeed have been those who, in the years from 1833-60, have really looked upon it as a practical probability. Scott, Crabbe, Mackintosh, Goethe, Say, Rémusat, Spurzheim, are reported among the losses of the preceding year. We see mention of the names and writings of two who are still among us, Dr. Boott and Miss Martineau. We find materials for reviving, were it desirable, the details of a thing of former days, the withdrawal of the free admission from a dramatic critic, because a theatrical manager did not relish his remarks. On one point this journal—in the best of company—made a great mistake. It speaks of the "extinct Napoleon dynasty," and makes *nothing* out of the initials of Napoleon, Joseph, Hieronimus (Jerome), Joachim and Louis. Political prophecy is like a journey to Corinth—*non cuius contingit*. There is a remark upon Cowper which is suggestive. The reader is recommended to compare the first edition of the translation of Homer with the last, to see how often, by a fortunate touch, he communicated life and strength to a weak or obscure point, and how frequently he dismissed lines, rough but happy, for others more polished and harmonious. We have sometimes thought a useful collection might be made out of the rough drafts which have been published long after the finished work had obtained its fame. The *Livre des Cent-et-Un* is in its ninth volume, now. We hear of the first part of Charles Lamb's article 'On the total Defect of the quality of Imagination observable in the works of modern British Artists.' There are more artists now who can write than there were, and British Art has thriven well since thirty years ago, so that it can both attack and defend itself. Another little squabble was the abolition of the distinction of seats at the Philharmonic Concerts, and the anger of the exclusives thereat. The opening of the Gallery of Practical Science in Adelaide Street, with Perkins's steam-gun and other rarities, will now look like a forerunner of much more extensive Exhibitions. The eminent success of 'Nell Gwynne' at Covent Garden, by "Mr. Jerrold," is announced. In law the baptismal name is the name; we now begin to be aware that the surname is what a man pleases, even though the Lord Chancellor himself should declare it to be the Queen's prerogative.

gative. But in letters a man must win his way to his Christian name by sheer force of notoriety, of one kind or the other; and at the time we recall, we have no doubt that "— Jerrold, Esq.," was the address of many a letter sent to the author of 'Black-Eyed Susan.' In the *Athenæum* for January 5, 1833, No. 271, by which it is apparent that the journal had then existed 5 years and 11 weeks, there are 16 pages published at fourpence. Few serials had then beaten us in cheapness; but the journal of that day looks small, as to quantity of matter, compared with what it is to-day. Taking our issue (No. 1834) for December 20, 1862 (the day on which we are making these notes), we find 40 pages at three-pence. To this it must be added that our large-type columns are now 4 lines longer and 4 letters broader. No. 271 gives 37 columns of reading and 11 columns of advertisements; No. 1834 gives 52 columns of reading and 68 columns of advertisements. Thirty years ago our readers got 12 columns for a penny; on the 20th of December last they got 40 columns for the same sum.

We learn that it is the intention of several ethnologists of the more advanced liberal school to found a new Society, to be entitled the "Anthropological Society of London," upon the model of the Société Anthropologique de Paris. The support of many of our best ethnologists has already been given to the new plan.

Mr. J. J. Sheahan, the author or editor of 'A History and Topography of Buckinghamshire,' recently published by the Messrs. Longman, has placed in our hands some direct evidence on the question as to whether Mr. Disraeli was or was not connected with the *Representative* newspaper. Mr. Sheahan had to submit to Mr. Disraeli for revision a brief biographical notice, in which he had copied the ordinary books of reference as to that story. Mr. Disraeli replied: "I have made no additions, and have only taken the liberty of correcting and condensing what you have so obligingly said of myself. I have made it a rule throughout life never to attempt to correct a misstatement respecting myself, provided it did not impugn my honour; but when utterly erroneous statements are submitted for my sanction, I hope there is no egotism in my presuming to correct them—as, for example, the constantly-repeated story of a newspaper called the *Representative*, in which I never wrote a single line, and never was asked to write a single line, and others." Unless there is some error in this account, Mr. Disraeli's note settles the question, and puts an end, authoritatively, to a bit of contemporary gossip.

We hear from the best quarter that the complaint of our Dresden Correspondent as to the clause of the new Postal Treaty between England and Prussia raising the cost of sending London journals into Germany is founded on misconception of some kind. The German version of the Treaty may have been imperfect, or he may have read it hastily. It is true that the postage on books and papers for the German States must now be paid in advance; but for all papers under four ounces in weight, the rate will be 2d. This will be the case with the *Athenæum*. A twopenny stamp being affixed to it in London, the Prussian Post-office will be bound to deliver it to the subscriber free of charge.

Among the papers to be read next Thursday at the Royal Society, we notice one by Mr. Francis Galton, 'On the Theory of Cyclones,' an important meteorological question. Another by Dr. Pavy may be described as an attempt to answer the question—"Why does not the Stomach Digest itself during Life?" This is an inquiry which has long engaged the attention of theoretical and experimental physiologists; and we should be glad to see the answer established on some more definite and satisfactory proposition than that of the "protection afforded by the living principle."

But a few weeks since we announced the award of the Royal Society's Copley Medal to the Master of the Mint, for his valuable contributions to chemical science, particularly his paper 'On Dialysis.' A recognition of their merit and importance has just been received from across the Channel, in the form of a communication from the Institute

at Paris, stating that the Jeckers Prize has been adjudged to Mr. Graham. The Copley Medal, which Davy called the "ancient olive crown" of the Royal Society, is of small value intrinsically. The Jeckers Prize is five thousand francs.

The municipality of Florence have done honour to themselves and to the memory of Mrs. Barrett Browning by placing a marble slab in the wall of the house she occupied in that city. The slab bears an inscription in Italian to this effect:—Elizabeth Barrett Browning lived, wrote and died in this house. She was a woman who, with a woman's heart, possessed the wisdom of a sage and the spirit of a true poet, and made her poetry a golden band between Italy and England.

One of our letters from Rome has some gossip about the visit of the Prince of Wales. The Prince ran round the studios with the ease of a private gentleman. He bought only two pictures,—one from Penry Williams, the other from Rudolph Lehmann. At the studio of the latter an incident occurred which exhibits the thoughtfulness and goodnature of the young Prince. Mr. Lehmann was arranging his room, and whitewashing his lobby, when an Italian *valet de place* rushed in upon him announcing "Il Principe Inglese!" The artist was a little embarrassed; the Prince tried to put him at his ease by asking to see his book of portraits. Even that was at home,—not at the studio. Mr. Lehmann offered to go and fetch it. "How long will it take you?" asked the Prince.—"A quarter of an hour."—"Then I will wait with pleasure." The Prince lit a cigar, and Mr. Lehmann rolled home in the Prince's carriage. Louis the Fourteenth, under a similar trial, had to say "J'ai failli attendre." The Prince sat out the time, and bought one of the unfinished pictures on the wall; the artist returned, and had the honour of a sitting and an invitation to dinner. A portrait of the Prince of Wales has been added to Mr. Lehmann's remarkable book of contemporary heads.

The Indian Council have decided on a Submarine Cable across the Persian Gulf. They have not given over this national work, as usual, to any company, contractor, or *concessionnaire*. The management is intrusted to Col. Stewart, one of their own officers. The core will be gutta percha, made at the Gutta Percha Company's Works, Wharf Road. It will be tested by Reid's process of pressure equal to the depth of sea where the cable is to be laid. Mr. Henley, of North Woolwich, will make the iron sheathing, and our own Government ships will submerge it.

Mr. Huntly Gordon writes, again:—

January 1, 1863.

"My friend Mr. Murray, with his usual courtesy, has pointed out to me that "I was probably ignorant of the fact that the title of Scott's novel is 'Woodstock, or the Cavalier.' That is precisely the case. I never read 'Woodstock' except in manuscript before it was published, and then it had only one title; the addition of 'the Cavalier' must have been an after-thought. And at this distance of time I did not remember that the Parliamentary General Harrison was introduced and described in one scene, to which Mr. Borrow alludes. I am very sorry to have been "playing at cross purposes" with the Author of 'The Bible in Spain,' which has no greater admirer than the undersigned. But Mr. Borrow should call *things* as well as persons by their right names. If he had spoken of Scott's 'Astrologer,' would any one have guessed that he meant 'Guy Mannering'? I do not presume to enter into a discussion on the literary merits of 'Woodstock,' but it would be easy to prove that though one of Scott's "second-class" tales it exhibits many traits of genius, which I am sorry that Mr. Borrow cannot see.

"GEO. HUNTLY GORDON."

Mrs. Katharine Thomson, who died at Dover of gastric fever on the 19th ult., was the widow of the late eminent physician, Dr. A. Todd Thomson, and daughter of Mr. Thomas Byerley, of Etruria, in Staffordshire. She was known to the public as the author of many works of biography and fiction, the first of which, a 'Life of Wolsey,' was written for the Society for the Diffusion of Useful Knowledge. Her first novel, called 'Constance,' was

published anonymously, and met with success—an animated picture of country life some forty years ago; it also paints the character of Dr. Parr, with whom the authoress was well acquainted. The next two novels published with her name were less popular, and Mrs. Thomson turned to biography. 'The Life of Raleigh,' 'The Memoirs of the Court of Henry the Eighth,' were followed by 'Memoirs of Sarah, Duchess of Marlborough.' The research and reading requisite for these works gave her material for a series of historical novels,—'Anne Boleyn,' 'Raglan Castle,' 'The White Mask,' 'The Chevalier.' In addition to these works she published 'Lives of the Jacobites,' and two novels, 'Tracy, or the Apparition,' and 'Widows and Widowers.' The death of Dr. Thomson, in 1849, put a stop for a time to her literary pursuits. On Mrs. Thomson's return to England, after some years' residence abroad, she published a novel, 'Court Secrets,' founded on the well-known story of Kaspar Hauser, 'Faults on both Sides,' and 'Memoirs of Villiers, Duke of Buckingham.' Her later works were written conjointly with her son, and published under the *noms de plume* of Grace and Philip Wharton, 'The Queens of Society' and 'Wits and Beaux.' The 'Literature of Society,' only just given to the world, was Mrs. Thomson's last production. Her fellow-worker, J. C. Thomson, was accidentally drowned at Tenby whilst bathing.

The building for the Ottoman National Exhibition, which has for some time past been in progress on the Hippodrome, Constantinople, rapidly approaches completion; the roof, which is to be of glass, was expected to be finished by the current week. Many appointments have been made by the Government of officials, and arrangements for the distribution and disposition of space are being considered. A trophy of Albanian arms is to be placed near the entrance of the building, *vis-à-vis* to another formed of cannon and small arms of Turkish Government manufacture. Is this intended as a sort of political hint of the relative value of the two? A great deal of embroidery made in the hareems of the capital is expected, the ladies being reported as ambitious of medals and "honourable mentions." For the admission of ladies a special day will be set apart, when no male individuals will enter: in a like manner, the ladies are to be officially excluded on the remaining days.

The *Kölnische Zeitung* publishes two little poems by the late Ludwig Uhland, the last ones, it is asserted, which he wrote. However short, they are exceedingly beautiful (especially the one inscribed 'Auf den Tod eines Kindes'), and we cannot refuse ourselves the sad pleasure of communicating them to the English friends of the German poet:—

Am Morgen des 27. Mai 1861.

Morgenluft so rein und kühl,
Liesel! tausend allem Volke,
Wirst du dich am Abend schwül
Thürmen zur Gewitterwolke?

Auf den Tod eines Kindes.

Du kamst, du gingst mit leiser Spur,
Ein flücht'ger Gast im Erdenland.
Woher? wohin?—wir wissen nur:
Aus Gottes Hand in Gottes Hand.

—How fine, how sweet, how pure! What a touching evening chime of this noble poet!

Another attempt has been made to explain the mystery of the construction of the Pyramids. The present exponent is Mahomed Bey, a learned Eastern, who states that they were constructed with their present face-angles to receive the direct rays of the star Sirius, which was the Egyptian Judge of the Dead.

A very interesting account has been lately given to the Chamber of Commerce at Lyons of the success attending an attempt to grow cotton at Valence, on the Rhone. The pods are stated to have been remarkably fine, and the staple excellent. It is not generally known that an extreme south latitude is not absolutely necessary to grow cotton: during the long wars of the first Napoleon, the whole of Europe was supplied with Italian cotton, some of which was grown as far north as Tuscany.

Dr. Sighart, Professor in the Lyceum of Freising, has published the first volume of a History

of the Fine Arts in Bavaria, with a complete accompaniment of vignettes and illustrations. Bits of sculpture and architecture, old pictures in various churches and monasteries, are generally the subjects engraved; and as the first volume deals entirely with the earliest times, nothing more perfect could have been chosen. The book is more or less antiquarian, and goes with almost superfluous minuteness into particulars which do not bear very strongly on the main stream of artistic history. But, with the drawback of not being exactly readable, it has an unimpeachable value as a work of reference; and future writers on the art of those early times cannot be too grateful to Dr. Sighart for the facts he has collected, and the engravings with which he has illustrated them.—Another historian of Art, perhaps more widely known as author of a Handbook to Italy, Dr. Ernst Förster, has begun the issue of his Miscellaneous Writings with a series of letters from Italy in the years 1833 and 1837, and a few sketches of travels in England and Scotland during the Great Exhibition. Dr. Förster went to Italy to study the remains of Early Italian Art, both for sketching and historical purposes. The details he gives us of Italian thought and manners at that time contrast strongly with the present advanced state of the liberated nation: the bigotry and prejudice, ignorance of the greatest names in their churches and galleries, and thanklessness towards the strangers who discovered their treasures, show that the people was not yet awakened from its dream of servitude. In Padua, Dr. Förster discovered a series of frescoes in the Chapel of San Giorgio; but his discovery merely caused the people to abuse him as a "bizarro Ultramontano," and no thanks were ever given him by the town. "They even made me pay duty for the colours I got from Germany to restore the frescoes with," he observes. The most interesting part of the volume is the account of a journey through the Papal States during the cholera in 1837, when the peasants took up arms and refused a passage to every one coming from Rome, and patrols had to keep the roads open, and quarantine had to be performed in each village.

SOCIETY OF PAINTERS IN WATER COLOURS.—WINTER EXHIBITION OF SKETCHES AND STUDIES by the MEMBERS NOW OPEN, at their Gallery, 5, Pall Mall East, from Nine till Dusk.—Admission, One Shilling.
JOS. J. JENKINS, Secretary.

WINTER EXHIBITION, 120, Pall Mall.—The TENTH ANNUAL WINTER EXHIBITION OF CABINET PICTURES by living British Artists, is now OPEN daily from 9.30 A.M. to 5 P.M. Admission, 1s. Catalogue, 6d.

MR. JOHN LEECH'S GALLERY OF SKETCHES IN OIL, from Subjects in Punch, with several New Pictures not hitherto Exhibited, is OPEN every day from 10 till dusk, illuminated with Gas, at the AUCTION MART near the Bank.—Admission, One Shilling.—Will Close on the 9th inst.

THE GEORGE CRUKSHANK GALLERY, EXETER HALL, contains a Selection of over a Thousand of his PROOF ETCHINGS, SKETCHES, &c. embracing a Period of upwards of Fifty Years; together with THE WORSHIP OF BACCHUS.—Open daily, from Ten to Five o'clock.—Admission, One Shilling; from Half-past Seven to Half-past Nine in the Evening, Sixpence.

Mr. EDMUND YATES'S INVITATIONS to EVENING PARTIES and the SEASIDE will be issued at the EGYPTIAN HALL, EVERY EVENING (except Saturday), at Eight o'clock. Mr. HAROLD POWER will be one of the party. A Morning Performance on Saturday, at Three o'clock.—Stalls, 3s.; Area, 2s.; Gallery, 1s. The Box-Office is open daily, from 11 till 5 o'clock.

SCIENCE

The Science of Home Life. By Albert J. Bernays. (Allen & Co.)—The idea of Dr. Bernays's book is excellent. What we really want is good books explanatory of the science of every-day life. Liebig's 'Familiar Letters on Chemistry' are an excellent example, but they start from too high a point. Our boys and girls cannot master the great first principles as he enunciates them. Johnston's 'Chemistry of Common Life' is much more attractive and readable. Dr. Bernays has evidently read these two books, and has conceived something between the two; but he has neither the philosophy of the one, nor the minute accuracy of the other. We feel, as we read his book, that we have met with it all before. The parts in which he excels are evidently those processes and details of home life with which he is practically conversant; but, in trying to deal with everything, he treats of subjects which he plainly does not understand. The great fault of all books on che-

tical physiology is the persistent conviction of all chemists, from Liebig downwards, that animal and vegetable bodies are but a congeries of chemical apparatus. Now, there is no doubt that the juices of plants and the flesh and blood of animals undergo chemical changes during their life; but this is not all, and however useful chemical knowledge may be, it is worse than useless to ignore other paths of inquiry, and lay down the laws of life upon chemical principles alone. But we should be doing Dr. Bernays an injustice if we left it to be supposed that he treated of chemical physiology alone. Candles and gas, soap and water, noble metals and base metals, atmospheric air and china, are amongst the subjects on which he discourses familiarly for the benefit of the family. It must not, however, be supposed that this or any other book of science will give information of permanent and practical value unless its teachings are illustrated by facts. In the hands of a class, with a good teacher such as we make no doubt, Dr. Bernays is, the book would be of value.

Treatise on Logarithms. By the Rev. J. Hunter. (Longman & Co.)—This is one of Gleig's School Series. It is a treatise, without tables, and is likely to be useful. It has plenty of examples.

Algebra made Easy. By T. Tate. (Longman & Co.)—This work, with its key, is a new edition of a useful beginner's book.

An Elementary Treatise on the Planetary Theory. By C. H. H. Cheyne. (Macmillan & Co.)—A small but sufficient commencement to a large subject. The planetary theory is one which especially requires to be cut down for beginners by a good hand; and Mr. Cheyne has done it well.

Mathematics for Practical Men. By the late Dr. Olinthus Gregory; edited by Prof. T. R. Young. (Lockwood & Co.)—This is the fourth edition of a well-known work. Mr. Young has presented it like a skilful editor; and this is all we need say.

The Student's Guide to the University of Cambridge. (Cambridge, Deighton & Co.)—This book, besides an account of the Colleges, contains chapters on University expenses, on the choice of a College, on the different courses of reading, &c. It is more to the purpose of a parent who has a son destined for Cambridge than the *Calendar*, though that is not by any means superseded.

Air and Water; their Impurities and Purification. By Henry B. Condy. (Davis.)—Mr. Condy was the fortunate introducer of the permanganates as deodorizing and disinfectant agents. He does not at first appear to have been aware of the real value of the agents he employed; but, by the aid of the experiments of a number of medical and scientific authorities, he has come to the knowledge of the real value of the substances he manufactures. The present essay is an attempt to show how the permanganates act in the purification of air and water. If the account had been correct, it would have been an interesting contribution to sanitary literature; but the author has too much an eye for the sale of "Condy's Fluid" to render his remarks of much value. At the same time, the permanganates present to the chemist a highly interesting field of study, for it is in the permanganic acid of which they are formed that the ozone of Schönbein really exists: for, although Professor Frankland, and those who think with him, can deny the existence of ozone in the air, they cannot deny its existence in these compounds. This active form of oxygen is as powerful a deodorizer and disinfectant as chlorine itself, and in its direct applications is much freer from danger; hence the value of the permanganates in a sanitary point of view. The beautiful and changeable colour of the solutions of the permanganates renders them ready agents as colour-tests; and for the detection of the organic impurities of water and air nothing more available has yet been employed. The theory of their rise is readily apprehended when it is known that the atoms of oxygen which exist as ozone in the permanganates are consumed or destroyed by contact with organic matters, the bright and beautiful permanganates being converted into dull and dirty manganates. From what we have said, it will be seen that these new salts possess properties worthy of being studied; and whilst we strongly recommend the substances

manufactured by Mr. Condy, we warn our readers that they will gain little by what he has written.

MEETINGS FOR THE ENSUING WEEK.

| | |
|--------|--|
| Mov. | Entomological, 7. |
| Tues. | Ethnological, 8. |
| — | Civil Engineers, 8.—'Railway Telegraph,' Mr. Preece. |
| — | Royal Institution, 3.—'Air and Water' (Juvenile Lectures), Prof. Frankland. |
| — | Photographic, 8.—'Photography and Magic Lantern Educationally considered,' Mr. Highley. |
| Wed. | Geological, 8.—'Lower Carboniferous Brachiopoda, Nova Scotia,' Mr. Davidson; 'Gravel Deposits, Ludlow, &c.,' Mr. Curley; 'N. Extension of Upper Silurian Passage-Beds to Lindley, Salop,'—'Crustacean Tracts, Old Red Sandstone, Ludlow,' Mr. Roberts. |
| — | Royal Society of Literature, 8. |
| Thurs. | Royal Academy, 8.—'Architecture,' Prof. Spink. |
| — | Royal Institution, 3.—'Air and Water' (Juvenile Lectures), Prof. Frankland. |
| — | Royal, 8.—'Monamines V.,—Action of Iodide of Methyl on Aniline, VI.,—Transformation of Aniline into Benzoic Acid,' Dr. Hofmann; 'Synthesis of Leucic Acid,' Dr. Frankland; 'Theory of Cyclones,' F. Galton; 'Immunity enjoyed by the Stomach from being Digested,' Dr. Pavv. |
| — | Antiquarian, 8. |
| Fri. | Archæological Institute, 4. |
| — | Astronomical, 8. |

FINE ARTS

ARUNDEL SOCIETY.

THE Arundel Society's publications for the current year appear with greater punctuality than heretofore, and are of unusual importance. The map-like outlines from portions of old works of Art, for a long time among the customary issues, are, we are glad to believe, not to be again employed; their value under any circumstances which permitted the use of another means of record is very doubtful, even if produced by some highly-skilled artist; while the process of tracing adopted for them is about the worst that could be devised. Instead of these wiry outlines, we get a clear and beautiful engraving, by Herr Schäffer, of a drawing, by M. Kupelwieser, from Fra Angelico's fresco 'St. Stephen distributing Alms,' in the Chapel of Nicholas V. in the Vatican. Of this and like works executed at that place by Angelico, Vasari says, "Many and various labours having rendered his name famous throughout all Italy, he was invited to Rome by Pope Nicholas V., who caused him to adorn the chapel of the palace, where the Pontiff is accustomed to hear Mass, with a 'Deposition from the Cross' and with certain events from the life of San Lorenzo [he should have added St. Stephen], which are admirable." About the same time, it would appear from the context, Angelico executed several fine illuminations, such as the Arundel Society published last year. With these and other works the Pope was so delighted that, finding the painter to be "a person of most holy life, modest and gentle," he desired to make him archbishop of his native city, Florence, which office Angelico escaped with some difficulty, and by recommending his friend the Frater Antonino, "a man well skilled in the art of governing others, a friend of the poor, and one who feared God,"—a recommendation so worthily answered by the event that about eighty years afterwards he was canonized by Adrian VI.

Angelico was certainly at the time (about 1446) this picture was painted in the most admirable and perfect possession of his characteristic power as an artist, for if it does not quite equal the splendid frescoes that still glorify the walls of St. Mark, at Florence, in spirit and largeness of treatment, this work may be accepted as expressive of the peculiarities of his style in general, more even than those works are. In the course of his visit to Rome the Frater painted two chapels, one of which only is preserved. This one contains five pictures, representing the lives of SS. Lawrence and Stephen. That of 'St. Stephen Preaching,' companion to the one engraved now, is full of expression and sweetness. The Society has already published similar engravings from this series representing St. Stephen before the Council, St. Lawrence distributing alms, the same before the Emperor Decius, together with the SS. Matthew and Bonaventura, by the same. In the work before us the Deacon is standing at the gate of the church; we see part of a Florentine street of Angelico's time, with the high-walled garden whose taller trees look over a group of rounded or angular towers and lofty four-square

palaces of the plainest form,—a street-view probably as well known to those who lived in the painter's day as the Strand is to us. In the 'St. Stephen Preaching' is a somewhat similar background; that of 'St. Lawrence distributing Alms' gives us a vista of the nave of a Renaissance church, with a semi-dome to the distant apex that is lighted with five high windows,—a locality doubtless as well known as the street-views were. The great charm about this work is the exquisite simplicity and naturalness of the expressions: the recipients come for their dole with the confident grace of people who are neither shamed nor degraded by the gift. Now-a-days it is hardly needful to say anything in honour of this marvellous and pure painter; but what was the state of public feeling about him sixty years ago may be guessed from a remark of Lanzi's, that "he was truly the Guido (!) of his age."

The Arundel Society continues to publish the scores of transcripts from the frescoes in the Brancacci Chapel, Florence; the present instalments comprise a chromo-lithograph from Masolino's double-subject picture of 'SS. Peter and John healing the Cripple, and St. Peter raising Petronilla,' well known for its grace, spirit, dignity and expressiveness. The two young Florentines, dressed in the fashion of the painter's day, who walk conversing through the street as if two miracles were not going on at their elbows, are charmingly beautiful in design and full of character. Their introduction, and that of similar figures, has a touch of pictorial satire such as the old painters delighted in, and no doubt often brought a thought of the lasting miracle of life to the minds of their contemporaries when they thus saw themselves painted as lost in the world and wrapped up in robes of pleasure: this motive is well expressed by the way in which the youths carry their arms folded under their mantles, while saints and apostles preach in vain. As in the foregoing, we are here given a glimpse into a Florentine street which is very curious. The self-coloured houses with the small, high-placed, and barred windows to the lower apartments, the glassless and shuttered windows, some open, some half and some wholly closed, the linen hanging over the sills, the two chained monkeys who gambol at the windows, the priest in black robes, the lady with the little child talking as they go, the people kneeling in the distance—for they afar off see the miracle—all make up a picture. Masolino da Panicale is said to have been one of the instructors of Masaccio, and was himself taught by Lorenzo Ghiberti, to whom one can see in such works as this the amount of his debt, and so trace the source of much of its character; it resembles in more points than one the panels of the famous Gates by Ghiberti.

The Brancacci Chapel deserves the attention the Arundel Society has given to its pictures from the fact that they were begun by Masolino, continued by Masaccio, and completed by Filippo Lippi, whose picture of 'St. Peter in Prison visited by St. Paul,' from which Raphael borrowed the 'Paul Preaching at Athens,' and 'St. Peter delivered from the Prison by the Angel,' form portions of this year's issue. The last is the most satisfactory of all the current transcripts. The Angel's grace of action and character of face are charmingly rendered.

We observe with much satisfaction that the affairs of this Society are in a flourishing state, and that beyond a doubt it will be able to preserve creditable records of numerous works of Art which time has long grudgingly spared, and which neglect is sure to destroy ere long. Not only this, but the fact that the Society is thriving indicates the existence and increase of a feeling for those noble and purest works in the art of painting which the world knows.

The thirteenth Report of the Society states that the following works are in hand: 'The Conversion of Saul' and 'Stoning of St. Stephen,' from the tapestries after Raphael in the Vatican, of which the original cartoons are wanting at Hampton Court. These are to be engraved. Chromo-lithography will present a copy from Benozzo Gozzoli's fresco at St. Gemignano of 'St. Augustine

Preaching.' Copies for future use and publication have been obtained from Perugino's 'Adoration of the Kings,' at Città della Pieve, and six frescoes by Mantegna, in the Eremitani at Padua: two representing the Martyrdom of St. Christopher, the others scenes in the lives of SS. James the Great and Less: also four drawings from frescoes by Cimabue, Buffalmacco and Simone Memmi, in the church of St. Francis at Assisi, the series of which is to be continued; together with copies of four frescoes by Luini, at Sorano, the best works of the master.—The Society has this year published a fine reduction, in plaster, from the head of one of the horses in the eastern pediment of the Parthenon.

FINE-ART GOSSIP.—As usual about this time, some noteworthy pictures have been added to the Winter Exhibition at the French Gallery. These tend considerably to improve its character as a collection of interesting works of Art; there are still, however, a great many paintings that ought never to be exhibited at all. M. Trayer's *Dressing Dolly* (23) needs no description: it is a charming, childlike personation, showing good feeling for colour, a little more solid than the work of the artist generally is.—Mr. Linnell's *Windy Day* (64) is a landscape treated with a rich semi-Venetian warmth of colour, with glowing earth, overarched by deep blue firmament, wherein swim giant masses of white cloud.—Mr. J. C. Hook's *Rustic Courtship* (87), previously exhibited, is one of the best of his Devon studies: a glowing combe, upon whose verdant sides a shy girl and boy are chatting, while the silver-fleeced sheep stray idly by. Right across the sloping removed side of the combe goes a line of dark, grave pines, shutting in almost entirely the vista, and marking the landscape with a strong purpose, as of thought, beyond its richness and redundancy. *Arming the Chevalier Bayard* (246), by the same, is one of the painter's Venetianesque pictures, such as he wisely ceased to produce some years ago.—Mr. Creswick's *Tees, near Barnard Castle* (180), is somewhat mannered, but otherwise renders the swift rush of the river over its grey-stone bed, stark and bare of moss as that is, with felicity.—Mr. J. Campbell's *On the Way to the Fair* (156), two performers with "Punch" wending over a heath, and stared at with characteristic faces by some native children, has remarkable feeling for expression in the locality, actions and faces. Nothing can be better than the visage of the "short" man who bears the musical instruments, unless it be the lathy figure and lugubrious countenance of his companion, who carries the theatre itself. Mr. Campbell, who can draw and paint a face or a head with both care and beauty, and can enter fully into the phases of human character that express themselves in the cut of a man's hair, the turn of his wrists, the fold of his cuffs, the set of his neck-cloth or the wearing of his trowsers, is incapable of putting a man on his legs.—Mr. Hodgson's *Study of a Head, A Devon Man* (134), is well painted and full of character.—M. Duverger's *Broken Pitcher* (248), a boy lamenting spilt milk, has humour and excellent painting. Nothing can be better expressed than the grief of the blue-bloused youngster who rubs his eyes so vigorously. *The Juvenile Toilette* (246), by the same, is a charming little picture. A very juvenile Frenchman is seated on a chair, while he most sedulously and seriously ties his boots on. His gravity is admirably given, the action of the figure most truthful, the colour excellent in the rich low key the French *genre* school delights in. M. Duverger, always more solid in his manner of painting than M. E. Frère, produces works generally less obnoxious to the charge of "over-sweetness" or varnishy treatment than those by the last. In these instances he quite equals M. E. Frère in humour and character.

The Academy of the Beaux Arts, at its last sitting, elected as a Corresponding Member, Mr. John Pye, surveyor, of London.

The church of Bray, Berkshire, not unknown by association of ideas with the office of a certain Vicar, has been restored. A new roof has been placed; the walls heightened; intruding and un-

sightly walls so situated as to interfere with both sight and sound have been removed from the interior, and the edifice made stronger than ever by additional arches and buttresses. Other interior improvements have been effected; we do not hear, however, that the famous vane has been removed, or made to go more easily on its pivot.

Notre Dame, Paris, was, after being closed for "restoration," re-opened to the public on Christmas Day. The decorations are of the richest and most effective, if not the most perfect, order. The most remarkable addition to the edifice has been the monument to Monsignore Affre, Archbishop of Paris, who, in 1848, died upon the barricades with the words "May my blood be the last shed." A life-size statue of the Archbishop has been placed upon a pedestal. He is represented falling upon a barricade holding an olive-branch in his right hand and in the left the crucifix. On the side facing the choir is written, "Denis Auguste, Archbishop of Paris, born 28th of September, 1793; died, the victim of charity for his flock, the 28th of June, 1848." The design of the monument is quite out of character with that of the surrounding cathedral.

The Italian Government, desiring to mark its sympathy with modern progress in the Arts, and in the hope of completing one of the most famous architectural monuments in the country, has invited architects to send in by the beginning of the year (1863) designs for the completion of the west front of the Duomo at Florence. This invitation has not been restricted to Italians living at home or in foreign countries, but the competition, which embraces three grades of premiums, has been thrown open to the world, and several distinguished French architects are understood to be about to compete. Amongst the Englishmen are, we believe, Mr. Papworth and Mr. Burges, the last successful competitor for the Memorial Church at Constantinople, and, with Mr. Clutton, for the Cathedral at Lille. Mr. Burges is also known as the successful restorer of Waltham Abbey. The restoration of the Duomo at Florence, or rather the finishing of its west end, has been an architectural problem for several centuries. Arnolfo da Lapo began it in 1294, and before his death in 1300, probably, carried it as far as the springing of the vaults. The nave and smaller domes of the choir may have been built in the next twenty years. Arnolfo, after the fashion of Mediaeval architects, left no drawings to show how the work was to be completed. Brunelleschi took the work in hand, and covered in its magnificent "crossing" with the present enormous dome, an octagon. Mr. Fergusson suggests that Arnolfo intended to use an octagonal dome-tower, diminishing in stages and surmounted by a spire, the whole to be about 500 feet high, after the general fashion of Chiavalle, near Milan, a contemporary work. The proper method of completing the west front is open to much discussion, and will doubtless engage the attention of many architects.

MUSIC AND THE DRAMA

CHRISTMAS PIECES.—Within the last half-century quite a new branch of literature has grown up in the shape of pantomimes and burlesques, which are now required in such numbers that the professional authors who regularly engage themselves in such compositions are greatly in request. Some of these writers are called on to provide more than one such work for the Christmas season. Mr. H. J. Byron, one of the most skilful of the punsters in burlesque dialogue, is the author this year of no fewer than four Christmas pieces. At COVENT GARDEN we meet with him as the author of a burlesque opening to a pantomime entitled 'Harlequin Beauty and the Beast; or, the Gnome Queen and the Good Fairy,' in which Mr. Byron has presented the public with an original and ingenious treatment of a familiar subject, which, assisted with some beautiful scenery by Mr. William Callcott, has proved very successful. At the ADELPHI, the same clever writer has allegorized the story of 'George de Barnwell,' as he has chosen to dignify the name of the youth who murdered

his uncle, as the introduction to a pantomime; and, throwing it, like John Bunyan, into a dream, has contrived to wring a better moral from the subject than Lillo found in it. At the STRAND, Mr. Byron has ambitiously travestied the romance of 'Ivanhoe,' modifying the characters "according to the spirit of the times," and has succeeded in producing a magnificent caricature, which is likely to crowd this little theatre nightly to inconvenience. And lastly, he appears at the ST. JAMES'S, with a fanciful extravaganza entitled 'Golden Hair the Good,' in three *tableaux*, which, for invention and delicate execution, merits literary distinction.—Mr. E. L. Blanchard has furnished the season with two excellent pantomimes, one at DRURY LANE, entitled 'Goody Two Shoes; or, Harlequin Cock Robin,' in which he has combined two nursery tales with his usual skill. It is illustrated with some really gorgeous scenery by Messrs. Grieve and Telbin, and introduces a clever ballet by Mr. Oscar Byrne. On the first night it was triumphant. We may mention here that the house has been completely renovated, and the interior ornamented in the arabesque style of Louis Quatorze, imitated from the gilded trellis-work in the celebrated theatre of the Imperial Palace at Versailles. The boxes, too, have all been thrown open, and are now furnished with handsome velvet chairs that occupy the whole space even to the wall of the lobby.—At the PRINCESS'S, Mr. Blanchard's pantomime is an exceedingly pleasing production, somewhat ambitious in its aim, and enriching the dialogue with a fair sprinkling of puns. The subject is taken from Mother Bunch's tales, and relates the story of 'Riquet with the Tuft.' The production has had the advantage of Mr. William Beverley's pencil, and the action is illustrated with much exquisite scenery.—Mr. William Brough, at the HAYMARKET, has placed 'Rasselas' on the stage, and brought forward Dr. Johnson himself, in the person of Mr. Tilbury, to act as Chorus. The piece is well supported, and has proved eminently successful.—At the OLYMPIC, Mr. F. C. Burnand has chosen the popular subject of 'Robin Hood' for a burlesque, and treated it in a manner likely to make it permanently attractive.—Mr. Boucicault, at his new theatre, WESTMINSTER, has provided himself with a pantomime which reverts to the old style of discarding dialogue, and depending alone on the action and dumb show. The experiment has been successful. The subject is of the author's own invention, and the piece is called 'Lady-Bird; or, Harlequin Lord Dunderreary.' It commanded an overflowing house and great success on Boxing-night.—The SURREY pantomime is, as usual, so far as the scenery is concerned, exceedingly splendid. It is entitled 'Mother Goose; or, the Queen of Hearts and the Wonderful Tarts.'—The VICTORIA has chosen 'The Adventures and Misadventures of Edward the Black Prince';—the GRECIAN, 'The Spider and the Fox; or, Harlequin Number Nip';—the MARYLEBONE, 'King Hal ye Bluff, Anne Boleyn ye Fayre; or, Harlequin Herne the Hunter';—the CITY OF LONDON, 'Sing a Song of Sixpence, a Pocket-full of Rye; or, Four-and-Twenty Blackbirds baked in a Pie';—the STANDARD, 'Cherry and Fair Star; or, Harlequin and the Dancing Waters, the Singing Apple, and the Little Green Talking-bird';—the PAVILION, 'King Silly-ninny, who sold his Wife for Half-a-Guinea; or, Harlequin and the Enchanted Princess';—the QUEEN'S, 'Harlequin Kenilworth; or, the Golden Days of Good Queen Bess';—and the EFFINGHAM, 'Harlequin and the Enchanted Prince; or, the Fairy of the Magic Grove and the Three Rummy Brothers of Bagdad.' To these may be added 'Harlequin King Humpty Dumpty; or, Simple Simon, the Maiden Blueize, and the Fairies of the Silver Dell,' at the NEW ROYALTY;—and 'Abon Hazzan, the Sleeper of Bagdad,' at the BRITANNIA.—The POLYTECHNIC, too, has a dissolving-view pantomime on the subject of 'Cinderella,' which is very clever. We have thus given the title of twenty-one Christmas pieces for the present year, but, we believe, have not quite exhausted the number. These represent the same number of theatres accessible to a London audience, and yet more are called for by the increased population.

MUSICAL AND DRAMATIC GOSSIP.—Pantomime, not Music, is in the ascendant during the holiday weeks of the new year. 'Ruy Blas' (put forward as "a successful opera") is, we perceive, to be revived at Covent Garden Theatre,—a dreary preparation for the Transformation Scene. Among the announcements of coming entertainments, those of Concerts of National Music figure prominently. The string (especially as played on by the imitators of the Welsh Concerts) may be harped on till the sound becomes tedious. Meanwhile the revival is noticeable, as indisputably proving the very strong hold which melody has on the heart of Great Britain.—Mr. Kennedy is giving Scotch Entertainments after the manner of Mr. Wilson. While on the subject, we may call attention to the appearance of a neat and richly-filled volume, 'The Songs of Scotland prior to Burns, with the Tunes' (Chambers), by Mr. R. Chambers. The book is full of pleasant anecdote and comment,—though we must be forgiven for asking if its writer is not sometimes too goodnatured and acquiescent? Mr. William Chappell, at all events, would say so in regard to the much-discussed "Skene Manuscript." Another question—how comes anything ascribed to the Ettrick Shepherd to find a place among songs "prior to Burns"? The above, however, are mere specks. Many of the tunes are noted in versions which are not familiar to us: but various readings are, as all the world knows, among the most characteristic and interesting features of national music. Often as the ground has been gone over, this book is still a welcome one.

It is possible, we hear, that one if not more Concerts may be given during the season in aid of the Mendelssohn Fund, at which 'The Tempest' of the one Mendelssohn scholar will be repeated. It is worth remarking, that whereas the movement was originated in Leipzig more than a dozen years ago, the composer's friends and townsmen have up to this time done nothing beyond subscribing a few pounds, which have never, we are told, been applied or expended; a true example alike of promptitude and of enthusiasm!—Should the English fund be increased, there can be surely, under the circumstances, no necessary reason for connecting its expenditure with a town which has shown itself so discreditably backward in honouring one who was the glory and the pride of the place, and the last of the great German composers.

The 'Tempest' Music referred to in the foregoing paragraph was given last night at Manchester, at one of Mr. C. Halle's Concerts.

Among the good signs of the New Year may be noticed the revival of a taste for Bishop's music, proved by the rival cheap editions of his Glee—now made possible, it would seem, by the expiration of old copyrights.

At a late competition for the Westmoreland Scholarship, the Potter Exhibition and the King's Scholarship at our Royal Academy of Music, Miss Hodgson, Miss Brinmead, Miss Agnes Zimmermann, and Master A. Mackenzie were elected.

Mlle. Vaneri, whom we had imagined to be theatrically engaged in France, was announced to sing at a Choral Concert at Glasgow, on New-Year's Day, among other music, a new "Curler's Song" (with chorus), by Mr. Lambeth. As she is in this country, and English is her native language, worse things might be done than to offer her a hearing in opera, where a tragic lady is in request.

M. de Leuven, the well-known and clever writer of many of Adam's opera books, is the new manager of the Opéra Comique.—A new Concert Hall in Paris (where such a building is eminently wanted) was a few days since inaugurated by a performance of M. David's 'Christophe Colomb' Symphony.—The musical writings of M. Berlioz are in progress of translation into German by Herr Pohl.—M. Gueymard (among all tenors about the least fitted to the task) is to sing in the revival of 'La Muette' the hero's part, vacated by the retreat of Signor Mario. Madame Ferraris is to be the *Fenella*, there being small chance of Mlle. Emma Livry resuming her duties for a considerable time to come.—Mozart's 'Requiem' is to be performed on Monday next in the church of Notre Dame, the restoration of which cathedral is now com-

pleted.—Madame Pleyel is expected to play in Paris during this month.

The revival of 'Faust' at the Théâtre Lyrique is equivalent to a renewed lease of popularity in Paris, for that finest of recent serious operas. We are now assured for somewhere about the tenth time, that the work in its English version will be shortly produced in London.

'Gideon,' an Oratorio by Herr Meinardus, was produced for the first time at Oldenburg on the 5th of last month. Herr Hiller's 'Destruction of Jerusalem' has been performed during December both at Munich and at Bonn.

We are glad to hear that a charming composer, who has somehow let his life slip by with too little production to show, has re-appeared. This is Herr Dessauer, six Songs by whom are reviewed in the New-Year's first number of the *Allgemeine Musikalische Zeitung*.

The 'Loreley' of Herr Max Bruch is to be produced at Mannheim.

In Italy, as forthcoming Carnival novelties, we read of 'Bianca di Montalto,' by Signor Perelli, and 'Carmelita,' by Signor Pacini, at Milan, and of 'Orio Soranzo,' by Signor Zescovich, at Trieste.

For the two hundred and twenty-third anniversary of Racine's birth, his 'Mithridate' was revived at the Théâtre Français.—At the Odéon, M. Janin authorizes us to state, a new actress, Italian by birth, Mlle. Beatrix by name, has made a real sensation in a revival of the sickly drama 'Misanthropie et Repentir.'

MISCELLANEA

The Pope's Swiss Guard.—The Swiss gentleman who challenged Mr. T. A. Trollope's reference to the Pope's Swiss Guard writes, in answer to Mr. Anthony Trollope's rejoinder,—

"Jan. 1, 1863.

"Mr. A. Trollope has to a certain extent misunderstood the purport of my argument. On reading my former letter over again, he will find that I admit the Pope employing a limited number of Swiss among his soldiers. Nor do I dispute the Guard at Perugia having been under the orders of a Swiss general; in fact, in some Swiss families, such as those of Baldeggy and Pfyster of Lucerne, and others, the command of the Guards formerly in the pay of the Popes has for centuries been a sort of vested right. But what I object to is, that at the present day this Guard should be called a *Swiss Guard*,—an appellation which perpetuates the idea that the Swiss Government still grants subsidies to the Pope, or at least encourages and officially allows its subjects to enter the Papal service; whereas the contrary is the real fact. The Pope's Guard is called Swiss with about as much right as the suburban builder's architectural abortion with a verandah and thatch is called a Swiss Cottage.

"C. W. H."

Population of Spain.—For the first time, a general statistic review of the movement of the population in Spain has been published. According to this, the number of births in the past year was 571,886, of deaths 432,067, of marriages 120,893. The statistics published by the "Revista-General de Estadística" singularly enough fail to give the total of the population; it only records one birth in 27 inhabitants, one death in 33, one marriage in 129, according to which the total of inhabitants would be 15,500,000. The proportion of illegitimate to legitimate children in the country and smaller towns is 1 in 27, in the provincial capitals 1 in 33. Of deaths in cases less than one year old there are 101,170; less than five, 108,627; less than ten, 20,906; less than twenty, 20,151; less than thirty, 24,031; less than forty, 25,096; less than fifty, 25,291; less than sixty, 29,638; less than seventy, 36,830; less than eighty, 27,069; less than ninety, 11,610; less than a hundred, 1,560; above a hundred died 88 persons.

TO CORRESPONDENTS.—A. M.—Fairplay—C. B.—W. D.—W. S. B.—A. W.—Suum Cuique—F. L. B.—Sincerity—Pax Vobiscum—E. W.—J. C. H.—M. A. B.—received.

Erratum.—P. 846, col. 3, l. 21, for "veros" read *vero*.

* The Title-page and Index for our half-yearly volume are given with the present number, on a separate sheet, as a Supplement, *gratis*.

LONDON, SATURDAY, JANUARY 10, 1863.

LITERATURE

Tractatus Theologico-Politicus. By Benedict de Spinoza. (Trübner & Co.)

Essay on Religious Philosophy. By M. Émile Saisset. (Edinburgh, Clark.)

THERE has been in this century a revival of fame for the lean and ugly grinder of lenses, Benedict Spinoza, who could live—unrespectable man that he was—upon a daily allowance of three halfpence worth of butter and milk and three farthings worth of beer. Not to make him out worse than the fact, it must be remembered that the little coins went a great deal farther than than now. He began life as a Jew, the worst beginning a man could make in that day. From heterodoxy in Judaism he passed over to heterodoxy in Christianity: Moreri says he was a sorry Jew and not a bit the better Christian for it. But he was honest, blameless, learned, acute, and charitable; and all these in high degree. What his opinions were on most things, it would puzzle your balancer of evidence to make out. He was an atheist, say Bayle and Voltaire; and the orthodox world thinks these working men ought to know. He was full of religion, says Schleiermacher, whose religion, though it is held in high repute by some, would perhaps not suit our Convocation. In our day he is recognized as a *pantheist*.

The time of Spinoza was very conspicuous for that phase of piety in which men join all the worst qualities of all noxious animals, and call the united spirit by the name of Christianity. The Greek word *panther*, which means "every wild beast," has been cut down, even by the Greeks themselves, to one particular kind of cat. But why restrict this universal word to a single ferocious animal, when the religious bigot, the true compound which the etymology demands, has no single and proper name of his own, but must be described, as the logicians say, only by genus and difference? *Pantherism*, then, was the cause of the measureless abuse which was heaped upon the writings of Spinoza, the handbooks that were to be of Lessing and Goethe. We have *Pantherism* still, in a mild form. It sits, like Bunyan's Giant Pope, behind the bars of its cage. The bars are effective so far as the laity is concerned: the monster can even yet, by making a long arm, lay hold of a straggling clergyman and get him, more or less torn, into its maw. But at each attempt Dr. Lushington tries the old bars with his hammer, and puts up a new one: so that the beast will soon have nothing to do but to bite his own nails.

The tractata now translated was the work in which Spinoza first announced his pantheistic views. It was published in 1670, with *Hamburg* in the title-page, though *Amsterdam* was the true place: this was one way of avoiding the claws of pantherism. It was republished in 1674, without any mark of place, together with a tract entitled 'Philosophia S. Scripturæ Interpres,' and the addition to both of "Ab autore longe emendatior." The second tract is evidently intended to pass for another work by the author of the first. Nevertheless, it is sometimes asserted to have been the writing of Spinoza's friend Louis Meyer. It is also said that the second tract had been previously published, 'Eleutheropoli, 1666.' We leave this point to those who are inclined to pursue it further; merely observing that the conflict with pantherism required every kind of evasion. Among other dodges—to use a word which must become serious English, for want of another—was that of printing false title-pages.

Thus Spinoza's *Tractatus* has been found hidden under 'Heinsii operum historicorum collectio I et II, Lugd.-Bat. 1673'; and also under 'Fr. Henriquez de Villacorta Opera Chirurgica omnia. Amst. 1673.'

Our readers are beginning to hear on all sides the word *pantheism*. They have—many of them—some idea that it must be bad, because it is so like *atheism*. There are those who look grave when they hear that a person is a *theist*; they suspect that he is six-sevenths of an atheist, and that with another letter he will be completely lost. We are under great difficulty in our explanations. We are not philosophers; that is to say, what is now called philosophy in Germany will not keep in English heads: it cakes up with other things, and, as the chemists say, forms insoluble compounds. There are among us, no doubt, those who claim to be vessels fit to hold the doctrines of the successors of Kant; but we doubt if their expositions be quite genuine as imported. German ingenuity has divided pantheism into two kinds. In one, all intelligence is part and parcel of the divine intelligence; in the other, there is no intelligence at all in Deity, which is not a person at all, but a kind of conglomerate of all things.

We might, on the other side, and in our English manner, distinguish three kinds of pantheism. First, that of the orthodox Christian bodies; our own Establishment, for example. The article says that Deity is *without parts*; the Athanasian Creed adds *omnipresence*. That is to say, *all* the Deity is everywhere; for some here and more elsewhere would imply parts. The omnipresence—to use Newton's phrase, who was quite orthodox on this point—is not virtual, but substantial. This doctrine cannot be that of the world at large: it is not even that of the clergyman in his public devotions. It must be remembered that the framers of our articles and creeds had not the least notion of the Kantian *subjectivity* of space. They looked upon the extended universe as a real and true objective existence; and they could not by any possible act of thought place the Divine person in any relation to it except either that of everywhere—or nowhere.

The second kind of pantheism is that which superadds to an omnipresent Deity an omnipresent and maintaining action. This pantheism knows nothing about Nature, or her laws either; but holds that the creative power and the maintaining action are undistinguishable by human intellect. The theologians have given their consent to Nature, as a working substitute for divine maintenance, or, if you please, as another name for it. But they take it in connexion with the doctrine that God *rested from his work*. They look coldly upon the belief that whatever creation may be, maintenance is of the same character, so far as man can form a notion; they begin to be afraid of contradicting, somehow or other, the rest of the seventh day. But they are more rational with children than with grown people. The little ones are allowed to suppose that He set the machine a-going, wound up for its appointed time, and safe in the hands of Nature, who had instructions how to proceed. The children are allowed to read or learn by heart the address to—

God, who makes the sun to know
His proper hour to rise;
And to give light to all below
Doth send him round the skies.

The adult world gets hold of one of the arrangements—the revolution of the earth—calls it a *law*, because it recurs again and again, invents *Nature* to be the immediate source of the law, and sits down with a phrase which covers everything and explains nothing. Our second kind

of pantheism renounces Nature, and refers all her works, her arrangements, and her usages, to the same creative power which called into existence the mind of man.

The third kind of pantheism is the one on which M. Saisset's book is written. It is here viewed as it appears in Spinoza, as well as in Hegel and his congeners; and he compares it with the views of Descartes, Malebranche, Newton, Leibnitz and Kant. Framing objections to every view, he, M. Saisset, proceeds to his own meditations, and endeavours to extract from them the personal God to whom men look up as the moral governor, as well as physical creator, of the universe of mind and matter. We should be glad if we could announce to our readers that we had found anything to guide them through the maze of speculation; but we have not been so fortunate. Any person who is fully and clearly cognizant of two things,—first, Here I am; secondly, I did not put myself here,—has got, we think, as far as he will get by help of M. Saisset and all the predecessors whom he has examined. But we recommend the work for exercise. There is truth in the remarks which the translator has appended:—

"The claims of modern pantheism to originality are loud and exultant. Philosophy, according to it, has had two epochs, the Greek and the Germanic. The genealogy, in truth, is longer, less august and less heaven-born, than such assertions would imply. It runs something in this way: Hegel, which was the son of Sohelling, which was the son of Fichte, which was the son of Kant. As we trace up the older names on the tree, we find that the German has a dash of Leibnitz, his countryman, a good deal more of Plotinus, the Alexandrian, but most of Spinoza, the Jew. Convinced of this fact, M. Saisset spent several years in the study of Spinoza, tracing out the lines of filiation between him and modern Germany downwards, between him and Descartes upward. [We add, that M. Saisset is an editor of Spinoza.] Most volumes of philosophy are but meagre analyses of jarring systems. In the present book every line tends to one centre. . . . The task is performed in the first or critical portion of the preceding work with a learning and acuteness which leave nothing to desire. The constructive is seldom equal to the critical portion of metaphysical performances. Every able metaphysician seems to dwell for a while in a shrine, of which he is

The priest who slew the slayer,
And shall himself be slain."

Well, but what is this pantheism after all? We have put it off, and off, and off, hoping to get a clear phrase or two by which to express it. Spinoza, say many, made God to be only Nature; but they do not tell us that he borrowed an old scholastic mode of distinction, and made Deity the *natura naturans*, not the *natura naturata*. Shall we leave off at this point, trusting those who can construe two Latin words together to get as much out of this barbarous concatenation as we can give them in any other way? We seem as if we were walking round a cloud, the character of which depends on the point from which we view it. Here it is *cumulo-stratus*; a little further on, *cirro-stratus*; then, *cirro-cumulus*; at last it seems like *nimbus*, which is a dark dense cloud, passing into a shower. And the shower is one of words, and of a mixed kind: warm rain from Spinoza, hail from Strauss, snow from Hegel. The following is M. Saisset's description:—

"According to pantheism, nature without God is but an effect without a cause, a mode without substance, a shadow without reality; and God without nature is but a cause without effect, a substance without mode, a power without life; from the bosom of motionless eternity, of infinite immensity, of the Almighty cause, of the being

without limits, there breaks unceasingly an infinite variety of contingent and imperfect beings, which succeed either in time, which are in juxtaposition in space, ever coming from God, ever aspiring to return to Him. God and Nature are not two beings, but the single being under a double aspect. Here unity multiplied, there multiplicity which unites itself again to unity. On the one side is the *natura naturans*, on the other, the *natura naturata*. The true being is not in the finite or in the infinite; he is their eternal, necessary and indivisible co-existence. This is pantheism. You may vary the formulas *ad infinitum*, as you take them from the East, or from Greece, or from modern Europe. You may say with one philosopher, that nature is an overflow of the absolute unity; with another, that God is the eternal coincidence of contraries; with a third, that nature is a collection of modes of which God is the substance; or, again, that the finite and the infinite, and contradictories, in general, are identical; but under every variety of formula, through all the changes and progressions of pantheism, analysis finds one single conception always the same, and that conception is, the necessary and the eternal co-existence of the finite and of the infinite."

If our readers understand all this, we have catered for them better than for ourselves; if they do not, they have it as cheap as we.

Pantheism, as a discussion, arose out of the new physics which came in with the seventeenth century. We will not say that

Philosophy, which leaned on heaven before,
Shrank to its second cause, and was no more;

but we feel that the sting of this epigram was due, as generally happens, to the truth of a proposition which the epigram, as generally happens again, both distorted and exaggerated. When link after link of the chain began to be joined on to each other, nature began to be personified in a more definite form. The old nature, which abhorred a vacuum, had a preference for circular motions, and so on, was a mythical hypothesis as compared with the new one, which seemed to work by a systematic and consequential train of operations. The old physics was one part of a system of which theology was another part: the new physics left all questions of ethics quite open, and theology looked on in sullen displeasure, muttering or proclaiming—as seemed most expedient for the time—a charge of atheism against each extension of view which physical science promulgated. But inquisitive minds were not capable of resting in a division of thought which contents itself with assigning God to Convocation, and Nature to the Royal Society. A few years after the Kings of France and England had given Nature her separate charter, the question of the connexion between theology and physics was agitated by Spinoza, and the discussion is alive in our own time. Spinoza's conclusions were as fully religious, as completely Christian, as any of his time. Bayle and Voltaire have followed the clergy in calling him an atheist; what does he say for himself? He admits the Scriptures as his rule of life and as the word of God. He believes in a future state of good or evil, according to the state in which the individual leaves the world. He proceeds upon a revelation by signs and doctrines, but with curious heterodoxy upon the nature of miracles and the way in which prophets were prophets. Are these the words of an atheist?—"Huc itaque nostrum summum bonum, nostraque beatitudo redit, in cognitionem scilicet et amorem Dei." The translator says, "Our supreme happiness, therefore, our highest joy, again resolves itself into a knowledge and love of God." M. Saisset says, "Whatever the age of Pascal and Bossuet may have thought, Spinoza is no atheist: Lessing had grounds for restoring him to his proper position, and Jacobi and Schleiermacher have

done a simple act of justice in ranging him among the mystics and the saints."

The plain truth is this. The nature and character of Deity are above our comprehension: all theories are equally insufficient. Hence the theologians, constructing a dogmatical account of the Creator out of the words of the Bible, have defended by evil speaking what they could not possibly explain, and have attempted to teach by curses what they could not possibly understand. But the history of philosophy tells us that any notions about the Creator may end in any system of religion, or of irreligion. Voltaire was a strict theist, the advocate of a personal God out of Nature; but he was not a Christian. Spinoza held a union of God and Nature which made Voltaire call him an atheist; but he was a Christian. These things begin to filter through the world at large, which, as we have often said, is gradually taking up theology. Such tendencies in England have a practical bearing; and the books which the feeble Convocation condemns are, with many other things, working towards a good end. The damatory clauses of the Athanasian Creed will not long be a vexation to the friends of the Establishment or a delight to its enemies. There is so much good machinery in this Establishment as it now stands, and so much power of better use, that we look forward with confidence to its existence, after many reforms effected from within. We fancy the distant time when few shall know which first disappeared out of the prayer-books, the "prayers at the healing of the king's evil" or the presumptuous prediction of the certain and everlasting perdition of all who do not receive certain metaphysical dicta upon the nature of the Deity. The point is gained so soon as the laity begin to make frequent allusion to the declarations which are to be withdrawn; the point is gained so soon as the clergy are frequently asked to say whether they do or do not believe the denunciations to which they have subscribed.

Fish-Culture: a Practical Guide to the Modern System of Breeding and Rearing Fish. By Francis Francis. With numerous Illustrations. (Routledge & Co.)

WE are at length awakening to the importance of fish-culture. A few months only have passed since we noticed at considerable length a very interesting account, by Mr. Brown, of the results of the salmon-breeding operations at Stormontfield; and by the present publication we perceive that the system is spreading throughout Europe. In the course of a few years we shall probably see our rivers, lakes and ponds teeming with fish as they did in the olden time. At the extensive piscicultural establishment at Huningue, near the Rhine and Rhone Canal, the exportations of fecundated and partially-incubated eggs have increased since 1853 from one million a-year to sixteen millions, the eggs being sent not only to the various rivers of France, but also throughout Europe, as the French Government are by no means selfish in respect to the benefits arising from the art practised at Huningue. The yearly expenses of the establishment are about 2,200*l.*, and it is calculated that twelve live fish are produced for one penny. These facts are conclusive as to the value of pisciculture; though we are not quite prepared to indorse Mr. Francis's statement that two hundred acres of water will produce double the weight of animal food that two hundred acres of land will yield. It is, however, quite certain that our pleasure waters are extremely unfruitful, though many, with due attention

and care, might be made to yield very large supplies of excellent and wholesome food. But, as experienced brothers of the angle, we think it right to state at once that pleasure waters, in the comprehensive sense, cannot exist with profitable waters, and that, however pleasing may be the picture of a lake fringed by trees, nestling in a well-wooded vale, on the peaceful surface of which swans

—float double,
Swan and shadow,

we must not believe that such pleasure lakes are tenanted by a large fish population. We do not say that fish, and good fish too, are not to be found occasionally in sheltered lakes surrounded by trees; but we affirm that if you desire to have pleasure waters fishy, you must cut down the trees surrounding them and banish your swans for evermore. The philosophy of the case is this: the leaves shed by the trees become saturated with water, and sink to the bottom of the pond or lake, where they accumulate, decompose, and turn into thick, black and stinking mud. During and after their decomposition they discharge noisome gases and exhalations, which pervade and poison the water, rendering it pernicious to fish, and rendering them mud-flavoured and nasty. And with respect to swans, you have only to observe them in waters where fish spawn to become fully aware of their greediness and voracity for fish-spawn. A swan will devour a gallon of this daily, if he can get it; and such is the destruction by swans of spawn in the Thames that by a very moderate calculation, and supposing only 200 swans to be at the feast, they eat one hundred and forty millions of eggs annually in this river. So if you would have fish and will have swans, let them be made of copper, which, when artistically painted, will look quite as well—at a distance—as the real things. The objection to trees does not of course apply to rivers, and particularly swift streams; and indeed, here trees are very serviceable as covers for the large family of Ephemeridae, on which many fish, and particularly trout, live and flourish; but even in the case of rivers, where they are not rapid, too many trees on the banks are prejudicial. It will thus be seen that it is quite as necessary to prepare waters for fish-culture as land for grain or other crops, and that until this be done the labour of stocking lakes or ponds will be in a great measure thrown away. Our waters being duly prepared, Mr. Francis tells us in lucid and practical language how to proceed in our fish-culture. With great propriety, the place of honour is given to the salmon, whose rank as king of our fish is not disputed, and he shows that with really very little trouble and expense our rivers may be replenished by a large and almost overflowing population of Salmonidae. So easy indeed is it to rear salmon artificially that the operations may be carried on in a drawing-room; and we can assure our readers that there are few sights more wonderful and interesting than the development of salmon from the ova. The *modus operandi* for rooms is thus described:

"All that is required is a small cistern, capable of holding a few gallons of water, with a small stop-cock to regulate the supply. Around this cistern may be coiled, as it were, in lengths, a small permanent gutter, or way, about an inch or two in width, and neatly gravelled. On this the ova can be deposited. Each coil or length, of course, must be lower than the other; and supposing the apparatus to be square, a little fall could be contrived at each corner. This coil or gutter, after passing two or three times round the cistern, should end in a water tank; and if the water tank be surrounded with a cooler, and furnished with a small force-pump, the water can be forced up again into the cistern, and may be used again and again. If,

however, the house be one well furnished with water and large cisterns, a very small pipe to convey the water to the troughs or gutters, and another to carry it off, will then be all that is necessary. Of course, such an apparatus may be made as tasteful and appropriate to the place it is consigned to as the owner may please."

Mr. Francis has evidently paid attention to the very important subject of extracting the eggs from the female salmon, and gives directions for manipulating the fish and ova which appear to us to be full of sound sense. Indeed, he considers that with judicious treatment the ova of salmon may be transported to the antipodes, notwithstanding the fact that hitherto all attempts to convey salmon by means of ova to Australia have failed.

Mr. Francis devotes a chapter to the food of fish and its production. It cannot be doubted that the condition and size of fish depend almost entirely on the supply and nature of the food within their reach; and granting this, it will be evident that just as we acclimatize and foster agricultural plants for the sustenance of ourselves and cattle, it is expedient that we should encourage the growth of certain water-plants favourable for harbouring insects on which fish live and fatten, and eradicate others injurious to them.

It will rejoice fly-fishers to learn, that the result of a series of curious and interesting experiments on the food of trout showed that those fed on flies were the heaviest and in the best condition; those fed on minnows occupied the second place; while those fed on worms were in much the worst order of the three. But these results cannot be accepted as the rule, for all trout-fishers know that trout are often small in waters where flies are abundant, and large where they are rare, but where the fresh-water *Pulex* is common.

Our author discusses at considerable length the best kinds of fish for our waters; and precisely as no good farmer would think of putting a Southdown sheep on a Highland sheep-walk, nor a Welsh runt on a Hereford pasture, no good pisciculturist would put fish in waters unsuitable to them. Our varieties of fish are quite sufficient to give us abundant supplies; at the same time, Mr. Francis considers that some fish foreign to our waters might be introduced in England with advantage. Among these is the famous Black Bass of North America, — a very excellent fish, as we can attest from personal experience. The Maskinonge is also recommended; but this fish is so voracious, and grows to such a gigantic size, that it appears hardly adapted for our comparatively small lakes and rivers. It frequently attains the weight of 80 lb.; and we can assure our sporting readers that to hook a Maskinonge of even 40 lb. places the fisher in a very serious predicament; at least, we well remember hooking one of about this weight, when trolling with a huge spoon bait in one of the large lakes in West Canada, and being for a long time extremely doubtful whether, seated as we were in a frail birch-bark canoe, the fish would pull us into the lake or we the fish into the canoe; and that the monster was at length, after a fierce struggle, laid prostrate at the bottom of the canoe was assuredly more due to an experienced angler who was with us than to ourselves.

The latter portion of Mr. Francis's book is occupied by an account of our sea fish and fisheries; and here our author shows, in an incontrovertible manner, that if our ignorance of our inland fisheries is great, that of our sea fisheries is even greater. Formerly one of our most valuable fisheries was that carried on around Newfoundland. In 1745 this yielded close upon a million a year; and in 1814 the exports

of fish and oil amounted to nearly three millions. Now, in consequence of a treaty that was concluded between our Government and France in 1857, the most valuable part of the Newfoundland fisheries has passed from us. Our herring fishery, too, which from its great value should be most carefully nursed, is neglected by our Government; for while the most careful measures are adopted to keep this fish upon the Norwegian coasts, and to induce it to multiply, small-meshed trawl-nets are allowed to be worked round our shores, which are well known to be wholesale destroyers of fry; and as an instance of the destructive nature of shore nets, we may state that the small poket-net of a common shrimper on the Sussex coast is known to destroy thousands of the fry of soles, turbot, flounders and other fish.

Mr. Francis concludes his practical and useful book by a chapter on the cookery of fish. Prefacing his observations by stating a fact, patent, we apprehend, to most families, that of all the food cooked one-fourth is wasted, Mr. Francis states with great truth that there are many fish which we consider worthless that may be made, in the hands of good cooks, to do excellent alimentary service. Fish soups would be much in favour if they were better known; and in this matter we might take a lesson from the Jews, who, from the circumstance that they make considerable use of fish at their fasts, are great adepts in cooking them. A pailfull of young cuttle-fish, when they have emitted their inky fluid, is not a lovely sight; yet they are, as we can attest, excellent eating, and when they are fully grown and served delicately fried with buttered toast, they are a pabulum for a gastronome.

All Mr. Francis's remarks on cooking fish are very pertinent, and fitly conclude one of the best and most practical treatises we have yet had on the new and important art of fish-culture.

The Shoemaker's Holiday; or, the Gentle Craft.
 Edited from the Edition of 1618, by Hermann Fritsche. (Thorn.)

THIS is a German reprint of an old English play, from a copy preserved in the Town Library at Dantzic. Though cheaply, the work is creditably performed, according to the state and degree of the editor's knowledge, but he seems behindhand upon several points of importance: thus, he does not know the names of the author or authors; nor is he aware that there was any impression of the comedy anterior to the year 1610. On this side of the Channel we are aware that the piece was written by Thomas Dekker and Robert Wilson, and that it first made its appearance in print in the year 1600 — in a much more correct edition than that of 1610, 1618, 1631 or 1637: the number of times it was reprinted, more than two hundred years ago, shows its early popularity at that time. Yet, although the play is very curious, and was once very popular, it has nearly escaped notice from the modern critics. How can we blame Herr Fritsche for not knowing much about the drama and its authors, seeing that in the 'Biographia Dramatica' (our main authority in such matters, though one of the worst books of the kind in any language), 'The Shoemaker's Holiday' is attributed to one who was a little boy at school when it was published? The piece itself affords abundant evidence of native and manly genius, with a knowledge of London life at the latter end of the reign of Elizabeth that could only have been acquired by long residence and acute observation. Dekker and Wilson were men of great experi-

ence, especially in all matters relating to our stage, in the time of Shakspeare.

Much necessary information regarding this comedy may be found in the Papers of the Shakspeare Society, published in 1849. The piece itself was one of several which that body intended to reprint at the time when it was prematurely dissolved. Had the Shakspeare Society continued to live and act, it would have put forth a whole *Corpus Dramaticorum*; for we will venture to assert that there is no existing play, printed or manuscript, anterior to the Civil Wars, that does not contain some curious or valuable illustration of the poetry, the stage, or the society of early times.

'The Shoemaker's Holiday' is one of the best of its kind in our language. It contains poetry of a high order, the plot is full of bustle and variety, and the characters are numerous, well distinguished, and capably sustained. It was acted by Henslowe's company very shortly before it was first printed, and it is one of the very few cases in which we know how the parts were distributed in an association of players, which was the great rival of the theatrical body to which Shakspeare belonged.

The first edition (a most rare production, and worth many guineas) is now before us, by the favour of a gentleman to whom it belongs. In noticing the play, we may first briefly refer to an instance of error, into which all copies, of any date, have fallen. It is in the first scene (though the performance is not divided into acts and scenes, and Herr Fritsche, omitting the acts, has separated the piece into twenty scenes), where Lord Lincoln is on the point of sending his cousin Lacy, the hero of the play, to the French wars: he exclaims—

Begone, begone! make haste to the Guild Hall;
 There presently I'll meet you. Do not stay;
 Where honour becomes, shame attends delay.

Here, we think, there is an error of the text, always repeated, and which we do not blame a foreigner for not correcting. The passage should surely read—

Do not stay;
 Where honour beckons, shame attends delay.

No doubt, in the old manuscript used by the first printer, "beckons" was written *beckons*; and hence the error. Again, just above, we have these lines: Lacy calls upon Honour, and says, Let it

So guide my actions in pursuit of France,
 As shall add glory to the Lacy's name.

—Here, "in pursuit of France," is almost nonsense, but because it is not quite nonsense a few of our elder critics would refrain from preserving the obvious couplet, so frequent in Shakspeare and his contemporaries; while we should venture to read—

So guide my actions in pursuit of Fame,
 As shall add glory to the Lacy's name.

The old printer's error arose from the fact that in the MS. "fame" was spelt with a capital letter. Here all the ancient editions are wrong.

Herr Fritsche mentions that the copy of 1618 in the Dantzic library is so worm-eaten and rotten at the end, that he was compelled to leave several lines incomplete. This is a pity; but of course, as he had no earlier impression to resort to, he could not be aware in how very many places the edition he used varied essentially from the true text, not merely as to words, but as to sentences and temporary allusions. We will here advert only to the former, as the latter would occupy too much space. The very last couplet in the comedy affords a proof of the carelessness of the compositor of the edition of 1618: it ought to run as follows, and it does so run in the copy of 1600:—

When all our sports and banquetings are done,
 We must right wrongs which Frenchmen have begun.
 Here for "sports" the printer of 1618 put words,

which, if we had no older exemplar to guide us, we should not have run the risk of altering, inasmuch as the King might allude to discussions and explanations to follow the catastrophe of the piece: he, in fact, refers to the "sports" and entertainments to follow the marriage of Lacy and Rose. We will just notice two places where the alteration of a single letter is required to amend and make evident the meaning of the poet.

Firke, a journeyman shoemaker, is a wonderfully amusing personage, and when he is told to get his face washed his answer is, "Send for a sousewife, if you will have my face cleaner,"—a "sousewife" being a woman whose particular business it was to clean and pickle pigs' faces: the printer of the quarto of 1618 altered "sousewife" to *housewife*. Afterwards, in a more important case, because the corruption destroys the verse, there is another misprint. Hammon, in a soliloquy exclaims of Jane, with whom he is in love,

One only look hath seem'd as rich to me
As a king's crown: such is lovers lunacy.

This may be meaning, but it is not measure; and moreover, the alteration of *love's* (which is the oldest reading) to "lovers" (which is the reading of the edition of 1618) destroys an allusion to a well-known production of the time. This mistake occurs at the very commencement of almost as beautiful a love-scene as is to be found in our language; where however the situation is a little equivocal, because the modest and retiring girl is already married, although the man who courts her does not know of the fatal bar to his happiness. In this part of the comedy there are also several woful mistakes, but for most of them M. Fritsche is not responsible, since he could only work with the imperfect materials in his hands. He is nevertheless apt to commit one error, from not being aware of the ordinary pronunciation of our language, when words of only two syllables were used as three: to amend lines thus circumstanced he now and then inserts monosyllabic expletives between brackets, thus:—

In earnest mistress [for] I do not jest.

Here "for" is surplussage, because if "mistress" be pronounced as a trisyllable, *misteress* (which was formerly the case, as we could show in hundreds of instances) the line is complete. Before we conclude we may point out a place in which the edition of 1618 presents a better text than that of 1600: it is in a couplet by Lord Lincoln to the Lord Mayor, regarding his daughter Rose, the heroine of the drama:—

So shall your Rose be free, my thoughts at rest,
And much care die which now lives in my breast.

This must be right, the opposition being between "die" and "lives"; but the first edition has this misprint:—

And much care die, which now *dies* in my breast.

This sort of error was common with hasty old printers (and no productions were printed with greater speed than plays, brought out to satisfy an immediate call, and generally composed from copy surreptitiously obtained. We might find several analogous instances in Shakspeare, where the compositor's eye was confounded, and he mistakenly repeated a word which had just before passed under his observation. The fact is, that all the old editions of plays ought to be consulted in making a reprint; and not only so, but different copies even of the same edition; because blunders were sometimes set right, even while the sheets were passing through the press. In this way in 'Troilus and Cressida,' act iii. sc. 2, "Love's thrice-reputed nectar" became "thrice *reputed* nectar," to the wonderful improvement of the passage.

Poems: an Offering to Lancashire. Printed and Published for the Art-Exhibition for the Relief of Distress in the Cotton Districts. (Faithfull & Co.)

PRINTED without charge, by Miss Faithfull, on paper gratuitously furnished by Messrs. Richard Herring & Co., edited by Miss Isa Craig, and contributed without fee by fourteen different writers, the verses contained in this little volume aim at extracting aid for the Lancashire operatives from those who, slow to give to the cotton sufferers from motives of benevolence, will part with a few shillings for a pretty book. They are, in the parlance of trade, a makeweight to be thrown into the scale, where the satisfaction to be derived from doing good is something under a complete counterpoise to a crown-piece. In a world where good intentions are not too plentiful, the object of such a work, preserves it from the full measure of critical severity due to faulty rhyme, broken metre and empty jingle. But still, when all liberal allowance has been made for laudable motive, we cannot refrain from expressing regret that the 'Offering to Lancashire' too closely resembles the packets of "mixed tea" sold by cheap grocers, in containing an undue proportion of bad leaf to the slight sprinkling of what is good. For ludicrous inanity, the contribution entitled "In the Winter" surpasses anything that ever came from Mrs. Leo Hunter's pen:—

While the earth is full of fighting,
When men rise and curse their day,
While the foolish strong are smiting
And the foolish weak betray,
True hearts behind are growing,
The brave spirits work alone,
Where love's summer wind is blowing
In a truth-irradiate zone

Daily woven with our glory,
Sounding far above our strife,
In a time-enclosing story,
To a space-absorbing life,
We can dream no dream Elysian,
There is no good thing might be,
But some angel has the vision,
But some human soul shall see.

—What, in the name of common sense and uncommon poetry, is the meaning of "a truth-irradiate zone" and "a space-absorbing life"? Has the writer, moreover, no fingers on which to count his verses?

Mr. D. G. Rossetti's fifteen lines, in which he addresses a young lady whom he thinks he knew in former days, conclude with a cockneyism which even charity cannot justify in a practised versifier:—

Before may be again:
Oh! press my eyes into your neck.
Shall we not be for ever *lain*
Thus for Love's sake,
And sleep, and wake, yet never break the chain?

To give flavour to the mixture, of which the greater part is rubbish of the above sort, Mr. Monckton Milnes and Mr. Frederick Locker swell the offering with two short poems of higher merit. Mr. Milnes says—

Labour degraded from her high behest
Cries, "Ye shall know I am the living breath,
And not the curse of man. Ye shall have rest—
The rest of famine and the rest of Death."

Mr. Locker's poem, "The Jester's Plea," possesses the delicate humour and pathos which characterize his metrical productions, and is so good a specimen of the writer's style that readers will thank us for transcribing it:—

THE JESTER'S PLEA.

The world! was jester ever in
A viler than the present?
Yet if it ugly is . . . as sin,
It almost is . . . as pleasant!
It is a merry world (*pro tem.*),
And some are gay, and therefore
It pleasures them—but some condemn
The fun they do not care for.

It is an ugly world. Offend
Good people—how they wrangle!
The manners that they never mend!
The characters they mangle!
They eat, and drink, and scheme, and plod,
And go to church on Sunday—
And many are afraid of God—
And more of Mrs. Grundy.

The time for Pen and Sword was when
"My lady faire" for pity
Could tend her wounded knight, and then
Be tender for his ditty!
Some ladies now make pretty songs,—
And some make pretty nurseries:
Some men are good for righting wrongs,—
And some for writing verses.

One tax our patience long has stood—
The tax that poets levy!—
I know the Muse is very good—
I think she's very heavy.
She now compounds for winning ways
By morals of the sternest—
I think that bards of now-a-days
Are painfully in earnest.

When Wisdom hails, I humbly try
And put a point on Folly:
If Pallas won't be civil, I
Away, and flirt with Polly.—
Who quit the goddess for the maid
Must certainly be losers;
But Pallas is a lofty jade,—
And beggars can't be choosers.

I do not wish to see the slaves
Of party, stirring passion,
Or psalms quite superseding staves,
Or piety "the fashion."
I bless the Hearts where pity glows,
Who here together banded
Are holding out a hand to those
That wait so empty-handed.

A righteous work!—My masters, may
A jester by confession,
Scarce noticed join, half sad, half gay,
The close of your procession?
The motley here seems out of place
With graver robes to mingle;
But if one tear bedews his face,
Forgive the bells that jingle.

—Such is the last piece of the volume, which, like a good epigram, keeps its best stroke for the conclusion.

Wanderings among the Falashas in Abyssinia; together with a Description of the Country and its various Inhabitants. Illustrated by a Map and Engravings. By the Rev. Henry A. Stern. (Wertheim & Co.)

It was with missionary objects that Mr. Stern visited the Falasha people, in Abyssinia. His starting-point was Boulak, the port of Cairo, whence he voyaged up the Nile to Korosko, above Assouan, thence across the Desert to Khartum, and up, by way of the Blue Nile, into Abyssinia. In the country of the Falashas, —who have hitherto been so little known that Dr. Jost, in his History of the Jews, doubted even their existence,—he sojourned, and preached freely; and his narrative contains many pleasant pictures of their primitive Christian life. The journey from Korosko across the dreaded wilderness was made under an armed escort commanded by a sheikh, and was formerly regarded as so perilous that it was actually interdicted by the Egyptian Government. Some European merchants, however, trading with Soudan, re-opened the route, and their camp-fires now regularly flame upon the sands. Only at one spot, five days distant from the river, are there a few brackish wells; but, instead of water, the traveller has the mirage to enjoy, with its visions of groves and lakes, its phantom flocks and spectral palaces painted deliciously in the sky. Thirteen days brought the party to Berber, all dust and sunshine; and thence, past tufted islands and shaded shores, a river-boat took them to the confluence of the Blue and White Niles; and here Mr. Stern was disposed to halt awhile, a guest of the Austrian Consul at Khartum. There was not much that was new to be seen in that rancid town, whence expeditions are despatched to catch negroes under pretence of hunting elephants; but all places are novel to a stranger, and a

day or two was not lost in the bazaar, the epitome of Eastern manners. Arrived at Kedarif, far deeper in the savage realm, the travellers found considerable excitement existing; a new and wonderful law having been promulgated, that all boys above thirteen and all girls above nine should marry within a fortnight, or be severely fined and whipped. Immediately all the place was in a whirl of hymeneal festivity, and little brides and bridegrooms abounded. The aspect of the region beyond became more barbarous and desolate at every step, until the road entered the dominions of His Majesty King Theodoros of Abyssinia, whose troops were then on the march to crush a rebellion, and whose martial pageant, as it cavalcaded down a mountain slope, was really imposing; the warriors all being mounted, and armed with swords, spears and shields, but followed by a footsore multitude of young women and girls, laden with baggage. At length, a cleft in the mountain opened upon the gaudy camp of the king: next day an audience was granted; the missionary held a conversation with his royal host, obtained permission to wander and preach among the Falashas, and was thoroughly content with his reception.

King Theodoros is not a personage of great fame in Europe. He is known to the Arab and the Galla, on the Nile and the Red Sea; but, beyond those limits, he must be regarded as obscure: and yet he is no ordinary man. Originally a poor boy in a reed-built convent, he became first a chief of freebooters, then a conqueror, and at last the sovereign of an extensive territory. His life has been a long struggle, and his throne was not reached without a series of sanguinary battles; nor does Mr. Stern conceal the fact, that he consolidated his power by very questionable means—as when, ambitious of reigning in peace, he heard of a rebellion in the province of Godjam, without remorse or mercy he immediately burst upon the insurrectionary population, slaughtered, tortured and ravaged, and perpetrated so many and such frightful atrocities, that when, next year, his wife died, he publicly accepted it as a retribution upon his cruelty, and vowed never more to be ruled by passion. At the Court of this potentate the Missionary breakfasted, and betrayed an ignorance which proves him to be no citizen of the world:—

“During the repast, which, owing to the fast, consisted simply of teff cakes, *dillik*, and an abundance of fermented hydromel, I nearly lost the esteem and regard I had hitherto enjoyed, and that, too, through an unconscious offence against the etiquette of aristocratic life. According to the Abyssinian notion, every man who claims to be of patrician descent and noble lineage must possess a fine shama, lined with a deep red border, and be enabled to emulate the noise of a certain unclean animal whilst eating his meals. This elegant acquirement, which I had unfortunately not yet attained, drew upon me the frowns as well as the whispering censures of the guests. Unconscious of the cause of this unexpected notoriety, I asked Mr. Bell whether there was anything peculiar in my appearance or deportment that provoked criticism.—‘Certainly,’ was the rejoinder; ‘your conduct is so ungentelemanly, that all the guests think you must be a very low fellow, and quite unaccustomed to move in genteel society.’—‘And to what am I indebted for this good opinion?’ returned I.—‘To the mode in which you eat; for if you were a gentleman, you would show by the smacking of your lips the exalted station to which you belong; but since you masticate your food in this inaudible manner, every one believes that you are a beggar, and accustomed to eat in that ostentatious quietness which pretended poverty prompts individuals of that class to adopt. I assured them that my breach of etiquette ought to be attributed to the difference of the customs in my own country, and

not to the low motive they assigned, an apology which amply satisfied the most accomplished courtier in the royal tent.”

Immorality and dirt appear to be very conspicuous elements of Abyssinian civilization even under the sway of this enlightened monarch. Theodoros himself was held in high esteem by Europeans, who knew him for his honesty, purity and disinterestedness; but of his subjects Mr. Stern remarks, “that notwithstanding their physical and intellectual superiority to every other African tribe, they vie with all in truthfulness, cunning and depravity.”

Armed with the King's favour, Mr. Stern next solicited permission of the Aboona, or Metropolitan, of Ethiopia to proselytize among the Jew Falashas. That great churchman was at first suspicious; but his consent was ultimately granted, and the mission began, after a grand episcopal breakfast, a royal marriage, various acts of justice, and certain saturnalia in which the good Christians of Abyssinia still indulge. At the Feast of the Assumption, there were dances:—

“This national amusement, which the practice of the Church hallows, is more a gymnastic than a saltatory exercise. In these exhibitions there is nothing of the extravagance of the Egyptian *almé*, or the capering of the fashionable ball-room. A number of young people, brimful of gaiety and happiness, arrange themselves in a circle on the greensward, or under a shady tree, and, in a wild and pathetic strain, strike up a favourite ballad. As the notes become more wild and passionate, the whole ring divides according to the sexes; they then entwine their arms around each other's shoulders, and, in a graceful and picturesque attitude, sway their bodies backward and forward to the minstrelsy of their own voices. This continues for some time, when a dancer or *danseuse* advances into the centre, and gazes motionless on the mirthful group. The impassioned strains which now become more quick and lively infuse new fire into the cold and statuesque form, and in a few seconds that seemingly immovable piece of humanity quivers in every nerve to the melody of the tumultuous choir.”

Somewhat tardily Mr. Stern relates what he saw and heard of the Falashas, or the Exiles, as the Jews are designated in Abyssinia. Of course, these people have traditions, and, like the Jews everywhere, make out a magnificent pedigree for themselves. They came to Ethiopia, they say, in the reign of Maqueda, the Queen of Sheba, when she took home Menilek, son of herself and Solomon, from whom the kings of Abyssinia thus descended. These Falashas were once independent, and ruled by kings and queens called Gideon and Judith; but they are now a subject race, scattered over five provinces, where their settlements are invariably distinguishable by the red pot on the apex of their place of worship:—

“Claiming a lineal descent from Abraham, Isaac and Jacob, the Falashas pride themselves on the fame of their progenitors and the purity of the blood that circulates in their own veins. Intermarriages with those of another tribe or creed are strictly interdicted, nay, even the visit to an unbeliever's house is a sin, and subjects the transgressor to the penance of a thorough lustration and a complete change of dress before he can return to his own home. Their stern uncompromising sectarian spirit has been highly beneficial in excluding from their community that licentious profligacy in which all the other inhabitants of Ethiopia riot; and it is generally admitted that Falasha men and women seldom, if ever, stray from the path of virtue, or transgress the solemn law of the Decalogue.”

The Falashas do not encourage early marriages; the age appointed for men being from twenty to thirty, that for girls from fifteen to twenty. “The troth once plighted, no priestly power can ever annul.” They denounce polygamy, and do not immure their wives and

daughters. They offer atoning sacrifice at their altars; their churches are built in three divisions, with an entrance opening from the east. Their ideas of purification are singularly austere: the dying must be removed to the unclean hut, erected on the outskirts of every Falasha village:

“Particularly in the hour of dissolution, when the sweet expressions of friendship and love are so soothing to the agonized soul and anguished frame, the dying Falasha has no affectionate hand clasped in his, and no words of comfort from beloved objects whispered in his ears. The inflexible law forbids the last offices to the weeping relative, and the helpless sufferer is in death's agonizing convulsions dragged from the weary couch into the open air, where the polluted and unclean remove him from the bare ground to the tainted and lonely hut.”

Altogether, they are a peculiar people; and it surprised the Missionary to find that they held commerce in disdain:—

“Exemplary in their morals, cleanly in their habits, and devout in their belief, the Falashas are also industrious in the daily pursuits and avocations of life. Husbandry and a few simple trades—such as smiths, potters and weavers—constitute the sole occupations in which they engage; commerce they unanimously repudiate as incompatible with their Mosaic Creed, and it is quite a disappointment not to find a single merchant among a quarter of a million of people, the lineal descendants of those who are supposed to have acquired a taste for traffic and riches on the very eve of their emancipation from Egyptian servitude.”

Of course, it was difficult to pass the boundaries which separate the Falashas from all other men in Abyssinia, as in the rest of the world. Their creed is to despise and abhor all other religions, especially as idolaters abounded around them; and the Abyssinian Church itself grew, in the course of ages, ineffably corrupt. However, Mr. Stern overcame the obstacle, and at once proceeded to visit a Falasha village, where their welcome, if not hearty, was courteous.

The Mission, established on the pasture-land of Genda, almost in the centre of the Falasha tribes, was carried on with no inconsiderable success, and Mr. Stern's anticipations for the future are satisfactory. But the whole condition of Abyssinia, Christian and Jewish, is discouraging; and it will probably be long before any definite progress is made, for the work to be done is immense, and the temptation to do it not very overwhelming. Still, the prospects of any country partially Christianized and civilized, and remaining so in the midst of a continent of barbarism, may be pronounced comparatively hopeful. Among his last protests against the caprices of savage life, the Missionary has the following:—

“Fond as the Abyssinian women are of embroidered garments and other fineries, it is strange that they should never try to gain even a slight acquaintance with the use of the needle. High and low alike depend upon their male friends for every stitch in their dress. Tastes, of course, vary in different countries; but I confess that it always provoked me to see a tall, bearded fellow acting the dress-maker, and a slender girl performing the functions of the groom. Several times I tried to introduce reform among our own people, but the very attempt to allot to each his own proper work produced such a storm of discontent, that I gave up the matter in despair. But if it is provoking to see a man pilfering the needle, it is still more aggravating to see him monopolize the laundry. It is true, the Abyssinians have as strong a prejudice against clean linen, as against a clean face; still, whenever, during the course of the year, the shirt or shama requires a little scrubbing, a big fellow, far better adapted to plough the field, performs the agreeable job. * * This kind of work, which is the heaviest the men perform, admits of no comparison with the more onerous duties devolving on the poor women.

In a large household, where a good number of females are required, some go early in the morning to collect wood, and others to fetch water; while not a few busily employ their hands in cleaning the stables, or in preparing bread, *shiro, dilik*, and *wotz* for breakfast. To remove the husks from the grain before it is washed and ground, is regarded by all as a most tiring job. We usually employed two to relieve each other at this occupation; but the unfeeling natives, who have no such consideration, sometimes force their female servants or slaves to stand over the rude mortar till their arms become almost paralyzed, and they are ready to drop from sheer exhaustion and fatigue."

An agreeable, informing narrative of travel and adventure is this book by the Abyssinian Missionary, which will probably interest many readers in the religious Embassy to the Abyssinian Jews.

A History of the Kings of Ancient Britain, from Brutus to Cadwaladr. Abridged from the 'Collectanea Cambrica.' With Notes. By Manley Pope. (Simpkin, Marshall & Co.)

We have been much in doubt what to make of this book. The title certainly does not give us anything like an exact idea of the book itself; and the author's notion, that by it he is "supplying a deficiency in the educational resources of this country," and that his book will "be found not unsuitable for the purpose of elementary instruction," appear to us equally incomprehensible. As far as we can see, he has merely published an English translation, perhaps a little abridged, of the Welsh translation of Geoffrey of Monmouth's 'History of the Britons.' This Welsh translation differs from the original chiefly in Welshifying Geoffrey's Latin names, in adding to some of them certain ridiculous epithets, such as calling the classical Æneas, "Æneas Whitefield" (as here Englished), and in adding some very foolish additional fables. Geoffrey of Monmouth has long been given up by all sensible historians; but if Geoffrey's history is fable, the Welsh additions to it are absolute trash. As a sample of the additional matter, we may venture to transfer to our columns the following story. In the time of King Lludd,—

"Three calamities, such as had never hitherto been known, fell upon Britain. The first of these was that of the Coranians, who had such intelligence, that not a word could make impression on the air but they knew it; and therefore it was impossible to effect anything against them. The second was a shriek, that was heard over every hearth in Britain on the night of every May-day; and so struck man and beast to the heart, that the men lost their strength, the women miscarried, the youth of either sex became senseless, and the beasts and trees unproductive. The third was, that whatever store of provisions were brought together, in any of the great houses of Britain the whole disappeared so as never after to be found, saving what was used on the first night."

The calamities were strange enough, but the remedies were not less extraordinary. Lludd went to Gaul to ask the advice of his brother Llefelys, who was king there, and who, against the first grievance, "ordered a long tube to be made, through which they might so converse that the air should not convey the sound to the Coranians." This was certainly a very ingenious expedient.—

"By this means they began to communicate their secret thoughts, but soon found that neither could hear anything but confused and indistinct sounds; whereby Llefelys perceived that a dæmon had lodged himself in the tube; he therefore ordered it to be washed with wine, and then their words became perfectly distinct and intelligible. Llefelys then gave Lludd worms of a particular kind, which he desired him on his return to bruise and put in cold water, and then to assemble the people indis-

criminally, both Britons and Coranians, and sprinkle them all with the water; and that such would be its efficacy as to kill all the Coranians without doing any injury to the Britons."

The causes of the other calamities, and their remedies, are equally absurd, if not more so, and we will abstain from repeating them out of consideration for our readers. At the end of this Welsh edition of Geoffrey of Monmouth, another individual, whom Geoffrey mentions as his authority, is introduced, making a rather singular statement: "I, Walter, Archdeacon of Oxford, translated this book from the Welsh into Latin, and in my old age have again translated it from the Latin into Welsh." Such is the trash which Mr. Manley Pope seems to think it desirable to introduce into our "elementary instruction." He seems to have been living in happy ignorance of all that has been written upon the subject of Geoffrey of Monmouth and his history, and to imagine that he has found something quite new, which only wants to be known to be duly valued and appreciated. The Welsh translation of Geoffrey of Monmouth has been to him a great mare's-nest.

Mr. Pope's want of knowledge on the subject of his book is especially displayed in his notes, which are very droll for their quotations. He talks of such writers as "Godfridus de Malmesbury"; and he supports his statements on such authority as the following:—

"There is also extant a testimony of some importance in an epitome of the History of Britain, extracted from the *Olis (sic) Imperialia* of Gervase of Tilbury, and to be found in the library of St. Martin's-in-the-Strand."

We would only ask, did Mr. Pope find it there? The very first note on the popular name given to Geoffrey's British History involves a very gross blunder. Brut, he says, was "originally the same as the French word *Bruit*, and is used synonymously with *Chronicles*." Does Mr. Pope not know that the name *Brut* was given to the book because it begins with Brutus, the progenitor of the British line of kings? He clearly believes in mermaids (p. 159). He believes, further, that the giant Gogmagog was thrown from a rock; and he hazards thereupon a new theory on the use of Cromlechs.

Lancashire and Cheshire Wills and Inventories, from the Ecclesiastical Court, Chester. The Third Portion. Edited by the Rev. J. Piccope, M.A. (Printed for the Chetham Society.)

TAKEN as a whole, this collection of Wills, extending from the period of Elizabeth to the reign of Charles the First, is less interesting than the previous Portions published. The documents themselves are less rich in illustrations of life and manners; but, on the other hand, for lack of remarkable incidents, we make acquaintance with remarkable personages. Strange circumstances, or what would seem so now, occur, however, without abounding. What gratitude would a right worshipful county magistrate confess to, in the present day, if a friend bequeathed him *6s. 8d., upon trust*, that he might prevent the testator's children squabbling over the terms of the will? We doubt also if any legatee would feel particularly ecstatic at having bequeathed to him a couple of stone troughs, or as many forms and one table, to be preserved as heir-looms in his family for ever. Even a devise of all the glass in the windows of a house must have less pleased than puzzled the heir of the brittle inheritance. A squire would probably declare himself to be more "bothered" than benefited, were his husbandman Giles to "desier his worshipfull landis-lord" to be the supervisor of Giles's testament.

It is to be observed, however, that aquires, on their side, sometimes required similar offices from their helps, like Tatton, of Withinhaw, who names as executors of his will a brace of Cheahire "Esquires," and with them, "my trusty servant, Owen Barton, gent."

Generally speaking, legacies are awarded for service rendered or affection paid, but here is one devised as a stimulant to the legatee to help himself. A good old parson, amid many evidences of good judgment and liberality, gives "to Henry Bury, of Wenaley, my other silver-pot, then to be delivered unto him when he can read and write and cast accounts, but not before." The testator, "Bury of Bury, clerk," looks to the future in other things: he leaves funds for a school and free library, and advice how to further the end, which he thinks may be accomplished, for "the library at Ipswich is thought to be worth 300*l.*, and yet began but awhile ago," in globes, and maps, and books. He does not give us a catalogue of the latter, but probably, like those of the Rev. Christopher Goodman, who *does* name "Musculus upon the Comon Plases," they were only suited to "such of my kindred that give themselves to learning, especially to divinity, for which my books best serve." Goodman and Bury are equally thoughtful of the poor as well as of their kin. The former gives "50*l.* towards the relief of the distressed citizens of Geneva, whereof I am a member,"—that is, a follower of the faith there publicly upheld. Bury remembers the poor nearer home, and says he, "Let the sexton have four times as much for making my grave as he hath for other men."

There is one especially curious incident in the will of this learned and liberal cleric,—namely, "I give unto Mr. Ralph Ashton, that religious gentleman, my eagle-stone, which I lately lent him for his wife." Mr. Piccope does not much enlighten ignorant readers by referring them to Raines's Stanley Papers, if they wish to be made acquainted with the nature and properties of this once supposed mighty and implicitly trusted talisman. The Eagle-stone belonged to no particular genus of fossils, as some thought. It was variously described as the *atites*, a hollow *godes* of oxide of iron with silic and alumina, the whole in layers, with loose concretions in the centre, which rattled when shaken. The most valued in Mrs. Ashton's time was that formed of the several varieties of common pebbles. Old women who performed the office of constables held them sovereign for the discovery of thieves. Young women, who had stories how the lady-eagle used to carry these stones to their nests, believed in their efficacy, for other reasons, and rested their hopes of a happily-achieved maternity by the timely application of the eagle-stone to the surface of the body. If the superstition itself be singular, not less so is the fact that country clergymen kept these magic stones by them, and lent them out to the ladies of religious lords in the hour of their need.

Of other traits of a by-gone society we have traces in other wills. "I give to Sir Hugh Cholmondeley," says Widow Brereton of Stratton, "my best horse, if my landlord do not take him for 'harryotte,' and if he so do, then I give him my best yoke of oxen." Again, says Widow Halsall of Halsall, "I give to the right honourable my very good Lord, Henry, Earl of Derby, the best fat ox which I shall happen to have at the time of my decease." This last was, evidently, heriot too; and the widow only left what the Earl,—brother-in-law to the Lord Stourton who was hanged for murder, and son-in-law to that Mary Tudor who had been, for a brief period, Queen of France,—was sure to take when his time came.

Even the law itself has not altogether abolished old customs in counties and on manors. When a man purchases land he would do well to inquire what the customs of the place are with respect to inheritance. The Saxon custom of *Gavelkind*, whereby all the children inherit equally, and primogeniture is without a privilege, still lingers in Kent. In a few other counties, we may yet encounter the exercise of *Borough-English*, according to which the youngest son stands next heir to the estate. Could this have arisen from some *droit de Seigneur* rendering the paternity of the first child doubtful? With regard to *Heriots*, what may now be the custom in Cheshire and Lancashire we are unable to say, but they have not been entirely eradicated from Sussex; and yet as long back as in the time of A'Becket that ecclesiastical landlord denounced them as a device of the devil; and he restored to a widow a fine fat cow which he might have legally taken at the death of her husband, the ex-tenant of the land. We hope Henry Earl of Derby acted as generously towards the children of Widow Halsall. We fear that the other widow's best horse was seized by the landlord, and did not pass, as contingently devised, to Sir Hugh. On the death of a tenant, the owner of the soil had a right to seize "the best beast" on the premises; sometimes the "best cow" at others the "best horse" was specified. We have heard of a lord's bailiff lying concealed in the farmyard of a dying tenant that he might rush into the stable and take possession of the best steed there, as soon as the owner died. No one thought this cruelty; it was, and here and there is, the "custom." But we know of worse cases than the last; for example, a tenant occupied land that lay in two manors. He was dying; the bailiffs of the two lords of those manors watched at his door for his death, and then a struggle ensued between them as to which should seize the finest horse,—for the right of seizure was in both. There lingers, we believe, even worse again than this. Land in one manor may be sub-let, and in such case the lord may seize in both divisions when the holder dies. Finally, we have heard of an attorney purchasing, for a mere trifle, the lordship of a piece of land subject to heriot. He had heard that the tenant was dying, and he knew that the finest horse in the county, there being bred, would be his, by right of his lordship.

As in the previous wills to which we formerly directed the attention of our readers, so in these, not only do fathers acknowledge and make provision for children born before marriage, but wives receive them, and legitimate heirs, ere they die, bequeath wherewith to render comfortable some less happy sister, described as "base-born." There is also much homely affection expressed in some of these documents; as witness that of Tatton, previously noticed. Squire Tatton is desirous that his widow should have a more "convenient house to keep hospitality in than the mansion manor-house," which is unfit "for her to dwell in, and especially for as much as the same house is distant from her parish church two miles, she being not able to travel so far in her old years to hear God's divine service." And so the fine-hearted old squire leaves the good dame his manor-house at Withinshaw, where she might keep a widowhood cheerful with happy memories of him, with a bright hearth round which to assemble old friends, and the church close at hand—a mere short walk for her to calmly walk thither, and not likely to fatigue the vicar, who occasionally, we are quite sure, walked back with her to dinner. Widow Tatton, however, if she espoused the vicar or any other

suitor, was to surrender the manor-house. The idea of the aged lady who could hardly walk a couple of miles becoming the bride of another would have called back Squire Tatton to earth, even though he lay, like Squire Mainwaring of Nantwich, beneath the ponderous "marble pillars, and the great tombstone of marble that came out of Ireland."

We have spoken of personages as well as incidents of interest with whom we come in contact in these testamentary papers. Thus, the will of "Dame Lady Anne Fytton" (*Phyton*, the fair dame writes the well-known name), "widow," introduces us to two families—the Fyttons of Gawsworth, and the Gerards, their cousins. The son and heir of Lady Anne was Sir Edward Fytton, whose sister Penelope married Sir Charles Gerard. Fytton and Gerard! what a coil the men who bore these names made some years after Lady Anne was entombed at Gawsworth. Will upon will, lawsuit upon lawsuit—how fierce and foul the struggle, which began in one century with forgery, and concluded in the next with murder in Hyde Park!

They who now pass through Gerrard Street and Macclesfield Street, Soho, pass over ground where the son and heir of Sir Charles Gerard, first baron of that name, and subsequently Earl of Macclesfield, kept a gay house, surrounded by trim gardens, and a sulky French wife, whom Charles the Second forbade continuing her attendance on the Queen, because the lady let her tongue wag rudely against the Castlemaine whom Gerard himself received at his mansion. That lord, who gave up his command of the Guards for a doucer of 12,000*l.* from the king, who wanted the dignity for Monmouth, was a fine dresser, a false friend, a talebearer against Clarendon, and altogether not a man to be esteemed. His uncle, Sir Edward Fytton of Gawsworth, had died childless, entailing (it was said) his estates on a kinsman, William Fytton, who was succeeded in the possession by his son, the notorious Alexander. To oust the latter, nineteen years after Sir Edward's death and thirty after the entail had been confirmed, as alleged, by a deed-poll, Gerard produced a will which Mr. Piccope would look for in vain in the Ecclesiastical Court at Chester. It purported to be that of Gerard's uncle, Sir Edward, duly made in the nephew's favour. Hot, fierce, anxious, was the litigation that followed, with a Pelion of perjury on one side upon the Ossa of false swearing on the other. Fytton pleaded the deed-poll, but Gerard brought forward one Abraham Granger, who made oath that he had forged the name of Sir Edward to that deed under menace of mortal violence. Thereupon the judgment of the Chancellor was given in favour of Gerard, and the deed declared to be a forgery. Gerard, as soon as he heard the judgment pronounced, "rose up," says Roger North, "and went straight down to a shop in the Hall, took up his Lordship's picture, paid his shilling, and rolling up his purchase went off, desiring only an opportunity in a better manner to resent such an eminent piece of justice."

Then ensued the strangest part of this will story. Abraham Granger, impelled by remorse or liberal payment, or desire to escape a great penalty by acknowledging the smaller offence, appeared in court, and confessed that he had perjured himself when he swore that he had forged the name of Sir Edward. The confession, however, was unsupported, and Fytton, who was considered the responsible person, was condemned to fine, imprisonment and pillory. But that he was not a man to be kept from greatness by having suffered such degradation they know who are acquainted with

North, Evelyn, Pepys, Burnet, Hume, Ormerod and Macaulay. Alexander Fytton, turning Romanist, was patronized by James the Second, who made him Chancellor of Ireland and Baron Gawsworth, and who found in him a willing and unscrupulous instrument in James's Irish Parliament, and active in passing Acts of Forfeiture of Protestant property and Attainder of Protestant personages.

The family quarrel, as we have said, ended in blood. Gerard died in 1693, Earl of Macclesfield. He was succeeded by his two sons, Charles, who died, childless, in 1701, and Fitton Gerald, Earl of Macclesfield, who died, without heirs, in 1702. Ten years later occurred, in Hyde Park, that savage duel between Lord Mohun and the Duke of Hamilton, in which both adversaries were slain. "It must be borne in mind," says Dr. Millingen, in his 'History of Duelling,' "that political animosities, which ran very high at this period, gave a peculiar acrimonious character to the transaction, the causes of which have never been satisfactorily explained." The causes, however, are known to us. Politics, indeed, embittered the affair, for Mohun was the Hector of the Whigs, and Hamilton was a Tory, whose recent appointment to be Ambassador-Extraordinary to France had given great offence to the Whigs generally. But there was a family quarrel, too. These two men, Mohun and Hamilton, were husbands of co-heiresses, who were disputing possession of the old Cheshire estates of the Fyttons; and when they went out to mutual murder on that dreary September morning of 1712, they brought to a sanguinary end the old Cheshire will case, which had given a zest to the legal controversies of two or three generations.

Rachel Noble's Experience. By Bruce Edwards. (Glasgow, Scottish Temperance League; London, Houlston & Wright.)

THAT the cause of temperance could be promoted by a prize-essay—one of the very worst forms of gambling—is the lamentable delusion of a single mind, for which eighty-three persons, to whom time is of some value, have been condemned to write a book, which is now complacently returned to them as waste paper. Does the prize-giver ever think of the injustice of having eighty-four specimens executed, when he proposes to take no more than one? Would he ask eighty-four tailors to send him in as many coats?

This tale, the best out of eighty-three which were sent to be adjudicated on, is the poorest of literary trash. The writer is, of course, wrong-headed on the vices of wine and ale. That was to be expected in a temperance tale. But he cannot write the English language, or reason from his own premises to their conclusion.

The heroine was a young lady who found it advisable to turn her talents to some profitable use, and therefore she answered an advertisement for a companion to a lady. Her first step was to obtain a testimonial as to her fitness; and the person to whom it was most natural for her to apply was a Mr. Virtue, who lived at the manse, and whose ministrations she had attended. And here she gives her first experience in the country where she made her start in life: "I did not then know how readily clergymen give flattering testimonials, probably from a mingling of official and personal kindness, in the spirit of that charity 'which thinketh no evil.'"

However, the testimonial, together with the recommendation of a physician, Dr. England, was partly the means of introducing her to a strangely blunt and rude family, named Mor-

gan. And she was informed by the eldest daughter, within two or three hours of her first entrance into their house, that her predecessor had plainly given them to understand that it was her opinion that they were rich and vulgar; and as for the daughter herself, that her nature was essentially vulgar. The predecessor told the truth, although it required but little discernment to perceive the fact. The brother, Mr. John Morgan, was to be a minister, and he made it his aim to be gentlemanlike. No doubt, he failed most palpably; but he was kindly and considerate. Their first conversation turned on intemperance, and the benefits of taking the pledge; and it also appeared in due course of time that the father of the family was a spirit-merchant, and Mrs. Morgan's ill health and need of a companion to superintend her household was owing to her devotion to ardent spirits. Miss Noble's duty, therefore, was to make Mrs. Morgan a teetotaller, to train the daughters and make a comfortable home for the father and sons. It does not appear why the eldest daughter should not have done all this, except that in that case Rachel Noble would not have been wanted. On Rachel's first introduction to Mrs. Morgan, whom she found in a state of intoxication, she became converted to total abstinence principles. She was confirmed in her conviction that that is the chief remedy, the oftener Mrs. Morgan eluded her vigilance and obtained possession of a brandy-bottle. Of course, it will occur to the reader that the wisest course would have been to keep a strict watch over the poor woman, and, when possible, to appeal to her sense of right and wrong. But Rachel Noble's experiences do not point to this method. In fact, they must have fully tended to convince both herself and her readers of the utter failure of total abstinence principles. Moreover, the 100*l.* offered by the Temperance League has been paid to a man who has missed their aim. In the tale, the pledge does not save its signers; the "sad examples" continue to be drunkards: Mrs. Morgan dies drunk; even Mr. John, the young minister, becomes a victim; and the only one who reaps benefit from "Rachel Noble's experience" is the inexperienced writer of the tale.

Goethe's Hermann und Dorothea. Translated into English Verse. (Nutt.)

Wilhelm von Humboldt's Studies of Goethe's Hermann und Dorothea—[*Wilhelm von Humboldt's ästhetische Versuche über Göthe's Hermann und Dorothea*]. Third Edition, with a Preface by Hermann Hettner. (Brunswick, Vieweg; London, Williams & Norgate.)

WHETHER Englishmen will, by any process of reasoning, be convinced that Goethe's 'Hermann und Dorothea' is a masterpiece of epic art, and that the homestead of mine host of the "Lion" is as important in its way as the residence of Priam or the camp of the Greeks, may seriously be doubted. Indeed, we suspect there are many honest men, by no means ignorant of German, and by no means destitute of poetical feeling, whose interest in the fate of young Hermann's wooing would reach that minimum point commonly expressed by a yawn, long before the nine books, named, like those of Herodotus, after the Muses, had been fairly read—not to say digested. "You must learn to love me," said the Bottle-imp to his victim, in Mr. Peake's once-famous melo-drama, rightly deeming that an affection of which he was the object must necessarily be an acquired taste. The same words might be addressed to the reader by the stolid hero, the strong-minded

heroine, the testy father, the kind mother, the medical *Philistine*, and the wise pastor, who figure in Goethe's idyllic epic, or epical idyl,—whichever form of expression the curious may prefer.

No doubt, to those who can appreciate it, it is a great work,—as olives, to those who like them, are delicious fruit; and when the anonymous author of the translation now before us asserts, in his Preface, that it is "a very pretty poem, full of artistic and finished pictures of middle German life as it was about the period of the first French Revolution, full of charming descriptions of persons and scenery,—full, in short, of interest and instruction of every kind,"—we feel that the tone of his commendation, warm as it is, is not sufficiently high. A work in which every character is a plastic individual, with peculiarities developed amid a primitive and monotonous life, unknown to great cities, or even to small towns, situate in countries that take a share in the world's politics,—in which so perfect a story is constructed on so simple a foundation,—in which the great event of the period, the French Revolution, is reflected without destroying the homely character of the picture, and in which realism never becomes vulgar,—is something more than a pretty poem.

We find we are almost talking in the words of Wilhelm von Humboldt. "The plain simplicity of the object depicted," says he, "and the greatness and depth of the effect produced,—these are the two qualities which, in Goethe's 'Hermann und Dorothea,' most powerfully and involuntarily elicit the admiration of the reader. Things so utterly opposed to each other, that they can be combined only by the genius of the artist, and by that only in his happiest moments, we find brought at once before our minds;—persons so true and individual, that they can only be derived from nature and the living present, and, at the same time, so pure and ideal, that reality can never attain them. In the mere delineation of a simple action, we recognize a full and perfect picture of the world and humanity."

The translation is, on the whole, faithfully and gracefully executed in blank verse; and its general style may be gathered from this passage, which we take at random from the book headed 'Euterpe':—

She went into the field
That, with its wide expanse, crown'd all the hill.
Still trod she her own ground, and joy'd to see
The crop of rye and nobly-waving wheat
That mov'd itself, like gold, along the slope.
Going between the ridges, on the path
She had the goodly pear-tree in her sight,
Which stood upon the hill,—the boundary
Of all the ground belonging to the house.
Who planted it, none knew. On all the place
It stood out large and broad [?]. The fruit of it
Was form'd; and underneath the reaper band
Resorted to enjoy their noontide meal,
And in its shade the herdsman lov'd to watch.

For refraining from an imitation of the original hexameter, the translator merits commendation. Whatever may be asserted on the subject, English hexameters are a bore, unsatisfactory to the classically erudite, and unintelligible to general readers. Scarcely more satisfactory are German hexameters; only it chanced that the founders of modern German poetry, Klopstock and others, showed a predilection for the ancient metrical form, and thus gained for it an early footing: whereas English poetry may be said to exist independently of hexameters, which merely appear as an occasional freak. And even with respect to Germany, it will be recollected how distasteful were Klopstock's numbers to the elder Goethe.

To the more resolute students of 'Hermann und Dorothea,' the reprint of Wilhelm von Humboldt's 'Studies,' with an explanatory Preface by Herr Hettner, will be very accept-

able. The essays may be regarded, to a certain extent, as the result of Humboldt's conversations with Schiller, and the views they embody belong to that state of thought which is represented in Schiller's philosophical writings. The author had before him the example of Lessing, who from the single group of Laocoon deduced an entire theory of the essential difference between poetry and plastic art, and endeavoured, in like manner, to propound a complete theory of poetry, while explaining the high qualities of Goethe's epic. Unfortunately, while Lessing's book is delightful, Humboldt's 'Studies' are dry to repulsiveness, as even his editor cannot deny. Dryness, however, will be scarcely a bugbear to those who are accustomed to the philosophical products of Fatherland; and, at all events, Humboldt's matter is good, however defective his form.

FRENCH NOVELS.

Lady Fortune—[*Dame Fortune*, par Paul Perret]. (Paris, Hetzel.)—So far as regards good intentions, 'Lady Fortune' is better than the general run of French novels, inasmuch as there is a recognition of moral obligation. There is no illicit love in it, nor unnatural sentiment: one might even say, that there is an aspiration after a nobler and better life than can be found in mere self-pleasing; a life of usefulness and of good to others is recognized as the ideal of human effort. It is true that the efforts to ameliorate the fate of the poor and miserable would drive a political economist fairly mad. The author's attempt to dispense a large fortune in works of beneficence reads like a child's dream; still, the aspiration is there, and the subject of the story is not the everlasting breach of the Seventh Commandment. The motive of the story is interesting, and opens out a rather complicated problem. A wicked old usurer dies, after accumulating an immense fortune by means of ingenious diabolical agency which the Father of Evil himself could not improve upon. By his will, the whole of his ill-gotten gains are bequeathed to a niece whom he has never seen. The mother and daughter are very cleverly drawn,—a piece of clear, distinct, wholesome workmanship. The discovery of the means by which the uncle had amassed the money comes with the inheritance; the young girl refuses to spend one farthing on herself, and devotes the money to the poor. In the description of the difficulty of this, the sacrifice, the temptation to keep at least some portion, are very well told; the weakness and cupidity of the lover are also very good, though too long drawn out, and made unreal by the treatment. Still, there is the germ of a good idea in the story; but when it comes to working out the details, it goes all to nonsense. Giving alms with both hands is the first idea of doing good; and the second is, to settle down on a young nobleman's neglected estate and reform his tenantry. Every work of benevolence being done in France by government machinery, a novelist has some difficulty in setting his heroine to work: there seems a want of organized voluntary charities to which spontaneous help may be brought and made available. The story of 'La Dame Fortune' is not very stupid, neither is it very entertaining; but it indicates a desire on the part of the author to get into a better track and a more wholesome choice of subject than is usual in French fiction at present.

The Trial of Handsome William—[*La Cause du Beau Guillaume Durant*]. (Paris, Hetzel.)—This is an interesting story; it has a certain grace of nature which is very refreshing in the weary, theatrical, unwholesome scenes of French fiction. As compared with French novels, it may be almost called pure, both in intention and detail; though, of course, an uninitiated English reader would find it highly scandalizing. It is the story of a young man's first love, and there are the grace and truth in it which redeem all love which is true and loyal. The incidents rather remind one of George Sand's novel of 'André.' A young man brought up under domestic circumstances which bring out the feminine elements in a gentle, reserved and

delicately-organized character, settles on a small estate to live an idyllic life of patriarchal benevolence. Louis Leforgeur, the hero, has lived, away from Paris, a life of pure but dreamy domesticity: he has had no Casino or Cremona chapters in his life; but neither has he any strong principles, nor strength of any kind,—only great refinement and good intentions. He falls in love, for the first time in his life, with a charming young peasant on his estate, who lives with a brutal brother, a game-keeper; and she is betrothed to one of his friends, who goes by the *sobriquet* of "Le Beau Guillaume." Matters are complicated by the ill offices and coarse gossip of an old woman, servant to Louis. There is a great deal of very delicate and subtle human nature in the working of these various elements. The brother, angry at his sister's disgrace, ill-uses her worse than ever; for he does not know how steadily Louis contemplates marriage, although he trifles with the purpose, and will not be coerced by any appearance of threat or violence. The brother rouses the neighbourhood against Louis; Louis despises their hostility, and the poor girl is the victim: she is murdered by her brother and Le Beau Guillaume.—The story is worth reading, and although it is a painful one, it excites wholesome human pity. The characters are human beings, and not the pestilential exhalations of a morbid and impure imagination. The servant Euronique is very clever, and true to life,—a bad-natured, covetous, jealous old woman, but not at all one of the demoniacal caricatures of the present evil days of French fiction.

The Conquest of a Soul—[*La Conquête d'une Ame*, par Eugène Lataye]. (Paris, Hetzel.)—This 'Conquest of a Soul' is a prose *In memoriam*; it is a tissue of that morbid self-analysis in which novelists delight, and in which, it must be confessed, they excel. The manner of the story is novel. It is the day of All-Souls, and a lover has been to visit the tomb of his beloved, who had died before their marriage. The image of her whom he had known so lovely decaying in the grave haunts him, and he returns home in a painful state of horror and depression: the spirit of the young girl as he knew her comes and sits beside him—he feels her presence, and his strong thought has the power to give it her shape. He converses with her as though she were once more his living companion, lending her words and speech,—to her, as though she had returned to him from beyond the tomb, he tells the history of his life, explains the misconceptions that separated them,—tells her the details of his life after their estrangement; and it seems as though she communed with him. In the end, he takes up the duties of his life again, whilst the love he has borne her is shut up in his heart, to be the cradle of all noble and good intents,—a living and ever-present thought stimulating him to become worthy of such a guest. There is true sentiment in all this, but it is figured by perpetual self-analysis. The writers of French fiction constantly stop to explain and scrutinize every emotion as it arises, until healthy spontaneous action has become impossible. The insidious growth of falseness that arises from taking note of every shade of emotion is the worst consequence of cultivating self-consciousness. Man is before all things an artist; he is impelled, by an instinct stronger than himself, to give a definite shape and design to all he undertakes. So long as he works on objects of merely mechanical skill, this is all very well; but when it comes to the "human soul by which we live," the "arts of design" render its spontaneity impossible, and simplicity of intention very difficult indeed: a habit of disloyalty of the lip to the heart is established—shades of feeling and trains of thought are going on which seriously modify the words uttered, guaranteed as they are by looks and tones which ought to signify truth. A Frenchman never lets himself go to his emotions with singleness of heart. There is always a residue of suspicion and doubt, even when he seems to confide the most; he considers that he owes it to himself to be beforehand with the possibility of deception—he has always an *arrière-pensée*. Hence there is a constant state of doubt—no genuine humour, no *abandon*. A profound weariness and dryness make themselves felt

through every page of modern French literature—self-esteem is the only sentiment that is allowed free play.

OUR LIBRARY TABLE.

A Handy Book of the Chemistry of Soils: explanation of their Composition and the Influence of Manures in ameliorating them. By John Scoffern, M.B. (Bell & Daldy).—It is not until the middle of this book is reached that any attempt is made to justify its title. The first 70 or 80 pages are on the science of chemistry, without any of that special reference to soils or to manures which the title-page leads us to expect. There is then a short chapter on the philosophy of vegetation, and this is succeeded by others of a rather fragmentary character on some points in agricultural chemistry. The work, which is thus both incoherent and incomplete, concludes with chapters on the Analysis of Soils, Guano, and other Manures. The book is not a manual for the student who desires thoroughly to master the relations of chemistry to agriculture. It is not even a complete handbook of any one department of that large subject. It appears to be intended for the increasing class of amateur agriculturists whose smattering of the scientific relations of the art they practise is a worthless substitute for the practical skill to which, and not to imperfect instructions in the analysis of manures or in the philosophy of vegetation, they ought to look for profit and success.

Notes of an Agricultural Tour in Belgium, Holland and the Rhine. By Robert Scott Burn. (Longman & Co.)—A small octavo volume of 240 pages, containing a great deal that is interesting and instructive to the English farmer. The descriptions of flax culture, of the elaborate rotations of cropping in which it has a place, and of the economy of manures as observed in Belgian agriculture, furnish many a lesson for the guidance of agriculturists here. Mr. Burn is well acquainted with those faults of our farm practice which in that of Belgium are corrected, and his descriptions of the detailed, elaborate and careful management of crops and of manures on soils and under climates very similar to our own are just the corrective we require of the wasteful, easy *want* of management which our farms and farmyards too often exhibit.

Lays from the Ingle Nook. By John Young. (Glasgow, Gallie.)—We can speak favourably, on the whole, of this unpretending collection. The best of Mr. Young's fireside pictures are very good—full of hearty, healthy feeling, brought home to us by touches of lifelike reality. That stage in baby life, for instance, when the little one for the first time scorns the help of the maternal skirt or finger, and, in the common phrase, "runs alone," is painted in the following extract with a truth and tenderness that all parents—mothers especially—will recognize:—

WEE BURDIE—A FAMILY PICTURE.

Tired wi' the labours o' the day,
An' drookit to the sark,
(Sair peltin' showers had held the sway
Frae early morn till dark.)
I push'd along to reach my hame,
That port frae worldly strife,
Sure to be welcomed to the same
By my ain wee guidwife.
Ere I had made my ain door-cheek,
Or o'er its threshold stap't,
She wi' her dumpy han' sae aleek
My shouters kindly clap't;
Syn'e roun' my neck her arms she flang,
Drench'd tho' I was wi' rain,
An' said, while to my breast she clang,
"Wee Burdie's gaun her lane."

Ere yet she spak I could espy
A flutterin' at her breast;
But whether 'twas wi' grief or joy,
I gat nae time to guess 't;
For grief or joy frae him she lo'es,
What wife can lang contain?
See out it cam wi' the blythe news,
"Wee Burdie's gaun her lane."

We'd ca'd her, in our fondness, "Burd,"
Our youngest lassie bairn,
Wha, an' ye'll tak her mither's word,
A genius was to learn;
Sin' ere Time, wi' his spankin' stride,
A towmon't's march had gane,
I'm tauld wi' a' a mither's pride,
"Wee Burdie's gaun her lane."

But noo the aulddest twa I
Enjoy themselves within,
Sae we maun in to share the cheer
An' see Wee Burdie rin.
An' sun'e's I caught the wee thing's
She stanchin' to me cam,
Grupt me wi' pride about the knee,
Syn'e look't o'er to her mam.
Or e'er I'd cuist my dreepin' coat,
Or to a bite sat doon,
I had to see Wee Burdie tot
Our biggin' roun' 'ar roun'.
An' when I saw joy's sunny rays
Illume my humble hame,
I sun'e forgat my dreepin' claes,
Nor heard my grum'llin' wame.
But Nature gars ane gie her heed;
Sae we to sup began,
While 'bout gaun tots, wi' railway speed,
The guidwife's clapper ran.
For miles aroud she kent ilk wean
(A' mither's best ken hood),
But ne'er a ane o' them had gane
Sae sun'e's her ain wee doo.

—Most of these poems are written in the Scottish vernacular—a medium which seems especially adapted to that fusion of humour and pathos in which Mr. Young excels. When he quits his native dialect, he is less in his element. Moreover, in some of his lays, both Scottish and English, the faults of carelessness and prolixity are obvious enough. The ability to place a subject before the reader by means of faithful details is not only a charm in poetry, but one of its first requisites. Mr. Young, however, carries his love of the circumstantial to excess, and gives us trifling particulars where we want broad characteristics. That he can present the latter when he chooses will be clear to all who have read our quotation. It is, indeed, the merit of what he has accomplished in this and similar examples that makes us the more earnest in pointing out what he must avoid.

Vernicles from the Portfolio of a Sexagenarian. (Longman & Co.)—This "Sexagenarian," though he has little imagination, fancy or wit, is sufficiently shrewd, comical and learned to be a tolerable gossip. His principal poem is entitled "Nosology,"—the word not being used in its medical sense, but in reference to the most prominent feature of the face. The writer holds that a man's genius depends upon the size of his nose, and maintains his crotchet (as a crotchet is usually maintained) by quoting the instances that coincide with it, and ignoring those that are adverse. It must be granted, however, that the various warriors, statesmen and poets who have had the nasal organ large make up a formidable list, and that some of the authorities here cited are entertaining, though inconclusive. The following dictum from the "Nugæ Vestales" is curiously applicable to a successful "nasute," as our author would call him, of these times:—"Quisque apprehendat nasum suum, et videat num possit fieri Imperator." It is difficult to give an idea of "Nosology" by extract, as the piece has no passage of remarkable force. It is, nevertheless, smooth and agreeable, and in the end excites our mirth by its persevering gravity in the treatment of a ludicrous thesis. There are in the volume several specimens of similar humour, —a quality which, however, runs into bad taste in the "Address to a False Tooth," and exhibits all the audacity of the punster, relieved by an occasional hit, in the "Elegy on a Favourite Mare." Of the few serious poems, that entitled "In Memoriam" is simple and pathetic. The author's strength, however, lies in genial chat, which, as we have already hinted, is lively and various, though not brilliant. Whoever has a leisure hour may spend it less amusingly than with our talkative "Sexagenarian."

A New Pantomime. By Edward Vaughan Kenealy, LL.D. (Reeves & Turner.)—In a dedication which recalls with more emphasis than discretion the exuberant Oriental style of the "Tale of Alroy," Mr. Kenealy lays his completed Fantasy-Piece at the feet of Mr. Disraeli. Perhaps any preamble less exaggerated would have been out of keeping with the offering. Certain portions of the poem have been already submitted to the public, and thus we are happily spared the labour of analysis or description of the whole. Suffice it to say, that few more perverse exercises of talent,

... and imitative power, recur to memory than ... contained in this thick volume. Students possessing the keenest vision, the widest range of reading, and the most entire sympathy with all the vagaries of German philosophy and fancy, have, on the whole, agreed to consider the second part of 'Faust' as an enigma—as a labyrinth in which Goethe the subtle, even supposing the path always clear to himself, not infrequently hid himself in its intricacies from those under the guidance of his spell. To take such a work, then, as model or point of departure, seems to us a mistake. Scanty would be the comfort to be expected from a poem written to outdo Shelley's 'Sensitive Plant' or 'Marianne's Dream.' Mr. Kenely, however, has not shrunk from a yet more difficult adventure,—and, with a confusion of imagination and purpose hardly equalled in our times, has brought together reminiscences of the celestial Prologue to the first 'Faust' (a portion of that work to which we English are not completely reconciled, in spite of all its majesty and meaning)—imitations of the mysteries of the second part of that drama, in which dream and antique legend and modern sarcasm are so strangely intertwined, and has further introduced, as principal actors, Goethe, the real poet, and *Gretchen*, his ideal creation,—the two separated awhile by *Mephistopheles*, and brought together for pardon and benediction at the close of the dream.—This is surely a case of misapplied ingenuity, if there was ever such a thing. Our author, to continue, seems innocent of every idea of selection in his episodes.—Wherefore, else, should he have told, too clearly to be mistaken, the melancholy death of an ill-starred English poetess, by way of adding a piquancy to a flagging scene of this chaotic Pantomime?—But what are we, who presume to sit in judgment on a masterpiece? Let its maker speak of it himself.—"The Poem is an *Ænigma* to the many,—and will always remain so:—for the Wise and True and Learned it was written, and they alone can understand and appreciate it. Let no man criticize it who does not in part conceive what it means;—let no man pronounce upon its Author who cannot enter into his soul. . . . But the absolute and perfect key to the Poem must be sought for in the soul and spirit of him who reads this work with the desire to think and judge for himself, according to the true and natural dictates of an illuminated reason, on the most sublime of all subjects—God and the Future. And so I send it forth into the world from this place, while the sacred music of the Temple Church peals beautifully from the very spot where the Priests and Knights listened to it a thousand years ago, and a stray sunbeam, wandering and chequered as his own life, plays over the grave where all that now remains of Goldsmith rests in peace beside my window."—The above shall not overawe us, so as to prevent our saying, that in the midst of much elaborate folly and spasms of Affectation, professing to be "commercing with the skies," (in reality painfully on the alert to gather an audience,) will be found lines and lyrics of real fancy and music. One tithe of the labour spent by our author in being unintelligible for the edification of the Wise and True and Learned, might have enabled him to take his place among his contemporaries, without contest, or exciting the uneasy feeling in persons of common sense, that, after all, this New Pantomime may be a dull, long-drawn joke, and that the contriver thereof is laughing at his scanty and bewildered audience from behind the curtain.

Land Registry 1862. Collection of Public General Statutes relating to the Registration of Estates; with the General Orders of the Land Registry Office, Forms, &c., and a Copious Index to Acts and Orders. Edited by James Bigg, Esq.—This little volume forms a part of the edition of Statutes now in course of preparation by the editor, to which we have adverted on several occasions. We have previously borne witness to the energy and activity of Mr. Bigg, and the Index, which is the only original matter contained in this book, appears to be prepared with his usual ability. We should have said that this would prove a very useful handbook to persons taking advantage of the last Act, if it did not seem to be doubtful whether any such class at present exists.

The Influence of the Mosaic Code upon subsequent Legislation. By J. Benjamin Marsden, Solicitor. (Hamilton & Co.)—It has seldom fallen to our lot to labour through 800 pages of more unreadable matter than is contained in this volume. Dr. Primrose's friend Jenkinson himself, in his celebrated remarks concerning the "cosmogony of creation," did not offer a more overpowering show of learning than does this author; but Mr. Jenkinson's display, for a very good reason, speedily comes to an end, with the admission that he is "straying from the question." Mr. Marsden unfortunately, though some of his remarks are little more appropriate to the matter in hand, does not perceive when he strays. The object of the book, as stated on the title-page, in the Preface, and in the conclusion of the work, is to show the obligations which legislation owes to the Sacred Scriptures. It is well that this is so stated, for in the perusal of the book it is by no means easy to bear in mind the author's purpose. Mr. Marsden's theory would appear to be, that in all cases where we find a similarity existing between the provisions of the Mosaic and of other laws, we are bound to conclude that those provisions originated in the Mosaic code, and were thence adopted by the others. Now it is only natural that there should be many points of agreement between the different laws of antiquity, inasmuch as all ancient lawgivers admitted that laws should be founded on the principles of right and justice, and not upon the arbitrary and changing rules of convenience. Accordingly we find many provisions in the Mosaic and other laws which bear a great resemblance to each other. It is of course impossible to conceive that a code of laws so remarkable as that contained in the Books of Moses should exist without exercising a strong influence upon the jurisprudence of all nations which had any communication with the Jews, and it is therefore highly probable that the provisions to which we have referred were borrowed from that code. The author, as we understand him, endeavours to show that this is not only probable, but certain; and here we think he fails. As we have before hinted, a great part of the book consists of observations, statement and argument, the connexion of which with the subject is probably known to Mr. Marsden, but is not revealed to us. We must further take exception to the author's style of reasoning, which is often very remarkable. Take, for instance, this sentence: "If whatever is expedient is right, whatever is right is expedient." By the same logic, if every tailor is a man, every man is a tailor. Notwithstanding the above remarks, we are inclined to think that the author is possessed of a good deal of information. He hints that he may on a subsequent occasion enlarge the present work; but we strongly advise him to write it over again, striking out the irrelevant matter, which now renders his work obscure and tiresome, adding references to his authorities, which are now entirely omitted.

Of Miscellaneous Pamphlets, we have to mention—*The Revolution in America: a Lecture*, by J. E. Cairnes (Hodges, Smith & Co.).—*Agent the United States and Confederate States of North America* (Ridgway).—*Observations on Mr. Gladstone's Denunciation of certain Millowners of Lancashire*, by a Merchant (Ridgway).—*A Few Words to All on the Present Distress of our Brethren in Lancashire* (Skeffington).—*The Defence of England by the Volunteers, with particular Reference to the Defence of Liverpool*, by F. V. M. (Mitchell).—*Commercial Blockade considered in reference to Law and Policy*, by John Westlake (Ridgway).—*Philosophical Reasons for not Hanging Garrotters and Burglars*, by a Member of the Society of Friends!!! (Rixon & Arnold).—*Land in India: Whose is it? Being a Comparison of the Principles at Issue*, by W. M. Wood (King).—*The Practical Application of the Law of Storms at Sea: also, an Easy Method of Correcting the Errors of Iron Ships' Compasses*, by R. Leighton (Hughes).—*Report of the Oxford, Cambridge, Dublin, and Durham Mission to Central Africa* (Spottiswoode).—*Light: a Lecture*, by the Rev. T. R. Robinson (Hodges, Smith & Co.).—*Colliery Accidents, How they happen; with Hints for their Prevention, &c.*, by a Lancashire Working Collier (Heywood).—*On the Cultivation of Cotton in Italy: Report to the Minister of Agriculture*,

Industry, and Commerce of the Kingdom of Italy, by G. Devincenzi (Trounce).—*Our Convicts; their Riots and their Causes: containing Startling Revelations of the Frightful Abuses of our Convict System, &c.*, by W. Thwaites (Froeman).—*and The Cry of Distress: a Poem of the Day* (Dublin, Wisheart).

LIST OF NEW BOOKS.

- Arundell's Law relating to Mines and Mining Companies, 4/ cl.
- Quaint's Lectures on Philosophy, 10s. 6d. 1/2.
- Balfour's Cousin Bessie, a Story of Youthful Firmness, 1/ cl.
- Barnes's Poems, in the Dorset Dialect, 3rd Collection, 6s. 8d.
- Bayly's Lancashire Homes and what Ails Them, 16mo. 1/ cl.
- Bennett's Stories that Little Breeches Told, illust. new ed. 5/ cl.
- Bonhoefer's Manual of Family Prayers, new edit. 8s. 3d.
- Bowes's Illustrative Gatherings for Preachers and Teachers, 7/ cl.
- Braithwaite's Commentary on Midwifery, No. 4, 12mo. 2/6 s/wd.
- Brierley's Tales and Sketches of Lancashire Life, Vol. 2, 8s. 2/6.
- Brownfield's Lower Brittany and the Bible There, post 8vo. 1/ cl.
- Edwards's Second Lesson Reader, 12mo. 3d.
- Burleigh's Amy Thornbottle, or the Curate's Daughter, 12mo. 3/ cl.
- Cassell's Illustrated Exhibitor, International Exhibition, 7/6 cl.
- Chambers's The Renewal of Life, 2nd edit. post 8vo. 6 s/c.
- Christian Advocate and Review, Vol. 2, for 1862, 8vo. 7 s/c.
- Clarendon's History of the Revolution, new ed. 8s. 2/6.
- Curling's Observations on Diseases of the Rectum, new ed. 8vo. 7/6.
- Dublin Examination Papers for 1863, 12mo. 2/6 lds.
- Dublin University Calendar for 1863, 12mo. 3/6 lds.
- Easy Lessons, or Leading Strings to Knowledge, new ed. 3/6 cl.
- Edison's J. S. Jophias, a Dramatic Poem, 8s. 7/6 cl.
- Every Man his Own Lawyer, 12mo. 2/6.
- First Latin Grammar, Part 1, Accidence, 8s. 2/ cl.
- Ford's Sephas, or Cloudy Skies, a Story, 2 vols. post 8vo. 21/ cl.
- Fyfe's British Enterprise beyond the Seas, 8s. 3/6 cl. gt.
- Gleadow's The Sick Room and its Secret, 8s. 1/ cl.
- Greenhow's Shipping Law Manual, 8vo. 20/.
- Help and Comfort for the Sick Poor, 4th edit. 8s. 1/ s/wd.
- Help Onward, or Short Meditations for Every Day in the Year, 3/6.
- Hunter's Examination Questions on Colenso's Algebra, Pt. 1, 2/6.
- Huxley's Causes of the Phenomena of Organic Nature, 8s. 3/6.
- Mills's Kinder Garten Educational Employment, 4to. 3/6 cl. gilt.
- Moore's Poetical Works, new edit. 8s. 7/6 cl. gilt.
- Murby's Musical Student's Manual, Division 3, 8s. 1/ s/wd.
- Newton's The Giants and How to Fight Them, illust. 8s. 1/ cl.
- Pietrowski's Story of a Siberian Exile, translated, post 8vo. 7/6 cl.
- Poems from the Dawn of British Literature to 1860, 8s. 3/6 cl.
- Punch, Vol. 43, 4to. 8 s/c.
- Reminiscences, by a Clergyman's Wife, ed. Dean of Canterbury, 3/6.
- Rogers's Domestic Life in Palestine, 2nd edit. 8s. 10/6 cl.
- Saint Bernard, Life and Times of, by Morrison, 8s. 14/ cl.
- Skyring's Builders' Prices, 1862, 8vo. 4/ cl.
- Story's Roba di Roma, 2 vols. post 8vo. 21/ cl.
- Stowe's Reply to Address of Women of Great Britain, 8s. 1/ cl.
- Stowell's Manxland, a Tale, and Manx Home Missions, 8s. 3/6.
- Talbot's Parochial Mission Women, 2nd edit. 8s. 2/ cl.
- Paris Vendémiaire in France, 2nd ed. 8s. 2/ cl.
- Thring's Law of Joint-Stock Companies, Vol. 3, 1862, 12mo. 7/6 cl.
- Tuckwell's Latin Vocabulary, 8s. 1/6 cl.
- Turner's Liber Stadium, Photographed by Bertalacci, Pt. 1, 31/6.
- War Office, List & Directory for the Civil Departments, 8vo. 6/ cl.
- Weakness of the Blockade, 8s. 2/ cl.
- Weakness of the Inefficiency of Government of N. America, 5/ cl.
- Webster's Royal Red Book, 1863, square, 5/ cl.
- Young's Science Elucidative of Scripture, 8s. 5/6 cl.

[ADVERTISEMENT.]

(Copy.)

To the Members of the Anglo-Biblical Institute.

DEAR BROTHER MEMBERS,—Allow me on the present occasion to direct your attention to *The Authorship of the Pentateuch*, as from the present state of the Public mind, this subject is likely to receive the amount of attention due to its importance.

Even should the References in the New Testament to the Pentateuch, such as our Blessed Lord's declaration John v. 46. "For Moses wrote of me," be regarded to determine that the use of the Appellation of Moses therein no more precludes the supposition that it was written by him, than that it has relation to that which God did by him; yet are the Arguments for attributing the Authorship of the Pentateuch to Moses through the claims of Tradition satisfactory, as no claims worthy of regard in favor of any other Authorship either exist, or are recorded to have ever had existence.

With reference to the Arguments advanced to prove that Moses could not be the Author of the Pentateuch, permit me first to state the points which in my letter entitled *Bible Authority* I consider were demonstrated. That errors in the extant MSS. of the Sacred Text. 2dly, That the existence of a limited number of Miracles has been absolutely necessary to attest the claims of certain utterances to be Divine Revelations. 3dly, That as no MSS. of the Pentateuch now claims to be that which its Author actually transcribed, all existing errors in our extant Copies of it are attributable, either to the Author of the Original Document, or to the Transcribers of those MSS. 4thly, That no statement can now justly be attributed to the Author of the Original Document as a contradiction, that can be explained, either by Miraculous interferences, or by an Error in the Transcription of our present Copy of it. Subject to these Prescriptions, I will proceed to examine what has been advanced to prove, that Moses could not have written all that is recorded in the Pentateuch, even should it be admitted, that some portions of it were written by him.

Abraham Ibn Ezra, who flourished in the 11th century, contended, that it was not possible that the passages in either of the five following cases could have been written by Moses.

1st. He contends, "That the last Chapter in the Pentateuch could not have been written by Moses, inasmuch as it records his death and burial; and that, if he had written it, he would be a prophet like him," which could only have been stated by a later Author." But as he does not inform us, how Natural Reason could discover these things; or, why God could not have Miraculously Revealed to Moses for the benefit of succeeding ages, that which should have been revealed to his Servant, as he had Revealed to him, that which existed before the creation of his Servant, or only alternative is to regard the declaration, "That Moses could not have written these things," to be simply the assertion of Ibn Ezra to that effect. That God did Miraculously remove his Servant, see Deut. xxxiv. appears even to have been a probable occurrence, through the painful practices of the Roman Catholics respecting their dead; such removal rendering the sin of worshipping his relics impossible; and then, that His commands delivered by His servant should live honored, He might have enjoined him to write never a word, but to be a prophet like him." If the Author of the Pentateuch could record that only which he knew by his Natural powers, the Copy of it which we now possess must then be a painful collection of Falsehoods: for what human Reason could unfold, *That the Lord did not Trans-*

lets Moses as He did Enoch, or remove him from this world as He did Elijah, but in the first time, and in the second time, He did it! And if the Lord did miraculously reveal this to any one, why should not that one have been Moses?

Andly, Ibn Ezra contends, that Moses could not have written the Pentateuch, because his acts are not therein recorded in the First person, but in the Third. And he says, that if Moses wrote the whole law, it is not, And I wrote the whole law. This contention will not add much to Ibn Ezra's reputation. Where is the impossibility in the Commander of an army writing a despatch, thus—The Commander-in-Chief gave orders to march, and placing himself at the head of his advanced guard, he personally led the charge! In fact he ordinarily does issue his orders in the third person; and by so doing he neither impairs their sense, or destroys their credibility. There are two admired examples of this style of writing in Antiquity; namely, Caesar in his Commentaries, and Xenophon in his Anabasis. And if the possibility cannot be questioned, it certainly requires more proof than Ibn Ezra has advanced to carry conviction, that Moses in so writing did not choose the better style. Surely Deut. xxxiv. 5 &c. would not be improved by Ibn Ezra's requirement. "So I the servant of the Lord, and he that carried me in the valley in the land of Moab over against Bethpeor, but no man knoweth my sepulchre unto this day, . . . and there arose not a prophet in Israel like unto me."

3rdly, Ibn Ezra contends, that as in Gen. xii. 6 we read, "And Abraham passed through the land, and the Canaanites were in the land, the writer of this must have lived at a time when the Canaanite no longer lived in the land, which was only in the days of David." Ibn Ezra here assumes, that the only meaning of the passage *And the Canaanite was then in the land* can be: That at the time when he wrote, the Canaanites were still in the land, and that it is not possible it should mean,—They at that time had taken possession of the land; or, had returned to it again after expulsion from it;—and till these last senses are shown to be impossible, his conclusion, that Moses could not have written this respecting the Canaanite is simply a false one. Besides these demonstrations, it is requisite to prove, before such a position as the Authorship of the Pentateuch can be either affirmed or negated by the Expression or Omission of a Single word, that it is impossible that such Expression or Omission could have had its origin in an error of the transcriber of the MS. that is now possessed, which certainly Ibn Ezra has not done.

4thly, Ibn Ezra contends, that as in Gen. xxii. 14 we read, "And Abraham called the mountain Jehovah-Jireh; as it is said to this day, in the mount of the Lord it shall be seen. Here Mount Moriah, on which Solomon subsequently built the temple, is here spoken of. The phrase, "as it is said to this day, in the mount of the Lord it shall be seen," could only have been added after the erection of the temple by Solomon, and consequently cannot proceed from Moses." Now it is requisite for the settlement of the doubts here raised respecting the Authorship of this passage, to decide whether the Text of Ibn Ezra was different to, or more correct than that which we now possess; or whether Ibn Ezra or the Authors of the LXX. were the better Hebrew Scholars, since according to the Text of the LXX., Moses' claim to be the Author of it is not interfered with by anything that is set forth therein; the reading of the LXX. being, "And Abraham called the name of that place, Jehovah he saw, in order that they should have said to this day, in the mount, Jehovah was seen;" and yet Ibn Ezra nowhere vouchsafes a decision on either of these points.

5thly, Ibn Ezra contends, that as in Dent. iii. 11 it is related "For only Og king of Bashan remained of the remnant of Giants; behold his bedstead was a bedstead of iron; so it is not in Rabboth of the children of Ammon. This phrase can only proceed from a later Author, who refers to an event that occurred long before him, and therefore, in order to point out the antiquity of the monuments, and dependence to ancient monuments." In case the Author of the passage produced from Deuteronomy referred to a bedstead of iron once used by king Og, in order to point out by the nature of the material its strength, as one proof of its owner being a Giant; which proof he supposed to be sufficient to decide whether the Author of the LXX. was right, or whether Ibn Ezra was right, in his quotation, viz. "Nine cubits was the length thereof, and four cubits the breadth of it, after the cubit of a man." (and certainly its extraordinary dimensions made it such a proof) there is no necessity for what is here termed "this phrase" to have reference "to an event that occurred long before him," as the Author's writing, "as with all justice to the passage it might have reference to an event which at the time of its being written was in actual existence; the thing sought to be proved being, not that king Og had lived, but that king Og whether living or dead was a Giant; and therefore, it is from this passage to prove that Moses was or was not the Author of it.

The foregoing objections of Ibn Ezra to the attributing of the Authorship of the Pentateuch to Moses do possibly embrace all that have been justly advanced thereon. It is indeed true, that the Evidences in numerous instances, are insufficient to support the rejection of their repetitions may contain a far more extensive list, and embrace, as they do, objections of the Class lately advanced by Bishop Colenso; they not discriminating the difference between an examination, whether the person to whom God had made a revelation, or whether it was not the case, that God had never Revealed to any one a specified thing recorded. The objections of Ibn Ezra are exclusively confined to the first of these examinations; Those of Bishop Colenso to the second. Should the foregoing examination of Ibn Ezra's objections have embraced all that have been advanced on this subject worthy of consideration, and should that which he has advanced thereon not be accepted by us, then indeed may we rejoice, not merely in the glorious things Revealed in the Sacred Record of the Pentateuch, but also in the assurance, unalloyed with the concern of Doubt, that the Author of the entire Work, of a privilege doubly valuable to him that does not comprehend, how it is possible to assert that Moses is not the Author of the Innumerable passages which Ibn Ezra determines could not have been written by him, and yet to place the smallest value on those that remain, even though Moses be acknowledged to be the Author of them.

I remain, Dear Brother Members, ever truly yours,
HERMAN HEINFETTER.
17, Fenchurch Street, January 6th, 1863.

FAMILY NAMES.

THE pother in the newspapers about the right to take anybody's name in place of your own, as you might take his umbrella or his bank-note, resembles, with a characteristic difference, an agitation which arose in America some years ago, and which still has partisans in New York, in favour of squatters' rights. Each agitation springs from the principle that nobody has any particular property in anything, and that a man has a right to take for his own uses everything that suits his pocket or his taste. The best expression of the American squatter-right, is perhaps that of the Yankee who said he was going South to open a bank—with a squarer; of English squatter-right, that of the Surrey tapster who dropt the hereditary Buggy and assumed the name and style of Norfolk Howard. The Yankee has an eye chiefly on land, while his

British contemporary has it on names. The moralities of the case are about the same, or somewhat in favour of the sovereign citizen. Mr. Jefferson Brick proclaims his right to seize any nice bit of clearing or hog's-run on which it should please him to "set down his foot." Mr. Montagu Tigg announces his design of appropriating any noble or picturesque name on which his eye may fall in newspaper or book. Mr. Brick may very well urge that, as one of the sovereign citizens whose home is in the setting sun, he owns a share, though a very small share, in the unoccupied public lands of the far west. Mr. Tigg has no illusion about his descent from any possible Montagus. The nonsense uttered about the hardships under which a man labours in the attempt to put away himself and pass into society as somebody else, is far less amusing and excusable than the bounce of Mr. Brick.

We cannot affect to sympathize with the miseries of these Montagu Tiggs; neither can we see why society should be asked, in such querulous tones, to relieve them from the consequence of their own act. If a man wishes to deny his father and mother, and to repudiate the name by which they were known in the world, let him be free to do so, as, in fact, he is. No statute forbids Mr. Tigg from assuming the name of Montagu, or Mr. Buggy that of Howard, supposing it clear that no wrong to a neighbour is intended by the change. But every change which raises doubts about identity, implies inconveniences to the man who makes it, which he must be prepared to bear. If you shave off your Dundreary whiskers, you may be unconsciously cut dead by a friend in the street. If you remove from Mayfair to St. John's Wood, some of your letters will for a long time miss a post. If you cross over from the Whig bench to the Tory bench, you may have to quit your pleasant club. If you leave Canterbury for Rome, you will probably annoy and alienate half your friends. The inconvenience arises from the very nature of things,—from the limit of our faculties, from the steadiness of our principles and from the necessities of time and space. In all these events of a man's life, society can help him in only slight degree. He must trust for his redress to time. In a few weeks the beardless Dundreary will be known by his bare face. The next edition of the 'Court Guide' will chronicle the address in St. John's Wood. The Tory novice, having got into the Carlton, may cease perhaps to regret the Reform cuisine. The convert, after an interview with Cardinal Antonelli, will be consoled for the sneers of his old comrades of Harrow and Cambridge. But each must bear the burden of his act. The gods will not help him, though he call upon them. Now, why should the man whom vanity and touchiness may induce to make a change which more than any other will disturb the desirable sense of continuity and identity, expect to do so without some share of personal loss?

To judge by much that is urged by the Buggies and Gimlets, a reader might infer that the owner of a common or an ugly name had some sort of case against society, some title to ask for a particular relief from the legislature, and even some claim to the indulgence of Judges and Secretaries of State. It is actually charged as an offence against Sir George Grey, that after he had signed one public commission to a person under the name of Jones, he refused to sign a second public commission to the same person under the name of Herbert, until evidence was put before him that Mr. Jones was known to be Mr. Herbert, and Mr. Herbert to be Mr. Jones. What else could he have done? It is not Sir George's fault that the conservative instinct of society objects to this confusion, and only slowly indorses the acts which lead to it. Mr. Buggy seems to think that society should come to the aid of these squatters on their neighbour's run. Why should it? Their names are their own, acquired by inheritance, like any other property they may possess, and a very important part of their social history. As such, a proud man would as soon part with his name as with his character, his genius and his blood.

It is a vulgar notion that some names are necessarily noble and romantic, while others are neces-

sarily mean and base. Names are beautiful only in their associations. Worth, valour, genius, learning, have converted syllables into poems, and words into histories. Look the British Peerage through, and in that bright list there is, perhaps, not one which does not seem to the eye and the imagination picturesque. Yet in their beginnings most of them had nothing in sound or spelling that could be considered glorious. Howard is a Hogward; Seymour is a tailor; Leicester is a weaver; Percy is a gross fellow; Butler is a cellar-man; Stuart is a domestic servant. Vane, Vere, Hyde, and Pole sound the reverse of heroic. Hay is not intrinsically nobler than Straw. How is it, then, that Hay has come to represent the pink of aristocracy, Straw the lowest of vulgar cheats? Simply by association. Would the complainants like to have been originally called Blunt, Craven, or Gore? There is nothing in Grey more attractive than in Brown, as to either sound or letters; indeed, Grey is a shade or so less vigorous than its rival Brown. Would any one like to have been known as Roper or Touchet if these familiar names had never been immortalized by worthy deeds? We do not know that Gimlet has a more familiar look than Bacon, Petty, Peel and Pitt. Yet these have become by association some of the most reverential and gracious of English names. Milton, Sackville and Shelley are not necessarily aristocratic and poetical. Had they not been glorified by genius and by rank, they would perhaps have been included in Mr. Buggy's list. Churchyard, Fuller, Kidd, Quarles, Donne, Bowles, Savage, Quincey, and Dickens, now household words, borne by some of the choicest of our national poets and humorists, would certainly have been so. Not much better as to sound are Cowper, Lamb, and Bulwer. People used to laugh and joke at Cecil. Talbot and Talmash would be considered vulgar. Every one considers Raleigh a romantic name, but in Sir Walter's time it was open to very bad puns. The same with Drake. Coke, too, would be thought low, had it never been illuminated by the Author of the 'Institutes' and the owners of Holkham. In the absence of Sir Christopher, would Mr. Tigg like to have been called Wren? Had there been no crudite giant of that name, would not Cheeke have been voted intolerable? In truth, scarcely anything depends on the letter, everything on the connexion of ideas. Solomon was the wisest of men, and his name is one of the noblest in literature; yet no prudent father, unless he were a Jew, would give it to his child, because in the present generation it happens to be ludicrously associated with old clothes. In its Saracenic form of Solyman it would still be considered magnificent. A current jest will destroy the picturesque beauty of the most famous names; a living Pompey would be set down as a nigger, a living Caesar treated as a dog. Cymon is a name which would attract the female eye, and, perhaps, even reconcile it to the adjunct Smith. Mrs. Cymon Smith would have an air upon a card! But the fine feminine instinct would recoil from Simon. And why this difference? Is it not because Cymon is associated with Iphigenia, and Simon with the simpleton who met a pleman coming from the fair? One of the objectionable names, to remove which from the face of the earth all gods and men are called to aid, is Vilian. Yet the Hogwards and Stywards were all vilians; and one of the proudest houses of Europe, that of Count Vilian the Fourteenth, rejoices in the obnoxious name.

COPYRIGHT, PHOTOGRAPHS AND ENGRAVINGS.

TWO cases for infringement of the copyright in a photograph were recently heard before Mr. Tyrwhitt, the stipendiary Magistrate, at Marlborough Street. We believe they are the first which have been decided "by summary proceeding" before a Justice as to the piracy of a photograph; and consequently they are of importance to the very great number of persons who are engaged in the production and sale of works of that description.

Now the Act of last session, after enabling the authors of original photographs, and the employers of authors of such works, to acquire copyright therein, but at the same time rendering it compulsory to register such right before any benefit of the

Act is obtainable, by the sixth section enacts as follows: "If any person, not being the proprietor for the time being of copyright in any Photograph, shall, without the consent of such proprietor, repeat, copy, colourably imitate, or otherwise multiply for sale, hire, exhibition or distribution, or cause or procure to be repeated, copied, colourably imitated, or otherwise multiplied, for sale, hire, exhibition or distribution, any such work; or knowing that any such repetition, copy, or other imitation, has been unlawfully made, shall import into any part of the United Kingdom, or sell, publish, let to hire, exhibit or distribute, or offer for sale, hire, exhibition or distribution, or cause or procure to be imported, sold, published, let to hire, distributed, or offered for sale, hire, exhibition or distribution, any repetition, copy or imitation of the said work, made without such consent as aforesaid, such person for every such offence shall forfeit to the proprietor of the copyright for the time being a sum not exceeding ten pounds; and all such repetitions, copies," &c. shall be forfeited. And by a subsequent section, all such penalties, &c. may be recovered by the proprietor of the copyright by summary proceedings before Justices.

From the above extract, it will be seen that the sixth section of the Act makes an important distinction between the *manufacture* of spurious copies and the *sale* of such copies. As respects the first offence, copyright in photographs having been created, coupled with compulsory registration, where a man takes the liberty of copying another's work, he does so at his peril; especially, as by searching the register at Stationers' Hall, the copyist can readily satisfy himself whether the owner of the copyright desires to protect it from infringement. But as regards the *sale* of spurious copies by a person who has bought and sold them in the ordinary course of his trade, and without "knowing" them to have been unlawfully made, it would, in the interests of commerce, be unreasonable under such circumstances to subject the seller to penalties, and therefore the legislature has justly placed the mere seller of spurious copies upon a different ground from that of the unlawful copyist. As regards the former, his *knowledge* of the unlawfulness of the act he is committing must be established; but as respects the latter, such knowledge is immaterial in establishing his liability to the penalties imposed by the statute.

The learned Magistrate overruled the defendant's objection as to his want of *knowledge* of the copy having been unlawfully made, and then convicted and fined him ten shillings and costs.

In Messrs. Southwell Brothers' second case the facts appear to have been somewhat similar to those above stated, and the defendant was also convicted and fined. But Mr. Tyrwhitt at the same time intimated that the defendant could take any steps open to him if he wished to carry the matter further,—in other words, suggesting an *appeal* from the decision.

With respect to the *appeal*, "The Summary Proceedings before Justices Act, 1857" enacts that after the hearing and determination by a Justice of any complaint which he has power to determine in a summary way by any law then in force, or thereafter to be made, either party to the proceeding before the Justice "may, if dissatisfied with his determination as being *erroneous in point of law*, apply in writing within three days after the same to the said Justice to state and sign a Case setting forth the facts, and the grounds of such determination, for the opinion thereon of one of the superior Courts of law to be named by the party applying." But at the time of making such application, and before the case is stated and delivered to the appellant, he must give such security as to the Justice shall seem meet to prosecute the appeal without delay, to submit to the judgment of the superior Court, and to pay such costs as may be awarded by the same. If, however, the Justice be of opinion that the application is merely frivolous, but not otherwise, he may refuse to state a case, and must, on the request of the appellant, sign and deliver to him a certificate of such refusal. Where the Justice refuses to state a case the Act provides that the appellant may then apply to the

Court of Queen's Bench, upon an affidavit of the facts, calling upon such Justice, and also upon the respondent, to show cause why such case should not be stated; and the Court may make the rule absolute or discharge it, with or without payment of costs as to the Court shall seem meet; and the Justice upon being served with such rule absolute must state a case accordingly, upon the appellant giving such security to prosecute his appeal, &c., as before mentioned.

The Court to which a case is transmitted under this Act has power to make such orders thereon, and as to costs, as it may think fit; "and all such orders shall be final and conclusive on all parties." The jurisdiction which by the Act is vested in a superior Court may likewise be exercised by a Judge of such court sitting in chambers, and as well in vacation as in term time.

THE POSTAGE-STAMP.

January 5, 1863.

I attach so little importance to the question of priority of suggestion, that I should have been quite content to leave the origin of prepayment of postage by stamps where it stands, if Mr. Charles Knight had not attempted in some degree to discredit my statement by ignoring the value (if not the existence) of the most essential stage of postage-reform as regards newspapers, and by assuming that an Act must necessarily have passed without discussion, in or out of Parliament, because he finds no record of any discussion in 'Hansard.'

He will find an abstract of the "Newspaper Postage Act of 1834" in his own 'Companion to the Almanac' for 1835. It was that Act which unequivocally established "the new system of newspaper-postage," by putting an end to the privilege of franking previously enjoyed by certain officials, and by abolishing the payment of postage on stamped newspapers, which thenceforward were prepaid by means of the stamp alone.

As regards "discussion," no one can doubt that the first intimation of a change about to be made in relation to newspaper-postage would excite an interest in the newspaper press, and accordingly we find frequent references to the subject in the *Times* newspaper for the early part of 1834. I need only refer to a leading article in that journal of the 28th of March in that year as one example out of many in which the forthcoming Act was "discussed."

Mr. Knight must allow me to recall to his recollection a little incident which I have no doubt has escaped his memory, and which he certainly was more likely to forget than myself. In the spring of 1834 we were fellow-passengers in the basket of a Blackheath coach, when the subject was discussed. I then stated, as I had frequently done before to other fellow-travellers, my views in relation to the prepayment of postage by stamps. These views Mr. Knight combated, and so little was he then prepared to adopt them, that he exclaimed, as he quitted the coach at the corner of Fleet Street, "Gray, you are more fit for Bedlam than for the British Museum!" This parting benediction my other companions did not allow me to forget, although it has, no doubt, been forgotten by Mr. Knight. That he afterwards thought better on the subject, and succeeded in interesting an influential Member of Parliament in the cause, I sincerely rejoice; for his co-operation was of essential service in securing for the public a boon which was then thought to be of great, but is now known to be of inestimable, value.

JOHN EDW. GRAY.

THE EARTHQUAKE WAVE.

January 5, 1863.

AN error occurs in the review of my Report to the Royal Society on the Neapolitan Earthquake of 1857, contained in the *Athenæum* of the 27th of December last, which, as it has no reference to myself personally, but may be productive of considerable scientific misconception, you will perhaps allow me to correct.

At p. 836 it is stated—"The result of his investigations shows that the average velocity of the earth-wave was 787·97 feet per second; . . . but it is important to bear in mind that this velocity is

that of the wave at the surface of the ground; and at the maximum depth of the shock-line it is very much less, not exceeding on the average more than 12 or 13 feet per second." There is here misconception.

The first and greater velocity referred to is a *mean velocity of transit* of the earth-wave or shock, that is to say, the velocity with which the *wave form* was transferred from place to place; and this velocity is not at any depth or distance from the centre of impulse materially less. The second velocity of 12 to 13 feet per second, supposed in the above passage to be that of the wave transit "at the maximum depth," &c., properly refers to the velocity of the wave itself, *i. e.* of the *wave particle*, which is, in fact, the *velocity of the shock itself*, as ascertained in this instance, and for the first time for any earthquake.

The relation between the two may be popularly illustrated by the wave made visible by a blast of wind in passing over a field of corn. The *transit rate* of the wave, or the rate at which the nearly simultaneous movement of the zone of corn ears, which here constitutes it and makes it visible, is transferred from place to place over the surface of the field, depends almost wholly upon the velocity of the wind, and may be more or less; but the velocity of the wave itself, or *wave particle*, here represented by the ears of corn that are at the same moment displaced and replaced, depends chiefly on the length, diameter and elasticity of each stalk of corn and the weight of the ear; in other words, upon the rate at which the wind can bow forward each stalk and ear, and that at which these can recover their original positions after the impulse has passed on to others. The two velocities, *viz.* that of the transit of the wave form and that of the wave particle, though in certain respects interdependent, are perfectly distinct things as regards earthquake shock, and the want of clear conception of this physical fact generally, amongst geologists and others, has much retarded the applications of Seismology.

In nature, the advance of the shock *from place to place* on the earth surface is at a transit rate often faster than that of sound in air, but frequently at only about one-half the latter velocity, dependent mainly upon the nature of the formations traversed; but the shock itself, *i. e.* the actual oscillation to and fro at each spot visited, has always a much lower velocity, as low frequently as 3 or 4 feet per second, most commonly from 10 to 15 feet per second, and in no earthquake that has ever visited the world in historic time has ever probably reached, certainly not exceeded, 80 feet per second.

It is this velocity of the wave particle that is the measure of the mischief-doing power of the shock, *i. e.* of the *velocity which the shock can impress* upon solid objects, such as buildings, &c. A moment's consideration will show that this impressed velocity cannot be equal or even approach to the high velocity of transit, for this velocity is often as great as that of a common shot. If, then, the velocity of transit could be impressed upon any free solid body,—suppose upon a block of stone, or a ball on the top of a building,—the object would fly off as if discharged from a gun, and only reach the ground again after a range of hundreds of yards, in place of describing (if dislodged) a trajectory of only a few feet, as is the observed fact.

ROBERT MALLETT.

DR. BEKE AND CANON STANLEY.

Bekesbourne, Jan. 5, 1863.

Dr. Stanley, in his 'Lectures on the History of the Jewish Church,' recently published, has given me credit for more than I am entitled to.

In discussing the question, "Where was Haran?" he says, in page 477, "Till within the last year, the identity of the Patriarchal *Haran* with that in the north of Mesopotamia (indicated in Lecture I. p. 8) had never been doubted."

"Within the last twelve months Dr. Beke (in letters to the *Athenæum*) has urged the claims of a small village, called Harrân-el-Awamid, about four hours' journey east of Damascus, on the western border of the lake into which the Barada and the Awaj empty themselves." [The Barada only, not the Awaj.]

by intrusion to destroy its nature as nitrogen, carbonic acid or other gas.

Having thus explained the object and common operation of the process, I will only next remark on this head that the several operations could easily be reduced to a methodical, mechanical system. The gas might be forced from a small pump connected with a gasometer, so contrived by gauging the piston-rod as never to force into a bottle more than a regular, measured quantity; always, however, observing to let each gas-injecting tube terminate in a valve. The process of corking (a cork being first selected for each bottle) may likewise be mechanically manipulated. The bottling cistern, as I may call it, could also be so arranged as to cause little or no waste; indeed, the wine flowing from inverted full bottles, in proportion to the admitted gas, might escape through appropriate channels to be filling other bottles. When once thus reduced to a system, the process of bottling would proceed rapidly enough; and what is favourable to its introduction is, that it requires little more than ordinary care and attention for its accomplishment, while any competent chemist would supply the means for securing the needful gaseous products.

From the nature of this process applied to fluids, it is evident that preserved fruits may have the saccharine syrup that will flow replaced by gas; and so also anything pickled, using vinegar or brine, or preserved by means of oil, may have all such fluid portions ejected by the gas which enters to fill up an equal space within the bottle or jar: but the after-success of such applications will depend on a knowledge of their capability of being thus kept, provided an oxygenated atmosphere can be absolutely excluded. In some cases oil or other fluid might be used solely to exclude common air until replaced by nitrogen, without such fluid possessing in itself any preservative quality; by which means a jar might be filled with eggs, and kept in an atmosphere of nitrogen. It will of course be understood that this artificial atmosphere is in effect merely neutral, and in that respect acts quite as well as a vacuum, with the advantage of being more easily obtained.

The time has gone by for making an application of this nature a grand "secret"; otherwise, in hands that could immediately apply it, results from so doing might follow productive of a wide-spread reputation and attendant fortune.

HENRY DIRCKS.

P.S. It is possible that the eggs of several delicate and curious birds, as the humming-bird, &c., for hatching by artificial means, might be brought to this country, adopting the process recommended; which, as it would keep them fresh, so possibly it might not interfere with their vitality.

OUR WEEKLY GOSSIP.

We hear that Mr. R. B. Knowles is preparing a memoir of his father, the late Sheridan Knowles, for publication. The work could not well be in better hands. Mr. Knowles acted for a long time as his father's amanuensis, and was perfectly well acquainted with his ideas on all subjects, especially the drama and literature.

The Land Registry Office has now existed for about three months, and we were recently informed that it had sold one stamp,—we believe, a shilling one. The old opponents of the measure of course chuckle over this, as a proof that they were right in asserting that the Acts could not work and must from their intrinsic defects become a dead letter. Others trace in this fact another proof that in the present state of the legal profession it is useless to endeavour to introduce any reforms the adoption of which cannot be made compulsory.

On Wednesday evening, M. Simonides exhibited his papyri and his Manuscript of Uranus before the Royal Society of Literature. It was simply impossible to see these MSS. by gaslight; and it was agreed that they be left at the Society's room, available for examination by daylight, between the hours of 11 and 3 on Friday and Saturday, January the 9th and 10th. The only fact of any value ascertained from M. Simonides or from his friends

was, that no independent evidence of any kind exists that the papyri borrowed from Mr. Mayer's Museum are the same as those now produced. It had previously been thought that Mr. Hodgkin could identify one of the rolls:—this proved on inquiry to be a false impression.

Lovers of Scott may find consolation in the fact, that if he is much abused by the Author of 'Wild Wales,' he is abused in very good company. There is a general attack in 'Wild Wales,' on the Scotch, the Irish, the Germans, and the nation to which Mr. Borrow himself belongs. He tells us that a Welsh gentleman asked him at the top of Snowdon, "Wyt ti Lydaug?"—"Are you a Breton?" and then continues, "I am not a Llydauan," said I, 'I wish I was, or anything but what I am, one of a nation amongst whom any knowledge save what relates to money-making and overreaching is looked upon as a disgrace. I am ashamed to say that I am an Englishman.'" ('Wild Wales,' vol. i. p. 366.) Many of Mr. Borrow's statements may be left to correct themselves; but there is one which may lead into error those who place confidence in his authority as a Welsh scholar, and may therefore deserve notice from a critic. He tells us at the very outset of his work (vol. i. p. 7), that "the double l of the Welsh is by no means the terrible guttural which English people generally suppose it to be, being in reality a pretty liquid, exactly resembling in sound the Spanish ll, the sound of which I had mastered before commencing Welsh, and which is equivalent to the English lh." What is meant by "the English lh" is not very obvious. The Spanish ll, which is equivalent to the Portuguese lh, is a sound as entirely different from the Welsh, as the double l of the English alphabet is different from either. Mr. Borrow's statement is, in short, quite unfounded.

On the question raised by us, incidentally, as to the dates at which Mr. Warren De La Rue and Dr. D'Orsan made their respective studies of the Moon, we have the following information:—

"Jan. 5, 1863.

"Dr. D'Orsan not having answered your question as to the date of the negatives from which his photographs have been enlarged, we are prepared to supply to your readers the information desired. The original negative was taken in February 1858, by Mr. Warren De La Rue, at his observatory at Cranford. On that occasion, owing to the absence of tremor in the atmosphere, and the perfect condition of his chemicals, Mr. De La Rue produced three negatives, which were perhaps the most brilliant he has ever been able to obtain. A positive from one of these was published more than two years ago by us in a stereoscopic slide, and it is from this copy that Dr. D'Orsan must have obtained his enlarged photographs. The proofs of this statement are as follows:—Not only are the photographs exactly similar as regards both lunation and libration, but the very flaws in the collodion film of the original negative are reproduced in Dr. D'Orsan's prints. One of the most prominent of these flaws is situated in a small plane to the N.W. of Tycho, between Orontius and Sarsides. It appears as a white speck on the collodion film of the original negative, and is reproduced as a black marking in the positive print published in the stereoscopic slide. It is reproduced again in both photographs of Dr. D'Orsan; thus proving, not only the source from which he has obtained the photographs, but that both his published photographs, although professing to be taken at different lunations, are from one and the same photograph. In one of them the outlying parts around Tycho have been carefully expunged. There are at least half-a-dozen flaws reproduced, but the above-mentioned is, we think, sufficient. We have the original negative in our possession at present, and shall be happy to show it to any one interested in the matter.—Yours, &c.,

"SMITH, BECK & BECK."

—The question of priority has an interest beyond its commercial bearing as one of copyright. The Royal Astronomical Society presented Mr. Warren De La Rue with their Gold Medal for his success in celestial photography; if Dr. D'Orsan's photographs are original, he would have deserved to share the

honour conferred by the Royal Society on Mr. De La Rue.

The final report of the Select Committee of the House of Commons on the best means of utilizing the sewage of the cities and towns in England was issued this week. The evidence, appended to the report, from chemists, agriculturists and engineers, will, no doubt, be read with interest by many persons engaged in farming and horticultural pursuits; but the Committee themselves, after nearly six months' investigation, appear to have been unable to arrive at any definite opinion on the real question at issue.

The accounts just issued relating to the Trade and Navigation of the United Kingdom for the eleven months ended the 30th of November last, show that the export trade in books, which has hitherto been declining every month since the breaking out of the American War, has recently exhibited a slight tendency to improve. The total value of the books exported in November, 1862, was 35,442*l.*, as against 31,789*l.* in November, 1861.

The Master and Fellows of St. John's College, Cambridge, are about to make very important additions to their College buildings, from the designs of Mr. G. G. Scott. These will comprise a new Chapel and Master's Lodge, and the prolongation of the Hall northwards. The new buildings will form portions of a new Court, which is eventually to occupy the whole of the ground between St. John Street, Bridge Street and the river, of which the new Chapel will occupy the southern side. As this is to be erected to the north of the existing Chapel, the services will be celebrated as usual while it is building, and it will be unnecessary to pull down the old Chapel till the new one is finished. The design for the Chapel is very noble, but has one conspicuous fault: it is too much like Mr. Scott's Exeter Chapel, Oxford. Like that, it will be a lofty apical building, in the Early Decorated style,—and, like that, will have a lofty *flèche* at the west end. One point of diversity, not to the advantage of the Cambridge design, will be in the roof, which will be of wood, waggon-headed, with false ribs, instead of being vaulted in stone. In so grand a work, the comparatively small additional outlay required for a stone vaulting should hardly be grudged. We trust this part of the scheme will be reconsidered. The site of the present Master's Lodge being occupied partly by the new Chapel, partly by the intended lengthening of the Hall, a new Lodge will be built, adjacent to the Library, overlooking the river. These works will be commenced next April; the remainder of the Court will not be proceeded with yet. It is to be hoped that the contemplated alterations include the re-facing of the south side of the first Court. This was classicized by Essex or Burrough towards the end of the last century, when a Roman skin was drawn over so many of the older Colleges. The authorities of St. John's intended to have treated the whole Court in the same way; but, happily, funds fell short: so there is less mischief now to undo.

Mr. Marshall Wood has been commissioned to execute a marble bust of the Prince of Wales for the Town Hall, Manchester.

Among the many new companies that the plethoric state of the money-market is creating, one of a most novel and curious nature is talked of. The object is to construct a gigantic reflecting telescope of far greater dimensions than Lord Rosse's celebrated six-foot reflector, with which it is expected wonderful planetary sights will be revealed. We hope, if such an instrument be constructed, that it will be erected where the atmosphere is clear; for, as we well know, Lord Rosse's splendid telescope is sadly out of place in the very misty atmosphere of Ireland.

Messrs. Bacon & Co. have published a sheet illustrating the battle-field of Fredericksburg. The position of each division and of each battery is marked, together with the lines of attack and defence.

Some of the exhibitors in the Classes under the superintendence of C. R. Weld, Esq., in the late International Exhibition, have presented him with

a testimonial in the form of a valuable chronometer and a purse of forty sovereigns. They have also presented the sub-superintendent, Mr. W. H. Jordan, with a gold watch.

It is fair to the gentleman who drew attention to the Postal Treaty with Prussia to add these few last words on that subject:—

“Dresden, Jan. 3, 1863.

“In my note to the *Athenæum* in regard to Prussian postage, which you kindly inserted, I may appear to have misled you, as to-day English newspapers of January 1st have arrived, and, according to the British Post Office Instructions, have been posted with twopence prepaid, and have been delivered here free. I have not only the Prussian official quarto before me, but likewise the Saxon reprint of the New Postal Treaty, and such a clause as that of newspapers up to 4 oz. going free for twopence English, or sixteen pfennigs German, does not exist. On going this morning to the Dresden post-office, and showing the envelopes, they say it is not reciprocal, but only applies to newspapers coming from England. Until yesterday they maintained it did apply either way.—Yours, &c., “J. R. H. C.”

Miss Bunnett, the translator of Dr. Gervinus, wishes to say that her translation was made from the edition published at Leipzig last year. She adds: “The expression ‘departed forefathers’ is certainly incorrect;—the word rendered ‘departed’ meaning in the original ‘emigrated.’ I do not know how the mistake could have crept into my translation.”

A light and graceful writer, Charles Dance, died on Monday at Lowestoft. The talent which he possessed was a very pretty one; most happy at a rhyme or an allusion, though not of the solid and brilliant kind. Many of his little dramas and burlettas were composed for *Madame Vestris*, during her management of the *Olympic Theatre*, when they had their day of pleasant acceptance, and then passed away into oblivion. His ‘*Look at Home*’ was produced on the opening-night in 1833.

An extensive series of experiments is about to be made in France with the type-telegraph invented by M. Bonelli, by which five hundred despatches of twenty-five words each can be printed within an hour. Should the experiments prove satisfactory, it is intended to introduce this telegraph on the principal railway lines in France.

Miss Florence Jacobb has translated, from the Sanscrit of the *Hitopadesa*, the first chapter, ‘On the Acquisition of Friends,’ and illustrated the nine fables contained in it with characteristic drawings and ornamental borders. This, she believes, is the first time, with the exception of the translation of the ‘*Sakuntala*,’ that any Sanscrit writings have been so treated, although several works have been devoted to the illustration of such stories as have been preserved in the books of the Median and Persian writers. We presume the authoress limits this remark to translations into English. The text itself is not unknown by English translations; but never before have these charming and wise tales been presented in so pleasant a manner to the English reader,—the reader, of all, who ought to be best informed upon their beauties, and most readily delighted with the quaint humour and wit they display. Like most works of the kind, these relations comprise tale within tale and apologue upon apologue, so cunningly woven together that the student regards them with the satisfaction due to those other Oriental works of art which consist of exquisite carvings of shell in shell, “the laborious orient ivory sphere in sphere.” Like these, the tales are self-enclosed and mutually illustrative; but never confused or mutually injurious in effect. They contain the wisdom of the great children of the East, gracefully enchased and enamelled with beautiful fancy and local colour. We commend them to all children, and grown children who are wise enough to be children yet. The chromo-lithographic designs by Miss Jacobb present views of Indian scenery, with figures of animals appropriate to the tales, wherein nature is rendered with much felicitousness and beauty. With great judgment, Miss Jacobb has preserved the style of

Indian art, and so rendered her scenes homely, so to say. That of a river running through sands of rich tawny hue, while the great round moon rises behind mountain ridges of deepest blue—their lower ranges purple in the gloom not yet broken,—is admirable. The hot sun-glare of several other pictures is almost equally well rendered. The scene where the deer is released by Hiranyaka, “the rosy prince of mice,” from the snare, has an exquisite sky.

The Dutch Government have determined to cut a ship-canal through the North of Holland, in order to enable ships to pass from Amsterdam direct into the North Sea. This will be a most important engineering work, and will have the effect of shortening the voyage by eighty miles between Amsterdam and London.

Among the numerous changes contemplated in ever-changing Paris is the transformation of the large inclosure of the Palais-Royal into a winter garden, in which concerts will be given.

“Life has not been entirely crushed out here,” writes a friend at Naples. “It is now a year or more that a few Neapolitans connected with Literature or Art united for the establishment of what is called ‘L’ Associazione di Mutuo Soccorso degli Scienziati, Letterati ed Artisti.’ Their plan was to form classes for higher popular instruction, and to give lectures every day in the week. Members paid a small subscription, and there were even gratuitous admissions; and the society has flourished so much beyond expectation, that at present there are no fewer than between three and four hundred subscribing members. Amongst them are men the most distinguished in their several callings—celebrated painters, sculptors and musicians; indeed, the first professors in Naples, who supply all the aids which are necessary to the illustration of their subject. They have taken spacious rooms in the Toledo, where classes are held daily, and lectures given occasionally; and the subscriptions are devoted strictly to the purpose of forwarding the interests of the Association. I have several times attended concerts in their rooms, in which both professors and pupils performed, and gave a treat to a critical and numerous audience. Last Sunday I attended what was announced to be ‘the first entertainment for the season by the Association,’ &c. One of the largest rooms in old Naples was taken for the occasion, and many hundreds of persons were present, who, by enthusiastic and frequent applause, gave expression to their satisfaction. After a prologue by a member of the literary department, a Hymn to Victor Emmanuel,—the music by Baron Staffa, and the words by Signorina Papa, both of them members,—was sung by the pupils of the Musical Section. Both the music and the execution were greatly applauded; and Staffa, who is a well-known composer, was called forward by acclamation. ‘The Social Influence of Woman,’ which was a kind of historical survey of the position of the fair sex in various countries and at various periods, was treated by Luigi Gandolfi, a member of the Literary Section, and elicited great applause. Some beautiful verses, entitled ‘The Island of Ischia,’ were recited by the author, Giovanni Fiorentano, a member of the Literary Section. A ‘Fantasia di Concerto’ for the pianoforte, by Coop, another member, and executed by his pupil, A. Orsini, was a treat, and Coop was called for and received applause. There were other pieces spoken or recited by members of the Scientific and Dramatic Sections; and the whole entertainment went off to the great satisfaction of a very crowded audience. I have dwelt somewhat in detail on the various subjects treated of, in order to give you a just idea of the character of the Association. The mere fact of its establishment is evidence of mental life; and the success which has attended its progress is the best guarantee for its continued existence.”

SOCIETY OF PAINTERS IN WATER COLOURS.—WINTER EXHIBITION OF SKETCHES AND STUDIES by the MEMBERS, NOW OPEN, at their Gallery, 5, Pall Mall East, from Nine till Dusk.—Admission, One Shilling.

JOS. J. JENKINS, Secretary.

WATER-COLOUR PAINTERS’ LANCASHIRE RELIEF FUND.—THE EXHIBITION NOW OPEN by the kind permission of Messrs. Day & Son, at the GERMAN GALLERY, 128, New Bond Street, from 10 A.M. to 9 P.M. Will close Saturday, 17th Instant.—Admission, 1s.; Catalogue, 6d.

Shares, One Guinea, in the Allotment of the Paintings, may be obtained at the Gallery.

WINTER EXHIBITION, 130, Pall Mall.—THE TENTH ANNUAL WINTER EXHIBITION OF CABINET PICTURES by living British Artists, is now OPEN daily from 9.30 A.M. to 5 P.M. Admission, 1s. Catalogue, 6d.

MR. JOHN LEECH’S GALLERY OF SKETCHES in OIL, from Subjects in France, with several New Pictures not hitherto Exhibited, is OPEN every day from 10 till dusk, illuminated with Gas, at the AUCTION MART (near the Bank).—Admission, One Shilling.

THE GEORGE CRUIKSHANK GALLERY, EXETER HALL, contains a Selection of over a Thousand of his PROOF ETCHINGS, SKETCHES, &c. (embracing a Period of upwards of Fifty Years; together with THE WORSHIP OF BAUCUS.—Open daily, from Ten to Five o’clock.—Admission, One Shilling; from Half-past Seven to Half-past Nine in the Evening, Sixpence.

MR. EDMUND YATES’S INVITATIONS TO EVENING PARTIES and the SEASIDE will be issued at the EGYPTIAN HALL, EVERY EVENING (except Saturday), at Eight o’clock. MR. HAROLD POWER will be one of the party. A Morning Performance on Sunday, at Three o’clock.—Stalls, 2s.; Area, 2s.; Gallery, 1s. The Box-Office is open daily, from 11 till 5 o’clock.

SCIENCE

SOCIETIES.

ASTRONOMICAL.—Dec. 12.—Dr. Lee, President, in the chair.—Lieut. A. Young, R.N., was elected a Fellow.—A Last Letter from Capt. W. S. Jacob.—‘Observations of the Horizontal Refraction of the Sun,’ by A. Lang, Esq.—‘On the Practicability of observing the Occultation of Stars by the Moon at Sea,’ by D. Smith, Esq.—‘On the Variable Star R Vulpecula,’ by G. Knott, Esq.—‘Description of a New Mode of obtaining the Value of the Divisions of a Transit Level,’ by Capt. W. Noble.—‘Results of the Meridional Observations of Small Planets; Occultations of Stars by the Moon; and Occultation of Jupiter’s Second Satellites; observed at the Royal Observatory, Greenwich, in October and November, 1862,’ communicated by the Astronomer Royal.—‘On the Forms of Lenses proper for the Negative Eye-pieces of Telescopes,’ by G. B. Airy, Esq., Astronomer Royal.—‘Extract of a Letter from Herr A. Auwers to the Astronomer Royal, dated 5, Gartenstrasse, Gotha, 1861, Dec. 1.’

ROYAL SOCIETY OF LITERATURE.—Jan. 7.—The Rev. T. Hugo in the chair.—The Rev. E. B. Butler, J. Sweetlove, G. Worms, J. Rome, and D. G. F. MacDonald, Esqrs., were elected Members.—Mr. T. Wright exhibited several Greek MSS. written on papyri, and purchased by Mr. J. Mayer, of Liverpool, from Mr. Constantine Simonides; together with the MS. of ‘Uranus,’ about which there has been so much controversy on the Continent.

PHILOLOGICAL.—Jan. 2.—H. Wedgwood, Esq., in the chair.—The first part of a paper ‘On the Value of the Views of German Scholars with regard to the Sanscrit Language’ was read by Prof. T. Hewitt Key.—Mr. Watts laid before the Society a paper ‘On Cardinal Mezzofanti,’ which had been communicated for that purpose by C. Waterton, Esq., of Walton Hall, the naturalist, to Mr. Vaux, of the British Museum. There has been much discussion on the number of languages known to the Cardinal, and Mr. Watts remarked, in a paper on his biography read before the Society in 1854, that while in most cases it might be thought frivolous to institute an investigation into the acquirements of an individual, such an objection ceased to be valid in the case of Mezzofanti, who, as by universal acknowledgment the greatest linguist on record, is the representative in that respect of the capacity of the human race. Mr. Waterton’s statement is to the effect, that when in Rome in 1840, a friend, the Rev. J. Macintyre, made him a present of a manuscript volume containing eighty-two specimens of various languages written by different students of the College of the Propaganda, who, it is well known, are a body of young men collected from all parts of the world to receive at Rome an education to qualify them for becoming Roman Catholic missionaries. Mr. Waterton, by the advice of Cardinal Fransoni, the then head of the College, sent the volume to Cardinal Mezzofanti to request him.

to enrich it with his autograph. "Cardinal Mezzofanti," pursues Mr. Waterton, "kept it a few days; and when His Eminence returned it to me, he said that in addition to the eighty-two languages and dialects therein contained he knew two others, which he had added." As this is the most direct and explicit statement ever recorded to be made by the Cardinal with respect to his wonderful acquirements, the list of the languages which the book contains is of much interest. Mr. Waterton gives them in the order in which the specimens are bound up:—1. Hebrew; 2. Sabæan; 3. Rabbinic; 4. Samaritan; 5. Peguan; 6. Modern Chinese; 7. Ancient Chinese; 8. The most Ancient Dialect of Chinese; 9. Ancient Greek; 10. Amharic; 11. Angolese; 12. Modern Greek; 13. Tamil; 14. Shan-se Chinese; 15. Canton Chinese; 16. Tairanic; 17. Ancient Chaldee; 18. Kurdish; 19. Modern Chaldee; 20. Syriac; 21. Mandaic; 22. Arabic; 23. Coptic; 24. Wallachian; 25. Anglo-Saxon; 26. Persian; 27. Tartarian; 28. Turkish; 29. Language of the Gambier Islands; 30. Hindustani; 31. Muscovite; 32. Maltese; 33. Icelandic; 34. Hungarian; 35. Illyrian; 36. Brahmanic; 37. Bohemian; 38. Bulgarian; 39. Russian; 40. Norwegian; 41. Danish; 42. Ethiopian; 43. Ancient Armenian; 44. Irish; 45. German; 46. Modern Armenian; 47. Georgian; 48. Laplandic; 49. Sardinian Dialect; 50. Lusatian; 51. Polish; 52. Chippeway Indian; 53. Servian; 54. Albanian; 55. Phœnician; 56. Californian Indian; 57. Ojibbeway Indian; 58. Welsh; 59. Flemish; 60. Sclavonian; 61. Sclavonian in different characters from the preceding; 62. Spanish; 63. Lithuanian; 64. Livonian; 65. Runic; 66. Werulian; 67. Sicilian; 68. Venetian; 69. English; 70. Italian; 71. Rhetian; 72. Latin; 73. French; 74. Portuguese; 75. Vandal; 76. Celtic (Gaelic); 77. Scotch; 78. Greenlandish; 79. Swedish; 80. Catalan; 81. Frisian; and 82. Dutch. The two added by the Cardinal are, 83. Biscayan or Basque, and 84. Tagala, a language spoken in the Philippines.—Mr. Watts observed that in examining this list, it was obvious that some languages occurred more than once; Chinese and its dialects occupying in fact five of the numbers, and Sclavonic being given twice over (Nos. 60 and 61) because the specimens were written in different characters, while some languages appeared to occur twice under different names, as Muscovite (No. 31) and Russian (No. 39), Icelandic (No. 33) and Runic (No. 65), Norwegian (No. 40) and Danish (41), &c. All these questions, and some others, respecting Hebrew, Sabæan, Rabbinic, &c., might very probably be cleared up at once by an inspection of the original specimens; and it was to be hoped that Mr. Waterton would add to the favour he had already conferred on the Society, by allowing an examination of the interesting volume which had so fortunately come into his possession.

SOCIETY OF ARTS.—Nov. 19.—Sir T. Phillips, Chairman of the Council, in the chair.—The Chairman delivered the opening Address.—Nov. 26.—Dr. A. W. Williamson in the chair.—The paper read was, 'On the Utilization of Peat, with reference more particularly to the Manufacture of Hydro-Carbon Oils,' by B. H. Paul, Ph.D.—Dec. 3.—Rear-Admiral Sir Edward Belcher in the chair.—The paper read was, 'On Boat Building by Machinery,' by Mr. D. Puseley.—Dec. 10.—T. Winkworth, Esq., in the chair.—The paper read was, 'On the Construction of Labourers' Cottages and Sanatory Building Appliances,' by Mr. J. Taylor, jun.—Dec. 17.—Sir T. Phillips, Chairman of the Council, in the chair.—The paper read was, 'On the Mines, Minerals and Miners of the United Kingdom,' by Mr. R. Hunt.

INSTITUTE OF ACTUARIES.—Dec. 29.—C. Jellioce, Esq., President, in the chair.—Messrs. J. H. Evens and W. J. Hancock were elected Official Associates; Messrs. F. Addiscott, W. Hughes, T. H. Johnson, A. E. Middleton, C. H. Ogbourne, H. Parminter, E. Waterhouse, B.A., A. Smither, B. C. Wales, and Lieut.-Col. Oakes, were elected Associates.—A paper was read by Mr. S. Brown, 'On the Rate of Mortality and Marriages amongst Europeans in India.'

MEETINGS FOR THE ENSUING WEEK.

Mon. Architects, 8.—'Building and Sanitary Arrangements,' Mr. Taylor.

— Geographical, 8.—'Ocean Currents, N.E. coast of South America,' Mr. Alison; 'Ocean Telegraphy,' Captain Rowley; 'The Atlantic and Telegraphy,' Dr. Wallich.

Tues. Actuaries, 4.—'Council.'

— Syro-Egyptian, 7.—'Samaritan Pentateuch,' Rev. J. Mills.

— Ethnological, 8.—'Commixture of Races of Man, and Civilization,' Mr. Crawford; 'Human Skull, Kellet, Lancashire'—'Ancient Indian Antiquities from Ecuador,' Mr. Bollaert.

— Engineers, 8.—'Electricity and Working of Trains,' Mr. Fyocce.

— Zoological, 9.—'Ornithology of Bonrou,' Mr. Wallace; 'Snakes in West Africa,' Dr. Günther.

Wed. Graphic, 8.

— Society of Arts, 8.—'Photography and Magic Lantern Educationally considered,' Mr. S. Highley.

— Microscopical, 8.

— Archeological Association, 8.—'Proceedings of Charles I., Sir H. Halford; Roman Villa, Marlstone, Berks,' Dr. Palmer; 'Ancient Brand-irons,' Mr. Syer Cuming.

THURS. Numismatic, 7.

— Royal Academy, 8.—'Architecture,' Prof. Spruik.

— Linnæan, 8.—'Loranthaceæ,' Prof. Oliver; 'New Species of Aheria,' Dr. Anderson; 'Germination of Beeds in Cyclamen,' Dr. Masters; 'Chlocon (Ephemera) dimidiata,' Mr. Lubbock; 'Japanese Species of Leiostraca,' Mr. Adams.

— Chemical, 8.—'Atomic Weights of Nickel and Cobalt,' Dr. Russell.

— Royal, 8.

— Antiquaries, 8.

FRI. Philological, 8.

FINE ARTS

History of the Modern Styles of Architecture.
By James Fergusson. (Murray.)

WHILE the battle of the styles is still raging, the appearance of such a book will surely be welcome. Mr. Fergusson brings to the task special qualifications of learning, labour, research, wrath,—we must not add that other, of partiality, which Byron declared made a perfect historian; instead of this, he possesses, in perfect self-confidence, a more serviceable spur.

The ruling idea of the book is, that archæology is not architecture, and that all the attempts now in action at reviving the Gothic or the classic styles contain elements of failure, inasmuch as they are not adapted to an altered range of circumstances, whereby they depart from the principles which rule genuine and honest Art manifestations. As the writer showed in the first part of this work, the Ancient, Mediæval and certain other styles of architecture in vogue to the middle of the fifteenth century, had a vital honesty in them; so he now takes up the subject from that date, and after pointing out the causes of the change the art underwent, its characteristics in various countries and its progress through the since past time, shows how hollow and false in soul the so-called Revival was, concluding therefrom how hopeless all revivals must be, whether Gothic, Classic, or anything else, in spirit. That they are imitative, and not original, is enough for him. If Mr. Fergusson has a leaning any way, it is towards the Palladian: the lover of the older styles will get small comfort from his opinions. If he has a prejudice, it is against the Gothic. He evidently considers that a Classic revival in England is not to be hoped for or desired, and looks forward to some vague glory—a new Art-avator that may arrive when his brother professionals are content to deal honestly and in accordance with the strict functionary and constructional laws of architecture. To show how the spirit of the Revival wrought confusion, he has produced, in the same heedful and lucid fashion which characterized the first part of his work, an account of the styles that have prevailed in the civilized and half-civilized portions of the world during the later centuries. Lovers of Gothic Art in its purity will thank him for the masterly unmasking of its rival the Renaissance, and reprobate his vigorous dissent from their favourite theories. From Brunelleschi to Barry, the works of every man of note are taken in review, and firmly yet fairly dissected.

Any reasonable criticism upon the Ancient styles and that of the Revival must recognize the fact that the former are true styles, "arranged solely for the purpose of meeting, in the most direct manner, the wants of those for whom they were designed; and the ornamentation that was applied to them either grew naturally out of the construction, or was such as was best suited to express the uses or objects to which the building was to be applied." Buildings in the imitative styles being designed on a totally different principle, produce, as might be expected, a totally different class of results:—

"It is, perhaps, not too much to say that no perfectly truthful architectural building has been erected since the Reformation. Mere utilitarian buildings are truthful, of course; but the moment ornament comes to be applied, or an attempt is made by any arrangement of the parts of a building to obtain an architectural effect, the new element is inevitably introduced. In modern designs there is always an effort either to reproduce the style of some foreign country, or that of some bygone age,—frequently both. The form of the building is, more or less, moulded according to these foreign elements, while the ornamentation, being always borrowed, seldom expresses the construction and scarcely ever the real truthful objects to which the building is applied."

The same feeling of insincerity that attends our examination of Renaissance buildings is painful in those of the recent classic or Gothic revivals, says the author. All this not only destroys one-half of the pleasure we experience in looking at buildings of a more truthful style, but it degrades architecture from its high position as a quasi-natural production to that of a mere imitative art. Thus used, it may gratify our tastes or feelings, but appeals not to our higher intellectual faculties; and what ought to be the noblest and grandest of the fine arts sinks below the level of painting and of sculpture; for, although these last are naturally inferior, they retain that truthfulness which the other has lost. During the existence of the true styles there was not a single edifice erected in any country that pretended to be a reproduction of any building of a preceding age, nor one that was borrowed or adopted from any foreign country or people, or resembled their productions, except in so far as the builders were allied by blood or had common feelings and interests. On the other hand, adds Mr. Fergusson, there is not perhaps a single building of architectural pretension erected in Europe since the Reformation which does not set ethnographic propriety and honesty at defiance. One would think such conclusions as these would be enough to seal the condemnation of anything; still the author, true to his function, holds the balance in hand, and does not condemn the falsity to be wholly bad, but proceeds to inquire what are the characteristics of the style of Art that European nations have followed so long—which they presumably had reasons for doing, or, if they had not such reasons, and they wrought in sheer carelessness, to discover how this came about, so that, by knowing the form of disease, we may prescribe a remedy.

Primarily, Mr. Fergusson ascribes the change of styles in architecture to the revival of classical literature, which, beginning in Italy, where the Gothic style never had a solid footing and must have been repugnant to the sense or superstition of the people, spread itself through all the other countries of Europe; lastly reaching England, but at a much later time than elsewhere (it being the fact that James the First could hardly obtain a classic design at home), and ultimately throve only under that weak and ostentatious son of his, Charles the First, whose "foreign feelings

and refined tastes" were needed to fix it in this country. One might ask if this was with Charles solely the result of school-teaching and ostentatious imitation, or was it a sign of the Italian blood of Rizzio cropping out in accordance with the law of alternation in mental character? The summaries of the effects as well as the causes of this change in divers countries are very interesting, and succinctly given by the author as he deals with them one by one in the body of the work before us. The Reformation in religion, whenever the Roman traditions were relatively inoperative or the literary *furor* weak, may be taken as the second cause of the great change. One of the first consequences of this was, that almost all the countries found themselves overstocked with ecclesiastical edifices, and even France had so far changed in feeling that she already possessed more of them than she required, so that but for the needs of the capital she would have scarcely produced a single important church during the seventeenth and eighteenth centuries. In Italy this was not so, because there the power of the Papacy culminated at that date, and every city enriched itself with churches that vie in splendour with the works of the middle ages, whatever may be said of their taste; and the Jesuits carried their peculiar style (which was the vilest and falsest of all) into every country to which they had access. "Although the countries on this side of the Alps abandoned almost entirely the practice of ecclesiastical architecture, they made up for it, in extent at least, by the erection of civil and domestic buildings on a scale hitherto unknown." The great work of De Corceau, for instance, published in 1576, contains illustrations of thirty of "*les plus excellens bastimens de la France*," but he does not include a single church. Mariette's work, with one hundred civil buildings, only imperfectly mentions eight churches. "Vitruvius Britannicus" has only short notices of three churches, but full details of one hundred and seventy-five civil structures. Thus complete was the change of public feeling in so short a time.

A comparison between the Sistine and that contemporary work King's College Chapel, Cambridge, offers an opportunity of showing the working out of the two systems of pictorial and architectural decoration, upon which so much of the history of the change of Art depends. In Giotto's Chapel, the sole object of the building was to receive the pictures; this is honestly carried out to a noble result. At Cambridge, the pictures are placed in the windows, filled in between the architectural millions, so that no moulding or constructive feature is broken or interfered with by the paintings; but, on the contrary, the pictures are often marred by the architecture. The character and function of the Sistine are the reverse of this, and yet not wholly and thoroughly carried out, inasmuch as the painting of the flat part of the ceiling, so that the figures appear as we enter to be upside down, is a mistake. Mr. Fergusson has omitted to point out that the comparison of King's College Chapel does not hold good in respect to the fact, that the windows therein depart from the strictly pure idea of their function in a Gothic edifice. This function is to give a splendid flood of coloured light to the interior they decorate; they should be of the nature of transparent mosaics, not in any sense as pictures to be studied, as now they must be, for themselves. The subordination of the pictorial element of decorative Art to Gothic architecture was therefore more consistent and thorough than he has shown, and the comparison is so far weakened. This infringement upon the law of Gothic Art shows the influence of changed

feelings to have been felt, even in England, sooner than people think. Along with the rigidly structural system of decoration that had been undermined when the Perpendicular style was introduced, went also the no less functionary service of window (chromatic) decoration. We say this to show that the change was by no means unheralded, and that the tide of feeling was determined in its direction, not originally moved, by the causes just summed up.

Mr. Fergusson marks the opening of the Renaissance period with the building of Florence Cathedral by Brunelleschi, then by that at Lodi by Bramante, when the chance of independent greatness was lost by not inventing new details to supply the place of the borrowed classical ones, so that a new and great style might have been developed, as it was not. From this he proceeds with an analysis of the style, and traces its decadence to perpetually copying inappropriate details. We cannot point to a better example of architectural criticism than the portion relating to the state of English Art in the last century. The remarks upon Newgate Prison, as built by Dance, are excellent and conclusive (p. 296). To us he does not seem consistent in denouncing the spirit of the modern Gothic revival to the extent he does, because as a revival it must be full of hope, always provided it is wrought in that spirit which none more powerfully than himself shows to be sound. He also generally ignores the application of Gothic Art to domestic uses,—a strange and vital error. Is it really necessary that Gothic work must be rude and barbarous, as stated in page 319? Is it true that the masonry cannot be too coarse nor the materials too common? Must the carpentry be rude and as unmechanically put together as possible? If so, how are we to reconcile the opinion with that found on page 875 of the first part of the work, where, speaking of the roof of Westminster Hall, we find that "even viewed only as a scientific combination of timber this roof is as good as anything that has been done in this engineering age"? This is stated to be also a noble work of architecture.

FINE-ART GOSSIP.—We have made progress in the custom of erecting statues to public men, with the addition of not a few to merely wealthy personages, such as those whose apotheosis laid the last century and beginning of the present so open to ridicule. Mr. Foley's Father Mathew, for Cork, is well advanced, and will probably be placed in a few months: the design represents him speaking to, or rather blessing, those who are supposed to be kneeling before him, having received the Temperance pledge. He has in hand, also, Lord Elphinstone, for Bombay; Sir J. Outram, equestrian, for Calcutta; a seated statue of Barry, for the Houses of Parliament, and one of Sir J. Fielden, for Todmorden. A statue to the late Duke of Bedford has been decided upon as a Memorial at Tavistock. Mr. E. Davis's Wedgwood, for Stoke, has been placed in its destined situation. A cast of this work may be remembered as standing under the eastern dome of the International Exhibition: he is represented holding the model of the Portland Vase in his hand, and his action is as of lecturing upon it. Mr. Woolner has in hand Macaulay for Cambridge, the Prince Consort for Oxford, William the Third for the Houses of Parliament, and eleven statues for the Manchester Assize Courts; Mr. Munro, Queen Mary the Second for the Houses of Parliament. A bust of the Prince Consort is to be placed in the Council Room of the Society of Arts, Adelphi; also an equestrian statue of the same in the Market Place at Coburg. Mr. Westmacott has lent his statue of the Peri at the Gates of Paradise to the Royal Horticultural Society: it will be placed in the

Conservatory at South Kensington. In the Council Room there will appear a statue of 'David with the head of Goliath,'—'Ariel released from the pine,' by the same, the model of Mr. Durham's 'Euclid.' The bronze 'Juno,' given by the Prince Consort to the Society, is now delivered from the International Exhibition to it.

The Report of the Royal Scottish Academy (the thirty-fifth) states that the Exhibition in Edinburgh was opened on the 12th of February, and closed on the 10th of May last; it contained 824 paintings and 33 sculptures, mainly by resident Scottish artists. The Exhibition was opened both in the day and evening, and pictures sold to about the total value of 5,000*l.*

'The Griffingage of the Hon. Newman Strange,' an Indian story, told by illustrative sketches of the progress of a new-comer in India, is told in the ordinary manner,—catastrophes, disappointments, quarrels, flirtations, and final matrimony. There is nothing very original in the incidents of the series, nor very lively in their production by the pen and ink of the draughtsman: some trivial points of character may amuse the old Indian, but these are certainly not enough to make the book valuable. The sketching power of the author is considerable, and must have been original: he draws tolerably, and might, with heed, draw well. Let us hope patience may benefit him.

Messrs. Lockwood & Co. have published 'A Handy Book of Villa Architecture' (Second Series), by Mr. C. Wickes. This consists of a set of suggestions to gentlemen about to build, as to design, construction and cost of villas in various fashions, such as taste may decide upon after inspection and consideration of means. By way of aid to a decision upon the last point, estimates are given of cost, so that we learn at once what may be built for 1,500*l.*, 1,800*l.*, 1,900*l.*, 2,000*l.*, or 3,000*l.* It is right to say, that all the specifications stipulate for the best workmanship and materials, although the estimates seem low. Here there is your half-timbered Domestic Gothic Cottage to be built for 1,500*l.*; your Palladian Villa at the next price. It is difficult to say what the next article is, unless such as is designated in the vernacular as "Gothic Villa"; it is unbeautiful, and therefore no more Gothic than it is outlandish. Another Palladian Villa follows, made so by keeping to the four-square arrangement of the above-named, and putting in light-openings of another form, and adding chimney-stacks that painfully resemble the coal-scuttles now much in vogue, styled "The Ruskin,"—which utensil, be it said for that gentleman's sake, must have been ironically named. We cannot say any of these designs, being of the most commonplace order, are to be commended. The interior arrangement is not less unsatisfactory: in the Domestic Gothic Cottage, the chimneys, instead of being made a constructional feature of the design and arrangement by getting them together, so far as practicable, in a fine central group, advantageously to retain heat, appear in no less than six stacks, three of which are external. Again, in all cases the vestibule, or "hall," is placed in the centre of the structure, so that the rooms lose what protection it might afford; in one the library is next to the lobby, as in the next it appears between the kitchen and the drawing-room, and abuts upon that side of the last where the young ladies' pianoforte is sure to stand. We pity the man who lives in Design V. so arranged, that being the 4,000*l.* villa, in the Domestic-Franco-Louis-Quinze-quasi-Palladian style,—a sort of "sugar-candy villa."

The Memorial Statue to Bishop Hooper, by Mr. E. W. Thornhill, erected near the Church of St. Mary-de-Lode, Gloucester, the spot of his martyrdom, represents him in the act of preaching. It is surmounted by a canopy, carved, like the statue, in fine Portland stone.

The subjects of the decorative paintings upon the nave ceiling of Ely Cathedral, made in keeping with Norman architectural design, are as follows, beginning at the west end of the nave:—1. The Creation of Adam; 2. The Fall; 3. The Sacrifice of Noah; 4. Abraham and Isaac,—"God will

provide Himself a lamb"; 5. Jacob's Vision of the Ladder; 6. The Marriage of Boaz and Ruth, from whom sprang Obed, the father of Jesse. The general design of these subjects, made by the late Mr. Le Strange, of Hunstanton Hall, by whom they were executed, is that of the Jesse tree; they form the central line of decoration. Twenty-four prophets and worthies of the Scriptural history are disposed parallel to the above in a double line down the sides. These are—1. Abraham and Jacob; 2. Job and Balaam; 3. Moses and Nathan; 4. Jonah and Joel; 5. Amos and Hosea; 6. Isaiah and Micah. Mr. T. G. Parry, of Highnam Court, Gloucester, has undertaken to carry out the following subjects of the pre-arranged scheme of decoration:—In the 7th bay will be Jesse, represented sleeping, as in the old manner; 8. David; 9. The Annunciation; 10. Entry into Jerusalem; 11. The Tomb, with the Angel guarding it; 12. The Majesty of Christ. The series of prophets and worthies before described as accompanying the already-executed work by Mr. Le Strange will be continued in these last by figures of the Prophets and Evangelists of the New Testament, and those of Our Lord's genealogy. A line of busts, suggesting the generations of the Saviour according to St. Luke, runs along either side of the ceiling at its lowest coving, or nearest the walls. This commences with the figure of Our Lord, round which is the inscription, "Being, as was supposed, the son of Joseph," and is carried on, with the names of each grade, to "the son of Adam," where the series ends in the central medallion of the first bay, which bears the writing, "Which was the Son of God." The disposition of Evangelistic symbols upon the whole design suggests the connexion between the old dispensation and the new.

Mr. John Pye, who has just been elected into the Academy of Fine Arts of Paris, is the engraver of that name, not a "surveyor."

A cathedral is to be built at Belfast for the diocese of Connor. The Cathedral of Tuam is to be rebuilt, but by the demolition of the present church, a good fourteenth-century building, with some richly-traceried windows. The Dean and Chapter of St. Patrick's, Dublin, have purchased from the authorities of St. Nicholas parish the north transept of their own cathedral, which has been for a long time used as a parish church: this is to be rebuilt, and again added to the cathedral, now being restored under the direction of Mr. B. L. Guinness, the eminent brewer, who is said to have expended already 80,000*l.* on the work, being his own architect.

MUSIC AND THE DRAMA

SACRED HARMONIC SOCIETY, Exeter Hall.—Conductor, Mr. COSTA.—FRIDAY, January 16, Mendelssohn's 'ATHALIE,' and Mozart's 'REQUIEM.' Principal Vocalists: Miss Parera, Madame Saindon-Dohy, Mr. Montem and Mr. Weiss. The Illustrative Verses in 'Athalie' will be recited by Mr. Phelps.—Tickets, 2*s.*, 5*s.*, and 8*shillings* 10*s.* 6*d.* each. The Offices of the Society are at No. 6, Exeter Hall.

HANOVER SQUARE ROOMS.—MR. HENRY LESLIE'S CHOIR.—The Programme of the FIRST CONCERT, on WEDNESDAY EVENING, January 14, commencing at Half past Eight, is now ready.—Stalls, for the Season of Five Concerts, One Guinea. Reserved Box Seats, numbered for the season, Half-a-Guinea. Immediate application for the latter tickets is necessary, as only sixty can be issued. Single Tickets, 5*s.*, 2*s.* 6*d.*, and 1*s.*

The Chorale Book for England; a complete Hymn-Book for Public and Private Worship, in accordance with the Services and Festivals of the Church of England; the Hymns from the Lyra Germanica and other Sources, translated by Catherine Winkworth; the Tunes from the Sacred Music of the Lutheran, Latin, and other Churches, for Four Voices. With Historical Notes, &c. Compiled and Edited by William Sterndale Bennett, Mus. Dr., and Otto Goldschmidt. (Longman & Co.)—It will displease enthusiastic persons to be told that a publication like this, howbeit carefully executed, and obviously a labour of love on the part of all concerned, is in some respects a superfluity.—In nothing are we English more national than in the forms of our worship; in nothing are we richer than in our Psalm and Hymn Tunes. We have had, and have, good preachers; we have not had sacred poets: and both of these have held the keys of our

hearts and sympathies, by the correspondence of their offerings to our requirements. Jeremy Taylor will always be nearer to us than Bourdaloue, or Massillon, or Bossuet,—Watts, than Madame Guyon. A truly pious heart can worship everywhere; but there is something for it inexpressibly comforting, as apart from excitement, in the home-shrine. This book, executed as it is (we repeat) by both translator and musicians in a spirit of reverence, will hardly, we fancy, become an English book, any more than a translation of Zollikofer's Sermons would be. Every land has its own metres: those of the German Hymns, when represented in English, inevitably tempt the translator to weakness (be he even accomplished as Miss Catherine Winkworth), owing to the number of double rhymes; these in many cases, as "rejoicing," "shining," &c., are in our language thoroughly unvocable, and to evade and vary them is one of the hardest portions of the task of him who arranges verse for music.—Thus much without reference to the subject-matter of the German Hymns; which again, in its own world, is open to remark on the score of nationality. In the reputation of their music, considering the mass collectively, we think matters may have been mixed up which do not belong to their intrinsic merit. They are grand and grave, no doubt,—some of them are admirable as specimens of simple devotional harmony; but as a whole they have less character and spirit than ours—laying entirely out of the comparison those ranting, florid and secular melodies which, of late days, a true and reverent taste in Art has driven out of the Tabernacles of Dissent.—In not a few the melody is essentially poor and unimpressive. There are many, however, among us to whom, whether theologically or artistically, whatever comes from the Churches of Germany to the Church of England is authoritative and welcome—possibly, by reason of its very strangeness,—and these will, and should, find no common satisfaction in this collection, which has been executed and produced with no common care.

MUSIC IN LEIPZIG.

January 1, 1863.

CHRISTMAS has brought us the busiest musical season that Leipzig has known for years.

At the Gewandhaus Concerts I have to mention a Requiem by Herr Friedrich Kiel, of Berlin. This work is the production of a conscientious musician; but it lacks genius. Among all the "numbers" the *Osanna* and *Sanctus* pleased me most. The extra concert for the benefit of the Orchestra Pension Fund this year brought us a *Suite*, in four movements, by Herr Lachner, of Munich,—Preludium, Menuetto, Variations and March, Introduction and Fugue,—moving in old forms, graceful in conception, clear in its construction, delicate and yet effectively instrumented, a composition cordially to be recommended for introduction into any English orchestra not afraid to produce something new. The variations, twenty-four in number, are very clever. The same evening Glinka's quaint and characteristic 'Kamarinskaja,' an orchestral Fantasia on two Russian *Volkalieder* (a Wedding and a Dance Song), was given.—Wagner's prelude to the 'Meistersinger zu Nürnberg' was repeated on the same occasion. The reception of this was far less enthusiastic than at its first performance. I do not feel at all inclined to alter the opinion I at first expressed.—Another evening gave us an Overture to the 'Thousand and One Nights,' by Herr Taubert, of Berlin,—a characteristic name to a characterless composition. Far better in every respect is Kapellmeister Reinecke's 'Aladdin' Overture, which has also been performed this season, and which, though not new, is the best of its composer's orchestral works.

The most important novelty I have to report on is 'Scenes from Goethe's Faust,' by Schumann. It was the first time that the whole had been performed in Leipzig, and, I believe, only the third time in Germany. The work is divided into three parts. The first comprises, No. 1, the Scene in the Garden; No. 2, *Gretchen* before the image of the *Mater Dolorosa*; and No. 3, the Scene in the Cathedral. The second and third divisions are from the Second Part of Faust, and contain, in the second, No. 4,

Scene with *Ariel* and the Sunrise, and *Faust's* long monologue; No. 5, the 'Vier graue Weiber,' and *Faust's* Blindness; No. 6, the scene where *Mephistopheles* sets the *Lemures* to dig *Faust's* grave, and *Faust's* death. The third part, No. 7, is devoted to *Faust's* Apotheosis. The work, which occupies a whole evening in its performance, contains, however, specimens both of the best and of the worst manner of its composer. In the Garden Scene there is much that is graceful. In the Cathedral Scene, the composer has treated the 'Dies Iræ' as it might be supposed to sound to *Gretchen's* disturbed conscience. The long monologues in No. 4. make it very wearisome. The 'Vier graue Weiber' are very cleverly treated; as are, also, the mocking *Lemures*. Really noble and simple are the short phrases for the chorus, after *Faust's* death. In the very mystical Third Part Schumann seems to have worked with especial delight. The best parts are the choruses of the Beatified Children, and, most of all, the graceful song of the Angel who has been driving away the Evil Spirits with the roses. But even in these there occur from time to time those peculiarities of harmonic treatment which mar what might otherwise give un-mixed enjoyment. Herr Stockhausen sang the part of *Faust*, and thus insured its being heard to the best advantage. As a whole, the performance was unsatisfactory.

There are two revivals that call for notice, both works by Bach. The first is a glorious 'Concert' for three violins, three tenors, three violoncellos and bass. It was played by the whole stringed orchestra. For the sake of contrast, an *Audante* from one of the violin *Sonatas* had been inserted between them, played admirably by Herr Concertmeister David. The second revival was the lovely Pastoral Symphony from the 'Weihnacht's Oratorium.'

The only new pianist that has appeared since my last report is Mr. Edward Dannreuther, of Cincinnati, a pupil of the Conservatory. The remarkable talent of this very young artist has been already mentioned in your journal. In the *Gewandhaus* he played Schumann's very difficult Pianoforte Concerto. The choice proved unfortunate, for the elaborate orchestral accompaniments had not been sufficiently rehearsed, and as the piano has hardly a bar to itself, the effect of what otherwise (especially in the first movement) would have been a magnificent performance was marred. I cannot but look to Mr. Dannreuther with confidence as one who will take the highest rank as a pianist of the most genuine and most musical school. Herr August Wilhelm, of Wiesbaden, also a pupil of the Conservatory, and who has likewise been mentioned in your journal with just praise, has made a successful *début* as a violinist in the *Gewandhaus*. The sisters Neruda have again appeared in the *Gewandhaus*; and with them the brother, Herr Franz Neruda, a respectable violoncellist. Another violoncellist who has been heard is Herr Steffens, of St. Petersburg; he has a good tone, and sings well on his instrument, and seems to have very fair execution.

In the "Euterpe" the only novelty has been a 'Festmarsch' by Herr Lassen, a Kapellmeister at Weimar,—a work characterized by all the bad qualities of the Weimar school. Herr Blasemann, the new Kapellmeister of the *Euterpe*, is a steady and painstaking director; but whether from somewhat distrusting his orchestra, or from a certain degree of lethargy, he is apt to drag the tempo.

An Organ Concert has been given by Herr Richter, Herr Thomas (a pupil of the Conservatory), and Herr Fischer (the organist of the English Church at Dresden), in the St. Nicholas Church, to afford the public an opportunity of hearing Herr Ladegaet's magnificent new instrument. The instrument has a rich, full tone, without being screaming; but some of the stops have that hoarseness of tone which are constantly met with both in German organs and in German throats. The mechanism of the organ seems excellent.

Of the Extra Concerts, that given by Madame Schumann and Herr Stockhausen was remarkable for the marvellous way in which the latter sang Schumann's setting of Heine's 'Dichterliche Cyclus,' of sixteen songs.—Herr von Bülow has given the first of a series of three Pianoforte Con-

certs. Schubert's posthumous A major Sonata was very interesting. To judge from this evening, Herr von Bülow is no player of Chopin's music. His selection, too, from this composer, was unfortunate. His most brilliant performance was that of Liszt's Concert Waltz on themes from M. Gounod's 'Faust.'

A.

PRINCESS'S.—The new piece produced shortly before Christmas, imitated from Scribe, and entitled 'The Triple Alliance,' has now entered on the second phase of its existence. Owing to the retirement of Mr. George Vining from the company, the rôle of the philosophical Minister—the representative of the politic Bolingbroke of the Court of Queen Anne—has now fallen into the hands of Mr. Henry Marston, who appeared in it for the first time on Monday. The part has probably benefited by the change. For the rattling delivery of a popular comic actor, we have now the sober, deliberate and impressive elocution of a veteran artist, who weighs every phrase and anxiously brings out the full meaning of every sentence. The character now stands before us as a well-studied portrait, in which every lineament of the countenance has been carefully traced. Here and there, too, the colour has been heightened, and the expression idealized; but nowhere is carelessness apparent, or unmeaning dash substituted for true, thoughtful and elaborate work. The portrait thus produced has a genuine historical value, which adds a great and abiding interest to the performance. The drama itself improves on repetition, and both Miss Aylmer and Miss Oliver have better realized the positions they occupy than either was enabled to do at an earlier period. They have preferred the natural and impulsive; and, though sometimes offending against convention, whether of the stage or of the Court, always act with a sincerity and earnestness that carry conviction, and enlist the feelings of the audience. With such advantages the play is now likely to retain the stage for several weeks, and establish itself in the good opinion of more intelligent playgoers.

ST. JAMES'S.—This theatre is now under the management of Mr. Frank Matthews, who on Saturday produced a new drama, in two acts, entitled 'The Dark Cloud.' This production is original, and we are indebted for it to Mr. Rose, a gentleman who, under the name of Arthur Sketchley, some few months ago made a promising *début* as an entertainer. The piece, which was successful, is better executed than conceived, many points of the story being open to critical objection, while the passing action brought into the foreground is generally effective. This is partly due to strong contrasts of character. *Mrs. Caroline Granville* (Miss Herbert), married to the son of a City knight, is of obscure origin, and an object of suspicion to Sir Marmaduke's new wife, whose tendencies, though not her antecedents, are aristocratic. A revelation, however, is about to be made, connected with the arrival of a visitor from Australia, one *Austin*, a friend of Caroline's former husband (Frank Ashton), who, though rich, it is soon seen was never honest. *Austin* had formerly loved the lady, and now seeks, by force of secrets with which he is acquainted, to induce her to quit her second husband and to elope with him. To further his nefarious purpose, he pretends that Frank Ashton was living at the moment of her marriage with Mr. Sidney Granville. But a good-natured doctor in the village, *Mr. M'Tab* (Mr. F. Matthews), has a wife well acquainted with Australia; and these kind-hearted souls, who contribute to the comic underplot, are destined to counteract the schemes of the returned convict *Austin* (Mr. Arthur Stirling), who, among other crimes, has been guilty of murder. *Mrs. M'Tab* (Mrs. Frank Matthews) was present at the death of Frank Ashton, and can testify that it was at a date prior to the second marriage. But the villain is not yet foiled, for he can reveal that the lady's first husband was transported for forgery. And now these dreaded secrets of her life are all disclosed. The second bolt, however, has fallen as harmless as the first. Sir Marmaduke Granville is acquainted with the particulars which led to the transportation of the poor banker's clerk, and that

he was really innocent of the imputed crime. In the end, the villain is handed over to the custody of the police, and the domestic peace which he had disturbed is restored under conditions that secure its permanent continuance, now that every vestige of mystery has been removed. The success of the play was indebted to the genial humour of the *M'Tabs*, and the lady-like bearing of Miss Herbert as the perplexed heroine.

MUSICAL AND DRAMATIC GOSSIP.—It is well known that the residence of Herr Molique in England has been attended with results of no common value, and that as a professor of composition his influence has been great and its fruits good. The manual ('Studies in Harmony,'—Ewer & Co.) just put forward by him for the use of students should excite more than common attention. A better book could not easily be named, whether as regards completeness or perspicacity. The exercises, moreover, are as interesting as exercises can be made. The importance of this last-named merit is great, especially for the solitary student, there being no reason, save in the incompleteness of the professor, why with every step forward which the pupil takes his ideas of form and melody should not be enriched and improved. Learning cannot be made easy, but it need not be a gratuitously dreary business.

The Philharmonic Concerts, this year eight in number, are to begin on the 9th of March.

Mr. Howard Glover's first Concert for the season was given this day week.

Mdlle. Titians has gone to sing at Naples, and not at Pesh, as was erroneously stated.

Mr. Balfé's new opera is, we are told, in active preparation at Covent Garden Theatre.—'Faust' is also in rehearsal there with Miss Parepa, Messrs. Perren and Weiss in the principal parts.

The rumour that Mr. Sims Reeves will sing in English Opera for Mr. Mapleson, gains ground.

Signor Costa is understood to be closely occupied in the completion of his new Oratorio.

M. Halle will be pianist, and M. Sainton violinist, at Monday's *Popular Concert*, at which Hummel's *Military Septett* will be performed.—*Mr. H. Leslie's Choir* will give its first Concert of the season on Wednesday next.—On Wednesday last, the *National Choral Society* gave 'Judas Maccabeus,' with Mr. Sims Reeves in the part of the hero.—The next *Sacred Harmonic* performance will consist of Mendelssohn's 'Athalie' Music and Mozart's 'Requiem.'

Mr. A. Sullivan's 'Tempest' Music, produced the other evening by Mr. C. Halle at Manchester, at what may be called a Shakspeare Concert, in formidable juxtaposition with Mendelssohn's 'Midsummer Night's Dream' Music, succeeded so entirely that it will be repeated on the 22nd instant. There have been few cases of more complete and legitimate success than this in our time.—Miss Hiles has been singing in the 'Messiah' at a Liverpool Philharmonic Concert, to the satisfaction of the audience.

Some misunderstanding seems to be abroad in regard to the Double Pianoforte Concerto by Mendelssohn, one of his earliest works, which we examined and heard at Leipzig in the course of autumn last, as though a rule of reserve and secrecy had been indiscreetly broken with respect to it. Such is not the case. The *Concerto* had been already performed some time previous at one of the Concerts of the Conservatory Pupils, which include a numerous and competent audience. The name of the composer not being announced, not any of those out of the secret—even among the persons the most familiar with its author's manner—scribed it to Mendelssohn. It was attributed to this and to the other known master, but by universal consent was agreed to be weak, poor and mechanical, not worthy the trouble of performance or of the fame of any great German musician.

Signor Peri's 'Rienzi,' a new opera, has had small success at Milan. The voice of Signora Bendazzi, two octaves and a half in compass, and described as deliciously sweet and powerful, has created a great sensation at Turin in Signor Verdi's 'I Vespri Siciliani'; but the opera has not pleased.

An opera by Herr Würst, 'Vineta,' the words

as well as music by himself, has been produced at Brealau.

Herr Theodor Löwe, of Vienna, has given a new opera, 'Concini,' at Prague, with some success.

MISCELLANEA

The Catalogue of the Bibliothèque Impériale, Paris.—In reply to some strictures upon the system of preparing the great Catalogue of the Bibliothèque Impériale, the *Moniteur Universel* has lately published the following particulars:—"The difficulty of coming to an agreement upon the proper plan to be adopted in cataloguing the library has been the true reason why the Bibliothèque Impériale has for more than a century remained without this indispensable guide to its treasures. In 1852, M. Fortoul, Minister of Public Instruction, had the good sense to come to a decision, knowing, however, perfectly well that he was about to incur inevitable censure. Since then every work which has been added to the collection has been entered on a slip, so that for ten years no new arrival has been without its classified title. By this temporary arrangement the confusion of the past is at least prevented from extending. As regards the works in the library before that period, titles have been copied on slips and afterwards inserted in the registers of several of the letters which constitute our bibliographical alphabet. Thus we have already completed the letters A B C D, which comprise all the old divisions,—Holy Scripture, or Bibles (text versions, Jewish, Rabbinical, or Christian commentators), Liturgy, Councils, Synods, Holy Fathers, Theologians of the Greek and Latin Church, Ancient and Modern Jansenism, Casuists, Catechists and Preachers, Ascetics and Controversialists. When, next in rotation, the *D* is shall have been completed (comprising heterodox theologians) and the *E* (Canon Law), the whole six inventories consisting of these letters will be re-cast into one, and thus the student will find to his hand a very complete key to the whole body of Theology—that is to say, to about one-fifth part of the immense collections of the Library. *F*, which comprises Legislation and Jurisprudence, has already been the subject of considerable labour in the way of classification, which will render the preparation of the inventory much more simple and rapid. *M* (History of England) is already completed upon slips, which are classified and about to be inserted in the registers. *T* (Medical Science), a division very rich in ancient and rare works, is completed, and a third part of its catalogue already printed and published. As regards the catalogue of *L* (History of France), which is also finished and three-fourths placed, serious objections have been taken, and it has been said that it would have been better to have confined this portion to the entry of the titles on slips. This, however, is matter of opinion. Every one will admit, that for a subject so extensive and so important both at home and abroad as the History of France, a catalogue upon slips, which would not find its way out of the drawers of the Bibliothèque Impériale, would not render one particle of the service which is daily received by the *savants* of our Departments and in foreign countries from a printed catalogue, which enters into their private studies, presenting them with a list of everything which has been published upon a political event, a treaty of peace, a battle, a sovereign, the biography of a Frenchman, or a locality of the Empire. Will it be seriously maintained that the 'Bibliothèque Historique' of the Père Lelong and Foutette would have been of such vast utility if their authors had kept it in manuscript? The answer is obvious. The 'Bibliothèque' of the Père Lelong, the catalogue of the History of France of the Bibliothèque Impériale, being printed, makes students familiar with an infinity of sources of information of which for the most part they would otherwise have had no idea. Such enterprises can only be condemned by the prejudiced or unreflecting; and the moment when the whole learned world applauds the resolution taken by the Minister of the Interior to print catalogues of the Archives of the eighty-eight Departments is, it must be admitted, somewhat ill chosen for such a condemnation. . . . Finally, the Bibliothèque Impériale of Paris, in the matter of its treasures of oriental

literature, has not been content to remain behind the British Museum, or the libraries of Oxford, Berlin, Leyden, and St. Petersburg, which of late years have published, complete or in part, catalogues of their manuscripts in the oriental languages. Thanks to M. Reinard, who has set himself for some time to this task, and has made an appeal to the learned, devoted like himself to those studies, the Library is now in a position to hand over to the Imperial printing-office the catalogue of Hebrew manuscripts, edited by MM. Munk, Durembourg and Franck. The catalogue of Arabic manuscripts, already considerably advanced by M. Michel Amari, will be finished by M. Barbier de Meynard, who has already, in conjunction with M. Pavée de Courteille, completed the Persian and Turkish catalogues. M. Renan has brought to an end the Syriac catalogue. M. Zotenberg and the Pere Soukias Baron complete the Ethiopian and Armenian catalogues. Thus the five volumes which form the oriental section will not long be wanting."

Westminster Bridge.—By a recent return of the expenses incurred in erecting Westminster Bridge, the outlay is given as 393,139*l.*, of which 145,057*l.* went to contractors and 248,132*l.* to other parties. The approaches cost 109,054*l.* It is worthy of note that long before Labeyle's bridge was erected the place of crossing was known as *Westminster Bridge*. See Dr. Wallis to S. Pepys, Oct. 24, 1699. In the old maps the landing-place on the north shore is so marked. In 1664 a proposal for erecting a bridge there is thus referred to in the correspondence of the French Ambassador to his Government: "Sur ce qui avoit été proposé, de faire un pont devant Withall pour passer du côté de Foxall, la Ville (of London) s'y est opposé par des vives remontrances; et le Roy a déclaré que de son vivant il n'y consentiroit; ce qui a extrêmement satisfait les bateliers, qui sont un corps fort considérable dans cette Ville."

The Swiss Guard.—Mr. T. A. Trollope and Mr. Anthony Trollope are both in error in regard of the Pope's "Swiss Guard." This fine and faithful body of men does not belong to the Papal Army, and must not be confounded with the Swiss Regiments. The "Swiss Guards" form the body-guard of the Sovereign Pontiff, and never leave Rome. Their barracks are at the Vatican and the Quirinal, and they mount guard at those Palaces. Including officers, chaplain, non-commissioned officers and privates, they number about 150, of whom 130 are rank and file, and armed with a halberd and short sword. They receive higher pay than the army, and when not on guard are allowed to work on their own account. They wear the picturesque uniform which is said to have been designed by Michael Angelo; and in the armoury at Basle I was shown two uniforms of the Swiss Papal Guard which were worn before those of the present pattern were introduced. EDMUND WATERTON. Walton Hall.

Population of Prussia.—The newest number of 'The Journal of the Royal Prussian Statistical Office' contains in an easy, collected survey, the definite result of the census in the Prussian States on the 3rd of December, 1861. According to this, the total number of inhabitants, civil and military, is 18,491,220. They are divided over 1,000 towns, with 5,625,852 inhabitants, and over 332 districts of the flat country with 12,865,368 inhabitants. The number of town and country districts is 345. The military population, inclusive of the 14,720 men stationed at Mayence, Luxemburg, Rastadt and Frankfort-on-the-Maine, consists of 268,372 men, of which 263,711 are in the towns, and 4,661 in the country. The most populous of the provinces is Silesia, containing 3,390,695 inhabitants; after this the most populated is the Rhine province, containing 3,215,784 inhabitants. The least populous of the provinces is Pomerania, with 1,339,739 inhabitants.

TO CORRESPONDENTS.—W. M.—F. R. G. S.—C. D.—J. R. C.—H. F. R.—M. J.—C. B.—L. R.—Gray's Inn—F. V.—E. M. S. P.—received.

Errata.—P. 9, col. 2, line 2 from bottom, for "Eschenling" read *Eschenbury*; and, just before, for "Leng" read *Lenz*.

CRAMER, BEALE & WOOD'S
MUSIC CIRCULATING LIBRARY,
For Town and Country.
Terms: Two, Three and Four Guineas per Annum.

CRAMER, BEALE & WOOD under-
take the PUBLICATION of COMPOSITIONS for the
Author on Reasonable Terms.
Estimates forwarded on application.
201, Regent-street.

HALF-PRICE.—All Music sent post-
free at Half the Published Price.
CRAMER, BEALE & WOOD, 201, Regent-street.

CRAMER, BEALE & WOOD'S
Weekly List of
NEW PUBLICATIONS.

A. S. SULLIVAN'S 'TEMPEST,'
Duett, 4s.
"Dance of Nymphs and Reapers."
A most effective Pianoforte Duett, extracted from Mr. Sullivan's
setting of Shakspeare's 'Tempest.'
CRAMER, BEALE & WOOD, 201, Regent-street.

CH. GOUNOD'S 'MARCHÉ COR-
TÈGE,' Duett, 4s. From his Opera, 'La Reine de Saba.'
This March was recently performed at the Crystal Palace, and
was much admired. It is arranged as a duett by the Composer.
CRAMER, BEALE & WOOD, 201, Regent-street.

F. BURGMÜLLER'S VALSE SUR
l'Opéra de Gounod 'LA REINE DE SABA.' 2s.
Mr. Burgmüller has always been one of the most successful of
pianoforte writers, and in this arrangement has quite sustained
his reputation.
CRAMER, BEALE & WOOD, 201, Regent-street.

CH. GOUNOD'S 'MARCHÉ COR-
TÈGE,' Solo, 2s. From 'La Reine de Saba.'
CRAMER, BEALE & WOOD, 201, Regent-street.

STEPHEN HELLER'S NOCTURNE,
4s.; and POLONAISE, 4s.
Played by Mr. Charles Halle.
CRAMER, BEALE & WOOD, 201, Regent-street.

A. S. SULLIVAN'S 'HONOR,
RICHES, MARRIAGE BLESSING,' 2s. 6d.
The much admired Duett for Two Female Voices from 'The
Tempest.'
CRAMER, BEALE & WOOD, 201, Regent-street.

A. S. SULLIVAN'S 'WHERE THE
BEE SUCKS,' 2s. 6d. From 'The Tempest.'
Sung with great success by Miss Banks.
CRAMER, BEALE & WOOD, 201, Regent-street.

HENRY SMART'S 'THE PURE IN
HEART SHALL MEET AGAIN,' 2s. 6d.
Song for a Contralto Voice.
CRAMER, BEALE & WOOD, 201, Regent-street.

HENRY SMART'S 'YOUNG EM-
MELINE—Prix pour Elle,' 2s. 6d.

THE MANUAL OF DATES:

A DICTIONARY OF REFERENCE

TO

All the most important Events in the
History of Mankind

TO BE FOUND IN AUTHENTIC RECORDS.

BY

GEORGE H. TOWNSEND.

Extract from Preface.

It has been the aim of the Author to render 'THE MANUAL OF DATES' a concise and trustworthy compendium of the principal events of ancient and modern times. As the value of a Book of General Reference must necessarily depend upon the character of the sources whence information is derived, the writer has, in all cases, consulted the best authorities, and their statements have been carefully considered and compared. On disputed points, conflicting accounts have been submitted to rigid scrutiny, and the view supported by the most conclusive evidence has been invariably adopted.

From the DAILY TELEGRAPH, Oct. 27, 1862.

"It is so arranged as to include the principal events of ancient and modern times, and the number of articles is nearly double that contained in any work of a similar plan."

From NOTES AND QUERIES, Oct. 11, 1862.

"We cordially recommend it as a book of reference which may be placed with advantage upon the library-shelf of every reading man. He will rarely, we think, have occasion to refer to it without finding the information of which he is in search."

LITERATURE

A Reply to 'The Affectionate and Christian Address of Many Thousands of Women of Great Britain and Ireland to their Sisters, the Women of the United States of America.' By Mrs. Harriet Beecher Stowe, in behalf of Many Thousands of American Women. (Low & Co.)

The Weakness and Inefficiency of the Government of the United States of North America. By a late American Statesman. Edited by a Member of the Middle Temple. (Houlston & Wright.)

The Results of Emancipation. By Augustin Cochin, ex-Maire and Municipal Councillor of Paris; Work crowned by the Institute of France (Académie Française). Translated by Mary L. Booth. (Boston, Walker, Wise & Co.)

THE state of English opinion as to the new Slave Empire is a fact in the moral history of our time which is worthy of consideration from a higher point of view than that of the convenience of Secretary Seward or the necessities of President Lincoln, and under better lights than the invective of Horace Greeley and the sarcasm of Mrs. Stowe.

The fact that a large and influential part of English society has, even in appearance, ranged itself on the Southern side in the American War, so as to brighten into joy at the reports of Federal disasters, and to predict a speedy success of the Confederate arms, as the end of that conflict which would be most agreeable to gods and men, is to ourselves, who are on the spot, a problem; while to our liberal allies of Paris, Frankfort and Turin, not to speak of those in Boston and New York, it is no less than a portent. If we consider this change from the outside merely, as our neighbours must do, the revulsion of sympathy in our Russells, Gladstones, Broughams and Buxtons, the old friends of the negro, and in many of our liberal populations who habitually shout for Garibaldi and Kossuth, will appear sudden beyond belief. A man so calm as Stuart Mill appears to have been surprised by it. Only two years ago England was the chief friend of the slave. While other countries were tepid, she was hot in his cause. She had paid down twenty millions in one round sum to buy off and break his chains. Some thought she had ruined a whole generation of planters, and many that she had blighted the prosperity of her oldest and noblest colonies, in order that he might eat his pumpkin and loll in the sun. Jamaica was by her given up to the negro as much as Corfu is now to be surrendered to the Greek, with the additional sacrifices which accompany a social, as compared against a political, change of power. Yet the country, though it sympathized with the ruined planter, never faltered in her course. She was moving in the path of progress, liberty and light: she knew that even growth brings pain into the joints; and that, whether men travel to their goal by the short road of the sea-coast or the long round of the stony desert, some must fall by the way. She had not only purged herself from the curse of her past connivance in the abomination, but had entered on an active and costly propagand of her younger and more righteous views. One of the most vigorous organizations ever known, even in the land of the Bible Society and the Church Missionary Society, drew to itself the resources of a zealous people. Almost every society in existence lent some aid to this body.

London was the City of Emancipation; and the abolitionists of Boston and New York were but pupils and preachers of a gospel which had its apostles and its head-quarters in the Strand. The public action corresponded to the public thought. We voted supplies for "an idea," and sent out a squadron to sustain a truth. We announced a new and fundamental theory, not only unknown to ancient law, but one which would have been incomprehensible to a Roman or a Greek. We made our soil free. We declared, not only that no subject of the English Crown, but that no resident on English territory, could ever again be claimed as a slave. Thus, England became a missionary and liberating power. Emancipation was her sentiment. In the eyes of mankind she assumed of her own will this gracious and ennobling duty of inviting the slave to become free. On touching her soil, his chains fell off. On reaching her decks he escaped from the condition of a chattel into the position of a man. Once beneath her flag, he required no manumission. From circumstances so peculiar the Cross of St. George derived a sort of sacred character; for in the eyes of all nations it appeared as the hope of mankind, the sign of a powerful and perpetual crusade in behalf of human rights. In every port it was recognized as the living symbol, not only of national, but of individual freedom. Slaves of all races, Dyaks and Abyssinians, Fans and Fijians, Georgians and Circassians, understood that whatever the miseries and horrors of their condition, there was one bright banner on the seas in which they had a part, the ensign of a people who would treat a man as a man, taking no heed whatever of the conventional relation of the master to his slave. They knew that, once they could escape into the protection of that flag, they would be free, beyond reach of the most crafty tyrant of the earth. They also felt, though darkly perhaps, that this beneficent and redeeming power was put out with no selfish end in view, but solely from considerations of abstract justice, from deference to the true lessons of history, and from an earnest and contrite sense of duty to God and man. The tyrant was still more sensible of its presence than the slave. These cruisers of humanity were upon the highways of his traffic; they followed him into his secret places; they detected him in his false pretences, and very often defeated him in his atrocious bargains and sales. They branded him as a felon, and made him infamous in the eyes of men. Among the breakers of Benin, off the headlands of Rio, in the bays of the Havannah, and along the approaches to New York, the man-stealers and the man-dealers had before their eyes the chastening terror of a vigilant and avenging flag. This service was most gallantly achieved. Willing hearts and daring hands found full support for what they did in the public resolution that, cost what it might, the accursed trade in human flesh and blood should cease. If they could not reach the slave-dealer at Dahomey, or the slave-breeder near the Dismal Swamp, they would do their best to cleanse the abomination from the high seas. For many years England had to do this work of ocean police alone, giving her zeal, her riches and her blood to the common cause of human nature, without much gratitude from the most friendly governments, and in the face of threats and protests on the part of some who made it their business to suspect her motives and decry her acts. Rio complained, and New York bullied. The Escorial, in which Christina sat, winked its eyes over the misdeeds of Concha; for although the Spanish government signed a

treaty for suppressing the external slave-trade, many of the grandees were Cuban slave-owners, and nothing in the sale of negroes offended the public sentiment of Spain. The Lisbon merchants entered openly into the trade. Russia, with its millions of serfs, could not be expected to do much for the negro; and France, with her theories of equality and her socialist philosophies, raised many difficulties in our way. With Washington we were often on the verge of war, from troubles arising out of the vigour of our cruisers; yet so fervid were the people in this cause of suppression, that although they would not hear of a difference with America on such material questions as the Maine boundary, the Lake navigation, and the Oregon dispute, they would at any time have armed in defence of the right of search.

Such was our position in regard to slavery two or three years ago.

Have the convictions out of which this public and private action sprang been changed? Has the English mind, so open to the light of Hungarian and Italian ideas, become dark to the vices and follies of slavery? Have we forgotten history so far as to dream of the resuscitation of a Slave Empire, and political science so far as to think that a nation of masters and slaves could enter into the amicable relations and competitions of modern society? Has the sense of duty to God and man died so completely within us, that we can look with complacency on the re-appearance among nations of an organized and sovereign society of slave-dealers? If it were so, it would be the most astonishing moral revolution known, not merely in the history of English opinion, but in the history of the whole human race. If these things could be truly said they would indeed be a portent and a sign, such as many of our neighbours, and some amongst ourselves, very timidly consider them. But those liberal men of other countries, who, like Hugo and Kossuth, Everett and Garibaldi, imagine that England has been guilty in this affair of the darkest apostacy and most startling stultification on record, judge her by the appearances which are proverbially deceitful, and were never more deceptive than in this particular case. Her emotions may have been mixed and fitful; for though she was much in earnest about emancipation, she recognizes causes not less sacred than that of the negro; in her large heart she has room for other sympathies than those in behalf of the lowest type of mankind; and the events of the American war have appealed victoriously and electrically to every one of her senses. But we, who live in the midst of Englishmen, can see no sign that our countrymen as a body have set themselves, in this matter, against the true lessons of history and the immutable laws of science.

Indeed, the public writer who assumes that a deep conviction, like that which possesses England on the futility and wickedness of owning men and women, can be put off with the ease of a garment, must be strangely ignorant of the way in which opinions which rule the world are formed. These do not spring from the turmoil of the crowd, or expire of a sudden in the whirlwind of events. They germinate in a single mind; they grow like the oak and the cedar; in the fullness of years they shed their seed; and in time they develop into a forest. Once a great truth is established, it must live out its life and effect its work. Men cannot put back the hand of time, restore America to the unknown seas, forget the mariner's compass, or return at their pleasure to the days before Agamemnon. Moral truths are just as despotic as material facts. It would be as

easy to unmake the laws of Kepler, and unfire the cannon of Malplaquet, as it would be to unlearn the Inductive Philosophy, or to repudiate on this question of domestic slavery the lessons of political science.

The force of a conviction does not lie in any conscious effort of the will. Take the example of our public proclamation of free trade. The doctrine of free trade is younger than the doctrine of negro emancipation. We have done less for it, and suffered less for it. Yet if any man were to talk of our free-trade principles being in danger from a sudden surprise, we should laugh at him as a fool. Truths are not killed in a day. Those principles, when new to politicians, were old to philosophers. They had grown very slowly into existence and acceptance, taking shape out of actual facts, and gaining arguments from positive events, and having a form, more or less perfect, in the minds of sages like Adam Smith, many years before they found advocates in Mr. Cobden and Mr. Bright. And truths which were slow to come will assuredly be slow to depart. The theory that domestic slavery is a rotten foundation on which to build a State is nearly as old as the first problem in Euclid; it has enjoyed so many centuries of life, and has been illustrated by the experience of so many countries, as to require in our day no special proof. All history is the demonstration of that one truth. It would be as rational for us to take Jupiter for our god, as to admit domestic slavery for our creed.

The world having made this induction once, even those in whom the human interest of the American War has mastered for a moment the induction of science, will not need to make it again. The world has taken note of a time when every nation under heaven partook of the curse, when the Egyptian sold his guest, and the Greek his captive, and the Roman his debtor; men of their own race and colour, and in some cases of their own flesh and blood. It remembers that no respect for virtue or genius stood in the way of the ancient slave-dealer; that the chances of storm or war might give the highest into bondage; that Epictetus was once a slave, and that Plato was sold for so much money in the market-place of Ægina. It has noted how the system fell into disrepute, age by age, and country by country; how the whole doctrine of Christ denied it in spirit; how Mohammed struck it in the heart by a declaration that no true believer could be a slave; how the free Germanic nations set their faces against it. It has noted the fact that this gradual disappearance of domestic slavery was, in every case, due to moral causes. Where the sword was drawn in the name of freedom, it found the cause invariably put back. It knows of many a servile war, but of none in which the ultimate fact was favourable to the insurgent slave. It sees that all fruitful ideas and pacific forces wrought together to this one great end, so that the curse was to be found in the fifteenth century only in the corruptest corners of the Roman world, particularly in the pirate port of Livorno, along the coasts of Barbary and Spain, and in the courts of such tyrants as Fernando of Arragon and Cæsar Borgia. Perhaps the very last slaves of European race ever brought into England came to us in the train of Prince Arthur's bride. The system had been dying by degrees from the very dawn of history until the discovery of America; when the humane Las Casas, in his mistaken zeal for the aboriginal Americans, introduced the lowest, and, we should hope, final phase of the unsocial institution. Under this new form the abandoned system was tried again—tried by many countries and in

many latitudes, by England and France, by Portugal and Spain. Everywhere it failed in one point or another,—in Jamaica morally, in Mexico economically, in San Domingo politically. Save in Cuba and the Southern States of America, the system broke up everywhere. Some nations could not, other nations would not, maintain the abomination by force of arms. England was the first to buy out the foul rights which she had ignorantly derived from the past, and to place her public force and her public opinion at the disposal of the beneficent revolution. Where a slave could be made, she assumed a protectorate with her guns; where a slave could be freed, she was ready with her purse. Believing in the teachings of history and the laws of science, she considered the last fragments of the slave society, unhappily existing in some of the United States and in Cuba, as a local disease which the whole world was bound to assist her in confining to the infested spots by every available species of moral *cordon*, and in helping her in the most speedy and harmless manner to pass away from the earth.

Such was the position and such were the ideas of England with regard to that trade in man; and these ideas, we may venture to assure our contemporaries in France, Italy, Germany and America, have undergone no change.

That the Southern statesmen and the Southern armies have engaged the sympathies of large and unexpected sections of our countrymen, is, in a certain sense, true; and so far as it is true, the fact is one which can be readily explained. We are not a logical people, like the Italians and the French; and, by a process which appears to our neighbours a perversion, we can give our admiration to a man who contests our ideas, and even opposes our arms. We followed with glowing veins the Italian battles of the First Napoleon. We sympathized with Ney as he recoiled from the ridge at Waterloo. We did justice to Todtleben at Sebastopol. The tendency of our thought is to place the human interest above the philosophical, and to judge of the hero before we take into our consideration the justice of his cause. Genius, valour, loyalty, endurance and success will never appeal in vain to the hearts of an English crowd. The individual comes first, the principle after. We shout as loudly for Tom Sayers at Farnham as for Garibaldi at Palermo. Many of our people thought Manin a hero and Cavour a demi-god; but many others were as ready to cheer Radetzky during the progress of his brilliant campaign. It is the man, and not the cause. A French public would be far more logical and selfish; their sympathies being with political ideas, while ours are with human nature. But a Hugo or an Everett who should infer that the English cheer which greets a Stonewall Jackson is a cry in favour of negro slavery, or in favour of a Slave Empire, would make a very sad mistake. What we like in Lee and Jackson is their conduct, not their opinions. We admire them as men and as soldiers; while we recognize the fact that, if they are slave-owners, they can scarcely be our friends; and if they are pledged to Slavery as the basis of a new empire, they are pretty certain to become, sooner or later, our national foes. In the mean time, a raid like that of Stuart, or a character like that of Jackson, will always charm a people who delight in gallantry and resolution, who in their own annals can boast of a Cavalier like Rupert and an Ironside like Cromwell. But our admiration for the men must not be confounded with respect for their principles and toleration for their cause. These things the people of England have not kept in reserve, and have not now to give.

We are now, moreover, as a people, in a state of re-action. Up to the date of Mrs. Stowe's appearance as an advocate of the slave, the progress of opinion, not only in London, its proper centre, but in Boston and New York—and even in Richmond and Raleigh—had been steady, sure and true. In the belief of many persons, our Pisgah was in sight. Our troubles as an emancipating power lay in Cuba, not in Charleston. In the cities of the South a good many persons openly deplored the evils of Slavery; no one dared to defend it as a permanent form of society, and public men were professedly seeking for a safe and timely issue out of a situation condemned by the strong and dispassionate voice of mankind. With that bad book true progress ceased and re-action came. That march of nature which had everywhere else abolished domestic slavery was interrupted in favour of an experiment in pathos and farce, in the efficacy of broad grins and wet pocket-handkerchiefs. The sentimental exaggeration of the story offended men of sense on this side of the Atlantic. The injustice exasperated those who were held up to public odium as Singletons and Legrees. The book succeeded, but the cause was lost. Even the merits of 'Uncle Tom' increased the evil; for as the tale was universally read, the planters had to contend against a prejudice in every city of the civilized world. It required no large acquaintance with history to foretell that men so baited would reply with the boldest denial and defiance, even to the sword and the knife. The mischief was at length crowned, and peaceful emancipation postponed for years, when the Ladies of England were induced to sign an unctuous address to the Ladies of America, urging them to tease their husbands and fathers into more violent agitations for abating at once a nuisance which every man fit to express an opinion on the point was aware could only be removed by conciliation and compromise—in a word, by time. On the subject of that epistle Mrs. Stowe is now a little forgetful, and not a little ungrateful. It arose from no spontaneous act of the British female mind, but was entirely a Yankee notion—a part of the machinery for advertising 'Uncle Tom.' The ladies who signed it did not pretend to have mastered the great problem of domestic slavery; and their act of signature implied, in most cases, no more than a compliment to the lion of the literary season. It is too bad that their feminine good nature should now be repaid with sneers and taunts. But whether the women of England meant to take an active part in the American dispute or not, nothing but evil came of their interference. From that day, the true Anti-Slavery movement stopped in England, and a Pro-Slavery association sprang up in the United States. Of course, we only mean that the artificial Anti-Slavery movement paused: the natural laws which have overtaken and suppressed domestic slavery in so many countries are still in force, and will work their ends in time, let man do what he may to arrest their course. But the active propagand connected with the names of Brougham and Buxton ceased at once; and as England cooled from very shame of being mixed up in an offensive and unprofitable crusade, the Southern States waxed hot and bold. At length the European conscience is disturbed, on one side by a report that our Evangelical Alliance has refused to give its moral aid to President Lincoln's proclamation; on the other side by a speech from the Vice-President of the Confederate States, Mr. Stephens, asserting the divine origin of domestic slavery, and declaring it a permanent necessity of the New Republic. Action and

reaction are equal but in opposite directions; there is no escape, either in politics or in physics, from the natural law.

To the dismay of every well-wisher to the slave in this country, the "inexpressible conflict" began. After rustling about the tea-tables of Boston and disturbing the beer-shops of New York, it broke out with fire at Leavenworth and invaded Harper's Ferry under John Brown. As if to reduce the great conflict of human society to a joke, the Republican party chose a facetious Abolitionist old lawyer of Illinois for the office of President. Illinois is one of those western States which so love the negro that it will not allow him to breathe its air; and the member of a State which we understand prohibits its own soil to the contamination of a negro foot was elected to tell the Southern gentry that their negroes are as good men and citizens as themselves.

Is it any wonder that Count Cavour on his deathbed should have said to those about him, "Can anybody explain to me these American events"? Is it strange that our Buxtons and Broughams, our Gladstones and Russells, are unable to follow in the wake of Mr. Wendell Phillips and Mrs. Beecher Stowe? English society had no faith in the shifty and illegitimate measures of these persons, and it retired, after some yearnings and hesitations, from all responsibility in the events to which they might lead. It saw no decency in the honours decreed to Brown, or in the support extended to General Butler. More than all, it had no confidence in the means to be employed. The English people recoiled from the idea of emancipating the slave by fire and sword; having no belief whatever in a social reform to be effected by war. Our gospel of emancipation is a gospel of peace, to be carried by argument and persuasion; not a gospel of blood and lust, to be enforced by the torches of Butler's negro brigade and the bayonets of Sigel's German mercenaries.

This is the truth as to a position which annoys some of our friends in New York and Boston, and perplexes many of our allies in Paris and Turin. We stand aloof from this conflict because (apart from considerations which arise from the more general questions at issue between North and South) we do not see our way to any good resulting to the negro from this unhappy war; because our theory of emancipation is one of conciliation and of peace, a beneficent development from within the body politic, not a violent and horrible revolution to be made by force. Our education has shown us the uselessness of servile wars, while it has given us confidence in the victories of time and the progress of natural laws. We should no more think of enforcing emancipation at the edge of the sword, than we should think of smiting men into the adoption of our manners or the profession of our faith.

David Elginbrod. By George MacDonald. 3 vols. (Hurst & Blackett.)

This is a singular book, and evinces talent, in spite of the strange mystical notions which seem to pervade the mind of the author on the subject of Mesmerism and Electro-Biology. A nervous reader will be not a little startled at the supernatural influence which is obtained by the villain of the story over the rest of the characters, and the ghost is one of the most appalling specimens of her species we have met with for a long time: albeit she is explained away, and softened down quite satisfactorily at last. David Elginbrod has, in fact, very little to do with the rest of the story. He is merely an old Scotch bailiff of extraordi-

nary piety and intellect, considering his rank in life. Being anxious to improve his mind he obtains the help of the tutor at the Hall, who lends him books and teaches him mathematics. As David has a beautiful daughter, who assists at these lessons and is herself an apt pupil, Mr. Hugh Sutherland (the young tutor) soon spends his evenings habitually in David's cottage. Those who are not deterred by the Scotch dialect from reading this portion of the story, cannot fail to be struck by the simple and original remarks of the old Scotchman, and the pretty poetical ideas of "Maggie my Dor" who inherits the talents and the goodness of her father. The most interesting part of the book, however, is Hugh's residence at Armstead, an old mansion in Surrey, swarming with spirits and legends and mysterious sights and sounds. Here Mr. Sutherland has for his pupil a poor, nervous boy, who seems at first to be half-witted, but who has only been badly managed, and who, under a more healthy method of training, becomes a most charming and affectionate youth. The little fables by which Hugh gains Harry's attention, and wins him from his dreary old romances, are full of poetry and beauty. Euphra is now the heroine of the tale. She is Harry's cousin, and keeps house for her uncle, Mr. Arnold. At first she seems inclined to feel some jealous distrust of the new tutor, who so quickly makes Harry love and obey him; but she soon changes her mind, and begins to flirt with him instead. She was not pretty, but "most women in whom the soul has anything like a chance of reaching the windows, are more or less beautiful in their best moments. Euphra's best was when she was trying to fascinate—then she was fascinating. During the first morning that Hugh had spent at Armstead she had probably been making up her mind whether between her and Hugh it was to be war to the knife or fascination. The latter had carried the day, and was now carrying him. But had she calculated that fascination may react as well?" Against Euphra's wonderful dark eyes, and her flattering tongue and clever artifices, the poor country lad of a tutor had no chance at all. He was not exactly in love with Euphra; he had believed himself to be devoted to Maggie Elginbrod, and he saw a great deal in Euphra to disapprove. She was false and unfeeling in many ways, he knew—frivolous and selfish—but she pretended to admire him, and flattery is very sweet; and so Euphra made Hugh her slave, in spite of all his better feelings. Under the plea of learning Italian, Euphra next induced the tutor to neglect Harry and to spend most of his time *l'été à l'été* with her; and as she chose to accompany the gentlemen in their walks and rides, poor Mr. Sutherland became in a manner bewitched, and scarcely answerable for his own actions. Presently some new actors appear on the stage,—an old Mrs. Elton, a sick young "Lady Emily" and their maid, who is no other than Maggie Elginbrod again: also a Bohemian Count suddenly arrives in the neighbourhood, and gains an entrance into the house under the plea of being a friend of the tutor's. He, being a clever, scientific man, and just to amuse the ladies after dinner, offers to show them a few little experiments in Electro-Biology. The result is terrific. The chairs and tables dance about the room violently; the plates, having the end of a pencil stuck through their rims, not only write but even spell correctly; ghosts are seen in all directions; rappings are audible at every door and window; the servants are driven to the verge of distraction, and Lady Emily takes to her bed. Partly out of bravado and partly out of curiosity, Hugh lays a wager with the Bohemian that he will

pass the night in the "haunted room," the very head-quarters of the ghosts; and the description of the visitor who appeared there is enough to keep anybody who is the least inclined to be fastidious in these matters awake for a week after reading it. Still more wonderful, the ghost seemed to be addicted to stealing, and two valuable rings disappeared from Hugh's room in the course of this eventful night. Of course the ghost turns out to be nobody in the world but Euphra, and the rings are wanted by the Bohemian for private purposes of his own. He had contrived somehow or other to obtain mesmeric influence over Euphra, and had made that lady his unwilling tool. One interview between them is so extraordinary that we transcribe it here. She had been impelled by some irresistible impulse to go in her ghostly dress to meet the Count in the ghost's walk, and meeting Margaret Elginbrod she had fainted with fright, thinking the real ghost had come to reproach her:—

"When she recovered, she found herself lying in the wood, with Funkelstein, whom she had gone to meet, standing beside her. Her first words were of anger, as she tried to rise and found she could not. 'How long, Count Halkar, am I to be your slave?'—'Till you have learned to submit.'—'Have I not done all I can?'—'You have not found it. You are free from the moment you place that ring, belonging to me in right of my family, into my hands.'—'What more can I do?' moaned Euphra, succeeding at length in raising herself to a sitting posture, and leaning thus against a tree. 'I shall be found out some day. I have been seen already wandering through the house at midnight with the heart of a thief. I hate you, Count Halkar.' A low laugh was the Count's only reply."

After some further conversation, in which Euphra irritates the Count, "he grew spiteful":

"If you do not behave better to me, I will compel you. Rise up!" After a moment's hesitation, she rose. 'Put your arms round me.' She seemed to grow to the earth, and to drag herself from it one foot after the other. But she came close up to the Bohemian, and put one arm half round him, looking to the earth all the time. 'Kiss me.'—'Count Halkar!' Her voice sounded hollow and harsh, as if from a dead throat. 'I will do what you please—only release me.'—'Go, then; but mind you resist me no more. I do not care for your kisses. You were ready enough once. But that idiot of a tutor has taken my place I see.'—'Would to God I had never seen you—never yielded to your influence over me! Swear that I shall be free if I find you the ring.'—'You shall find the ring first. Why should I swear? I can compel you. You know you laid yourself out to entrap me first with your art, and I turned upon you with mine. And you are in my power. But you shall be free notwithstanding; and I will torture you till you yourself—find the ring!'"

The strangest part of this wild story is, that the author treats all this as a commonplace, every-day occurrence. There is nothing apparently to be surprised at in Count Halkar's power over Euphra. It is quietly explained as having been occasioned, in the first instance, by her own weakness:—

"Some of my readers (says Mr. MacDonald) may put Euphra down as insane. She may have been; but, for my part, I believe there is such a power of one being over another, though, perhaps, only in a rare contact of psychologically peculiar natures. I have testimony enough for that. She had yielded to his will once. Had she not done so, he could not have compelled her; but having once yielded, she had not strength sufficient to free herself again. Whether even he could free her further than by merely abstaining from the exercise of the power he had gained, I doubt much."

Here is a moral lesson to all ladies and gentlemen with "psychologically peculiar natures."

Resist the first attempt of the electro-biologist, and it seems you will be safe for life! Yield ever so little, and your case is hopeless! There is also another piece of advice which may often be found useful, and which is so peculiar that we cannot forbear quoting it, for the benefit of those who may wish to ensure the obedience of their footmen.—Hugh, wishing Mr. Elton's old butler to do him a service, "had fixed him with his eyes before he began to explain his wishes. He had found out that this was the best way of securing attention from inferior natures, and that it is especially necessary with *London servants*. It is the only way a man without a carriage has to command attention from such!" This is indeed making a very practical use of mesmerism. We shall soon have a little handbook of 'Electro-Biology for the Million.' Stare hard at the housemaid before you ask her to dust the room; quell the cook with a glance if you wish the dinner to be properly dressed; but, above all, take care to "cow the superciliousness" of your footman, if you ever expect him to open the door, or put some coals on the fire, when you desire him to do so.

But to return to the victim of the tale, poor Euphra. The tutor is dismissed rather unceremoniously, on account of the missing ring, which Mr. Arnold had entrusted to him; and Euphra, who really is attached to him, becomes a victim to shame and remorse. She has also dislocated her ankle, which, however, by no means prevents her tyrant from causing her to meet him in the avenue whenever he wishes it (though she is incapable, on common occasions, of putting her foot to the ground). She comes to London, and Margaret (who has also the power of mesmerizing, though, of course, she uses it only for the best purposes) insists upon Euphra resisting the Count's attraction—holds her down in bed, catches her on the stairs and carries her back by force,—and succeeds at last in releasing the wretched woman from her painful bondage. Euphra, in a state of clairvoyance, finds out the Count's hiding-place, and describes it so accurately that Hugh is enabled to trace him out and obtain the lost ring. Euphra dies from the effects of her terrible struggle against the Count's power, and Hugh marries Margaret Elginbrod. This outline of a very absurd story does no justice to the many beautiful passages and descriptions contained in the book. The characters are extremely well drawn: the pompous, stiff old Mr. Arnold; the sensible, plain-speaking Mrs. Elton, and the gentle Lady Emily, all being sketches from the life, and affording capital contrasts to the fantastic Euphra and her mysterious master, the Bohemian. Hugh Sutherland is a pleasing, but not wise young man, warm-hearted and impulsive, and therefore to be liked; Margaret is a good spirit more than a woman, and through her the opinions of David Elginbrod are promulgated for the benefit of the public,—and very excellent opinions they are.

The Weather Book: a Manual of Practical Meteorology. By Rear-Admiral FitzRoy. (Longman & Co.)

'The Weather Book,' by Admiral FitzRoy, comprises the cream of his many publications since he accepted the office of Superintendent of the Meteorological Department of the Board of Trade, and contains a considerable amount of new matter and illustrations. It conveys undoubted testimony to the author's zeal and energy in pursuit of his favourite topic, and is a pleasing record of his scrupulous candour in acknowledging his indebtedness to authors whose theories he adopts and endeavours to

put into practice. This praise is fully due to the Admiral; but his treatment of the subject is rather rambling, and he omits to supply the facts which meteorologists most need. It is a fault in a book intended to lay the foundations of a new experimental science, that it should be mainly occupied with deductions from unproven hypotheses, instead of the careful establishment of axioms by rigorous induction from observed facts. To illustrate our meaning, we will take the author's statement that the condition of the air foretells coming weather, rather than indicates weather that is present; that the longer the time between the signs and the change foretold by them, the longer such altered weather will last; and, conversely, that the less the time between a warning and a change, the shorter will be the continuance of the predicted weather. This is an underlying axiom of the whole of the Admiral's superstructure of weather-wisdom; but is it true? We know of no published collection of instances grouped in a way that would satisfy a man of science desirous of forming his own opinion on the subject. If Admiral FitzRoy had taken the proper means to establish his new science of weather-wisdom, he would have bestowed at least as much labour in confirming this important hypothesis as he has devoted towards raising a superstructure of rules of forecast upon it. It would have been evidence of the highest value, if he had collected the instances of marked weather-changes, say twenty in a year, at each of ten first-rate European and American stations for some ten years past, and had found in the 2,000 cases so collected that a steady proportion was maintained between the duration of the warning and that of the incoming weather. Backed by an array of facts, we should be most happy to accept, provisionally, his hypothesis; but until we have such evidence, the Admiral's axiom can claim no higher rank than the persuasion of an individual.

The uncertainty under which many of the elements of weather-wisdom now lie, is well exemplified by the opposite opinions entertained by Admiral FitzRoy and by Prof. Dove. Prof. Dove says, the advancing current of an incoming northerly wind blows along the ground, and that the storm is upon us before the instruments give any indication. Admiral FitzRoy says that the northerly, like the southerly current, advances aloft, high above head, and therefore that the barometer testifies to its existence long before the wind has changed! Here is a doubt which infects the character of exactly one-half of the forecasts that depend on statical conditions. If Dove be right, FitzRoy's predictions of northerly winds are simply nonsense. Surely, a collection of facts made by a couple of clerks working for a few weeks would set this simple question, and many others like it, at rest.

The principal axioms of modern meteorodynamics (to coin a word on the basis of hydro-dynamics) are the following, so far as the climate of England and North Europe is concerned:—

1. There is a steady drift of the entire body of the atmosphere, including all its currents, from the west; consequently, an advent of change in the weather usually comes from the west. Hence the value of sunset over sunrise indications.—(Dove, FitzRoy and others.)

2. The first causes of all varieties of winds are a current of warm, moist, and therefore specifically light air, coming from the south, and one of a precisely opposite character returning from the north. Their combinations and conflicts, and their modifications, due to the cause stated in the next paragraph, are capable

of producing every principal condition of weather.—(Dove.)

3. The direction of every wind is modified by the well-known influence of the different rotative velocity of points on the earth's surface in different latitudes. A long-continued north wind becomes easterly, and a south wind westerly. The normal direction of the above-mentioned polar current is found to be north-east, and that of the equatorial south-west.—(Dove.)

4. The polar and equatorial currents usually flow along the earth in parallel strips that do not readily mix; between their edges are calms or commotions.—(Dove.)

5. Above-head are various currents in layers, never less than two, according to aeronauts; frequently three, and occasionally four.—(Fitz-Roy.)

(We may gather from this the inextricably complex causes of the indication given by a barometer. It records the sum of the pressures of the currents, and takes no notice of the order of their alternation. A south wind below with a north wind aloft, would give precisely the same barometrical results as the contrary arrangement.)

6. The mobility of the air surpasses in a vast degree that of liquids. Its elasticity permits a mass of it to continue in movement longer than the duration of the original cause of movement. There is necessarily compression and a high barometer at the end of its course.—(Dove.)

7. The wind blows in cyclonic (retrograde) curves when indraughted to a stormy centre of light ascending currents (Dove's law). We notice that Mr. Galton, in a paper read so lately as Thursday week at the Royal Society, asserts the common occurrence of the precise converse of these, or of anti-cyclonic (direct) curves dispersed from a calm area of heavy descending currents.

8. Cyclonic curves are also produced when the equatorial current forces its way from the south-west against a mass of quiescent air.—(Dove.)

9. Cyclones are not satisfactorily proved to maintain their character for more than four days. Usually they last one or two. When one cyclone occurs, others succeed it.—(Fitz-Roy.) Alternate prevalence of polar and equatorial currents causes the weathercock at any station to "veer" in a complete circuit.—(Dove.)

10. As a matter of fact bearing upon forecasts, and taking the changes of wind that actually occur, without reference to their causes, it appears that when change takes place, there is a probability of two to one that it will be by veering, and not by backing. In other words, the weathercock makes a circuit to the right, and not to the left, in that proportion.

11. If the tension of the air differs widely in adjacent districts, storms must be expected. It is found that a barometrical fall of one-tenth of an inch per hour, at any one station, is a very serious warning.—(FitzRoy and others.)

There may be many among those who have not examined the weather-tables published day by day in the journals, who may credit Admiral FitzRoy's statements, under the persuasion that his forecasts are generally just, and therefore give reliable testimony to the correctness of his theories. We do not share that persuasion, but advisedly take the exactly opposite opinion, that his speculations are *primâ facie* open to distrust, because we find his weather-prophecies to be peculiarly unhappy. We can scarcely quote an instance where he has foretold, or rather asserted, an important change before the change has actually begun to take place in some

of his stations. On the other hand, we can quote many instances of bold predictions signally unfulfilled, those during the earlier part of this present month, of north wind and snow, being amongst them.

It is wearying to meteorologists who are truly anxious for reliable bases of ascertained fact to be condemned to read books of hypotheses, when it would be so easy to give them what they want. Thus we are told that there is much repetition in nature, and we are also told that many hundreds of wind-charts have been compiled at the Meteorographic Office. Why does not Admiral FitzRoy give us a few dozen of the most typical cases, simply drawn in small diagrams, with a few lithographed lines, aided possibly by colours, and let us know the conditions under which they severally occurred?

As regards the literary character of the 'Weather Book,' one merit has certainly been promoted by the very discursiveness of its character: it is the enlargement of the vocabulary of meteorologic science. The movements and mutual relations of the atmospheric elements are so peculiar and new to our experience, that a great command of words is required to express them. Commander Maury's remarkable power of language has done good service in introducing happy expressions, and Admiral FitzRoy has afforded his own quota of available words. Thus he talks of the *appulse* of one wind-current upon another, and of their mutual compression and *resilience*. He also writes of the *potential* of a volume of atmosphere, including under that compact phrase the entire range of meteorologic energies,—such as direction and force of wind current; tension; heat, latent and active; and moisture, condensed or in vapour.

While we doubt the value of forecasts in our ordinary English weather in the present state of the theory, we gladly testify to our belief in their value, when any extraordinary storm is approaching, and we are also willing to believe that a probability of fair weather may be predicated. In addition to this, we are convinced that a mere statement of existing dangerous weather telegraphed to the ports is of great advantage. A storm does not necessarily overspread the whole of a large district; on the contrary, areas of calm will be interspersed among violent wind-currents. It is obviously right that ports which happen to be temporarily beneath one of these areas of calm should be made acquainted with the precariousness of their position.

Ragged Life in Egypt. By M. L. Whately. (Seeley, Jackson & Halliday.)

As the characteristic heroism of the Spartans was most fully shared by the women of that race, so the women of England are in no way behind in the restless activity which stimulates the blood in Anglo-Saxon veins. The author of 'Ragged Life in Egypt' need not have apologized for having extended her energies beyond her own immediate circle. Whatever her success may have been, her endeavours are beyond all praise; and it is no doubt most true that, as she says, "a more extended interest does no harm to the home-field of labour." There is no class whose sympathy or interest she would reject, and certainly not that of the lower classes, who constitute the majority of every society; therefore the field of labour which she chose was the ragged and uneducated in Egypt. Her plan was to go to the very root of the matter, to settle amongst the poorest, and to establish a school, and so to attempt to humanize and raise out of their degradation some of the lower classes of the

females in Cairo. There were many difficulties to encounter, but all are described in a not unpleasing manner, and moreover with a great air of truthfulness. Mingled with it also are so many picturesque descriptions of life and scenery, that the reader will be much tempted to withhold any sympathy with the troubles to be encountered from untidiness, laziness and untruthfulness, whilst house-hunting in the close Coptic quarter.

Before entering upon the main subject of the work, we are treated with a picture of "the Cairo bazaars," and also a view from "the housetops,"—the most pleasant part of a house at certain seasons in Grand Cairo. From this position there is to be obtained a view of the distant country around the city; and no less interesting was a near view of the inhabitants themselves, and their quarter or "Gate." They appeared to be "a merry, as well as a quarrelsome set, and at least as much laughter as scolding went on: nor are the men graver or more silent on their side. I wonder who invented the fable of Oriental gravity, or whether some Eastern race really exists which is habitually grave, silent and solemn? The Egyptians remind one constantly of the Irish in their love for conversation, mirthfulness and propensity to dispute, and general excitability of temper." It seems from this description that it is upon the housetops of the inferior dwellings that native life is most displayed. And there were two remarkable things which our author observed, and concerning which she gives her lucubrations at the time. One was, the great accumulations of old broken pitchers, sherds, and pots on all the housetops: the other was the flocks of pigeons which always emerged about sunset from behind this rubbish, where they had been concealed during the heat of the day. The effect of the light on their outspread wings called to mind a verse in the Psalms, "Though ye have lain *among the pots*, yet shall ye be as the wings of a dove covered with silver, and her feathers with yellow gold."

But the difficulties in hunting out scholars and establishing the school were as great in their way as house-hunting, and yet as cheerfully and successfully encountered. At first there was great reluctance on the part of both parents and children; but after going out into the highways and urging them to come in, a considerable amount of success was obtained, notwithstanding the ragged state of the scholars, and the unseasonable visits of the parents, who were led from curiosity to enter the room and squat on the mat to watch the proceedings. It is to be remembered, by the way, that neither the "ragged" state of the children nor their dirty condition implied poverty; for it appears that even in the higher classes a child is often intentionally kept dirty to avoid the Evil Eye: "The fear of the Evil Eye, as is well known, induces even women of the higher classes frequently to keep their children ill-dressed and unwashed; and sometimes they go so far as to daub the forehead of a pretty or highly-valued child with *soot*, in the idea that this diverts the power of the envious glance which they dread." So that although the effort was made in the first instance to reclaim the ragged and apparently destitute, yet they could not be looked upon in the same light as the poor and wretched nearer home. However, through them an influence was obtained over their parents, and short as was the time during which our author pursued her task of religious education, yet she is induced to hope that "the seed has been cast on the waters in faith, and after many days we may find it with joy."

Her plan was to pursue, as far as possible, the system to which she had been accustomed

in England in the instruction of her scholars,—in inculcating habits of order and regularity whilst instructing them in needlework and such like employments; and these were varied with the importation of a version of "school-treats" and "mothers' meetings," such as have been put in practice in this country. Whether such a system can take root there, does not seem very apparent; but the intentions are of the best, and there is cause for thankfulness for "even the smallest step towards better things." When she availed herself of the assistance of "the story-teller" in reading parts of the Bible to his audience, the author says—"We often wondered what was the effect of the reading so much of the Scriptures on the reader himself, but never had any opportunity of finding out. We end as we began—with ignorance."

Gongora: an Historical and Critical Essay on the Times of Philip III. and IV. of Spain. With Translations. By Edward Churton. 2 vols. (Murray.)

BORN at Cordova, of parents whose lineage was ancient and noble, and educated at Salamanca, Lewis de Gongora y Argote was a brilliant feature of Spain's brief day of literary vigour; and his writings should be studied by all who would form acquaintance with the age and actions of Cervantes, Lope de Vega, Quevedo and Calderon. Wit, scholar, courtier, trifer and student, Gongora so caught and chronicled the social temper of his time, that notwithstanding, and in some cases through, their defects, of which the taint of euphuism is the one most generally mentioned to their discredit, just as it is also a fault on which illiberal criticism has laid undue stress,—his works have long been raised above the contempt which justly covers the Purists, and have come to be highly esteemed, not more for their pleasantry and polish than for the insight which historic inquirers may gain from them into the tone and manners of Spanish life under Philip the Third and Fourth. Mr. Churton has well discharged the functions of translator; though the Introductory Essay prefixed to his translations is in some respects too minute and diffuse for general readers. Of the Spaniard's various works, his 'Historical Poems' and his 'Elegiac and Sacred Poems' are the most marked by the alternate stiffness and verbosity of the inferior writers with whom he has been too generally connected in repute. But even in these the fervour of a devout churchman and the spirit of a patriotic Spaniard make themselves felt through the cumbrous affectations of an abominable style. In the 'Ode on the Armada,' the blood of Spanish youth boils up against Elizabeth, till the poet exclaims—

O hateful Queen, so hard of heart and brow,
Wanton by turns and cruel, fierce and lewd,
Thou dost aff on the throne, true virtue's bane,
Wolf-like in every mood,
May Heaven's just flame on thy false tresses rain!

In better taste and with finer feeling is written the 'Ode on Philip the Third's Tomb,' where these lines occur:—

Call it not pomp profane; such splendour due
Its own mute tale would tell:
This outward beauty, sadly fair to view,
Invites thine inward sense to dwell
With reason in thy heart's recess, and own
The love that Truth reveals to hearts that muse alone.

—This last line matches with Wordsworth's often-quoted words,—

Oh, reader, had your mind
That store which silent thought can bring.

Far better than the "Historical" and "Sacred" pieces, because in the absence of anxiety to achieve great results they touch lightly on familiar subjects, and consequently, for the greater part, steer clear of affectation,

are the "Poems of Wit and Humour." Amongst them may be found some strokes of delicate satire and exquisite playfulness. In the 'Country-Bachelor's Complaint,' the simple village Squire, recalling the happy time when he was heart-free and ignorant of care, says—

At club-room frugal stakes I play'd,
Too proud if Fortune gave success
To trump above our Town-Alcalde,
Or check the curate's hand at chess.
And there the state I ruled from far,
And bade the winds to blow for me,
In succour to our ships of war,
That ploughed the Briton's rebel sea.

Or with the Canon held disputes,
Good man, of college-lore profound,
About Nebrixa's Hebrew roots,
That ne'er would grow on Spanish ground.

Or, plunged in questions yet more deep,
We argued, till our stock was spent,
If folks the Church's fast could keep,
And eat asparagus in Lent.

Of three sonnets taken by Mr. Churton from the Turner MS., the last, addressed to a friend on his marriage, speaks with unusual asperity of "life's greatest misery," a wife:—

To dine on meats high-spiced, and find your flask
Has leak'd, and not a drop your thirst to tame;
To reach your posting-house dead-tired, and ask
For miles, and find one trotting brute dead-lame;
To try new boots, with luck not quite the same,
One with great pain you fit, and one you tear;
To play Primero, and—to win your game
Wanting the King—to find the Knave is there;
To ply with gifts a thankless lady fair;
To owe to bankers punctual as the day;
To ride unclacked, unenclosed, through spongy air;
To feed bad grooms who steal your corn and hay;
Count all the griefs you've known since life began;—
The worst remains—to be a married man.

The holy estate of matrimony was regarded by gay young men about Madrid in the sixteenth century much as it is looked on by the bachelors of the Pall Mall clubs who now-a-days grow merry over the question whether a man can marry and then live with decency and comfort on 300*l.* a-year.

Macaronic Literature—[*Macaroneana Andra, overum Nouveaux Melanges de Littérature Macaronique*, par Octave Delepierre]. (Trübner & Co.)

As biographers love their heroes, so M. Delepierre, whose enthusiasm for Macaronic literature is well known, boldly asserts that his favourite Macaronic poetry has been cultivated by all civilized nations. When we recollect of what much of that poetry consists, and see the quality of much of that which is contained in this volume (of which only 250 copies have been printed), this assertion reminds us in some degree of the thankfulness of the shipwrecked mariner, who, cast ashore at the foot of a gibbeted criminal, blessed his stars for that sign of his being in a Christian and well-ordered country.

The new additions which M. Delepierre now makes to former collections consist of reprints of Macaronic poems, the originals of which were sold at the last sale of M. Libri's books, in July, 1862, the purchasers of which have lent them to the editor of the present volume, with full reliance on his indiscretion.

We say this, because the zeal of the editor to increase his '*Macaroneana*' was pretty sure to cause him to forget discretion. The '*Nobile Vigonce*' is the oldest (nearly four centuries old) of all poems of this class, and hitherto was unknown, except to M. Libri. If the secret and the poems had died with him, the public would have lost nothing worth preserving. There is more cleanliness in the '*Virgiliana*' of the same author, Fossa; but there is nothing to praise: a judgment which we render in spite of the remark of the author:—

— *tali es dignus carmine qui obloqueris.*

The second portion of the book, the Pro-

verbs of Bolla, an author of the sixteenth century, can only be called Macaronic by courtesy; and they are not so much proverbs as indecent axioms, at some of which Holywell Street itself would stand abashed. The same author's '*Documenta Utilissima*' M. Delepierre does not reprint. He describes them as "moral sentences on the rules suitable to be followed by those who wish to keep in the right path. They are mere commonplaces, and of a much graver character than the proverbs by which they are preceded."

The Macaronics of Odassi have, perhaps, more of humour in them than the foregoing; and those of Capella and Jean Richard, the former fragmentary, the latter more complete, do not want for spirit, especially the lines of the Burgundian. Nevertheless, the book is a melancholy book. It belongs to the Curiosities of Literature; and the few for whom it is printed may here see how scholars recreated themselves in the olden time, and how very little some of them are to be respected for the quality of their recreation.

We are glad to leave these people, albeit their pamphlets now sell for more than their weight in gold, for M. Delepierre himself. He especially distinguishes himself in a gossiping sort of supplementary chapter on Macaronics generally. In this he refers to the Macaronic verses which abound in the manuscripts of the sixteenth and seventeenth centuries. "For example," he says, "it is not in the present day that English people complain for the first time of the lamentable defects in the reading and preaching of the Anglican clergy." He then cites, from a manuscript in the British Museum, the following lines, in which, as he tells us, is given a summary of the faults of the aforesaid clergy:—

*Hii sunt qui Psalmos corrumpunt nequiter almos,
Jangler cum jasper, lepar, galpar quoque dragger,
Mometer, forsakpyper, forreyner, sic et overlesaper,
Fragmina verborum Tutivillus colligit horum.*

This hybrid fragment reminds us of a better illustration of Macaronic nonsense than any contained in this collection. When Marlborough was once in France, he was waited on by a President Montesquieu, uncle, we believe, of him who wrote the '*Esprit des Loix*.' The President piqued himself on his knowledge of English, and on his power of expressing himself in that language. Accordingly, on being introduced to the great warrior, he at once commenced an oration, every word of which he fondly hoped was British. Marlborough heard him to the end, and then said, in as execrable French, "I hope, Sir, you will excuse my replying at length, as from my ignorance of your language I have not understood three words of what you have had the goodness to say to me."

We must remark, before concluding, that M. Delepierre has considerably disturbed our ideas of what is to be implied by the term "Macaronic." From the examples we meet with in this volume, we are led to suppose that any sentence in which a foreign word is used or adapted comes within that term. If so, what Macaronic writers were some of our old authors! Is not Bastwick's deduction of the Independents as well as the Bishops from a part of the Devil's body, of Macaronic quality? When Serjeant Maynard said that the law was *ars bablativa*, he was as strong in Macaronic humour as any of M. Delepierre's writers. The women whom Brian Walton knew, and who held that English without an admixture of Hebrew would hardly find them in words to help them to heaven, were innate Macaronic hussies. When Roger North brought in the word "mystified," in its French sense, he was

qualified for enrolment in M. Delepierre's list; still more so when he spoke of "the banks and intrigues of the river Volga." George Keith used the verb "thou hypocritest"; and in Jeremy Taylor's age, to *redargue* and to *coargue* were used for logical implication. "Was't not rare sport at the sea-battle," says Marston, "whilst roaree robble-bobble roared from the ship's side!" All this is in as good Macaronic style as most of what we find in M. Delepierre's book. Indeed, we may consign to him no less a person than Barrow as a Macaronic writer; for that earnest divine peppered his English, so to speak, out of foreign casters. "We have some letters of Popes," he says, "(but not many), for Popes were not then very *scribitious*, or not so pragmatical." He talks, too, of "*prolling* money from all parts of Christendom." And in this style Barrow is only equalled by Bishop Hacket, who, indeed, invented rather than imported the words which he interpolated with his English;—for instance: "When all the stuff in the letters is scanned, what *fadoodles* are brought to light!" In the old days when these writers lived, playing with words was common; and such play was called "an Oxford clink," the fashion possibly having commenced among the idle scholars in that seat of learning, who at one and the same moment exhibited their fun and their scholarship.

Geological Observations in South Australia: Principally in the District South-East of Adelaide. By the Rev. Julian Edmund Woods. (Longman & Co.)

EVERY clergyman unacquainted with geology is fundamentally ignorant, because the Church is founded on a rock. Therefore, he ought to be able to describe rocks as well as to subscribe to articles. This being logically proved, we may advance another step, and say that every missionary clergyman is doubly bound to be a geologist; especially if, like Mr. Julian Woods, he is ordained to a wild district of 22,000-square miles, where he is far more likely to find rocks than resting-places, and petrifications than parsonages. Indeed, without some mental food of this kind he himself might become a petrification, and subsequently turn up on some lecturer's table as an irrefutable proof of the early creation of Man.

Mr. Woods seems to be a very respectable geological amateur, and an honest man withal, for while others laud the fertility of Australia and describe it as the emigrant's paradise, this good gentleman tells us plainly that "in the whole of South Australia there is not a single portion of available land which is not bounded either on the north, or east, or west, by a similar desert, if the term can be applied to tracts of land producing nothing but useless stunted shrubs. The appearance of such places is very gloomy. From any eminence you see nothing but a dark-brown mass of bushes as far as the eye can reach. The soil is generally a yellow sand, and when a patch of it is observed, it gives an air of sterility in exchange for monotony. But the outline is generally unbroken, seeming like a heaving ocean of dark waves, out of which, here and there, a tree starts up above the brushwood, making a mournful and lonely landmark. On a dull day the view is most sad, and even sunlight gives no pleasure to the view, for seldom bird or living thing ever lends a variety to the colour, while light only extends the prospect, and makes it more hopeless."

Such a district is certainly a wretched residence for either shepherd divine or shepherd ovine. It is no place for flocks either spiritual or temporal; but if a man can reflect upon

rocks, in the absence of flocks, then he may feel somewhat relieved, and even a little romantic, within geological limits. Every grain of sand in these countless grains of countless sands, once had a parent rock or parent shell or coral. Sands washed up from old seas, sands broken down from old corals, by storms and by beach surf, sands blown away and afar by wild winds, sands belting the coasts for thousands of miles in immense masses, sands mounded up into dunes,—all, all have had their history; and, strange to add, many of them their living history,—for the white and rather fine sand of the coasts teems with the remains of animal life—spines of *Asterida* and *Echini*, fragments of *Bryozoa* and shells, and then sponge spicula and *Foraminifera* in great abundance. Here, in these miles of deadness and solitude—where the moody missionary rides alone and meets not his fellow for an entire day;—here in these millions of grains scattered by every turn of hoof, once dwelt life and motion—life indeed in its lowest forms, but yet life complete according to its grade and rank of organization. Musing on such a profusion of former life, riding amidst acknowledged microscopical tombs, and noting down such things as he sees, or infers from what he sees, the devoted clergyman becomes reconciled to his voluntary doom, and finds the immense desert not altogether uninteresting, and the innumerable sands not without records of the past or instruction for the present.

Occasional features, too, of more palpable interest present themselves. Here, for instance, we come upon curious sand-pipes, and there upon "native wells," the latter being round hollow tubes, often three or four feet wide, and generally running down to the water level, however deep, and bearing a strong likeness to an artificial well. In one place the ground is studded all over with these wells, some being as wide as five feet, and so deep that one hundred feet of sounding-line has not reached the bottom, although water has been found at sixty or ninety feet. Next come the occasional salt-pans or "salinas," which are immense basins or swamps filled with brine in the rainy seasons, which, in summer evaporates, leaving a thick crust of salt at the bottom, white and glistening, and giving to the ground an appearance of snow-covering.

Again, in the limestone districts, there are the "limestone-biscuits." These appear in places where the ground generally is pitted over with little depressions, in which the remaining water collects as soon as the dry weather sets in. These being the last to dry up, a small quantity of lime and pipe-clay (in which soil alone do they occur) becomes hardened into a cake at the bottom. Before they are quite dry, as the summer advances, they curl up, become detached from the ground, and when quite hardened receive a rounded shape from the rain and waste of the ensuing winter. Thereupon they are well-baked and well-shaped biscuits, and may be found thickly strewn over the surface.

Whilst, however, the native wells and the salt-pans and the limestone-biscuits are suggestive of associations connected with life, there are other natural phenomena sadly suggestive of death. In places where there is a mixture of sand and pipe-clay, and where the Flora is of a more diversified character than usual, large tracts of ground are covered with mounds exactly resembling graves in a churchyard, only far more closely packed together than even in our best paying extra-mural cemeteries. These are locally termed "Dead Men's Graves," or the "Biscay Country." The "graves" are commonly about a foot in height, and long and narrow in shape. They are never seen, except

where there is a considerable quantity of surface water in winter, and during the rainy season, when the water has collected around them, some of their rounder portions may be observed to heave up and down in little bubbles, while the water assumes a frothy appearance, as though fermentation were proceeding. Probably this likeness to fermentation is the result of the chemical action of carbonate of magnesia and lime upon each other, in connexion with the compact dolomite which is sometimes found to underlie these mounds; and this action would give rise to these mounds, whence the gas escapes, and where dolomite is found. The greater proportion of the "graves" are, however, due to the unequal action of water upon the soils which it covers.

If, by way of variety, we take a turn from the sandy and sepulchral deserts into the swamps, we find them not very lively, though full of animal life. Fish and fresh-water mollusca abound; but they do not impart much visible cheerfulness, while vast quantities of bones of cattle, sheep and horses have accumulated round some of the deep swamps during the last seventeen years. Pleasant tokens are these of poor thirsty animals who manage to get their feet into the mud, without getting their mouths into the water, and thus die of parching thirst within sight of the desired streams. Superstition might attribute the mysterious sounds, which on every evening during spring and the early part of summer are heard near some of these swamps, to the ghosts of the dead and disappointed beasts. Generally at these times and places three echoing sounds are heard, like the lowing of a large herd of cattle, after which half an hour's interval ensues. To any one ignorant of the cause, these sounds are extremely startling and mournful; but science dispels superstition and declares them to be "entirely due to a column of air resisting a column of water which is draining through the limestone, and finally being driven backwards or forwards, according to the periodical increase of the weight of water."

Of Geology proper Mr. Woods presents his readers with as much as his district affords and his opportunities of observation allowed, and he describes the whole so plainly that all may understand, and so correctly that even old geologists may learn something from him—that is, something local, and so far new. There is some approach to novelty in his opinion that the present state of that part of Australia which he treats upon (a territory in the south-eastern district, included within the boundary between Victoria and South Australia on the one side, and the windings of the river Murray on the other) is similar to what Europe was immediately after the secondary period, and that really, in regard to the development of its Fauna and Flora, the antipodal continent is far behind the rest of the world. Mantell and Phillips, however, had long ago intimated that the Fauna and Flora of our Wealden and part of our Oolitic eras possess many important similarities to those which now characterize Australia and the neighbouring seas. In truth, there is a well-known similarity between Mesozoic life in Europe and Cenozoic life in the antipodal region. Curious questions arise out of this similarity, and Phillips has passingly touched upon them, but their discussion would be out of place here. It is enough to adopt Mr. Woods's words: "There are no secondary rocks found in Australia, but a great portion of the country appears to have been recently raised from the sea, where it has undergone a state of things very similar to our chalk; while the immense tracts of desert country, and the large portions that are quite unavailable, indicate a territory

less adapted for the habitation of man than any tract of land of similar size on the face of the earth."

Lectures on the History of the Jewish Church.
Part I.—*Abraham to Samuel.* By A. P. Stanley, D.D. With Maps and Plans. (Murray.)

Prof. Stanley appears anxious in his Preface to explain the nature of this work, lest it should be misapprehended. It consists of lectures, not a history; it presents the main characters and events of the sacred narrative in a form nearly historical; and the lectures are *ecclesiastical*, i.e. they treat of the Jewish Church, or the nation's religious development. The lectures are twenty in number, followed by three Appendixes, on Ur of the Chaldees and Haran, the Cave of Machpelah visited by the Prince of Wales last year, and the Samaritan Pass-over.

The interest attaching to Bible scenes and histories will never be effaced from the heart of man. Our dearest hopes are too closely connected with them to be lost amid the storm of business or the frivolities of the world. Their charm cannot be lulled into forgetfulness, though it may be deadened by the dull routine of life. The hallowed associations entwined with these events and characters take hold of the memory in early years, and cast a grateful shadow over the path of the traveller as he treads its rugged ascent. It is well, therefore, to be reminded of the old history of Jewish patriarchs and prophets. With all their faults and follies, they read lessons to their posterity and to the world at large. Their forms stand out in prominent outline to encourage, warn and strengthen.

Prof. Stanley has chosen a subject congenial to his office and adapted to his talents. In its treatment he has shown his usual ability. He has had signal advantages to qualify him for the work. Repeated visits to Palestine have familiarized him with the sacred region. He has written one of the best books on the geography of that land. He has an eye to discern and a pen to portray the features of the varied landscapes presented to the traveller by that hallowed country. Accordingly, the work before us is an able and interesting one. The author catches the salient points as he proceeds, and sets them before the reader with vividness and vigour. He is evidently at home in his task. His geographical and historical pictures are drawn with the hand of a master. The work may be considered a companion to his 'Sinai and Palestine,' showing equal ability in sketching places, events and characters. The strength of the author lies in the admirable method in which he places his varied knowledge before the mind of the reader. It is not often that so great attainments are combined with such skill and beauty in writing. His illustrations are appropriate, his comparisons striking, his style and language excellent. The author is strongest in his knowledge of geography and history. He is as accurate too as he is strong. In these departments,—and they are the main elements of which the work consists,—none need fear to follow him with unwavering confidence, and to accept his statements.

If it be asked, has the author advanced our knowledge of the subjects discussed in the volume? the answer must be in the negative. The work contains nothing new, except it be the account of Machpelah. All that the Professor tells us was already known. This, however, can hardly be called a fault; because he did not intend to open up new ground or to help forward Biblical science, but to illustrate

the chief points and characters connected with the growth of the Jewish people. He adds a fresh interest to what was known before, by his peculiar mode of narration. Hence the work is not meant for scholars. It is fitted for intelligent readers of the Old Testament, and young men beginning to devote themselves to the study of the Bible. Sometimes, the description approaches the character of a sermon. Indeed, the twentieth Lecture was delivered as a sermon at Oxford. This explains its diffuseness, an approach to which some other Lectures also exhibit. We could have dispensed with the pieces of poetry interspersed, the quotations from Arnold's sermons, and occasional reflections of a practical nature. But all, without doubt, are intended for effect, and may stimulate the general reader.

The weakest point of the book appears in the indications of the author's critical power and knowledge of Hebrew. Here he is not a master. He candidly admits his imperfect knowledge of Hebrew—an admission which looks rather oddly at times beside his critical attempts in the notes. He relies implicitly on Ewald, who is lauded in terms which prove that the writer is no Hebrew critic himself. The laudation of the one German critic is so excessive as to be unjust towards other Germans who have made important contributions to the criticism of the Old Testament. The best friends of Ewald are those who can form an intelligent and discriminating judgment of his merits—who are able to see where his theories are baseless and where they are right. We are compelled to differ from both Ewald and Prof. Stanley in many points of Biblical science; but the claims of the former to distinction are unquestionably great. It is curious to observe that the one critic who has done most to illustrate the Book of Genesis in modern times, Prof. Tuch, of Leipzig, is never mentioned. Yet he is no mean geographer, as well as Hebraist. Our author's deficiency in critical ability is seen in his undue attachment to the text of the Septuagint in comparison with the Hebrew, as well as in his excessive leaning upon Ewald's opinion. What can be the use of adducing the Greek readings so often, even when they are evidently incorrect? Is the esteemed Professor a disciple of Kennicott? We almost suspect him to be so, by various allusions. The merit of Kennicott lay in collating Hebrew MSS., not in critical ability. His essays in amending the Hebrew text were failures, because he followed Cappellus's method.

Notwithstanding the author's slender knowledge of Hebrew, he undertakes to give a new version of Deborah's Song in the fifth chapter of Judges—a song presenting many difficulties in the original. But he professes to have adhered as closely as he could to the version of Ewald, at the same time "following always the order of the words, and their exact force in the original." Here he has occasionally misapprehended the meaning of the original, as in the fifteenth verse, where he renders

And the princes in Issachar with Deborah, and Issachar as Barak,
Into the valley he was sent on his feet.

The last line gives a singularly feeble sense. The translation should be—

The princes of Issachar also were with Deborah;
Yea, Issachar was the support of Barak.
They rushed into the valley at his feet.

The author has given two lectures on the prophetic order and the nature of the prophetic teaching which contain many correct sentiments, though the very difficult subject is treated superficially. Some statements he has ventured to make are certainly incorrect, such as that Isaiah foretold the fall of Tyre. The 23rd chapter in the book of Isaiah was not written by

the prophet himself. It is apparent, however, that our author has neither entered deeply into the question of the prophetic predictions nor studied the development of the Messianic idea in the prophetic writings.

The book before us contains no solution of the difficulties which the history of the period traversed presents in the Bible. On them he usually gives no opinion. This peculiarity strikes the critical reader of the book at every step. The oracle is dumb in the very places where many would wish it to speak. Has the author formed no opinion of his own on testing points? Surely he has. Is it that he has followed the advice of counsellors? From whatever cause he has slid over difficulties, the thing is to be lamented. The author is a liberal theologian, but he does not take the position of leader. He is content to follow timidly in the wake of bolder men who speak out whatever be the consequences. This must lessen his influence in the cause of Biblical science. His reserve is surely carried to excess when he does not even venture to name the two most recent works on the Old Testament which are destined to advance the criticism of the Bible. He alludes, indeed, to one of them, but in a way for which the author will hardly thank him. The present time needs bold men prepared to give utterance to their deepest thoughts. How quietly the author evades the giving of a positive opinion may be seen from the following extracts:—

"There may be errors in chronology—exaggerations in numbers—contradictions between the different narratives."

"There are doubtless many difficulties which may be raised on the offering of Isaac; but there are few, if any, which will not vanish away before the simple pathos and lofty spirit of the narrative itself, provided that we take it, as in fairness it must be taken, as a whole."

"Was it two hundred and fifteen years (according to the Septuagint), or four hundred and thirty years (according to the Hebrew), or a thousand years according to the modern computations of Egyptian chronology? We need not enter on any detailed answer." (Of the sojourn in Egypt.)

"The Jewish Scriptures, at least in the Pentateuch, abstain almost entirely from any direct or distinct mention of either" (a future state and judgment after death).

In speaking of the burning bush which appeared to Moses, and the rod in his hand, it is said, "These were the outward signs of his call. And, whatever the explanation put on their precise import," &c. Of the plagues of Egypt we read that "they are calamities natural to Egypt, though rare, and exhibited here in aggravated and terrible forms. But not the less are they the interventions of a Power above man," &c. On the number 600,000 armed men that came forth from Egypt, he says, "We may leave the question to the critical analysis of the text and of the probabilities of the case, and confine ourselves to what remains equally true under either hypothesis" (600 or 600,000). On the difficulties of the sojourn in the desert the author says: "We cannot repudiate altogether the existence of natural causes, unless we go so far as to maintain that mountains and palm-trees, quails and waters, wind and earthquake, were mere creations of the moment to supply momentary wants; we cannot repudiate altogether the intervention of a Providence, strange, unexpected and impressive in the highest degree, unless we are prepared to reject the whole story of the stay in the wilderness." In relation to the speaking of Balaam's ass, he writes, "the voice, however explained, which breaks from the dumb creature that has saved his life."

Of the time when Balaam's prophecy was delivered, he says:—

"It has often been debated, and no evidence now remains to prove, at what precise time this grandest of all its episodes was introduced into the Mosaic narrative."

Again:—

"It has been a question often debated amongst scholars, how far the code of the Pentateuch was a collection of earlier, later or contemporaneous customs, under one general system. It will here suffice to name those portions of the law which, by direct connexion with the life of the desert, can be traced back to the Sinaitic period."

By the "Evangelical Prophet,"—

"may be designated the Author of Isaiah, xl.-lxvi., whether, with most Continental scholars, he is regarded as a separate prophet from the Isaiah of Hezekiah, or, with most English divines, he is regarded as the older Isaiah, transported into a style and position later than his own time."

"We need not here discuss the vexed question of the precise time when the Book of Deuteronomy assumed its present form."

In conformity with these expressions, the author proceeds throughout on the supposition that everything is *historical*, as it is related. He never hints at the possibility of myth or legend. Great numbers are not pronounced exaggerated. Yet there are indications of enlightened views in various parts of the book, as in the difficulty of the sun standing still at Joshua's command, and the massacres of the Canaanites by the Jews. The former had been already settled; and therefore no boldness was required to affirm that the passage is an extract from a poetical book.

One point is occasionally touched upon in a most unsatisfactory way, viz., the numbers in the Old Testament, which appear to many excessively large. Here Prof. Stanley usually appeals to two authorities, Kennicott and Laborde, neither of whom possesses critical weight. Both incline to *reduce* the numbers, where these numbers present a difficulty. The latter, however, speaks very undecidedly respecting the 600,000 that went out of Egypt; and seems afraid to say *expressly* that the sum should be 600. Thus in 1 Sam. vi. 19, the numbers of Bethshemesh are brought down by Kennicott from 50,070 to 70. Whatever method be resorted to for lessening numbers, we repeat the belief of every critical Hebrew scholar, that they are original in most cases. Their authenticity is unquestionable. Every modern process of manipulation applied to them is opposed to the established principles of sound criticism. Such as alter them are the enemies of safe interpretation. Unsettle the text by arbitrarily changing numbers wherever they appear too large, and a licence is introduced of which any rash critic may avail himself to disturb the narrative and make it other than it is. Literalists should consistently adhere to the text as it is. If they do not, they are dangerous men, who assume without evidence that the text is wrong. It is a desperate expedient to resort to unauthorized changes of an old text superstitiously watched over by the Jews. Since the days of Gesenius and his school, the proposers of changes in the numbers have been treated as they deserve. And after all, it is a mere conjecture whether letters of the Hebrew alphabet were anciently used as numerals. There is no *proof* that they were. Who will allow the science of sacred criticism to be marred by an assumed principle which rests on no foundation? Whatever the numbers be, they must, in almost every case, have proceeded in their present state from the original authors. They are a constituent part of the genuine text, faithfully preserved by the Jews in the face of the very difficulties which they create.

OUR LIBRARY TABLE.

Remains, in Verse and Prose, of Arthur Henry Hallam; with a Preface and Memoir. (Murray.)—Upwards of a quarter of a century, if not more, has passed since the historian of the Middle Ages gathered the relics left behind him by one of high virtue, genius, attainment and promise, and wrote a Preface, in which depth of feeling was attested by the excellently calm, not cold, taste in which the memorial was written. Later, attention was drawn to the tomb of Arthur Henry Hallam by a poem which, among monumental poems, has a solitary, we may almost say a supreme, place. 'In Memoriam' comes more intimately home to English sympathies than 'Lycidas' or 'Adonais,' and may be pointed to, perhaps, as the one special monody to which beauty of form and feeling have given a universal currency. It was not inopportune, then, to reprint the 'Remains' of Arthur Henry Hallam. There is added, too, a shorter notice of a younger Hallam, Henry Fitzmaurice, who had his full share of the family heritage, "love of the best and honourablest things"; who, like his brother, died in the flower of expectation and promise, and who is mourned accordingly.

The World of Phantoms: a Poem. (Hardwicke.)—This poem opens with a rebuke to modern professors of magic, and then proceeds to record, in a rambling story and tumid rhymes, the triumphs of Mesmerism. A Count Puseygar, who receives such severe wounds as must have been fatal in ordinary cases, is miraculously freed from pain and danger by the Mesmeric charm. This auspicious event occasions great surprise to the convalescent. Not content with letting well alone, he is curious—perhaps pardonably so—to learn the means by which his restoration has been effected. His wishes are complied with, and it will be satisfactory to know that the information given is from the highest authority—the shade of Mesmer himself. That distinguished phantom revisits the "glimpses of the moon" for the express purpose of relieving the Count from his perplexities. Mesmer's conduct, in a word, is most affable; but, we lament to add, his language is unintelligible. Perhaps, however, there is dramatic fitness in this. *Non omnia possumus omnes*; and our author may have thought that to explain miracles as well as to perform them would be too much to demand of the same individual. Accordingly, apparitions of no less renown than those of Messrs. Gall and Spurzheim are called in to elucidate the elucidator. The subjoined lines contain the gist of Gall's present opinion as to the Mesmeric process:—

Each day we live some hidden source we find,
That shows how link'd is matter with the mind;
How immaterial on material rests,
And one design these two combined, invests.
By every thought an atom melts away;
Another flash, a second cannot stay
Where th' impression strikes the sensuous brain;
A change is wrought, the void fills up again.
Life holds the balance with an equal beam,
Or mind and matter are not what they seem
When each exerts its own apportion'd rule,
To guard the health or obviate a fool.

—After so luminous an exposition, all difficulties on the subject of it will of course vanish, and the author must be held to have done service in summoning these ghostly teachers for our edification. Still, gratitude cannot blind us to some peculiarities in his style, nor restrain us from offering him a few suggestions. We venture to say, then, that he does not materially increase our stock of knowledge by the remark—

In varied forms the lot of man is cast,
The future lives not in the sensuous past;—
and that the following couplet is open to the same objection:—

Truth needs no polish from contemptuous art;
It acts but one, and that a single part.

—This observation touching a hero—
For him wealth, splendour, power, all combine
To fix the glory of his lineal line—

is either a pleonasm, or, if not, it prompts us to inquire what sort of line an unlineal one may be. Finally, when the writer asserts of his Mesmeric wonders—

'Tis meet such things should have in one divan
The sole attention of each known seaman—

we are uneasy at the perverse skill with which he at once violates orthography and pronunciation.

To be serious, in spite of its ambitious style, the book abounds in errors and puerilities such as we have quoted. The power to "call spirits from the vasty deep" may be a great thing in its way, but the invocation will be no less potent if uttered in decent English.

The Golden Link: a Poem-Romance. By John Wray Culmer. (Low & Co.)—A 'Tale-History,' a 'Sermon-Sonnet,' a 'Song-Story,' would be no less desirable specimens of English literary ware than is a 'Poem-Romance.' But Mr. Culmer, apparently, takes great pride in neologisms. 'We read in one page concerning "boxes," that

Glided in chill range around his dusky room;
—in another, of
A fairy thing e'en to her blush-pink nails;
—in a third, of *Epithalamies*;—in a fourth, how
Ring within ring of golden-flowering furze
Sang faintly, fitfully, across the park;
—in a fifth, of
Much tangled maidenhair
Ablaze with brilliants from the bubbles flung.

—and so on, through the hundred pages of this strange and solemn little story of an ill-assorted marriage, of a wife's infidelity, a husband's death, and of a monument of "satiric granite" which told lies concerning the fortunes and misfortunes of the whole party. Till Mr. Culmer can substitute his own peculiar grammar and dictionary for those of our mother-tongue, as heretofore and at present employed, he can hardly be accepted as belonging to any order of the poets or romancers of England.

The Common-Place Philosopher in Town and Country. By the Author of 'The Recreations of a Country Parson.' (Parker, Son & Bourn.)—No sign of health and well-doing is exhibited by the multiplication of books like this; a book which will give the most languid and indolent of thinkers no trouble, and in which the more earnest inquirer will fail to find a single original thought or counsel. The "Country Parson" however, has a public, and, to judge from his fluency, finds it hard to feed his readers rapidly enough. There is nothing to offend in his essays—there is no want of self-knowledge or self-appreciation in their titles,—but they are eminently "commonplace."

What and How of the Eternal Worker: the Work and the Plan? (Private circulation.)—Another of the great solutions of all difficulties, but by no means like some of its predecessors. It must be a revelation. We find it out thus. The author designates revelation and miracle as twin errors, and assures us that "God has never—as popularly taught and understood—spoken to man directly, either through prophet, priest or lawgiver; and the only inspiration that has moved man to action has been the normal working of his attributes in their diversified combinations in different idiosyncrasies, as influenced by external circumstances." Again, it is stated that the great problem of the age is "to give enunciation to a new faith, in harmony with present knowledge." Now when we look at the author's title we see—in spite of the modest note of interrogation—that the new faith is found, and this is confirmed by the short and declaratory character of the chapters. How it can be revealed that all revelation is an error rather puzzles us; but we remember that Epimenides the Cretan was believed when he said that *all* the Cretans were liars. The great solving word of this new announcement is "idiosyncrasy." How often it occurs we have no idea; but if the printer would tell us at what page he had to seek a further supply of the letters *i* and *y* we should be able to form a guess. The idiosyncrasy of this author is the everlasting use of the word "idiosyncrasy": he is by no means the only person who thinks that a Greek word is the master-key which opens all doors. Like the rest of his class, he uses his *open-seame* set of syllables in many cases for which common English is already made and provided. If he will take the five words *mould, cast, bias, turn, bent*, and substitute one or another for *idiosyncrasy* at every occurrence of that word, he will make his book much clearer and somewhat shorter. The author believes in a God, in immortal life, and in thanksgiving, of which he has furnished a form. Prayer he rejects as wholly inefficacious. It will comfort those who hold a

different opinion to see how hard it is to get rid of prayer; for though the average chapter is under eleven pages, it takes twenty-seven pages to settle this point. But the author feels that in so difficult a matter example is needed as well as precept. "It may perhaps be said, granting even that prayer is futile, and but a habit induced in error, who can break the giant force of such a habit supported as it is? We answer that we, the writer of these pages, have done so; what we can do others also may. . . ." This is encouraging; but why should so valuable a secret be confined to "private circulation"?

Thoughts on the Dwellings of the People, Charitable Estates, Improvements and Local Government in the Metropolis. By Thomas Hare, Barrister-at-Law. (Low & Co.)—The purport of this little brochure is excellent, but the author is too sanguine. He proposes to himself no less than "to describe a method of combining the powers and the action of all our existing associations, ancient or modern, and to indicate some of the results which may be expected to flow from such a powerful and enlightened organization." There are many valuable suggestions; the object is one that all must wish to see accomplished, and we cordially agree with the author when he asserts that "the multiplication and improvement of the dwellings of the working classes is the only sure basis of every secular effort for the benefit of the masses." We call attention to the pamphlet as the work of a man who has thought upon the subject.

Counsels of an Invalid: Letters on Religious Subjects. By George Wilson, M.D. (Macmillan & Co.)—These counsels had a special value to those to whom they were originally addressed, but we doubt whether they are of a nature to be generally acceptable. The diversity of taste in the matter of religious books is great, and there may be readers who will find some satisfaction in this work; but for ourselves, we must own to finding them rather weak, amiable and insipid.

Horse Warranty: a Plain and Comprehensive Guide to the various Points to be Noted, showing which are Essential and which are Unimportant. By Peter Howden. (Hardwicke.)—Mr. Peter Howden settles with a stroke of his pen questions which would cause endless discussion at a parliament of veterinary surgeons, or a conference of the "deep hands" and "knowing ones" of the horse-trade. This manual, therefore, offers many points of attack and occasions for contradiction; but no one practically acquainted with horses will question the general trustworthiness of its views. Unsoundness Mr. Howden regards as the rule, soundness as the very rare exception, of horse-flesh. "There are few horses that would stand the strict test of examination for purposes of unqualified warranty, even amongst those that have not been worked; but few indeed would be those that *had* been worked that would not fall under the denomination of unsound." Starting with this opinion, that a great majority of the horses offered for sale are blemished, faulty, or marked by important defects, Mr. Howden notices in succession all the ills to which horse-flesh is subject, states the signs by which each may be detected, and concludes his observations on every failing by stating whether its presence proves a horse to be practically as well as theoretically unsound, or only blemished. The many horse-buyers who are not versed in the technicalities and artifices of the horse-trade, and yet wish to form judgments of their own on the animals offered to them by dealers, will find much useful information in this volume, which, more than any other manual of the kind placed before us of late, puts the intelligent but uninitiated buyer on an equal footing with the clever and unscrupulous trader.

Sunday Echoes in Week-day Hours. By Mrs. Carey Brock. With a Preface, by the Right Rev. Lord Bishop of Winchester. (Seeley, Jackson & Halliday.)—Written by a lady who had previously displayed her capacity to write for young readers, and introduced to the attention of parents by the Bishop of Winchester. 'Sunday Echoes' attempts to set forth the sorrows and trials of a little boy's school life, and to show how he was enabled to overcome evil influences and temptations to wrong by reminiscences of the Collects which he had learnt

at home under the spiritual guidance of an affectionate and devout mother. As a picture of school life the narrative has many faults; but the tone of womanly piety and gentleness pervading the entire story, and the simplicity with which the writer puts forth her ideal of boyhood, and treats the Prayer Book as if it were a "Guide to the Playground," will win the sympathy of adult readers, though the ordinary occupants of schoolroom and nursery will in all probability be more bored than amused by the grave sermons of good Mrs. Ryley.

Our Reprints include, *Thalatta! or, the Great Commoner; a Political Romance* (Parker, Son & Bourn).—Mr. Lever's *Roland Cashel*, which has been added to Messrs. Chapman & Hall's "Select Library,"—Mr. Latham on *The Shape of Sword-Blades*,—Vols. XXII. and XXIII. of the Reprint of *Punch* (Bradbury & Evans).—*Selections from the Poetical Works of Robert Browning* (Chapman & Hall).—*The Bakerian Lecture, on the Total Solar Eclipse observed at Rivabellosa, near Mirandela de Elbro, in Spain*, by Warren De La Rue (Taylor & Francis).—and a New Edition of *Perrin's French Fables*, by Le Stievenard (Tegg). Among translations, we have *Titan; a Romance*, from the German of Jean Paul Friedrich Richter, translated by Charles T. Brooks (Tribner & Co.),—and from the French, *The Story of a Siberian Exile*, by M. Rufin Pietrowski (Longmans). We have a second edition of Mr. Garbett's *Rudimentary Treatise on the Principles of Design in Architecture* (Virtue Brothers & Co.); fourth editions of *Charades, Enigmas and Riddles*, collected by a Cantab (Bell & Daldy).—*Glimpses of our Heavenly Home; or, the Destiny of the Glorified*, by the Rev. E. Davies (Heylin).—and *Help and Comfort for the Sick*, by the Author of 'Sickness, its Trials and Blessings' (Rivingtons); an eleventh edition of *Haydn's Dictionary of Dates relating to All Ages and Nations*, revised and enlarged by Benjamin Vincent (Moxon & Co.). *Barrington* (Chapman & Hall), by Charles Lever, has been completed and issued in a single volume. The following have also appeared.—Vol. II. of *The Museum* (Edinburgh, Gordon).—Vol. III. of *The Voyage of the Novara* (Saunders, Otley & Co.).—*Practical Mechanic's Journal (Scientific) Record of the Great Exhibition of 1862* (Longmans).—Mr. Jerrold's *History of Exhibitions*.—*Education Internationale: Documents du Concours provoqué par M. A. Barbrière, en Décembre 1861, pour la Fondation d'un Collège International (Dulau)*.—*Vorträge und Reden Kunsthistorischen Inhalts*, von Ernst Guhl (Dulau).—*Analytic Universal Telegraphy, an International Telegraphic Language*, by Count D'Escayrac de Lauture (Hotten).—*A Pilgrimage to the Home of Florence Nightingale*, by James Croston (Whittaker).—*The News Almanack*.—*Scottish Widows' Fund Life Assurance Society's Diary and Prospectus*.—*British Workman, 1862*.

LIST OF NEW BOOKS.

Adams's Geography Classified, post 8vo. 7/6 cl.
Adams's School-boy Honour, new edit. 8vo. 3/6 cl.
Ascham's The Schoolmaster, ed. with Notes, by Mayor, 12mo. 6/ Beanie on the Instructions of Musketry, cr. 8vo. 2/6 cl.
Bees, Silkworms, and Inhabitants of the Acarum, cr. 8vo. 1/5wd.

CHARING-CROSS BRIDGE.

THE Charing-Cross Railway Bridge, carrying the South-Eastern Railway into its western London terminus, now rapidly approaching completion, and intended to supplant the well-known and beautiful suspension work by Brunel, will be one of the most effective and imposing structures on the Thames, so far as height and extent of span can render it remarkable. The suspension bridge of Hungerford thus superseded is to go to Bristol, and its iron-work employed to cross the Avon at a splendid elevation, where almost any structure would look noble; it will supply a long-felt need of the locality. The whole width of the Thames opposite Hungerford is about 1,340 feet,—more than twice as wide as at the Chinese Bridge at Chelsea. The water-way at Hungerford is 1,256 feet 4 inches, of which the central span of the suspension bridge is not less than 646 feet. Hungerford Bridge is the longest bridge on the river, being nearly double that of London Bridge. Of the new work Mr. Hawkshaw is the engineer; he has divided Brunel's openings into spans of 154 feet each, by cylinders placed in pairs. The brick piers of the former structure are allowed to remain for the use of the railway, giving something of variety to the ranges of cylinders that rise like gas-pipes straight out of the water, and bear up the iron lattice girders of the bridge itself in the most uncompromisingly simple and unadorned manner. On the tops of these cylinders the iron bed of the road crosses at a mere right angle, the whole arrangement producing an appearance of formal rigidity that fails to satisfy the eye, which instantly questions the policy of using these ugly things in such numbers, when, if the structure had been less rigidly trabeal, it is presumable that some of them might have been omitted, and an appearance of continuity and grace gained by the varying lines of the spanners, that might have been employed with structural advantage.

The form of structure thus indicated, displaying right angles everywhere, is continued across the river. The cylinders of each pair stand 49 feet apart. That portion of each which is below the bed of the river is 14 feet in diameter, in seven segments of 9 feet long each, with flanges cast inside, whereby they are bolted together, leaving the exteriors to look like mere tubes in smoothness. Above this comes a portion 10 feet in diameter, reaching to the main girder, in seven segments of nine-foot lengths. In most cases these cylinders are sunk 40 feet into the bed of the river, thus giving ample security. The lower and wider portion of these cylinders is filled in with concrete. Above this they are lined with brickwork to the summit, where blocks of granite receive the wrought-iron girders of the superstructure, keeping the cast-iron cylinders from contact with the ever-vibrating roadway by rising an inch or two higher than their edges. Here, then, was an opportunity of giving a truly architectural and constructional form to these ugly shafts or cylinders, one also which would have been in keeping with their character as sustaining a great load. If these blocks of granite had been widened out, so as to become abaci supported upon cushions, the function of the columnar cylinders would be indicated, their ugly and meagre forms ennobled, their bearing surface

extended, to the manifest advantage of the structure, and the introduction of an element breaking the rude right angle of the girders and cylinders secured at no more expense than the extra coat of larger slabs of granite.

Forty-nine feet, the space between each pair of cylinders, gives the width of the roadway, accommodating four lines of rails; each cylinder is braced to its companion by a transverse beam of wrought iron. This roadway we may describe without going into technicalities and structural peculiarities, all of which are most ingenious, if not wholly novel in design, as supported by lattice girders of vast strength; their architectural effect is by no means unpleasing when seen in perspective, the repetition of the latticing enriching the aspect of the work excellently. To this effect of constructional decoration the arrangement of the galleries, so to style them, contributes; these project on either side of the bridge, being sustained by brackets or extensions of the transverse beams of the whole structure. These galleries or balconies are to serve as footways to perform the office of the old suspension bridge, and are to be seven feet in advance from the sides of the great lattice girders, that being the width of the footway on each side. The arrangements for attaching these balconies to their supports have been challenged as insufficient and perilous.

The effect of leaving the brick piers of the suspension bridge to mix up with the cylinders is not a little bewildering to the observer who may be ignorant of the primary use of the former. Their serviceableness to the railway and the cost of removing them commanded their retention. The bridge, when completed, will consist of six spans of 154 feet each, and three on the Middlesex side of 100 feet each; the bridge is to be widened on that side to 175 feet, so as to admit of seven lines of rails and platforms into the station. The depth of the Thames, at low-water, spring-tide, on the site of the bridge is 11 feet; the rise of the tide, 17 feet 6 inches; the level of the rails above Trinity high-water mark, 31 feet. The towers from which the chains of suspension now hang, and which are so graceful an ornament to the river and the older structure, will of course be removed, so that nothing will break the straight line of the lattice girder tops stretching from shore to shore. The greater portion of the labour of erecting the railway bridge has been performed without in any way interfering with the use of the older structure, being in fact built to enclose it within its far greater width. Temporary wooden footways now serve for the traffic.

CULTURE OF SILK.

Sericulture, as our French neighbours call the culture of silk, is making such progress as to be worthy of remark. Apart from the attempts to establish silk-grounds in the South of France, Italy and Algeria, certain agricultural proprietors near Monte Video and in the territory of Uruguay have commenced operations to the same purpose. The arrival of about seventy pounds of cocoons at Paris may be taken as an earnest of what they hope to accomplish in future. The castor-oil plant grows abundantly all over the country above referred to, and so rapidly that in four months its height will be four feet, with leaves from eight to twelve inches broad. This plant is found to be the best food for the mongrel silkworm, bred from the two varieties which have of late received much attention from cultivators, the one peculiar to the castor-oil plant, the other to the ailanto, as Loudon names it, *Ailantus glandulosa*, a tree familiar in English parks and in some of the squares in the west of London. It appears that in the favourable climate of South America, six gatherings may be made in a year; and one of the cultivators at Assumption states that about one acre of land will yield two million cocoons, which, at the rate of 2,500 to the pound weight, make nearly 800 pounds. With these data, it will not be difficult to calculate the profit that may be anticipated from silk culture. Silk has been experimented on by chemists, and M. Persoz finds that a preparation of chloride of zinc will dissolve silk,—which fact at once suggests a method for detecting tricks of trade as practised by silk-

weavers. Much of the woven silk, so called, sold by mercers and others, contains a large proportion of wool or cotton, sometimes both; but now all may be discovered by an easy chemical process. As above stated, the chloride dissolves the silk, but leaves untouched the wool and cotton; the wool in turn is dissolved by an aqueous solution of caustic potash, which leaves the cotton uninjured. M. Ozanam, in a recent communication to the Academy of Sciences at Paris, carries the question a step further by showing that the several operations may be accomplished in one single bath of ammoniuret of copper. Let the piece of cloth be plunged into this, and in a short time the cotton disappears; at the end of three, six or twelve hours, according to the strength of the bath, the silk is dissolved, leaving the wool intact. Thus the quality and proportions of the materials of the warp and weft may be easily determined. M. Ozanam explains that, by Mr. Graham's method of dialysis, it is possible with this bath to separate silk in the gelatinous form, taking care to use for the porous septum a substance that does not dissolve in the ammoniuret of copper. Parchment or paper would soon disappear. Having prepared a quantity of silk in the gelatinous state, as, in fact, it exists in the worm, it might then be possible to draw it out in threads of any length and of any thickness, and thus avoid the trouble of spinning by a process similar to wire-drawing. Or silk cloth might be produced, either by a process of pouring out and rolling, or in endless lengths, after the manner of paper-makers. And with this capability of reduction to the gelatinous condition, we have the means for re-converting old waste silk, woven or twisted, refuse cocoons and floss, to a useful and valuable article of commerce. These are a few hasty suggestions as to the way in which these interesting chemical results may be utilized: that many others will shortly be forthcoming is not to be doubted.

THE POSTAGE-STAMP.

January 12, 1863.

WITH a view to historical accuracy, I trouble you with some brief remarks on Dr. Gray's letter of January the 5th, which was called for, he says, by my attempt to discredit his statement, "by ignoring the value (if not the existence) of the most essential stage of postage reform as regards newspapers."

The Act on Newspaper Postage, to an abstract of which in my 'Companion to the Almanac' Dr. Gray refers, has no reference whatever to the inland postage of newspapers. As set forth in its title, it is "to regulate the conveyance of Newspapers by Post between the United Kingdom, the British Colonies, and Foreign Parts." It had been enacted in 1825 that Newspapers might pass free by Post from one part of Great Britain to another. They went free before, by the fiction of the frank of a Member of Parliament, whose name was printed on the wrapper.

The question of a Postage Stamp to be affixed to the wrapper of a newspaper could not have arisen upon the Act of 1834; for that Act, by superseding the payment of Postage upon Colonial and Foreign Newspapers, rendered any stamp for prepayment wholly unnecessary. Nevertheless, Dr. Gray dates his idea of prepayment by means of stamped covers "from that early part of 1834" when the Newspaper Postage Act was under discussion; and he refers to a leading article in the *Times*, of the 28th of March, "in which the forthcoming Act was discussed." The Act was not passed till the 13th of August. It was a very small instalment of Postal Reform, needing no parliamentary discussion.

In the 'Companion to the Newspaper' of June the 1st, 1834, is inserted a document, which is stated "to have been prepared several months ago, for the information of some official personages"; in which, amidst a great number of other suggestions for the abolition of the stamp, it is said that the difficulty of a prepayment by the transmitter of an unstamped newspaper would be obviated by "Mr. Knight's plan of a stamped frank, and it would facilitate the transmission of all printed sheets under a certain weight." "Several months" before the 1st of June would carry us back to

the "early part of 1834" as the period when Mr. Knight's plan was a recognized fact, submitted by others to the consideration of "official personages."

Was it in this ungenial season that Dr. Gray and his "other companions" were fellow-passengers with me "in the basket of a Blackheath coach"; when he stated his views in relation to the prepayment of postage by stamps, which views I "combated," and "afterwards thought better of the subject"? "Several months" before the 1st of June, my own plan had been formed, and is recorded to have been under official consideration. Perhaps I may be warranted in asking, how it was that my alleged appropriation of Dr. Gray's idea remained unnoticed by him till 1863? I leave to the judgment of those who have long known me, to decide whether the language stated to have been used by me to a gentleman of scientific eminence would not have been better suited to the character of a costermonger returning from Greenwich fair than to mine.

CHARLES KNIGHT.

THE INSCRIPTIONS AT BAALBEK.

January 14, 1863.

I thank Mr. Hogg for his obliging answer, in the *Athenæum* of January the 10th, to my letter on the inscriptions at Baalbek, and for explaining the reason of his supposing that the two capitals of the columns in the portico were not of "gilt bronze." I am sorry for my mistake respecting his meaning, when I said he considered the absence of gilding on the capitals of the columns in the Great Temple negated the reading "that the capitals of the portico had been gilt," whereas he really alluded to the absence of any bronze or brass capitals "in or about the temples"; but in neither case do I see the force of his objection.

It is true, as he says, that "none of the capitals still extant in or about the temples of marble or compact limestone are made of brass or bronze"; but this fact would not prove that two capitals of the colonnade of the portico of the sacred inclosure surrounding the temples could not have been of "gilt bronze." I may also observe, that this portico is distant more than 500 feet from those temples, and that all its columns have long since been removed. It is not the portico of either temple, but of the inclosure, in which they stand; and as I said before, the Saracens would have found better use for bronze capitals than building them into walls, where they might have been seen by us at the present day. The absence of any made of brass or bronze "in or about the temples" would not certainly prove that none were originally put up in the portico, and would scarcely, as it seems to me, negative the reading that two of the capitals of its columns were of "gilt bronze." I think it highly probable that the capitals of the other columns in this portico were of stone, or marble, gilt; while *two*, as we are informed by the inscriptions, were of *bronze gilt*. It was a custom, both of the Romans and the Greeks, to colour their architecture, and parts were often gilt. In so splendid a building as this at Baalbek we may therefore suppose they adopted the same custom; and the superiority of the two capitals, above alluded to, consisted in their being of bronze gilt; but there is no *authority*, from the remains themselves, for conjecturing that the stone capitals were gilt; and "M. Mariette's statement in 1758 (only seven years after Wood's visit), that in his opinion the capitals of the porch (portico) had been gilt," could neither confirm, nor disprove, any hypothesis respecting them. If he had supposed they had been originally gilt, or painted of any particular colour, this would have been a mere suggestion; since the columns of the portico and their capitals had long disappeared before he visited Baalbek, and nothing remained of them except the pedestals, which are in the same position at the present day.

If the word "dua" was never used at the time the inscriptions were put up, we might not expect it to occur at Baalbek; but since so great a classical authority as Mr. Hogg admits that "dua" was only "most generally used in the third century after Christ," there is reason to suppose that "dua" might be met with at the commencement of the century, especially in monumental inscriptions, some

of which show that those who cut them were not always careful to adopt classical words. Indeed, it is hazardous to determine what form of a word may, or may not, be found in an inscription, merely from its use by ancient writers at a particular period; and words sometimes occur on monuments which would not be met with in classical books.

I am sure that Mr. Hogg's object, in this inquiry, is to arrive at the truth, whatever it may be, and I trust he will give me credit for the same desire; and this is often arrived at by difference of opinion; but I do not know whether he has visited Baalbek, and has copied or carefully examined the inscriptions *in situ*, and can speak from his own knowledge of the appearance and position of the letters, or whether he depends solely on the copies given by others. With regard to those of Wood and Krafft, on which he relies so much, they differ greatly from each other; and I can safely affirm that Krafft's "inflata (pecunia) sua regum devota" in the first inscription, and in (flata) nujmin(i)bus" in the second, are inaccurate; and that "inluminata sua pecunia ex voto" in the first, as given by Wood and by me, may be depended upon as correct. Those words within brackets are (as I suppose) supplied by Mr. Hogg, and therefore omitted by Krafft. On the probability of the Greek *Delta* in "devota" I need make no remark. Herr Krafft is also incorrect in the first inscription, when he gives "Antonini Pii Aug-e Julise.....Senat Antonin(i)," which Wood and I read "Antonini Pii Fel. Aug. et Julise.....Senat Patr(is)," followed apparently (according to my copy) by "Aur. Ant." and some letters not easily deciphered; and I leave it to others to decide whether Herr Krafft's copy is likely to be so very accurate, though he is, no doubt, "an intelligent and careful German traveller." And now let us examine the space occupied by the letters in the part relating to the "capitals of the columns,"† which as I read them are—

CAPITA COLVMNARVM DVAAEREA AVRO INLVMINATA
and according to Krafft—
CAP COLVMNARVM DVM AERI AVRO IN FLATA

without any spaces between "cap" and "col," or "in" and "flata." The double A of "DVAA" may easily be mistaken for "DVM"; but how account for the extra length occupied by "capita" and "inluminata"? "Aeri," again, is clearly "aere" (a). The other double A might also be taken for M; and indeed Wood reads "dum" and "muro," but there is not sufficient space for "dum erant in muro." If M. De Sauley has proposed to read "capita columnarum duo aere auro inluminata"—and to translate the sentence "two capitals" (of columns) "in gilt bronze," as Mr. Hogg states, I am glad to be supported by his opinion, though I depend in reality on the copy I made, and only differ from him in reading "dua" for "duo." Though I have had some experience in taking copies of inscriptions from the monuments, I am far from pretending that any of my own are in every part more correct than those made by some other person: much must depend on the manner in which they are copied, especially when in a difficult position like these at Baalbek; but unless the transcriber of these brought his eye to their level, as I did at two different times of the day, and therefore under different lights, he would not have had so good a chance of copying them accurately; and I am inclined to consider my reading correct: according to which "two of the capitals of the columns were of bronze illumined with gold." Mr. Hogg takes no notice of my statement that I was let down to the inscriptions by a rope from the top of the parapet walk (which has taken the place of the lower part of the colonnade), as if this was of no importance; while he admits that "the height from the ground at which they are placed, and the greatly-decayed letters, render the true reading of them extremely difficult at the present time"; that is, when seen from below. He also says he has "seen other and more recent copies which differ again from" mine; but he does not give any of them, nor state in which letters they differ from mine, nor how they were copied. It would be satisfactory to

† The whole of the inscriptions may be seen in the *Athenæum* of December 20, 1862.

know these particulars: I feel sure the omission was unintentional.

I must offer my apologies to Mr. Hogg for having misquoted the inscription "Divisio Moso," given by him from M. De Saulcy. It was purely an oversight. Besides, the correction I intended to offer was not in the *first*, but in the *second*, word, which I read "Mosch" instead of "Moso." There are at Baalbek two of these short inscriptions, one "Divis Mosch," the other "Divisio Mosch."

With regard to Bek, the word is common in Coptic: as in "*Dios-t-baki*," "*Diospolis*"; "*On-t-baki*," "*Heliopolis*," and others: and this part of the name may have been given to Baalbek from the Egyptian "*baki*," "city," as it received the name *Aven*, or *On*, from the same language,—(see Amos i. 5, and the Septuagint translation of that passage). Respecting the connexion between this Heliopolis and the Heliopolis of Egypt, from which Macrobius says the statue of the God was taken, by the aid of the Egyptian priests—see Macrobius. Saturn. i. c. 30; but when Mr. Hogg asks (Tr. R. S. Lit. vii. p. 259), "may not this Egyptian terminal word" (Beki) "have been introduced in the tenth or eleventh century, by the Egyptian Caliphs, who governed Baalbek?" I hope he will excuse me if I doubt the Moslem Caliphs having introduced a word from the Egyptian, or Coptic, which they neither used, nor (perhaps, it may be said) even understood, and compounded a name of a Syrian town with that word and the title of a heathen Deity. I cannot, however, conclude without expressing my thanks to Mr. Hogg for his valuable paper on Baalbek.

GARDNER WILKINSON.

OUR WEEKLY GOSSIP.

THE design by Mr. Noble for a bust of the Prince Consort, which is to be placed in the new building of the Bath United Hospital, has been completed, and photographs of the same have been submitted to the Queen. Her Majesty has been pleased to express her "entire approval of the design," and has also graciously suggested the following inscription:—

HIS LIFE

SPRUNG FROM A DEEP INNER SYMPATHY WITH
GOD'S WILL,

AND THEREFORE WITH ALL THAT WAS TRUE,
BEAUTIFUL AND RIGHT.

—These words will be inscribed on the plinth.

The University of Cambridge has lately received a present of thirty pictures, by modern artists, from the Gallery of Mrs. Ellison, of Sudbrooke Holme, near Lincoln. They have been placed in the Fitzwilliam Museum, to which they form a welcome addition, that gallery being almost entirely deficient in representatives of the modern English Schools of Art. Five of the pictures have recently become familiar to the general public by having formed part of the International Exhibition. These are two by Good,—'Reading the News,' and 'An Old Woman'; Danby's 'Painter's Holiday'; Crewick's 'Ford'; and Morland's 'Gipsies.' Among the others may be noticed, a good early Turner, 'The Mouth of the Thames,' strongly reminding one of the noble picture of the same subject hung, with its glorious companion, in the Middle Room at the National Gallery; a second Morland, a bit of Isle of Wight Coast, painted by him while hiding from duns and bailiffs; Collins's 'Anglers,' and 'Meadfoot Bay, Torquay'; a good bit of Genoese Sea-coast, by Stanfield; some of Mr. Linton's best works,—'Taormina,' 'Sparta,' and two views from Venice; another by Good,—'The Singing Lesson'; 'Leap-frog,' by Gill; and a good Cattle-piece by Cooper. There is ample space on the walls of the Fitzwilliam Museum for half-a-dozen such donations; and it is hoped that many pictures now half-buried in country-houses, or hanging as mere articles of furniture in badly-lighted rooms, will follow those from Sudbrooke Holme to the magnificent Cambridge Gallery.

The ancient Holy Well at Oxford, which gave name to the parish in which it stood, and formed a bath reputed to possess singular virtues, has been totally obliterated by the formation of a deep-lying drain to carry off the water to the river: this was

needed through the erection of a chapel for the Female Penitentiary of the city upon the site of the bath-house.

Among the plans for the improvement of the metropolis and its neighbourhood that will be brought before Parliament in the ensuing session are the following,—every one of which is of importance, many of absolute necessity:—The Thames Embankment (north side); Queen's Road, extension to Battersea; Regent Market, utilization of Leicester Square; South London Markets; St. John's Lane stoppage; Thames Bridges; Blackfriars Bridge; Admiralty Buildings; Albert Bridge; Royal Arcade; Putney and Fulham New Bridge and Pier; Tower Bridge; Fulham Bridge; Grand Surrey Docks; Metropolitan Bridges; Thames Embankment (south side); Wandsworth and Fulham Bridge; West London Docks. It will be observed that many of these schemes are directed to the construction of bridges on the Thames, either totally new, or the rebuilding of old and yet existing structures. We believe the whole number of such propositions is no less than eighteen; some of them are sure to take effect, to the great comfort of the population, that has now but three free bridges for use. If any new railway bridges are to be constructed across the Thames, surely the Government might stipulate that they should afford free foot accommodation.

The Thames Embankment Committee of the Metropolitan Board of Works have reported in favour of the formation of a subway along the embankment from Westminster to Blackfriars at a cost of 20,000*l.*, and against a proposal to place at the junctions of the streets and along the work dwarf trees and shrubs planted in ornamental devices, the last "being of no practical value to the Board." We trust, however, that the planting of trees along this new boulevard, the same being by far the finest method of decoration that can be devised, will be insisted on by the public voice.

An extract from a letter addressed to Prof. Tyndall by Mr. James Hall will interest some of our readers:—"Last week, on the 2nd of January, accompanied by a guide, I made the ascent of Snowdon from the Victoria Hotel at Llanberis. There had been a heavy fall of snow the previous night, which circumstance I hoped would give me an opportunity of repeating your experiments relative to the blue colour of newly-fallen snow in Switzerland; nor was I disappointed. As soon as I arrived at a sufficient altitude for the snow to be one foot thick, viz., 1,900 feet above the sea, on making a hole with the bâton I was delighted to find the blue colour, but rather pale. As we ascended the mountain, we came into a dense mist with the snow deeper; and the blue colour became darker every step until we reached the summit, when the colour was as dark as that of the firmament. The most beautiful colour, however, was in the natural cracks and holes in the drifted wreaths of snow, caused, I suppose, by the particles of snow not having been compressed on each side the cracks or holes, and the reflexions consequently more numerous. The light in the crevices of the snow on the side of the mountain overlooking Glaslyn was exceedingly beautiful. The thermometer on the summit was 28°F., and the calculated height by an aneroid 3,595 feet above the sea."

The West African Company has utilized the articles removed from the Liberian Court at the International Exhibition by forming them into the nucleus of an African Museum, to be enlarged in the premises occupied by the Company at Gresham House. The idea is a good one, which we trust will be carried out.

A singular fatality appears to have lately pursued the most distinguished cultivators of the Irish language. The death of O'Donovan at the close of 1861 was followed by that of Eugene Curry in 1862; and the first days of the new year have been marked by the sudden and premature death of Dr. Siegfried, in the thirty-third year of his age. Dr. Rudolph Thomas Siegfried, a native of Dessau, was lecturer in Sanscrit and assistant librarian at Trinity College, Dublin. He combined a knowledge of the Celtic languages with high ac-

quirements in general philology, and especially in the Sanscrit, of which he was the first Professor ever appointed in Ireland. When he first visited this country, he spent some time in Wales in the study of Welsh, from which he passed over to Ireland to perfect himself in Irish. His official duties at Trinity College engrossed too much of his time to permit him to contribute so frequently as might have been wished to literature and philological science; but, in the 'Ulster Journal of Archaeology,' there is a memoir from his pen of his distinguished friend Dr. Caspar Zeuss, whose 'Grammatica Celtica' is recognized as the great contribution of German learning to Celtic philology. In this memoir the death of Zeuss is attributed to over-work and over-study; and there is too much reason to fear that Siegfried fell a victim to the same causes. On Wednesday, the 7th of January, he was suddenly attacked at Dublin by brain-fever, and on Saturday, the 10th, he expired. The Royal Irish Academy resolved to attend his funeral in a body, on the 14th, as a mark of respect.

We notice in the last number of the *Proceedings of the American Philological Society*, at Philadelphia, that the civil war has been carried into the ranks of philosophy and science; for, at a meeting of the Society in March last, it was resolved, "That a committee be appointed to report to the Society the names of any of its members who may have been publicly and notoriously engaged in acts of treason against the United States." And at the following meeting it was agreed that "Matthew F. Maury and W. F. Lynch have committed public and notorious acts of treason against the United States"; and it was ordered "that they be expelled from the Society." This will perhaps be news for Capt. Maury, who, having run the blockade from Charleston, is now in London.

By a report recently published, it appears that five counties of Southern Virginia, on the slopes of the Alleghany range, contain good coal, "semi-anthracite and semi-bituminous." Near Wytheville, in the same region, lies a deposit of rock-salt, which yields 24,000 gallons of brine daily; and the quantity of salt manufactured within the year has amounted to 300,000 bushels.

According to a New York paper, Mr. Grinnell, well known for his connexion with the search for the Franklin Expedition, purposes presenting the British Government with some interesting relics of Frobisher's Expeditions to the Arctic Regions which have been brought to New York by Capt. C. F. Hall. The relics, which consist of fragments of iron, wood, tile and glass, were obtained by Capt. Hall on Kod-lu-narn, or White Man's Island, where a colony endeavoured to establish itself on the occasion of Sir Martin Frobisher's third voyage to the Arctic Regions in 1576-8 under the patronage of Queen Elizabeth.

France is preparing another expedition to the Niger, under the command of Capt. Magnan. Government has put three steamers, built for the purpose, at its disposition. One of them can be taken to pieces, in case of waterfalls being in the way of the expedition. The steamboats, one of which is a screw, have all flat bottoms, and when laden draw only 3½ feet of water. Capt. Magnan intends erecting stations at the Niger delta, viz., at Karimana, at Tombuktu and Bamaku. From the latter places, caravans are to be despatched regularly to Algiers and Senegambia, and a regular steamboat navigation is to be established on the Niger.

The magnificent and unique collection of porcelain belonging to the celebrated Sèvres manufactory is at length about to be exhibited in a manner worthy of its excellence. A new Museum for its display has been erected, which is so arranged as to comprise three distinct collections. The first will be composed of every description of foreign china, and of specimens of the materials of which it is composed. The second will contain specimens of every description of French earthenware, and the third patterns of the produce of the Sèvres manufacture since its establishment. The new Museum has been erected by command of Napoleon the Third, who has ordered that the old and inconvenient Museum

shall be converted into a barrack for the pontoneers of the Imperial Guard. *A propos* of the ceramic art, we may take this opportunity of stating that the problem respecting the origin of the famous Henri Deux ware, which has been appropriately called 'The Sphinx of Art,' is said to have been at length solved. The *Chronique des Arts* informs us that the mysterious pottery was made at Oiron, near Thouars, with Rigné clay, by two artists—François Charpentier, a potter, and Jean Bernard.

While students, Ludwig Uhland and Justinus Kerner joined in writing an operetta, entitled 'Der Bärenritter.' The hitherto unpublished manuscript of this little work has been found among Uhland's papers, and the heirs of the poet have sent it to the musical composer, Herr Friedrich Kücken, requesting him to set it to music. Herr Kücken, we hear, has commenced the task at once.

The Rev. John Dalton, late vice-rector of the English College at Valladolid, sends us some further notes on Simancas and Yuste:—"Any information connected with Simancas will, I am sure, be interesting to the readers of the *Athenæum*. I have lately discovered that the first Spanish scholar who was allowed to examine the Archives at Simancas was Señor Don Pasqual de Gayangos, Professor of Arabic in the University of Madrid, and well known by his learned work, 'The Mohammedan Dynasties in Spain,' which has been translated into English. It was in the year 1844 that this permission was granted by the Government of that day: for centuries before, the gates had been closed both against native and foreign scholars. Another point I should be glad to see mentioned in the *Athenæum*. Many French and English writers, when speaking of Yuste, where Charles V. retired to spend the evening of his days, call it St. Yuste, St. Just and St. Justus—as if the monastery was called after the name of a saint. But this is not the case. Yuste is the name of a small stream which descends from the Sierra, behind the walls of the monastery: hence it is called by Spanish writers, 'El monasterio de Yuste.' (See Siguencia's 'Historia del Orden de San Geronimo,' parte ii., p. 191: also, 'Retiro, Estancia, y Muerte del Emperador Carlos Quinto en el Monasterio de Yuste,' by Don Tomas Gonzalez, who was appointed the 'Archivero Mayor' at Simancas on the restoration of Ferdinand the Seventh.) Though Ford, in his 'Hand-Book for Spain,' and Mr. Stirling, in his 'Cloister Life of the Emperor Charles V.,' have stated that the monastery derives its name from a small stream, and not from a saint, yet the mistake is still made by many English writers, as well as French: as, for instance, by Mr. Charles Knight, in his 'English Cyclopædia,' article Charles V., vol. ii., p. 178.

JOHN DALTON."

Mr. A. W. Bennett, the publisher of 'Our Satellite,' writes in answer to Messrs. Smith & Beck:

"January 12, 1863.

"The letter from Smith, Beck & Beck, in your impression of the 10th, seems very fairly to raise the question at issue between Mr. Warren De La Rue and Dr. Le Vengeur D'Orsan, as to the relative priority of their lunar photographs, and their consequent value in a scientific point of view. Mr. De La Rue's publishers appear to base their conclusion as to the copying of his photographs by Dr. D'Orsan on the existence of certain flaws, not only in Mr. De La Rue's negatives, but also in both of Dr. D'Orsan's published photographs, presented by him to the scientific world as original representations of different periods of lunation. It is evident that photographs taken from a body like the moon, which presents, at periodically recurring intervals, not only precisely the same appearance as to lunation, but also, at longer intervals, of libration also, if taken by independent observers, may, and under certain circumstances must, bear a striking resemblance to each other, such as photographs taken from but few other natural bodies would admit of. To distinguish between minute flaws in the negative, and hitherto undiscovers "flaws," so to speak, on the surface of the moon, would require a most accurate and critical series of observations. But Messrs. Smith & Beck will

themselves acknowledge that any such *apparent* evidence of copying would fall to the ground if it can be shown that Dr. D'Orsan's photographs were taken prior to February 1853, the date of Mr. De La Rue's. Now this I am authorized by Dr. D'Orsan to state in the case; he is prepared on his part to reciprocate their offer, and to show to any scientific gentleman really anxious to investigate the subject, both his own original negatives and the exact date of their production. It is on this originality that Dr. D'Orsan rests his sole claim to any merit as a worker in seleno-photography, and on this ground alone that the patronage of the scientific world is solicited to 'Our Satellite.' On the question raised by you as to any right Dr. D'Orsan might claim to 'share the honour conferred by the Royal Astronomical Society on Mr. De La Rue,' he is not anxious himself to assert any such claim, but rather to leave it to the unbiassed judgment of the scientific world. To show how little idea either author or publisher has had of setting up rival claims to those of Mr. De La Rue, I may mention, that before the publication of No. 1 of 'Our Satellite' in August last, the photographs included in it were shown to Mr. Joseph Beck; they were also exhibited at the recent meeting of the 'British Association for the Advancement of Science,' held at Cambridge; and it was not till after the publication of the first part that I received any hint of the suspicions as to the claim of the work to originality which are conveyed in Smith & Beck's letter, and which I am most anxious should be satisfactorily disposed of. Yours, &c.

"ALFRED W. BENNETT."

—The main fact to be noted in this communication is, that Dr. D'Orsan has not yet given the dates of his lunar observations. The question of priority, therefore, remains in doubt.

SOCIETY OF PAINTERS IN WATER COLOURS.—WINTER EXHIBITION OF SKETCHES AND STUDIES BY THE MEMBERS, NOW OPEN, at their Gallery, 5, Pall Mall East, from Nine till Dark.—Admission, One Shilling.

JOS. J. JENKINS, Secretary.

WINTER EXHIBITION, 1863, Pall Mall.—THE TENTH ANNUAL WINTER EXHIBITION OF CABINET PICTURES by Living British Artists, is now OPEN daily from 9.30 A.M. to 5 P.M. Admission, 1s. Catalogue, 6d.

NOW OPEN.—THE ART EXHIBITION FOR THE RELIEF OF THE DISTRESS IN THE COTTON DISTRICTS.—4, Suffolk Street, Pall Mall. Open from Ten till Four.—Admission, 1s. F. W. DICEY, Hon. Sec.

THE GEORGE CRUKSHANK GALLERY, EXETER HALL, contains a Selection of over a Thousand of his PROOF ETCHINGS, SKETCHES, &c. embracing a Period of upwards of Fifty Years; together with THE WORSHIP OF BACCHUS.—Open daily, from Ten to Five o'clock.—Admission, One Shilling; from Half-past Seven to Half-past Nine in the Evening, Sixpence.

SCIENCE

SOCIETIES.

ROYAL.—Jan. 8.—Major-General Sabine, President, in the chair.—The following papers were read:—"Application of the Theory of Polyhedra to the Enumeration and Registration of Results," by the Rev. T. P. Kirkman.—"Contributions towards the History of the Monamines: V. Note on the Action of Iodide of Methyl on Ammonia;" VI. Transformation of Aniline into Benzoic Acid," by Dr. Hofmann.—"A Development of the Theory of Cyclones," by F. Galton, Esq. As a limited area of very low barometer is a locus of light, ascending currents, which are indraughted from all sides in cyclonic spirals; so Mr. Galton maintains that a similar area of very high barometer is a locus of dense, descending currents, which disperse on all sides in *anti*-cyclonic curves. The curvature of the cyclone being retrograde in our hemisphere, that of the *anti*-cyclone is direct, owing to the same well-known fundamental causes, acting in a modified manner. The area of the cyclone is one of storm and rain, that of the *anti*-cyclone one of calms and fair weather. An *anti*-cyclone is enabled to feed a cyclone without abruptness, for the very reason that its curvature has an opposite character; just as a contrary rotation on the part of two wheels is a necessary condition of their moving in gear or in unison. The experience of simultaneous charts of the weather of Europe extending over ninety-three epochs of observation, compiled and shortly to be published by Mr. Galton, showed an almost invariable deflection of the wind-currents

in the sense mentioned above, and occasional instances of exceedingly well-marked systems of *anti*-cyclones. The loci of highest and lowest barometer were separated in his charts by distances of from 1,000 to 2,000 miles; and Mr. Galton concludes that whenever there are limited areas of very high and very low barometers at distances not exceeding the above, a line drawn from the former to the latter will be cut in all cases by winds coming from the left.—"On the Immunity enjoyed by the Stomach from being digested by its own Secretion during Life," by Dr. Pavy. The author, after stating that the "living principle" suggested by John Hunter as the protecting agency did not stand the test of experiment, for it had been shown that the tissues of living animals might be dissolved by the stomach secretion, said that the prevailing notion of the mucous lining of the organ serving as its source of protection by its susceptibility of constant renewal during life was equally untenable; for he had found by experiment that a patch of entire mucous membrane might be removed, and food would afterwards be digested in the stomach without the stomach itself presenting the slightest sign of attack. The view propounded by Dr. Pavy was one dependent on chemical principles. The existence of acidity was an absolutely essential condition for the accomplishment of the act of digestion. Now, the walls of the stomach being permeated so freely as they are during life by a current of alkaline blood, would render it impossible that their digestive solution could occur. After death, however, the blood being stagnant, there would not be the resistance to the penetration of the digestive menstruum with the retention of its acid properties that existed during the occurrence of a circulation, and thus the stomach became attacked when death took place during the digestive process, notwithstanding it had previously been maintained in so perfect a state of security. Dr. Pavy, in advocating this view, brought forward experiments which showed that digestion of the stomach might be made to take place during life. Whenever the circumstances were such that an acid liquid in the stomach could retain its acid properties whilst tending to permeate the walls of the organ, gastric solution was observed. The question of result resolved itself into degree of power between acidity within the stomach and alkalinity around. It did not appear that the digestion of living frogs' legs and the extremity of a living rabbit's ear introduced through a fistulous opening into the stomach offered any valid objection to his view. In the case of the frogs' legs, it might be fairly taken that the amount of blood possessed by the animal would be inadequate to furnish the required means of resistance. In the case of the rabbit's ear, the vascularity of it being so much less than that of the walls of the stomach, there was nothing unreasonable in conceiving that whilst the one received, the other might fail to receive protection from the circulating current, on account of the disparity of power that must belong to the two.

GEOGRAPHICAL.—Jan. 12.—Sir R. I. Murchison, President, in the chair.—Commander Edmund R. Fremantle, R.N., the Hon. Robert H. Meade, Commander Edwin A. Porcher, R.N., Capt. F. Sayer, J. O. Balfour, W. Blunt, W. Fuidge, R. S. Gladstone, C. M. Grant, A. Lambert, D. G. Forbes-MacDonald, C.B., A. Michie, C. Wetton and G. Worms, Esqs., were elected Fellows.—"Ocean Currents on the North-East Coast of America," by J. A. Mann.—The President read a letter from Dr. Livingstone.—"Survey of the Physical Condition of the Atlantic, preliminary to the laying down of another Electric Cable connecting Europe with North America," by G. C. Wallich.

GEOLOGICAL.—Jan. 7.—Prof. A. C. Ramsay, President, in the chair.—*Special General Meeting*.—It was resolved—That the number of Foreign Members be in future limited to forty, instead of fifty, as heretofore; that a Class of Foreign Correspondents be instituted, not exceeding forty in number; that the Foreign Members shall be elected out of the list of Foreign Correspondents. It was also resolved, that the meetings of the

Society shall be held in the Society's Rooms at Somerset House, on and after the Anniversary Meeting next ensuing.—*Ordinary General Meeting.*—J. Daglish, G. Davies, J. W. Lea and H. M. Jenkins, Esqs., were elected Fellows. The following communications were read:—'On the Lower Carboniferous Brachiopoda of Nova Scotia,' by T. Davidson, Esq.—'On the Gravels and other Superficial Deposits of Ludlow, Hereford and Skipton,' by T. Curley, Esq.

SOCIETY OF ANTIQUARIES.—*Jan. 8.*—F. Ouvry, Esq., Treasurer, in the chair.—Mr. W. H. Davies communicated remarks on some Roman remains, such as a fibula and some coins, found in an ancient kiln on Charlton Downs. Mr. Akerman added a description of these objects.—Mr. Williams exhibited a beautiful glass cup on a silver-gilt stem, taken at the siege of Boulogne in the reign of Henry the Eighth, and bequeathed to the Founders' Company by Richard Wesley, Master of the Company in 1631.—Mr. C. Faulkner exhibited a Roman urn, a fragment of Samian ware marked DONATVS, the fragments of the rim of a disc-shaped object and a tooth of some animal found in the urn. All these objects were discovered in a field near Deddington.—Mr. Fairholt exhibited a drawing, by himself, of a pistol in the Dresden Armoury, accompanied by remarks.—Mr. Augustus W. Franks exhibited eight circular fruit-trenchers in a box bearing the arms of the Ironmongers' Company, to a member of which they had probably belonged.—Mr. J. G. Nichols communicated a copy of the Will of Luke Hornbolt, painter to King Henry the Eighth. The Will was proved on the 27th of May, 1544.—Mr. Davidson laid before the Society, by the hand of Mr. C. Reed, an account of some remains exhumed by him in the autumn of last year on Snape Common, in the county of Suffolk, comprising a long boat-like structure, a Roman gold ring with a nicolo stone, and some urns, of which photographs were exhibited.

ARCHÆOLOGICAL INSTITUTE.—*Jan. 9.*—The Very Rev. Canon Rock, D.D., in the chair.—Dr. Rock, referring to the many and valuable archaeological treasures that had been exhibited at the periodical meetings, gratefully recognized the liberality shown by the possessors of works of art and antiquities. During the past year the Institute had been specially favoured by the Master of the Rolls, who had sent for inspection documentary matters of the greatest interest,—and the Earl of Winchelsea, who had brought for examination the precious drawings and memorials collected for Lord Hatton by Dugdale, with the unique French version of the *Modus* for holding parliaments, which Dr. Rock had the pleasure to announce would be given in the next 'Journal' of the Institute, under the editorial care of Mr. Duffus Hardy.—The Rev. C. H. Campion gave a full description of the mural paintings lately found in the church of Westmeston, Sussex, and of which some notice had been offered by Mr. Blaauw at the previous meeting. The paintings, which were assigned to the close of the twelfth century, were now completely illustrated by a series of tracings and coloured drawings.—Mr. Birch, Keeper of Antiquities in the British Museum, then delivered a very interesting discourse on the gold jewelled ornaments discovered in Egypt, and sent by his Highness the Viceroy to the late International Exhibition, where they had been inspected with eager curiosity. They were found near Thebes, in 1859, by M. Mariette, Director of the Viceroy's Museum, and were brought to England under his charge. The sepulchre in which their discovery was made has been attributed to the Queen Aah Holep, mother of Amosis I. of the seventeenth dynasty—one of the most remarkable personages in early Egyptian history. After a most interesting sketch of the condition of public affairs at the period, and the determined conflicts with the Shepherds, invaders from the East, who assumed powerful hostile dominion in Egypt, Mr. Birch entered upon a minute description of the rich ornaments, an exquisite series of drawings of which he was enabled to display through the kindness of Mr. Kiddle, who had fortunately been permitted to

preserve for us memorials of a collection of objects unrivalled in beauty of workmanship and in historical interest. From the great richness of the colouring, it had been supposed that some portions of these precious relics had been enamelled; but this notion Mr. Birch believed to be erroneous: he had seen no example of true enamelling on Egyptian works. In conclusion, he stated that the date of these objects may be placed, at the lowest calculation, at B.C. 1500 or 1510; but they are possibly even of higher antiquity.—Mr. Yates pointed out analogies presented by these insignia of an ancient Egyptian sovereign with other ancient evidence; and Mr. Franks stated his concurrence in the view taken by Mr. Birch regarding the want of proof that enamel was known to the ancient Egyptians.—Mr. Hewett communicated a notice of an ancient weapon, of the thirteenth and fourteenth centuries, called the "Godenag," or Good Day.—Various antiquities were brought for exhibition by Mr. Faulkner, Capt. E. Hoare, Mr. Bernhard Smith and Mr. Webb.—The Hon. W. O. Stanley, M.P. sent for examination a drawing of a bronze cauldron found in Denbighshire; Dr. F. Keller sent a cast of a unique die for casting Gaulish gold coins, lately found at Avenches, in Switzerland; Dr. De Berlanga, on the part of the Marquis de Casa Sorring, presented to the Institute, through Lord Talbot de Malahide, two lithographed fac-similes of the inscribed bronze tablets found near Malaga in 1851. Through the liberality of the Marquis of Westminster, a large series of the earliest documents relating to Reading Abbey was sent for examination; and Lord Clifford kindly placed before the Meeting the fine Cartulary of Chertsey Abbey, preserved in the Library at Ugbrooke.

INSTITUTE OF BRITISH ARCHITECTS.—*Jan. 12.*—Mr. J. Taylor read a paper upon 'Sundry Sanatory Building Arrangements.'

ENTOMOLOGICAL.—*Jan. 5.*—F. Smith, Esq., President, in the chair.—Mr. Saunders exhibited some Galls from Southern Africa: one of them was formed in large masses on the roots of a tree from the Zulu country; another, which was rather soft to the touch, was formed on a species of *Cissus*. He also exhibited living specimens of a species of *Bruchus*, from the seeds of *Erythrina Savandersonii*.—Prof. Westwood exhibited a large tough pouch from Africa, which had been cut off from the branch of a tree to which it had been suspended: it was doubtless the nest of some gregarious Lepidopterous larva. He also exhibited leaves of various plants mined by Lepidopterous larvae, and mounted on glass, so as to show the larve inside: this mode of exhibiting the miners, and the shape and peculiarities of their workings, was due to Mr. Stone, of Bournemouth.—Mr. S. Stevens exhibited a fine species of *Psalidognathus* from Quito, and a remarkable instance of arrested development in a specimen of *Papilio Pammon* brought by Mr. A. R. Wallace from the Sulu Islands.—Mr. Laing exhibited a peculiar variety of *Elloptia faeciaris*; and Mr. Stainton, a number of interesting varieties of Lepidoptera from the collection of Mr. W. H. Bibbs, of Worcester, including *Vanessa Urticeæ* and *Atalanta Arge Galatæa*, *Arctia Caja*, *Frigoteles lanestræ*, &c.—Mr. Percy Wormald exhibited a single specimen of *Limnephilus nobilis* (Kolenati), a Trichopteran insect new to this country, and captured at Ruislip in September last.—Mr. Waterhouse exhibited *Omalium riparium*, *Homalota levana* and *H. dilaticornis*, and read some notes on those species.—Sir J. Hearsay exhibited a collection of thirty-two species of Spingids from India.—Mr. Saunders read a further paper on the genus *Catascopus*, containing descriptions of seven new species.—Mr. Walker communicated a paper entitled 'Characters of undescribed South African *Lepidoptera Heterocera*, in the collection of W. S. M. D'Urban, Esq.'—Major Parry read 'Observations upon *Lucanus Lama* (Oliv.) and its Synonym.'—The President read some 'Observations on Ants of Equatorial Africa,' containing a criticism of some of the statements of M. Du Chaillu with reference to the ants of that region.—Mr. W. F. Kirtz read a paper 'On the Geographical Distribution of European Rhopalocera.'

INSTITUTE OF CIVIL ENGINEERS.—*Jan. 13.*—J. Hawkshaw, Esq., President, in the chair.—The following candidates were elected:—Messrs. J. W. Brassington, J. S. Crowley, E. Gotto and G. Wilson, as Associates.—The paper read was, 'On Railway Telegraphs, and the Application of Electricity to the Signalling and Working of Trains,' by Mr. W. H. Preece.

MEETINGS FOR THE ENSUING WEEK.

MON. Asiatic, 3.—'The Surya-Siddhanta,' Mr. W. Spottiswoode; 'Indian Dates,' Prof. Goldstucker.
TUES. Royal Institution, 2.—Special Meeting of Members. Ethnological, 8.—'Nations inhabiting British Birmah,' Hudson's Bay Territories, Mr. Ishaler.
WED. Statistical, 8.—'Cotton Trade and Civil War in America,' Dr. Leone Levi.
THURS. Royal Institution, 1.—'Animal Mechanics,' Prof. Marshall.
FRIDAY. Engineers, 8.—'Railway Telegraphs,' Mr. Preece.
SAT. Society of Literature, 4.
METEOROLOGICAL, 7.—'Ordinary and Council.—Average Height of Barometer, London, for 83 years,' Mr. Eaton.
SOCIETY OF ARTS, 8.—'Colonization and Convict Labour, Hudson's Bay Territories,' Mr. Ishaler.
GEOLOGICAL, 8.—'N. Extension of Upper Silurian Passages, Linley, Salop,' Messrs. Roberts and Randall; 'Crustacean Tracks, Old Red Sandstone, Ludlow,' Mr. Roberts; 'Parallel Roads of Glen Roy,' Mr. Jameson.
THEATRE. Royal Academy, 8.—'Architecture,' Prof. Smirke.
ROYAL, 8.
ROYAL INSTITUTION, 1.—'Chemical Affinity,' Prof. Frankland.
ANTIQUARIES, 8.
FEL. Royal Institution, 8.—'Radiation through the Earth's Atmosphere,' Prof. Tyndall.
SAT. Royal Institution, 3.—'Life and Death,' Mr. Savory.

FINE ARTS

EXHIBITION FOR LANCASHIRE.

THIS is a collection of works mainly by amateurs; it shows in some of the examples how many good artists too-kind Fortune has spoiled by not keeping them to Art as a profession. We often find in such gatherings that a large number of our amateurs have every qualification to make them painters but the necessity to be so. Besides the estimable executants whose benevolence has led them to contribute, are several men of note who appear here with the same intention. The success of their common efforts was attested on Tuesday last by a crowded "private view," and the sale of examples to the value of more than six hundred pounds. The whole surpasses in interest any amateur exhibition we have seen. The noteworthy professionals who are represented here are, amongst others, Messrs. C. W. Cope, E. Creswick, W. Cooke, W. Mulready, C. L. Stanfield, D. Roberts, F. Leighton, P. H. Calderon, J. E. Millais, Lündgren, J. Sant, J. Sutcliffe, G. P. Boyce and Mrs. Bodichon.

Mr. Cope has a pretty drawing, *Sleeping Child* (No. 505), very well drawn and expressive; also *Female Head* (506), and *A Study* (511), all studies of parts of pictures.—Mr. Cooke's contributions are sketches from Venice, *From the Giardini Publici* (505a), and *Two Sketches of Venice* (506 a); a figure, *Gardener* (731), and 726, 737; all interesting as from his hand and effective studies.—Mr. Mulready is the most generous contributor, with a small picture, executed in his best manner, that has been, we believe, engraved, entitled *The Disobedient Prophet* (507), he who fell among lions. He lies in the rocky place of desolation, the brutes stalking watchfully by, and assistants hastening near. The drawing of the nude in the chief figure is admirable; so is the colour of the flesh—a beautiful picture. This artist sends also several of his inimitable studies with the pen (512, &c.).—Mr. Stanfield is hardly less liberal, with more than one excellent drawing, the best being *Val d'Ossau* (686).—*St. David's, S. Wales* (689),—*Muleteer* (728),—*Contrabandista* (734), and *Dover* (736). *Val d'Ossau* is a splendid study of rocks solidly done, and more richly coloured than is usual with the painter. No. 515, by the same, *Study from Nature*, is hardly less good.—Mr. Roberts's two drawings of the *Entrance to Calais Harbour* (616, 617) are distinguished by the deft outlining and spirit of his earlier mono-chrome studies. That showing Fort Rouge is best. See also 724, 725 and 735.—Mr. Leighton's gift is a most exquisite *Study of a Head* (618).—Mr. Millais sends the drawing from the finest piece of composition he has produced, being that to "Dora," in the illustrated edition of Mr. Tennyson's Poems, entitled *Dora* (681).—Mr. Sutcliffe has *Waterfall in Borrowdale* (120), a strongly-painted piece of rainy sunlight on the mountain-side.

Of the works sent by amateurs now let us speak.

Miss C. Jenkinson's sketch of *Lago Maggiore* (14) has dealt well with the glittering, darkening levels of the lake, and the distant peaks, seen in varied tones, one behind the other.—Lady Belcher's *Pluskardine Abbey* (18), though heavy and cold in colour, has some excellent drawing and good tone; the grey ruin amongst trees.—Mr. A. Severn's *View of the Thames, from Westminster* (19), is almost painty and crude enough in colour to dissuade one from admiring its show of feeling for tone, atmospheric and local fidelity. The sentiment of this picture is the best amongst its qualities.—Dr. Haden is one of the best etchers we know; more than one drawing here attests his skill in producing natural effect beautifully, and his artist-feeling in giving meaning to the themes he chooses. See the melancholy look given to the *Entrance to Mytton Hall* (115), and the true English look of the sunny *Egham Reach* (118).—Mrs. Coltman's *Study of Rocks* (130) shows nature treated pictorially, but really well withal; also her clever suggestion of the French feeling for landscape, *Sketch by a French Artist* (131),—a fuzziness of trees, opening to a warm blue vista, that might be anything and everything. Very excellent is Miss Hampson's *Claudian Aqueduct* (133), a bold and sound study.—Dr. Chambers's *Ronda, Andalusia* (140), shows the well-known ravine with its wonderful bridge; its rocky sides have been rendered with unusual felicity in gradation of tone and colour. See those to the left, from the sky-line to their base. The alocs are ill drawn.

Hardly anything can better show how widely diffused is the practice of drawing and painting amongst us at the present day than the names of the persons who contribute to this collection. We have Peereses, Peers, Regius Professors of Medicine, Deans, Honourables, Captains, Reverends, Majors, Doctors of Medicine and Divinity, Major-Generals, Queen's Counsellors, M.P.s, and Commoners whose very names are exciting to the heralds.

FINE-ART GOSSIP.—A very good Exhibition of Photographs has been opened by the Photographic Society, in the galleries of Suffolk Street. Landscape has a more prominent place this year than usual; but there are endless examples of album portraits and a few attempts at elaborate compositions. Among the landscapes our readers should examine carefully a series of studies by Col. Stuart Wortley. They are simple pictures of sea, sky and coast-line, nearly all taken on the shore at and near Naples; but for truth, power and delicacy combined, they surpass nearly everything we have yet seen from a lens. Mr. Thurston Thompson's copies of pictures, especially Turner's, should not be overlooked. Mr. Bedford has contributed his Eastern sketches to the Exhibition. A large composition by Mr. Robinson, called 'Bringing Home the May,' which stands over the mantelpiece, is worthy of attention. It is an illustration of Spenser, and is perhaps the first picture yet composed mechanically. It has some very beautiful effects. Indeed, the Exhibition repays one for a visit, and is highly creditable to the Society. We must, however, protest in the name of Art against the increase of coloured portraits.

We do not remember any stronger proof of the necessity under which we are to appoint an intelligent Edile empowered to decide upon the architectural aspect of public works, than is afforded by the completion of an ugly railway arch and its paltry screen right across the southern foot of London Bridge. This is for the use of the South-Eastern Extension Railway to Charing Cross, is carried about twenty feet above the road level, completely shuts out the fine view of London Bridge, and darkens, so to say, the handsome road most cruelly. This structure, for the sake of which St. Thomas's Hospital has been pulled down, comes so close upon the Church of St. Saviour, the finest Gothic building in Surrey, that it is now wholly shut in from the south. Whatever economical or sanatory reasons might exist for removing the hospital, there could be none for replacing it by a line of common arches, which spoil the vista of a grand bridge and hide a great church. We question if it was imperative to carry the

railway above instead of beneath the existing highway and out of sight. When we add to these lamentable blunders the substitution, by the same railway company, of the unsatisfactory bridge at Hungerford for the elegant structure by Brunel, it will be seen how heedless their engineer has been of the beauty and dignity of London streets. The viaduct in Southwark might surely, even at its present level, have been borne upon open iron arches, so that a new picturesque element would appear, in place of the blind and coarsely-designed viaduct now built. An Edile with common sense and taste would spare us the ridiculous exhibition of waterworks in Trafalgar Square—would insist upon something like decent Art being employed in the works at the north end of the Serpentine, where a great deal of money has been wasted upon trashy ornamentation. The railway station in the Marylebone Road, near Albany Street, is another eyesore, where so-called "ornament" has made a work offensive which proffered a good opportunity of special character and an excellent site. The London, Chatham and Dover Railway is to cross Ludgate Hill.—Let us hope with less disgraceful heedlessness of St. Paul's than has been shown in the Borough for St. Saviour's.

The exterior restorations of Notre Dame, Paris, include replacing the series of statues of the Kings of France, from Clovis to Philip Augustus, which was broken by the destruction of eight of them during the Revolution, in 1793. There are twenty-eight in all.

A friend in Munich writes to us on the prospects of Art for 1863.—"Two important undertakings are announced for this year:—an International Exhibition of Pictures to begin in May, and a Permanent Exhibition of works for sale. The first project is only in its infancy, but being a child of rapid growth will, no doubt, come to maturity before the other. Every three years an exhibition is held in Munich, and artists are sure to send to one that occurs with such regularity. But the permanent Exhibition of the Works of Munich Painters that are for sale, although very much needed, is not certain of foundation. Englishmen who have visited this place with a view of studying the modern Art for which it is chiefly renowned, must have felt the want of some guide to the studios, some central collection of the latest paintings. Neither the New Pinacothek nor the Kunst-Verein supplies this want, and buyers are thus thrown on the judgment of the *valeur-de-place* or the picture-dealer. At present the artists who have a place on the walls of the New Pinacothek are certain to be largely encouraged, while younger men who have not yet attained such eminence, or older men whom the caprice of King Ludwig has disregarded, are perhaps almost in want of bread. I have been told on good authority that a painter of merit who was in needy circumstances, and could not get any market for his pictures, happened to sell two to the King, and has ever since been so much employed that he cannot find time to execute his works with the care that formerly distinguished them. On the other hand, the Kunst-Verein, where the newest works are exhibited, cannot pretend to represent the Art of Munich, and the yearly purchases of the Committee do not include more than five or six pictures of merit. The object of the Kunst-Verein is not to encourage Art, but to support poor artists, and pictures are generally bought on this principle, without the least regard to their merits. When we consider that a Committee is chosen of painters and connoisseurs to decide on the purchases to be made by the Kunst-Verein, we must be astonished at most of their selections. The very meanest works are bought at the same price as others of decided ability, and the people who frequent the rooms seem to have no canons of taste beyond those supplied by the Committee. As there are five or six hundred painters in Munich, many of whom have a European reputation, it is not too much to say that two good *genre* pictures, a few scenes of peasant life, and a dozen landscapes, are a very small and inadequate yearly production. Yet, unless the stranger happened to be in Munich at one of the triennial Exhibitions, he would not easily have the means of forming a more favourable judgment. The esta-

blishment of a permanent Exhibition will, no doubt, remedy these evils. But the extent of royal patronage, the public works that have been executed and are being executed, have prevented any general experience of them,—the more as great patrons are not confined to Munich. It was stated the other day that there was some chance of a German Academy being founded in Rome, similar to that possessed by the French, and it was hinted in the official paper here that King Ludwig might leave by will his Villa Matta for that purpose. But King Ludwig has replied that he is strongly opposed to the idea; and as the Villa Matta is his private property, the scheme may be supposed to have fallen. The words "private property" have an ominous meaning when we remember the actions of some Italian princes, and when we are told that the public buildings in Munich which King Ludwig paid for from his privy purse are still considered his own possessions. When Pericles threatened to complete the Parthenon out of his own funds and place his name upon it, we suppose he did not mean to devote the salary allowed him as chief of the State to a reflection upon the stinginess of the State, or to put his private name on anything which had come indirectly out of the public money."

MUSIC AND THE DRAMA

MONDAY POPULAR CONCERTS.—ST. JAMES'S HALL.—On MONDAY EVENING NEXT, January 19.—Pianoforte, Herr Paer; Violin, M. Salnton; Violoncello, Signor Piatti. Vocalists: Miss Banks and Mr. Sims Reeves. Conductor, Mr. Benedict.—Sofa Stalls, 5s.; Balcony, 3s.; Admission, 1s.—Tickets at Chappell & Co., 20, New Bond Street; and at Austin's, 28, Piccadilly.

NEW PUBLICATIONS.

Mass for a Four-part Chorus, with Orchestra—[Messe, &c.]. Composed by R. Schumann, Op. 147, No. 10 of his Posthumous Works. (Leipzig, Rieter-Biedermann; London, Ewer & Co.)

IN any ordinary case, the circumstances of publication announced as above would have furnished a reason for some reserve in criticism. The hand, for the most part, should be lightened which is laid on posthumous works;—seeing that they may have been held back in the lifetime of their author for revision, if not from a sense of their utter unworthiness. Such, it is needless to point out (for the blind idolaters will listen to no representations on the subject), is the case with Mendelssohn's early compositions, not destroyed, indeed, by himself, but judiciously kept by him from publicity, because unworthy of his reputation. The number affixed to this work by Schumann places it in the category of mature productions. Moreover, it has all the peculiarities of style which distinguish other of his owned writings, such as 'Paradise'—'The Rose Pilgrimage,'—peculiarities calculated to exercise a baneful influence on those whom they enthral, and to deaden their senses to the fact that, allowing the works of the master a certain merit, they nevertheless belong to a period of decay and unhealthy taste.

We cannot, for the sake of a few songs (which make a sort of oasis, overvalued by reason of the barrenness of the desert which they diversify), and a few juvenile pieces for the pianoforte, disdained by their writer as obvious and trivial, consent to "enter on the list" of great composers a man so deficient in melody, so licentious to impurity in harmony, so imperfect in technical skill, and so frequently false in expression, as Schumann. It is a treason to beauty, to truth, to knowledge, to represent him (as Germany is now disposed to do) in the light of Beethoven's continuer—as the man in the depths of whose poetic genius the shallow and correct works of Mendelssohn are being rapidly swept out of sight to their right level, as so many mediocrities. Why, even in any one of the few posthumous Quartets by the composer of 'Fidelio' (so disastrously appealed to as models and points of departure), there are more of the delicious "thoughts which create thoughts," by seizing and charming the ear, than in the entire mass of overwrought and morbid composition by Schumann which we are invited to digest. Think (to give but a single instance) of the strange fragmentary Op. 130; which, besides the unintelligible freaks and rhapsodies of its first movement, contains such

subjects as those of the *Presto*, of the *Andante con moto* (over-confused though it be), of the German Dance, of the *Cavatina*, of the impish *Finale*. Think (to come to a more exact parallel) of the first ideas of Beethoven's 'Missa Solennis,' spoiled as that strange colossal composition is by exaggerations and defiances which do not bespeak strength, but weakness,—not discovery, but bewildered misapplication of resource. There is not one of the numbers which compose that Mass which does not arrest the ear at first by the announcement of some bold, distinct, expressive musical phrase, proclaiming the presence of a poet. There is not one of the numbers in this Mass of Schumann's the subject of which might not have been thrown off by any one allowing his pen to wander over the stave by chance. This dreary platitude—this utter want of freshness, if not feeling—have, nevertheless, a great advantage for the person who can induce his audience to consider him as profound. The public comes to prize the plainest of chords, the most obvious of contrivances, the most paltry bar of stale melody, by contrast, as so many revelations. There are persons in Germany who go into ecstasies over the comic-opera Chorus about "Allah's Throne," in Schumann's 'Paradise,' because of the commonest of common imitations,—who admire the opening song of the same *Cantata* (forgetting that in it they are admiring Beethoven's 'Mai-Lied'),—perhaps because they contrast so meekly with the sickening dullness of the Pestilence scene—with the excruciating cries of the *Peri* announcing her "Joy, joy for ever!" as she enters Paradise.

To avoid possible mistake, it is worth while to note certain points presenting themselves during the tedious journey which an examination of this Mass has proved to us. The "Kyrie," in c minor, has a certain gravity and pomp in its march; and this is conducted with less eccentricity and torment to the voices, and more respect for the import of the text, than will be found in other portions of the service. Schumann starts his "Gloria" on a group of notes, rather than a phrase, so artfully contrived as to mystify the ear as to the key (c major):—this is obviously a darling notion with him, since it is repeated obtrusively again and again, without any reason, save that of the writer's obstinacy. The subject, introduced in order to show science (Letter A, page 11), is bad for its purpose, because mean and common, and not bettered by the writer's disregard of the voices. They must be automatons, not singers, who can grasp the intervals with certainty. But your new German holds that the voice, with all its peculiarities and privileges, is utterly unworthy of conciliation or consideration. The phrase "Et in terra" will say little to any one. The "Laudamus" (by way of profound expression) is an agitated minor group of notes. The "Gratias agimus" is as uncouth as if the writer's meaning had been to express exhaustion and satiety, not gratitude. Far better, because more musician-like, is the episodic treatment of the "Domine Deus" (where the orchestra sets off a vigorous morsel of chant). The modulations in the "Quoniam" are repulsively crude; and to those who conceive that sound and sense should not be two, the setting of the words "Tu solus altissimus" (four times repeated, and thus obviously meant to be a point), may be fairly commended as monstrous. The opening of the final strophe, "Cum Sancto Spiritu," with the placid and large "Amen," is better,—one of the best things in the Mass. After this, recurrence is made to the *no*-phrase which commenced the "Gloria"; then comes the usual amount of elaboration, and the second division of the Service ends.

The "Credo" is notoriously that portion of the Mass which offers the greatest difficulties to the composer, owing to the variety of clauses included in the act of Faith. Yet, in his First Mass, Beethoven could bind these nobly and symmetrically together, and, in his Second Mass, announce another mode of treatment by a cementing phrase on the word "Credo,"—which device Schumann has awkwardly and languidly adopted.—At p. 39, there is some large and simple writing on the words "et ex Patre natum." After this the

author wanders into unpleasant vagueness, till we arrive at Letter F, page 41, where the text is dislocated, and the clauses "descendit de caelis"—"et incarnatus est," &c.—"crucifixus" (the last *how* stupendously set by Sebastian Bach!) are tied together by a mysterious phrase for the basses, which might never have suggested itself had there not previously existed the *Trio* to the *Scherzo* in Beethoven's Archduke Rudolph Trio. Curiously enough, the words "et sepultus est" are decked out by a sort of "Will o'-the-wisp" figure, which, supposing it found in a French "sensation-scene," would drive the picturesque pedants of the new school into fits. Nor is there anything more grotesque in music than will be found in page 45, on the phrase "sedet ad dexteram Patris, et iterum venturus est cum gloria." The leap to the last word, and the scream on it, may belong to the future; but if they be accepted as sufferable, all art and reverence of the past must thenceforth and for ever be abolished.

The "Sanctus" in 4-2 tempo has a fatally ancient look; but the mystery thereof mainly lies in the notation. The *Offertorium*, a *soprano solo*, bears a likeness, as close as one piece of colourless ware can bear to another, to many a vague and doleful *Lied* about "yearning," or "gloom in the heart," or "summer noon," which we recollect from Schumann's hand, and is credited with intensity because of its absence of explicable meaning. The skipping "Pleni sunt caeli" comes in odd contrast with such a studied piece of formalism as the "Sanctus." The "Hosanna" flows more smoothly, but the phrases are poor; and the "Benedictus," that favourite and fortunate movement, claims the distinction of being the one "Benedictus" we could name not having the slightest pretext of an idea. In barrenness, however, it is outdone by the "O salutaris," for a bass voice. The "Amen" is figurative on a subject not worth the trouble of working. Lastly come the "Agnus" and the "Dona." The first movement is curious as an assortment of yawns. If the *contralto* part can be executed in tune by any choristers, they must be voices from brass and iron, not flesh and blood. Towards the close of the "Dona," "the cloudy scene begins to clear" (p. 83); but the phrase which leads the Mass to its close (p. 85) is one of those uncouth groups of notes, alike "without nature and without grace" (as the Irish lady said of the growing of the Indian fig), which are to be accepted as an example of concealed melody by those who find in Schumann a prophet, a poet and a pioneer.

We are not of this congregation. The character attempted in this journal eighteen years ago of Schumann as a composer, stands before us clear and emphatic as the character which we repeat to-day. The driftings of fashion hither or thither—the allowances claimed for want of new ideas, mis-called progress—the vacant desire for change (as if change implied novelty), have little influence over those who cannot be made to see that crooked is straight, that a broken nose is as seductive as a feature chiselled by Phidias, or that a flat surface implies more relief than one including clear lights, pure half-tints and deep shadows. As a specimen of vacancy and platitude, claiming for themselves the honours of profound thought and choice wisdom, it is hard to fancy anything more remarkable than this Mass by Schumann appears to us.

CONCERTS OF THE WEEK.—Our best wishes and approval go with the *Popular Concerts*, in proportion as they follow out the path which now seems opening—that, namely, of venturing music which is forgotten, or unfamiliar, or awaiting its verdict. From the first, the average style of performance there has left little to desire. To Germany we must look for the model-tradition and execution of German music; but these concerts, offered to audiences two thousand strong, have closely emulated and equalled the best of the kind which could be given at Leipzig, Berlin, Frankfort, or Vienna, not merely in quality of execution, but in appreciation of the listeners. Yet, at this very time, pedants are asking, "Are the English really musical?" There is nothing in France comparable to them. The far-famed Quartett party led by M. Maurin, which

hardly keeps together a public audience, though lauded to the skies as the quintessence of perfection, as holding the key which has unlocked the mysteries of Beethoven's last compositions, gives to our poor judgment too much conceit in place of real expression,—too much polish to an excess of minuteness in place of that finish which is acceptable, inasmuch as it is well proportioned. Thus much in point of manner. On Monday St. James's Hall was, as usual, very full: even though some collapse might naturally have been expected as following the unusual excitement of Herr Joachim's last appearances. The most unfamiliar work was Hummell's *Military Septett*: a cheerful, rich composition, with enough idea, skill and combination to make it acceptable occasionally, though not so frequently as the grander *Septuor* in D minor. Why not give one or two of his best solo *Sonatas* a trial, that for instance in D major, which is so fine and solid as a piece of *bravura*? Next Monday, we observe with pleasure, a fair opportunity is to be given of judging Schumann's *Pianoforte Quintett*, Op. 44. A *Quintett* by Schubert will also be played for the first time, and a *Romance* by Viotti, together with specimens by Haydn and Beethoven. This is as it should be.—The singers were Miss Banks and Mr. Winn. The latter sang M. Gounod's 'Nazareth,' which noble Canticum is coming into request among our bass singers, grave though it be.

It was evident from the first concert of Mr. Henry Leslie's *Choir*, that its Director does not intend to sleep on the successes of former seasons, but is anxious to make progress. The concert opened with a fine 'Kyrie' by Leo, which was excellently performed. After this came a setting of the Laureate's 'Sweet and low,' by Mr. Joseph Barnby, full of delicate beauty—a thoroughly attractive 'Lullaby,' deservedly *encored*; a more robust Part-song by Mr. Pearsall, and Mr. J. L. Hatton's 'May-Pole' (which hardly merits the careful finish bestowed on it by Miss Walsh, Mr. Dixon, Mr. Matthison and Mr. Hodson); Mr. H. Leslie's taking 'Flax-Spinner's Song' (*encored*); Mr. Benedict's healthy and jovial 'Old May Day'—the First Part closing with Mendelssohn's eight-part Psalm 'Why fiercely rage the Heathen?' The execution of the last-mentioned composition, beautiful, but not easy to sustain, was steady, expressive, and (the length of the anthem considered) creditably precise in tune.—A pianist new to us, who appeared, Herr Coenen, was not "up to the mark" of the concert. Chopin's grand, yet fantastic *Polonoise* in A flat is beyond the new-comer's grasp.—The Second Part of the concert, among other interesting things, included a spirited part-song, 'Sir Knight! Sir Knight! oh whither away!' by Miss Macirone.—One-half of the next concert, on February 4th, is to be devoted to the Welsh Melodies as arranged by Mr. John Thomas. The rage for this national music, at the time present, is thoroughly justifiable: a little curious, likewise.

LYCEUM.—This theatre, which has been recently placed under the management of Mr. Fechter, reopened on Saturday. The interior has been cleaned and renovated, and now looks remarkably attractive. The chandeliers have been replaced by sun-lights, and the ceiling bears in its compartments the names of the great English dramatists from Shakespeare to Knowles. The ventilation, also, has received due attention from Messrs. Defries & Sons, to whom we are indebted for the improved lighting. The performance opened with a slight farce, or sketch as it is called in the bills, entitled 'A Sudden Attack,' of no great merit and less probability. That a lady of title should become the landlady of a lodging-house, and that a Captain of the Guards should introduce himself as Mr. Brown, a fishmonger, and refuse to be dislodged until the mistress of the house consents to marry him, appears to be regarded by the playwright as among the ordinary occurrences of practical life. After this absurdity came the great piece of the evening,—'The Duke's Motto,'—altered from M. Paul Féval, by John Brougham, with the consent of the original author. This compliance with the International Law does credit to the new management. Of 'The Duke's Motto' it is difficult to give a sufficient account in a small space. It is a

piece of action and detail, and involves a great variety of incidents and agents. It depends on these; not on dialogue or character. It has, indeed, a hero whose adventures form the staple argument of the drama. He is a sort of Avenger, who through a long life pursues the murderers of a chance friend, and protects his daughter until she is restored to her rightful possessions. The gallant captain *Henri de Lagardère* (Mr. Fechter) is the name of the man on whom this mission devolves, and who performs it so faithfully. At the opening of the play, he has a duel on his hands with the *Duke de Nevers* (Mr. F. Charles); but instead of fighting with him, he defends him, though in vain, from his assassins, directed by the wicked *Prince de Gonzagues* (Mr. G. Vining). However, Lagardère escapes, carrying with him the Duke's infant daughter, *Blanche*, and swears to avenge her father's death, as well as to protect the child. The above little story forms the subject of a Prologue. The main action of the drama is contained in the three following acts. Twenty years having elapsed since the transaction above stated, we are introduced to a mountain gorge on the Spanish frontier, where some Zingari, with *Zillah*, their queen (Miss C. Leclercq), are assembled; and after a ballet and song, these are visited by Gonzagues and his suite. Lagardère and his ward are already present. The wicked Prince has married his cousin's widow; but the estates are in abeyance until the life or death of *Blanche* can be certified. Finding that *Zillah* is a foundling, he proposes to substitute her for the missing child, and arranges matters accordingly for a journey to Paris. Among his train is *Esop*, a hunchback, the depository of the Prince's villanous secrets; and in order to take his place, Lagardère forces a duel on him, kills him, and then assumes his character and costume. The assumption is so perfect, that the audience are deceived as well as the Prince. In Paris a family council is held, presided over by the Regent Orleans; and Lagardère, with *Blanche*, is there also. The council is held in the Oratory of the Princess de Gonzagues, in which is the portrait of the Duke, her former husband; and Lagardère contrives to apprise her of the intended fraud, and to direct her course of action by a voice which she supposes to proceed from the portrait. The result is that the Princess refuses to recognize *Zillah* as her long-lost daughter; and the full solution of the mystery is reserved for the Regent's ball. Lagardère, having confided her secret and papers to *Blanche*, leaves her to the care of *Carrickfergus*, an Irishman (Mr. John Brougham), and proceeds to the Regent's palace, where with difficulty he obtains admission. Meanwhile, the Prince's agents have contrived to carry off *Blanche* and her papers; so that at the moment he expects her and her guardian, *Carrickfergus* gives him the appointed signal that all is lost. Under these circumstances, Lagardère forfeits his pledge to the Princess, and is consigned to prison, whither Gonzagues sends a cowardly assassin to despatch him. In the third act, Lagardère outwits his intended murderer, makes his escape, resumes his old disguise of *Esop*, and boldly seeks the Prince. From him he learns that *Blanche* is under the same roof with the antechamber and conservatory in the Rue St.-Magloire, which forms the last scene; and then suggests a better plan than her murder, namely, that she should be married to himself, and thus by a degrading alliance made to forfeit her rights. The scheme pleases the Prince and his companions, and the victim is sent for. *Blanche* and her protector soon understand one another; and the young lady pretends to be subdued by some magical influence, and most unexpectedly gives her consent. A contract is then signed, and Lagardère affixes his signature and throws off his disguise. At this moment the Regent enters with his Court, and prevents the conflict that was about to follow on this disclosure. Lagardère now restores *Blanche* to her mother, but has yet to reveal the murderer of the Duke. For this purpose he places in Gonzagues' hands a sealed paper, stating that it contains the name of the Duke's assassin, written by the Duke himself immediately before his death. The Prince fears to open the letter, and rushes to a candle to consume it,—thus demonstrating his guilt to all

observers. Nothing is written in the paper, and he is betrayed by his own conscience. Challenged by Lagardère, he fights a duel on the spot, and is killed: and thus justice is appeased for Nevers' death, and *Blanche* becomes the bride of his avenger. The reader will have perceived that in such a plot there is much action, many incidents, considerable intricacy, and manifest elaboration. Even for the time and place in which the story is laid, there are also many improbabilities. Of dialogue and character there is, as we have intimated, little, and that confined to one of the *dramatis personæ*. As to motive, that appears to have been scarcely thought of; the main point has been to produce a situation in the foreground of the picture, and leave the rest to mere suggestion. Aided by admirable scenery, for which we are indebted to Mr. Gates and to Messrs. Cuthbert & Dayes, as mere groupings the transactions on the stage have a picturesque interest, and the story itself moves with a rapidity which engages the spectator's attention in the pursuit. As to acting, that is confined to the gallant Captain and Mr. Fechter, who carries us through the labyrinth of his adventures with that ease of style and that *finesse* of treatment which can pertain only to the practised artist. One charm of his performance is the absence of all exaggeration in it,—a charm, however, not so much personal as national. It marks for the most part the difference between the Continental and British schools of histrionic art. And this is the chief advantage which we hope to obtain by the encouragement of a foreign leading actor on the English stage. The influence of it must be so far beneficial that it will soften the asperity and subdue the vehemence in which English actors, even those who are artists, are too prone to indulge. Mr. Fechter's management has commenced with a decided success; and though the total want of domestic sentiment may make the new play less popular than it might have been, a run may be predicted for it.

MUSICAL AND DRAMATIC GOSSIP.—The first number of a monthly periodical entitled *The Musical Review* appeared on New Year's Day. The increasing interest taken here in all that concerns the art augurs well for the success of such a publication, supposing it to be competently conducted.

It is said that 'Mary Tudor' is the title of Mr. Balfé's new opera.

Mr. C. Salaman will deliver his lecture on "Beethoven's Life and Compositions," with instrumental and vocal illustrations, (the latter by Miss Hughes,) on Thursday next.

Mr. Wallace is in Paris. A rumour, which we do not pretend to guarantee, is in London, stating that he has engaged himself to write an Italian opera for M. Calzado's theatre, and that 'Lurline' may also be, possibly, given there—translated. In this case, what is to become of all the ballads?

By signs and tokens not hard to interpret, among others an increase of price, particularly opportune at the present moment, it may be inferred that *The New York Musical Gazette* is feeling the influences of the war. It could hardly be otherwise. Yet operas and concerts go on as usual in the Northern States, though with less costly artists than those who were some years since allured to the New World by tales of fabulous gains awaiting them there.—At Havana, meanwhile, the old Eldorado is still to be found, if we are to believe in the reports which arrive of the enormous gains and triumphs of Madame Charton-Demeur, who is singing there.

The Life of Madame Schroeder-Devrient, by the Baron Alfred von Wolzogen, an extension of a former pamphlet into a biography, has just been published.

Florence has lately given a sign of musical action in a field of art long too little cultivated there, or at best considered as an arena of labour, not pleasure. When Dr. Liszt announced "a Study" as forming part of the programme of one of his Milanese concerts, a voice from his audience cried, "I come to the theatre to entertain myself, not to study."—"Quæsta robâ" is a phrase we have heard applied by a great Italian artist to Mendelssohn's 'Elijah.' The taste

—to put it otherwise—for the symphonic, otherwise concerted, instrumental music of Germany has had no existence in Italy save among the fewest of the few. Times are changing, apparently. The love of music, like the poetry of Earth, "ceaseth never." The Opera of Italy has been driven to its last exaggerations, if not sunk to its lowest depths, by the wild bombast of Signor Verdi and his imitators. Betwixt want of training, and the easy laurels gathered by male and female bawling, the school of singers has been reduced to its lowest ebb. The theatres are compelled to call in aid from quarters which fifty years ago lay under contempt for their inferiority. Amateurs, then, are eagerly beginning to learn how to discover and enjoy the riches of the tiresome, thoughtful, and scientific world of instrumental music. There is now a "Boccherini journal" at Florence, devoted exclusively to chamber music (is there such a periodical anywhere else?). Noble patrons of the art seem to be outdoing and rivalling the sympathetic proceedings of the Ottobonis and Marcellos. The Duke of San Clemente has obtained prizes for two Quartets, from a society for the encouragement of chamber music. Signor Bottesini has, in like manner, won a prize; also Signor Anichini, a young professor of counterpoint at the Institute of Florence.

Mdlle. Trebelli has re-appeared at the Italian Opera of Paris.—Mdlle. Artot is carrying everything before her at Vienna, where Mdlle. Patti is expected early next month.—Madame Caillag, who went to Barcelona, to sing as *Fides* in 'Le Prophète,' is said to have found the theatre there (as can well be believed) so inadequate to the representation of a complicated and difficult opera, that she threw up her engagement.

M. Semet's 'Ondine,' after long preparation, has been at last brought to the light of the footlights at the Théâtre Lyrique. The critic of the *Gazette Musicale* describes it as having been anything but successful. The music, he says, is harsh and pretentious, overcharged with strange effects in attempts at the modern German style. This, in the hands of a French composer, is habitually a disastrous proceeding; one for which M. Semet's former operas in no wise prepared us—it may, however, have been suggested by the home of the legend; which, not strange to say, with all its beauty and fantasy, and therefore often tried, has never been successful on the stage. The heroine's character, in its exquisite delicacy, presents almost as many difficulties to the composer as does that of *Hamlet*. There are perpetual changes of light and shade, of feeling and humour, which Music cannot follow, without its becoming undecided, and therewith fatiguing. That M. Carvalho can hardly have expected much success for the new 'Ondine' may be inferred from his cast of the opera. Mdlle. Girard is clever, but there is, possibly, no living singer less fitted by nature to present the pale, ethereally-graceful spirit heroine. The other singers, according to the French chronicler—even our favourite M. Bataille—and the chorus, were painfully out of tune. The opera, however, is beautifully put on the stage.—Mozart's 'Coel fan tutte,' with a new story "derived from Shakespeare's plays" (it is advertised), will shortly be produced, with Mesdames Fauve, Lefebvre, Cabel, and Girard, in the principal parts.

"Herr Würst's 'Vineta,' just produced at Breslau, is reported by connoisseurs" (writes a friend) "to possess no vocal fascination, one or two songs excepted; the score to be in the symphonic style of the better German masters, but a little heavy and overwrought. The scenery and decorations carried off the opera."

The dramatized version of M. Hugo's 'Les Misérables,' by his son M. Charles Hugo, has been brought forward at Brussels, under circumstances of an excitement, quickened, if not created, by the fostering care of Parisian prohibition. The drama seems to have been received with a yawning sympathy throughout the six hours of its duration, but not to have succeeded. The story, with its probabilities, defies even a French dramatist with French credulity to appeal to. What could the best of the race make of such leading incidents as *Valjean's* day in the coffin, his journey to the cemetery

and his burial there; of *Gavroche's* night-hospitality in the bowels of the plaster elephant on the Place de la Bastille!—Verily, Censorship might have permitted the piece to appear and perish of its lumbering absurdity, instead of making a success for it, as it has done for the 'Fils du Giboyer,'—an answer to which feeble satire, by the way, is about to be produced at the Odéon Theatre.

A noticeable proof of British energy has been just given at Plymouth, in the instant restoration, if not reconstruction, of the theatre after the late serious conflagration. We seem hardly to have read to the end of the catastrophe, ere we are told of the building having been re-opened, with surprisingly small trace of its late misadventure.

MISCELLANEA

Mezzofanti.—Nothing is more vague than the term "knowledge," especially as applied to languages. It embraces everything—the little, the more, the much, up to such perfect knowledge as is possessed by a cultivated native. The list of languages presented at the meeting of the 2nd of January, by Mr. Watts, to the Philological Society, is a confused group, in which the same languages are quoted under different names, in which several are introduced with erroneous designations, and many are omitted with which Mezzofanti, and, indeed, all philologists of any tolerable competency are more or less acquainted. Mezzofanti had studied most of the idioms taught by the Propaganda, and particularly those orally taught by or to the Missionaries dependent upon that great institution: these idioms are far more numerous than those cited in the *Athenæum*. Naturally and necessarily, the amount of colloquial power which the Cardinal possessed over languages in which he was accustomed to converse was very varied. What struck me most in my intercourse with the Cardinal, was not the depth, but the wide extent of his knowledge, the accuracy of his ear, and the correctness of his pronunciation. He caught the characteristic euphonisms of language, and had a remarkable acquaintance with many obscure dialects confined to small localities. Of those of Spain, for example, only two are mentioned,—Spanish (i. e. Castilian) and Catalan; but he certainly had knowledge of thrice that number of dialects spoken in the Iberian Peninsula. Of Italian there are reported Italian (i. e. Tuscan), Sicilian and Venetian—a small proportion of those with which he was familiar. So, again, he had attended to several of the Philippine idioms, only one of which is spoken of—the Tagal. Mezzofanti, I believe, never pretended to know the various dialects of China of which the names are (very confusedly and erroneously) given. He had studied the Mandarin,—that is, the Court or literary language; but when a friend of mine, who had been conversing with him in that dialect, broke off into Cantonese (one found in the list), Mezzofanti said, "You are not speaking *Hwan-hwa*" (the literary tongue); but he was not able to carry forward the conversation in the Canton vernacular. The most profound philologist whom I have ever known was Rask, of Copenhagen. The philologist who made himself acquainted with the greatest number of dialects was the elder Adelung.

Public Libraries Act, 1855.—Will you permit me to call the attention of Mr. W. Ewart, M.P., to the recent adverse decisions as to the adoption of the Libraries Act in Brighton and in the parish of Kensington? The amended Act is framed on the principle of law not to carry it. It is encumbered with an un-English two-thirds proviso, and a no-poll clause. It is hard enough to obtain a majority, but a two-thirds majority acts as a prohibition. Had a poll been allowed and a simple majority sufficed, the Act might have been triumphantly carried in Brighton and Kensington, and also in the City of London. I hope, in compliance with the wishes of the friends of public instruction, Mr. Ewart will in the next Session so amend his amended Act as to rescind the two-thirds nonsense, and allow a poll to be demanded. The Act in its present shape is utterly unworkable. MATTHEW H. FEILDE.

CRAMER, BEALE & WOOD under- take the PUBLICATION of COMPOSITIONS for the Author on Reasonable Terms.

Estimates forwarded on application.

201, Regent-street.

HALF-PRICE.—All Music sent post- free at Half the Published Price.

CRAMER, BEALE & WOOD, 201, Regent-street.

CRAMER, BEALE & WOOD'S

WEEKLY LIST OF NEW PUBLICATIONS.

A. S. SULLIVAN'S 'TEMPEST.'

Cloth, 12s. 6d.

Published separately.

Dance of Nymphs and Reapers, Piano-forte Duett, 4s.—Banquet Dance, Piano-forte Solo, 2s.; ditto, Duett, 2s.—Honour, riches, marriage, blessing, Vocal Duett, 2s. 6d.—Where the bee sucks, sung by Miss Banks, 2s. 6d.

Mr. Sullivan's 'Tempest' Music, produced the other evening by Mr. G. Halle at Manchester, succeeded so entirely, that it will be repeated on the 22nd inst. There have been few cases of a more complete and legitimate success than this in our time." *vide Athenæum, Jan. 10, 1863.*

CRAMER, BEALE & WOOD, 201, Regent-street.

JEAN SEBASTIAN BACH'S GA- VOTTE in E MINOR, 2s. 6d.

— GAVOTTE in G MINOR and MUSUETTE in G MAJOR, 1s. 6d.

— SARBANDE in E MINOR, PASSAPIED in E MAJOR, and GAVOTTE in G MAJOR, 2s. 6d.

New Editions, edited and fingered by C. J. HARGITT.

CRAMER, BEALE & WOOD, 201, Regent-street.

C. P. EMANUEL BACH'S SONATA in A MAJOR, 4s.

— FANTASIA in C MAJOR, 2s. 6d.

New Editions, edited and fingered by C. J. HARGITT.

CRAMER, BEALE & WOOD, 201, Regent-street.

T. W. NAUMANN'S 'DANIA,' 3s.

Fantasia on Danish Airs.

CRAMER, BEALE & WOOD, 201, Regent-street.

H. T. TILLYARD'S 'IMOGENE,' 3s.

Morceau de Salon.

CRAMER, BEALE & WOOD, 201, Regent-street.

H. EICHLER'S 'BESIDE MY LONE COUCH KNEELING,' 2s. 6d.

Sung by Miss Lascelles.

CRAMER, BEALE & WOOD, 201, Regent-street.

G. LINLEY'S 'ONLY FOR THEE,' 2s. 6d.

Sung by Mdlle. Parepa.

CRAMER, BEALE & WOOD, 201, Regent-street.

C. J. HARGITT'S 'TIS HOME WHERE THE HEART IS,' 2s. 6d.

Sung by Mdlle. Elvira Behrens.

CRAMER, BEALE & WOOD, 201, Regent-street.

ROUTLEDGE'S LIST

OF

NEW and STANDARD WORKS.

FISH-CULTURE. A Practical Guide to the Modern System of Breeding and Rearing Fish. By FRANCIS FRANCIS. With numerous Illustrations. Post 8vo. cloth, 5s.

DISRAELI'S (the Elder) WORKS.

On the 1st of February will be published, Vol. I. of a New Edition of

DISRAELI'S WORKS. Edited, with Memoirs and Notes, by his Son. To be completed in Seven Monthly Volumes, price 3s. 6d. each, crown 8vo. cloth. Vol. I. will contain the First Volume of 'The Curiosities of Literature.'

A CRUISE UPON WHEELS. By CHARLES ALSTON COLLINS. Cheap Edition, with Illustrations.

HOYLE'S GAMES. Modernized by G. F. PARDON. With Illustrations. Imp. 16mo. cloth gilt, 2s. 6d.

3 vols. royal 8vo. cloth, 2l. 14s.

ROUTLEDGE'S ILLUSTRATED NATURAL HISTORY. By the Rev. J. G. WOOD, M.A. F.L.S. With 1,500 original Illustrations by Wolf, Zwecker, Weir, Coleman, Wood, Harvey, Sowerby, and Tuffen West.

ROUTLEDGE'S ATLASES.

Corrected to 1862.

The COLLEGE ATLAS. Forty-third Thousand. A New Edition, containing 33 Maps Coloured in Outline. Super-royal 8vo. half bound, 12s.

The JUNIOR ATLAS, containing 14 Maps Coloured in Outline. Super-royal 8vo. half bound, 5s. 6d.

The COLLEGE CLASSIC ATLAS, Coloured in Outline. Super-royal 8vo. half bound, 12s.

The JUNIOR CLASSIC ATLAS, containing 15 Maps Coloured in Outline. Super-royal 8vo. half bound, 5s. 6d.

ROUTLEDGE'S ATLAS of the WORLD, with 15 Maps. Royal 8vo. cloth boards, 1s. 6d.; coloured, 2s.

The MANUAL of DATES. By GEORGE TOWNSEND. Crown 8vo. half bound (260 pp.), 12s. 6d.

* This work is much more comprehensive and complete than Haydn's Dictionary.—*Observer.*

MEN of the TIME. A New Edition, brought down to the Present Time. By E. WALFORD. Post 8vo. half bound, (260 pp.), 10s. 6d.

LONDON: How the Great City Grew. By GEORGE ROSE EMERSON. Fcap. 8vo. cloth, 2s. 6d.

REMINISCENCES of the late THOS. ASSHETON SMITH, Esq. By Sir J. EARDLEY WILMOT. With Portrait and Illustrations. Post 8vo. cloth, 2s. 6d.

RUSSELL'S DIARY in INDIA. With Illustrations. 2 vols. crown 8vo. cloth, 21s.

WHITE'S HISTORY of ENGLAND. With Analysis, Index, &c. Post 8vo. cloth, (260 pp.), 7s. 6d.

SHEPPARD'S FALL of ROME, and the RISE of the NEW NATIONALITIES. Post 8vo. cloth, (750 pp.), 7s. 6d.

RUSSELL'S MODERN EUROPE EPITOMIZED. By GEORGE TOWNSEND. Crown 8vo. cloth, 6s.

ROUTLEDGE'S SHAKESPEARE.

In 3 vols. royal 8vo. cloth, 2l. 16s.; or half calf, gilt, 2l. 7s. 6d.

Edited by HOWARD STAUNTON.

With 800 original Illustrations by JOHN GILBERT.

From *The Times*.

"We have said enough to show our appreciation of 'Routledge's Shakespeare.' For such an edition there is room. *The Pen, The Pencil, and The Printer,* have striven together in honourable rivalry, combining clearness of text, elegance of illustration, and beauty of type. The result is worthy of the labour, and we can say with a safe conscience to all who wish to receive or present the Bard in a becoming dress, buy 'Routledge's Illustrated Shakespeare.'"

London: ROUTLEDGE, WARNE & ROUTLEDGE, Farringdon-street.

LONDON, SATURDAY, JANUARY 24, 1863.

LITERATURE

The Invasion of the Crimea. By A. W. Kinglake. Vols. I. and II. (Blackwood & Sons.) It has long been understood that the author of 'Esthen' was about to bring out a history of the short but glorious campaign which has been our only essay of arms on European ground since Waterloo. Year after year passed away, and the hopes of the reading public still remained ungratified. Such a delay, many would think, could not fail to prove fatal to the success of the expected work. Since the capture of Sebastopol, India has been the scene of a sanguinary conflict, and the deeds performed there have, in a measure, caused the exploits of the Crimea to be effaced from the memory of the public. Indeed, the heroes of the Russian war are now little more regarded than were the veterans of the Peninsula ten years ago. Their glory shines brightly when called to mind, but it has to undergo the powerful rivalry of more recent fame. Under these circumstances, a bare chronicle of the Crimean war would have proved tedious to readers whose attention had been already exhausted by the perusal of the numerous books which appeared while the interest of the occurrences described was still fresh. With far higher aims Mr. Kinglake has produced a work which is no mere mixture of facts, fancies and fallacies, but is, in the fullest sense of the word, history. It stands to the Crimean war in the same relation as Sir William Napier's 'History' to the Peninsular war.

The author commences with an examination of the causes which brought about the war, as well as with a detailed account of the successive steps taken in the diplomatic action which preceded it. Originating in a squabble between the Latin and Greek monks at Jerusalem respecting a couple of keys, a silver star, a cupboard and a lamp, the dispute arrived in time at the dignity of being called "the question of the Holy Places." Pilgrimage to Jerusalem is viewed by the Russians with almost Mussulman reverence; while the French, as Mr. Kinglake informs us, have been chiefly represented in that city by a "tourist with a journal, and a theory, and a plan of writing a book." The piety of the Russians is deep-seated and earnest; while, as to the French, "it was understood that by the course of her studies in the eighteenth century, France had obtained a tight control over her religious feelings." Bearing this in mind, the conduct of the French Government in casting an apple of discord into the peaceful East merits the severest censure. Eagerness to gain the reputation of zeal for the interest of religion, and to show that they were no idle holders of office, coupled with a restless love of meddling in the affairs of other nations, doubtless influenced the conduct of the French ministers on this occasion. Louis Napoleon had to divert attention from despotism at home to diplomacy abroad. On this topic Mr. Kinglake enlarges with calm philosophy. In England the Emperor is well known, and nothing has proved more difficult to Englishmen than to reconcile the fact of the apparently incapable adventurer, who failed ignominiously at Strasburg and Boulogne, having been able to found a throne—as far as can be seen—more stable than that of his great prototype. This difficulty has been considered one of the most insoluble enigmas of our age. Mr. Kinglake, approaching the question with numerous opportunities of learning the truth, and a clear insight into men

and motives, has pictured the man of mystery. Speaking of Louis Napoleon's demeanour when in England, he says, "Towards foreigners, and especially towards the English, he was generally frank. He was reserved and wary with the French; but this was upon the principle which makes a sportsman reserved and wary with deer and partridges and trout." Again, when describing how, in imitation of the first Napoleon, he contemplated France from a foreign and, as it were, external point of view, the following simile occurs:—"Indeed, during the periods of his imprisonment and of his exile, the relation between him and the France of his studies was very like the relation between an anatomist and a corpse. He lectured upon it; he dissected its fibres; he explained its functions; he showed how beautifully Nature, in her infinite wisdom, had adapted it to the service of the Buonapartes; and how, without the fostering care of these same Buonapartes, the creature was doomed to degenerate, and to perish out of the world."

Mr. Kinglake's idea of Louis Napoleon's character is, in brief, as follows:—"That he is not so clever as men think him now, though much more so than was supposed formerly; that, having no conscience to serve him as a guide, he keeps two paths before his eyes up to the very last moment, and, while watching the progress of events, secures little resting-places from which he contrives at his leisure the next measure to be adopted; that his imagination leads him often into dangerous positions, and when he fails, it is in consequence of not being endowed with more than the ordinary physical courage of the mass of mankind. In addition to this, he conceives that the Emperor possesses dramatic tastes which in any other man would have exhausted themselves in frequenting theatres, but in him—the claimant of a throne—have become a passion. He supports the aspersion on his physical courage by alleging the attempts at Strasburg and Boulogne, on which occasions he permitted himself to be extinguished by one angry colonel. He also cites his conduct at Magenta and Solferino. With regard to the latter, he combats the flowery account of the *Moniteur*, which would persuade us that the Emperor was in the thickest of the fight, by the observation, that in that action the Emperor was followed by a numerous staff and a large escort of the Cent Gardes, yet only one of them was hit, according to some, in the clothes, but if the *Moniteur* may be believed, in the "actual body." He justly ridicules the somewhat blasphemous explanation of the official organ, which informs the public that "the protection which the Deity threw around the Emperor was extended even to his staff."

Mr. Kinglake seeks to account for the false impressions concerning Louis Napoleon's abilities by the repulsive nature of his studies, which were directed to the art of applying stratagem to jurisprudence. Much of the Emperor's wrong-doing he ascribes to the evil influence of those around him. These he denounces with vehement scorn, but is careful to base his accusations on actual facts. M. de Morny, the speculator with a questionable character; the Count de Persigny, who, however, took no active part in the carrying out of the *coup-d'état*; and Col. Fleury, a resolute, unprincipled man of humble origin, who, having spent in dissipation all of a moderate inheritance, had enlisted in the cavalry, and rapidly risen to the rank of major;—these were the men who goaded Louis Napoleon on to the Imperial throne. Needy, ambitious and energetic, they determined to turn his claims and

talents to their own profit. The author says, "There seems to be no doubt that what may be called the literary part of the transaction was performed by the President in person. He was the lawyer of the confederacy. He, no doubt, wrote the proclamations, the *plébiscites* and the constitutions, and all such-like things; but it seems that the propelling power was mainly supplied by Count de Morny and by a resolute major named Fleury." Urged by these men, and stimulated by the thought of his claims, by disappointment, and by personal humiliation, he determined to strike the blow which should make him absolute. The soldiers, bearing in mind 1848, were at that time in no good humour with the people. Due care was taken to increase their discontent, and presents of food and wine were continually given them. To quote the words of our author, "Men used to African warfare were brought into the humour for calling the Parisians Bedouins. There was massacre in the very sound." At length came midnight of the 1st of December 1851, and after some reluctance, some hesitation, the conspirators were carried away by Fleury's impetuosity, and the *coup-d'état* passed from a project into a fact. It is said that at the last moment the heart of one of them failed; but Fleury, getting into a room alone with him, drew out a pistol, and, holding it to his head, compelled him to go on. Two days later the massacre of the unarmed, unoffending spectators on the Boulevards took place. Mr. Kinglake imagines it was caused by a sudden impulse of maddening terror which seized on the excited soldiery, beginning to feel the responsibility they were incurring. The author thinks that it was to divert the mind of France from these atrocities that the difference about the Holy Places was fanned into a flame, and every means taken of preventing a peaceful solution. With the view also of giving an air of respectability to the bloodstained throne, and terminating the painful, the dangerous isolation in which it stood, a successful endeavour was made by Louis Napoleon to draw England into a special alliance against Russia. In this scheme he was aided by Lord Palmerston's views on foreign policy. Of all the great Powers of Europe, Austria was most concerned in resisting the incursion of the Russians into the Danubian Provinces, while, from geographical position, no one was so capable of putting an end to it. Prussia also, as a leading member of the Germanic Confederation, was interested in keeping the mouths of the Danube open. Both Austria and Prussia were completely agreed with England and France as to the necessity of opposing the designs of Russia, and quite willing to concert measures for doing so. Such a union would certainly have prevented war; but, in the most inexplicable manner, the adroitness of the Emperor, supported by the warlike spirit of the English nation, succeeded in procuring a special alliance between England and France, for the sake of undertaking a measure of public police which was equally the province of the other two powers, and could be more effectively undertaken by all four combined.

We pass now to the arrival of the Allied forces in the East. Mr. Kinglake has described with singular skill, appreciation and eloquence the very different characters of the two generals who commanded them. Marshal Achille St.-Arnaud had, for reasons best known to himself, discarded his proper name of Jacques Le Roy. In 1816 he had entered the Royal Guard as a sub-lieutenant; but his dissipated—to use a gentle term—mode of life soon obliged him to leave the service. He then travelled, learned

several foreign languages, and passed a considerable time in England; some say he became a billiard-marker in London. After the revolution of 1830, he returned to France, and again entered the army as a sub-lieutenant. His prospects now seemed good. Writing some stanzas to Meunier, he obtained promotion; and by translating into several foreign languages a little work of Bugeaud's on Tactics, he gained that Marshal's favour and an appointment on his staff. Whilst in charge of the Duchess of Berri, his conduct received the approbation of the Government, without provoking the dislike of the royal prisoner. Fortune seemed to smile on him; but, for some cause or other, he was obliged once more to abandon the sword. In 1836 he for the third time, and at the age of forty, entered the Foreign Legion as sub-lieutenant, with the determination to distinguish himself or perish in the attempt. In eight years from this time, he was a general. Vain, gay, reckless and brave, utterly without scruple, he valued human life as nothing if it interfered with his advancement. Continually oppressed by illness and pain, during the intervals he sang and slaughtered, fiddled and fought, with equal zest and energy. One particular act seemed to mark him out as a useful tool for the conspirators of the 2nd of December. In 1845, he surrounded a body of Arabs who had taken refuge in some caves. Eleven came out and surrendered; but St.-Arnaud—and St.-Arnaud alone—knew that five hundred still remained. Without acquainting his troops with the nature of the deed they were performing, he caused them to block up every aperture, thus cruelly murdering every soul within. A confidential report to Marshal Bugeaud conveyed the horrible intelligence; but, with the exception of him and St.-Arnaud's brother, the fearful secret was confided to no one else. In such a man were combined the two qualities most required by the authors of the *coup-d'état*,—namely, ruthlessness and the power of keeping a secret.

Col. Fleury, sent to Algeria to seek for a man who as Minister of War could assist in the destruction of the Constitution, fixed on St.-Arnaud. All know how well he fulfilled the expectations formed of him. Insatiable, and possessed of claims troublesome to satisfy and difficult to ignore, Louis Napoleon yielded gladly to his request that he might receive the command of the Army of the East. Not having, however, any very high opinion of his fitness for the post, the Emperor took care to surround him with people intended to control his motions should they threaten to become rash.

The English Commander-in-Chief was a striking contrast to his French colleague, and his character has been affectionately, though impartially, delineated by the author. Qualified for his task by personal observation as well as by the possession of all Lord Raglan's papers, his opinion has great weight. We English are actuated by a very sincere desire to be just, but, heated with party spirit or by public disasters, we often defer being so till death has robbed reparation of half its value. Admiral Byng, Sir John Moore, the Prince Consort and Lord Raglan are instances of this. As soon, however, as the victim of obloquy is beyond their reach, our countrymen become generous, and are only too ready to rescind the judgment pronounced in the first flush of wounded national pride or feeling. Lord Raglan's friends have always felt certain that justice would some day be done to him. That time has, we are convinced, at length arrived. Mr. Kinglake's book has cleared up so many errors, given us so great an insight into the secret history of the war, that the accusa-

tions brought against Lord Raglan at once cease to deface the pages of history. Not that it can be proved that the dead Commander was a great general; but, while admitting some slight defects, Mr. Kinglake shows that the charges brought against him were almost entirely untrue. The modern Bayard, the flower of English chivalry, now stands forth with the greater brightness from his temporary obscurity. This modest, unassuming, yet dignified English gentleman—the pupil, companion and trusted friend of Wellington—was skilled alike in diplomacy and the work of a staff-officer. Courteous and conciliatory in manner, prudent without being close, firm without being obstinate—of great powers of perception, unwearied industry, and possessing both a ready pen and an eloquent, persuasive tongue,—he was yet wanting in some respects. He had never been practised in handling large bodies of men, and had no regimental experience. Long years of office-work at the Horse Guards produced in him baneful habits of method and uniformity, much opposed to the genius of war. Naturally, he chiefly applied himself to what he best understood,—namely, correspondence,—leaving to others those little details of organization on which, though apparently trifling, the welfare of an army principally depends. Again, thinking that he was doing more good by writing than riding, he omitted to exercise a personal supervision over, or to show himself to, the army, and thereby failed to obtain much valuable influence with the men.

In dealing with the French his difficulties were very great. Scarcely arrived at Constantinople, he was called on to oppose the restless, intriguing vanity of St.-Arnaud, who was desirous of incorporating the brigades of Omar Pasha's army with his own. Such a step, besides involving a slight to the Turkish Commander, and destroying the balance of military authority in the Allied forces, was contrary to the provisions of the Tripartite Treaty. This document laid it down that each army was to remain under the separate command of its own chief. The author describes with great humour how the alert, complacent Marshal was speedily baffled by the quiet, courteous firmness of Lords Stratford and Raglan. On another occasion, St.-Arnaud proposed that when English and French troops were serving together, the senior officer should command the whole. This insidious suggestion, which might have resulted in placing *General* Lord Raglan under the orders of *Marshal* St.-Arnaud, was promptly declined. Undismayed by failure, St.-Arnaud soon made a fresh attempt to usurp the direction of affairs. Just at the moment when the army was about to proceed to Varna, the agreed base of operations,—indeed, the Light Division had already started,—a staff-officer came to Lord Raglan at eleven o'clock at night, begging him to suspend all further movements, as the French army was not yet in a fit state to enter on a campaign. The inconvenience of thus arresting an operation which had been definitely decided on was urged, and it was pointed out that the Allied forces stood pledged to the Turks in this matter. The French continued obstinate, and on the morrow Lord Raglan received a written communication on the same subject. A few days later a new and still more extraordinary plan of St.-Arnaud's was made known to Lord Raglan, not as a project to be considered, but as one already determined on and partly commenced. This was no less than the abandonment of the expedition to Varna, and the occupation of a position in rear of the Balkan. Indeed, some of the French troops had already begun their march from Gallipoli. Lord Raglan was invited to co-operate. For

five days the discussion lasted. At length the English General's firmness and moral ascendancy prevailed—the idea was abandoned.

Soon after the arrival of the combined forces at Varna, the siege of Silistria was raised, and the Russians, yielding to the menaces of Austria, evacuated the Principalities. The object of the war now seemed attained; but the warlike spirit of the English could not endure that such extensive preparations should have been made to no purpose. The Duke of Newcastle fully shared this feeling. During an after-dinner consultation, the assent of his colleagues, who happened to be somewhat drowsy, was obtained to the draft of a letter proposed to be written to Lord Raglan. The next day a despatch, recommending the invasion of the Crimea, in terms which scarce admitted of a refusal, was sent to Varna. The season was far advanced. It was the 16th of July before Lord Raglan received the communication alluded to; no preparations had been made for the operation, and no certain information was possessed by the Allied Generals respecting the proposed theatre of war. What little was known about the Crimea had been sent from Paris and London. Under these circumstances, Lord Raglan's judgment was opposed to the expedition; but the opportunities for forming an opinion being as great at home as in Bulgaria, and the wording of the despatch being so imperative, he conceived he had no option, but must obey. At the same time, St.-Arnaud received an order to co-operate should the invasion of the Crimea be resolved on. In the course of a fortnight or three weeks—which was the time required by the French for their preparations,—Sir George Brown and Sir Edmund Lyons had, by dint of great exertion, procured at Constantinople all the necessary boats, ships and steamers. Unfortunately, about the end of July cholera broke out among the troops and soon extended to the fleets, which latter put to sea in the hopes of staying its ravages. At length the health of the army having somewhat improved, and the ships being clear from sickness, on the 24th of August the embarkation commenced. The French had 25,000 infantry, 70 guns drawn by four horses each, and a body of about 80 cavalry. The English expeditionary force consisted of 22,000 infantry, 60 guns drawn by six horses each, and 1,000 cavalry. The French took less time in getting on board than we did. It must, however, be remembered that infantry can be embarked with great ease and rapidity, but that when horses are concerned the process becomes tedious and difficult. We have seen how superior we were to the French in the number of horses: moreover, a heavy swell checked the shipment of the latter during four or five days. When everything seemed to be completed, it unexpectedly appeared that the French had not sufficient steam-power to tow all their sailing vessels. These facts are rather opposed to the prevalent idea of the superior activity and arrangements of the French. On the 4th of September our allies had accomplished their embarkation, and on the 6th the English were ready. The following day the expedition sailed. Meantime, St.-Arnaud, tortured by anxiety about the sickness on board his transports and the fancied delay of the English, had, on the 4th, started with his sailing fleet, not giving Lord Raglan the slightest intimation of his movements. The latter took no notice of the Marshal's waywardness, who, on the 6th, finding himself isolated and the wind blowing hard, saw he had done a foolish thing, and returned. More obstacles still remained to test the indomitable firmness of the English General; and, again, it was with the French

that they originated. Several of St.-Arnaud's chief generals presented him with a remonstrance against landing to the north of Sebastopol. Such a step, they pointed out, would be extremely hazardous, while a landing could be effected at Kaffa with scarcely any risk. Kaffa was a long distance from Sebastopol, with which place the only communication was a difficult mountain-road. The fact is, the French generals for the most part disliked the expedition altogether. The Marshal was too ill for discussion; so, with unusual good sense, he referred the matter to the decision of Lord Raglan. He, with his usual adroitness and firmness, quickly foiled "these timid counsels," as the *Moniteur* termed them. It was at first supposed that they had proceeded from the English; but that idea was soon found to be incorrect, and Mr. Kinglake now settles the question beyond a doubt. On the 9th, the English fleet had arrived at the rendezvous; it was not till the 13th that the last French ship joined. Still came difficulties for Lord Raglan to cope with. It had been arranged that during the night of the 13th the French should lay down a buoy opposite the centre of the appointed landing-place, half of which was to be allotted to each army. When daylight came, it appeared that, either through mistake or design, the buoy had been placed opposite the extreme left instead of the centre. The consequences might have been serious with a less prudent commander. Lord Raglan said not a word, but quietly selected another spot for the disembarkation of his troops.

Passing over the events of the next few days, which, however, have been well and clearly described by Mr. Kinglake, we come to the battle of the Alma. This is, perhaps, the choicest morsel in the whole of this interesting book. The author has carefully studied the various accounts, has gathered much from oral evidence, and moreover he accompanied Lord Raglan during the whole of that bloody day. The result is an excellent and intelligible account of a general action. Throughout Mr. Kinglake shows that, though a civilian, he is no contemptible strategist and tactician. He occasionally makes use of other than the correct technical terms: notwithstanding this slight failing, he has shown himself entitled to take rank among the best historians of warlike operations. We are not, as is often the case, blinded with smoke, dazzled with flashing sabres, and deafened by the roar of artillery in these volumes. Everything, though spiritedly depicted, is drawn with clearness and precision, combined with an amount of accuracy seldom to be met with in a non-military man. Each movement is duly explained, its object pointed out, and its progress followed. The manner in which one manœuvre bore on another is also shown. We have here a series of brilliant panoramas, yet the skill of the writer connects them so admirably that we never feel any want of continuity. Mr. Kinglake places us, as it were, in the position of an Argus surveying the field of battle from a balloon.

The great merit of his account is that there is no clap-trap, no fatiguing loftiness of tone; but every fact is expressed in simple yet nervous English. He becomes almost Ossianic, and the scene appears before our mind's eye as vividly as if it were an actual picture. We can easily imagine the superstitious terror of the Russians at the apparition of the tall, hearse-like plumes of the 42nd rising gradually over the slope of the hill, and becoming more ghost-like from the white smoke which half concealed them. Rising, still rising, with their bare legs and quaint, semi-barbarous dress, moving on nearer the while through the thick

air—silently gliding onward with that long, easy step peculiar to the Highlanders,—they must have seemed like the spectres of the Brocken. Scarcely have the eyes of the Russians learnt to look steadfastly on this terrible vision ere another and yet another wave of armed horror springs from the earth beneath. Then, when the enemy retired,—the fierce war-shout of the Highlanders, differing equally from the cheer of the English and the howl of the Irish soldier,—who can blame the Muscovites if they were discomfited by such foes? Most powerful, most picturesque are the pages in which the charge of the Highlanders is described. In old times Mr. Kinglake would have been revered as a bard by the gallant men whose deeds he has chronicled.

It is impossible for us to accompany Mr. Kinglake much further over the field of battle; but, ere we quit it, we feel it our duty to correct two inaccuracies of which he has been guilty. The first of these refers to the Brigade of Guards. Mr. Kinglake leads one to suppose that the Scots Fusilier Guards, which was the centre regiment, hurried up without being formed, disordered by a hurricane of shot, and thrown into confusion by some of the retreating Light Division, was driven back to the river and took no further part in the fray, thus leaving a gap between the Coldstreams and Grenadiers. This is incorrect: and for saying so we have the authority of an officer belonging to the corps in question who was present on the occasion. His statement is supported by the general opinion of the regiment heard by the writer of this article at the time, and also by Russell's 'Letters from the Crimea,' by 'Letters from Head-quarters,' and by Col. Hamley's testimony. The truth is, that while the Scots Fusilier Guards were advancing under a heavy fire, some of the men of the Light Division came through their ranks, and at the same time a cry was raised of "Fusiliers, retire!" referring to the 23rd or 7th Regiment. On this, yielding to the weight of the retreating crowd, and to a misconception of the order, the battalion—except the Light Company—retired slowly a short distance, when the officers and non-commissioned officers, facing the men about, brought the regiment back into its place. Charging with the rest of the Brigade, it took the battery. There was only a temporary retreat of a very short distance, and no permanent gap was created. As to the left companies alone having been pushed back, the author is mistaken; for the third company from the right, at all events, was thrown into confusion by the retreating men of the Light Division.

The other error consists in Mr. Kinglake's assertion that there was no close encounter, no severe struggle on the part of the French at the telegraph station. This statement he supports by many powerful arguments. It seems to us they are disposed of by Col. Hamley, who, in his 'Narrative of the Crimean War,' says, with reference to a personal visit to that portion of the field the day after the battle, "But it was not till reaching the plain on which stood the unfinished signal-tower, already mentioned as the contested point of the French attack, that there appeared signs of a sanguinary conflict. Many Russians lay dead there; and they lay thicker near the signal-tower, the hillock on which it was built being strewn with them. Three or four had been bayoneted while defending the entrance; and in the space within, which was divided into compartments, were three or four such groups slain in the defence. Another spot near contained three or four hundred corpses." After the battle was won, Lord Raglan proposed to St.-Arnaud to send the English cavalry and

one English division—the rest were too much exhausted—in pursuit, provided the French would co-operate. St.-Arnaud replied, that the knapsacks having been left behind, it was impossible that the French army could advance further. Thus, again, it is shown that it was the French, and not, as was believed, the English, who were opposed to energy and a daring course of action.

Miscellanies. Collected and Edited by Earl Stanhope. (Murray.)

In the studio of an artist who has painted historical pictures or executed historical monuments will be found a heap of hints, sketches, models, costumes, broken marbles, unfinished canvas, maulsticks, armour, hangings, feathers, matchlocks, halberds—all the picturesque refuse and materials of his trade. In like manner, in the writing-desk of a man who has written many books, there would be found a mass of papers, more or less in the nature of refuse,—fragments of correspondence, copies of documents, first ideas of character, remnants of opinions, unfulfilled designs—all the rejected things of a highly critical and selective art. Such literary refuse is for the most part sent to the chandler's shop or thrown into the fire. Yet, it may often have a certain value. Artists' first suggestions have an interest for the collector of pictures, as Messrs. Christie & Manson find; and the portfolio of a man of letters, though it should contain nothing better than rejected materials, may be a very attractive book. Lord Stanhope's certainly is so.

Five letters by William Pitt, two by Edmund Burke, and two memoranda by the Duke of Wellington make the best parts of this collection. The letters by Pitt are of no great importance, and were omitted by Lord Stanhope from the Life of that statesman; they would certainly have added to its weight and bulk. A letter from Mr. Boyd contains an anecdote which may be quoted:—

"Christmas was one of the most obliging men I ever knew; and, from the position he occupied, was constantly exposed to interruptions, yet I never saw his temper the least ruffled. One day I found him more than usually engaged, having a mass of accounts to prepare for one of the law courts: still the same equanimity; and I could not resist the opportunity of asking the old gentleman to give me the secret. 'Well, Mr. Boyd, you shall know it. Mr. Pitt gave it to me:—Not to lose my temper, if possible, at any time, and NEVER during the hours of business. My labours here [Bank of England] commence at nine, and end at three; and, acting on the advice of the illustrious statesman, I never lose my temper during these hours.'

The letters by Burke are of more moment than those of Pitt, for they turn entirely on his personal position—a question which is now exciting some attention among students of the period. The second letter, which is in the form of a memorandum, drawn up by Burke and submitted by him to Pitt, we shall quote. The original is among the Pitt MSS. When Lord Stanhope showed the original to Macaulay that writer returned it with the remark, which Lord Stanhope thinks worthy of a double repetition, that "it is interesting and very characteristic." We may give it under its legitimate title of

BURKE UPON BURKE.

"Mr. Burke understands that Mr. Pitt is so obliging as to think that his humble industry in his thirty years' service may without impropriety be recommended to His Majesty's gracious consideration. Mr. Burke has never asked for anything, nor suggested any reward. It never did become him, nor does it now become him, to suppose that he has any merit to entitle him to the particular

favour of the Crown or of the public. He is sensible that he has done nothing beyond his strict duty. But if he is permitted to compare his endeavours and rewards, not with the standard of his duty, but with contemporary examples, he would submit the following matters to judges more impartial than he can be in his own case. In the year 1782 Lord Rockingham was Minister. Mr. Burke's connexions with that noble person were of the closest kind. About that time, or a little before, Mr. Burke was deeply concerned in a great variety of affairs, and was supposed to be of some use, both in producing good and in averting evil. At that period this was pretty generally acknowledged by all parties. Mr. Burke believes it to be in the memory of many that a surprise was expressed that a provision for him had not been recommended by his particular friends and oldest connexions, when so much was done by them for absolute strangers. The fact is, that for the general accommodation in forming what was called an administration upon a broad bottom, Mr. Burke did cheerfully postpone every pretension of his, whether grounded on connexion or service. He privately forwarded, and he publicly defended, a permanent provision for Colonel Barré and Mr. Dunning. Besides Colonel Barré's office in possession (as good as Mr. Burke's), that gentleman obtained a pension of 3,000*l.* a-year. Mr. Dunning obtained a peerage with the Duchy for life, made up by a pension to 4,000*l.* a-year, although he was possessed of a very ample fortune. Mr. Burke never did solicit the Pay Office. It was offered to him. He held it in all about a year, under two administrations. It is the only place he ever held. During the time he held it, amongst the multiplicity of his other occupations, he employed himself with pains, not easily described, to form a new constitution for that office, and to carry a Bill for that purpose through the House of Commons. He flatters himself that, in that Bill, useful regulations were made; and savings of some importance with regard to public money ensued in consequence of them. Mr. Burke certainly does not mean to compare his abilities with those of the two gentlemen he alludes to. It is allowed to a man to speak of his industry. As for real labour in mind and body, he had even then,—that is, so long ago as 1782,—worked more in any three months than they had done in their whole lives. Lord Ashburton's professional industry is put out of the question; it was private; it had no relation to the State, and that kind of toil (whatever its value may be) rewards itself very sufficiently. The arrangement for these two gentlemen was made twelve years ago. During the twelve, Mr. Burke's exertions have continued—in what way, or with what merit in any of the particulars, it is not for him to judge. It is certain that, notwithstanding his very advanced age, his industry has not been relaxed in any course in which such small abilities as his could possibly employ it. During that period his circumstances have not been improved. Many expenses, more easily felt than calculated, are necessarily attendant on such exertions as his. A total neglect of a man's private affairs is likewise the inevitable consequence of occupations that engross the whole man. Mr. Barré came into Parliament in 1763, and had his settlement in 1782. Mr. Dunning came into Parliament later than Mr. Burke, and had his at the same time with Mr. Barré. Mr. Burke came in at the end of 1765,—near thirty years ago. Many since then have been raised to honours and emoluments, whose labours have not been greater. Lord Auckland is another instance. His figure in Parliament was never considerable. It may not be perfectly good policy to consider no services as of any high estimation except those done in office. Perhaps the most essential are those done in the House of Commons; and rank there (though not a thing to be exactly defined) ought to stand as high as rank that is official. It is not meant in the least to depreciate Lord Auckland's talents or services. Both are respectable. The services, however, received some part of their recompense as they were performed. Almost ever since he came into Parliament he has been in lucrative situations. He has something in present possession not con-

temptible. He has something secured. He has a peerage: and all this in the prime and vigour of his life. Mr. Burke does not conceive that whatever His Majesty may be graciously pleased to do for Mr. Burke in the present temper of the public mind would be more unpopular or ill-received in the nation than what has been done for any of these gentlemen."

Mr. Napier will, we dare say, find these "comparisons" in no way odious, the self-assertions no less modest and honourable than they are terse in style, and the sarcasms as legitimate as they are unquestionably bright. The paper is highly studied, and every word is accurately weighed. The memorandum must have been meant for the public, and Lord Stanhope has done well to print it. That it will be read in two ways we can hardly doubt, but the critics of Burke will agree with Lord Macaulay that it is "very characteristic."

In these Miscellanies will be found a defence of Sir Robert Walpole by Sir Robert Peel, and a series of letters from Lord Macaulay, Mr. Hallam, and Sir Robert Peel on the alleged sacrifice of human victims to Jupiter in the Roman times. Of more immediate interest are the Duke of Wellington's memoranda on Napoleon. The first of these refers to the value of Napoleon in the field:—

"It is very true that I have often said that I considered Napoleon's presence in the field to be equal to 40,000 men in the balance. This is a very loose way of talking; but the idea is a very different one from that of his presence at a battle being equal to a reinforcement of 40,000 men. I'll explain my meaning. 1. Napoleon was a *grand homme de guerre*, possibly the greatest that ever appeared at the head of a French army. 2. He was the Sovereign of the country as well as the Military Chief of the army. That country was constituted upon a military basis. All its institutions were framed for the purpose of forming and maintaining its armies with a view to conquest. All the offices and rewards of the State were reserved in the first instance exclusively for the army. An officer, even a private soldier, of the army might look to the sovereignty of a kingdom as the reward for his services. It is obvious that the presence of the Sovereign with an army so constituted must greatly excite their exertions. 3. It was quite certain that all the resources of the French State, civil, political, financial, as well as military, were turned towards the seat of the operations, which Napoleon himself should direct. 4. Every Sovereign in command of an army enjoys advantages against him who exercises only a delegated power, and who acts under orders and responsibilities. But Napoleon enjoyed more advantages of this description than any other Sovereign that ever appeared. His presence, as stated by me more than once, was likely not only to give to the French army all the advantages above detailed, but to put an end to all the jealousies of the French Marshals and their counter-action of each other, whether founded upon bad principles and passions, or their fair differences of opinion. The French army thus had a unity of action. These four considerations induced me to say generally that his presence ought to be considered as 40,000 men in the scale. But the idea is obviously very loose, as must be seen by a moment's reflection. If the two armies opposed to each other were 40,000 men on each side, his presence could not be equal to a reinforcement of 40,000 men on the side of the French army, nor even if they were 60,000 men on each side, or possibly even 80,000 men on each side. It is clear, however, that wherever he went he carried with him an obvious advantage. I don't think that I ought to be quoted as calling that advantage as equal to a *reinforcement* of 40,000 men under all possible circumstances."

The second is a criticism on the campaign in Russia:—

"The Russians nearly lost themselves by an ill-applied imitation of our operations which saved Portugal; and they would have been lost, if Napoleon had not always, and particularly at that time,

found himself under the necessity of seeking to fight a general battle. With this view he quitted the basis of his operations, up to that moment successful, adopted a new line, which, after all, he never completely established, and ultimately abandoned. That which the Russians did well was their dogged refusal to treat. Napoleon having fought his battle and obtained possession of the ancient and real capital of the country, intended to record his triumph as usual in a Treaty of Peace, by one of the articles of which he would have obtained a sum of money to replenish his coffers, according to his usual practice; and he would then have made a peaceable and triumphant retreat from Russia across Poland and Germany, supported by the resources of the Russian Government as long as his armies should have remained in the Russian territory. In the mean time he had made no preparations for the Military Retreat which he would have to make, if his Diplomatic efforts should fail, which they did. We see that he was distressed for want of communications even before he thought of retreat; his hospitals were not supplied, nor even taken care of, and were at last carried off; and when he commenced to make a real movement of retreat, he was involved in difficulties without number. The first basis of his operations was lost; the new one not established; and he was not strong enough to force his way to the only one which could have been practicable, and by the use of which he might have saved his army,—by the sacrifice, however, of all those corps which were in the northern line of operations: I mean the line from Kalouga through the southern countries. But, instead of that, he was forced to take his retreat by the line of the river Beresina, which was exhausted, and upon which he had made no preparations whatever. This is in few words the history of that disaster. It is my opinion that the loss of the French army would have been accelerated, more disastrous and disgraceful, if the season had been wet instead of having been frosty. In truth, the army could not in that case have moved at all in the state to which all its animals were reduced at that time."

The Whig colour of buff and blue, the red-coats of the army, and the story of Charles the Fifth and the two clocks are among the further subjects illustrated in these Miscellanies.

The Sorceress—[*La Sorcière*, par J. Michelet], (Paris, Dentu.)

SPIRITUAL and temporal powers have fixed their canons, in Paris, against this volume, and prohibited its circulation. Church and State, therefore, have proportionately glorified M. Michelet. His counterfeit presentment of a perfect Sorceress, and his magnificent apologies for bygone witches, have alarmed the patriarchal and paternal tutors of the French intellect in the nineteenth century. Bell, book and candle—all profuse enough under the roofs of Notre Dame and the Tuileries—wage war against a picturesque treatise made up of poetry, paradox and history; and the result is, that it will be read in spite of every effort at suppression:—nor unprofitably either, by students of a ripe age; for, wild, reckless and extravagant as these pages often are, they contain much that is valuable, and which M. Michelet gathered and laid by during the thirty years of learned labour bestowed by him on his greatest work, with other materials which he has since brought into a variety of characteristic shapes. The old eloquence re-appears, no doubt, in the old perverted form: there is the same unnatural, excessive, fantastic tinge of imagination; the language incessantly splinters off in epigrams more or less brilliant and prismatic. M. Michelet, indeed, wanders through his subject with an apparent resolve to gratify himself by continually astonishing and not seldom offending his reader; but he vividly illustrates the spirit of mediæval ecclesiasticism, though, while insulting the sacerdotal class, red-handed as it was from the

slaughters of Wurtzburg and Treves, he suggests, whether purposely or otherwise, that no word or name or human sentiment can, or ought to be held sacred. Hence, an audacious familiarity of style, contrasted at times with an affectation of fastidious reverence.

M. Michelet's first chapter is headed "The Death of Gods"; his seventh, "The King of the Dead"; his ninth, "The Devil a Doctor"; his fifth, in the 2nd book, "Satan an Ecclesiastic"; and so forth. But the very title of the work is an example of the eccentricities in which it abounds. Sprenger, nearly four hundred years ago, speaking of the black heresy, attributed it to sorceresses rather than to sorcerers. Another authority, belonging to the generation of Louis the Thirteenth, affirmed that, for one sorcerer, there were ten thousand sorceresses. M. Michelet plunges into this idea and lashes it into a foam. Women, he avers, are naturally sorceresses. They are born Fées, or fairies. Next they develop into sibyls. Love makes magicians of them. Men must work, and women must weep, is an English poetic theory. Not so, according to M. Michelet. While men are engaged in action, women are weaving spells, inventing deities, communing intelligently with flowers. No matter how many male jugglers, astrologers, prophets, necromancers and quacks may have existed since Time began, Circe was, is, and must be, a woman!

M. Michelet writes against the Church of the Middle Ages, and as a champion of the true sorceress, or elementary reformer of the human intellect, who, he maintains, has been in every sense maltreated. The clergy have cursed, the people reviled, the children pelted her, and the poets (children also, he says) have painted her at once ugly and old. "At the word sorceress, we conjure up the frightful crones of Macbeth." But all that is fallacious. Many sorceresses have perished, simply for being young and beautiful. "The Sibyl predicts destiny; the Sorceress makes it." This is M. Michelet's second proposition. The priest of the Church sees her, the priestess of Nature, and trembles in presence of "the universal martyr whose ashes are scattered to the winds." And thus it was that a fair-haired, white-armed young girl was burnt in the year 1300, and that M. Michelet's volume was prohibited in 1862. From these airy heights he descends to an historical review of modern sorcery, chiefly as practised, or declared to have been practised, by women. He has little to do, however, with the vulgar stock-in-trade of romantic and dramatic hags—owls, cauldrons, black cats, or stuffed fish, zodiacal belts, peaked hats, toads and crabs; or with the array of charms, lamens, sigils, talismans, spells, crystals, pentacles, magic mirrors and geomantic figures with which Scott's Antiquary exasperated Mr. Dousterswivel. His sorceress, for whose sake he incurs the penalties of suppression, is of a nobler type, though often, in herself, a miserable, ruined, abject dupe.

For a thousand years she was the sole physician of the people. Emperors, Kings, Popes and very rich Barons might have doctors of Salerno, medical Moors or Jews; but the multitude consulted the Wise Woman, the Good Woman, or the Beautiful Woman (Bella Donna), as they were variously termed, and of whom the Church consumed so many at the stake that even the second Ferdinand, bigot though he was, protested, lest they should calcine all his subjects. "And I find," adds M. Michelet, "in the Wurtzburg list, a sorceress of fifteen, and at Bayonne two of seventeen, damnably pretty." Beyond this point he becomes more serious, and his nar-

rative impeaches bitterly the judges, lay and monkish, by whom these horrors were perpetrated, and the Church which sanctioned them, during the three centuries from 1300 to 1600 of the Christian era. That Church, he says, engendered Despair in the world, and Despair gave birth to Sorcery. Humanity, throughout Christendom, was lost, weary and blind, and women converted the withered chips of legendry into the enchantments of a new fable. It was in the thirteenth century, M. Michelet affirms, that the popular notion of the Evil One first became definite. Before that epoch, the idea of an infernal compact entered into by a human being and the powers of darkness had rarely floated distinctly into the superstitions of the times. Afterwards it became, so to speak, a separate myth, and, as illustrated here in a long, elaborate narrative, daring in detail and language—not so daring, however, as the subsequent abridgments of legal cases—assumed a hideously repulsive colour. M. Michelet, dwelling upon these diabolical romances, contrasts two eras of malady—that of the leper, externally accursed, and that of the "possessed," whose epileptic frenzies prepared for mankind a third, and even worse, because more enduring, scourge. An age of disease, bodily and mental, became an age of sorcery. The popular practice of medicine by women was regarded by the Church as a species of dealing in the Black Arts; the collectors of herbs, compelled to seek for those which suited their purposes at strange hours of the day and night, brought suspicion upon themselves; their familiarity with vegetable poisons was often in France held to still further darken their characters. Here M. Michelet takes occasion to draw a contrast between the Mediæval Church and the Mediæval Satan, and this in the chapter which introduces the Enemy of Mankind as a doctor—a spirit of the fourteenth century,—a century afflicted with epilepsy, the plague and ulcers. The Sorceress, almost alone, combated these evils:—

Let none conclude (proceeds M. Michelet) that I undertake to whiten, to vindicate without reserve, the Devil's sombre bride. If she often did good, she could also do a great deal of harm. There is no great power which is never abused. And this power had three centuries during which to reign literally over the *entracte* between two worlds—the ancient dying, and the new scarcely as yet begun.

The catalogue of mischiefs wrought by sorceresses in the services rendered by them, with charms and philters, to the naughtily-disposed, is drawn up very impartially. The daughters of Philip the Beautiful are cited as examples; and they lead to a disquisition on the Griseldas of that epoch, and on Blue Beard, whom M. Michelet regards as an important historical personage, belonging to a day when the decision—classical in our times, M. Michelet says—went forth that "love between married people is an impossibility." Philters were difficult, in the case of well-guarded beauties, to employ. Charms of all degrees of value were more easily obtained. The paring of a finger-nail, an eyelash, a hair, or the thread of a garment, given into the hands of a sorceress, might be made available. Sometimes, the author records, lovers drank one another's blood, like the savages of Borneo; and the lady who ate De Coucy's heart "found it so good, that she never ate any more all her life." The enchantment practised by one great sorceress was remarkable in its efficacy and in its result, as enabling her to trample upon a proud lady. She first made the patient submissive to her will, undressed her, and cooked a cake

upon her bare back. "Oh, ma mie!" the sufferer cried, "I can bear no more. Be quick; I cannot remain thus."—"You must," replied the enchantress. "Madam, you must be warmed; the cake will be cooked but by your warmth, by your flame." And whoever ate that cake was straightway "in love." With such anecdotes M. Michelet amuses himself. A similar degradation re-appears in the irreligious mysteries of the period enacted under the title of the Black Mass. At these festivals, called Sabbats, birds were offered to heaven, and corn to earth; and two images, representing the last dead and the last born in the district, were laid on the altar—a woman prostrate on her face. These heathen rites naturally inflamed the fury of the Church; but

Judges and Inquisitors, although so hostile, are compelled to avow that they were characterized by a spirit of gentleness and peace. None of the three accompaniments, so utterly shocking, of a nobleman's fate:—no swords, no duels, no blood-stained tables, no gallant perfidy to dishonour an intimate friend.

In other respects M. Michelet's apology for these celebrations is more fearless than satisfactory.

In his second book M. Michelet opens on a new era, when Sorcery began to decay—when the demon, as he expresses it, was multiplied and vulgarized. "Every lunatic woman assumed to herself that great name—Sorceress!"—a dangerous, though a profitable name. Men aspired to bear it; and here was another step in degeneracy. M. Michelet turns from them to sketch the position of a grand lady at her own château, removed from the rivalries and jealousies of the Court, which kept its peculiar aristocracy of sorceresses amply and strangely employed:—

At her château, it is true, she was alone,—the only woman, or nearly so, amid a world of unmarried men. To believe the romancers, we might fancy her taking pleasure in being surrounded with pretty girls. History and common sense affirm just the contrary. Eleanor is not such a fool as to put Rosamond in competition with herself. The queen and great ladies, licentious as they were, were not the less horribly jealous,—witness the one spoken of by Henry Martin, who gave up a girl whom her husband admired to be torn to pieces by soldiers. The power of a woman's love, we repeat, endures while she is alone.

Yet the ladies of that epoch, if particularly rich and beautiful, loved to encircle themselves with little courts, and to be attended, as queens were, by trains of maidens. M. Michelet does not appear to sustain his assertion very triumphantly. Progressing with his subject he treats of the sorceresses who, solicited by women in the access of a sudden frenzy, pretended to transform them into animals, and relates a tradition connected with this fearful mania:—

In the mountains of Auvergne a hunter fired, one night, at a she-wolf,—failed to kill her, but shot off her paw. She fled, limping. The hunter went to a neighbouring château to demand hospitality from its proprietor. He, welcoming him, asked whether he had enjoyed good sport. As a reply to the question, the hunter thought of producing from his game-bag the she-wolf's paw; but what was his astonishment when, instead of a paw, he drew forth a woman's hand, with on one finger a ring, which the gentleman instantly recognized as belonging to his wife. He ran to her apartment, and found her wounded and endeavouring to hide her fore-arm. That arm had no hand; the missing limb was fitted to it, and exactly corresponded, when she confessed that it was indeed she herself who, in the form of a she-wolf, had attacked the hunter, and fled, leaving a paw on the field of battle. The husband was cruel enough to deliver her up to justice, and she was burnt.

In the chapter which contains this ghastly

legend, women are described as praying to the sorceresses for the power of thus brutalizing themselves, and of biting the flesh of children and women. The sorceresses naturally took advantage of this delirium, and, too often, exercised their influence scandalously; and M. Michelet draws at large upon Sprenger, whose sources of information were no doubt copious and original; but he was a credulous as well as garrulous mountebank himself, who argued that the word *diabolus* was derived from *dia*, two, and *bolus*, a pill, because that which it represented was swallowed simultaneously by body and soul. "But," he continues, with the gravity of Sganarella, "according to the Greek etymology, *diabolus* signifies *clausus ergastulo* or *defluens*,—that is to say, falling, because he fell from heaven." Sprenger, M. Michelet allows, is a fool, though a bold one. But he was a man having authority, and, for a merciful man, which he claimed to be, exercised it roughly enough.—

One morning, three ladies of Strasburg registered a complaint that, on the same day and at the same hour, they had been assaulted with invisible blows. How? They could only accuse a man of ill-favoured countenance, who had bewitched them. Led before the Inquisitor, this man protested and swore by all the saints that he knew nothing of the ladies, whom he had never seen. The judge refused to believe him. His great sympathy with women rendered him inexorable, and indignant at these denials. Already he had risen. The man was about to be tortured, and would probably have confessed, as the most innocent frequently did. He obtained leave to speak, and said, "I remember, in fact, that yesterday, at the hour mentioned, I beat, not baptized beings, but three cats who came trying furiously to bite my legs." The judge, a man of penetration, saw the whole thing at once: the poor man was innocent; the ladies, of course, were on certain days transformed into cats, and the Evil One amused himself with throwing them at the legs of Christians, to make them pass for sorcerers.

Accusers and judges shared the confiscated property of the sorcerer. Hence, as M. Michelet has it, the clergy were considerably enriched. But, in France, from 1450 to 1550, trials of this character were comparatively few. Isabella of Spain, however, in 1506, began to burn sorcerers. Geneva, in 1515, burned 500 in three months. The Bishops of Bamberg and Wurtzburg divided fifteen hundred victims between them:—

A sorceress (under the torture) confessed to having taken from a cemetery the body of a child, recently deceased, to be used in her magical incantations. Her husband said, "Go to the cemetery; the body is there." They went; the body was found undisturbed in its coffin. But the judge decided, against the evidence of his eyes, that this was an appearance, an illusion of the Devil. He preferred the woman's confession to the fact, and she was burnt.

Diana of Poitiers persecuted sorceresses. Catherine de' Medici protected them. In the early years of the seventeenth century the Basques overflowed with the strange frenzy, and, in 1609, a tribunal was set up to repress it. When the judges arrived, many of the people fled, but the witches remained. Two informers volunteered—La Murgui, aged seventeen, and Lisalda, of the same age. La Murgui, or Margarita, was employed to strip girls and boys, and examine their bodies in search of the demoniacal mark. While she took in hand the young, the elderly were inspected by a surgeon; and the test was the finding of a spot, on body or limb, into which a needle might be thrust without producing pain. Many a victim did Margarita give up, bleeding from her needle, to death. The story of Gauffridi, burnt at Aix in April, 1611, and of the rival sorceresses, Made-

leine and Louise, of whom the former was condemned to cut wood in an Italian forest for the remainder of her days, while the latter propitiated justice by informing against a poor blind girl, and consigning her to the stake, is still more horrible episode in this history of satanic folly, in league with satanic villany. "And let us pray to God," writes the good Father Michaelis, who records the events, "that all this may tend to His glory, and that of the Church!" The evil spirits of Loudun have, somehow, obtained a more popular and familiar reputation. Aubin's work, if not extensively read, has been extensively pillaged; and Figuier's is all but exhausted. M. Michelet, however, is in no humour to give Grandier the rank of a martyr—not even for the sake of trampling on the memory of Richelieu. The life of Madeleine Bavent is less known. Madeleine was born at Rouen, in 1607, and left an orphan in her ninth year. At twelve she was apprenticed to a person engaged in supplying linen vestments to ecclesiastics. The Confessor of the establishment informed her, with three other pupils, "after enervating them with belladonna," that he would take them to the Sabbath, or festival of mysteries, where they should marry the Devil Dagon. At sixteen, Madeleine became a novice in the Convent of St. Francis, at Louvière, founded by the widow of a man who had been hung for swindling, and where the young girls were expected to walk in gardens and worship in chapels as so many juvenile Eves. Under this law, Madeleine was punished for wrapping the corner of an altar-cloth about her shivering shoulders. All that followed tempts M. Michelet into philosophizings, very aimless and unnecessary; but the fate of Madeleine was not one to render her contemporary devotees jealous. The needles of the witch-finders pierced her flesh. She was condemned to perpetual imprisonment in a dungeon deeply sunk in the earth. In her misery she swallowed spiders and powdered glass, and stabbed herself in the throat, and yet, it seemed, could not destroy her life. And in this fearful captivity, after long daily tortures under the hands of the official Penitentiary, she ultimately died, and M. Michelet commemorates her as a victim of the Church.

The affair of 1730—the great inquest which involved Father Girard and La Cadière—occupies, perhaps, the most extraordinary, the most interesting, and yet the least attractive chapter in M. Michelet's volume. The Jesuits had, at Marseilles, a bishop named Bezbunce, a dull and credulous man. With him they stationed Girard, a man neither young nor handsome, neither eloquent nor fascinating, but an adept in the employment, in his confessional, of a mystic terrorism which often subdued the most reluctant penitents. From Marseilles he went to Toulon, and there had among his penitents Catherine Cadière, daughter of a trader, seventeen years old; not an elegant or lively, though, perhaps, a pretty girl; a saint from childhood; and he arranged that she should journey to continue her religious exercises at Marseilles; thence, again to Toulon, where Father Girard obtained, by degrees, a marvellous supremacy over her mind, and prepared her for the vocation of what M. Michelet is pleased to term a sorceress. Amid the vice and villany of his conduct he schemed to make an exhibition of the unhappy girl, and to convert some scrofulous traces on her hands, feet and side into wounds, emblematic of the Crucifixion. These wounds he artificially prevented from healing; he fitted on her head an iron crown with spikes, which sent the blood trickling down her neck and face: his persuasions exalted her fancy,—she became his slave, his puppet, his artistic imposture; and his brutali-

ties were such that even M. Michelet hesitates to describe them. We will say, however, that his hesitations begin too late, and that these narratives flow at intervals through channels so impure and infamous that it might be better for society, if not for the Papal Church, were they altogether suppressed. M. Michelet has no idea, and apparently no power, of reticence. Not satisfied with bare recitals, which may be justified as the giving of revolting evidence is justified in courts of law, he volunteers a touch of colour wherever it can be made available, and seeks to be rhetorical when he might with infinitely more grace have been silent. And yet, after a ludicrous passage which recalls certain disquisitions of Boileau on the penances endured by maidenly martyrs and children, he checks himself, saying, "We have not the courage to relate what follows." The ultimate fate of La Cadière was never distinctly ascertained. That of Father Girard was, as might have been anticipated, even in 1731, in an inverse ratio with his deserts.

In this work M. Michelet, while condensing a large amount of curious historical inquiry, expatiates wearisomely, and not at all times inoffensively, upon those parts of his subject which he has selected for ostentatious display. He was determined, at the outset, to keep in view the connexion he fancies to have detected between women and mysteries; and in pursuing this theory through one chapter after another he really glosses over a wide extent of ground which might have yielded profitable results to his research. When noticing the sorceresses—to abide by his own term—who were ambitious of converting themselves into wild animals, he omits all mention of the Loup-garous, or men animated by the same frenzy, to which Cotgrave devoted some learned space, and which Rabelais confounded with ordinary hob-thruses and hobgoblins. But a good deal of interesting matter might have been included under this head, had not M. Michelet been exclusively intent upon his old invariable theme, often disguised, yet always to be identified in whatever he writes—Priests, Women and Families. From the revolting incidents of La Cadière's long persecution he rises into a sonorous epilogue, leading from the audacious question: "They who seriously propose that Satan should come to terms and make peace—have they well reflected?" When M. Michelet, by the way, wields this word "Satan" so robustly, he is taking it from that pulpit which, he implies, denounces all thoughts and things hostile to itself and its absolutism as Satanic:—

The dead are dead. These millions of victims—Albigenses, Vaudois, Protestants, Moors, Jews, and American Indians, sleep in peace. The universal martyr of the Middle Ages, the Sorceress, has nothing to say. Her ashes have been scattered to the winds.

—Yet the two opposing spirits of the epoch might be reconciled:—

But do you know what separates these two spirits and prevents their union? It is an enormous reality which has been in existence five hundred years. It is the gigantic work which the Church has cursed, the prodigious edifice of modern sciences and institutions, which she excommunicates stone by stone, but which every anathema aggrandizes and augments by a stage. Name one science which has not revolted. * * Let us destroy, if we can, all the sciences of nature, the Observatory, the Museum and the Jardin des Plantes, the School of Medicine, and every modern library. Let us leave our laws, our codes; let us return to canonical right. All these novelties have been—Satan. All progress has been his crime.

Sorcery, then, was the prelude to science. The Sorceress heralded the Professor:—

She has perished, and must have perished. How! Above all, through the progress of the very sciences she inaugurated, through the physician and the naturalist for whom she laboured. The sorceress has perished for ever, but not the Fée. She will re-appear in this form, which is immortal. Woman, occupied of late years with the affairs of man, has deserted her proper position,—that of medicining, of consolation, of the Fée who cures. That is her real priesthood. And it belongs to her, whatever the Church may say. With her delicate organs, her love of the most refined detail, her tender sense of life, she is called upon to be the most minute confidant in all the sciences of observation. * * * Between invalids and children there is very little difference. Women are necessary to both. She will re-enter into the sciences, and carry amid them her sweetness and humanity, like a smile of nature. The anti-natural pale, and the day is not distant when its eclipse will be for the world a new Aurora.

The peculiar force and peculiar licence of M. Michelet's style are simultaneously conspicuous beyond the usual degree in this volume, which leaves a subject of great historical interest only partially and confusedly, although boldly and brilliantly touched, because the author has vagaries of his own, which he persists in following with no useful result, and because he could not endure to leave in the records of monkish inquisitors and lay judges all the abominations with which, in addition to their disclosures of ignorance, cruelty and fanaticism, they abound. M. Michelet, in some respects, might have taken a lesson from that Michaelis in whom he trusts, and whom he so vehemently despises. But it was necessary, perhaps, that the work should be overdone, in order that it might enjoy the prerogative of a prohibition.

Letters and Despatches relative to the Taking of the Earl of Ormonde, by O'More, A.D. 1600.
From the Irish Correspondence in the State Paper Office, London. Edited by the Rev. J. Graves. (Dublin, Printed at the University Press.)

Chamberlain, in one of his letters, written in February, 1600,—at which time O'Neill (Tyrone) had broken what Mr. Graves calls the "injudicious truce" he had concluded with Essex,—notices the march of Tyrone into Munster to confer with Desmond, and expresses a hope that Ormond may give him a blow on his return back, and teach the fox not to forsake his hole nor go so far from home." Chamberlain's hopes were not fulfilled.

The black Earl of Ormond, whose wife was the granddaughter of the poet and soldier Earl of Sheffield who fell in Kett's rebellion, commanded Elizabeth's forces in Ireland, where Mountjoy was Lord Deputy, and held in some suspicion the fidelity of Ormond. The latter was at Kilkenny, with Carew, President of Munster, and Donogh O'Brien, Earl of Thomond and Prince of Limerick, when Owny M'Rory O'Moore, rebel chieftain of Leix, in the Queen's County, proposed a conference with Ormond at Corrandhu, near Ballyraggett; and the three great men resolved to ride over to Owny the Dinast together.

We had hoped that this volume might have told us the subject that was to be conferred upon; but here we are as much in the dark as ever, gaining only a few additional details to those with which we are already familiar. Carew and Thomond, in relating the incidents of the seizure, can only say of the parley that it "was appointed for some good cause, best known to his Lordship." Whatever the cause, the parties met one April morning of the year 1600. The Earl and his companions were slightly armed and scantily attended. Owny came with a "back," and was prepared for

mischievous. His men crowded round the invited guests "as close as they might, every one trailing his pike, and holding the check of the same in his left hand, ready to push." This was suspicious; and the interest thickened when the notorious Jesuit Archer intervened. Then a religious controversy arose, and angry words were exchanged, and a sudden rush was made at Ormond as he was about to turn his horse and fly with Carew and Thomond. Ormond was dragged to the ground, and he narrowly escaped being murdered. He was robbed of his hat, sword, dagger and George, carried to Leix, and, for climax of insult, Archer was given to him for a bedfellow.

Carew and Thomond rode down the crowd, opposing them by mere weight of their horses; but the latter got two inches of steel in his back, which kept him from further riding for a week. The excitement caused by this affair was immense, and had various consequences. Near Irish kinsmen of the noble prisoner began to lay claim to his heritage; others seem to have set up pretensions to marry his daughter, whose safety the Government was anxious to secure. Ormond himself hoped that no attempt would be made to deliver him by force, as he would "then be sure to be slayen"; in which case, moreover, Carew intimated to Mountjoy that the country would be disturbed by "the competitors of his land."

Carew did not, like Mountjoy, suspect the loyalty of Ormond, who had daily to withstand the assaults of a roomfull of priests turned in to convert him, and to promise him a principedom in Leinster if he would become Papist, and obtain the surrender of Leix and O'Phally to the O'Mores and O'Connors. In the breathing hours between these attacks, the Earl's own cooks were allowed to bring his food to the castle-gate; "but there Owny himself receiveth the diet, and carrieth it up to the Earl." It is worthy of notice, that much of the intelligence obtained by Government was got from the "Intelligencer" who carried Tyrone's letters, which he delivered to the authorities to be read, and then demurely carried them according to their addresses. In one of these, Tyrone earnestly urged Ormond to become in religion subject to the Pope and in allegiance to the King of Spain. This letter was read by Mountjoy before it reached Ormond, whose very keepers betrayed their master, Owny, by allowing the agents of the Government to see and receive messages from the prisoner. One of these spies was an Irishwoman, who seems to have earned her English wages with alacrity.

While Mountjoy was expressing his unjust mistrust of Ormond, there were some who thought he might have prevented the capture: his comment on which is, that "they who are so apt to lay this accident as an imputation to my government, may as well tax the Mayor of London because Dorington brake his own neck from the steeple of St. Pulcher's." Fearful of losing his prisoner, Owny took him to the woods of Leix, removing him every three hours from one fastness to another; and Owny and he sat at different tables in the same room. Occasionally, he puzzled those who sought him as to his whereabouts, by causing "a trusty friend of his own, of stature and resemblance like to the Earl, to put on the Earl's night-gown which he was wont to wear, and directed him in that fashion to walk by the wood-side, where the Earl used to walk, whilst Owny and some twenty others nearest him in trust put the Earl on horseback and brought him to O'Dempsie Castle."

The Earl, though only fifty-eight, was brought near to death by this misadventure; and Owny, who was likely to get more by him if living at

large than if dying under his ward, liberated his prisoner in the middle of the month of June. Hostages were given for the price to be paid for this liberty; but as Owny within a few weeks lay dead on a stricken field, the ransom was probably never paid. Ormond said of him, that Owny was the "most malicious, arrogant, vile traitor of the world"; and he stoutly repelled the idea that he was about to give his daughter to the son of Tyrone. O'Neill handsomely relieved him from the imputation, in a gallant letter to Lady Ormond: "I hope to get such a match for my son as shall seem to his state convenient; and assuredly I had rather match him with one inferior to him, than to desire any match that might be to my Lord or to your Ladyship hurtful." O'Neill was a gentleman; and in this version of Ormond's story he especially appears so. It is a story illustrative of the vices and virtues of the Irish character; and though Mr. Graves only gives the rather dry documents, there is as much amusement in some of the details as in a sparkling romance. The only fault is, that the drama does not end with a marriage.

Roba di Roma. By William W. Story. 2 vols. (Chapman & Hall.)

TILL Rome shall fall ("and when Rome falls, the world") the City of the Seven Hills will be inexhaustible as a subject of interest. Howsoever it be treated, we turn to it again and again, provided the man or woman who takes it in hand has only a moderate share of descriptive power by which to express real sympathies and experiences. It is true, that with Affectation holding a court of conceit in the Vatican, or at the Sistine "Miserere," or among the awful shadows of the Coliseum, no terms of truce can be kept. Second-hand rapture should be warned off the ground on which the Apollo stands, or which Michael Angelo's sibyls overlook. Second-hand poetry should be discouraged from meditating in the Campagna, or dreaming in the Borghese Gardens (scene of one of Mr. Hawthorne's most delicious dreams). Second-hand history would do well to let the Cæsars and the martyrs and the Popes alone. No such cautions apply to or touch this book of Mr. Story's. It contains the gatherings of an honest observer, and (as we know, thanks to a certain marble *Cleopatra*) a real artist. We do not always like his taste. Every now and then he seems to fancy it incumbent on him to give himself "a rousing shake," and to be jocose forthwith—a mistake inevitably acting as an extinguisher on such mirth as the reader might have had at his service. His orthography, too, is oftentimes singularly incorrect for one who is so conversant with Continental lands and languages. His chapter on the "Evil Eye" and the superstitions akin to that superstition, contains many facts and speculations which can be indorsed by no sound thinker or careful sifter of evidence. But in the above lines our objections are told, and they must not be stated without its being added that we have read his volumes from the first to the last page as eagerly as if Eustace, and Waldie, and Lady Morgan, and Whiteside, and Andersen, and Dickens, and Fanny Kemble, and Head had not written,—as if Byron, reversing the miracle by which Niobe was "struck to stone," had not given the Gladiator blood, breath, sufferings more impressive in their stateless, semi-savage passion, than the most stately cries and confessions of heroic tragedy—as if the "Tomb in St. Praxed's" had not been built up in poetry by a living man of genius, to show how strong in death could be the strange union of pride, greed, ostentation, astuteness, and scho-

lastic learning, existing among the august and inscrutable nobles of a land in which the contrasts are too subtle, and yet too sharp, to be grasped by any northern hand—save that hand belong to a strong man.

Mr. Story, as a Romanist (not to use the word in a theological sense), yields to no past pilgrim or resident in enthusiasm. He owns to an artist's pleasure (your artist having apparently no nose to be afflicted) in the dirt and dilapidation observable on every side,—in the mixture of matters most august and matters most ruinous and foul. He winks with an eye of toleration at the beggars, whose shameless laziness and protrusion of real and fabricated disease amount to so repulsive a drawback, encountered as they are at the very moments when the mind wishes to gather itself into admiration and recollection. It would grieve him to see the Pifferari who play before the Madonna, at Christmas, those old Sicilians which Corelli knew and Handel pilfered, in clean skins, or with robes less patched than the boat of Theseus. He is a man of intelligence, a man of letters to boot, yet can acquiesce in, nay, prefer, a life to which intellect and literature can penetrate in only such parsimonious dribbles as superstition and despotic bigotry allow, and corruption permits to pass for the sake of its paltry fees. In spite of all these defects, and of a climate, moreover, which has difficulties and dangers for every one, in which much bodily exercise is impossible, and for which the resident must arm and manage himself with a nicety and care which would raise cries of ironical indignation were they found necessary in London,—“there's no place like Rome” for Mr. Story. What is more, he has an artful way of pointing out many of its wants and blemishes, as though they were so many blessings and beauties. Nothing more honest in the form of partisanship has ever come before us since Horace Walpole's compliment on Marie-Antoinette's dancing, in his delicious full-length portrait of the Austrian-French queen.—“They say she dances out of time; but then it is wrong to dance in time.”

We shall offer a few disconnected critical memoranda on certain of the chapters. The Pifferari tune noted by Mr. Story is by no means one of the best to be found. A more characteristic one, of the same style, was wandering the streets of London some months ago. The subjects of “street music” and “the constant habit of song” among the Italians cannot be dismissed without a word on its quality, which is in no respect represented here. If Mr. Story be anything of a musician, he must know that the few cries of London which are left are infinitely more Ausonian in tone than ninety-nine hundredths of the sounds now to be heard in Italian streets or Italian churches. The pilgrim will be excruciated in the picturesque island of San Giulio, which adorns the lake of Orta—in a stately place of worship on St. Michael's-day—by sounds of a nasal ugliness which, if passed off for music in this country, would draw down on us foreign sarcasms. Such power of discrimination as the people of the South ever possessed, is no more. The very things which are beauties in the Corso would be abominations in Cheapside. For years to come, it may be feared, every idea of popular music must be given up in Italy. It can only now be a topic by the fond favour of old tradition, even so to continue. We do not sympathize with the rapture still expressed by certain tourists, on finding themselves in the cheap opera-houses of Italy. Surely, in exhibitions of Art, price is not the first consideration. As supply and demand stand, a cheap opera is little more attainable than a cheap *Œopatra*. Good orchestras, good principal

singers, a good chorus and good music (not expecting first-class genius, save in first-class capitals) are hardly to be found, as the theatres of London, Paris and St. Petersburg attest. At this moment of writing the Neapolitans are cheering and serenading *Mdlle. Titiens*, as though she were their old idol, *Malibran*, come back among them. Good music is banished from the Italian opera-houses in favour of the fashionable rubbish of the hour. “It tastes of game, though,” said the old woman who boiled the stake on which the crow had been sitting (so runs a Norwegian proverb). It can but be the name of opera, and some lingering superstition belonging to bygone days, that can reconcile the most easily-contented amateur to the direful sounds with which his ear is now assailed in the South—expensive luxuries, did the ticket of enjoyment thereof only cost a penny. It is not so with Italian acting; concerning which Mr. Story writes with sense, appreciation and true relish.

Christmas, with its ceremonies and festivities, yields a very pleasant chapter. Mr. Story is eloquent on the subject of “vails”—that nuisance which deprives hospitality of its grace and acknowledgment of its cordiality. He describes brightly and pictorially the visit to the *Presepio* at the church of *Ara Cœli*, and the festival of the *Bifana*. He is great, too, on the subject of games—*Morra*, *Ruzzola*, *Pallone* (which he exalts above cricket), and has even a nook of kindness for the lottery! Then, he discourses on games of cards:—

“In an Italian pack there are only forty cards,—the eight, nine, and ten of the French and English cards having no existence. The suits also have different signs and names, and, instead of hearts, spades, clubs, and diamonds, they are called *coppe*, *spade*, *bastoni*, and *denari*.—all being of the same colour, and differing entirely in form from our cards. The *coppe* are cups or vases; the *spade* are swords; the *bastoni* are veritable clubs or bludgeons; and the *denari* are coins. The games are still more different from ours than the cards, and they are legion in number. There are *Briscola*, *Treutte*, *Calabresella*, *Banco-Fallito*, *Rossa e Nera*, *Scaraccoccia*, *Scopa*, *Spizzica*, *Faraone*, *Zecchinetto*, *Mercante in Piera*, *La Bazzica*, *Ruba-Monte*, *Uomo-Nero*, *La Paura*, and I know not how many others,—but they are recorded and explained in no book, and are only to be picked up orally. Wherever you go, on a *fiesta*-day, you will find persons playing cards. At the common *osterias*, before the doors or on the soiled tables within, on the ruins of the *Cæsars*' palaces and in the Temple of Peace, on the stone tables in the *vigna*, on the walls along the public roads, on the uncarved blocks of marble in front of the sculptors' studios, in the antechambers or gateways of palaces,—everywhere, cards are played. Every *contadino* has a pack in his pocket, with the flavour of the soil upon it. The playing is ordinarily for very low sums, often for nothing at all. But there are some games which are purely games of luck, and dangerous. Some of these, as *Rossa e Nera*, *Banco-Fallito* and *Zecchinetto*, though prohibited by the government, are none the less favourite games in Rome, particularly among those who play for money. *Zecchinetto* may be played by any number of persons, after the following manner:—The dealer, who plays against the whole table, deals to each player one card. The next card is then turned up as a trump. Each player then makes his bet on the card dealt to him, and places his money on it. The dealer then deals to the table the other cards in order, and any of the players may bet on them as they are thrown down. If a card of the number of that bet on issue before a card corresponding to the number of the trump, the dealer wins the stake on that card; but whenever a card corresponding to the trump issues, the player wins on every card on which he has bet. When the banker or dealer loses at once, the bank ‘*fa toppa*,’ and the deal passes, but not otherwise. Nothing

can be more simple than this game, and it is just as dangerous as it is simple, and as exciting as it is dangerous. A late Roman *principessa* is said to have been passionately fond of it, and to have lost enormously by it. The story runs, that, while passing the evening at a friend's house, she lost ten thousand *scudi* at one sitting,—upon which she staked her horses and carriage, which were at the door waiting to take her home, and lost them also. She then wrote a note to the prince, her husband, saying that she had lost her carriage and horses at *Zecchinetto*, and wished others to be sent for her. To this he answered, that she might return on foot,—which she was obliged to do.”

An elaborate chapter is devoted to the Colosseum (why not *Coliseum*?); one more charming, and something more novel, to “*Villeggiature*, *Harvest and Vintage*,” reminding us pleasantly of the delicious country pictures in Mrs. Fanny Kemble's ‘*Year of Consolation*.’ But the *Campagna* is handled with yet greater felicity of touch and affluence of colour:—

“Within this magnificent amphitheatre lies the *Campagna* of Rome, and nothing can be more rich and varied, with every kind of beauty—sometimes, as around *Ostia*, flat as an American prairie, with miles of *canni* and reeds rustling in the wind, fields of exquisite feathery grasses waving to and fro, and forests of tall golden-trunked stone-pines poisoning their spreading umbrellas of rich green high in the air, and weaving a murmurous roof against the sun; sometimes drear, mysterious, and melancholy, as in the desolate stretches between *Civita Vecchia* and Rome, with lonely hollows and hills without a habitation, where sheep and oxen feed, and the wind roams over treeless and deserted slopes, and silence makes its home; sometimes rolling like an inland sea whose waves have suddenly been checked and stiffened, green with grass, golden with grain, and gracious with myriads of wild flowers, where scarlet poppies blaze over acres and acres, and pink-frilled daisies cover the vast meadows, and pendant vines shroud the picturesque ruins of antique villas, aqueducts and tombs, or droop from mediæval towers and fortresses. Such is the aspect of the *Agro Romano*, or southern portion of the *Campagna* extending between Rome and Albano. It is a picture wherever you go. The land, which is of deep rich loam that repays a hundred-fold the least toil of the farmer, does not wait for the help of man, but bursts into spontaneous vegetation and everywhere laughs into flowers. Here is pasturage for millions of cattle, and grain fields for a continent, that now in wild untutored beauty bask in the Italian sun, crying shame on their neglectful owners. Over these long unfenced slopes one may gallop on horseback for miles without let or hindrance, through meadows of green smoothness on fire with scarlet poppies—over hills crowned with ruins that insist on being painted, so exquisite are they in form and colour, with their background of purple mountains—down valleys of pastoral quiet, where great *tufa* caves open into subterranean galleries leading beyond human ken; or one may linger in lovely secluded groves of ilex and pines, or track the course of swift streams overhung by dipping willows, and swerving here and there through broken arches of antique bridges smothered in green; or wander through hedges heaped and toppling over with rich luxuriant foliage, twined together by wild vetches, honeysuckles, morning glories, and every species of flowering vine; or sit beneath the sun-looped shadows of ivy-covered aqueducts, listening to the song of hundreds of larks far up in the air, and gazing through the lofty arches into wondrous deeps of violet-hued distances, or lazily watching flocks of white sheep as they crop the smooth slopes guarded by the faithful watch-dog. Everywhere are deep brown banks of *pozzolano* earth which makes the strong Roman cement, and quarries of *tufa* and travertine with unexplored galleries and catacombs honeycombing for miles the whole *Campagna*. Dead generations lie under your feet wherever you tread. The place is haunted by ghosts that outnumber by myriads the living, and the air is filled with a tender sentiment of sadness

which makes the beauty of the world about you more touching."

The above extracts have been drawn from Mr. Story's first volume. His second is devoted to markets,—to the Jew quarter, or Ghetto, which was probably never before described in such detail,—to field sports and races—to fountains and aqueducts—to births, baptisms, marriages and burials (the last, how ghastly!)—to summer in the city—to the good old times, including some choice bits of dark, wicked, cruel ancient history—to saints and superstitions, with much, of course, concerning Madonna-worship—and, lastly, to the Evil Eye. Here our author is profuse in anecdote, accepting (as has been hinted) every sort of tale and testimony with unquestioning eagerness and appetite. His book, however, is lively, readable, and has permanent value enough to entitle it to a place of honour in the shelf which contains every lover of Italy's Rome-books.

The Prince Consort's Farms: an Agricultural Memoir. By John Chalmers Morton. (Longman & Co.)

Of the various features of the Prince Consort's many-sided life, none gained him a wider popularity, or wrought perceptible good to a greater number of his adopted fellow-countrymen, than the enlightened interest which he displayed in the science and pursuits of agriculture. That he was a discerning patron of painters and sculptors, was known to the studios and those comparatively few persons who were allowed to witness the immediate results of his exercise of taste. That he was an appreciative student and enthusiastic admirer of the best authors of ancient and modern literature, was a fact known to a yet more limited circle. But that he was a farmer, delighting in the theory and eminently successful in the practice of agriculture, was known to every breeder and ploughman in the kingdom. Apart from the priceless moral effects of example on those who were next to him in rank, the beneficial consequences of his literary and artistic tastes were in a great degree limited to those whose appointed task it is to elevate mankind by the chisel, the pencil or the pen; but there is scarcely a hamlet in the country where the poor are not in some way better cared for than they would have been had Albert the Good deemed rural concerns too lowly for his notice. In farming, as in every other occupation which won a share of his attention, he was thoroughly conscientious and thoroughly in earnest. He did not take it up because it was the fashion, playing by fits and starts the rôle of a beneficent country squire, and laying a dainty hand on the plough-tail when his heart was at the whist-table. His function, indeed, was to fix, not follow, fashions; and as it was his high intent to set the arrow-head of fashion on those pursuits alone which were liberal, honourable and useful, he would not have expended so much time in working out problems for the practical farmers of Great Britain if he had not felt that his exertions would result in great and enduring good. The value and extent of his services in this respect will be best seen by those who enter on their consideration by reflecting what would have been the consequences if, instead of forwarding agricultural interests, the Prince Consort had opposed them, or simply withheld his countenance from them. The time is not far distant—indeed, it is fresh within the memories of men still at the head of public affairs—when it was the humour of good society to make light of the responsibilities of property, and when the duties of patrician proprietors were not supposed to extend be-

yond taking their rents from their stewards' hands, and taking their sport over their tenants' farms. What was the ordinary condition of our most productive counties in those days can be easily recalled by those who are acquainted with the state of agriculture when Arthur Young commenced his useful career, and remember the opposition which that reformer met with from an aristocracy whose "fashion" it was to sneer at farming as work fit only for the vulgar. Such men need not be reminded that long after George the Third had held out the hand of fellowship to the Duke of Bedford and Mr. Coke, of Holkham, the obstacles to the diffusion of agricultural knowledge were the apathy and scorn of wealthy landowners towards the new movement. Nor will such men be slow to believe that if the Prince Consort had affected disdain or shown carelessness for the farmer's toil, it would soon again have become the mode with fine gentlemen to spend time and energy on amusements less profitable than the improvement of their estates, less commendable than the education of their dependents.

Fortunately for this country, Prince Albert, from the time when he first made it his own, determined that agriculture should not be excluded from the wide range of his sympathies. Forbidden by the delicate circumstances of his elevated position to interfere in politics, he saw that the highest public career open to him lay in the exercise of moral influence—that it was possible for him to be the guide and teacher of the aristocracy by the example of his own life. In accordance with this view, he resolved to be in the fullest and noblest sense of the term the first and most true gentleman of his time.

From this point of view must be regarded Prince Albert, the patron of farming. Becoming a member of the Smithfield Club in 1840, he forthwith turned his attention to agricultural science; and with each succeeding year he enlarged the scale of his operations, so that in the last year of his life, when he accepted the Presidency of the Royal Agricultural Society of England, he had not merely under his nominal control, but under his own personal management, many thousands of acres of land, and several distinct and costly farming establishments. Prince though he was, he could boast that he was not only one of the largest farmers in the country, but that no farmer paid closer attention to the details of his business. He not only saw to everything himself, but would not rest till he had satisfied himself that he did everything in the best possible way. There were observers who muttered that, though a Prince Consort might in accordance with the humour of the nineteenth century play with agriculture and throw away money on a toy-farm, he was bound in honour not to conduct its affairs so that the balance-sheet stood in his favour at the year's end. There were even those who suggested that the royal yeoman and tenant-farmer was animated by love of money not less than love of science. But the Prince kept on after his own fashion, which was proudly to shun affectation, and to labour heartily and honestly at whatever work he undertook. He would manage his farms thoroughly or not at all. His aim was not to achieve popularity at agricultural meetings by speaking of himself as a farmer, but to teach the noblemen who watched him how to till the soil; above all, to teach them that country gentlemen ought to know how to manage their estates. Every improvement in system, mechanism, manure, was had recourse to as soon as it was made known, and, after full and fair trial, was assigned its proper place in the list of agricultural contrivances.

After every experiment, the practical question "Does it pay?" was put. Love of the beautiful was never permitted to put the farmer's chief object, the useful, out of sight. When the Prince built the new Dairy at Windsor, he wished to have an elegant building; but he would not suffer such wish to interfere with practical convenience. After careful deliberation, he decided on the best conditions of aspect, materials, drainage, ventilation, subsoil, remoteness from timber, and then gave general orders to the builder. "The architect," observes Mr. Morton, "was instructed by the Prince, that while his Royal Highness wished to have an ornamental dairy, no beauty of ornament would compensate for want of everyday usefulness."

The story of Prince Albert's management of the estates which he held as owner, or tenant, is in every case the story of what rapid improvements can be effected in landed properties by knowledge and capital. The Osborne property, for the most part a high-lying tract of land, comprises 1,810 acres, "of which 600 acres are the park around the house, 400 acres are woodland, and 700 acres are arable." Since the estate came into Royal hands, such alterations have been effected that its former owners would scarcely know it. "Fields of all shapes and sizes, surrounded by ragged and broken fences, bad roads, poor cottages and buildings, have been replaced by trim and shapely inclosures, good cultivation, the best possible accommodation for both inhabitants and farm-stock, and every other evidence of intelligence and liberality in the owner, and of welfare and contentment amongst the labourers." The mansion is entirely new, having been built since 1845 by the late Mr. Thomas Cubitt from the Prince's designs; the land has been thoroughly drained; a new pier has been constructed; the beautiful church of Whippingham has been completed from the designs of Prince Albert; and the terraces and ornamental grounds surrounding the 'House' are scarcely less the work of the new proprietors. Speaking of the Swiss Cottage and Gardens allotted to the Royal children, Mr. Morton says, "These are interesting for the proof they give of the practical good sense that has guided the education which the Prince thought necessary for his family; for here essentially is a school at which homely, domestic and most useful instruction is given and received. Every garden, consisting of several plots, contains flowers (roses, lilies, pinks, &c.), and, in separate beds, strawberries, gooseberries, currants and raspberries among fruits, and asparagus, artichokes, potatoes, turnips, cabbages of various sorts, onions, carrots, parsnips, lettuces and other culinary vegetables. The cultivation of all these plants has to be looked after; and close by, in the Swiss Cottage, is a kitchen, where the vegetables which have been grown by every little gardener may be washed and cooked; where cookery of other kinds is carried on; where, indeed, the apparatus exists for juvenile entertainments: given by those who have thus themselves carried out the whole process from the planting of the seed or set, up to the preparation of its produce as food. It is extremely interesting to see—in the orderly arrangement of the tools, each one bearing its owner's name—in the well-tilled plots—even in the arrangements for practice and instruction in the kitchen, as well as in the admirable collections illustrative of various branches of natural history in the Museum upstairs—proofs of that regard for the systematic, the useful and the practical which the Prince Consort was known to possess. And still more interesting is it to learn that not only are the immediate ends contemplated in these things fully attained, but that

the family bond is strengthened, here as in humbler instances, by every homely, family enjoyment shared in common. The Crown Princess of Prussia still retains her little garden, and produce from it is sent each summer from Osborne to Berlin."

Not less worthy of remark are the changes for the better wrought in Balmoral since the Royal Family purchased that picturesque Highland estate, which, with its additions, comprises upwards of 30,000 acres, bounded on the north by the river Dee, on the south by the water of Muick and the Lochs Muick and Dhu-loch, and on the west by Lochnagar and the rocky ridges stretching down to the Dee. The same eye for beauty and skill in wedding Art to Nature which had surrounded Osborne with glades and terraces, brought fountains and flower-gardens round the rock-girt castle. But the improver's art was not content with mere decoration. When the estates came into his hands, they had for many years been greatly neglected. The dwellings of the tenants, the farm-offices and fences, had fallen into decay; the cottages, or rather hovels, of the labourer were wretched. The existing system of agriculture was of an antiquated school and sadly ineffectual. The new lord set himself to work a reform,—not abruptly, for fear of wounding the feelings of his sensitive Highlanders, but gradually, cautiously, steadily; and so completely did he attain his end, that Dr. Andrew Robertson writes—"To describe the numerous improvements effected by the liberality of his Royal Highness upon the different estates, would prove tedious by repetition. It will be sufficient to state, generally, that comfortable cottages have replaced the former miserable dwellings; that farm-offices, according to the size of the farms, have been erected; that money has been advanced for the draining, trenching and improvement of waste land; that new roads have been opened up, and old ones repaired; and that fences have been renewed, and upwards of 1,000 acres of unreclaimable land planted."

If the Prince's alterations in his farms near Windsor were less striking and sudden than his improvements at Balmoral and Osborne, they were not less important. Upon them he tried in the most enlightened spirit every variety of experiment, adopting so many different methods of management, that there "can be hardly any farmer in the country to whom one or other of the many facts illustrated on these farms is not personally and professionally interesting."

But however the Prince varied his plans of farming, he had only one system of treatment for his labourers. Their intellectual and moral elevation was with him a chief object; and to effect this he relied on considerate usage, education in juvenile or adult schools, benefit societies, religious instruction and comfortable dwellings. It would be difficult to say on which of these agents he placed the greatest reliance. Wherever he had workmen, the schoolmaster and clergyman were close at hand and vigilant in the performance of their duties. On the delicate respect which it was his wont to show to the prejudices of his humblest dependents, some testimony is borne by Dr. Andrew Robertson. But it was on the urgent need for improving the labourer's dwelling that he most emphatically and warmly insisted. That he was not slow, at considerable pecuniary sacrifice, to illustrate his preaching by action, is well known. The leading feature of all the Prince's cottages for the poor is the presence of at least three bedrooms, so that during hours of rest parents may be separated from their children, and children of different

sexes may be kept apart. As to the need for this accommodation, question will be raised by no one acquainted with the dwellings of the rural poor, and with the immorality prevalent amongst them, which may be distinctly traced to deficiency of sleeping-rooms. The fire-proof model cottage—which readers may have visited when it was exhibited by His Royal Highness near the Great Exhibition of 1851—had a living-room, scullery and three sleeping apartments. Better than the model-cottages of 1851, the Osborne cottages have a kitchen in addition to the living-room and three sleeping apartments. Varying considerably in plan from the Osborne dwellings, the Balmoral cottages have a bed-closet in addition to the three sleeping apartments. "But," the capitalist will inquire, "do the occupants of these cottages pay rents which give a fair interest for the money spent in building them?" To this question a negative must be returned. When it is stated that the Balmoral cottages cost about 150*l.* each, landed proprietors need not be told that the farm-labourers who occupy them cannot in rent pay the interest of the capital sunk in them. But the results of the Prince's benevolent plan are worth a sacrifice. "Mr. Chadwick, C.B., informs us that the death-rate on the Osborne Estate amongst the labouring classes is only 12 in 1,000, the rate for the whole kingdom being 23 in 1,000, and that of the best rural districts known elsewhere being about 17. There can be no doubt that the reduced rate at Osborne has been due to the intelligent attention paid to the sanitary condition of the cottages. 'It may be said,' adds Mr. Chadwick, 'that if all the cottage property in the United Kingdom were maintained in the same condition as that of Her Majesty and H.R.H. the Prince Consort, the death-rate would be reduced more than one-third, or nearly one-half. It would be as if every third year there were a jubilee, and there was no sickness and no deaths.'" Prince Albert was a keen-eyed farmer, careful as any laird in all Scotland over the outgoings and the incomings of his farm accounts; but, looking at such results as these, he was well pleased to invest some thousands of pounds in model cottages, and, instead of interest, find his reward "in the establishment on his estates of a healthy, well-conditioned labouring population." May all great proprietors take to heart this lesson of practical benevolence from Albert the Good!

OUR LIBRARY TABLE.

A Manual of European Butterflies. By W. F. Kirby. (Williams & Norgate).—Every child is a butterfly-hunter, and every student of Entomology commences with butterflies and moths; but, from our isolated position, scarcely one collector in a hundred ever thinks of looking at anything else than a British specimen,—a plan, so far as science is concerned, to be deplored, as but very limited views of Nature can be obtained from examining the species confined to so small a portion of the world. Now, however, that railroads and steamboats have rendered Continental travel so easy and cheap, we think that Mr. Kirby has done good service in publishing a nice little pocket volume containing short descriptions of all the hitherto observed European species of butterflies. In our own country we possess scarcely seventy different kinds of these beautiful insects; but there are about three hundred and twenty known on the Continent, including types of two out of the eight European families of butterflies of which we possess no English representative. By abbreviating the technical terms, and by means of synoptical tables of species at the head of each genus, the collector is enabled easily to determine his specimens. Great care appears also to have been taken to describe the caterpillars of every species hitherto observed in their preparatory states, and to indicate their pro-

per food-plants. Several valuable tables are given at the end of the volume,—the first showing at one view the geographical range of all the species, from which it would seem that Russia produces the greatest number of species; the second table gives the entire synonymy of the species, with references to detailed descriptions by various previous writers; the third gives a short biographical account of the chief writers on Lepidoptera and of their works; the work being ornamented by a good alphabetical index. It will thus be seen that the author has contrived to condense a large amount of matter—which a bookmaker might easily have swelled into a goodly octavo volume—into a very small space. We, therefore, recommend the work to every one who has a taste for Natural History, and who purposes making a Continental tour during the ensuing summer, assuring them that the collecting of insects is so common abroad that they need be under no fear of being laughed at if seen carrying a butterfly-net.

Memoir of Her Royal Highness the Princess Alexandra of Denmark, with Historical Sketches of the House of Schleswig-Holstein-Sonderburg-Glücksburg, and of the Alliances which have taken place between the Royal Families of England and Denmark; with a Glance at the History of the Danes. (Simpkin, Marshall & Co.)—Beyond calling attention to the fact, that the Princess Alexandra Caroline Marie Charlotte Louise Julie is a sub-Lieutenant of the Danish army, the writer of this short memoir says nothing of the lady who is soon to give law to English fashion which has not appeared in every newspaper of the country; but the last two chapters on the matrimonial alliances of the royal houses of England and Denmark contain enough lightly-written gossip about King James's Queen Anne, Queen Anne's Prince George, and the mournful career of George the Third's luckless sister, Caroline Matilda, to atone for the conspicuous lack of information about the personal history of the Princess in whom the loyal subjects of Victoria feel so lively an interest.

The War-Office List and Directory for the Civil Departments of the British Army, January, 1863. First Publication. Compiled from Official and other Documents, under permission of the Secretary of State for War, by Denham Robinson, of the War Office. (Harrison).—Mr. Denham Robinson, in the introductory pages of his War-Office Directory, gives a series of tables illustrating the "Succession of Ministers and Principal Officers charged with the Administration of the Army and of Military Affairs." These lists are calculated to be of service to historical students who maintain no relations either with the existing War-Office or its employes. In his preface the compiler observes, "Lastly, I must observe, that the 'War-Office List' is in no way 'by authority.' I have by 'permission' searched the non-confidential office records for information, and I have taken the greatest care to make my statements reliable; but, nevertheless, they issue on my responsibility alone, and carry, therefore, no greater authority than that of a painstaking private individual." At the end of the volume there is a good index to the names mentioned in the list; and in the body of the work a brief account is given of the professional career of every War-Office clerk who is alive at the present time.

The Countess Dowager. By Julia Tilt. (Booth.)—The Countess Dowager in her youth was the heroine of one of Miss Tilt's former novels. She re-appears, grown very old and twaddling, and is left in charge of a large party of young people during the absence of their parents. Being much scandalized at the manner in which her granddaughters and their friends behave, and in order to check the enormous amount of dancing, flirting, riding and talking nonsense, which takes place the moment the young ladies are relieved from the watchfulness of the maternal eye, the old lady suggests as a pleasant and instructive pastime that each member of the family should relate a short tale every evening till the return of their respective parents shall release her from her responsibility. The result of this proposal is four or five little stories of much the same calibre as those to be met with in old Keepsakes or Books of Beauty. There is a

tale of circumstantial evidence; a runaway marriage; the adventures of a young man who was taken in and ruined by a pretended lady of rank and fortune; and these stories are discussed by the party afterwards. In spite, however, of all the Countess Dowager's precautions, the most ineligible young man of all proposes to the favourite granddaughter, and her pangs of remorse are bitter till it finally turns out that the younger son has at least 50,000*l.* a year of his own: so the conclusion is highly satisfactory to all parties concerned. There is nothing very new or remarkable about the book, and no very glaring defects. It may pass muster as a novelette, and will do to ask for at the circulating libraries for want of anything better.

Aims and Ends: a Novel. 3 vols. By C. C. G. (Newby).—'Aims and Ends' is the first novel of a very young lady, young enough to go into ecstasies over her heroine's appearance, dressed in an upper skirt of Brussels lace upon white satin, with a *corsage* fitting without a crease; over her wreath of silver, wheat with blue forget-me-nots. With all these touching details is mingled the incidental faithlessness of the wearer, who having promised and vowed to love and marry a certain Mr. Stafford, in a few weeks afterwards becomes the envied bride of Lord Thornbury, a white-faced Othello, who makes her deservedly miserable, and leaves an insulting codicil to his last will and testament by which she is to be reduced to poverty if she ever takes a second husband. It is a thorough young-lady novel, with boarding-school views of life and character. It is amusing from its absurd unreality, but the authoress might find more profitable aims and ends.

Conyers Lea. By Cyril Thornton, M.A. (Saunders, Otley & Co.).—'Conyers Lea' may be read from the beginning, or at the end, or in the middle, or backwards, or even upside down, with equal interest. It is a light gossiping book, being a collection of anecdotes for the most part, amusing in themselves, but strung together in a disconnected way, treating on all sorts of subjects, from Portland Roads down to Spurgeon, and it is called 'Conyers Lea'—not the name of the hero, but the house where the passion for writing first seized on the author. It has a word or two about Church-rates, Tractarians, and old armour. In fact, the author seems to be rather an authority on old armour; and not only that, but since every story must treat more or less on marriage, he holds that a haunted house and 800*l.* a year will not do. And if a man wants to marry his deceased wife's sister, why should not he go the whole hog, do it boldly, and "let him marry his grandmother like a man"? There are "sketches episcopal" as well as magisterial and military, and amongst them the Ecclesiastical Commissioners are not forgotten—which latter seem to lead to the mention of an uncomfortable ghost, called the notorious "Baum Rabbit," which is popularly believed to appear once in a century. And in the sketches episcopal and military it turns out that the Bishop always has the best of it in his encounters with the Colonel, notwithstanding the assistance of the "Conyers rabbit," whether the matter in dispute be church-rates, deceased wives' sisters, tithes, "Methodys," or "Puritan Fathers." "The Bishop, when by himself, had a meditative style of walking; he was nearly as tall as the Colonel, and far broader across the shoulders; but looked ten years younger. Time's hand had been laid apparently lightly upon him." He has a good reason, too, for all he says, and an interesting chapter is one wherein he is the spokesman on the subject of the history and origin of the Church of England. On this part of his work the author seems much at home, and manifests marks of careful and sound training, so far as his own habit of perseverance has induced him to avail himself of it. In fact, it seems almost a matter of regret that he has not written more at length on this subject, and spared his readers a description of a cold-blooded murder.

Katharine Parr; or, the Court of Henry VIII. Translated from the German by John Ringwood Atkins. (Newby).—Historical romances can give a colouring to history sometimes, and nothing more; but hardly even that to a diligent student. Moreover, it must be a writer of no inferior order who so succeeds, whilst all may be content to aim no

higher than to amuse. 'Katharine Parr' was written to entertain German readers, and being translated into English we can see what sort of light dish was provided for their mental food, and how far English history is answerable for the fit of indigestion which might possibly ensue. King Henry the Eighth is, of course, a hateful character, and is therefore drawn in the darkest colours to heighten the effect. Katharine, who is a Protestant, marries him from ambition, and whilst the marriage-day is celebrated with the burning of heretics (the brightest and best wedding torches which, he tells Katharine, he could think of), at the same time Bishop Gardiner and Lady Jane Douglas, her lady in waiting, determine her downfall. Amongst the condemned this day is Maria Askew, who had made her way into the King's presence to beg mercy for the Countess of Salisbury. The characters are all represented as attired in the most gorgeous array of penny theatres: "The King stood in the centre of the room, attired in his gold-embroidered robes, and covered with precious stones, which blazed resplendent with the light from the chandelier. Beside him was the young Queen, whose beautiful and amiable countenance was turned towards the King with a look of the deepest anxiety; at a short distance from the Queen still knelt the youthful Maria Askew, whilst in the background were the Bishops, through the open doors of the adjoining apartment a host of courtiers; whilst on the opposite side, through the open window, might be seen the glowing skies; while the sound of bells and drums, mingling with the yells of the populace and the shrieks of woe and despair, resounded along the air." It reads much like a description of a country fair, with a theatre where a dreadful tragedy is going to be performed, and the gaping crowd outside are bidden to walk up and be in time, for it is now going to begin, and the charge is only one penny. And there is entertainment suited for all comers. First, the splendid scene with the King and coloured fire, followed shortly by a good stand-up fight between Gammer Gurton and Hodge, her affianced husband. There is also a festival, at which brave knights and combatants break lances in honour of their ladies; and Lord Sudley having vanquished Henry Howard, he is rewarded with a diamond pin, which, at the command of the King, is fastened upon his collar by the Queen herself, who takes the opportunity of conveying to the victor a *billet-doux*. On this little incident hangs much of the plot of the tale. The chief actors are named after the several historical characters who bore their parts in the events of the times of Henry the Eighth; and upon the death of the King, Katharine is married to Thomas Seymour. So far only can 'Katharine Parr' be called an historical romance, whilst it is spiced with many such scenes as might be worked into the most ordinary novel.

Mr. George Stacey Gibson has given his little botanical friends a *Flora of Essex* (Pamplin), in which he has exhausted the field of small matters. In stating the districts in which Essex plants are found, the authors who have spoken of them, the species which somebody is likely to find somewhere, the years where those known to occur have been found, and some matters of similar high interest, his book is very complete. There are also nearly three pages of additions and corrections, which, in a little volume of 469 pages, is pretty well. The best thing in the book is a short account of the life of Edward Forster, a very amiable man and diligent Essex botanophilist; or, perhaps, a well-executed loose map of the county.

A dissertation on *Phosphorescence; or, the Emission of Light by Minerals, Plants and Animals*, has appeared from the pen of Dr. Phipson. (Reeve).—"Phosphorescence, whether manifested by the glow-worm, the Bologna stone, a fungus, or a falling star, is generally looked upon as an unexplained and mysterious production of light." Dr. Phipson's attempts to unveil the mystery are attended with no success. Yet his account of the phosphorescence of living plants is interesting, as are more especially his gatherings in other kingdoms of Nature. Upon the whole, he refers the phenomenon to either electrical or chemical agency, which is very like explaining the unknown by the ignotum.

To the cheap and useful series of "Oxford Pocket Classics" has lately been added *M. T. Cicero de Senectute et de Amicitia*,—*Cicero's Dialogues on Old Age and on Friendship, with short English Notes, for the Use of Schools* (Parker),—a neatly-printed, carefully-edited little volume, well adapted for school purposes.—Mr. J. S. Laurie, whose excellent "Graduated Series of Reading-Lesson Books" has met with great and well-deserved success, has undertaken to prepare another set of works at a cheaper rate, specially adapted to the six standards of the 'Revised Code.' We have before us the first three of the series: the 'Standard' Primer; or, *Easy Hornbook*;—the First 'Standard' Reader; or, *Tales and Rhymes*;—and the Second 'Standard' Reader; or, *Stories of Children*: by J. S. Laurie (Longman). They are all admirably adapted to answer the purpose intended, and well got up, considering the low prices at which they are published, though the paper is not quite so good as might be wished.—M. L. F. de Porquet's *Short and Easy French Readings for Little Folks* (Simpkin & Co.) is a collection of short conversational sentences, with vocabularies explaining the meaning of words and phrases. A few woodcuts are inserted, which are of no great value.—A *Pocket Dictionary of the French and English Languages*, by L. Contanseau (Longman), is an abridgment of the same author's 'Practical French and English Dictionary,' and contains several improvements upon existing pocket dictionaries.

- LIST OF NEW BOOKS.
- Ace's Treatise on Auricular Confession, 12mo. 3/6 cl.
 - Anette, or Enri to Lanceshire in December, 1862, cr. 8vo. 1/6 cl.

HORACE VERNET.

THIRTY years ago, so little did England know, or then choose to know, about French modern Art, that Vernet was, so far as this country is concerned, almost the only representative name among French painters. One cause of this might be that the Vernets have been a distinguished family during four generations.—The founder of it, Antoine, belonged, we are reminded, principally to Avignon; the son, Joseph, became universally known as a clever and capital marine

painter: a man who wrought carefully, with a certain picturesque taste for arrangement and *chiar-oscuro* (as distinct from colour). Joseph Vernet's best sea-port scenes "hold their place in any and every gallery." There is a humour of Claude in them, without Claude's magic management of air. They are pictures that wear, and will wear: having more of Art in them (though the Art may not be ours) than many of the hasty theatrical productions to which they were contemporaries and models. The family, including Horace's father, Carl, whose pictures of horses and battle-pieces kept the Vernet name alive, prospered according to the fashion of painters in those days,—which was to gain comparatively little, and at best fitfully. Horace, the present subject, born in 1789, at all events rose to no eminence and fortune by inheritance. The boy had to labour through a busy and wearisome apprenticeship,—as our Stothard and Turner had to do,—to make drawings, we are told, for Fashion-books; to design for booksellers, in days when designers were sparingly paid;—nevertheless, at the ripe age of twenty, he married, opened a studio, established a manner of his own, and with it a name and a fame.

Horace Vernet was eminently the picturesque painter of contemporary French war-things and people—having a clear eye and a neat hand, and more feeling for nature and colour than, at the time when he broke out, was the vogue among those who painted the Past in antique nudity, or the Present in modern garb. It may have been for these serviceable qualities that Napoleon the First (in no respect a good judge of Art) patronized and decorated Horace Vernet and made him a Chevalier. This Horace Vernet did not forget, even in the dark days of St. Helena; and in the year 1822, the exclusion from the Exhibition of a work on a subject thought dangerous led to Vernet's opening a show of his own,—a show of pictures of other French battles, which spoke at once to French sympathies,—having the advantage, moreover, of the figures being characterized to perfection (so far as the soldier is concerned), of being drawn with freedom as well as accuracy, and of being fairly good in point of colour.

The result was, that no government could do without Horace Vernet; and Charles the Tenth (under whose stupid reign certain Fine Arts, nevertheless, flourished gorgeously in Paris) made advances to him, commissioned him, and in 1828 appointed him to the Directorship of the French Academy in Rome.

The choice proved in every respect an excellent one. The artist had strong Southern sympathies,—apart from memories of the Cæsars and the Gracchi. He could paint the peasant and the robber-folk of Central Italy,—as his 'Brigand's Confession' (to name only one picture),—with a touch as true as, and less elaborate than, that of Léopold Robert, whose 'Moissonneurs' for a while gave Robert a stilted French reputation,—as the man among our born enemies who had best painted Roman scenes and people. Then Horace Vernet, as the host of the Villa Medici, to which French artists resort, kept a royally artistic house there for all comers,—painters, musicians, men of letters from all lands, such as old Rome has not enjoyed since. Mendelssohn's letters, recording his travelling experience, have told us how "the little thin Frenchman, with stiff grey hair and the ribbon of the Legion of Honour," welcomed with avidity everything that was really distinguished,—and how the young musician had to play and improvise to him,—and how the Frenchman would insist on painting the young German's portrait,—and how the Frenchman's daughter (Madame Delaroche, now dead) danced a Saltarella, as a matter of course, at one of these bright and hospitable gatherings. Vernet, in his time, had a power and a presence in Rome, belonging to his liberal geniality, which no successor, as head of the French Academy, has up to this time replaced.

As will befall every true artist who knows his own powers, Horace Vernet was waited for and wanted:—and when Louis-Philippe came to the throne of France, and wished to leave the mark of his reign

on that country by furbishing up Versailles, and collecting in that grand, overgrown, historical palace every conceivable record of its country's festivity and glory,—from the hunting-parties at L'Isle Adam, in one of which a troop of Chasseurs and dogs are placidly trotting up a terrace staircase, to the last note of the latest *razzia* made in Algeria,—Horace Vernet was called in. Accordingly, he painted manfully a "battle"-room at Versailles—his "Smala" picture among other African scenes. But however willing to do the work of an honest artist, Horace Vernet was no sycophant. He came to a quarrel with the Citizen-King because the patron wished to find Louis Quatorze painted in a heroic position at Valenciennes, which history informs posterity Louis Quatorze did not keep. On this rupture Vernet went to St. Petersburg, and there painted pictures of Polish sorrow for that chastizer of the Poles, the late Emperor Nicholas. His divorce from France was short. He came from Russia to visit the East a second time, to execute among his latest military histories 'The Attack of the French on Rome, when held by the Triumvirate.' He was decorated and glorified to the last, and (family bereavements apart) died at a ripe old age, with honours and memories round him. His funeral, however, by his own express desire, was nobly simple. A few friends attended him to the grave: which was spared the bombast of those funeral orations to English ears and hearts so unreal and melo-dramatic.

As a painter, his choice of subjects and the course of his career may more or less rule the place which Horace Vernet may hold in the eyes of our grandchildren. Meanwhile, he must be commemorated for something better than his acres of battles in the African Gallery at Versailles—for something besides the Italian groups which have gone through Europe. He painted at times for love, as well as for patronage; and, unless memory has betrayed us, there is a portrait by him of the Superior of "Les Frères Chrétiens" (to name only one among many) which may one day help to set his name in its right place—not as a clever man, not as a showy artist, but as a great and real French painter, belonging to the country of Poussin, and Claude, and Delaroche.

ASSYRIAN HISTORY.

11, Great Stuart Street, Edinburgh, Jan. 10, 1863.

I read with great interest an account which appeared in the *Athenæum* of December 20th of some antiquities recently discovered near the source of the Tigris. It is there said that at the last meeting of the Royal Asiatic Society, "Sir H. Rawlinson communicated to the meeting the results of certain researches in the hill country north of ancient Assyria, carried on during the present year by J. Taylor, Esq., Her Majesty's Consul at Diarbekr, and which are to be resumed by that gentleman next spring. In a cave from which the principal stream of the Tigris rises a large river, two cuneiform inscriptions were discovered and casts taken by Mr. Taylor. One of these is already in London, and proves to be a record of Tiglath-pileser I. The other, not yet received, is surmised to belong to Sardanapalus."

Now, this discovery is valuable, not only from the interest attaching to sculptures preserved to us from such a remote age, but also from the testimony which it bears to the truth of the modern interpretations of cuneiform writing. Your readers are well aware, no doubt, that although Sir H. Rawlinson and others have laboured for many years in the decipherment of the curious and complicated Assyrian records, usually agreeing with one another in their interpretation whenever the inscriptions contain a simple narrative of historical facts, yet a large proportion of the learned world, including many distinguished Orientalists, still remain incredulous; some even doubting the fact whether any true decipherment has yet been obtained. It is difficult to account for this continued incredulity; but the only way to overcome it seems to be, to continue to accumulate proofs of the general correctness and trustworthiness of the translations.

An opportunity of doing so appears to me to offer itself on the present occasion, and I will proceed to explain in what manner.

The volume of cuneiform inscriptions recently published by the British Museum contains a long inscription, which fills ten sheets, of the Annals of Sardanapalus I., recovered from the pavement slabs of the temple of Ninev, the Assyrian Hercules. He was the god of war, and also the traditional founder of Nineveh, as is expressly stated in the inscription, in these words: "Ninev, who laid the foundations of this city, in ancient days now long past." This deity had likewise the name of Bar, which is used indifferently and interchanged with that of Ninev in the same inscription.

Sardanapalus I. (whose name I prefer to read as *Ashurakbal*) was a great conqueror, the son of Kutī-Bar, whose name means "the arrows of Bar," or rather, "the armed service of Bar." He was therefore, doubtless, a zealous worshipper of that deity.

Now, in the third sheet of these Annals, line 101, there occurs a statement which appears to me to throw light upon the fact now announced of the discovery of inscriptions of Tiglath-pileser and Sardanapalus at the source of the Tigris. The following is the translation of this part of the record:—

"In that same year, while I was staying at Nineveh, they brought me the news, that those Assyrians whom Divanuriah, King of Assyria, my ancestor, had located in the cities of Zilukha, had revolted, together with Kuliah their chief, and had marched against Dandamusa, one of my royal cities, and attacked it. In the name of Ashur, the Sun, and the Sky, my protecting deities, I assembled my chariots and my army; and at the source of the waters of the river Supnat, in the same place with the statues which Tiglath-pileser and Kutī-Bar, Kings of Assyria, my ancestors, had erected, there I erected a statue of myself, and I placed it by the side of theirs."

Such is the statement contained in the Annals, and I thought at first that our explorers had now discovered the very sculptures which that ancient record speaks of; so that, in fact, their discovery might have been predicted with some probability. But whether or not the same sculptures are spoken of, at any rate the Annals record a remarkably similar event. I may add, that there are other inscriptions in which Divanubar, the Obelisk King, speaks of having set up sculptures or tablets at the actual source of the Tigris, but he does not speak of having seen those already placed there by Tiglath-pileser; so that the coincidence is again imperfect. But these inscriptions show the veneration with which the sources of great rivers were anciently regarded. And so in the present day, the source of the Ganges, at Gangootri, in the Himalaya mountains, is accounted a sacred spot and visited by numerous pilgrims. The reason why an army, or at any rate its principal chiefs, assembled at the sacred source of a large river before commencing a campaign, would perhaps not be divined if the inscriptions did not expressly inform us. It was for the purpose of dipping their weapons in the sacred fountain. This kind of baptism was in all probability thought to render them irresistible. So the Greeks fabled that Achilles was made invulnerable by being dipped when an infant in a sacred stream. But to return to the passage in the Annals (iii. 101), the question remains, in what district was the source of the Supnat? I believe the Supnat was an affluent of the Tigris. The Assyrian colony spoken of lay some distance to the north of Nineveh, and near to the mountains of the Nahiri, whose numerous and turbulent tribes were usually at war with the King of Assyria. The annals of Tiglath-pileser give a long account of battles with them. And moreover, from the source of the Supnat, Sardanapalus marched straight to Kinabu, the city of the revolted Assyrian chief Kuliah, which he took and destroyed, and slew all the inhabitants.

He particularly says, "not one escaped."

After which, he gives an account of a campaign in the mountains of the Nahiri; whence it seems reasonable to infer that the city of Kinabu, and consequently the source of the Supnat, lay in that district. And the source of the Tigris is also in a mountain district which once formed a part

of the land of the Nahiri. I therefore think it probable that if the sources of the other great rivers in that country are carefully examined, other sculptures and tablets will be found there.

H. FOX TALBOT.

OUR WEEKLY GOSSIP.

At a Special General Meeting of the Members of the Royal Institution, held at the house of the Institution, on Monday last, the Prince of Wales was elected an Honorary member and the Vice-Patron of the Royal Institution.

Mr. J. H. Foley, the sculptor, has been elected a Member of the Belgian Academy of Fine Arts.

Already an economical application of Mr. Graham's ingenious process of dialysis has been discovered, and tried, with an interesting result, in the utilization of brine. In the curing of meat there commonly remains a quantity of waste brine; but Dr. Marcet, by dialysing this refuse liquor, separates the salt from the juice of the meat, and the latter remains fit for use as an article of diet. Separated in quantities on a great scale, it might be converted into soup for prisons and penitentiaries, or for half-starved cotton-spinners in Lancashire. From this beginning it would, perhaps, be safe to predict that dialysis will prove as valuable to commerce as to science.

A rumour, of which confirmation is promised, has reached us, that the skeleton of a crocodile has been discovered in the Old Red Sandstone in the neighbourhood of Elgin. If true, it marks another epoch in geological science, as the fossil remains hitherto found in that formation have been of creatures much lower in the scale of organization.

We have all heard of the "insignificant little man" who was pointed out at a scientific conversation as the "greatest dipterist in Europe." Mr. Galton, in his paper 'On Cyclones,' of which we gave an abstract last week, introduces the term "cyclonists." Are we to have a class of distinguished cyclonists, who will discourse learnedly about the weather at meetings of a Cyclonic Society?

The author of 'A New Pantomime' wishes to make the following explanation in our columns, to which we have no objection:—

"Temple, Jan. 21, 1863.

"I am quite sure you will not be sorry to correct an error into which the writer of your criticism on my poem 'A New Pantomime' has fallen; and as the article is harsh enough, it is as well that it should at least be accurate. Gretchen, the heroine of the Pantomime, is not, as your critic supposes, the ideal creation of Goethe, kidnapped by me from his drama, but is the real flesh-and-blood Gretchen whom that eminent person, in his Autobiography, names with those other females whom he either flirted with, deceived or seduced in the course of his youth. No one can tell which of the three he means. She is the only woman who seems to have ever truly touched his heart, and it was to commemorate her name and memory that he selected Margaret (Gretchen, Peggy) as the heroine of his 'Faust.' He devotes a good deal of his reminiscences to her; and I would respectfully recommend your critic not again to write about Goethe until he has first read that Life, when he may, perhaps, form a different estimate both of myself and of my Pantomime, and correct some others of his views equally erroneous with that which I have pointed out.

"E. V. KENEALY."

Messrs. Tinsley Brothers have in the press 'Abeokuta, and an Exploration of the Cameroon Mountains,' by Capt. Richard F. Burton,—and 'Wanderings in West Africa: from Liverpool to Fernando Po,' by a F.R.G.S.

Among the numerous schemes for improved communications in the metropolis, is one for a railway, beginning near the Shadwell Station of the Blackwall line, to pass through the Thames Tunnel to Rotherhithe. It is proposed to connect the South Thames system of railroads by this means at the east end of London with those on the north: completing the circle now formed by recently-opened works of the same character.

A first attempt has just been made in Germany to naturalize the Spenserian stanza. Prof. Bodenstedt has narrated the second marriage of the Czar Ivan the Terrible in that metre; and though the quantity of double rhymes necessary in German poetry has a very different effect from the verse of 'Childe Harold' or 'The Faerie Queene,' the success of the experiment is perfect. We regret to hear, in the same letter which conveys us this announcement, that the amenities of literature are not observed in Germany as we expect them to be in a community so purely philosophic, and that a new chapter may be added to the 'Quarrels of Authors' from cultivated Munich. The ill feeling of no less a poet than Herr Geibel towards his colleague Prof. Bodenstedt has shown itself in ways that can hardly be explained by any rules of open warfare, as they are beyond all bounds of courtesy or literary honour. A very painful impression has been made on all friends of such poetic names by the conduct of Herr Geibel in disregarding the unimportant vote of the Chapter of the Maximilian Order, and persuading the King of Bavaria to interpose, as he had never done before, between the Chapter and their nominee. Even in the old days when poets abused each other like pickpockets, such a course would have been considered dishonourable, and we trust German literature will make haste to wipe off the stain.

A scheme is on foot to establish a new park at the west end of Edinburgh; liberal support is offered, and the cost estimated at 30,000*l*.

'Highlanders at Home' is the title of a book, published by Messrs. Dean & Son, containing drawings of those natives, by Mr. R. R. M'Ian, and descriptions of the manners and customs they illustrate, by Mr. J. Logan. These descriptions are amusingly done, considering their purely local interest. Their spirit may be appreciated when it is seen that a fellow is spoken of as "a stern Highlander" whose conduct in these days, as described, seems to be that of deserter, idler and masterful ruffian, if not thief. It is too late to represent such scamps under a sentimental light. Rob Roys should pick oakum. As to the drawings, they are flimsy, but good enough for the purpose; as reproduced, however, they are coarse. Another peculiarity of their reproduction is printing in plumbago, the result of which is that all the shortcomings of black-lead pencil drawings are present, and you have to turn and twist the book about to avoid the shining surface; the drawings are not worth so much trouble.

Messrs. A. Strahan & Co., of London, have published a little gift-volume for this and all seasons, containing "Wordsworth's Poems for the Young," so entitled, being a selection from the poet's works of such as are most suitable for juvenile readers. Of course, this comprises some of the best he produced. The selection has been made with much taste and judgment, excluding all those psychological studies which are obviously such, and not a little daunting to the youthful student. These are illustrated by forty woodcuts from the pencils of Messrs. J. Macwhirter and J. Pettie, with a single charming little vignette, by Mr. Millais, showing a dainty damsel of seven years old, reading. The sketches by the first-named artists are mostly landscapes appropriate to the themes; some are very prettily done, as also are a few pleasant figure-subjects by Mr. Pettie, who surpasses Mr. Macwhirter in these, as much as he is surpassed by him in the landscapes.

Is it unlawful to make and sell photographic copies of a print from an engraved plate in which there is a subsisting copyright, the consent of the proprietor of such copyright not having been obtained for making and selling those copies? In the case of *Gambart v. Hall*, which is an action for the alleged infringement of the plaintiff's copyrights in two engravings, 'The Light of the World' and 'The Horse Fair,' by making and selling photographic copies of them, the verdict was for the plaintiff; leave being at the same time reserved for the defendant to raise the above question of law for decision upon the Engraving Copyright Acts. Mr. Coleridge, Q.C., accordingly, this term, moved for and obtained a rule nisi, upon the part of the defendant, to enter a nonsuit, upon the ground

that the statutes in question do not preclude the public from making and selling photographic copies of prints from copyright engravings without the consent of the proprietors of such rights. This point, which is of great importance to the publishers of prints and to photographers, will, therefore, soon be argued before, and decided by, the Court of Common Pleas.

The earliest instance which appears to have occurred of any litigation arising from a claim to copyright seems to be that which, as related in Baldenucci's 'Dell' Arte dell' Intagliare in Rame,' p. 21, took place in the commencement of the sixteenth century, between Albert Dürer and Marc Antonio Raimondi. The former designed, executed and published a series of woodcuts from the Life of Christ. Marc Antonio, after he settled in Venice, not only took the liberty of closely imitating upon copper the prints from Albert Dürer's woodcuts, but also the well-known monogram upon them of that great artist; and impressions from these spurious copies were extensively sold as his productions. Upon this fraud coming to the knowledge of Albert Dürer, he went to Venice and took proceedings there against Marc Antonio; but the only redress the former could obtain was a decree that Marc Antonio should no longer upon his works use the monogram of Albert Dürer.

By recent accounts from Tasmania, we find that the Government of that country have voted 3,000*l*. for the purpose of investigating the mineral and metalliferous resources of the Macquarie Harbour country. The investigation will be entrusted to Mr. Charles Gould, the Government geologist, son of the eminent ornithologist. It is the universal feeling in the colony that no gentleman is better qualified for this task, Mr. C. Gould having already, by his geological explorations, rendered great service to the colony. Mr. C. Gould, we may add, is convinced that the country he is about exploring is extremely rich in minerals. Mr. Gould, we observe, will be provided with a complete photographic apparatus, by which means we shall be put in possession of the physical aspects of this interesting district of Tasmania, which is a new country.

By a letter recently received from South Australia, we learn that Mr. George French Angas is on the point of returning to England with his remarkably fine and extensive collection of shells, the result of his labours in that part of the world during the last thirteen years, and which is well known in the colony as the Angas Collection.

Twelve years ago the first emigrant ship sailed into Lyttelton Harbour, province of Canterbury, New Zealand. Now that colony can boast of its towns, its electric telegraph, a railway in progress, and a bishop. And yet more, it has established a Philosophical Institute, of which, as we see, Mr. Julius Haast, Government Geologist of the province, is president. His inaugural address is now before us, and we gather from it that a good museum of native products of all kinds, endeavours after acclimatization of foreign plants, fish and animals, and the formation of a good library, are to hold the first place in the labour and consideration of the youthful Institute. As they purpose to gather books by an exchange of publications, we infer that they intend to publish their own *Transactions*, so that we may some day see the Philosophical Institute of Canterbury on the exchange list of the Royal Society of London. In a country where so much remains to be explored and so much is comparatively new, we may expect the formation of a museum to be carried on with spirit. We notice that Mr. Haast mentions the great birds of the Dinornis family, which are among the most interesting questions of natural history. It appears that two species new to science have recently been described. And to quote his own description, "another still larger Kiwi, provisionally named *Apteryx maxima*, and called Roa by the natives, still exists in the western mountains of the island. Living specimens of this bird, which is as large as a turkey, have not yet been procured; though," adds Mr. Haast, "I observed its tracks in the fresh-fallen snow, and heard its call during the night." A still larger Kiwi, *Palapteryx ingens*, is

believed from "auricular evidence" to be in existence in the great beech forests which cover for many miles the slopes of the New Zealand Alps. The railway above referred to,—from Port Lyttelton to Christchurch,—will be carried by a tunnel through the rocky wall of Banks's peninsula; and the colonists deserve praise for undertaking it on their own resources.

Prince Demidoff, well known for his munificent patronage of Art in various ways, particularly for publishing at his own cost large illustrated works of travel and archaeology, is now adding another to the number. In this we have nothing of Russia or the adjacent territories, the scene being laid on the shores of the Mediterranean. The title of this new work is 'La Toscane, Album Pittoresque et Archéologique'; and the first part contains eighteen large views of places in the island of Elba. It has been some years in preparation, and is, as we are informed, to comprise about one hundred different subjects. The artist is André Durand, whose pencil was employed in the former works published by the Prince; but, judging from the plates in this first part, we cannot congratulate him on his pictorial effects. The landscapes have a hard look; and in the views of the sea the water has more the appearance of a "lozengy" wooden floor, than of the translucent rippling brine. It is possible, however, that the lithographer, and not the artist, may be responsible for this disappointing result. In justice to the Prince we mention that, as usual, he is presenting copies of the work to the principal libraries of Europe.

We hear, from Archangel, that Capt. Krusenstern, of the Jernack, has returned thither in safety, after having been given up for lost some time. He was one of the expedition sent by the Russian Government to explore the mouth of the Yenisei, in the Polar Sea. The other ships and crew of the expedition had returned months ago, finding the obstacles on their way altogether insurmountable. The Jernack also was stuck in the ice, only a few miles from the mouth of the Yenisei. Capt. Krusenstern and his crew reached the land by leaping from one block of ice upon another, doing battle bravely with all the horrors of the northern regions. Arriving at the shore, after infinite toil and wearied to death, they met with a party of Samoyedes, who at first fled, seemingly terror-stricken by the sight of these curious strangers. The interpreter, however, succeeded in making them understand the forlorn situation of the strange visitors; now they received the exhausted travellers hospitably, and at last helped them, by the loan of dogs, reindeers and horses, to return to Archangel.

SOCIETY OF PAINTERS IN WATER COLOURS.—WINTER EXHIBITION OF SKETCHES AND STUDIES by the MEMBERS, NOW OPEN, at their Gallery, 5, Pall Mall East, from Nine till Dusk.—Admission, One Shilling.

JOS. J. JENKINS, Secretary.

WINTER EXHIBITION, 120, Pall Mall.—The TENTH ANNUAL WINTER EXHIBITION OF CABINET PICTURES by living British Artists, is now OPEN daily from 9-30 A.M. to 5 P.M. Admission, 1s. Catalogue, 6d.

NOW OPEN.—THE ART EXHIBITION for the RELIEF OF THE DISTRESS in the COTTON DISTRICTS.—6, Suffolk Street, Pall Mall. Open from Ten till Four.—Admission, 1s.

F. W. DICEY, Hon. Sec.

PHOTOGRAPHIC EXHIBITION.—THE NINTH ANNUAL EXHIBITION OF THE PHOTOGRAPHIC SOCIETY OF LONDON is OPEN DAILY, from Ten till Four, at the Gallery of the Society of British Artists, Suffolk Street, Pall Mall East.—Admission, 1s.

THE GEORGE CRUIKSHANK GALLERY, EXETER HALL, contains a Selection of over a Thousand of his PROOF ETCHINGS, SKETCHES, &c. embracing a Period of upwards of Fifty Years; together with THE WORSHIP OF BACCHUS.—Open daily, from Ten to Five o'clock.—Admission, One Shilling; from Half-past Seven to Half-past Nine in the Evening, Sixpence.

SCIENCE

SOCIETIES.

ROYAL.—Jan. 15.—Major-Gen. Sabine, President, in the chair.—The following papers were read:—'Notes of Researches on the Poly-Ammonias; No. XXI. Secondary Products formed in the Manufacture of Aniline,' by Dr. Hofmann.—'On the Form of Crystals of Peroxide of Benzoyl,' by Mr. W. H. Miller.—'On the Synthesis of Leucic Acid,' by Dr. Frankland.—'On the Artificial Formation of Fibrin from Albumen,' by Mr. A. Smee,

jun.—'Note on the Spectrum of Thallium,' by Dr. W. A. Miller.

ASIATIC.—Jan. 19.—The Right Hon. Lord Strangford, President, in the chair.—A. M. Dowleau and Coomarasawmy Moodeliar, Esqs., were elected non-resident Members.—The substance of a paper was given, by W. Spottiswoode, Esq., 'On the Indian Astronomical Treatise, the *Sūrya-Siddhanta*,' pointing out more particularly the difference in conception between the Hindú and Greek epicycles that are made to regulate the motions of the planets in the two systems.—Prof. Goldstücker then read a paper in which he establishes, by means of the actual application of certain rules of Sanskrit Grammar, by Patanjali, in speaking of *Kátáyana*, that these two commentators of Pánini were contemporaries. He had previously established the thesis that Patanjali lived in about B.C. 140-120; and he now mentioned that the two commentators must have been long posterior to Pánini.

SOCIETY OF ANTIQUARIES.—Jan. 15.—W. Tite, Esq., M.P., V.P., in the chair.—Mr. E. Peacock laid before the Society an object found in a gravel-pit at Yaddleshorp, in Lincolnshire, on which he was desirous of ascertaining the opinion of the Society. Mr. Evans believed it to be a natural formation, in which the Director concurred.—Mr. B. B. Woodward exhibited, by permission of Mr. S. K. Wilson, a gold finger-ring with a piece of ass's hoof inside, and the figure of a bull incised as the seal.—Mr. Howard exhibited a seal of Isabel of France, attached to a deed relating to a chantry at Coventry, and bearing date 17th January, 13th Edw. III.—The Director exhibited a bronze key found in the Thames.—Sir W. B. Smijth exhibited, through the Director, some very interesting Roman remains found at Theydon, in Essex.—Mr. B. Botfield, M.P., laid before the Society fragments of a British urn or urns found on his own property at Norton.—M. J. Beldane communicated a paper 'On Royston Court House, the Palace of James I.,' illustrated by a plan of the building.

BRITISH ARCHAEOLOGICAL ASSOCIATION.—Jan. 14.—H. Syer Cuming, Esq., in the chair.—T. S. Noble, J. Milligan, jun., and A. Cope, Esqs. were elected Associates.—Presents were received from the Royal Society, the Canadian Institute, the Sussex Archaeological Society, and Dr. De Berlanga, of Malaga.—Mr. Durden exhibited the handle of a large Roman vessel in bronze. It is of elegant design, belonging to a period not later than the first century of the Christian era, and was exhumed at Hod Hill, Dorset, in March, 1862. Several Roman coins were obtained at the same time.—Mr. C. Ainslie exhibited a cast of the interior of a *Cyphosoma Konigi, Mant.*, found in making an excavation at Westminster, which had probably been employed as an amulet by some ancient inhabitant of Thorney Island. This exhibition gave rise to a discussion as to the occurrence of Fossil Echini in early sepulchral interments, a subject deserving of more particular consideration.—Mr. Ainslie also exhibited two iron arrow-heads found in the Thames, one of the Norman era, the other of the fifteenth century.—Dr. Kendrick exhibited electrotypes of medallion plaques of the sixteenth century, representing Vulcan, the Rape of Europa, &c. Two were the work of Bernardo Castelli, illustrative of Tasso's 'Gerusalemme.'—Mr. Baigent forwarded a small shield found in December last at Micheldever, Hants. It is of copper, charged with the Royal arms of England. The red enamel is still visible, and it had originally been gilt. It is presumed to be of the time of Edward the First (1272-1307).—Sir H. Halford, Bart. forwarded, through the Treasurer, some interesting letters relating to Charles the First, detailing some particulars from the storming of Leicester to the battle of Naseby, and described some horse-trappings and other articles belonging to the King, now in the possession of Sir H. Halford. This communication will be printed, together with Mr. E. Levien's notices of unpublished documents relating to the Captivity of Charles the First.—The remainder of the evening was occupied in the reading of a paper by Dr.

Palmer, of Newbury, 'On Discoveries made on the Site of a Roman Villa at Well House, near Marlstone, Berks.'

NUMISMATIC.—Jan. 15.—W. S. W. Vaux, Esq., President, in the chair.—Mr. Venables exhibited some Roman silver coins, consisting of Constantius II., Julianus, Valens, and a fine silver medallion of Gratian, with the reverse legend, *VIRTUS EXERCITVS*.—Rev. Asheton Pownall exhibited a British gold coin, belonging to Dr. Perry, with the legend, *VOCORI ON*: it was in poor preservation.—Mr. Akerman exhibited a gold coin of Cunobeline and a sceatta.—Mr. Frederick Pearson exhibited two Chinese medals and a five-peseta piece, struck in 1809 by the Junta of Spain at the time of the French invasion.—Mr. Wilson exhibited a collection of Chinese coins found at Canton some years since: they consisted of the Emperors Hang He, Keenlung, Keeking and Tao Kwang.—Mr. Evans read a paper 'On a Find of Roman Coins at Luton, Beds., on the Estate of J. Shaw Leigh, Esq.' They consisted of denarii and small brass from the time of Caracalla to that of Claudius Gothicus, and must have been deposited in 269 or in the autumn of 268. The most curious feature connected with the find is the absence of any coin of the usurper Tetricus.

ZOOLOGICAL.—Jan. 16.—G. Busk, Esq., in the chair.—Mr. A. R. Wallace read a paper 'On the Ornithology of Bourou, as investigated by himself during two months' stay in that island.' The total number of species of birds obtained was sixty-six, of which seventeen appeared to be undescribed. The general character of the Ornithology of Bourou was essentially Moluccan; not a single Celebesian form occurred. This contrasted strongly with the Avi Fauna of the Sulu group, in which the greater part of the species met with were common to Celebes.—Dr. Günther exhibited a new form of venomous serpent, discovered by Capt. R. F. Burton in Western Africa, for which he proposed the name of *Peechlostolus Burtonii*, after its discoverer. Dr. Günther also read a second communication on the Chars of Great Britain, in which he described a new species of this group of fishes from Lough Esk, in Ireland, and proposed to call it *Salmo Colii*. Dr. Günther likewise read a note on the synonymy of a venomous serpent from Australia, of the genus *Diemannia*.—A letter was read from Capt. Speke, commanding the East African Expedition, relating to the zoology of the country traversed during his progress towards Lake Nyanza.—Dr. Sclater called the attention of the Meeting to two fruit-eating pigeons, from the Samoan Islands, in the Society's Menagerie (*Carpophaga microcera* and *Ptilopus faeciatius*), which were new to the collection.—Mr. W. B. Tegetmeier exhibited a singular variety of the domestic fowl, in which the webs of the feathers were all broken up into minute filaments.—A paper was read by Mr. J. A. Johnson, containing descriptions of five new species of fishes recently obtained at Madeira by that gentleman, amongst which was a new form of Scopelidae, proposed to be called *Neoscopelus Atlanticus*.—Mr. B. Leadbeater exhibited specimens of eggs of a species of Rhea, supposed to be those of Darwin's Rhea, collected by Mr. Goodlake in Patagonia.

SOCIETY OF ARTS.—Jan. 14.—The Hon. and Rev. S. Beut, Member of Council, in the chair.—The paper read was, 'The Application of Photography to the Magic Lantern Educationally Considered,' by Mr. S. Highley.

SYRO-EGYPTIAN.—Jan. 13.—W. H. Black, Esq., in the chair.—The Rev. J. Mills read a paper 'On a Manuscript Copy of the Samaritan Pentateuch,' which he exhibited. Mr. Mills had remained for some months with the Samaritans at Nablus, in 1860, and being the first non-Samaritan ever allowed to examine the celebrated scroll believed by them to be written by Abishma, the great-grandson of Aaron, gave a brief description of that manuscript. The one he exhibited to the Meeting was kindly lent him by Annam, the present Samaritan priest, and which he is now collating with the Hebrew text and also with the Samaritan text as

published in Walton's Polyglot, with the view of its being published. It is a manuscript of the fourteenth century, transcribed from the original scroll for the private use of Tabiah Ben Itchak, a priest of Nablus, as stated by the scribe at the end of the manuscript, and which has been ever since preserved in the priest's family. Mr. Mills dwelt at some length on the peculiar characteristics of the Samaritan manuscripts of the Law, and the uncommon accuracy with which they are copied. The diacritical signs made use of in the manuscript were described; and having pointed out its various divisions and discussed its documentary character, the paper concluded with an exposure of Gesenius's Essay on the Samaritan Pentateuch—the reckless assertions made by that great lexicographer for the purpose of damaging the character of this class of manuscripts. Several fragments of ancient Samaritan manuscripts were also exhibited to the Meeting.

MEETINGS FOR THE ENSUING WEEK.

- MON. Actuarial, 7.—'Columnar Method of Calculation of Survivorship Annuities,' Mr. Meikle.
- Entomological, 7.—Anniversary.
- Architects, 8.
- Geographical, 8.—'Route to Siam across Isthmus of Kra,' Capt. Fraser and Forling; 'Island of Tsusima,' Mr. Oliphant.
- TUES. Engineers, 8.—'Railway Telegraphs,' Mr. Preece.
- Royal Institution, 3.—'Animal Mechanics,' Prof. Marshall.
- Zoological, 9.—'New Australian Mammal,' Mr. Krefft.
- WED. Society of Arts, 8.—'Electrical Communication between Great Britain and America,' Mr. Massey.
- Archæological Association, 8.—'Ancient Literary Frauds,' Mr. Madden; 'Sepulchral Discoveries, Stapleford Tawney Church, Essex,' 'Roman Remains, Coombe Wood, Bath,' Mr. Byer Cuming.
- THURS. Royal Academy, 8.—'Architecture,' Prof. Smirke.
- Royal, 8.
- Royal Institution, 2.—'Chemical Affinity,' Prof. Frankland.
- Antiquaries, 2.
- FRI. Royal Institution, 8.—'Points of Contact between Science and Art,' Cardinal Wiseman.
- SAT. Royal Institution, 3.—'Life and Death,' Mr. Savory.

FINE ARTS

ART IN BERNERS STREET.

AN Exhibition, containing a few creditable pictures and drawings, has been opened (second year) at No. 14, Berners Street. Of these the best are as follows, mostly the works of young artists:—'A Study' (95), by Mr. De Morgan, a girl embroidering, is full of originality and dextrous painting; in tone, flesh-tints and surface this is valuable; the shadows are rather dirty; the features, as of a portrait, need refinement, as their character does not necessarily imply vulgarity.—Mr. J. Campbell's 'Cellarman' (100) we have seen before: there is much to admire in it.—Mr. Storey's 'Twilight' (86), three ladies walking in a garden, would, so good is its rendering of tone and feeling, be admirable if it were better drawn and less sentimental.—'The Head of a Child' (78), Mr. T. Morten, is largely and solidly handled, if dirty—the result of carelessness.—Mr. T. M. Carrick's 'Rocky Seashore' (72) has, like the last, much feeling for nature, carelessly expressed; the water is well rendered.—A lady in antique costume (unnumbered), by Mr. V. Prinsep, though but a sketch, shows rare artistic power that might be better employed. Mr. L. W. Thomas's (unnumbered) 'Coast Scene,' a sunlight on the sea, renders the effect charmingly, being unusually good and bright in colour.—'Ulleswater' (143), Mr. G. Mawley, though thin and a little woolly in rendering of foliage, evinces taste for colour and recognition of nature.—Mr. Bridell's 'Entrance to the Via Mala' (143), the rock-cleft showing a bar of intense blue sky, is dashingly sketched, and effective, if not heedful.—Mr. E. J. Poynter's 'Egyptian Water-Carriers' (135), two half-lengths of stately women bearing jars of the old shape upon their heads, which heads are of the old type in form, but occidental in colour, are finely drawn, apt in expression, and indicate artistic ability in the painter.—Mr. S. Solomon rarely fails to mark his singular powers and intensity of feeling upon all we see from him: here are two drawings, such as fifty years ago would have roused the cognoscenti to admiration; they make even now old-fashioned observers feel there is something in Art beyond their rule of criticism. The first of these is 'Shadrach, Meshach and Abednego' (129). The three stand hand-clasped and fearless, shielded from the furnace-heat between the wings

of the angel whose tall head overlooks them. There is no attempt at imitating fire in this design, but its extraordinary force arises from the less vulgar and far more intense means of expression and design in the best sense of that word. The next design represents with much tenderness and grace of character 'The Meeting of Isaac and Rebecca': he takes her by both hands and salutes her with the kiss. These are singularly original works.—Mr. G. P. Boyce is another painter of ability. His 'Edge of the Desert' (108) gives admirably the vastness of the place, and in colour looks like a transported piece of Egypt; so also does the 'Gibel Mokattam, from the Rubbish Hills, Cairo' (120); it is a placid unbroken evening, just when the sun has turned below the edge of the Egyptian world; golden light, reflected from the sky, lingers softly, not in the coarse glare so commonly represented in Oriental phases of like character, but solemnly and delicately, against minarets and low white cliffs, flushed with grave splendour and saddened with purple shadows. The whole heaps, the cast-out débris of a falling metropolis, that are known as the Rubbish Hills, lie here in a broad shade, so complete, that their forms are absorbed and their broken surface only indicated by the devious pathways across them, that, being differently coloured, show themselves. Loneliness and ruin are emphasized by a figure hurrying along, whose bright blue robe tones all the purple, orange, vermilion and grey charmingly.

FINE-ART GOSSIP.—Among Mr. Stanfield's contributions to the forthcoming Royal Academy Exhibition will be a picture representing the condition of some part of the fleets on the day after Trafalgar—a subject that has been in the mind of the artist for many years. The scene is near the locality of the battle, the weather a fresh gale, such as took effect at the time; along the distance of the picture is the low coast of Spain, a watch-tower, presumably of Cadiz, marking a point of land. Near the foreground rides a dismasted and captured Spanish war-ship, the Union-Jack hoisted above her taffrail surmounting the flag of Spain; she has two anchors out by the bow, and rolls heavily, seeming to drag them, showing her decks to us loaded with wreckage and lumber from aloft as she lies heeling over to starboard; a wave has struck her on the port-bow. Between this capture and the land, so as to be handy to prevent her going ashore if the anchors do not hold, lies an English ship of lighter draught. In the mid-distance some other craft are seen making their way towards Gibraltar.

Mr. E. Davis desires us to say that his statue of Wedgwood has not yet been inaugurated at Stoke.

Comprised in the Photographic Society's Exhibition of this year will be found several attempts to utilize the practice of photography to artistic purposes, and afford a substitute for hand-skill in the production of plates that may be used for printing from, in place of engraving. Among these are examples of the processes invented by M. Lemerrier in litho-photography, whereby transcripts are said to be obtainable direct on stone from an ordinary negative; also others, to the same end, by M. Poitevin. Perhaps the most remarkable of this class of subjects are the heliographic or photographic etchings on steel, invented by M. Charles Negre; several specimens, not only of impressions resulting from this gentleman's system of operation, but of the plates themselves whence such impressions have been taken, are to be seen: the last resemble unusually sound and broad lithographic drawings, having withal a firmer and brighter texture—especially observable in a clear rendering of shadows on the objects represented that cannot but be of great value should the system be found commercially useful. These impressions represent, for the most part, architectural details and carvings—very good subjects for an experiment. Quite equal in interest to these, and in their charming fidelity placed beyond question of delightful usefulness, are some extraordinary examples of success in photographing upon enamel: the impression of a portrait, of which there are many here, or other

subject, being obtained upon enamel, the same may be fused at once into a transcript perfectly indestructible in its own nature; or it may be painted upon, as seen here, in the manner of an ordinary enamel, and afterwards fused. We are bound to say that the silly practice of painting on photographs seems in this case to be less objectionable; at any rate, the results are obtained in a less offensive manner than that of the tawdry "coloured" photographs. Neither are these open to the challenge in taste as those photographs on semi-transparent glass are when they show opaque examples transparently. M. Lafon de Camersac is the inventor of this novelty. M. Bertsch's automatic arrangement of lenses, which adapts itself to a fixed focus, is one of the wonders of photographic practice that cannot but commend itself to all who observe it; here are some enlarged results of its working. M. Henri Corbin's dry collodion paper, which is of course portable, and will keep fit for use for six months at least, must be a real blessing to travellers, who may by its aid dispense with a great deal of baggage, that enemy to the photographer. Architectural students should not omit to avail themselves of the magnificent volume of photographs taken from details of the Cathedral of Amiens during the recent "restorations," and exhibiting the sculptures of that glorious gallery of Art in many instances in their state ere any other "effacing finger" than that of Time had been laid upon them. Taken from various points of view offered for this occasion only by the erection of the scaffolds used during the work of restoration, these productions are unparalleled in interest. The man who does not know what Gothic sculpture was, or one who doubts its value, will do well to look at these; they are the work of M. M. Davette and Romanet. Here should also be noticed the productions in the carbon-process by M. Robert, of Sèvres (Director of the Imperial Factory), where the same example has been reproduced with singular success. M. Camus's Egyptian views, photographs on the largest scale of temples, propylons and ruined colonnades, especially one of the Hypethral Temple at Philæ, will be appreciated; as will be M. Chernay's copies of the Mexican antiquities, made in danger of his life from Indians.—M. de Londre's waxed paper productions, remarkable for clearness as they are,—and last, not least interesting, the photographs on glass by M. M. Ferrier, père, fils, et Soulier, some of whose copies of Alpine nature enchain the observer.

MUSIC AND THE DRAMA

ROYAL ENGLISH OPERA, Covent Garden, under the management of Miss Louisa Pyne and Mr. W. Harrison, Sole Lessee.—On MONDAY, January 26, and Friday, 30th, Balfe's Grand Opera, SATANELLA.—TUESDAY, 27th, and THURSDAY, 29th, Wallace's brilliantly successful Opera, LOVERS' TRIUMPH.—WEDNESDAY, 28th, and SATURDAY, 31st, Howard Glover's Popular Opera, RUY BLAS.—Every Evening, the Grand, Original, Zoological, Comical Christmas Pantomime, written by H. J. Byron, entitled HARLEQUIN BEAUTY and the BEAST, or, the GNOME QUEEN and the GOOD FAIRY. The Grand Transformation Scene, MOONBEAM and SUNLIGHT; or, the DESCENT OF MORNING'S FIRST RAY, invented and painted by W. Calloot.—NOTICE.—A Morning Performance of the new Pantomime every Wednesday at Two. Carriages to be in attendance at half-past four. N.B.—Children under Twelve Years of age, admitted at half price to the Morning Performances to all parts of the house except Pit, price 1s. 6d. Private Boxes, from 10s. 6d. to 4l. 4s.; Orchestra Stalls, 10s.; Dress Circles, 5s.; Upper Boxes, 4s.; Amphitheatre Stalls, 2s.; Pit, 2s. 6d.; Amphitheatre, 1s. The Box-Office open daily, from 10 till 2. No charge for booking or fees to box-keepers.—Doors open at Half-past Six. Overture commences at ten minutes to Seven.

MONDAY'S POPULAR CONCERT.—When Schumann's Pianoforte Quintett was first played here, by Mdlle. Claus, some years ago, it produced little or no effect. In the interval, the advance of the composer's popularity in Germany has been steady, rapid, and (as we have said) startling. Our own impressions are, that whatever be the amount of aspiration conceded to Schumann, in his best works, he was deficient in fancy, and audacious, not only in taking, but also in making, those liberties, which can but be pardoned in consideration of consummate genius. The immodesty of eccentricity is a subject well worth treating. If the leading phrases of the four movements of this Quartett be analyzed, three (that of the slow movement reserved) will be found heaps of notes, in themselves characterless; not so the subjects of Haydn, Mozart, Beethoven, Weber, Mendelssohn (in his best writings). That

the *allegro* is meant to start vigorously; that the second subject is intended to flow; that the *scherzo* is built on the scale; and that the *finale* is based on an idea of incessant, animated motion,—are all so many perceptible facts; but not one idea referred to seems to us to have a spark of divine fire. Then, as in the close of the divisions of the *allegro*, as in the midst of the movement *alla marcia*, interest is checked by perverse little episodes, to our uninitiated apprehension having no keeping or connexion with the remainder of the movement—varying it, no doubt, inasmuch as dislocation is variety. Need we cite how different are the introduction and employment of Beethoven's episodes? Further, Schumann's taste in harmony is, throughout, impure—showing a perverse leaning to the use of those extreme chords and suspenses which are useful to give piquancy and heighten effect, but are no more admissible when employed as the universal medium of carrying on a movement from point to point than would be Cayenne pepper showered over a bill of fare from the soup to the dessert. So that, to sum up, our impressions stated last week have undergone no change in consequence of Monday's experience.—Schubert's stringed Quintett is an interesting, though an ill-proportioned work—full of charming ideas, and, in the first two movements especially, happy and graceful effects—ill set and elaborately drawn out to a length, owing to which no small amount of charm is lost.—Both Quintetts were played with spirit—Herr Pauer being at the pianoforte; but M. Sainton must watch his intonation, which once or twice of late has not been altogether satisfactory. The vocal performers were Mr. Sims Reeves, who is in excellent voice and spirits, and Miss Banks, who got her usual *encore* in Mr. A. Sullivan's buoyant and delicate *Ariel* song.

MUSICAL AND DRAMATIC GOSSIP.—Besides the mere pleasure which the music, as music, continues and will continue to give to the English ear, there is many a pound's worth of instruction to be got for the English musician out of a shilling volume, containing *Twelve of Sir Henry Bishop's Glees* (Boosey & Sons)—at half the price that is charged for many a trashy ballad not worth singing—for many a lame polka that is not worth dancing—for many an overwrought transcript of some opera-tune not worth transcribing. The edition is neatly brought out; the pages are very little crowded.—That which is to be pondered, as matter of instruction, may be briefly indicated. First, the superior quality of the text preferred by Sir H. Bishop, and that in a day when the Vauxhall ballad was not yet extinct. He was at his best when setting words by Shakespeare, Ossian, Joanna Baillie: under those circumstances he was rarely commonplace, never vulgar. The modest ease with which voices were treated by him (a fair reference being paid the while to expression) may be also recommended to all young writers. The writer had something of his own, but the originality was neither forced nor unpleasing: the ear was relieved from monotony without the teeth being set on edge. But this volume gives also an instructive example of Bishop's weakness and want of self-respect—defects which prevented his ruling his public, instead of being, as he was, tempted or dragged into false paths. What can be more foolish in taste than his appropriation of the cheery madrigal "Now is the month of Maying" as the second part of his setting of "Who is Sylvia"? The old "*ballet*" (we imagine it may have been danced as well as sung) loses much of its sprightly grace by the alteration of the words, and by the omission of the "*Pal-lal-la*" burthen. The adapter here proclaimed himself, by the proceeding, inadequate no less than irreverent. The sins of Bishop, in this matter, had no small part in strangling the growth of native opera; in corrupting our popular knowledge of foreign music; and in bringing into discredit on the Continent his own name, which ought to have been only honourably known there. It was so known, if the tale be true, that when Signor Rossini came to England, on his being introduced to Bishop, the composer of 'Il Barbiere' began at once to hum the melody of the round here printed—"When the wind blows."

The announcement of 'Athalie' and Mozart's 'Requiem,' performed yesterday week by the *Sacred Harmonic Society*, need not be followed by a criticism of works so thoroughly reliashed, when executed by a body of artists whose rule is excellence. The quartett of *solo* singers consisted of Miss Parepa, Madame Sainton-Dolby, Messrs. Montem Smith and Lewis Thomas.

Mr. Henry Phillips announces a farewell concert.

Among other candidates for public favour in London may be mentioned M. Jullien, who announces a dance-orchestra: after the fashion of that of his father.

M. Berlioz writes in favourable terms of the music of M. Semet's 'Ondine.' It is only fair to advert to this praise, after the censure registered a week ago.

There is a talk, says the *Gazette Musicale*, of reviving Gluck's 'Armide' at the Grand Opéra. This was next to an inevitable sequel of the success of 'Orphée' and 'Alceste': another proof of a fact which, stated in print a few years since, was ridiculed as if it had been an absurd paradox; namely, that Gluck's operas have never quitted the stage. They appear too sparingly, it is true, for the same reason that Shakespeare's tragedies are comparatively seldom seen. Where is the *Lady Macbeth*?—where is the *Cleopatra*?—where the *Lea*?

Madame Schumann is said to meditate playing in Paris,—also Mr. Aptommas, our harpist,—during the coming season.

'King Enzo' of Herr Abert, concerning which opera we heard good report in Germany a few months since, has just been given at Mannheim, it is said, with the greatest possible success.

Signor Mario, who, truth to say, has not been singing well, and therefore not frequently, at the Italian Opera in Paris this winter, has, whether wisely or unwisely, accepted an engagement at Barcelona, whither he will proceed in February.

'Philidor,' a five-act drama with a prologue, which has nothing to do with the great chess-playing musician, has been produced at the Théâtre de la Galté.

The new book for 'Coel fan tutte' at the Théâtre Lyrique is based on Shakespeare's 'Love's Labour's Lost.'—By the way, last week Madame Faure was printed by mistake for Madame Faure-Lefebvre, in specifying the cast.

Molière's birthday has been duly kept in Paris at the two classical theatres,—the Français and the Odéon: at the former by the performance of 'Le Misanthrope' and 'Le Malade Imaginaire;' at the latter, by 'L'École des Maris,' 'Le Malade Imaginaire,' and a new piece, 'La Fille de Molière.'

We have the following from Naples:—"Mdlle. Titiens has now been with us a fortnight, and has perfectly enchanted the Neapolitans. On her arrival there was a party prepared to oppose her; but all feeling of hostility has been crushed by her remarkable powers. Every one is compelled to confess that, for years, such a voice has not been heard in Naples. The *Giornale di Napoli*, which is the most moderate in its praise, says, 'Titiens, at San Carlo, and Ristori, at the Fondo, are the objects of the warmest sympathies of our public. Titiens has not an extraordinary volume of voice (!); but she sings exquisitely, has all the graces of elegance and of art, and, what is more, she acts and sings with feeling. Without denial, she is one of the most distinguished artists of singing of the day. Ristori, whose long career has secured for her only increasing honour, is always the Queen of the Italian Dramatic Theatre,—is the heiress of the talents of Marchionni and Talma.' As yet, Mdlle. Titiens has sung only in 'Lucrezia Borgia'; and it is to be regretted that the protracted engagement of Steffonone will probably deprive the Neapolitans of the great pleasure of hearing her in *Norma*. In a short time it is proposed to give the as yet unedited opera of Donizetti, 'Maria Stuarda,' under the Bourbons prohibited,—Steffonone to take the part of *Maria Stuarda*, and Titiens that of *Elisabetta*. There are rumours of intrigues to prevent the success of these two ladies in Donizetti's opera. We are shortly, too, to have a

Concert under the direction of Thalberg, who is desirous of introducing a young Neapolitan, Benjamin Cesi, a performer of great talent, and the only pupil to whom Thalberg has ever given gratuitous lessons. To the disgrace of Naples, however, be it said, so great a master found it difficult to obtain a room in a city of palaces and of magnificent public buildings."

MISCELLANEA

Cardinal Mezzofanti. — Your Correspondent "B." (page 94) cannot have read with attention the paragraph which he volunteers to criticize. The report of the Meeting of the Philological Society (*ante*, page 55) stated that Mr. Watts had laid before the Society a paper by Mr. Waterton, containing a list of eighty-four specimens of different languages which Cardinal Mezzofanti had in a manner adopted as a list of the languages known to him, and that Mr. Watts remarked, among other things, that in this list "some languages appeared to occur twice under different names," producing two or three instances. "B." first attributes to Mr. Watts the list which belongs to Mr. Waterton, and then produces as an observation of his own that "the same languages are quoted under different names," &c. He then complains that only three Italian dialects are reported in the list, "Italian (*i.e.*, Tuscan), Sicilian and Venetian," overlooking "No. 49, Sardinian," and appearing to overlook also that in a list of languages the introduction of dialects as on a par with them may be and has been objected to. "Mezzofanti, I believe," he proceeds, "never pretended to know the various dialects of China of which the names are (very confusedly and erroneously) given. He had studied the Mandarin,—that is, the Court or literary language; but when a friend of mine, who had been conversing with him in that dialect, broke off into Cantonese (one found in the list), Mezzofanti said, 'You are not speaking *Huan-hwa* (the literary tongue); but he was unable to carry forward the conversation in the Canton vernacular.'" The name of the Mandarin dialect, it may be remarked, is not *Hwan-hwa*, but *Kwan-hwa*, *Kwan* being the native Chinese word for what the Portuguese, and English after them, call Mandarin. With regard to the provincial dialects, this is but negative evidence on anonymous authority, and there is positive evidence entitled to more attention. Don Rafael Umpieres, Procurator of the Mission at Macao, declared, in a letter to Dr. Russell, of Maynooth, that he "frequently conversed with the Cardinal in Chinese, from the year 1837 up to the date of his death in 1849, and that he not only spoke the Mandarin Chinese, but understood other dialects of the language." (Dr. Russell's 'Life of Mezzofanti,' page 368.) The variety spoken at Macao is, of course, the Canton dialect. Mr. Harford, of Blaise Castle, author of the 'Life of Michael Angelo,' is another witness to the same effect. "He one day talked to me of the Chinese language and its difficulties," he says, speaking of the Cardinal, "and told me that some time back a gentleman who had resided in China visited him. 'I concluded,' he added, 'that I might address him in Chinese, and did so; but after exchanging a few sentences with me, he begged that we might pursue our conversation in French. We talked, however, long enough for me to discover that he spoke in the Canton dialect.'" (Dr. Russell's 'Life of Mezzofanti,' page 224.) Permit me to recommend to your Correspondent "B." to make himself acquainted, before writing further on Mezzofanti, with Dr. Russell's Life of the Cardinal, and with the three papers on the same subject read by Mr. Watts before the Philological Society in 1852 and subsequent years, in which he will find that most of the points have been fully discussed which he considers new. As it appears by "B."s remarks that he has enjoyed the singular advantage of personal acquaintance with both Mezzofanti and Rask, he would be able, no doubt, to communicate some interesting information by simply recording his reminiscences of those two illustrious men. W.

LITERATURE

The Pentateuch and Book of Joshua Critically Examined. Part II. By J. W. Colenso, D.D., Bishop of Natal. (Longman & Co.)

FINE times for unbelievers! We mean for those who reject altogether. Not only is the *odium theologicum* completely used up against heretics within the pale, so that none of it is now available for our Voltaires and Volneys, but its place is absolutely supplied by charity—of a certain sort. But woe to those who discuss without rejecting; woe to those (heretics) who *select*, and say this is true and this is not; woe to those who think that God's word can stand without man's help and man's additions; and, above all and through all, woe to John William, Bishop of Natal!

Just before the meeting of the Convocation, the heterodox bishop makes his second appearance. Many a shaft has been aimed at him since he issued his First Part; he has not lost his temper, and he has not modified his phrases. "The Bible," he says, "is not itself 'God's word,' but assuredly 'God's word' will be heard in the Bible, by all who will humbly and devoutly listen for it." This sentence is the text of the sermon, the battle-ground of the whole controversy. It matters little whether this or that position be the object of the current attack or defence. Waterloo will be remembered when Hougoumont is forgotten.

For ourselves, as our readers are aware, the interest lies in the great fight for the freedom of the clergy: we mean the liberty of discussing, out of the pulpit, the points of doubt and difficulty which, *as all know*, are widely felt among them. We look at Dr. Colenso's Preface. He replies to the charge that his objections are not new, by the simple statement that he never said they were. He then considers the announcement that the doctrine of literal inspiration is generally abandoned. On this point he cites, from a theological journal, "that the Scriptures cannot in any particular be untrue"; from a recent Oxford preacher, that "we must accept the whole of the inspired autographs or reject the whole, as from end to end unauthoritative and worthless": but his most striking proof that the doctrine of literal inspiration is now practically given up, stands as follows.

Our readers know that the supply of clergymen from the Universities is steadily and continuously falling off. The following is Bishop Sumner's account of the ordinations in 1841, 1851 and 1861, exhibiting the University men as compared in number with the *literate*s, as they are called, that is, men who have not received University education.—

| | Oxf. | Cam. | Darh. | Dubl. | Lit. | Total. |
|----------|------|------|-------|-------|------|--------|
| 1841 . . | 242 | 270 | 13 | 33 | 38 | 596 |
| 1851 . . | 215 | 222 | 23 | 41 | 113 | 614 |
| 1861 . . | 159 | 219 | 21 | 30 | 241 | 670 |

In 1841 the number of literates was one in fifteen of the whole: in 1861 it was more than one in three. Now, though it is probably true that the literate of 1861 is better educated in theology than the University graduate of forty years ago, it is equally true that the highest education of our day makes many turn away from the clerical profession who would once have sought it. We are therefore compelled to take, as our standard of future clerical teaching, the doctrines laid down in those great schools which seem destined to be the *almæ matres* of the bulk of our clergy. At St. Aidan's, Birkenhead, which already, according to Bishop

Sumner, educates five per cent. of our young deacons, the teaching is as follows:—

"The whole Bible, as a revelation, is a declaration of the mind of God towards his creatures, on all the subjects of which the Bible treats.....The Bible is God's word in the same sense as if he had made use of no human agent, but had himself spoken it, as we know He did the Decalogue. Modern science, with all its wonderful advances, has discovered not one single inaccurate allusion to physical truth, in all the countless illustrations employed in the Bible.....The Bible cannot be less than verbally inspired. Every word, every syllable, every letter, is just what it would be, had God spoken from Heaven without any human intervention.....Every scientific statement is infallibly accurate, all its history and narrations of every kind are without any inaccuracies. The words and phrases have a grammatical and philological accuracy, such as is possessed by no human composition."

Until we read this we scarcely knew how great was the value of Essayists, Reviewers, Colensos, and other misdemeanants. At a time when the higher education is leaving the Church, and the substitute is teaching such doctrine as we have quoted above, energetic and self-risking men are found who make a gallant attempt to save the body to which they belong from the inevitable destruction which awaits their Establishment if ever its pulpits should be wholly or mainly abandoned to the literates of St. Aidan's. By the time that most of our clergy are sciolists who teach that it was God himself who told Timothy to send Paul his cloak and his books in the very words He would have used from Heaven—"every word, every syllable, every letter"—by that time, we say, the dissenting minister will be the theologian to whom all persons of culture will look, whether for sound teaching or reasoning opposition. The parish priest will be the worshipper of relics, and not even of true relics. We do not believe that time will come.

Dr. Colenso is preparing a third part, which is to discuss the Book of Genesis. The present part contains his continued argument and final conclusion upon the Pentateuch and Joshua. Our readers begin to be familiar with the separation of the Old Testament into two different records, much intermixed, which are distinguished by the use of different names of God, Elohim and Jehovah. Taking the Pentateuch to be a collection of writings of a date long after Moses, Dr. Colenso considers the prophet Samuel as probably the Elohist writer, taking the Jehovistic additions to be enlargements, amendments and illustrations, by a subsequent writer. The following is the author's own summary of his results:—

"The following are the principal steps of the argument, as it has been developed up to this point.—i. There are different authors concerned in the composition of the book of Genesis, whose accounts in some respects contradict each other.—ii. One of these authors is distinguished by abstaining altogether from the use of the name Jehovah in that book, while the other uses it freely from the first.—iii. The former writer composed also E.vi, as all critics admit, and as internal evidence shows; and it would seem from this chapter that he designedly forbore the use of the name Jehovah, until he had announced its revelation to Moses.—iv. Either the name was actually made known to Moses, in the way described, or else, it is plain, the Elohist must have had some special reason for commending it in this way to the reverence of those for whom he wrote.—v. If the name was first revealed to Moses at this time, then the Jehovistic story, which puts it in the mouths of persons of all classes from the days of Eve downwards, cannot be historically true; and this involves at once the historical truth of all the other statements of the Jehovist.—vi. And this unreal cha-

racter of his story is further confirmed by the fact that, amidst the multitude of names which are given in the book of Genesis, down to the age of Joseph, though there are numerous names compounded with Elohim, there is not a single one compounded with Jehovah.—vii. But the impossibilities, which we have found existing throughout the whole story of the Exodus, are equally conclusive against the historical truth of the whole.—viii. We must return, then, to the other supposition, viz. that the Elohist had some special reason for commending the Name to the regard and veneration of the people.—ix. The most natural reason would be that he himself was introducing it, as a new Name for the God of Israel.—x. We find an indication of the fact that the Name did not exist before the time of Samuel, in the circumstance that, throughout the history in the book of Judges, there is no single name which can be appealed to with confidence as compounded with Jehovah, while there are names compounded with the Divine Name in the form of El.—xi. During and after the time of Samuel we observe, in the books known by his name, a gradually increasing partiality for the use of names compounded with Jehovah, while not one name of this kind occurs at such an age, as is inconsistent with the supposition that this name may have been introduced by Samuel.—xii. Hence arises the suspicion that Samuel was the Elohist; and the position he held, together with the circumstances of his time, and the accounts which are handed down as to his doings, and especially the tradition with respect to his historical labours, tend strongly to confirm this suspicion.—xiii. It is further confirmed, and, as it seems to me, confirmed almost to a certainty, by the fact that David, in his earlier Psalms, as Ps. li, Ps. lx, Ps. lxxviii, made little or no use of the name Jehovah, while in his later Psalms he seems to have used it more freely; and the same appears to be true of other Psalmists of that age.—xiv. We conclude, then, with some degree of confidence, that Samuel was the Elohist writer of the Pentateuch.—xv. Since the Jehovistic writer makes free use of the name Jehovah, he must have written in a later age than the early days of David, and not earlier than the latter part of David's life, when the name became more common, and names began to be compounded with it freely.—xvi. This is confirmed by finding that one Jehovistic passage, N. x. 35, is manifestly copied from a Psalm of David, the name Elohim, which David used, being changed to Jehovah.—xvii. But this later writer can hardly have lived long after Samuel, and the time of the introduction of the name Jehovah; since even he does not introduce freely into the story names compounded with Jehovah, as a later writer would most probably have done, though he uses freely the Name itself.—xviii. In point of fact, we shall find reason to believe that all those portions of the first four books and the book of Joshua, which are not due to the Elohist, were composed by one or more writers who wrote in the latter days of David, and in the early part of Solomon's reign,—with the exception of some interpolations, of which a few smaller ones occur in Genesis, but larger ones in Exodus, Leviticus, Numbers, and Joshua.—xix. These interpolations are all due to the same hand, that of the Deuteronomist, who revised the book as it stood in his time, and added to it almost the whole book of Deuteronomy.—xx. The book of Deuteronomy was written about the time of Josiah, and, as some suppose, by the hand of the prophet Jeremiah."

A great deal has been said about Dr. Colenso's competency to grapple with the questions he has raised. His Hebrew, his arithmetic, his logic, have been separately impugned. There has been full measure of the silly kind of opposition which declares the assailant to be exceedingly weak, as a preliminary to straining every nerve to throw him down. It is not to our purpose to settle whether Dr. Colenso be weak or hardy, right or wrong; all this is part of a large argument, on which hundreds of pens are to be employed. But we can assure our readers that he is not a contemp-

tible antagonist. He has learning, research, method, acuteness, and power of presentation: and, better than all, he *has a case*.

All orthodox Christians are taught to impose upon the Almighty the conditions under which they will accept a revelation. Startling as this may appear, there is hardly a published argument upon the subject of Scripture which does not contain proof of it. Let the reader to whom our position is new watch what falls in his way. The theologian will not bow to the assurance that the Spirit of God is to watch over the word of God: this kind of inspiration will not suit his book at all; he will accept no guidance except his own assumption of a perfection which he imagines to reside in his own interpretation of the words of a dead language. Now and then, by devout interjection, appears a separate sentence, having nothing to do with the reasoning, which contains an acknowledgment of that doctrine of guidance which is one of the three great points of Christianity. But never does he dare to interweave into his fabric of orthodox argument a practical admission of and conclusion from the very plain truth that, if there be anything at all in Christianity, the actual superintendence of its Author is at least the second corner-stone of the whole.

In those who know that great doctrine which the Quakers have put in place of a priesthood—and without depriving themselves of the power of being very good Christians—Dr. Colenso will inspire no fear, even if he be totally and radically wrong. But he is right so far, that the letter of the Bible is not what the teacher of St. Aidan's would make it. *He* is not the inventor of this doctrine: he is only one of those who have imported it into the clerical branch of the community. It has long been the doctrine of the educated laity that the word of God is *in* the Bible, to the utter rejection of the notion that every word of the Bible has that character. We do not mean that this doctrine has been announced in words: but we affirm that the manner in which the Bible has been used by the laity has been one continual practical application of it. Many, even of those who have not discovered that they hold the doctrine, have been acting upon it with a steady consistency which perhaps they would not have attained if they had better known what they were about. Dr. Colenso, among others, has brought the point to issue by forcing the clergy to defend or to surrender. The clergy are trying their hands at defence. The members of this estimable body share with other collective masses the inconvenience of a difference between corporate and individual character. Corporately, with one voice, they maintain the whole of their subscriptions: individually, there is hardly a man of them who has not some transparently evident dodge by which he escapes from a part of his subscriptions. They know this, and they feel it. But the strife has commenced which is to restore to our religious system that consonance of private belief and public profession which is part of an honest state of things, and therefore ought to be part of a Christian community. The boiling passions of what is called religious controversy, the freezing mixtures of what ought to be called irreligious evasion and suppression, with the good intention which may be seen in all but the worst specimens, and the bad logic which runs riot even in the best, will accelerate the day of truthful teaching.

Dr. Colenso deserves thanks for having relieved his Church from a visible stigma. He has shown that a Bishop may have courage to agitate questions of doubt and difficulty as well as an inferior clergyman. It was a very suspicious circumstance that, while numbers of

the ordinary clerical community were vexed by the action of their own reflections upon various parts of their own professed belief, the right reverend bench seemed to have a patent medicine which prevented any loss of repose. Looking at the learning and character of those who of late years have cried out against the formulae which were stereotyped in the sixteenth century, it was a strange thing that no mitred head should ever betray any sign of uneasiness. True it is that Dr. Colenso is only a colonial bishop; but time works wonders.

The Life and Times of the Right Hon. Sir James R. G. Graham, Bart., G.C.B., M.P.
By Torrens M'Cullagh Torrens. Vol. I.
(Saunders, Otley & Co.)

Mr. M'Cullagh Torrens's Preface tells us that all the official and confidential papers of the late Sir James Graham are, and must remain for years, sealed documents; but private letters and personal recollections have slightly aided the author in his task, with a manuscript diary of Mr. John Lewis Mallet, some newspaper files, and those dense volumes which preserve for posterity the dust and ashes of our House of Commons eloquence. The result is scarcely commensurate with the writer's declared aim. If, however, Mr. Torrens be content to offer it as "a tribute of respect," and as nothing more, it may pass satisfactorily through the hands of political readers who were contemporaries of the Netherby Knight. We have yet to see how Mr. Torrens deals with the one act which more than any other, or, it is not too much to say, than all else combined, entailed obloquy upon the eminent bureaucrat—for such conspicuously was Sir James Graham—and which is still remembered with disgust. It is clear at the outset that his opinion is partial; he avows it, indeed, as that of a faithful "friend." Only friendship, we believe, would attribute to Sir James Graham "a great reputation." If such as he are "great," what becomes of the men who stand in the very foremost ranks of oratory and statesmanship? Some individuals are called great for having made a moderately competent use of first-rate advantages, as others are styled illustrious for having been born in a palace, or, as Douglas Jerrold said, as dukes are affable when they enter a farmhouse to avoid a wetting and inquire about the crops.

Mr. M'Cullagh Torrens's narrative, though occasionally interesting, and lightened by a few glimpses of pleasant personal reminiscence, has too much the texture of a parliamentary abstract. Perhaps one of the most readable chapters is the first, wherein are celebrated the Grahams of other days. Early in the fifteenth century, they had their home at Netherby, in the Debateable Land, where "John with the Bright Sword" hewed out an estate for himself, frightening both borders with "his fleet horse and sable plume." The Grahams increased and multiplied, and the lands around gradually fell into their possession; and their marauding exploits—whose remembrance was, in a very different battle-field, revived by Daniel O'Connell—not unfrequently provoked the vengeance of the law. About the year 1552, one Jock Grahme, surnamed "of the Pear Tree," had a brother who lay for execution in Carlisle Castle for having participated in some recent foray. As Jock rode by Corby gate, he saw young Salkeld, son of the sheriff, playing outside the wall. "Would Master like to ride?" he asked, and on the child consenting, lifted him to the saddle-bow, and, before pursuit was possible, lodged his little hostage safely beyond the border. How the sheriff contrived it history does not say, but the condemned moss-trooper

received a pardon, and the boy was restored to his father. Then there was Sir Richard Graham, Master of the Horse to the Duke of Buckingham, who accompanied Prince Charles to Spain, and who fought at Edge Hill; Viscount Preston and Baron Esk, of Cumberland, who nearly lost his head; and Dr. Graham, who rebuilt Netherby, an ancient and stately structure, whereof Camden writes, "there hath been marvellous buildings, as appear by ruinous walls." The son of Dr. Graham was the first Sir James, "the second son of the fourth son of the second son of Sir George of Esk," as Mr. Torrens puts it. The first Sir James Graham was barely twenty-two when he inherited Netherby. He was a little man; but his wife, Lady Catherine Stewart, was above the ordinary stature, and their eldest son, James Robert George Graham, born June 1st, 1792, "inherited from her the lofty and commanding presence by which he was distinguished."

Sir James the First, of Netherby, must have been a man of cheerful mind, for, says Mr. Torrens, referring to Archdeacon Paley,—"Sir James was full of anecdotes of the sociable divine, and loved to tell how he disenchanted Mr. Howard, when fishing one day at Corby, who had asked him if the quiet of the wooded glen through which the Eden flows was not propitious to high philosophic thoughts, by replying, 'Nay, nay, with rod in hand I think of nothing but the salmon.' Another story never failed in its recital to excite the merry little baronet's laughter. Some one, praising the conjugal peace enjoyed by a gentleman in the neighbourhood, who had not had even an argument with his wife for more than thirty years, appealed to Paley whether it were not admirable as a domestic example. 'No doubt, said the doctor, 'it was verra praiseworthy, but it must have been verra dool!'"

The earliest schooling of James George Robert Graham was in a private establishment at the village of Dalston, where Lord Glamorgan, afterwards Duke of Beaufort, first touched Greek and Latin as his fellow-pupil. There he fell into disgrace for sowing the lady's flower-garden with thistles, and suffered promptly for the misdeed. There, too, he betrayed his characteristic fondness for dress, having about him already "something of the future dandy." At Dalston, as a matter of course, he fought the village boys; and at Westminster he fagged for Lord Charles Lennox, afterwards Duke of Richmond. Earl Russell and the present Bishop of St. Asaph were among his Westminster contemporaries. However, not even Mr. Torrens can make much of James George Robert Graham's youth, which, emphatically, was a dull one—none the more, perhaps, on account of the fact, admitted by himself in a bit of *impromptu* autobiography, "I am ashamed to say that whilst I was at Oxford, I never, during the whole period of my residence, heard a single sermon."

In 1812, he passed the spring and summer in London; "was bent on being a politician, and resolved to be a Whig; and being proposed by Lord Morpeth, he was admitted a member of Brookes's Club." Towards the close of the year he went abroad, listened to debates in the Spanish Cortes, and was introduced to the Duke of Wellington at Cadiz—*à propos* whereof Mr. Torrens has a simple story to tell:—"It was Christmas time, and the dinners were served partly in English fashion. Mr. Graham and Mr. C. Stourton, who had more recently arrived from England, were present at one of them, when the renowned chief, on whom all eyes and thoughts were fixed, suddenly caused much amusement and surprise by setting fire

to some brandy which he had poured over a mince-pie, just as he would have done if he had been at home."

Wellington and the mince-pie suggest a picture. Mr. Graham now dabbled in diplomacy, and, being sent to Murat, concluded with the great cavalry officer the preliminary armistice that separated him from Napoleon, and afterwards gave way to a wandering fit in the warm South:—

"Charmed by the novelty and excitement of the scenes he visited, he gave himself up to the enjoyments of the hour. His taste for dress made him dwell with curiosity and pleasure on the picturesque costumes around him; and, in the gaiety of youthful companionship, he sometimes indulged in the pardonable foppery of trying how some of the Southern garbs became him. A gentleman lately mentioned to a mutual friend that he had seen him in a Greek costume enter the opera-box of the English General at Genoa, where his handsome face and figure, thus set off to singular advantage, attracted no little observation. He brought home with him a curious variety of dress, chiefly of Sicilian manufacture; and his intimates used to say when he appeared in a waistcoat of a colour and pattern they had not seen before that his valet 'had been to the Palermo box.'"

Mr. Graham, in 1817, at twenty-five years of age, bethought him of a seat in Parliament. There was no room for him in his own county, on account of his father's Toryism. But, in the following year, he stood for Hull, long represented by two Tories. The struggle was close and keen; but "the young Whig from Cumberland" was declared duly elected, at an expense to the family estates of more than 6,000*l.* "He took his seat on the third Opposition bench, beside his friend Lord A. Hamilton. Near them sat Mr. E. Ellis, Mr. T. F. Kennedy and Sir R. Wilson; and below them, Sir F. Burdett, Mr. Hume and Lord Althorp."

It is always interesting to mark the beginnings of signal parliamentary reputations. Mr. Graham's maiden speech was a failure:—

"Mr. Graham's speech, delivered in the dialect and with the gesture of an exquisite, savoured too much of anxiety for out-of-door applause, to win the respect of the House of Commons. Most of his assertions were true, indeed, as to the excess of patronage and the political corruption it engendered. But his generalities were too violent and too vague, and his indignation seemed too vehement to be sincere. His apprehension that the power of the Crown was increasing and ought to be diminished, sounded too like a reading out of date from the pages of Burke; and the inartistic mode in which he intimated his belief that venal motives were chiefly potential in keeping up super-numerary offices and undeserved pensions made his hearers stare and smile, rather than listen or reflect."

But he "voted up to the mark": the outsiders "swore he would go as far as Burdett"; and at Brookes's he was set down as a promising fellow:—

"Some, indeed, of the more temporizing and timid from the first disliked him. He was not, they said, the style of man that was wanted; he was too saucy for his years, too confident on his legs, and too sarcastic across the dinner-table. He had no scruple about rallying them on their too frequent attacks of the gout on the eve of trying votes in the House of Commons, and it was probably in pique at some caustic remark of his upon the want of efficient leadership, that Mr. Tierney is said to have called him 'a manly puppy.'"

Mr. Graham was married in July, 1819, to the youngest daughter of Col. Callander, of Craigforth, Stirlingshire, bearing away the palm from many rivals; for, says Mr. Torrens, "Fanny, the youngest of the family, then reigned at Almack's, and all the world of fashion was at her feet." Moreover, "at the first drawing-room Mr. and Mrs. Graham

attended after their marriage, George the Fourth asked one of those who stood near him who they were, and on being told, exclaimed, "They are the handsomest couple I ever clapped my eyes on."

In that time of dangerous political agitation, a Bill was introduced prohibiting any person from taking part in the proceedings of a town meeting who was not an inhabitant or freeman of the place. Mr. Graham had a good opportunity, but threw it away:—

"He wished to know if a member who sat for a borough of which he was neither inhabitant nor freeman would come within the mischief of the Act? He paused to listen for the report of his shot; but few were attending, and nobody cried 'Hear.' He looked to see if it had hit; but the Under-Secretaries were talking to one another on the Treasury Bench, and Lord Castlereagh was occupied in smelling the hothouse flower in his button-hole. Mr. Graham repeated his question in other words, but with no better effect. He felt half vexed with himself at having got up, but he was up and must go on; so he thought he would argue the point. The case was not an imaginary one, he said, for it was his own, as he happened to sit for a borough of which he was neither a freeman nor an inhabitant, and of which he was not likely to become either, having no connexion with the place. At this unlucky proffer of irrelevant information he heard, or thought he heard, something like a suppressed laugh. He felt himself getting confused, a little at first, and then very much so. For a few minutes he rambled on through commonplace and reiteration, but no timely cheer came to his rescue, and he sat down without any distinct recollection of what he had said or what he had intended to say. Mr. Henry Lascelles, who sat opposite, whispered to a mutual friend, 'Well, there is an end of Graham; we shall hear no more of him.'"

His first session in Parliament contributed little to the "great reputation" which his biographer claims for him; he had done nothing, indeed, to secure his re-election at Hull.

Mr. Graham was next returned for St. Ives. He was petitioned against, declined to defend his seat, and accepted the Chiltern Hundreds, resolving to settle down quietly as a country gentleman and Cumberland farmer; but, in 1824, he became "Sir James," and, surrounded by encumbrances, actually thought of selling Netherby, the ancestral home of the Grahams, from him of the Bright Sword to him who revelled so in the Archdeacon's little joke:—

"Full of this, he went the length of inquiry as to the openings that might be available for one who could bring to a London house of established character a considerable accession of capital. The firm of Pole, Thornton, Downe & Co. desired just then to extend its resources, and to obtain the strength of new connexions: and the matter at first sight wore to him an appearance highly attractive. Fortunately the negotiation had not proceeded very far, when he was induced by a friend to whom he had confided his wishes, to consult Mr. James Evan Bailey, of Bristol. 'Tell him,' said the wise and experienced banker, 'to hold fast by Netherby, and keep clear of banking. Nothing he can say on the subject can change my opinion.' Within twelve months Messrs. Pole, Thornton, Downe & Co. failed; and thus, narrowly saved from ruin, Sir James put away all further thoughts of commercial enterprise."

His studies in general literature may now be said to have begun; and, while enumerating his favourite books, Mr. Torrens speaks of Gibbon as "the matchless undertaker of the obsequies of Empire"! As Member for Carlisle (where, at the election, Sir Philip Musgrave, the Tory candidate, was kept for an hour plying the shuttle of a hand-loom weaver to save himself from the mob), the Baronet occupied a somewhat better, though far from brilliant, position in the House of Commons. In 1828, he sat for the county of Cumberland, though

abused by Lord Lonsdale as "the Radical Baronet," and ridiculed by Burdett as "emphatically a dandy,"—which he certainly was, according to Mr. Torrens.

It was in 1830 that he began, though still somewhat faintly, to shine. His motion on the salaries, pensions and emoluments of Privy Councillors was partially a success. In reference to it, he made use of the oft-quoted words,—"I am not disposed to stoop to ignoble game while flights of voracious birds of prey are hovering in the upper regions of the air." As Mallet wrote in his Diary, whence Mr. Torrens occasionally borrows a passage,— "What with his industry and talents, his fine manners and person, his aristocratical bearing, and his factious independence, Sir James Graham may go a great way."

In Lord Grey's Cabinet, he sat as First Lord of the Admiralty. It was soon afterwards that the Duke of Wellington declared, in connexion with the Reform Bill, that "he certainly never would enter the House of Lords from the time the Bill passed. . . . He would not be degraded, even with the House of Lords."

When the creation of Peerages, in order to carry the Reform Bill, was talked of,—

"Sir James was pressed to allow his name to be included. 'They want me to go with the rest,' he said to a friend; 'and say that as the title of Preston was formerly in my family, I must take it as that of a revived peerage. But I have no fancy for figuring in the unwelcome list; and all my ideas of political life are centred in the House of Commons.'"

Mr. Torrens, in this volume, brings his narrative down to the final retirement from office of Lord Grey in 1834. Hitherto, assuredly, he has not pictured in Sir James Graham many of the attributes which go to make up greatness; but his Memoir, if not uninfluenced by a desire to praise, is written with too much sense and spirit to be extravagantly eulogistic; and, when complete, it may facilitate the work of a future historian of these times.

Married in Haste: a Story of Everyday Life.

By Capt. Lascelles Wraxall. 3 vols. (Skeet.)

Those who have any taste for the stirring scenes, sudden surprises and extraordinary transformations of a pantomime, will appreciate this book, which bears the same relation to the novel (properly so called) as the Christmas Pantomime does to the Legitimate Drama. 'Married in Haste' is a quiet, unassuming title, which in nowise prepares us for the wild improbabilities related in the course of the story. The hero (one Shafto Thorncliffe), residing at Freiburg in the year 1848, unexpectedly finds himself immersed in hot water, owing to the insurrection of the German peasants of the neighbourhood. He fights, is wounded, but escapes to the Black Forest, crawls with difficulty to the door of a cottage, and there lies at the point of death. A kind Fräulein—half English and half German—and her old house-keeper take pity on the dying man. Gretchen nurses him carefully and tenderly, falls in love with him, and they marry in haste, only to repent at leisure. Gretchen is as dull and stupid as she is pretty and good; and as she declines to leave her cottage in the forest, Shafto has a great idea of leaving her there and betaking himself to his aunt in London, there to lead a gayer life with his former associates. But the old aunt is beforehand with him, and drives up to the door of the "Hermitage" one fine day, and disinherits Shafto on the spot. Gretchen brings out her little store of gold left her by her father, and the young couple have a reconciliation scene; and the first act ends with Gretchen, in white

muslin and pink bows, nursing her baby, while Shafto paints at his easel,—the picture of domestic happiness.

But now comes the villain—*such* a villain!—in the shape of a Russian prince, who, having once seen Gretchen at the window nursing her baby, determines, for want of something better to do, to seduce her! He is not particularly in love with her; but he is “a man of inflexible will,” and is accustomed to spare neither time, trouble nor expense for a little passing whim of this kind; he therefore sets his valet, Leonardo, to work, and becomes acquainted with the young artist. He flatters him into believing he has been seized with a desire to possess some of his pictures; he persuades him to visit Rome; and, as Mrs. Thorncliffe and the baby would be dull at home, he insinuates that one of his carriages will be quite at the lady’s service, and he hopes Shafto’s interesting family will accompany them on a little tour. On the road they are several times attacked by bravos, and once rescued by no less a personage than Garibaldi himself. The party finally reach Rome, where Mrs. Thorncliffe is most comfortably established in one of the Prince’s magnificent palazzos,—for he happens to have one in every town of importance on the Continent. Shafto borrows money and does nothing; Gretchen’s character becomes compromised, and the Prince and his valet enjoy their game together,—the valet having an eye to the lady himself the moment his master finds some other and newer attraction. Of course, it is necessary to get rid of Shafto, who is a little in the way at this juncture, so they remove to Naples. Here, the Prince, who is used to this sort of thing, gives his orders to Leonardo accordingly—

“When is it to be, Excellency?” was the calm reply of the valet. “Let me see, this is Tuesday; suppose we say Sunday night—the better the day, you know—you will have all in readiness for our departure, as we shall not remain here long after the melancholy loss.”

The valet bows and leaves the room, and as the door is closed the Prince mutters in great glee—

“Sunday for the Englishman; Monday for you, friend Leonardo.”

Shafto is thrown into a dungeon full of rats and damp straw, and has for his companion a tailor whom he had met in Germany. The little tailor is released, and promises to let Shafto’s friends know his whereabouts. Leonardo also turns up in this same prison, and materially assists Shafto with his advice. Henry Clavering, his chief friend, happening to come to Naples at the right moment, rescues Mrs. Shafto Thorncliffe from the Prince—fights a duel with that worthy and lames him for life, and then proceeds to effect Shafto’s escape. This, with the help of some bribes, Leonardo, a file, a rope, a boat, and the yacht of a young Englishman in the bay, is conducted successfully; and the young couple are once more happily re-united and proceed to England, where Lord Southport and Mr. Clavering introduce Shafto into high society, obtain him sitters of the first rank, and launch him triumphantly in London as a fashionable portrait-painter. But the Prince has been beforehand with them. He has agents in every city as well as houses, and he gives his private orders to a lady of great beauty, wealth, station, and of apparent respectability, to keep her eye on Shafto—to cause him to fall in love with her, to effect a separation between husband and wife, and, in short, to work their ruin as speedily as she can, with convenience to herself.

This part is one of the best in the book—it is a little more like real life, at all events, and the fascinations of Mrs. Santonge are more agree-

able reading than the open *diableries* of her accomplice, the Russian Prince. Lady Portumna, another lady of fashion and a friend of Mrs. Santonge, also gains the affection of Henry Clavering, who is more or less attached to his cousin Louisa Bazaine, and the two young men and the two young women are all four eminently miserable, while Lady Portumna and Mrs. Santonge tranquilly enjoy life and the homage of their respective adorers.

At last poor Gretchen can bear the neglect and coldness of her husband no longer, and seeing an advertisement in the paper of a “governess wanted,”—a widow preferred, and one or two children not objected to,—she packs up her clothes and her children, and goes to the lawyer, Mr. Bazaine, who is the referee of the advertisement. Here she unexpectedly meets Henry Clavering, and a stormy conversation ensues. She reproaches him with having led astray her husband, and of being himself well known as the lover of Lady Portumna. Upon this, Miss Bazaine faints away, and old Bazaine intimates to Henry that he had better for the present discontinue his visits to the house. Mrs. Chavasse (as Gretchen now calls herself) obtains the situation she desires, and goes off to Ireland with her children. Here, she arrives at an old castle with massive wooden gates, which are presently thrown open, and four men armed with guns come out to receive her. This place is Portumna Castle. Lord Portumna is as mad as Bedlam, it appears, and she is to be governess to his only daughter. Gretchen finds, however, “to her great gratification,” that if she stares steadily at Lord Portumna, “he quails at her glance.”

Clavering, who has sworn to obtain for Lady Portumna the possession of her daughter, now re-appears on the scene, and is persuaded to believe, with Gretchen, that he would do much better to advise “the Countess” to become reconciled to her husband and to live at home again. This he generously consents to do, and Lady Portumna, who is really fond of her child, nurses it through the smallpox unknown to her husband; and on his recognizing her, they become devoted to each other, and extremely grateful to Clavering and to Gretchen. But at this juncture the governess, who has only just walked to the village to put a letter in the post, is abducted and carried on board the yacht of our old friend the Russian Prince; Mrs. Santonge being the only other passenger. The Prince is not yet on board, but is to join his yacht in the Mediterranean.

Now comes the righteous retribution! And however commonplace and natural the other incidents may have been considered, we believe no one will be prepared for the punishment devised by Leonardo for his wicked master the Prince. The old runaway horse—the hackneyed bull—the railroad accident—all the thousand and one misfortunes so common to the frail lives of the modern hero of romance are thrown for ever into the shade by this novel and remarkable invention. No sooner had the Prince gained his yacht than it was attacked by pirates under the command of his former valet. Of course, the Prince’s men were overpowered in no time, and the pirates anxiously awaited the next order of their leader:—

“‘Aristarchus,’ he said, ‘I will not kill this man at once, for I owe him to suffer protracted agony; you will, therefore, fasten him securely upon the piston-rods; then go below and take one of the engineers with you. You will bank up the fires to get steam up, and so soon as the pistons begin working this noble Prince will have the life thoroughly squeezed out of him, and suffer the same torture to which he once on a time exposed

me.’ * * * These atrocious orders were promptly executed. The Prince, still gagged, was laid spread-eagle-wise across the piston-rods, with his face upwards, so as to see the beam against which his brains would be dashed out.”

This was indeed an ingenious contrivance, and almost deserves a patent and a medal; but the Prince was not to die yet; so no sooner had the valet left him to the tender mercy of his own steam-engine, and carried off the two ladies to his head-quarters in one of the Greek isles, than a Turkish officer boards the Prince’s yacht, releases him from his perilous condition, but takes him prisoner for numerous political offences, and condemns him to the galleys. Shafto afterwards sees him working in a chain-gang at sweeping the streets of Sebastopol, and we learn that he ultimately lost his head by the cannon-ball of a Frenchman. The remainder of the story is of a more agreeable nature. Gretchen is once more rescued by Henry Clavering and Lord Southport, who are still cruising about together in a yacht. Shafto finds his wife an heiress; for his old aunt is dead at last, and has left her money to Gretchen. The Hermitage is rebuilt, with a billiard-room and a studio; which thoughtfulness so affects Shafto, that he becomes a model husband on the spot. Clavering then marries his cousin Louisa, and Mrs. Santonge goes to America with Leonardo, who has realized a very handsome property, but does not care any longer to reside in Europe—and so ends the author’s idea of “a tale of everyday life!”

A Treatise on some of the Insects injurious to Vegetation. By Thaddeus William Harris, M.D. A New Edition, enlarged and improved, with Additions from the Author’s Manuscripts and Original Notes. Illustrated by Engravings. Edited by Charles L. Flint. (Boston, Crosby & Nichols; London, Triübner & Co.)

THE value of Dr. Harris’s work on Economic Entomology has been proved by the issue of two previous editions; the present is greatly enlarged. The work was the only important entomological production which, up to the time of its first issue, in 1841, had appeared in America. Abbott, a schoolmaster in Georgia, had indeed found time to collect and observe the transformations of many species of insects, all of which he had drawn and coloured with the utmost precision and delicacy; and his drawings having been sold in England and France, were subsequently published under the editorship of the late Sir J. E. Smith, and Messrs. Leconte and Boisduval. Say, too, had in addition to his many short technical memoirs, containing descriptions of hundreds of North American insects, published in all kinds of inaccessible newspapers and periodicals, issued a work under the imposing title of ‘American Entomology,’ in three volumes, 8vo., on the plan of Shaw and Nodder’s ‘Naturalist’s Repository’ or Donovan’s ‘English Insects,’ each plate containing only one or two figures, with a page of meagre descriptive text. Dr. Harris, looking at the subject from a practical point of view, devoted his attention to the insects injurious to vegetation, and composed a treatise, in which he contrived to blend technical details and specific descriptions with accounts of the habits of the different kinds of obnoxious insects, so as to render his work almost as interesting as Kirby and Spence’s ‘Introduction.’ The importance of the work is proved by the fact of this edition being issued in consequence of the resolution of the Legislature of Massachusetts authorizing the editor “to use the plates prepared for the illustration of the edition

for the Commonwealth in the publication of one or more editions designed for a wider circulation than that for the State could be expected to have." The work is therefore regarded as a national one, and in the present edition no pains have been spared in rendering it as complete as possible, all the leading entomologists of the States having assisted in its production. Prof. Agassiz has supervised the beautiful illustrations; Dr. Leconte contributes notes on the Coleoptera; Mr. Uhler, on the Orthoptera and Hemiptera; Dr. Morris, of Baltimore, on the Lepidoptera; Mr. E. Norton, on the Hymenoptera; and the Baron R. Osten Sacken, secretary of the Russian Legation at Washington, on the Diptera. The printing of the work was done at the University Press, Cambridge, Mass., and the whole work is one of the most commendable typographical productions issued in America.

Unlike the work of Kirby and Spence, or Curtis's 'Farm Insects,' in which the insects are arranged and described under the different kinds of trees or plants subjected to their attacks, the author has followed the systematic arrangement of the different families of insects, describing each species and its ravages as it presents itself in the order of classification: hence it is necessary for an observer to know the name of the family or genus of an insect in order to trace out its history in the present work; and hence, too, where any kind of tree or plant is infested by insects belonging to different families, their several histories have to be sought in different portions of the work. This must naturally be a serious difficulty to the persons for whose use the work is written; which might have been obviated by an appendix, in which the different kinds of trees and plants had been arranged systematically, with references to the pages where the various insects which prey upon each plant had been described.

There is also another objection to the work in its greatly enlarged state. With the view to render it as complete as possible, descriptions of many newly-discovered species of insects have been introduced into the work which are not materially injurious to vegetation. Of course, every insect which does not prey upon animal matter may be said to be injurious to vegetation; and in this point of view the author and editors have inserted so great a number of lepidopterous insects, that the butterflies and moths alone occupy more than one-third of the whole work. If all the comparatively harmless species were omitted, the volume would be reduced to one-half its present bulk, and would then be of a size to allow it to fall into hundreds of hands which will now be deterred by its price and size.

As many of the American species of insects are either identical with or very closely allied to our own, many of the details of their habits given in this book may be traced in our own country. Here, for instance, is the history of the pea weevil, *Bruchus Pisi*:—

"Few persons, while indulging in the luxury of early green peas, are aware how many insects they unconsciously swallow. When the pods are carefully examined, small discoloured spots may be seen within them, each one corresponding to a similar spot on the opposite pea. If this spot in the pea be opened, a minute whitish grub destitute of feet will be found therein. It is the weevil in its larva form, which lives upon the marrow of the pea, and arrives at its full size by the time that the pea becomes dry. This larva, or grub, then bores a round hole from the hollow in the centre of the pea quite to the hull, but leaves the latter, and generally the germ of the future sprout, untouched. Hence these buggy peas, as they are called by seedsmen and gardeners, will

frequently sprout and grow when planted. The grub is changed to a pupa within its hole in the pea in the autumn, and before the spring casts its skin again, becomes a beetle, and gnaws a hole through the thin hull in order to make its escape into the air, which frequently does not happen before the peas are planted for an early crop. After the pea-vines have flowered, and while the pods are young and tender and the peas within them are just beginning to swell, the beetles gather upon them and deposit their tiny eggs singly in the punctures or wounds which they make upon the surface of the pods. This is done mostly during the night or in cloudy weather. The grubs, as soon as they are hatched, penetrate the pod and bury themselves in the opposite peas, and the holes through which they pass into the seeds are so fine as hardly to be perceived, and are soon closed. Sometimes every pea in a pod will be found to contain a weevil grub; and so great has been the injury to the crop in some parts of the country that the inhabitants have been obliged to give up the cultivation of this vegetable. These insects diminish the weight of the peas in which they lodge nearly one half, and theiravings are fit only for the food of swine. This occasions a great loss where peas are raised for feeding stock or for family use, as they are in many places. Those persons who eat whole peas in the winter after they are raised, run the risk of eating the weevils also; but if the peas are kept till they are a year old, the insects will entirely leave them."

For checking the ravages of this insect an exceedingly simple plan is recommended by Deane, but to be successful it should be universally adopted. It consists simply in keeping seed peas in tight vessels over one year before planting them. Latreille and others recommend putting them, just before they are to be planted, into hot water for a minute or two, by which means the weevils will be killed and the sprouting of the peas will be quickened.—

"The crow black-bird is said to devour great numbers of the beetles in the spring, and the Baltimore oriole, or hang-bird, splits open the green pods for the sake of the grubs contained in the peas, thereby contributing greatly to prevent the increase of these noxious insects. The instinct that enables this beautiful bird to detect the lurking grub, concealed, as the latter is, within the pod and the hull of the pea, is worthy our highest admiration; and the goodness of providence, which has endowed it with this faculty, is still further shown in the economy of the insects also, which, through His prospective care, are not only limited in the season of their depredations, but are instinctively taught to spare the germs of the peas, thereby securing a succession of crops for our benefit and that of their own progeny."

Probably the observations which will attract the greatest amount of attention amongst entomologists are those relating to the barley-straw insects and joint worms, as they are completely opposed to the generally-received opinions as to the economy of the groups to which the insects are referable. These insects belong to the Chalcididae, a family of vast extent, the members of which are parasites upon other insects; but it would seem from the numerous observations recorded by Dr. Harris, that several species of *Eurytoma* infest the barley and wheat plants in their growing state, the stalks of many of the plants having a number of small worms or larvæ within them near to the second joint, and becoming hardened in the part attacked, from the interruption of the circulation of the sap. During several years previous to 1830, the barley crops in various parts of Essex and Middlesex (New England) were more or less injured in the same way, and in some places the cultivation of the grain was given up in consequence thereof. These worms were transformed to small flies about the make and size of a small black ant with wings:—

"In the summer of 1831 myriads of these flies

were found alive in straw beds, in Gloucester, the straw having been taken from the fields the year before. An opinion at that time prevailed that the troublesome humours with which many persons were then afflicted were occasioned by the bites of these flies; and it is stated that the straw beds in Lexington, being found to be infested with the same insects, were generally burnt. Specimens of the grubs having been forwarded to Dr. Harris, he reared therefrom winged individuals of the genus *Eurytoma*, believing 'that the true culprit, or original cause of the disease, would prove to be some species of *Cecidomyia* (small midges belonging to the order Diptera), allied to, but distinct from the Hessian fly, and that they, while in the larva or pupa state, had been preyed upon and destroyed by the *Eurytoma*."

Subsequently Dr. Harris became convinced that the "joint worm" of the wheat fields of Virginia is identical with his barley-straw insect, the former having been also ascribed by Dr. Fitch to a species of *Cecidomyia*. A quantity of the diseased wheat-straw having subsequently been forwarded to Drs. Harris and Fitch, both these observers obtained only specimens of *Eurytoma* and a few *Pteromali* (minute parasites belonging to the same family, Chalcididae, which are supposed to have preyed upon the larvæ of the *Eurytoma*), and a careful observation of the grubs themselves proved them to be Hymenopterous, and not Dipterous:—

"In favour of the conclusion that the *Eurytoma* alone is the author of the mischief done to the wheat and barley, and that it is not a parasitical insect, we have the fact that hitherto no person has succeeded in obtaining from the diseased wheat-straw so much as a single specimen of a *Cecidomyia*, while both the wheat and the barley-straw have yielded to several observers, in repeated instances, numerous specimens of the same kind of *Eurytoma*, and nothing else, saving an extremely small number of lesser parasites. The determination of this difficult and interesting question is of much importance in a scientific and an economical point of view. The great amount of property that is at stake, and the serious losses already sustained by the ravages of the joint worm, render it necessary to ascertain the true history of the insect before proceeding to take measures for the protection of our crops. We are to consider, in destroying the *Eurytoma*, whether we shall kill an enemy or a friend. If it be a parasite, as the almost universal opinion of entomologists would lead us to believe, it would be the height of folly to attempt to interfere with its operations. On the other hand, if we can show it to be a plant-eating insect, we may use such means as are in our power towards checking its career, not only with perfect safety, but with eminent advantage."

The accounts given of the injury to the stems of barley and wheat in the preceding statements exactly agree with the injuries committed upon these plants in England and France by *Chlorops pumilionis* and *glabra* and *Oscinis lineata* (two-winged flies belonging to the family Muscidae). None of these flies have, however, been noticed in America by Dr. Harris. Yet, although Dr. Harris did not observe any obnoxious species of *Oscinis* or *Chlorops*, Dr. Asa Fitch, in his 'Reports' on the injurious insects of the State of New York, published by order of the Government, has described several new species of both these genera, without, however, having been able to identify them with any special disease of the barley or wheat crops. The fact which we have repeatedly observed of the parasitism of various species of *Eurytoma*, induces us to believe that the American *Eurytoma* are also parasites, although they have not been noticed in England or France as feeding upon the *Chlorops* and *Oscinis*.

We cannot conclude our notice of this work without alluding to the excellence of the engravings and woodcuts: some of the latter, especially those of the different species of Sphin-

gidæ, are equal to the productions of our best xylographers.

The Five Great Monarchies of the Ancient Eastern World. Collected and illustrated from ancient and modern Sources, by George Rawlinson, M.A. Vol. I. (Murray.)

Mr. Rawlinson has chosen to range over an extensive field—the five great monarchies of the old eastern world. The theme is worthy the pen of a great historian. It carries us back to times covered with the hoariness of age, and possessing many features of solemn grandeur as well as lawless ferocity. We are transported to the monuments of nations who played an important part in the world's history, and left broad traces of their activity, which it was reserved for antiquaries of later ages to explore. The present volume, containing Chaldæa, and Assyria in part, is to be followed by two others descriptive of the three remaining empires. If the treatment of the latter be equal to that of the first, the writer will have produced his best work. The Bampton Lectures are the least valuable of his publications, because the author was far from being at home in the department to which they relate. His Herodotus is a heavy and mongrel production, ill digested, and overloaded with extraneous matter. The present production shows a considerable advance in the author's learning, descriptive power, and mastery over the materials at his disposal. It evinces great industry, carefulness, elaboration, and completeness. Mr. Rawlinson improves as he proceeds. It is true that he will never become a philosophical historian. He has little power of criticism, and scarcely any constructive skill. He can neither analyze like Niebuhr, nor describe like Grote. His excellence consists in bringing together the scattered information that exists respecting the old monarchies of the world, and in presenting it with lucid compactness. That he deals very often in minute things, and sets forth many details, is no fault of his: it arises out of his theme. Yet these small details, however accurate, are liable to weary an impatient reader and make him close the book. Fortunately, the light-literature public are not the class for whom he has written. He addresses himself to men whose taste inclines them to the solid and instructive. To such his book will be welcome and valuable. From the nature of the subject, originality cannot be expected. Even originality of treatment can hardly be looked for, unless the author had entertained a different idea of the plan to be pursued. All that he attempts is a comprehensive survey of the ancient monarchies, including general views of their countries, climates, productions, people, languages and writing, arts and sciences, manners and customs, religion, history and chronology. Some of these things had been examined by distinguished scholars or searched out by travellers prior to our author. He has had the benefit of historians, antiquarian investigators, and decipherers of unknown characters. An illustrious brother has read old tongues in our day. Indeed, had it not been for Sir Henry, Mr. Rawlinson could not have written as he has done. His great obligations to that brother are gracefully and amply acknowledged. With his help, and that of Hincks, Oppert, Layard, Loftus, Rich, Ainsworth, Ker Porter, Jones, Chesney, Botta, Flaudin, Place, Boutcher, Heeren, Fergusson, the Journals of the Royal Asiatic and Geographical Societies, in addition to ancient sources, the work has been ably drawn up; the writer exercising an independent judgment and slavishly adhering to no authority. Its value is enhanced

by the numerous illustrations with which it abounds, and an excellent map of Mesopotamia and adjacent countries.

In the department of the arts and sciences he seems to move most easily; in that of race he is sometimes at fault, though speaking in a decided tone. In the province of languages he has to rely entirely on others. It is evident that he is no Semitic scholar; and therefore his conjectural derivations in that family of languages are occasionally unfortunate. Thus, he takes the name *Shinar* from *shenē* (two), and *nāhūr* (a river); *Shemesh*, the sun, from *shammesh*, ministrare, denoting the *ministrating* office of the sun, not the brilliancy of his light. Both are incorrect. His view of the Old Testament may be inferred from the expressions used in page 182: "The Mosaic account of creation is miraculous, as a true account of creation must be." In speaking of Assyria's capital he says: "Jonah saw Nineveh while it still stood; and though the writer of the prophetic book may not have been Jonah himself, he probably lived not very many years later." It is surely an established conclusion of Biblical science that the Book of Jonah was written much later than the times of the prophet himself. Its author was neither Jonah, nor a contemporary, nor one who lived soon after. Centuries intervened between the prophet and the book. Whatever view of the narrative be taken, the prophetic book contains sufficient evidence of this, having appeared soon after the Babylonish exile. Huzzab, in Nahum ii. 7, is thought by our author to denote a particular portion of the Assyrian territory. This is incorrect. The appellation belongs to the Queen of the Assyrians.

With regard to the early Chaldeans the author has a theory that they were Hamites, not Semites—Ethiopians, not Arameans. Knobel seems to be of the same opinion. What leads Mr. Rawlinson to entertain it is the Mosaic narrative in Genesis x. 8, where we read that *Cush* begat *Nimrod*; to which statement he attaches an importance which we should not, in the face of contrary evidence. The arguments in favour of the Semitic character of the early Babylonians are given in a weak form; we need not repeat them in their best shape. Though the author has tried to refute them, he has been unsuccessful. Does he suppose that he can overthrow the Chaldee argument by the bare affirmation that "the Babylonian language of the age of Nebuchadnezzar is found to be far nearer to Hebrew than to Chaldee"? The reverse is the fact. These and many other particulars betray small acquaintance with recent Biblical literature on the part of the author, and slightly impair the value of his book. They do not, however, outweigh its great merits, which the most captious cannot deny. It deserves the approbation of the intelligent and learned: we hope it will not fail to receive it.

Musical Studies, Adorations, Caprices and Criticisms—[A travers Chants; Etudes Musicales, Adorations, Bouades et Critiques, par Hector Berlioz]. (Paris, Lévy Frères.)

LIKE former volumes of the kind, this is a revised collection of scattered criticisms by M. Berlioz, fitted out, rather than recommended, by a fantastic title, not easy to translate. He can hardly write anything which does not contain matter for thought,—as much matter for scrutiny. More than ever does the latter remark apply to this miscellany, because, though the author keeps his promise of being whimsical as well as adoring, such value as the collection possesses is critical. It is graver than its predecessors in its subjects, and more authoritative

in their treatment. Assuming that the mind and the knowledge of its writer are reflected in it, the picture of both to be made out by those who know his works is singular and instructive.

The range within which M. Berlioz moves is strangely narrow. Calling himself three parts a German, as he does here (though not many Germans will echo the call), it is natural to his assumed character that he should pass by everything Italian with the pharisaical contempt of one too wise and holy to occupy himself with what is so sensual and meretricious. The few words of favour he has to bestow are given to the new *finale* of Signor Rossini's 'Moïse,'—to the use of the horns in the last scene of 'Lucia,' and to one or two other scattered examples of the kind. But it is hardly in character that he should know so few German masters, and judge some of them so absurdly as appears to be the case. For any allusion or reference that we can here meet, Bach need never have written. Handel is mentioned with a mixture of bitter dislike and cautious timidity; principally as a man who wrote singers' nonsense for the display of *prime donne* (even as one M. Berlioz condescended to do in his 'Benvenuto Cellini'), and not as the writer of 'Israel,' 'Solomon,' 'Saul,' 'Judas,' the 'Dettingen Te Deum,' 'Acis,' and 'Alexander's Feast,'—works, possibly, unknown to our whimsical critic. Mozart is, in his eyes, an especial sinner—almost as frivolous as Marcello—because of the flourishes permitted by him in *Donna Anna's* "Non mi dir." The study of 'Die Entführung,' again, as a shallow denunciation of music which the writer has taken no pains to understand, amounts to impertinence, aping the profound severity of a Rhadamanthus. There is not a word of Spohr, not one of Mendelssohn. The idols elect of M. Berlioz are Beethoven and Weber, in neither of whom is a fault hinted to which a blank pardon is not given therewith. We are told, as precious facts, how Dr. Liszt played Beethoven's c sharp minor *solo* Sonata in the dark, till his hearers were moved as though they had seen ghosts,—(there is a parallel to this in M. von Lenz's tale of himself and Glinka sitting on the ground to do serf's homage to the Mirth Symphony,)—how, under like circumstances, they mutely pressed the hands of another pianist, Madame Massart. In a later page, as an expression of the rapture enkindled within him by the monologue of *Alceste*, which closes the second act of the opera, "At hearing that," says M. Berlioz, "the heart swells: one would fain have something to embrace. It seems to me then as if, were the statue of Niobe before me, I could break it in my arms." In such confessions and protestations some may find more of sentimental rhapsody than of sagacious knowledge or real admiration. That same c sharp minor Sonata of Beethoven—to return—has been as conveniently overworked by French enthusiasts as the unaccompanied trio of the Masqueraders in 'Don Juan.' In running over Beethoven's compositions, a line might have been found for his *Concertos*—for his Pianoforte Trio in D major—for his exquisite Hungarian dance and chorus in 'King Stephen.' In scrutinizing his Symphonies, some better parallel might have been found for the *finale* to that in A major, with its semi-Russian theme, than the overture to Gluck's 'Armide.' M. Berlioz, however (it may be said parenthetically), is not happy in his parallels; as, for instance, when he calls the prelude to Gluck's 'Alceste' Handeliana. Then why, as his almost solitary objection to Beethoven, fix on the minuet to the "Little Symphony" in F? which he affronts as stale and old-fashioned. Does he forget its delicious Trio, with its melody for his favourite instrument the horn? or is it too trivial for his taste?

The above are minute questions and exceptions; but never did critic, by the high tone taken, by the exclusiveness and severity, more deliberately expose himself to close observation and uncompromising comment than our writer.

Then, as to Gluck, concerning whose later operas the knowledge of M. Berlioz is as genuine as his enthusiasm—knowledge to which we have frequently owned our obligations,—these pages give us occasion to make a remark which characterizes the writer in some degree. The numerous changes and variations in the copies of Gluck's operas, the disorder of his scores, are noted duly; but such fact never seems to have suggested itself to our author as an argument against finality in any version of any of these works when they are to be given on the modern stage. M. Berlioz does not admit such a thing as elasticity,—as the necessity of modifications, omissions, compromises even. Yet his idol, Gluck, not merely confessed this necessity, but absolutely sanctioned it; and once, in a form which ought to have been wormwood to a bravura-hater like our critic. The air closing the first act of 'Orpheus,' introduced at the Grand Opéra for the display of M. Le Gros (not to hint at the vulgar possibility of its being a piece of effect), is not Gluck's, but by Bertoni, the furnisher of *roulades* for Guadagni, the original *Orfeo*. The air, again, of *Hercules*, in the third act of 'Alceste,' is by Gossec, not Gluck. Yet the latter, in this as in the former case, allowed the interpolated matter to take its place in the scores, which were published, it may be presumed, for the use of other theatres. Such concessions as these can by no sophistry be reconciled with the theories of unalterable purpose, deep intellectual foresight, determination to perish rather than to concede in favour of corrupt executants, which form the watchwords of those in whose army our critic has enlisted;—watchwords forgotten by none more curiously than by the soldiers themselves. M. Berlioz is angry with a conductor who added instrumental parts to the duett between *Armida* and *Hidraot* in 'Armide.' We have heard the same executed with twenty or more voices to each part, under the direction of M. Berlioz! It would surely be more just, though not by half so imposing, were it recollected as well as owned that these great masters of old could oblige, condescend, accommodate themselves to circumstances; and that, therefore, as an inevitable consequence, some discretionary power must be committed to those who revive their works. But the conductor who assumes this can hardly, as a critic, sternly denounce it without destroying his own authority in either capacity. The man who altered the shape (thereby destroying much distinctive character) of 'Der Freischütz,' by replacing spoken with sung dialogue,—he who, for the sake of effect, scored a pianoforte piece, the same composer's 'Invitation to Waltz,' never meant to be scored,—by both proceedings lost the right to be as sarcastically severe as M. Berlioz shows himself in the case of every other exercise of private judgment which does not suit his humour of the moment.

Let us hear him, however, for a while, in his most ironical and amusing vein, when describing the impertinence of executants:—

Five years ago (he writes in 1861) there was given at Baden a new and charming opera, composed expressly for the season, entitled 'The Sylph.' A harpist had been brought from Paris to accompany in the orchestra an important piece of vocal music. This person was persuaded that an artist of his value ought to make himself talked about in Germany, since he condescended to come there; and as the author of the opera would not write a *solo*

for the harp which had no relation to the action of the drama, our friend accordingly took care of himself, wrote clandestinely a little *concerto* for the harp, and on the night of the first performance of 'The Sylph,' at the moment when, after the symphony for the orchestra, the singer was preparing to commence her air, the performer, profiting by a moment of silence, betook himself tranquilly to the execution of his *concerto*, to the great astonishment of the conductor, of all the musicians, of the singer, and of the unlucky composer, who, perspiring with anxiety and indignation, thought he was dreaming a bad dream. I was there. The composer is a philosopher, and the shock did not make him lose too much of his rotundity; but I grew lean on his behalf.

Was this a real *concerto*? we may ask, or one of those immoderate *cadenzas* which it was the habit to permit, and to leave to the discretion of players of *obbligati* instruments (to harpists especially) as a close to the symphony to the air of parade; examples of which by the score will occur to every opera-goer? Lindley's violoncello *cadenzas* to such songs as 'Alexis,' 'Gentle airs,' come into this category of immoderate and foolish displays; but they were not *concertos*. The question, though in seeming minute, is raised as suggesting that the love of the whimsical confessed by M. Berlioz (and which makes many of his criticisms valueless to readers who have no glossary, nor key to his cipher) leads him not seldom into extravagance and inaccuracy. He is diffuse in the chapter on Baden-Baden and the liberalities of M. Bénazet, who gave him *carte-blanche* (he informs us) some years ago annually to organize grand concerts, and to produce what music on what scale he pleased, by way of adding to the attractions of that place; and he tells how it gave him a sort of ghastly and sardonic pleasure to force on the notice of the respectable fools of quality, the gamblers and the courtesans congregated there, two of the most serious and awful movements of his 'Requiem.' If this ingenious reason be not an afterthought, introduced under the mistaken notion of seasoning a dull page, it tells ill for the good taste and self-respect of the artist. Nothing could be less in accord with every feeling of what is right and real than would be the proceeding of a sculptor should he expose his 'Genius of Death' as an Old Bogie to terrify a profligate assembly of rouged and intoxicated revellers. It is the antique skeleton at the banquet turned into ribald farce with a vengeance. Perhaps the tale is but—a paragraph;—perhaps a mere paragraph, too, may be another of the author's Baden stories, in which he records how he put down with his wit a "human gosling" who interrupted himself the poet when he was dreaming among the ruins of the New Castle under most picturesque circumstances, and when writing down (he adds) the words for that very *notturno* which since (we may add) has been found so very beautiful and effective in his Shakspearian opera. To ourselves, such jokes and egotisms as these appear dismal rather than winning, when once the season of thoughtless and impertinent youth is past!

Another instance or two must needs be given to illustrate what we mean by the insecurity (we can find no better word) of M. Berlioz, which neutralizes our trust in his teachings, be the wording thereof ever so ingenious and epigrammatic. He adores Shakspeare as fervently as Gluck—is fond of quoting from our poet—and cannot, apparently, endure the idea of any irreverent hands touching the ark of sanctity. How contemptuously does he write of the Italian librettist who, when arranging the text for Bellini's 'Montecchi,' left out the figures of *Mercutio* and the *Nurse*, both, it may be suggested, ill fitted for music! Yet those who

hold a man to his professions will feel that M. Berlioz has done in his own person an offence greater than such omission—a sin of commission. Whence came the comic Poet who figures in his Shakspearian opera 'Benedick and Beatrice,' produced at Baden-Baden the other day?—a starved, conventional substitute for *Dogberry*, if farce was wanted for contrast. To change the theme: our author speaks learnedly in ascribing to the increased size of our public rooms the destruction of modern voices and the deterioration of modern composition. Doubtless, the cause alleged has something to do with the effect; but what may have been partly cause of the cause? Some might allege the vast increase of the orchestra by modern seekers after what is magnificent and wonderful, and who, in their writings for the voice, have preferred to treat it, not as a subordinate, but as an equal—nay, as a despot, to whom the voice must bow in fetters. When M. Berlioz wrote so sensibly and impressively of the vast size of modern theatres (but are they so much more vast than formerly?)—reserving his praise for the Opera House at Berlin—we suppose the old one—and clenching this with a fact which we have never discovered, to wit, that the Germans sing, and do not shout,—why could he not, in fairness, have recalled what has been done by the German symphonists in the matter of an instrumentation at once overpowering and distracting?—take, as but one instance, the tenor variation to the air in Beethoven's Choral Symphony. Why could he not advert to the modern additions made to the band?—things inevitable, whether they denote progress or decay, inasmuch as there is no keeping artistic material *in statu quo*, to please a Handel, a Gluck, a Mozart, a Beethoven or a Berlioz. We have been present at operatic performances in German towns of repute—one was that of our critic's own 'Benvenuto Cellini,' at Weimar—where the wind instruments required almost outnumbered the stringed ones; and thus, seeing that, owing to want of space and want of money, the latter could not be multiplied, the composer's effect was lost. We have been present at a performance of the 'Romeo and Juliet' Symphony, by M. Berlioz, at which a squadron of thirteen harps was added to the already lavish array of players. His *cantata* from 'The Tempest' is cited as an example, in his treatise on Instrumentation, to which two pianofortes, in addition to the ordinary band, are necessary. For that treatise, too, drummers are invited to study the devices of a 'Requiem' written by M. Berlioz for four orchestras, of course to be placed apart one from the other, the four including, if we mistake not, twelve drums!! Surely the criticism on which we have been animadverting, delivered with due severity, by one who has propounded such astounding examples of his own composition to be followed, reminds us of nothing so much as of the priest preaching against his own altar, or Charles Lamb, in the front row of the pit, hissing the "Mr. H." which he had made.

It is fit that discrepancies like the above should be pointed out. M. Berlioz has naturally a keen intelligence, and an honest love for some music. He has read, he has thought—he commands a brilliant style: he has no objection to ban and to bless, like one whose verdict is oracular. When these qualities are combined with prejudice and inconsistency, the compound becomes dangerous to the student in proportion as the form in which it is administered wins or subdues him. Were our author in some points less attractive, such a book as this would have been passed over lightly.

Memoirs of Christina, Queen of Sweden. By Henry Woodhead. 2 vols. (Hurst & Blackett.)

"Thrice august virago" was a part of the poetical homage rendered by Filicaia to this strange woman, who thought she could lay down her crown without making entire sacrifice of her sovereign rights. She was a puzzle and perplexity to the world from her very birth, if not earlier. The astrologers had foretold the coming of a son; and a girl in that year 1628, when she was born, was not welcome to Gustavus Adolphus, nor agreeable to the young lady herself. The latter, however, thanked Heaven, subsequently, that girl as she was, she had more of the heart and humour of the other sex about her. At two years of age the roar of artillery was sweet music to her; in her early childhood she succeeded to the inheritance of her great father. The prosy addresses she received on the throne gave her more annoyance than her sire's death.

During her minority she was well taught, admirably self-instructed,—a very marvel of general erudition. When the three Oxenstiernas and other sage and valiant stewards made over the kingdom to her sole government in 1644, she found a dark world before her. Of the years of minority she had pleasant memories of useful labours accomplished, and only one disagreeable reminiscence—the tremendous whippings she used to receive at her royal mother's hands for drinking the rose-water in which that exalted lady was wont to wash her face.

The Treaty of Westphalia enabled her to live for awhile in peace. She founded universities, patronized scholars, rushed into extravagant projects, and was on such friendly terms with Bourdelot and Pimentelli, French and Spanish envoys, as to give some uneasiness to her Protestant subjects. She early gave notice of her resolution not to marry; exhibited many eccentricities, particularly at church; and in listening to *gaillard* stories, often boldly supplied the epithets which the more modest narrator evinced fear of expressing. She was an almost sleepless woman; and those about her respected and dreaded her by turns. She was alternately to them a Minerva and a Medusa. She was a lukewarm Lutheran, abhorred the doctrine of Calvin, wore no ornaments, was above the weakness of much washing, and seldom combed her hair above once a week. She worked unceasingly, was so far strong of mind that nothing could give her uneasiness, and declared that she cared no more for death than she did for sleep. After ten years of "kingship," she grew weary of it, longed for a new sensation, was horrified at the sight of a secretary coming to her on business, and in 1654 resolved to abdicate, and enjoy life in Italy. "I do not trouble myself," she wrote to Pope Clement, "to know or care what the world will say about it." She would fain have retained a little land over which she might have preserved sovereign rights; but the Senate objected, giving her an annuity of two thousand rix dollars, and taking her cousin, Charles Gustavus, for her successor. To show her anxiety to be rid of all further incumbrance, she had the ceremony of abdication performed at seven o'clock in the morning. When all was done, she signed to a Swedish nobleman to approach and take the crown from her head; but, he showing reluctance, she dis-crowned herself, stripped off all royal finery, made a very long speech, set off on her errantry the same evening, and took with her the crown jewels!

If there was much of romance in her early

life, there was still more, and of madness too, in that which followed. She roamed from land to land in male attire. Queens went in disguise to gaze at her; kings and grand-dukes offered her ovations, which she despised; and Jesuit societies were astounded at the learning of the little gentleman in Spanish hat, plume, manly hose, sword and dagger. It was only on reaching the Spanish territory in the Netherlands that she re-assumed the dress of her own sex, and passed over to the Church of Rome: but this latter fact was not made public till she had reached a subsequent stage of her wanderings at Innsbruck, in 1655. At the public profession the ceremony was rendered as splendid as possible, and the Archduke gave in honour of the neophyte a masked ball in the evening. "A comedy after the farce!" was the comment of the convert.

Her subsequent entry into Rome was as that of a conqueror. Its gorgeoussness was a theme for many an after-day. Festivals followed of an extraordinary sumptuousness, and Pope Alexander gave her a dinner, at which a Jesuit preached a sermon, and Christina was bold enough to loudly dissent from some statement made by the preacher. The gallantry of the Pope led him to side with the lady. At Mass she could not be silent, would often laugh, and loved to make the Cardinals laugh also. Indeed, she exercised such powers of attraction over some of these gentlemen, that they left Rome for the sake of their reputation.

The extravagance of her life here caused much scandal, and Christina left Rome for France in 1656. The ladies at Fontainebleau received her with open arms and showers of kisses. "They take me for a man!" said she. The French Court in time came to look upon the bold, witty, learned, scarcely-washed, ill-dressed woman as a half-drunken gipsy.

She went, wandered and returned, and rendered her second sojourn famous by ordering, at Versailles, that murder of Monaldeschi, one of her gentlemen, which has been so thrillingly narrated by an eye-witness, Father Lebel. After that mysterious deed, Louis was glad to bid her farewell. She went once more to Rome, —visited Sweden, was coldly received, much annoyed, and was obliged to leave it, for the last time, for Rome in 1662. An attempt to return to Sweden, subsequently, was met by such opposition that it was finally abandoned; and after another course of vagabondizing, Christina settled finally in the Eternal City,—the "Tenth Muse," fêted, caressed, abused, flattered, slandered and fearless. "Everything trembles here but myself!" said the lady.

Amid much extravagance, and many flirtations with Cardinals, and disquisitions with philosophers, and political negotiations, and a vast correspondence, and dissensions with the Pope, and assertions of sovereign right, and squabbles of higher or less degree, the life of Christina wore on till it came to an end in 1689. She saw the fate of the Stuart, and foresaw that the alliance of England and Holland would prove injurious to France. "Mind," said she, "I have prophesied it!"

Such is the outline of the life of a woman who has had almost countless biographers, from Archenholtz, with his ponderous but conscientious quartos, to generalizing pamphleteers. Her story was half written while she was being laid in the tomb, "in a robe of gold," like Lesbia; and only seven years since Christina was included in a series of Ex-Sovereigns published by Bentley. Once more her life is attempted, by Mr. Woodhead, who has furnished a compilation, offered nothing new, and written his book in a succession of little paragraphs which seem suitable for youth to

commit to memory. He has divested the romantic life of all picturesqueness, and shown considerable ingenuity in being dull and uninteresting even when dealing with passages the action and excitement connected with which might have defied stupidity of detail. As a sample of Mr. Woodhead's style and argument, we quote his narrative of the death of Monaldeschi, whom the ex-Queen murdered, for no sufficient reason ever yet discovered, but probably for no better than having betrayed her secrets and ridiculed her habits. Christina has just told him of her resolution, and left him to his assassins. In the quotation we preserve the author's plan of brief paragraphs:—

"The unfortunate man now showed as much want of courage and manliness as he had previously shown want of faith and honour.

"He knelt down twice and began his confession, and as many times he rose to cry and supplicate for mercy.

"He had pronounced his own doom when he thought he was sealing the death-warrant of Sentinelli, but the latter felt a degree of pity which he would not have experienced from his rival. Sentinelli consented to make an appeal himself to the Queen, but a display of pusillanimity was not the way to move Christina. When she heard that Monaldeschi would not finish his confession, and sought thus to prolong his life, she exclaimed:—

"The coward! wound him, and thus force him to confess!"

"The precautions the wretched man had taken to preserve his life, now served only to increase his misery. Sentinelli tried in vain to wound him through his shirt of mail, and at last struck him in the face.

"Convinced now that he could not escape death, Monaldeschi finished his confession and resigned himself to his fate, but a considerable time elapsed before the soldiers could complete their bloody task, on account of the shirt of mail.

"There will be hardly any difference of opinion now that this act of Christina's, even if it be not called a murder, was a violent and illegal execution. Some impartial writers, however, have attempted her justification, and amongst them the illustrious Leibnitz, who at least deserves a hearing, because he had paid particular attention to the subject, as is proved by his 'Traité sur le Droit de Souveraineté et d'Ambassade.'

"Leibnitz maintained that, as the suite of a Sovereign or his Minister were exempt from the jurisdiction of the tribunals in countries they visited, the suite must still be accountable to some one for their actions, and could only be so to their own Sovereign or Minister.

"A parallel case happened nearly about the same time, which has hardly been considered a matter of reproach to the perpetrator.

"When Charles II. was in exile, and it did not appear likely he would ever be King of England, one of his suite, named Manning, was detected corresponding with Thurloe, and he was shot by order of Charles in the palace of the Duke of Neuburg.

"Charles passed scathless from the censure which has so deeply wounded the fame of Christina, but he had an advantage not to be desired for her.

"Charles committed so many crimes, that we all feel it would be absurd to make a great outcry about one."

We do not share in this feeling at all; but we may add, that the difference between the cases of Charles and Christina lay in this, that the former claimed to be a sovereign king who could justifiably execute a notorious and adjudged traitor; Christina was no sovereign at all, and certainly held no prerogative to execute a man without even cause assigned. Her exalted position has so maintained her before the eyes of the world, that she has been universally accepted for a heroine; but had she been an ordinary lady with the same tempera-ment, she would have appeared in a very dif-

ferent light. Such a one among ourselves might be described as a strong-minded woman, a little excused for her eccentricities because she gave good dinners, but a bold hussy for whom her sister-women often blushed, and a clever but cruel one, who loved to catch clever men at fault, or to make her male visitors generally look like fools,—and who, for her freethinking ways, kept the parson of the parish, or the parish-priest, according to the flock of which she was so precious a lamb, in a state of continual anxiety and fever. As it is, flatterers call her that "Thrice great Queen"!

RECENT VERSE.

Essays and Poems; with a brief Autobiographical Sketch. By A. J. Leatherland. (Tweedie.)—The essays in this volume are very creditable to the writer, who describes himself as an invalid artisan. His views are practical, yet generous and high-toned; his arguments, on the whole, clear and logical. We can speak with especial praise of the treatises respectively entitled "Psyche" and "The Religious Element in Literature." Now and then, Mr. Leatherland shows himself too much of an optimist; as when he observes—"A poet or a lover of poetry must, of necessity, be a man of feeling. To be cruel or brutal would be contradictory to his nature." These dicta, we fear, admit of exceptions. In another instance the advocate is too timid for his cause. He defends our best works of fiction by pleading their salutary lessons, their exhibition of manners and their rational entertainment. But he shrinks from adding, as he might do, that the essence of a fine imagination is its moral truth, and that in a first-rate novel we read, under feigned incidents, the real story of human feeling and character. It is not often, however, that our "artisan" is thus at fault. His teachings, though frequently anticipated, are generally sound; while his easy and lucid style is suited to familiarize the ideas of more abstract thinkers. The writer's autobiography is also worth perusal, certain passages of it rising even to dramatic interest. In parting, we would advise Mr. Leatherland to confine himself to prose composition. His verse, though fluent and polished, bears the fatal impress of mediocrity.

Poems, Grave and Gay. By Edward Irwin. (Tallant & Co.)—The serious poems in this little volume, though unexceptionable in feeling and sometimes pleasing in description, call for no especial remark. Mr. Irwin succeeds better in the gay than in the grave. His mirth is often of the rough and random kind, but it flows from him easily. As an example both of its merits and faults, we cite

LOVE UNDER DIFFICULTIES.

I met a dear creature, it matters not where;
And I met with a fall too, in meeting the fair;
For I fell quite in love,—but you wouldn't blame me,
For this beautiful creature you only could see.
Her eyes were like—stay, they bewildered me quite:
No mortal could see them and criticize right.
I could only observe that their number was two,
And their colour—about the most mischievous blue.
Her mouth (my own waters)—don't ask me I pray—
'Twas the sweetest of mouths, and that's all I can say:
And the envious fellow who dares to say "no,"
If he had any taste, faith, he wouldn't say so!
Her mouth, when she laughed, was a casket thrown wide
With pearls gleaming white from pink velvet inside;
When she sang, 'twas a cage, which to shut were a sin,
While her tongue, like a little bird, warbled within.
Her hair, gathered up in a net with much care,
Peeped out from the bars of its prison up there,
Ev'ry wave, ev'ry fold, seeming silly to say,—
"Don't you think it's a shame to confine me this way?"
For lightness, her foot was like that of a lamb;
For whiteness, her hand might have borne off the palm;
And kind was the heart that went beating below,
To keep itself warm in her bosom of snow.

The next time I met my dear charmer, thought I,—
"I'll disclose to her father the truth, or I die."
"Introduce me," I said, "to your worthy old sire,
The grey, spectacled gentleman next to the fire."
She replied with surprise, and a mixture of glee:
"That old gentleman there—is my husband!" says she.

—The liveliness of our extract will provoke a laugh, though its carelessness and want of finish are apparent. We would remind Mr. Irwin that polish is as necessary to sportive composition as to that which is serious. At present he is only comical; with pains he may attain to humour.

Darrynane in 1832; and other Poems. By Ellen Fitz-Simon. (Kelly, Dublin.)—These pages are chiefly occupied with recollections of real persons and scenes. Amongst the former O'Connell is conspicuous. Mrs. Fitz-Simon is, we believe, a daughter of the celebrated Irishman: her enthusiasm for his memory may therefore be taken as a just tribute to his domestic virtues. We cannot, however, congratulate the lady upon inheriting any large share either of her father's humour or pathos. With the exception of a colourless "Dramatic Sketch," the volume reads like a fragmentary diary in verse. Here and there we meet with a prettiness; but Mrs. Fitz-Simon's memoranda are too hastily dashed off to interest the reader.

The Shrine of the Brave: a Poem, in Four Cantos. By a Working Man. (Slough, Herbert.)—The historical passage of which these lines treat is the resistance of Boadicea to the Romans. It is to the credit of the "Working Man" that he has been a student of English history; but he has erred in attempting to convert his knowledge into poetry, of which he has not yet acquired even the mechanical rudiments.

The Homestead: with Occasional Poems. By Cecil. (Tresidder.)—"The Homestead" refers to a certain spot in Leinster which has the distinction of being the author's birthplace. He treats us to occasional descriptions of this favoured locality and its inhabitants; but his genius is discursive; and politics—American and European—the Sepoy war, promotion by purchase, the plans of the Jesuits, and kindred topics, occupy his space far more than does the rural theme which he has nominally chosen. Cecil, moreover, loves to expatiate upon a grievance, and complains, as follows, of England's indifference to her best and bravest:—

Thus Franklin, with his brave compatriots, flies,
At Britain's call, to win her frozen prize;
And, martyr to his zeal and duty, dies!
She lost another Nelson in that son,
To mourn his fate where nothing could be done!
But where she could have render'd aid, and save
Her host of heroes from the Indian grave
Of Moslem massacre! alas, oh Muse!
None may her Horse-Guards' policy excuse;
Where wealth not merit, family not worth,
Its patronage has heretofore call'd forth;
Where red-tape-rule the Empire's interest mocks
To trammel Nelsons or some Havelocks!

—There may be some grounds for Cecil's indignation; but the mildest critic may demand that he should express it in tolerable grammar, and that if he cannot alarm the "Circumlocution Office" by his eloquence, he should, at least, not amuse it by his blunders.

OUR LIBRARY TABLE.

Lamps of the Church; or, Rays of Faith, Hope and Charity, from Lives and Deaths of some eminent Christians of the Nineteenth Century. By the Rev. Henry Clissold, M.A. (Rivingtons.)—The clergyman, or, as he designates himself in his preface, "the Son of Aaron," who has produced this comparatively innocuous, but far from instructive, collection of biographical sketches, expresses a hope that his volume may become so generally and permanently popular as to lessen the demand in times to come for works of prose fiction—especially such of them as appear in red and yellow bindings. "How painful," observes Mr. Clissold, folding his hands as he sighs sorrowfully, "the scene when we perceive those countless works of fiction of a much lower order which daily issue from the press, and in their red and yellow attire, with their frequent appeals to the unhallowed passions of a fallen nature, threaten to displace from the library-shelf the books which are the sacred depositories of those great verities of life and death, judgment and eternity, that concern now and for ever the happiness and welfare of every man, woman and child!" A somewhat extended acquaintance with the writings of modern novelists encourages us to question the soundness of Mr. Clissold's induction, and to doubt whether a red and yellow exterior to a work of imaginative literature is to be regarded as a sign of uncleanness within. "Lamps of the Church" is rich in green and gold, which it may be presumed is in Mr. Clissold's opinion the appropriate livery of edifying scripture. Of the memoirs

themselves we must speak less favourably than of their binding. The writer's system is to state the name, date of birth, and leading characteristics of his hero or heroine, and then with a jump, which leaves the most active and really interesting portion of the life untouched, describe the failing powers and deathbed speeches. Those, therefore, who would know more of the author's good men and women than the names of the parishes in which they were born, and the texts of Scripture in which they found most consolation at the approach of death, will lay aside the "Lamps of the Church" without enlightenment. Of Mr. Clissold's literary style readers may form a just appreciation from the following passage, in which Helen Plumtre, of whom the biographer does not condescend to say whether she was maid or mother, spinster or wife, is brought upon the scene:—"The letters of this Christian lady, which in every page breathe an ardent piety, have been edited by the Rev. H. Western Plumtre, of Eastwood Rectory, in the county of Nottingham. The first letter in the series is dated January 16, 1817; and the last of them, October 1833, extending, therefore, over a period of fifteen or sixteen years: and with the exception of some interesting statements contained in a brief preface, the particulars of her spiritual life must be gleaned from her correspondence." What are we to think of this letter! Since it covers fifteen or sixteen years of events, it is doubtless a long one. But why is its extent over so considerable a period of time thus mentioned as a necessary consequence of its date! Possibly the "Son of Aaron" intended to say that the entire series of letters extended over fifteen or sixteen years. Similar looseness and confusion pervade the entire volume, in which there is scarcely a memoir which does not exhibit ignorance of the simple rules of grammar.

Rudimentary Treatise for Students of Agriculture. Outlines of Modern Farming. By Robert Scott Burn. Vol. I.—Soils, Manures and Crops. With Illustrations. (Virtue, Brothers & Co.)—In his Preface to this first of a series of volumes, Mr. Robert Scott Burn says, "The present volume, as its title-page indicates, is devoted to the consideration of points connected with Soils, Manures and Crops. The second volume will take up those connected with the Breeding, Rearing and Fattening of Cattle, Horses and Sheep; while the third volume will be devoted to the Management of the Dairy, of Poultry, and of Pigs." This series will be followed by a companion volume, entitled "Historical Outlines connected with Farming and Farming Economy"; and the author undertakes to discuss in a separate work questions connected with "Reclamation of Waste Lands," the "Utilization of Town Sewage," and "Irrigation." When Mr. Burn has fulfilled the promises of his programme with the spirit and efficiency which mark this first instalment of his comprehensive scheme, he will be entitled to praise as a contributor to general literature, not less than as a promulgator of the knowledge which is of special value to the practical farmer. The history of agriculture is a fine subject for a good book, which has been nibbled at by many writers, but has not hitherto been satisfactorily handled.

Life in Normandy: Sketches of French Fishing, Farming, Cooking, Natural History and Politics; drawn from Nature. 2 vols. (Edinburgh, Edmonston & Douglas.)—These are volumes curious by reason of their tediousness. "They were written," we are told, "for pastime" (which is hard to believe) "in 1848, by a Highland gentleman resident in Normandy," whose experience in the French manner of cooking "marrots, cuttle-fish, limpets, frogs, snails and maggots" (!), it was hoped, might be profitable to thriftless folk at home, unable to turn the bounties of Nature to culinary account. "Men and their manners and customs," it is added, "are lightly sketched." That which the writer of the Preface, just gleaned from, would consider as "heavy" is not easy to imagine. Two imaginary Britons, Hope and Cross, and a French Marquis—who eats as heartily as one of the gormandizers in the "Noctes Ambrosiane," and who cooks, moreover, the breakfasts and dinners to which Hope and Cross are bidden—carry on the business of the book, for the most part in dreary dialogue which

fails to amuse. As for instruction, we do not believe that one single snail the more will be cooked in Argyllshire or in the Orkneys for all that is here said and done. The lithographic sketches belong to a bygone day of the art.

Niccolo Marini; or, the Mystery solved: a Tale of Naples Life. 2 vols. (Parker, Son & Bourn.)—There are some districts, and among the most richly endowed by Nature, which resist the best endeavours of the tale-teller. Wales is waiting for its novelist, so is the Kingdom of the Two Sicilies; whereas in a churchyard in the Marshes, and a desolated brewhouse, Mr. Dickens has found the materials and the framework of one of the most powerful romances ever written. 'Niccolo Marini' is a dull, awkward story, once again setting forth the pursuit of an English fortune by an Italian adventurer, who has, besides his debts, to consider the manner of walking on slippery ground for a Neapolitan nobleman in difficulties, keeping the while patriotic relations: in brief, who is a spy. False concords like these apparently turn up in every tale of modern Italy. Is such an impression as the above one more case of prejudice—one more illustration of the antipathies which so long kept England from France, and France from England, asunder? Or is it an expression of a truth compounded of Southern organization and Southern misgovernment? Is the world's old epithet "false" a warranted epithet or not? The tale, then, in its cast of incident is not pleasant. The author's hand, whether as a painter of character or a reporter of dialogue, is dull, weak and heavy. Few figures more absurd, in their want of resemblance to real life, could be named than the German servant of the English hero. We cannot, then, recommend 'Niccolo Marini.'

How it was done at Stowe School. (Hamilton, Adams & Co.)—The writers of these recollections of school-life take needless pains to assure the public that they were educated on a very bad system; and the object of their volume is to overthrow an evil which exists only in their own imaginations. Attacking the private academies, in which most children of the middle ranks of English life are educated, and arguing that they ought to be reformed on the rational and liberal system of Eton and Harrow, they attribute to them a fault from which it is well known they are quite free, and say nothing of an evil by which they are too often marked. The fault thus attributed is excessive severity of discipline; whereas it is matter of notoriety that if the middle-class private academy errs in respect of penal provisions, the error is that of improper leniency. In times past, corporal punishment may have been far too liberally employed in public and private schools; but there is no doubt that at the present day some of the worst defects in "educational establishments for young gentlemen of the middle classes" are due to the absence of the Silver Lady of the Woods. Of the prevailing evil of the schools they attack—namely, the attempt to teach young children too many subjects—nothing is said by the authors of this *brochure*, the coarse tone of which is not its least fault.

North and South. By the "White Republican" of *Fraser's Magazine*. (Chapman & Hall.)—The "White Republican," who here pleads the cause of the South and cries aloud for European intervention in Transatlantic affairs, says little to which England can give ear just now, when so many teachers of superior qualifications are enlightening the public mind on American politics. The most noteworthy passage in the essay is that in which he compares the attitudes assumed by England and France towards the contending parties, and concludes his survey by saying, "What, then, has England gained by her diplomatic refusal? She has gained an enemy, and lost an ally; while France has gained a friend, whose trade alone, when the blockade is raised, will be worth ten millions a year. The Southern Government will pass tariffs more favourable to France than to any other country, in return for this well-meant service of the Emperor. The great agricultural nation of the new Confederacy will prove a new 'El Dorado' to the merchants and manufacturers of France, under the reciprocal benefits of Free Trade; while

French vessels will be employed, in preference to all others, in the transportation of sugar and cotton, of silks and wines. As the Emperor takes no step backwards, he will doubtless be the first to recognize the independence of the Confederacy, and reap the first golden harvest of peace. In the mean time, what hinders the Government of France from buying cotton in New Orleans and sending it to Havre?" It would at present be unreasonable to ask from American critics generous judgment of our national conduct towards their warring States. The time, will, however, come when, in North and South alike, men will do justice to the motives which have hitherto caused us to place considerations of morality above those of national aggrandizement, and still make us less anxious to achieve what will be profitable than to do what is right. Meanwhile the "White Republican" may rest assured that we are fully aware of the sacrifices we have made, and are still making, for the sake of principle, and that the South is no more able to bribe, than the North is to bully, us into adopting a merely selfish policy. He will also do well to reflect that his countrymen would receive in good part from France suggestions to which the reply would be a threat of war, if they were offered by England. The Anglomania of the American multitudes is amongst the reasons why we say, "Let us keep quiet, and not irritate a susceptible people with well-meant but inopportune suggestions; let us not speak, till we can speak with good effect."

Klimatographische Übersicht der Erde.—[*Climatographic View of Our Globe*, von A. Muehry, M.D.]. (Leipzig and Heidelberg; London, Dulau & Co.)—The principal aim of Dr. Muehry is to furnish authentic reports on the climate of our globe and the peculiarities it presents in different countries; and in the bulky volume before us he gives us the result of eight years' compilation and study, intended both for the scientific meteorologist and the practical man. A well-arranged book of reference on such a topic would be invaluable now-a-days, when communication between most parts of the world has become both rapid and frequent; and great undertakings often fail because the effect of climate on the health of enterprising Europeans has not been, or from want of reliable information could not be, taken into consideration. Regarded in this light, the work falls short of our actual requirements. In his Preface, the author warns us not to expect a notice about every place; but he leads us to believe that, at least, all the different countries of our globe would be treated upon as fully as existing records admit. However, in this belief we are disappointed. Several large countries are left out entirely. We do not find a syllable about the whole empire of Japan, though Europe has of late been inundated with information on the subject. Nor do we meet with any account of the Isthmus of Panama, that highway of nations; a scanty notice about Portobello, now a deserted, unimportant place, excepted. There is ample information about the giant natural bridge which connects North and South America in the very works our author largely quotes for other districts. In treating of the South Seas, several important groups have been ignored—for instance, Fiji, Tonga and Raratonga; and we could go on multiplying similar shortcomings, even after a hasty perusal of the work. Again, the author has not availed himself of the latest sources of information in dealing with the various countries he does not omit. We strongly recommend to his notice the *Journal* of our Royal Geographical Society and recent works of travel. Surely more ample details could have been gleaned about our new colony of British Columbia than are contained in Sir J. Richardson's account; and something more complete might have been drawn up about the Sandwich Islands than is embodied in Wilkes's 'Narrative.' The author is altogether behind his age in supposing that Mauna Loa, the highest active volcano of that group—indeed, of our globe—has not had an eruption for the last sixty years. Our illustrated newspapers show a different picture. The grouping of the different countries according to their geographical position could have no object when no attempt is made to preface the different

groupings by some kind of generalization. An A B C guide would have been more acceptable, because a number of people are not so sure respecting the geographical whereabouts of the place they wish to look for as the author may be, and will be quite at a loss under which heading to search. In short, whilst applauding the author's aim to be useful to medical men, naval and military officers, statesmen, commercial travellers, emigrants, and all those who are now called upon to take the effects of climate into consideration, we censure the impracticable plan of the work, regret its omissions and shortcomings, and altogether blame the careless manner in which the printer has acquitted himself of his task, having counted as many as three typographical errors in one line.

Of Pamphlets on slavery and other subjects we have to record—*The Horrors of Slavery: being a Verbatim Reprint of a Narrative describing a Residence of Seven Weeks on a Sugar Plantation in Jamaica in the year 1832* (Stock).—*The Proposed Slave Empire: its Antecedents, Constitution and Policy*, by C. S. Miall (Stock).—*Confederate Notes for English Circulation*, by M. B. H., of Arkansas, C.S.A. (Simpson).—*Shall we Recognize the Confederate States?*—*The Question considered in Three Letters with Reference to our National Interest and Duty, and to Slavery as illustrated in the History of our West Indian Possessions*, by the Rev. E. L. Blackman (Ipswich, Knights).—*Native Policy of New Zealand: a Speech delivered in the House of Representatives of New Zealand*, by J. E. Fitzgerald (Stanford).—*The Land Question*, by G. R. (True-love).—*Letters from Canada*, with numerous illustrations (Algar).—*Crime and Criminals: Is the Gaol the only Preventive?* by A. Pulling (Stevens, Sons & Hayes).—*Remarks upon Archbishops: Whately's Letter on Medical Trades' Unions*, by W. Bayes (Turner).—*Hints and Suggestions for the Formation and Management of Working Men's Clubs and Institutes* (Bell & Daldy).—*Practical Remarks on the Laryngeal Disease, as illustrated by the Laryngoscope*, by Dr. Sieveking (Richards).—*Excessive Infant-Mortality: How can it be Stayed?* by M. A. Baines (Churchill).—*Final Report on the Utilization of the Metropolitan Sewage and the Reduction of Local Taxation* (Kent & Co.).—*Observations on Art Proper: its Dignity, True Principles and Aim*, by E. Bates (Leeds, Inchbold).—*The Brothers Burnes; or, the Traveller and the Doctor* (Two Pictures from India), (Nichols).—and *Habits: a Lecture*, by the Archbishop of Dublin (Hodges, Smith & Co.)

LIST OF NEW BOOKS.

- Amy's New Home, 18mo. 1/6 cl.
 Answer to Mr. Assumption of Surnames, 8vo. 1/
 Andrews's Critical Latin-English Lexicon, new ed. roy. 8vo. 18/6 cl.
 Baker's Laws relating to Burials, with Notes, Forms, &c. 18mo. 7/6
 Balfour's Retribution, 18mo. 1/6 swd.
 Bingham's The Prayer Book as it Might be, or. 8vo. 3/6 swd.
 Book of Days, ed. by Robert Chambers, Vol. 1, royal 8vo. 10/6 cl.
 Bosi's History of the Moravians, new edit. 18mo. 3/6 cl.
 Carter's Imitation of Jesus Christ, Lent Lectures, 1860, 8vo. 8/6 cl.
 Child's Girl's Own Book, revised by Valentine, 16mo. 4/6 cl. pt.
 Chronograph, Salem Chapel, 8vo. 2/6 cl.
 Clarke's Common-Life Sermons, new edit. 8vo. 3/6 cl. limp.
 Collins's Cruise upon Wheels, new edit. post 8vo. 5/6 cl.
 D'Aubign's History of the Reformation, abr. by Gill, post 8vo. 5/6
 Dick's Compendium of Mathematical Geography, post 8vo. 5/6 cl.
 Family Atlas, Society for Diff. Useful Knowledge, n. edit. fol. 6s.
 Fisch's Nine Months in the U. S. during the Crisis, or. 8vo. 3/6 cl.
 Folkard's Sailing Boat, 2nd edit. post 8vo. 12/6 cl.
 Gausson's The Canon of Holy Scripture, 2nd edit. 8vo. 10/6 cl.
 Harry the Whaler, 18mo. 1/6 cl.
 Harvey's The Assessments of the Rent-Charge, 8vo. 1/6 swd.
 Hoare's The Christian Mother, or Notes for Mothers' Meetings, 1/
 Hodgson's British Influence in India: an Essay, or. 8vo. 3/6 bds.
 Holy Year, or Hymns for Sundays and Holidays, 3rd edit. 16mo. 4/6
 Illustrations of the Beauties of Tropical Soenery, &c. or. 8vo. 6/
 Irish Convict Reform, by an Irish Priest, Dublin, 8vo. 1/6 swd.
 Kennedy's Hymnologia Christiana, or. 8vo. 7/6 cl.
 Laurie's Fourth Standard Reader, or Fables and Parables, 18mo. 1/
 Lytton's Novels, Lib. Edit. 'Lucratia', Vol. 1, 8vo. 5/6 cl.
 M'Cauley's Examination of Ep. Colenso's Difficulties, or. 8vo. 5/6 cl.
 Midland Masonic Calendar, for 1863, 8mo. 1/6 swd.
 Mogridge's Thoughts for Thinkers, or. 8vo. 1/6 cl.
 Money's Suggestive Thoughts, with Introduction by Dr. Macleod, 4/6
 Mother's (A) Lessons on Kindness to Animals, new edit. or. 8vo. 1/
 Oxford University Calendar, for 1863, or. 8vo. 4/6 bds.
 Parker's (Theodore) Collected Works, edited by Cobbe, Vol. 1, 8vo.
 Procter's Legends and Lyrics, Vol. 3, 3rd edit. 8vo. 5/6 cl.
 Richardson's New Dictionary of the English Language, Part 1, 4/6
 Robertson's The Desert Pathway, or. 8vo. 4/6 cl.
 Robinson's Italian Sculpture of the Middle Ages, folio 12s/6 hf.-bd.
 Rowe's Mind whom you Marry, or the Gardener's Daughter
 Royle's 'Be at Peace', Introduction by Rev. E. Parry, 1/6 cl.
 Sandeman (Rev. D.), Memoir of, by Bonar, new edit. or. 8vo. 5/6 cl.
 Savonarola (Girolamo), History of, by Villari, trans. 2 vols. 18/6 cl.
 Sixpenny Magazine, Vol. 4, 8vo. 3/6 cl.
 Smith's Elementary View of the Practice of Conveyancing, 6/6 cl.
 Smith's The Cassiterides: the Phenicians in Western Europe, 3/
 Stone's Therapeutics of the Day, trans. by Masstah, 8vo. 8/6 cl.

LORD LANSDOWNE.

THOUGH he was not himself a poet or an historian, the Marquis of Lansdowne had too many points of contact with letters to permit of his passing away from our midst without some words of record, some expressions of regret, in a literary journal. In the best sense of the word, he was a friend of literature and of learned men. To him must be ascribed, in part at least, those improved relations between men of rank and those of genius which mark the present times from all former ages. The great poet and the great patron are social figures as old as history; Southampton, Herbert, Montagu, Rochester, Halifax, Harley and Chesterfield, being, as it were, the necessary social counterparts of Shakspeare, Jonson, Dryden, Swift and Johnson. In our own days, thanks to such noblemen as Lord Lansdowne and the late Duke of Devonshire, the patron has risen into the friend. Lord Lansdowne gave to literature, like the grandees of another age, the encouragement of a great nobleman and an active politician; while to the man of letters he gave the companionship and sympathy which in our days have superseded the poet's dedication and the patron's purse. So far as letters are concerned, that was the charm of Lord Lansdowne's life. The Halifaxes and Harleys, if they appreciated the toils and delighted in the society of scholars and poets, made an ostentatious and oppressive show of their kindness and preference. They never seemed to forget that they were great lords, and they seldom allowed their pleasant companions to forget that in comparison with such mighty personages they were only popular writers and beggarly wits. No trace of such distinctions ever checked the talk or weakened the welcome at Bowood or Lansdowne House. If help was needed, it was freely given. From Thomas Moore to Frances Brown, there is a history of princely care and of unpublished generosity to write which has, perhaps, no equal in the lives of British Peers,—or only that of the late Duke of Devonshire, whose bounties to the struggling and the aged servants of literature, high and low, will never, perhaps, be known to their full extent. The delicate bounty of the Duke to Leigh Hunt, so recently told by Mr. Collier, recalls the scene of Mr. Longman's interview with Moore, when the publisher told the astonished and grateful poet that Lord Lansdowne had secretly placed 1,000*l.* in his hands to cover the liabilities in the Bermuda accounts. "Secret service" was the kind of service which he most loved to render: once the writer of these lines received from him a considerable sum of money, to be used at his own discretion, for the benefit of one who was richer in mental than in worldly gifts, with a request, which the circumstances of the case made it impossible to observe, that the person who received the advantage of his gift should not be told from whom the solace came. So it was ever with him. Yet the personal relation of the Marquis to the man of letters was that of friend to friend. Even while occupying Sloperton Cottage, at the gate, so to speak, of Bowood Park, Moore had no sense of his own inequality. The gracious courtesy of his noble host made pleasant to all parties a relation which under any other man might have become intolerable. Admiring wit and song, and fine prose and conversational power, he dextrously hid away all formal suggestions of his own high worldly rank, and, with a grace which put his guest at perfect ease, met him on the common ground of intellect.

From the far-off date of Lord Lansdowne's birth—so far away as 1780—he appeared to the younger men of this generation as one of another age. They remember him as having been squibbed by Byron in Byron's youth. They think of him as a contemporary of Sheridan and of Scott. In the lives of poets which men who are now middle-aged read when they were at Rugby or Westminster, he was a constant and conspicuous figure. Lansdowne House, too, from its recurrence in Memoirs, has a sort of rival fame to Holland

House, carrying us back to the times of Napoleon and Castlereagh. Yet the doors of Bowood and Lansdowne House remained open to every man who made his mark in literature until yesterday. In the room in which Moore had sung his melodies, Macaulay afterwards talked his essays, Lady Morgan told her Irish stories, and Jerrold cracked his jokes. Lord Lansdowne was no great speaker, and no very bright wit; but his shrewd good sense enabled him to value at their true worth the more showy and shining qualities of his guests. It may have been after that overbearing table-talk, during which Mr. Carlyle is said to have caught "flashes of silence," that Lord Lansdowne exclaimed, "I wish I could be as certain of anything as Tom Macaulay is of everything." Of late years deafness interfered with his enjoyment of wit and anecdote and table-talk; but books and their authors engaged his interest to the very last. A party, in which literature was represented, was gathered in the Wiltshire country-house at the time of the accidental fall which ended in his death. Some of his latest remarks referred to the 'Memoirs' of a departed celebrity which have just been issued to the world, and have roused no small amount of "Tory spite."

The loss of such a man is a loss to literature. A harvest of affection grew to the very last about the kindly old gentleman, who at eighty-two, though bowed with years, and shut from much of the world by deafness, had the elasticity of spirit which belongs to men of middle age. Only a few days ago we were reminded of the love borne to him by Henry Hallam, perpetuated in the name of a favourite and gifted son. A list of the books dedicated to him, from Moore's collected writings downward, would fill a page of the *Athenæum*. Of living men of letters, it would not be easy to name a single one of eminence who has not lost in him a personal friend.

SIR W. R. HAMILTON.

Observatory of Trinity College, Dublin,
Jan. 31, 1863.

A misdescription, in the recent volume of Lectures delivered before the Dublin Young Men's Christian Association, in connexion with the United Church of England and Ireland, during the year 1862, which did not appear to me worth noticing at the time, has acquired some literary importance, and may perhaps occasion hereafter some confusion, in consequence of its having been very naturally transferred to the review of that volume, in the *Athenæum* of this day.

The Committee, or the Publishers, will (I hope) correct the inaccuracy, in any future edition of the work. But, in the mean time, the copied (or extracted) title of a Lecture,—"*Light*," by the Astronomer Royal for Ireland,—in your recent page 148, may lead many of your readers to infer that I had the honour of lately delivering, in company so eminent as is described, the beautiful address in question; or some address on the same subject.

The Lecture was given by my old and dear friend, Dr. Robinson, and not by your obedient servant,

WILLIAM ROWAN HAMILTON, LL.D., Royal
Astronomer of Ireland.

DEEP-SEA TELEGRAPH.

Kensington, Feb. 2, 1863.

WILL you permit me to state, in reply to the communication of Mr. Bower Wood which appeared in the *Athenæum* of Saturday last, that I am neither directly nor indirectly concerned in any Deep-Sea Telegraphic route between this country and America, but ready and anxious to render my plan of survey available for whatever route the Government or the public pronounce to be the most feasible.

With regard to the objections that have been urged against my scheme, I have only to say that they shall be fully and most satisfactorily answered when the fitting time and opportunity arrives. Meanwhile, I would caution the unwary against lending an ear to those who, in the absence of argument, resort to such assertions as the follow-

ing. The speaker, Sir Edward Belcher, at the meeting of the Society of Arts, on Wednesday, the 28th ult., said, "If we had enough data for laying down these electric cables, he saw no reason to incur such enormous expense by mapping the Atlantic, and blotting our charts with soundings, which were placed merely at haphazard!" Surely, such a charge demands the fullest investigation at the hands of the Lords Commissioners of the Admiralty; for, assuredly, if well founded, its least baneful result would be the consignment of my scheme to the category denounced by the same speaker as a "mere speculative dream."

G. F. WALLICH.

LES MATINÉES ROYALES.

Hampstead, Feb. 4, 1863.

WILL you spare me room for nailing a false shilling to the counter? Whilst the people in Prussia are preparing to commemorate the Hundredth Anniversary of the Peace of Utrecht, the conclusion of the Seven Years' War—in which the English, too, under the guidance of the great Chatham, bore an eventful part,—a respectable London publishing firm has thought fit to put forth a reprint of an often-printed gross lampoon on the hero of the said war, and even to claim a sort of originality for a production which, at its first appearance nearly a century ago, was officially denounced as a forgery, and has ever since been recognized as such by bibliographs, and all persons of the least authority in such matters.

I am alluding to a little pamphlet, in the French language, which has appeared recently, under the title, '*Les Matinées Royales; ou, l'Art de Régner*.' Opuscule inédit de Frédéric II., dit le Grand, Roi de Prusse.' I have taken the trouble to compare this "authentic, never-before published text" with one of the four or five editions of the '*Matinées*' in the British Museum, and find it simply a reprint—with some lines of commonplace amplification added here and there, perhaps a dozen or a dozen and a half lines in all—of the Paris edition of *An IX.* (1801), which is itself a reprint, with additions, of that of 1756. These '*Matinées*,' purporting to be lessons in the art of government, and personal confessions, written by King Frederick for the instruction and benefit of his young nephew and heir-apparent, appeared first in 1766. On that occasion, Frederick's aide-de-camp, Col. Quintus Jellius, wrote the following letter, dated March 4th, 1766, to the Prussian Resident at Hamburg:—"Le Roi m'ayant ordonné de faire insérer dans les gazettes d'Altona et de Hambourg l'article ci-joint contre l'infame auteur des '*Matinées* du Roi de Prusse,' j'osei bien, cher ami, m'adresser à vous dans la ferme persuasion que vous vous y prêterez volontiers et que vous contribuerez tout pour diffamer cet exécration écrit." And the article in question appeared in the Hamburg *Unparteiische Correspondent* of the same month. Since then, the '*Matinées*' have been often reprinted, in Paris, in London, in Boston (the appetite of the grosser part of mankind for scandal, true or false, being unfortunately considerable at all times), with new chapters, or *Matinées*, added; each new edition, like the present, setting up some new claim to authenticity. The editor of that of *An IX.*,—who has, at least, this excuse for wasting good paper and print on such an "opuscule," that he openly avows, not horror, but admiration, for its contents!—also professes to give "an authentic, never-before printed text":—"Le manuscrit," he says, "en a été trouvé dans les papiers d'un grand personnage qui avoit servit en Allemagne dans un poste éminent. Le hasard l'a fait tomber entre nos mains; et après nous être assurés qu'il n'avoit jamais été imprimé," &c. That was in 1801, five years before M. de Méneval could have "made his copy, at Sans-Souci." And so it went on. "Lewd, idle newsmongery," writes the venerable Prof. Preuss, of Berlin, the biographer of Frederick, and the editor of his '*Works*,' in a notice of this latest London edition, inserted in the Berlin *National Zeitung* of the 15th of January, from which I have also taken the above letter of Col. Jellius,—"*Lewd, idle newsmongery* went on producing new copies from old ones, printed or written; and during the last fifteen years such manu-

script 'Matinée' have been offered for sale, both in Paris and in Berlin,—and in London, too, (see Carlyle, 'History of Friedrich,' first edition, I., 263),—"generally pretending to have been taken, in 1806, from the original at Sans-Souci." Herr Preuss goes on to say, that, when submitted to him, he has always rejected these "copies, because no such 'original manuscript' has ever been discovered at Sans-Souci or elsewhere; because no person at all acquainted with the numerous pedagogical writings, and the patriotic testaments, of the great King has ever ascribed that paucity to him; finally, because of Frederick's well-known clear and concise style, the style of great characters, there is not a trace to be found in the dissolute 'Matinée.' " Again the everlasting pamphlet got into print as recently as two years ago, when it appeared amongst the 'Correspondance inédite de Buffon'; this time with very high pretensions indeed—"From an original manuscript, said to have been given by King Frederick himself, in 1782, to young Buffon, as a present for his father, the great naturalist." So ran the story; the absurdity of which the vigilant Prof. Preuss did not fail, at once, to expose. Whereupon the editor of the 'Correspondance,' M. Nadault de Buffon, very handsomely wrote to the Professor, stating "that he had found the manuscript amongst his family papers; that it was entirely in the handwriting of Buffon's secretary" (no original manuscript, then!); "and that he would, in a new edition, proffer the light Herr Preuss had thrown upon the matter." So much for the external history of this pamphlet down to its present re-appearance as an "opuscule inédit." Perfectly corresponding with its external history is the character of its contents. There needs no minute acquaintance with Frederick's writings, "pedagogical" or other; the knowledge that he was a king and a gentleman, and not a swaggering *poisson*, suffices to recognize the spuriousness of this composition. It abounds in mere blunders, too. It lets Frederick say (second *Matinée*), "My father" (Frederick Wilhelm, the stout orthodox Protestant!) "had an excellent project, in which, however, he did not succeed. He had engaged the President Loen" (a well-known Deistical writer) "to write for him a little treatise on religion, with the view of bringing about a reunion of the three sects" (Catholics, Lutherans, Calvinists) "into one." Then follows a description of this treatise, said to have been made to order of Frederick Wilhelm, but analyzing (as already Barbier, in his 'Dictionnaire des Anonymes,' has pointed out), in fact, a book in the style of the French *philosophes*, 'La Véritable Religion,' published and dedicated to Frederick, by the said De Loen, in 1751, many years after Frederick Wilhelm's death! In the fifth *Matinée*, Frederick is represented saying that, after he came to his throne, all his efforts were directed towards attracting the eyes of the world to his military drillings and manoeuvres. "I repeated them every year (je les renouvellois chaque année) till I succeeded in turning the heads of all the Powers; they all took to the Prussian drill. My soldiers thought themselves twice as much when they saw themselves imitated everywhere. This accomplished, I began to consider what pretensions upon several provinces I should put forth. I fixed upon Silesia;" the fact being that Frederick acceded to the throne June 1740; that he resolved upon asserting his claims on Silesia immediately after the death of the Emperor, in the following October; and that he took the field in December of the same year. Not much time here for many "annual reviews!" Then (fourth *Matinée*) the King, whom nobody ever yet accused of intemperance at least, is made to say to his youthful nephew, "When I dine in public, I make a show of abstemiousness; when I dine in my own apartments, I have my bed close at hand, which puts me at my ease, however much I may drink (Je suis près de mon lit; c'est ce qui me rassure sur tout ce que je bois)." Those samples may suffice. One feels humiliated to have to argue about such an article, somewhat as if one were called upon to demonstrate to an adult sane person that the moon was not made of green cheese!

Who the author of this pamphlet really was has

been much guessed at; never yet with complete success. The last guess was that of Mr. Carlyle, who, in his indignant chapter on the 'Matinée,' hypothetically suggests that the "Prince de Ligne may, perhaps, have been concerned in the affair." But the Prince de Ligne, "Prince of Coxcombs" though he be, could hardly have committed blunders like the above. He would have known, too, that the King, from a very early period of his reign, signed his name invariably 'Fédéric,' without the first r,—never 'Frédéric,' as in the fourth *Matinée*. Nor would De Ligne have put it on quite so thick as to let the grey-haired King address his boy-nephew in strains like these: "Voulez-vous passer pour un héros? Approchez hardiment du crime. Voulez-vous passer pour un sage? Contrefaites-vous avec art!" To judge the tree by its fruits, it is most probable that the real author was some unguessable obscure scribe, perhaps a writer of scandalous news-letters, such as there were in those days, and "original" specimens of whose productions, both in animus and matter singularly like the 'Matinée,' are to be met with in English family archives. Indeed, Barbier ('Dictionnaire des Anonymes,' s. v. *Matinée*), which the curious may consult) gives a hint, from Bachaumont, 'Mémoires Secrets,' of some such origin, which has a great air of probability.

But this latest edition professes to be "after a copy made at Sans-Souci, in 1806, by M. de Méneval." A supply of such "copies" has been in the market these many years. That the French visitors at Potsdam in 1806, who deplored Frederick's grave, and were otherwise never scrupulous in their takings on such occasions, should have practised such self-denial in Frederick's cabinet as to take only a "copy" of a document attractive to the French mind, would itself require some explanation. Strange it would seem, too, that M. de Méneval should have withheld his important literary discovery from his friend Barbier [see 'Biographie Universelle (Michaud, nouvelle édition,' s. v. *Barbier et Méneval*], who was at that time busy with his 'Dictionnaire,' questioning gods and men and books concerning *ouvrages anonymes*, and to whom such an addition to his article *Matinée* would have been so interesting! But, after all, whether M. de Méneval did copy anything or not at Sans-Souci, would make no difference as to the question of authorship. The "proofs" that Frederick is "véritablement" the author, for which we are referred to the *Home and Foreign Review*, amounts to this: first, "The authorship has never been brought home to anybody, therefore it must be Frederick's; and, secondly, in a note to Buffon's 'Correspondance inédite,' it is stated that Frederick the Great sent an original manuscript of the 'Matinée' as a present to the great naturalist. When speaking of the King of Prussia's express denial of the authorship, the Reviewer observed, "of course he denied it; how could he do otherwise?" And after that he professes to believe that the King had sent an "original manuscript" of a pamphlet which he had publicly denounced as an infamous forgery, and which could be had in the shape printed for ten *sous*, as a royal present to Buffon, the great naturalist! Failing "proofs," the Reviewer falls foul on Prof. Preuss, a man of unimpeachable honour and integrity, and on the other editors of the 'Œuvres de Frédéric,' for not having included this denounced forgery amongst the King's authentic works; charging them with wilful falsehood, and I don't know what. And it is on such "proofs" as the above that this last reprint calls itself boldly, on the title-page (what none of the previous editors have had the face to venture for their "authentic copies"), 'Opuscule inédit de Frédéric II.' "Inédit," coming at the back of, perhaps, a dozen previous editions; and "de Frédéric," on the above evidence!

THE GERMAN TRANSLATOR OF CARLYLE'S
'HISTORY OF FRIEDRICH.'

LUNAR PHOTOGRAPHS.

Cranford Observatory, Jan. 29, 1863.

ON my return from Italy, where I had been travelling for about three months, I read the correspondence in your columns in reference to Dr.

D'Orsan having pirated one of my lunar photographs.

In Dr. D'Orsan's work no information is given as to the original source of his enlarged photographs, either as to their dates, the locality where they were taken, or the instruments used in their production; and to the question so often put, "When did Dr. D'Orsan take his negatives?" the only answer is, that Mr. Bennett says that he is authorized to state that Dr. D'Orsan's photographs were taken prior to February, 1858.

At the time of the first announcement of Dr. D'Orsan's intended work, in 1862, any gentleman working assiduously with proper instruments, and with the aid of the published accounts of the methods used by myself and others, might have succeeded in producing photographs of the Moon. But it is remarkable that Dr. D'Orsan, having, as he alleges, succeeded, prior to February, 1858, in obtaining photographs equal to those he has issued, should have refrained from making known his success, while notices of the progress of astronomical photography in the hands of other labourers were frequently appearing. For example, in the *Athenæum*, Feb. 6, 1858, an account is given of my photographs having been enlarged by means of the electric lamp to six feet in diameter, in illustration of a lecture by Mr. Grove at the Royal Institution. Moreover, my photographs have been repeatedly exhibited at public institutions and at the meetings of the British Association; and in the Report of the latter body for the year 1859, my methods of working were published in minute detail. Since September, 1857, enlarged positive copies of my lunar and planetary photographs have been freely distributed by me among men of science in England and abroad; and in a few instances some fine negatives have been presented to those specially interested in the subject. My Observatory has always been accessible to those seeking admittance, and my modes of procedure readily shown to any who cared to be instructed. Indeed, I have done all that lay in my power to promote the study of astronomical photography, because I have felt that it would prove of the greatest value to science.

A careful examination of Dr. D'Orsan's two photographs has convinced me that they are both derived from one and the same negative taken by me at Cranford (lat. N. 51° 28' 58", long. W. 0h. 1m. 37.5 sec.) on the 22nd of February, 1853, at 9h. 5m. (G.M.T.) On that night I took several photographs, of which three have been preserved. The first was taken at 9h. 5m. in twenty-five seconds; the second, 9h. 25m. in thirty-one seconds; and the third at 9h. 50m. in forty seconds: which particulars are recorded on the negatives themselves with a diamond point. They were obtained by means of my reflecting equatorial of thirteen inches aperture and ten feet focal length. Upon reference to the 'Nautical Almanac,' it will be seen that on that day at eight hours the moon's motion in declination was only $\frac{1}{10}$ of a second of arc in ten minutes, at nine hours only $2\frac{1}{3}$ seconds of arc, and at ten hours only $4\frac{1}{3}$ seconds of arc in the same interval: whence it is evident that the motion of the moon in declination during the taking of any one of the photographs being quite inappreciable, the clock-movement of the telescope could be made to compensate absolutely the apparent motion of the moon in the heavens.

This circumstance, combined with the stillness of the air, enabled me to obtain on that occasion some of the finest negatives I have ever succeeded in producing. These negatives, with others, were lent to Messrs. Smith, Beck & Beck, who published positive copies of them in a glass stereoscopic slide in April, 1858; so that Dr. D'Orsan could without difficulty have obtained positives well adapted for enlargement. The photographs issued by Dr. D'Orsan, so far as they extend, agree exactly with copies from my first negative, as regards the configuration of the lights and shadows of the several craters, and the elevations and depressions of the lunar surface; and they are identical in respect of the libration.

Now, although it is quite possible, as Mr. Bennett states, that after certain intervals the same appearance of the lunar disc will be presented both

as to libration and lunation, yet the coincidence of precisely the same conditions is by no means frequent; and there is a very great improbability that any two photographs taken at different times would exhibit the moon under an aspect identically the same.

Apart from these considerations, however, the identity of Dr. D'Orsan's photographs with my own can be established in the following way:—No negative has yet been obtained absolutely free from defects; and hence, if several be taken of the same object, terrestrial or celestial, under precisely the same conditions, prints from them are always readily distinguishable by means of the defects peculiar to each negative. My three negatives, taken on the 22nd of February, 1858, have been subjected to an examination with the microscope, and certain minute holes in the collodion film of one of them have been thus identified with corresponding dark specks in Dr. D'Orsan's prints.

Messrs. Smith, Beck & Beck have already pointed

out some of these coincidences, which are not to be explained away by the assumption of "hitherto undiscovered flaws" on the lunar surface, for in that case the two other negatives would likewise have recorded them. The impressions of the flaws, pointed out by Messrs. Smith, Beck & Beck, not being very conspicuous objects, were undiscovered by Dr. D'Orsan, and therefore not removed in his prints; but other defects, to be seen in the original negative, were too conspicuous to be overlooked: and I will here adduce evidence to show that attempts, more or less successful, have been made to remove their impressions in Dr. D'Orsan's prints.

In my original negative, taken at 9h. 5m., there is a group of holes situated between the craters Apianus and Playfair and Werner and Purbach, forming, so to speak, a constellation of holes, which are not to be found in the two other negatives.

A diagram of this region of the moon is given in the accompanying wood-engraving, which

SOUTH

NORTH

is copied from a lunar photograph 38 inches in diameter: it represents as corresponding dark impressions the holes in the negative. An examination of Dr. D'Orsan's prints will prove that in both of them can be traced the existence of these defects, which have, however, been more or less completely erased. The speck on the western wall of the crater Werner is in many prints left untouched, which is also the case as regards the speck situated just on the summit of the western ridge of the crater Purbach; while, for the most

part, the more conspicuous defects situated on a diagonal between Werner and Playfair are carefully corrected.

In some of Dr. D'Orsan's prints, the defects have been corrected by stopping out the negative with opaque colour, the effect of which was to produce corresponding white spots which were then painted over: on washing one of these, the white spaces became apparent, as shown in the accompanying engraving, which is copied from an enlargement of one of his prints. On others

SOUTH

NORTH

the correction has been made by erasing, more or less perfectly, the dark impressions of the defects left by negatives which had not been stopped off; but on every print that has passed through my hands it was easy to detect the remains of the spots, corresponding to the defects in my negative.

Only a very small portion of my original photo-

graph has yet been published by Dr. D'Orsan: should he venture to issue other parts of it, there will be no difficulty in detecting them.

So far as Dr. D'Orsan has gone, I do not hesitate to say that he has merely published unauthorized copies of a portion of a lunar photograph taken by myself.

WARREN DE LA RUE.

February 3, 1863.

Since handing in my communication, I have received from Mr. Bennett the accompanying letter, which I shall feel obliged by your inserting in your columns.

WARREN DE LA RUE.

"5, Bishopsgate Street Without,
February 3, 1863.

"In my letter which appeared in the *Athenæum* of January 17th, I undertook, on the part of Dr. D'Orsan, that, at the request of any scientific gentleman interested in the controversy between yourself and Dr. D'Orsan, the exact dates at which his lunar photographs were taken should be disclosed, and the negatives of the photographs themselves produced, for comparison with your own. Since that time, repeated applications have been made to Dr. D'Orsan for the production of the dates and negatives in question, without, I regret to say, any result. I am thus forced to the conclusion, that it is not in Dr. D'Orsan's power to produce that evidence which would at once overthrow the grave charges which have been advanced against the originality of his lunar observations. I feel bound, by the courteous manner in which Messrs. Smith & Beck and yourself have conducted this controversy, to acquaint you at once with the conclusion at which I have arrived, as also with my determination, in which no alternative is left me, to discontinue further publication of 'Our Satellite' until, by the means above stated, the doubts which are thrown over the originality of the work are entirely removed.—Believe me to remain, yours faithfully,
ALFRED W. BENNETT."

"W. De La Rue, Esq."

OUR WEEKLY GOSSIP.

THE executors of the late James Walker, Esq. have bequeathed to the Royal Institution a marble bust of Prof. Faraday, by Mr. Matthew Noble.

The *Gazette* of Friday, January 30, contained the announcement of the appointment of a Government Commission to inquire into the present position of the Royal Academy in relation to the Fine Arts, into the circumstances and conditions under which it occupies a portion of the National Gallery, to suggest such measures as may be required to render it more useful in promoting Art and in improving and developing public taste. The members of the Commission are Lords Stanhope, Hardinge and Elcho, Sir E. Head, Messrs. Stirling, H. D. Seymour and H. Reeve.

One of the numerous foreign *savants* who attended the evening meetings of the Royal Society last May, at the close of a discussion in which Messrs. Faraday, Tyndall, Stokes, Carpenter, Grove, Clerk, Maxwell and others took part, warmly expressed his admiration and astonishment at the quiet, deliberate manner in which the discussion had been carried on. "You are more animated on your side of the Channel," answered a by-aitter. "Animated?" rejoined the *savant*. "why, we are never content with talking about the subject in question, but we talk about one another, and raise quarrels, and set everything on fire. I am very glad to have seen how you carry on a debate in the Royal Society." We are reminded of this incident by the quarrel of Messrs. Le Verrier and Faye in the Academy of Sciences at Paris. To say that the debate has become vehement is to describe it by a mild term; and, too often, the points at issue are forgotten in a personal altercation, accompanied by retorts and recriminations which have more than once brought down the interference of the chairman with a reminder that the "debate could no longer be regarded as scientific." M. Faye charges M. Le Verrier with disregard of the proper functions of the Observatory, with encroachments on the province of the Bureau des Longitudes by his measures for a general rectification of the latitudes and longitudes throughout France, and with neglect of duty in not having published the report on the difference of longitude between Greenwich and Paris. To all this the Director of the Observatory replies with vigour, and, in turn, shows that the delay in the latter particular arises from M. Faye's own faulty observations. The controversy is not yet settled, for it has enlisted partisans on each side. At the meet-

ing last week, M. Delaunay, whose merits are well known, took up the question against M. Le Verrier. So there will be yet more replies and replications. Meanwhile, science is scandalized by these unworthy bickerings.

With reference to the utilization of towns' sewage (a much-debated question), a suggestion has been thrown out which appears worth attention. We are told that the fertilizing salts contained in the sewage are mixed with such an enormous quantity of water as to be comparatively valueless. But it is thought that the new chemical process of dialysis, discovered by the Master of the Mint, might be used on a great scale for the separation of the salts. The essential elements are there in the form of crystalloids and colloids, and it is for practical chemists to decide whether by the application of dialysis a question of so much importance can be settled.

Mr. Colley Grattan, a gentleman known in the London literary world, has been appointed Consul at Teneriffe.

The Austrian Government are said to be in possession of a gun-cotton secret. By experiment, they have overcome the difficulties which the nature of the material, as at first discovered by Schönbein, opposed to its use in artillery practice. The Austrians, moreover, have discovered a metal—iron, copper, spelter and tin—which, in certain proportions, is tougher than any gun-metal hitherto devised. This, owing to the nature of the explosion produced by gun-cotton, is an essential requirement. Gun-cotton explodes all at once—not grain by grain, as gunpowder does; hence it fails to impel the ball or projectile with the continuance of force necessary to a long range. This is the main difficulty, as we hear, which the Austrians have overcome. If with this they have rendered the cotton less dangerous in a high temperature, they will have done good work, as a much smaller weight of gun-cotton is required on service than of gunpowder. The Commission sent to Vienna by our War Department to inquire into the facts came home, indeed, with information, but not the information that was really wanted,—dust, so runs the rumour, having been thrown in their eyes by the Austrian authorities. So the subject has been taken up by the Gun-cotton Committee of the British Association, who have held one meeting, and will shortly take further proceedings.

Mr. B. B. Woodward, the Queen's Librarian, is preparing to publish a new periodical under the name of 'The Fine-Arts Quarterly Review.' The work is to treat of painting, sculpture and engraving, of photography so far as it is employed as a substitute for drawing and engraving, and of ornamental and decorative art. A goodly list of contributors and referees has been received. The first number is announced to appear in March.

The fact that at present, when almost every branch of human inquiry has its special periodical, there is not in the whole of Great Britain a magazine exclusively devoted to the science of Botany in all its bearings, in which those who have not the advantage of attending learned Societies are able to exchange their opinions, has induced Mr. Hardwicke to project 'The Journal of Botany, British and Foreign,' to be published monthly, edited by Dr. Seemann, and illustrated by Mr. Fitch.

Mr. B. Webster has addressed a letter to the journals, stating that the trial-scene in 'Janet Pride' was entirely written by himself and added to Mr. Boucicault's drama, which terminated with a previous scene.

A new work from the pen of Roger Therry, Esq., for many years one of the Judges of the Supreme Court of New South Wales, is announced for immediate publication by Messrs. Sampson Low, Son & Co. It is entitled 'Reminiscences of Thirty Years' Residence in New South Wales, &c.; with a supplementary Chapter on Transportation and the Ticket-of-Leave System.'

During some works undertaken not long ago in Oxford Cathedral, a small crypt or subterranean chamber was discovered, which has led to many efforts to explain its original function. This is

situated immediately under the eastern end of the crossing, just as you enter the choir from the nave. It is lined with rough plaster upon rude stonework, and, among other guesses at its origin, presumed to have been a portion of the original Saxon crypt, existing before the Norman minster was founded, and built in, as it was, with the new work. Such examples exist in several cathedrals. Or it may be the secret place wherein rested the true relics of the patron-saint of the structure; otherwise, a treasure-chamber to be used in time of need for concealment,—which is known, says Mr. King, in the course of some ingenious remarks on the subject, to have existed here, because in the thirteenth century the University chest was deposited "in a secret place in the Monastery of St. Frideswide." Or it may have been used for the production of certain miraculous appearances, many of them attended with curious effects of light, which, throughout the twelfth century, are recorded to have taken place at the shrine of the saint. To this last, the reply is, that the shrine of the saint is not at all likely to have stood so far westward as the tower arch; that the trick of casting reflected light at so great a distance as the whole length of the choir would be dangerous; while the low level of the chamber offers a still stronger objection to this surmise. It is not likely to have been a place of secret penance, inasmuch as two recesses it contained were placed north and south. The probabilities of its being a secret treasure-chamber are thus enhanced.

Dr. John Robert Kinahan, Professor of Zoology in the Government School of Mines, and one of the Honorary Secretaries of the Natural History Society of Dublin, died on February the 2nd, not having quite attained the age of thirty-five years. He was a zealous and able naturalist, devoting his attention specially to the recent Crustacea, and contributed many new species to the Fauna and Flora of Ireland. His papers published in the *Transactions of the Royal Irish Academy* and elsewhere were numerous and important, especially those 'On the Britanica Species of Crangon and Galathea,' 'On the Causes of the Present Decay of the Dublin Crab and Lobster Fisheries,' and his 'Review of the Genera of Terrestrial Isopoda.' Palaeontologists are also indebted to him for his descriptions of Oldhamia, for the discovery and description of the genus Histioderma, and of other organic forms of the earliest date yet known, which his labours procured from the Cambrian Rocks of Bray Head and Howth.

From the Report of the Lancashire Independent College (which institution, we may say in passing, appears to be highly prosperous, having a larger number of students on its books than ever), we notice an attempt to improve the library, so as to make it worthy of the denomination and of the county. A quantity of books, under the name of the Raffles Memorial Library, has come into the College, and a couple of active young men, Messrs. Joseph Thompson and William Armitage, spurred on by this accession, have commenced a movement for a large increase of their literary treasures. We should be glad to hear of their success.

A further material for paper-pulp has been discovered in the fibre of the *Hibiscus Moschentes*, an indigenous tree which grows in great quantities throughout Pennsylvania, and is said to yield seven tons per acre.

The Board appointed to watch over the interests of the aborigines in the colony of Victoria has lately issued a Report, in which it is stated that the remnant of this people amounts to no more than 2,165 persons. They roam from place to place, and hang about the towns and gold-fields. Habits of intoxication are on the increase, and there seems little hope of any improvement in the condition of this race. They are supplied with clothes and food, and are grateful for them, but would, probably, rather go without either than labour for them: some individuals, however, will work for a part of the year. Exertions are being made to collect the weapons and utensils of the natives, so that some authentic records of their customs may be preserved; and a beginning has been made with a vocabulary of their language. It appears also, from recent accounts, that the

native people of the districts lying about our colonies of Vancouver's Island and Victoria,—we mean that one of the many Victorias which lies near the Columbia River,—are likely to undergo a similar process of extinction, and with them the fur-bearing animals they hunted.

By a recent mail from New Zealand, it appears that Catalri, one of the Maori kings, has started a newspaper, the first number of which contains this intimation: "When this sheet comes to you, pay for it, if you approve; the price is three-pence. The good of the press is to carry our intentions to the tribes of the world; because steadfastly fixed are the words of the beginning, Faith, Love, Law."

The French Government have given orders for the construction of two very powerful astronomical telescopes, embracing all M. Foucault's improvements. They are to be made under the supervision of the Academy of Sciences, and will be used at Marseilles and Montpellier when the atmosphere is extremely pure.

Accounts from Vienna speak of considerable activity, both artistic and literary. In architecture, the destruction of the fortifications, and the substitution of buildings for the open space between the inner town and the suburbs, have led to the display of much energy in competition, and seem to give hopes of something more. The restoration of St. Stephen's, the new building for rifle practice, the *Curhaus*, for which several designs have been sent in, all of them in the Renaissance style, are among the principal projects.—A great deal is expected of a new Art journal that has just been organized in Vienna under the patronage of the Prince Czartoryski. Dr. Von Lütow, of Munich, has been entrusted with the editorship, and many distinguished names of the Art-critics of Germany are ranked among the contributors.

Prof. B. Studer, the well-known geologist of Berne, has just published a 'Geschichte der Physischen Geographie der Schweiz,' which will be read with profit by all tourists to whom Switzerland is a country of scientific as well as picturesque interest. Considering that in course of time a more intimate knowledge of a country, of its topography, natural products and climatic relations, is obtained, Prof. Studer holds it a duty as much to our predecessors as to science, to compare the present with the past, and record the amount and character of the progress made.

A friend at Naples sends us the following odds and ends of gossip:—"M. Dumas's prolific pen is now at work for the stage; and during the current week we are to have at the Fondo a new drama, entitled 'Le Notte di Firenze.' The subject is taken from the times of Alexander Medicis; and the history of its composition is one of many proofs of the rapid genius of its author. On Monday, Madame Ristori was with him arranging the plan of the piece, and on the following Saturday morning it was completed. M. Dumas has now on the stocks two other dramas, to be entitled respectively 'Cleopatra' and 'Marie-Antoinette,' the plans of which he arranged on Saturday morning with the great actress for whom they are written. Madame Ristori has long had a fancy for the unhappy and unfortunate Queen, whose character she imagines she can well represent. Both pieces will be performed by Madame Ristori in London next June; 'Marie-Antoinette' for the first time, and some of the most striking scenes of the French Revolution will be introduced. M. Alexandre Dumas is at the same time proprietor and editor of a journal in Naples, called the *Indipendente*, singularly anti-English in its tone, yet, it must be confessed, industrious and courageous in exposing the abuses of this country.—Within the last two or three months several evening schools have been opened by the Municipality; and it is very encouraging to find that the attendance is so great that an application has been made to the Syndic for the establishment of other similar institutions.—About a week since there was a public examination of what is called the 'Italian Evangelical School,' warmly supported by English influence. Its name sufficiently indicates its leading feature. The Bible is read and explained, and a creed insinuated, as far as I could judge, after the most approved

principles of Calvin. It may well admit of a doubt whether, in the present state of the Neapolitan mind, it is judicious to touch on theological questions, especially in such a way as simply to substitute one creed for another. It must be admitted, however, that the answers of the pupils of the Italian Evangelical School showed considerable mental development, much to the honour of the directors and the teachers. At present, there are eighty pupils chosen from the humbler classes, who receive a gratuitous education in reading, writing and arithmetic, geography and the elements of natural philosophy; and which, were it not for the theological feature, might command the warmest approbation.—At length, after a long interval of neglect, the Public Libraries are receiving much attention, and deficiencies are being supplied. For some years the Library of the National Museum has received few additions, except of a theological character, and the usual answer to the application of students was, either that the work was not there or was prohibited. Considerable and regular additions are now being made of philological works."

SOCIETY OF PAINTERS IN WATER COLOURS.—WINTER EXHIBITION OF SKETCHES AND STUDIES BY THE MEMBERS, NOW OPEN, at their Gallery, 5, Pall Mall East, from Nine till Dusk.—Admission, One Shilling.
 JOS. J. JENKINS, Secretary.

WINTER EXHIBITION, 120, Pall Mall.—The TENTH ANNUAL WINTER EXHIBITION OF DRAWING PICTURES by living British Artists, is NOW OPEN, daily, from 9.30 A.M. to 5 P.M.—Admission, 1s. Catalogue, 6d.

PHOTOGRAPHIC EXHIBITION.—The NINTH ANNUAL EXHIBITION OF THE PHOTOGRAPHIC SOCIETY OF LONDON is OPEN DAILY, from Ten till Four, at the Gallery of the Society of British Artists, Suffolk Street, Pall Mall East.—Admission, 1s.

NOW ON VIEW, TWO important PICTURES painted by the late ABRAHAM SOLOMON; also, a Choice Collection of Modern Pictures by English and French Artists, at the Gallery of Moore, M^{rs} Queen & Co., 10, Finchurch Street, E.C.—Admission, Free.

ART EXHIBITION for the RELIEF of the LANCASHIRE DISTRESS, 6, Suffolk Street.—Open from 10 A.M. until dusk.—Admission 1s. Catalogue, 6d.—On and after MONDAY, February 9, until further notice, the Rooms will be lighted by gas after dusk, and remain open until 8 P.M.

F. W. DICEY } Hon. Sec.
 A. L. CHETWODE }

NOTICE.—The GALLERY, 14, Berners Street, W. is NOW OPEN, daily, to the Public, with a Splendid EXHIBITION of PICTURES, the selected Works of the leading Artists of the day.—Admission, One Shilling.
 FREDERICK BUCKSTONE, Secretary.

SCIENCE

SOCIETIES.

ROYAL.—Jan. 29.—Dr. W. A. Miller, Treas. and V.P., in the chair.—Mr. H. J. Carter was admitted into the Society. The following paper was read:—'On the Absorption of Gases by Charcoal, No. 1,' by Dr. R. A. Smith.

BRITISH ARCHEOLOGICAL ASSOCIATION.—Jan. 28.—Nathaniel Gould, Esq., V.P., in the chair.—The Chairman announced that he had been to visit some Roman remains discovered at St. Dunstan's Hill, upon the making of an excavation in the premises of Messrs. Ruck & Co. They consisted of a portion of Roman wall, about 3½ feet thick, built of various materials, principally chalk, Kentish rag and broken Roman tile; the bad Roman build, a filling-in of this rubble; the mortar, however, so good as to make an imperishable wall, which consisted of a double-arched basement, one over the other, and then the present house. It is nearly 20 feet below the level of the present street, and about the level of the high water of the Thames.—Mr. T. Wright reported that he had, at the invitation of Mr. Tite, M.P., that afternoon visited the works of demolition on the site of the late East India House, where, in digging up the foundations, the workmen had come upon the floor and walls of a Roman house, the floor lying at a depth of nearly 20 feet below the level of the modern street. An outside wall ran nearly under the edge of the present street and parallel with it, and a transverse wall ran from it at right angles in the opposite direction to the street; and this latter wall was traced to a distance of perhaps 20 feet, when it met with another wall parallel with the former. The length of the room has not been ascertained, but it was evidently much greater than its breadth. The floor was in perfect preservation, and was formed of tessere of about a quarter of an inch

square, black, white and red, but arranged in no very intelligible pattern. The walls, which were 2 feet thick, remained on one side to a height of between 3 and 4 feet, and the stucco and fresco-painting on the inner surface were unbroken. It appeared to have been painted in panels, with a rather rude pattern.—Mr. Halliwell presented to the Association an engraving of Mother Shipton, printed in 1662. Wolsey is being shown York Minster from the top of a tower. Mr. Wright made some remarks on old prophecies, which, it is known, in the middle ages were used as political instruments. They were numerous in the reigns of Richard the Second, Henry the Fourth and Henry the Eighth, and it became necessary to enact laws against them. That on the engraving was of a highly popular character.—Mr. John Turner communicated an account of Sepulchral Discoveries he had made at Stapleford Tawney Church, Essex.—Mr. Clarence Hopper read a communication from Mr. Madden, of Dublin Castle, on Ancient Literary Frauds and Forgeries, and their bearing on records and events in Irish and other Celtic annals. The frauds principally referred to were those by Joannes Annus de Viterbo, Father Higuera, Curzio Inghiamari; the metallic plates mentioned by Stokeley and other authorities; the fabulous history of the Emperor Aurelian by the Bishop of Guevra, &c.

ENTOMOLOGICAL.—Jan. 26.—Annual General Meeting.—F. Smith, Esq., President, in the chair.—An abstract of the Treasurer's accounts for 1862, and the Annual Report of the Council, were read.—The following gentlemen were elected Members of the Council for the ensuing year:—Messrs. Dunning, Grut, Sir John Hearsey, M^r Lachlan, Pascoe, W. W. Saunders, Shepherd, F. Smith, Stainton, Stevens, Waterhouse, J. J. Weir, and Prof. Westwood.—Mr. F. Smith was re-elected President; Mr. S. Stevens, Treasurer; Messrs. Shepherd and Dunning, Secretaries; and Mr. Janson, Curator.—The President delivered an Address to the Society.—Votes of thanks to the Officers and Members of Council for their services during the past year were carried unanimously.

Feb. 2.—Ordinary Monthly Meeting.—F. Smith, Esq., President, in the chair.—The President nominated F. P. Pascoe, G. R. Waterhouse and F. Grut, Esqs., to be the Vice-Presidents for the present year.—F. Moore and E. A. Smith, Esqs., were elected Members.—The Secretary exhibited a box of "mannas" from Tasmania, and numerous specimens of an Eurymela, a hemipterous insect, which was said to cause the manna to be formed on the white gum trees by perforating the young branches for the purpose of feeding on the sap.—Mr. Bond exhibited a singular instance of arrested development in the fore-wing of a specimen of *Colias Hyale*, and a variety of the female of *Lycena Adonis* in which the markings on one side were semi-obliterated.—Mr. Waterhouse exhibited, and read some notes on, several species of the genus *Homalota*.—Mr. Howard exhibited a collection of Coleoptera captured by himself in Central Europe.—Mr. Stainton, on behalf of Mr. C. Healy, exhibited some bramble-leaves inside which were visible the cast-off skins of larvæ of *Nepticula Aurella*, and read some notes on the moulting of those larvæ.—Mr. M^r Lachlan read a paper 'On Anisocentropus, a new genus of exotic Trichoptera, with Descriptions of five species; and also of a new species of *Dipseudopsis*.'

ETHNOLOGICAL.—Feb. 3.—J. Crawford, Esq., President, in the chair.—'On the Psychological Differences which exist amongst the Typical Races of Man,' by Robert Dunn.

INSTITUTION OF CIVIL ENGINEERS.—Feb. 3.—J. Hawkshaw, Esq., President, in the chair.—At the Monthly Ballot the following Candidates were elected:—Messrs. E. Filliter and A. S. Ormsby, as Members; Capt. J. Grantham, R.E., and Messrs. T. E. Dunn, J. R. Furniss, I. J. Holtzapffel, S. L. Koe, A. S. Rake, L. R. Roberts, R. O. White and H. Wilson, as Associates.—The paper read was, 'On the Woods used for Sleepers on the Madras Railway,' by Mr. B. M^r Master.

ROYAL INSTITUTION.—Feb. 2.—W. Pole, Esq., Treas. and V.P., in the chair.—The Earl of Clanwilliam, E. W. Cox, Esq., Sir W. A. Fraser, Bart., Gen. C. H. Hamilton, C.B., and P. Vanderbyl, Esq. were elected Members.

SOCIETY OF ARTS.—Jan. 28.—W. R. Grove, Esq., Q.C., in the chair.—The paper read was, 'The Submarine Telegraph,' by Mr. T. A. Masey.

INSTITUTE OF ACTUARIES.—Jan. 26.—C. Jellicoe, Esq., President, in the chair.—Messrs. R. R. F. Davey, F. C. Dutton, W. J. Norton, E. W. Norfolk, J. S. Parker, G. W. H. Secretan, A. E. Wenham and A. R. Wormald were elected Associates of the Institute.—The President announced the result of the Annual Examinations which took place in December last, viz., for the Matriculation Examination there were fourteen candidates, of whom nine passed, in the following order of merit, viz., C. H. Haycraft, D. H. M^rGregor, W. E. S. Macdonald, Edwin Waterhouse, Francis Addiscott, Arthur Smither, Edwin Justican, T. Hyde Johnson and Robert Clarke; for the Second Year's Examination five candidates presented themselves, of whom two passed, viz., H. W. Manley and C. R. Saunders—equal. For the Third Year's Examination one candidate, viz., Mr. A. J. Finlaison, came up and passed. This gentleman has received the certificate of competency.—Mr. Hill Williams read a paper, by Mr. J. Meikle, 'On the Calculation of Survivorship Annuities by the Columnar Method.'

MEETINGS FOR THE ENSUING WEEK.

- MON.** Architects, 8. Geographical, 8½.—'Inundations of the Nile,' Consul Saunders; 'Countries near the Niger,' Dr. Balke; 'Madagascar,' Lieut. Oliver.
- TUES.** Horticultural, 1.—Anniversary. Actuaries, 4.—Council. Royal Institution, 3.—'Animal Mechanics,' Prof. Marshall. Syro-Egyptian, 7½.—'Hebrew Pace and Cubit,' and 'Hebrew Christian Inscription, year 138,' Duke of Rouillon.
- WED.** Civil Engineers, 8.—'Sleeper Woods, Madras Rail;' 'Drainage, Dundee,' Mr. Fulton; 'Drainage, Newport (Mon),' Mr. Williams. Zoological, 8. Graphic, 8. Society of Arts, 8.—'Construction of Twin Screw Steamships,' Capt. Symonds. Microscopical, 8.—Anniversary. Society of Literature, 8½.—'Mr. Mayer's Papyri and their interpretation by M. Simonides,' Mr. Vauz. Archaeological Association, 8½.—'Roman Villa, Combe Down, Bath.'
- THURS.** Royal Academy, 8.—'Painting,' Prof. Hart. Royal, 8½. Antiquaries, 8½.
- FRI.** Royal Institution.—'Chemical Affinity,' Dr. Frankland. Astronomical, 8.—Anniversary. Royal Institution, 8.—'Artificial Illumination,' Dr. Frankland.
- SAT.** Royal Institution, 3.—'Life and Death,' Mr. Savory.

FINE ARTS

NEW SCULPTURES IN ST. PAUL'S.

FIVE new statues in St. Paul's should offer us a chance at least of congratulation on the progress of sculpture in this country. We find none such on inspection of Baron Marochetti's, or Messrs. Theed's, M^r Dowell's, Lough's or G. G. Adams's work recently placed there. By the first is the Cenotaph to Lord Melbourne and his brother, the whole design of which is a mistake, and an example of that falsity in construction which at once decides a thing to be bad in Art. Two angels, winged and draped,—one with a trumpet, one with a sword, neither of which emblems has reference to the deceased nobleman,—lean, or rather seem to loiter, against the jambs of a doorway of bronze, probably supposed to lead into the tomb, but which really takes one's ideas into the open street and the pastry-cook's shop in a line with it behind. How commonplace and trivial is the motive so sought to be expressed need not be pointed out to any one acquainted with mortuary sculpture: we doubt, however, if another instance of the same, so completely false in arrangement, exists. The composition of the whole, tomb-door and figures, is at variance with the architectural feeling of the cathedral itself. The marble is sensuously tinted, the hair gilded and set back metriculously, the surface smoothed, not finished with thoughtful and laborious art.

Mr. Theed's 'Hallam' is less offensive to feeling and art than the above, inasmuch as it is feebler. The figure stands in doctor's robes, much

as if the historian, that keen-witted and heedful man, had risen, when in dotage, from his breakfast-table to welcome some one whom he doubted that he knew. The robe is so weakly treated, that it resembles a dressing-gown; the action is so timid in pose and purpose, and the face bears such a simper, that those traces of character and action they show come most painfully to the heart of the observer as marks of dotage ere its time. The weak, "old-gentlemanly" seeming of this figure is not that which posterity will look for in a statue of Hallam. The theme of the last statue needed a manly, earnest grasp of the subject, and an astute decision in design, such as the man possessed who should have been nobly commemorated. That of Turner was probably a more difficult task to succeed in, and Mr. M'Dowell has done better with it, but not done wholly well. Turner is seated, dressed in a cloak, with a palette, too small for use, on one thumb; in the other hand he has a brush, but does not hold it in the way a painter full of thought would hold the same. There is no life in his action. Half-seated, half-leaning upon a rock, one foot planted well in front, one knee bent, keeping the other foot up and behind, the painter looks over his shoulder with a would-be bright expression of keen delight in nature. Of that rugged, half-sordid, noble countenance, so full of purpose and so keen in knowing, Mr. M'Dowell has seen little else than the common features and their bare expression; of the mind's expression, that of all things needed to be seen in a statue such as this, there is little indeed. It is commonplace only.

Mr. Lough's 'Sir John Lawrence,' if it were not so lengthy and ill-constructed about the neck and shoulders, would be a more valuable work than it is. The artist has evidently felt the character of the man, and, while attempting to render some of the same in the face, has been so faithful in working the features, that, if we have not a noble or dignified idea of the statesman, we have the interest of a portrait in his statue. However long Sir J. Lawrence's neck might have been, that characteristic might have been given with something less of the tailor's blundering in fitting the gorget to the coat. Mr. G. G. Adams, who enjoys a monopoly of the Napiers, has really done his best with the historian. Major-General Sir William Napier stands on a different leg from Major-General Sir Charles Napier, the conqueror of Scinde! They both wear cloaks, as brothers should, which, considering St. Paul's is never warm and Nature short of Mr. Adams's art, is not beyond expectation. Before us lies a photographic portrait of the Historian, with its great beard and high-massed hair, the strenuous will of mouth—the fine, clear-cut and bold nose—the unflinching, manly eye—the face, so fine, so grand, so gentlemanly despite its irritability, that it is impossible not to lament the sculptural opportunity wasted.

FINE-ART GOSSIP.—The Exhibition season for this year commences on Monday next by the opening of the British Institution. The private view takes place to-day (Saturday).

The members of the Society of Painters in Water Colours have presented to Mr. Field an album or portfolio containing a drawing by each individual member. The Society numbers fifty-four artists, including Associates, so that this is a gift of splendid character. Its object is to form an acknowledgment of the services rendered to the body in certain matters wherein Mr. Field's legal experience has been valuable. The Winter Exhibition, now open, of this Society seems to have met with the success it deserves for the excellence and variety of its contents. We hope to see the experiment repeated.—Next Saturday the annual election for members to fill vacancies will take place. As this Society is *sans reproche*, and contains a smaller proportion of incapable men than any similar body in London, there are many candidates, and the result is looked for with anxiety.

Mr. Holman Hunt will probably send to the Royal Academy this year a life-size portrait, half-length, of Dr. Lushington. The air and character

of this render the aspect of a man who, deeply versed in law, is strong and deliberate to balance in his mind the far-forward effects of judgment or the far-backward history of justice. Accordingly, he sits, his knees crossed, sustaining an open book with his hand: the light falls full upon his face, revealing its million wrinkles, and that the eyes are but inwardly speculative. Intro-vision is given to them with the greatest art, there is extra-vision so far only as the organs are concerned and capable: we see behind them comprehensive, searching, fine thought. A work singularly devoid of mere pictorial graces and prettinesses, yet, with all its manhood, intensity and depth, likely to be cavied to the million. This artist has almost completed the life size figure of an Egyptian Fellaah girl bearing corn upon her head and surrounded by pigeons, before described by us. This work will not at present be exhibited.

Lovers of Art who find how often the system of competition mocks their sense of justice, will rejoice to know that it is likely soon to go out of use, through several of our most able sculptors and architects having refused to enter into competitions. One great advantage of this imposition, for such it often is, being done away with, will be that we may fix the responsibility of employing meretricious or dull artists upon the blunderer to whom it is really due, and not, as now, find the same shuffled from hand to hand through a committee. Responsibility once fixed, we may find less confidence existing in the minds of Ministers and others who use competition to blind foregone conclusions in behalf of favourite artists. Under such responsibility, these personages will do well to consult artists and other experts on matters of Art, in place of relying on the opinions of "patrons" and wealthy "walking gentlemen." That educated public opinion would form the best Court of Art is undoubtedly true, and an appeal to it be beyond challenge if public opinion were really competently educated. That it is not so, the many blunders we regret may show, if they answer no better use.

The publications of the Art-Union of London for this year lie before us. How can the managers of this society believe they are encouraging Art by issuing such examples as the present? Mr. Dicksee's 'Labour of Love,' the chief attraction, is not calculated to elevate people's ideas of the true function of Art. Valuable skill of the engraver has been wasted upon a triviality of the most flimsy kind. A girl runs, bearing a child upon her shoulders; they laugh as no one out of a bad picture or off the stage ever yet laughed.—The Council of this society advertised that they would award a premium of one hundred guineas for a series of designs in outline illustrative of the 'Idyls of the King.' Accordingly, no less than forty-three sets were sent in competition, comprising 540 drawings. From these, the works of Mr. Paolo Priolo were selected. What the others must have been it would be difficult to surmise; but if these were the least incompetent, their value must have been small. A certain mechanical and academical facility of execution, the results of labour long maintained, is discernible. This, throughout, is of the mean and spiritless order, that is properly styled Academical. Real drawing, dutiful study from the life, are no more to be found than are composition, expression, or even that feeling for purity of form which redeems so many sins in the eyes of artists. Finicking study of drapery—elaborate rendering of utensils, of weapons and herbage—things quite beside the sculptural severity pertaining to outlines of this class, pervade the series. Spirited grasp of subject that has glorified many a wretched scrawl and daub, is not here. Merlin would be more than ever ashamed of himself if he could see the idea Mr. Priolo has of Vivien, than which nothing is tamer, except that he holds of the magician himself. Let no unkind friend show these things to Mr. Tennyson. If Mr. Priolo had studied Betsch and Overbeck less, and Flaxman and Nature more than he has done, he would, if he did not abstain altogether, see where his work falls short of the true character of the task in hand.

The "restoration" of Worcester Cathedral goes on vigorously. It is to be thorough. A fourth

contract has been entered into, which includes the *scraping* of the choir-ceiling and groins, adjusting the ribs, some of which are distorted, *scraping* the nave entire—ceiling, piers, triforium and aisles—and putting the whole in substantial repair. The Chapter-House restoration has proved a heavy job, but is now nearly done—so says the *Builder*. All this is to be got over in time for the Musical Festival next autumn, so that the visitors to the ancient city may find the Cathedral as good as new, and not at all like the "mickle grey abbaye" it once was. Let us entreat the contractors to go gently over the carvings; there are some—or were, not many months ago—upon the capitals of the nave arcade that really deserve a little care. Let it not be forgotten that anything like restoration by way of *scraping* may injure delicate workmanship. Some of the mouldings about this building cost, let us hint, more thought and labour in patient and long-dead brains than people with scrapers in their hands would readily believe. Let us trust that *scraping* simply means washing from whitewash, and not the use of a painful iron tool, which, if it leaves a nice smooth surface, all of one colour and beautifully clean, is rather apt to take off the very bloom of carving. We are reminded by mention of the Chapter-House at Worcester to inquire what is going to be done with the books removed therefrom to Edgar Tower, where they cannot remain? Now the Guesten Hall is gone—or more strictly to speak, made a desolate ruin, with one half-standing—a library will be required somewhere. A friend reminds us that Worcester once possessed three great halls,—the Guesten Hall, the Deanery Hall, and that one which is still spared and used as a school. Let us hope that some one may look to the repairs of this still noble remnant, lest it also go the way of halls at Worcester. It did not seem to be very much cared for last March, when we saw it. Perhaps it has been pulled down already. Has no one power in these matters? The mayor, the citizens, and the learned Societies of archaeologists and architects, local, provincial and metropolitan, have protested against the like proceedings, and it is reported that the county gentry are full of regret.

MUSIC AND THE DRAMA

MISS ALICE MANGOLD'S GRAND SOIRÉE MUSICALE will take place at the Queen's Concert Rooms, Hanover Square, February 14th.—Artists, Messrs. Reichardt, Dehmann, Ries, Webb and Platti; Mlle. Soldene, Georgi, and Alice Mangold.—Tickets, 15s. and 7s., at the Rooms.

CONCERTS OF THE WEEK.—There was only one novelty at Monday's *Popular Concert* claiming attention. Mendelssohn's *Sonata* in E major, Op. 6, his only *solo Sonata*, has been little played, for reasons not hard to find. The two first movements are more laboured and less interesting than the music written at his better period. The theme of the *allegretto* flows pleasantly, it is true, but not freshly; the *minuetto*, in its oddly-chosen key, F sharp minor, is quaint and somewhat "bitter." The *finale*, however, led to by the awkward *adagio alla fantasia*,—an imitation of Bach's 'Fantasia Chromatica,'—redeems the composition. The grand and distinct vigour of its subject was never surpassed by Mendelssohn in any of his later works, and the interest is kept up with untiring vivacity of resource. It requires a player of no common nerve to deal with this *finale* as it demands, the figure of accompaniment for the left hand being especially tormenting. In this movement, then, Madame Arabella Goddard's imperturbable calmness and equality of finger could not fail to tell.

Mr. Henry Leslie's *Second Choir Concert* was one-half devoted to Welsh Harp Music, with the co-operation of Mr. John Thomas. The solitary novelty in the programme was a setting of 'Ye Mariners of England,' by Mr. H. Leslie.

Mr. Sims Reeves, who apparently has made a firm alliance with Mr. Martin's *Choral Society*, sang in 'The Creation,' at Exeter Hall, on Wednesday evening. His secession (if so it prove) from the *Sacred Harmonic Society*, be the temporary inconvenience and injury what they may, will have one good result if it lead to the increase of the staff of first-class tenor Concert singers, consisting at the

time present of two persons. Mr. Haigh, it is said, intends to devote himself to this occupation: a voice of better quality hardly existing than his. We may speak of his appearance in 'Elijah,' last night, for the Sacred Harmonic Society, next week.

The orderly music at the Crystal Palace recommenced on Saturday last;—the Christmas gambols being over. The singers were Madame Louisa Vinning and Mr. Miranda. The player was Herr Pollitzer.

PRINCESS'S.—The new management displays considerable activity. Miss Amy Sedgwick has renewed her engagement, and the drama of 'One Good Turn Deserves Another' has been reproduced. Mr. Roxby sustained the character of *Simon Topper* for the first night or two; but, in consequence of the injuries he received in endeavouring to save Mrs. Hunt and Miss Smith, two ladies of the *ballet*, who caught fire on Friday evening, the 23rd ult., he was not able to resume the part until last Monday. The pantomime continues attractive, and is much indebted to the manner in which it is illustrated by Mr. Beverley.

ST. JAMES'S.—A new piece of some importance was produced on Saturday, entitled 'The Merry Widow.' It has been skilfully adapted by Mr. Leicester Buckingham from a French piece by M.M. Dumanoir and A. Keranion, called 'Jeanne qui pleure et Jeanne qui rit.' The idea has evidently been borrowed from Madame Émile Girardin's 'La Joie fait Peur'; only taking the converse of the circumstances in the older work. The Merry Widow is a self-sacrificing being who, supposing her husband to be dead, is afraid to let the event be known by his blind mother, lest the shock should be too great for her remaining strength. She therefore affects gaiety, goes out to parties and has music at home. With her is contrasted a mourning widow, who wins the world's good opinion by a hypocritical show of grief, and who is really seeking to win a second husband by the false show of good feeling. She indeed almost wins the heart of the lover of the merry widow's sister; for the young man, disgusted with what he deems the heartless behaviour of the two ladies, seriously thinks of transferring his affections to a more genial quarter. The lost husband is one Charles Mildmay, late a colonel in an Indian regiment; and, every mail, his widow reads to his blind mother a fictitious letter pretended to have been sent by him. At last, however, comes a real letter, stating that he has been made a general, and is on his way home from Southampton. Mrs. Charles Mildmay, who has suffered so long from a suppression of feeling, is now enabled to indulge freely in emotion, and exclaiming "He lives!" brings down the curtain with great applause. Miss Herbert, it is needless to add, supports the character with grace and feeling; and the drama, having been carefully Anglicized, is likely to prove attractive.

MUSICAL AND DRAMATIC GOSSIP.—Now is the time when Opera rumours begin to be heard and listened for. A gay Royal wedding and the public appearances of a young Court should naturally quicken the managers of entertainments. These gentlemen, however, in proportion as they are secure of their audiences, are too apt thriftily to slacken their efforts, as the theatrical bills of the Exhibition year showed. As regards the Italian Opera-house, some excuse is to be found in the impoverished state of the repertory, the difficulty of assembling a company of good singers, and the timidity of our fashionable public in accepting novelty. Such hope of enterprise as exists for persons of the "movement" party lies in the opposition between the two houses. Meanwhile, not a word has as yet been breathed regarding the intentions of either Mr. Gye or Mr. Mapleson. If we mistake not, the lease of the English Opera at Covent Garden will terminate this season; and Rumour, how far correctly we have no means of ascertaining, asserts that the lease will not be renewed by the present proprietors, who will betake themselves to some more manageable theatre (where?). As matters stand, to make

English Opera profitable in so vast a space is not possible. That a school of available artists is in process of training, every one conversant with the state of affairs during the last quarter of a century must be aware. First-class singers (as they were rated) could be named whose boast it was, on a first night, to remember only "the ballad—to leave the concerted music to take care of itself, to disdain recollection of the words or attempt at action. Those days are past; but we have still no company adequate to the presentation of grand opera,—and without grand opera a grand theatre (for the English) cannot be made attractive. To instance,—it is no surprise to us to hear that 'Love's Triumph,' though containing much of Mr. Wallace's prettiest and some of his best music, has been no triumph for the treasury. Want of self-knowledge is one of the most disheartening characteristics of the theatrical world; reference to false expediency, another. The English public, whether musical or dramatic, may now be trusted by any one who has any good thing to show; and yet everywhere the observer is balked by "the funeral baked meats" which "coldly furnish forth the marriage-tables,"—by recurrence to the old unmusical practices, the old concessions to vanity or immediate gain, which have made so cruel a havoc of Art. Till these things are swept into the limbo of oblivion by administrative discretion and knowledge, we shall have (in English theatrical music) to work out the old arithmetical problem of the ant that crept twenty steps up its sand-heap and fell back nineteen: how long was it before the ant arrived at the top of the sand-heap?

A sea-stained packet addressed to us and saved from the wreck of the Colombo, contained journals, criticisms, and books of the words of the Melbourne Triennial Musical Festival, which was held so far away on the 7th of October and two after days, conducted by Mr. Charles E. Horsley, with a band and chorus of three hundred performers, and for principal singers Mesdames Lucy Escott and Sara Flower, Messrs. Squires and Farquharson;—the programme of the first day consisting of the Exhibition Music and the conductor's 'Comus.' On the second day 'St. Paul' was given;—on the third, a Miscellaneous Concert.

There is some idea of holding a Musical Festival at Bradford this autumn.

Messrs. Rudall, Rose, Carte & Co. put forward their *Musical Directory Register and Almanac for 1863*,—as usual, we are sorry to say, incomplete. Fancy, in the column devoted to Manchester, no mention of Mr. Halle's Concerts in the Free Trade Hall, which are unique, of their kind, among the entertainments of England!

'Benedick and Beatrice,' by M. Berlioz, which has undergone some modifications and additions since its production at Baden, has been "commanded" by the Grand-Duchess of Saxe Weimar, for her birthday, in April. The music will be published shortly.—M. Gounod's 'Reine de Saba' is apparently conquering Germany. It was produced the other day at Darmstadt, with every appearance of success. A similar fate, it may be recollected, befell Chérad's 'Macbeth' after the failure of that opera in Paris.—"Heaven knows what will become of German music if things continue in their present state!" writes a correspondent *à propos* of a new opera 'La Réole,' just produced to text by Madame Birch-Pfeiffer, by Herr Gustavus Schmidt, of Frankfort, who is described by our friend as "a weaker edition of Lortzing, but without a certain talent for fresh melody, but without grace, delicacy of taste, or particular originality."—The *Allgemeine Musikalische Zeitung* mentions with praise 'The Foscari,' an opera lately produced at Munich, by Herr Zenger, whose name is new to us. Another is that of Herr Westmeyer, whose 'Der Wald bei Hermannstadt' has been given at Dresden.—Herr Tichatschek has been celebrating his "silver wedding" to the Dresden Theatre, by singing no less fatiguing a part than that of the tenor in Spontini's 'Fernand Cortez.'

Sacred music seems to fare only a little better in Germany. A 'Requiem,' by Herr Scholz, has been produced at Cologne. Klopstock's 'Hymn to Death,' set and sung by Gluck, transcribed from

hearing it by Reichardt (the composition having been never written down), and the accompaniment arranged by Herr Rust, the director of the Bach Society at Berlin, has been given at a concert there by Madame Jachmann-Wagner, without, however, producing any effect. Strange news comes from Bremen of a performance of 'Israel,' with additional accompaniments by Herr Lachner, and an organ part by Herr Reintaler! Is this a misprint? or a case of ignorance, or of presumption? and can it be possible that so clever a man as the composer of 'Jeptha's Daughter' has ventured to do over again that which was so consummately accomplished by Mendelssohn?

Mdlle. Patti's *Zerlina*, in 'Don Giovanni,' has been such as to persuade the Parisian talkers about Mozart, who are more numerous than Parisian connoisseurs, to accept nearly the most lame and impotent cast of the immortal opera ever ventured in a great musical capital. It would seem as if the world was returning to the bad old ways and old days of Catalani's husband, and to his opera notions of "Ma femme et cinq poupées."

A friend at Naples writes:—"Lucia di Lammermoor" has been produced at San Carlo before a crowded house. Titiens, of course, took the part of Lucia, and was vociferously applauded, in the sixth scene of the second act especially. Wretchedly supported, her genius yet triumphs over every difficulty, and though some affect to dislike the *fortitura* she introduces, there were some astonishing effects made by her which seemed to electrify the audience."

Signor Luigi Romani (*quere*, the excellent librettist?) has published at Milan a history of the Theatre della Scala, from its opening in 1778, with Salieri's 'Europa riconosciuta,' and Mortellari's 'Troja distrutta,' down to our degenerate days.

The death of Mrs. Hullab, after an illness of much suffering, deprives the English musical profession of a valuable member. She was one of the first group of pupils formed at the Royal Academy, which did that institution a credit it has not maintained—a pianist (as those who remember her public appearances must recollect), trained in the best school, and playing the best music well. Shortly after her marriage, however, she ceased to appear in the orchestra, and gave herself up exclusively to assisting her husband in his undertakings; for which her sound musical knowledge, her clear intelligence, and her unwearied energy well qualified her. Never had artist a more devoted and competent helpmate. To her own family, her loss is one not to be repaired.

Mr. Walter Lacy has been appointed Professor of Elocution at the Royal Academy of Music.

The Concerts at the Paris Conservatoire are now running their usual course without venturing any novelty. M. Berlioz speaks in praise of some fragments of a Symphony by M. Bizet, a Laureate who has lately returned from his course of study in Rome.

Mr. Howard Glover seems to be ranging himself among the givers of series of concerts. A second entertainment, with a long list of singers, is announced by him for this morning.

The following is from a Correspondent:—"The successful play of 'Camilla's Husband' is called original. Where would the great situation have been had not a certain 'Gendre de Monsieur Poirier,' by a certain M. Émile Augier, with a certain outburst in the fourth act, 'Et maintenant va te battre, va!' been produced some nine years ago at the Théâtre Gymnase of Paris!—O."

A new piece, by M. Sardou, 'Les Diables Noirs,' which was on the point of being produced at the Théâtre du Vaudeville, has been prohibited.—Voltaire's 'Merope' has been revived at the Théâtre Français.

There has been a trial within the last few days, of moment to all who wish to bear the name of Olmar,—no real name, but the theatrical one, according to absurd usage, assumed by Mr. Mead, whose behaviour, with his feet in rings, on the roof, and his head downwards, is found alluring, and it may be assumed profitable also, at the Alhambra. Rival Olmars, who have taken the title, have been laid under legal prohibition not to infringe the rights of the original acrobat by

assuming his assumed name. They may do the ring trick if they can: but they must not do it as Olmar, neither as acting Olmar.

A word concerning new ballets, which abroad do not altogether die in their birth, though at home it will be not easy to re-awaken interest in them until a new Taglioni, a new Fanny Elssler, shall come.—'Théolinde,' by that skilled chorégraphe, Madame Cerito's husband, M. St.-Léon, has prospered at St. Petersburg.—A grand ballet, 'La Comtesse d'Egmont,' by Signor Rota, has been successful at Turin;—and a *something* made out of the tale of 'Robert Macaire,' and mimed or danced at a place no less august than La Scala, has absolutely, we read, been enjoyed at Milan.

The Glasgow Theatre Royal has shared the frequent lot of theatres, and been destroyed by fire.

MISCELLANEA

Copyright.—In the Gossip of the *Athenæum*, last week, reference is made to a case of Art piracy recently decided at Bonn in favour of the owner of the copyright, similar in its character to that of *Gambart v. Hall*, now pending in our courts. A comparison is made between our law and that of Germany, in which it is stated as a reason why the law of Germany is superior to ours, "that the definition of copyright" there is "the right of multiplying copies by any mechanical process"; and English law is condemned as not being expressed in such simple terms. It so happens that the English law uses exactly the same terms, and it is from those very terms that the question at issue arises,—Is a copy of an engraving by photography a copy by "a mechanical process"? The photographer contends it is not a mechanical process; he admits it to be a copy, no doubt, but by a "chemical process," and therefore, he says, not within the terms of the law. A photographic copy may be within the mischief the Act was intended to remedy, but is it within the words used? In making these observations, I beg to be understood as in no way expressing an opinion in favour of the shortcomings of the law of Art Copyright in this country.

P. LE NEVE FOSTER.

The Coliseum.—An Old Subscriber, in reply to our query why the word should be "Colosseum," and not "Coliseum," in our review of Mr. Story's work, 'Roba di Roma,' of last week, writes to say, that in Vol. ii. of the 'Lives of the Roman Emperors,' p. 50 (edit. Naples, 1768), there is a note which gives the reason for using the orthography as first above given. Referring to the completion of the great Amphitheatre by Titus, the note has the following:—"Nel mezzo dell' Anfiteatro si sorgeva una grande statua rappresentante Nerone, chiamata il Colosso di Nerone, da cui quel luogo prese il nome di Colosseo."

Australian Explorers.—In the *Melbourne Argus* of Nov. 25, 1862, we read—"Mr. Landsborough, the explorer, has received a complete service of plate, suitably inscribed, and subscribed for by a large circle of admirers, in acknowledgment of his services to the cause of exploration. The presentation took place in the Exhibition Building, and was witnessed by a large assemblage of ladies and gentlemen. The Governor occupied the chair, and Lady Barkly was also present. His Excellency made the presentation in brief but appropriate terms. Mr. McKinlay, the South Australian explorer, has received from the Government of that colony, by vote of Parliament, a sum of 1,000*l.*, in token of the public appreciation of his services. Letters have been received from Mr. Howitt, the leader of the party by whom the remains of Burke and Wills are being brought down from Cooper's Creek to Melbourne. The party have arrived in the settled districts of South Australia, and are expected in Melbourne about the middle of December. Arrangements have been made to honour with a public funeral and a monument the remains of Victoria's first heroes."

TO CORRESPONDENTS.—J. R. A.—N. P.—G. M.—T. G. M.—J. R. W.—J. L.—H. W.—C. D.—S. B. B.—Elfreda—C. B.—received.

LITERATURE

The Geological Evidences of the Antiquity of Man, with Remarks on Theories of the Origin of Species by Variation. By Sir Charles Lyell. Illustrated by Woodcuts. (Murray.)

SEVERAL years ago a geologist ventured to hint that man was older than 6,000 years; the hints of that daring student have become the theory of many. Sir Charles Lyell's volume is an elaborate assault on the popular chronology, bringing the matter to this issue: either the scientific or the popular chronology must be wrong. The difference is not that of a few years or a few centuries, but one of thousands of years, possibly thousands of centuries. It is as well to begin with broad results, though Sir C. Lyell is cautious in bringing them to the front.

The question turns upon the amount of evidence and the correctness of the geological interpretations of it. If the evidence be scanty, or if its interpretation be fanciful, the popular chronology may be still defended: if it be abundant and well established, if the proofs be impregnable and the ordering of them unimpeachable, then the world must yield assent to them, however reluctant it may be to abandon a long-received view.

All the evidence which has come to light has been marshalled in this volume, where the most is made of it. It has here been commingled with a large mass of materials possessing little direct bearing upon the question at issue. The work is, in truth, a large treatise on Post-Tertiary Geology, having the date of the advent of man in view, but often hiding it by the interposition of rocks and formations and phenomena, which might have been much more briefly treated. Man himself is sometimes buried under piles of glaciers, erratic blocks, drifts, sands and sections. In fact, the volume appears to have been written to the subject rather than to have grown out of it. A great name has been employed to grace a great book, which certainly is acceptable to all who study geology; but no geologist will conceive that the evidences of the antiquity of man at present extend to 506 full pages. So large a structure of miscellaneous and sometimes heterogeneous materials occasionally seems to be defective in unity of design and in constructive symmetry.

Adverting as briefly as possible to the most significant of the evidences for human antiquity here collected, we observe that the occurrence of human bones with those of extinct animals in certain caves has been regarded as one of the strongest indications of man's great antiquity. Formerly it was concluded that the human bones and those of the animals with which they were intermixed, were not coeval. It was not imagined that men and mammoths were contemporaries. Of late years, however, convincing proofs have been obtained that remains of mammoths occur in undisturbed alluvium, so imbedded with works of human art, and sometimes with human bones, as to admit of no doubt that man and mammoths co-existed. The details of such evidence fill several pages in the present volume. Several Belgian caves were carefully examined by Dr. Schmerling in 1833. In one, at Engis, near Liège, he disinterred the remains of at least three human beings, and the skull of one of these was imbedded by the side of a mammoth's tooth. Another skull was buried five feet deep in a conglomerate in which the tooth of a rhinoceros, several bones of a horse and some of the reindeer occurred. In another cavern on the right bank of the Meuse, numerous bones of the

extremities of at least three human beings were intermingled with bones of extinct animals. Generally amongst these caverns, wherever human bones occurred, they were met with at all depths in the cave-mud and gravel, sometimes above and sometimes below those of the cave-bear, elephant, rhinoceros and hyena.

In 1860, Prof. Malaise extracted from a similar deposit in one of these caves, at the depth of two feet below the crust of stalagmite, three fragments of a human skull and two perfect lower jaws with teeth, all so associated with and so similar in condition to the bones of bears, large thick-skinned animals and ruminants, as to leave no doubt in his mind that man was contemporary with those animals.

In 1857, a fossil human skeleton was found in a cave in the Neanderthal Valley, near Düsseldorf. Probably the skeleton was complete, but only the larger bones were preserved by the discovering workmen. This human being was of the same, or perhaps of a more recent geological age than those whose remains were found by Dr. Schmerling in the caverns near Liège. The skull of this individual is remarkably ape-like, and its human connexion was once doubted. Some experienced zoologists, however, have pronounced in favour of its humanity, and one has declared that the individual to whom it belonged must have been distinguished by small cerebral development and uncommon strength of corporeal frame. Some anatomists have described it as the most brutal of all human skulls. Readers of all that is said in this volume concerning it, and who are unfavourable to the author's views, may be disposed to doubt its humanity, as being at least "not proven." On the other hand, "although in several respects it is more ape-like than any human skull previously discovered, it is in regard to its capacity by no means contemptible." In the diagram of this skull there is, doubtless, a nearer resemblance in its outline to the skull of a chimpanzee than has ever before been observed in any supposed human cranium. The previously mentioned skull, taken from the cave of Engis by Dr. Schmerling, approaches nearly to the highest or Caucasian type, and is inferred to be of greater antiquity.

Speculation respecting the antiquity of the human bones in the caverns near Liège can only proceed, first, upon the time required to allow of many species of carnivorous and herbivorous animals, which flourished in the cave period, becoming first scarce and then gradually extinct; and, secondly, upon the great number of centuries necessary for the change of the physical geography of the Liège district from its ancient to its present configuration. In the end, the author observes—"Although we may be unable to estimate the minimum of time required for the changes in physical geography above alluded to, we cannot fail to perceive that the duration of the period must have been very protracted, and that other ages of comparative inaction may have followed, separating the post-pliocene from the historical periods, and constituting an interval no less indefinite in its duration."

These human relics are as rare as interesting in the earlier or post-pliocene period. Dr. Schmerling found extinct mammalia and flint tools in forty-two Belgian caverns, but only discovered human bones in three or four. Other human relics may claim a line or two, and they are "the fossil man of Denise, and the fossil human bone of Natchez, on the Mississippi." The so-called "fossil man of Denise" combines the remains of more than one skeleton found in a volcanic breccia near the town of Le Puy-en-Velay, in Central France. The

bony fragments consist of a frontal and some other parts of the skull, including the upper jaw with teeth, both of an adult and young individual; also some vertebrae and other portions. All these are imbedded in a light, porous tuff, resembling materials ejected in several of the latest eruptions of Denise. But none of the bones penetrated into another part of the same specimen, which consists of a more compact rock, thinly laminated. Much doubt of the genuineness of this fossil has recently prevailed, and still more doubt respecting that of others from the same locality. Though Prometheus was punished for his attempt to make a man of clay, a dealer at Le Puy was paid for his attempts to make a fossil man, and the high price of "human fossils" is suspected of having advanced trade, if not science, at Le Puy. Suppose, however, a single specimen to be genuine, such as the one now in the Museum at Le Puy, what antiquity should we assign to it? Geologists have studied the formations closely, and it is inferred that the human being presumed to be fossilized may have lived nearly contemporaneously with the mammoth and rhinoceros, and was coeval with the last eruptions of Le Puy volcanoes. Thus, then, for reasons which Sir C. Lyell specifies, we obtain no greater antiquity than before. The skull is of the ordinary Caucasian or European type.

In the delta of the Mississippi, at Natchez, near New Orleans, a human skeleton is said to have been found buried under four cypress forests. In this case, no remains of extinct animals were found with it; but in another part of the basin of the Mississippi, a human bone, associated with bones of the mastodon and megalonyx, is supposed to have been washed out of a more ancient alluvial deposit. Nevertheless, Sir C. Lyell thinks "it is allowable to suspend our judgment as to the high antiquity of the fossil"; and, again, "Should future researches confirm the opinion that the Natchez man co-existed with the mastodon, it would not enhance the value of the geological evidence in favour of man's antiquity, but merely render the delta of the Mississippi available as a chronometer, by which the lapse of post-pliocene time could be measured somewhat less vaguely than by any means of measuring which has yet been discovered or rendered available in Europe." In order to ascertain the geological time by this chronometer, we add a sentence from another page—"If I was right in calculating that the present delta of the Mississippi has required, as a minimum of time, more than one hundred thousand years for its growth, it would follow, if the claims of the Natchez man to have co-existed with the mastodon are admitted, that North America was peopled more than a thousand centuries ago by the human race."

If man existed on this earth in the post-pliocene period, it is highly probable that he would be buried by his fellow men where he died, and therefore there would be burial-places, in conformity with the customs of rude nations now living. One such burial-place has been discovered near Aurignac, not far from the foot of the Pyrenees. Unfortunately, the disinterred bones were ignorantly re-interred; but not before a medical man recognized them as having formed parts of no less than seventeen skeletons of both sexes and of all ages; some being so young that the hardening of certain bones was incomplete. The size of the adults implied a race of small stature. Subsequent researches on the spot led to the finding of a great variety of bones and implements, the latter including not fewer than a hundred flint knives, projectiles, sling-stones and chips.

Scattered through the ashes and earth were the bones of nine species of carnivorous and ten species of herbivorous animals. As there was no stalagmite in the grotto, all the bones and soil found in the inside must have been artificially introduced. Many facts fairly support the inference that this was an ancient place of sepulture, closed at its opening so effectively against hyenas and other carnivora that no marks of their teeth appear on either human or brutal bones. Here we have a very ancient type of the funeral rites of Indian tribes, which latter Schiller has so faithfully embodied:—

Here bring the last gifts—and with these
The last lament be said;
Let all that pleased, and still may please,
Be buried with the dead.

From what has been cited, and from more that might be cited, it is clear that man was contemporary in Europe with two species of elephant and two of rhinoceros; also with at least one species of hippopotamus, the cave-bear, the cave-lion and the cave-hyena; with various bovine, equine and certain other animals now extinct, and many smaller carnivora, rodentia and insectivora. But it has naturally been asked, if man co-existed with the extinct species of caves, why were his remains, and the works of his hands, never imbedded *outside* the caves in ancient river gravel containing the same fossil Fauna? The answer now is, that his memorials, though not his bodily remains, have recently been discovered in the post-pliocene alluvium containing flint implements in the valley of the Somme.

Our own columns have contained so many communications and remarks upon the circumstance of the finding of these implements that there can be no occasion to repeat them here. The state of public opinion about these flints is probably nearly this:—the majority of readers are unwilling to accept the fact of their human workmanship, having never seen specimens of them. On the other hand, all who have seen good specimens of them, such, for instance, as several exhibited in London, have been compelled, however reluctantly, to confess that something beyond nature has shaped these flints, and that they bear every appearance of human handiwork. Of course, geologists like our author regard this as unquestionable. Certainly, counterfeits may be daily made, and palmed off by men of to-day; but there were originals, and great numbers of them. At Abbeville and at St-Acheul, near Amiens, these flint implements have been found in such abundance that probably not less than a thousand have been exhumed since 1842. They commonly occur in low beds of coarse flint gravel, usually at twelve, twenty, or twenty-five feet below the surface. The legitimate conclusion deduced from all the facts is, that the flint tools and their fabricators were coeval with the extinct mammalia imbedded in the same strata, including the mammoth and the rhinoceros.

Works of art have also been discovered in association with extinct mammalia, in a cavern in Somersetshire, as recorded in our notes of the last Meeting of the British Association at Cambridge. In 1858, also, the entrance of a new and intact bone-cave was discovered at Brixham, near Torquay. Numerous fossils were very carefully taken in 1859 from the subterranean fissures and tunnels, and were all collected and numbered with reference to a journal kept during the progress of the work, and in which the geological position of every specimen was recorded with scrupulous care. Although no human bones were obtained during these excavations, yet many flint knives were found, chiefly in the lowest part of the bone-earth. One of the most perfect lay at a depth of thirteen feet

from the surface, and was covered with bone earth of the same thickness. Fifteen such flint knives were found, and though these, apart from the associated mammalia, afforded no safe criterion of antiquity, yet that was demonstrated by the discovery, at the same level in the bone-earth, of the entire left hind leg of a cave-bear, in which every bone was in its natural place. Here there is evidence of an entire limb having been introduced when clothed with its flesh, or at least when the separate bones were bound together by their natural ligaments, and in that state buried in mud.

About the position of the above-noticed flints there can be no ground for incredulity, as it is attested by eminent observers; while with reference to the St-Acheul flints the same may be safely said. Thus M. Gaudry states to the Royal Academy of Sciences at Paris, in describing his own remarks at St-Acheul, "The great point was not to leave the workmen for a single instant, and to satisfy oneself by actual inspection, whether the hatchets were found *in situ*. I caused a deep excavation to be made, and found nine hatchets, most distinctly *in situ* in the diluvium, associated with teeth of *Equus fossilis*, and a species of *Bos*, different from any now living, and similar to that of the diluvium and of caverns."

Much of the information accumulated respecting the valley of the Somme and its vicinity is minute and circumstantial, and must be studied in original papers, or the abstracts of them, in Sir C. Lyell's book. We can only glance at leading features and broad results, and advance a general statement that the evidence of man's antiquity in this locality has grown more and more definite. There is, however, one defect in it which cannot be overlooked, and this is the absence of human bones in the alluvium. Amongst thousands of flint implements and knives scattered through the alluvial mud and gravel of the Somme, not a single human bone has yet been found. This demands consideration, especially when the objection is strengthened by the like dearth of the mortal remains of our species in all other parts of Europe where the tool-bearing drift of the post-pliocene period in valley deposits has been investigated.

What can be the cause of this deficiency? Not the greater destructibility of human than of other animal bones, for Cuvier pointed out long ago, that men's bones were not more decayed than those of horses in ancient battlefields; and in the Liège cavern, as above mentioned, human skulls, jaws, teeth and other bones were found in the same condition as those of the cave-bear, tiger and mammoth. It is strange, therefore, that while within the last twenty-five years thousands of mammalian bones from post-pliocene alluvium have been submitted to skillful osteologists, they have been unable to detect amongst these one fragment of a human skeleton, or even a tooth. A really satisfactory answer to this objection has not yet come before us. What is said, amounts to this:—such absence of human bones is an emphatic illustration of the extreme imperfection of the geological record. Other bones, as those of the musk buffalo, have not been detected till lately; and the same theory which explains the comparative rarity of such species will, no doubt, account for the still greater scarcity of human bones. Again, "the whole assemblage of fossil quadrupeds at present obtained from the alluvium of Picardy is obviously a mere fraction of the entire Fauna which flourished contemporaneously with the primitive people by whom the flint hatchets were made." These arguments can be fitly used to explain the *scarcity* of human bones; but do they adequately account for their *entire absence*? The difficulty is not

their rarity, but their total non-appearance in these localities. So far for the time present; but for the future Sir C. Lyell has this observation, "that ere long, now that curiosity has been so much excited on this subject, some human remains will be detected in the older alluvium of European valleys, I confidently expect."

There is a section in our own country which contributes a particular determination of a chronological point. While the sections near Amiens and Abbeville only teach us that the fabricators of the ancient tools were coeval with extinct mammalia, recent discoveries in the fluviatile gravel of the valley of the Ouse, near Bedford, show that all of these were post-glacial, or posterior to the grand submergence of central England between the waters of the great glacial seas.

Hitherto we have directed attention to the more ancient deposits connected with the question of human antiquity, or those named the Post-Pliocene. Of less interest in point of antiquity, though greater in number of human remains, are the deposits of recent periods, and with these Sir C. Lyell has commenced his volume. He has proceeded downwards; we have worked upwards. By adopting the latter order we begin with remoter ages and fewer human traces; but in these the greatest interest of the present question is concentrated,—in these we arrive at the remotest appearance of man.

So much has been written and said concerning supposed human remains and works of art within the range of the Recent Period, that we should only be touching upon well-known subjects if we were to follow Sir C. Lyell in his first three chapters, which take up these topics, and represent results compendiously. The Danish peat and shell mounds, the several ages of stone, bronze and iron, the human skulls of the same period, and the imbedded remains of mammalia of recent species, the Swiss lake-dwellings, with their stone and bronze implements, their fossil cereal and other plants, and the remains of wild and domesticated mammalia, though not of extinct species,—all these are interesting enough to those who have not read concerning them in original books and papers, and certainly demand a prominent place in the volume before us. So also do other similar subjects, as the ancient human remains in the coral reefs of Florida, and the buried canoes near Glasgow.

As a collector and examiner of such evidence Sir C. Lyell deserves commendation. He deals fairly with the facts which he accumulates, and does not often permit his ever-present theory to obscure his perception of difficulties. But he appears to be very sparing of inferences from this theory which war against the popular belief. He gathers facts, and leaves it to others to draw inferences. Writing merely as a geologist he may be allowed to be thus guarded, and may affirm that he has no concern about popular beliefs. Writing for the large public, we must look, as the public will look, his facts in the face.

Where do these facts leave the Biblical Adam?

When we go back to the works of human art in the Post-Pliocene period—or that of deposits in which, the shells being recent, a portion, and often a considerable one, of the accompanying fossil quadrupeds belong to extinct species—we so greatly antedate the popular chronology as to make this Adam difficulty perhaps impossible. Where can we place him? Not within the Recent Period, for he was the first man; and there must have been many generations before him in the post-pliocene epoch. Nor in the latter epoch, for that was

vastly remote in its beginning, and an individual Adam placed there would be lost in the long vista. We cannot bring him down later in this epoch, because at any later period we may afterwards find that he had predecessors.

If we desire to fix something like the probable advent of man upon this earth in accordance with the Lyellian theory, we must first ascertain the date of the mammoth. Bold as the geologists are, they do not inform us upon this date, or even plainly conjecture it. Still, it is obviously so remote that for the reasons alluded to, and many others, we can hardly place the Biblical Adam there. A first man who existed a hundred thousand years ago escapes altogether from the grasp of popular thought.

Other considerations connected with the Lyellian theory will still more decisively tend to eliminate him. Presuming that he must come in as first of men, if at all, how could such men as the one of the Neanderthal valley descend from him? Adam is regarded as having been pure, noble, intelligent, and made in the very image of God. This Neanderthal man was brutal to such a degree that no amount of physical degradation would allow of his descent from Adam in a direct line; and even supposing that it did, we have the skull from Engis, which while it was probably more ancient, or at least quite as ancient as the one from Neanderthal, is decidedly more intellectual, and "though the forehead is somewhat narrow, it may nevertheless be matched by the skulls of individuals of European race." Both of these skulls, then, the higher and the lower one, could hardly belong to descendants from the same Adam, or if they did, could hardly be so widely different when comparatively near together in time, and quite near together in locality. If there were unity of origin, there was wide diversity of character, and yet with such wide diversity of character there was identity of locality.

Again, Sir C. Lyell puts the case:—

"Had the original stock of mankind been really endowed with such superior intellectual powers, and with inspired knowledge, and had they possessed the same improveable nature as their posterity, the point of advancement which they would have reached ere this would have been immeasurably higher. We cannot ascertain at present the limits, whether of the beginning or the end of the first stone period, when men co-existed with the extinct mammalia, but that it was of great duration we cannot doubt. During those ages there would have been time for progress of which we can scarcely form a conception, and very different would have been the character of the works of art which we should now be endeavouring to interpret—these relics which we are now disinterring from the old gravel-pits of St.-Acheul or from the Liège caves. In them, or in the upraised bed of the Mediterranean, on the south coast of Sardinia, instead of the rudest pottery or flint-tools, so irregular in form as to cause the unpractised eye to doubt whether they afford unmistakable evidence of design, we should now be finding sculptured forms, surpassing in beauty the masterpieces of Phidias or Praxiteles; lines of buried railways or electric telegraphs from which the best engineers of our day might gain invaluable hints; astronomical instruments and microscopes of more advanced construction than any known in Europe, and other indications of perfection in the Arts and Sciences, such as the nineteenth century has not yet witnessed."

So that the views generally entertained by the Grecian and Roman classics of "a dumb and filthy herd, fighting for acorns," as Horace sings respecting the first men, fitly represent the ideas entertained by certain geologists and ethnologists of the present day concerning the earliest of our race. If, then, such was their character, where are we to place the Biblical Adam? Certainly not at the

head of the "dumb and filthy herd"—certainly not at the head of the most savage of savages. On the other hand, had he been such as he is generally conceived, we must have had, according to the above-quoted opinions, long races of superior men, instead of flint-fabricators and flint-fighters. Since, then, there was no first place for a progenitor "endowed with superior intellectual powers, and with inspired knowledge." If all the Lyellian opinions be held, it is hard to see how the popular Adam can be admitted at all.

This difficulty would be greatly aggravated if future discoveries of shaped flints of admitted human workmanship should be made, or of other equivalent works of human art, in much earlier deposits. The oldest memorials of our species as yet discovered in Great Britain are of post-glacial date, as already noted; they are posterior to a deposit well known to Tertiary geologists as the boulder-clay, which is coeval with far-transported erratic blocks of stone. But it is hinted that there are British deposits which may, upon careful research, afford bones or stone weapons of the era of the *Elephas meridionalis*; and "if any such lie hid in those strata, and should hereafter be revealed to us, they would carry back the antiquity of man to a distance of time probably more than twice as great as that which separates our era from that of the most ancient of the tool-bearing gravels yet discovered in Picardy or elsewhere."

Although such almost unlimited draughts upon antiquity as are here drawn may terrify many readers, and make them apprehend a bankruptcy of certain popular beliefs; yet it must be remembered that they wear no such startling appearance to those who have long familiarized themselves with the immense scale of geological time: while they dwarf the historical period, they are themselves dwarfed by the great geological calendar. If Europe was peopled by the human race, and by the mammoth and other now extinct mammalia, during the concluding phase of the great glacial epoch, then, although we go back to hundreds of thousands of years, we are still within the Post-Tertiary era of the geological scale.

So accustomed are geologists to immense periods that Sir C. Lyell regards even his human period as geologically brief. "If we reflect on the long series of events of the post-pliocene and recent periods contemplated in this chapter, it will be remarked that the time assigned to the first appearance of man, as far as our geological inquiries have yet gone, is extremely modern in relation to the age of the existing Fauna and Flora, or even to the time when most of the living species of animals and plants attained their actual geographical distributions."

We have nothing to say in this place to the concluding chapters of this volume, in which the author remarks upon the recent modifications of the Lamarckian theory of progressive development and transmutation. Sir C. Lyell's present views on the Darwinian theory are sufficiently known to geologists, and they have no immediate connexion with the main question of the present book.

Sisterhoods in the Church of England; with Notices of some Charitable Sisterhoods in the Church of Rome. By Margaret Goodman. (Smith, Elder & Co.)

WE wonder how many of our readers are aware of the existence and increasing numbers of convents and sisterhoods in the Church of England,—convents which are subject to no external supervision, and irresponsible to any authority save the absolute will or whim of the Lady Superior!

Miss Goodman, whose former work, 'The Experiences of an English Sister of Mercy,' contained some revelations about the introduction of conventual rules into Miss Sellon's House of Mercy at Davenport, supplies in the present work further information on the subject of the Sisterhoods in the Church of England, and earnestly calls the attention both of the Government and the Clergy to this danger.

Conventual institutions, with the one exception of the household of Nicholas Fauar at Little Gidding, have been unknown in the Church of England until within the last sixteen years; there are now no less than twenty-five Houses of Sisters belonging to different orders scattered about the country. The most important are those at Clewer, East Grinstead, Oxford and London. Miss Goodman says,—"The number of institutions now existing, and their rapid growth, show that the system of religious societies bound by solemn promises, and in some instances by vows, has become naturalized in the English Church."

This is a subject which requires to be brought into daylight. Miss Sellon's institution at Davenport, the most important of these Protestant nunneries, is bound by a rule more hard and cruel than that of the severest order known in the Romish Church (that of the Poor Clares), and it is under no visitation or control. "The friends and parents are to think of the Sister as in her grave, and it is esteemed 'a falling away' from the rule should the recluse desire to see one even so near and dear to her as her mother." So writes Miss Goodman, who has lived under the law. The hardships ordained by Miss Sellon as rules for holy living and dying might win the grim approval of St. Simon Stylites himself. Certainly nothing can equal the ingenuity of women for tormenting each other; like French acting, it is exquisite in its details. The chief bitterness seems to lie in the total exemption of the Lady Superior herself from her own rules; she lives, we are told, in ease and luxury, no one is allowed to approach her uncalled, and the Sisters kneel to receive her commands. Spiritual pride and love of domination are fostered to the uttermost. The vow of holy obedience to the Superior, taken by each Sister on her reception, is terribly absolute, and commits the individual who takes it to unlimited bondage both of thought and deed: the promise is "to obey the Holy Mother in all things." Not content with this, Miss Sellon desires to rule the very thoughts of her "children"; she insists upon each one writing down her thoughts as they occur in a book called *The Little Soul*; and this book is placed in her hands at appointed times. "Particular affections" are not allowed, and Sisters are not permitted to show either kindness or common humanity to each other. The pitiless cruelty enforced under penalty, if transgressed by any act of kindness, or even of courtesy towards each other, is enough to make the reader sick at heart. It is a melancholy record how precious things may be spoiled and "purposes betrayed"; for every woman there has entered on that life for the sake of devoting herself to a strict course of religious duty, and to minister to the wants of the poorest and most destitute classes. In the beginning, this house at Davenport was a happy and cheerful, if self-denying, Christian household, associated together to carry on works of mercy and benevolence. The insidious growth of conventual rule has changed it into a cruel, hard, barren imitation of the worst features of Roman monasticism. The works of practical benevolence have gra-

dually either died out or been carried on by the agency of paid labour; the Sisters becoming recluses, and passing their time in prayers and austerities for the fancied good of their own souls.

At page 29 Miss Goodman makes the startling assertion that, with one exception, there is no Sister at Davenport who is staying there with the full and free consent of her parents. The principle of conventual life involves, be it remembered, severance of ties of blood, and substitutes "holy obedience" to Superiors for obedience to parental rule.

If it were only women of mature years who undertook this life, it would be sad enough; but they would be better able to bear up against its crushing weight than the young and enthusiastic, who are the most liable to be dazzled by the prospect of "a more excellent way" than the simple path of duty into which it has pleased God to call them. Some protection ought to be exercised over them, even against their will. In page 7 of the Preface, Miss Goodman writes—

"The fact that these conventual establishments are closed against all unwelcome visitation, and that any of the inmates may be secluded from all intercourse and communication with their family and friends at the will of the Superior, is, if not a breach of the law of England, at least an alarming and dangerous innovation. * * Since it is possible for a young girl to be kept secretly in strict seclusion in a convent professedly connected with the Church of England, not only against her own inclinations, but against the wishes of her parents and friends, even in despite of their efforts to remove or communicate with her, this fact is one of grave importance, and demands the consideration of the legislature."

Again she pleads—

"That the unfortunate inmates of lunatic asylums are shielded by law from ill usage and unjustifiable restraint. Surely inmates of religious houses who devote themselves to the good offices of nursing and comforting the sick and afflicted, or even if solely engaged in prayer and worship, ought not to be left entirely to the tender mercies of high-handed and uncontrolled power exercised by irresponsible Superiors whose authority is absolute."

Miss Goodman, be it remembered, has lived under the rule she thus deprecates, and knows what it is. Dr. Pusey is the spiritual director of Miss Sellon and of the Davenport Sisterhood, but he is apparently more under Miss Sellon's influence than any of the Sisters; indeed, the whole of the community seem to have been half-jealous and half-scandalized at the excessive intimacy between these august personages. With these incidental points we have nothing to do; we only wish to draw attention to the widely-increasing spread of conventual tendencies in the English Church, and the grave abuses certain to ensue, unless some provision be made to bring the various Sisterhoods under the same supervision as is exercised over clergymen and their parishes. It is no concern of the public whether Dr. Pusey spends his vacations in Miss Sellon's suite of apartments at Davenport, nor whether those apartments are or are not luxuriously furnished and carefully warmed with hot-air pipes, or that the stone stairs are covered with pieces of carpeted wood whenever the Superioress ascends or descends them, which are taken up when she ceases to walk upon them,—this is nothing to the public; though, doubtless, to the fireless, half-starved, scarcely-clad Sisters, such contrast must seem "hard to be understood." But it *does* concern the Protestant public whether Confession is imperative; as may be seen in the instance given of a poor young lady, weak-minded enough, no doubt, but all the more helpless for that, who, at the wish of her

relatives, left Miss Sellon's. Miss Goodman says—

"Dr. Pusey, her confessor, wrote to urge her to return, declaring he could no longer remain her spiritual director if she failed to do so—a threat which involved his refusal again to grant her absolution. This so weighed on her mind that eventually she returned, but not until some time after a day which Miss Sellon had fixed as the utmost limits of her visit home. For this act of disobedience she was, on her return, desired to take the lowest place in the household; forbidden to hold any intercourse with the other novices; and during her penance, which lasted twelve months, she passed the time each day allowed for recreation alone, and as there was to be silence at all other times, she was thus reduced to almost perpetual silence. Added to this, she was constantly pointed to as a warning."

The result was, that she endeavoured to starve herself to death, and wept incessantly. It was asked her (afterwards) why she ever came back. "What could I do?" she replied; "I must have been lost if Dr. Pusey would not give me absolution."

There is also an instance given of Dr. Pusey's mode of teaching his penitents; where it will be seen that "confession" is by no means optional with the Sisters, but enforced with as much stern emphasis as in the Church of Rome. The poor girl above alluded to was at last sent home to die. The mention of her patience and sufferings is very touching; her very weakness makes one's pity for her the stronger. For those who desire to see how the rule of conventual life works in a Protestant community, let the reader turn to the story of poor Sister Fridswida; part of her story was given in the 'Experiences of an English Sister of Mercy,' but the history of her death will be found here in detail.

Religious orders belonged to a by-gone state of society, and have died out in the natural change and process of time. In the world where our lot is cast, we must live and work at the duties given to us by Providence, and not, by the exercise of "will worship and voluntary humility," "play fantastic tricks" with the sacred relationship which it has pleased God to impose upon parents and children. "To do the duty that lies nearest to us," is the only safe course; any other, however it may be masked by austerities and prayers, is only another form of self-will and self-pleasing. The Superioress of the Poor Clares, one of the Roman Catholic religious houses visited by Miss Goodman, dismissed her with these words at parting: "You Puseyites are like children playing in the market. Remember it is very dangerous to *play* at being Catholics."

It has cost enough to win religious liberty of thought and worship, and it behoves Protestants to watch that it be not bartered back on pretence of "spiritual direction." Every man and every woman must bear the burden of their individual responsibility, and may not, from weakness or idleness, surrender the guidance of their own conscience to any man, be he clerical or lay.

The Bibliographer's Manual of English Literature, &c. A New Edition. By Henry G. Bohn. Part VIII. (Bohn.)

This volume contains the most complete record of Shakspeare's Works, and of publications regarding him and them, that has ever yet been made. Lowndes did much in 1833; but Mr. Bohn has done a great deal more in 1863. Still, the list of editions is not perfect; and while we make a few brief remarks upon it and upon some of its deficiencies, we are anxious to do justice to the pains taken by Mr. Bohn. A Correspondent has already pointed out the defects in the list of Russian

works; yet it ought to be said, that Mr. Bohn has done more than could have been expected. What is now before us occupies considerably beyond 100 closely-printed pages, and reminds us more of what the industrious scholars of Germany are in the habit of producing in this way than of anything of the kind yet accomplished by Englishmen.

First comes a full account of all the collected editions of the Plays from the folio of 1623 to Carruthers and Chambers in 1861, with elaborate particulars of collation, pagination, &c., so that the buyer of any one of them can be at no difficulty in ascertaining whether it be a rarity, whether it is perfect, and what price at any previous time has been given for it. Regarding the engraved portrait by Martin Droeshout which occupies the centre of the title-page of the folio of 1623, we have a piece of information touching the artist which is worth recording, since it shows that he was a native of Brabant, who came to England as a painter early in the seventeenth century, and that he had letters patent of denization sixteen years before he was employed upon the head of our great dramatist. In these letters patent (Roll 5 Jac. I., membr. 39) he is called *pictor*, and it is the more probable that he not only engraved but painted the portrait which is justly considered the most authentic likeness of Shakspeare, because Ben Jonson bears unequivocal testimony to the resemblance.

These, in fact, are the only lines quoted by Mr. Bohn upon our great dramatist or his works, and it would have been going too far out of his way to insert others; but we may just notice a circumstance that seems to have escaped the remark of everybody who has written on the commendatory poems, viz., that Milton, in the edition of his 'Miscellaneous Pieces,' in 1645, expressly dates his verses, "What needs my Shakspeare," &c., 1630, which is two years before they appeared in print. It is therefore probable that they were not written for the purpose of preceding the folio of 1632. Here, too, we may ask why, if the famous commendatory poem "A mind reflecting ages past," &c. were Milton's, as many have contended, he did not reprint it in 1645? Possibly, he did not like to insert in the small volume two poems on the same theme; but, in that case, that he should have preferred the shorter to the longer, the worse to the better, is extraordinary. Mr. Masson, in his recent 'Life of Milton,' says not a syllable on the question, and does not, so far as we remember, even allude to the poem. The modern attempt to assign it to Dr. R. James, of Oxford, is even more absurd than the attribution of it to Jasper Mayne.

After the fullest and minutest details respecting between three and four hundred impressions of the collected plays and poems, Mr. Bohn comes to the publications of separate plays, which, being treated in alphabetical order, are easy of reference. He commences, of course, with 'All's Well that Ends Well,' and concludes with the 'Winter's Tale.' In this department we have little to add beyond the notice of a mistake, where he calls the two fac-similes of 'Hamlet,' 1603 and 1604, *photographs* instead of lithographs. Photography had not then been successfully applied to the multiplication of copies of rare originals; but the Duke of Devonshire took care to obtain the assistance of the first lithographer of the day, and we can assert that nothing has been done since to exceed the beauty and fidelity of the imitations by Netherclift. In enumerating the libraries in which exemplars of particular dramas exist, Mr. Bohn has here and there not included the Duke of Devonshire's collection, in which every first edition of Shakspeare is to be found.

There is an important circumstance connected with the appearance of the 'Romeo and Juliet' that has escaped observation, viz., that the publishers were in such haste to print it and bring it out in 1597, that two separate printers were employed, who used two distinct kinds of type. This, too, is a peculiarity that belongs to no other play by Shakspeare, or by any other rival dramatist that we are aware of.

Mr. Bohn was not acquainted with another particular connected with 'The Taming of the Shrew,' which merits attention. He tells us that the first edition, "as now printed," is in the folio of 1623. This, in all probability, is a mistake; for if any skilful person examines the fourth edition, with the date of 1631 on the title-page, he will see at once that the type of the body of the play is considerably older than that of the title-page, the fact having, perhaps, been that it was really printed considerably before the folio 1623; for some reason it was withdrawn from circulation, and the printer of the folio 1623 actually reprinted his text from the fourth with certain rhythmical changes and improvements. Thus the line which stands in the quarto,

Trust me, I take him for the dog,
is properly altered in the folio 1623 to

Trust me, I take him for the better dog.

Again, where Hortensio says, defectively, in the quarto,

I think she'll prove a soldier,

the text is amended in the folio of 1623 to

I think she'll sooner prove a soldier.

Other variations of a more minute kind might be adduced to establish that the quarto, though bearing the date of 1631, was printed before the folio 1623. More than one quarto-copy of 'The Taming of the Shrew' is without a title-page, because it was early cancelled, and that in the British Museum has only a fragment of it.

After the acknowledged plays, we have a correct list of all those that have at any time, and upon any or no evidence, been imputed to Shakspeare; and among them 'Edward the Third,' for which we have only Capell's word, since no external proof is in existence. How capable he was of judging critically of its merits may be estimated by the reprint he made from the quarto 1596, in which, as the language of the poet (whoever he may have been) is properly represented, the following lines are put into the mouth of the King:—

Fairer by far thou art than Hero was;
Beardless Leander not so strong as I:
He swam an easy current to his love,
But I will through a Hellespont of blood
Arrive at Sestos, where my Hero lies.

—Here Capell, not having any suspicion of corruption, and apparently not understanding the allusion, with the utmost simplicity gave the penultimate line as it stands most absurdly in the old copies,—

But I will through a helly spout of blood
Arrive at Sestos, &c.

—To show the folly of some of these spurious ascriptions, we need only mention that Dr. Farmer attributed 'The Yorkshire Tragedy,' quarto, 1608, to Shirley, who was only nine years old when it was first acted.

The intelligence afforded by Mr. Bohn regarding the various editions of Shakspeare's poems is as full, and nearly as accurate, as it could be rendered. When it is said that a copy of the 'Sonnets,' quarto, 1609, is in the Bentinck Library at Varel, it is only a slight mistake, but one which makes the exemplars appear more numerous than they really are: that at Varel, near Oldenburgh, was five or six years ago brought over to this country, and sold at auction for 150*l.* What became of the

mass of other curious tracts that accompanied it from Germany, we have never heard. They were sold in a mass, with the 'Sonnets,' for a song.

A Successful Exploration through the Interior of Australia, from Melbourne to the Gulf of Carpentaria. From the Journals and Letters of William John Wills. Edited by his Father, William Wills. (Bentley.)

THE title does not declare the principal object of this volume, which, besides telling yet again the story of the sad, though successful, exploration from Melbourne to the Gulf of Carpentaria, attempts to sketch the life and character of Mr. Burke's associate. As the biography of a man of whom readers cannot know too much, written by one whose relation to the dead hero gives pathetic force to every line of affectionate eulogy, it is a work deserving no common meed of praise. The lives of men are often written by their children; it is seldom that a father appears as the historian of a distinguished son. On the whole, Dr. Wills has performed his task with judgment and good taste. Here and there he speaks with unprofitable, but not unnatural, bitterness of the persons through whose misconduct the explorers met their fearful end; and in his concluding pages he displays warm, but not unreasonable, indignation at the neglect and petty opposition which he alternately experienced from those who were peculiarly bound to sympathize with the bereaved parent. Perhaps it would have been better if in these pages Dr. Wills had betrayed less sensitiveness and exhibited less emotion; but in all other respects the memoir is good. A better portrait has not for many a day been painted by a biographer. A few brief pages are given to the childhood, school experiences and early characteristics of the explorer: and then the young Australian emigrant, daring, observant, manly, is brought upon the scene, from which time till the close of the drama the writer keeps himself as far as possible in the background, and leaves his son's letters to tell the story of a life which many an English youth, yet unborn, will take for his model.

Born at Totnes, in Devonshire, on the 5th of January, 1834, William John Wills was the eldest son of a medical practitioner. As a child he was intelligent, and fond of associating with his seniors. A thoughtful, sedate, inquiring urchin, he was never treated as a mere schoolboy; but he was not the less ready to take part in athletic sports and the pursuits of the playground. At eleven years of age he was trusted alone with a gun, and was a notably good shot; and having no dog to accompany him on his sporting excursions, he trained a favourite cat to follow him about the fields and hunt the hedge-rows. "So particular," says his father, "was he in his general demeanour that I designated him Gentleman John, or my Royal Boy. His brothers, all younger than himself, styled him Old Jack, or Gentleman Jack." At the Ashburton Grammar School, which he entered in his twelfth year, he gained no distinction at examinations. A hard-working, nervous boy, he was far from brilliant; and through the defect of a slightly-impaired utterance, he failed to take so good a position in the classes as he would otherwise have attained. In the May of 1850, he left Ashburton School, and was apprenticed to his father, who at that time thought of educating him for the medical profession. A year later he came up to London to see the Great Exhibition, and, for the first time in his life, beheld the wonders of the capital. "If," says Dr. Wills, recalling this

trip, "after a day or two, I chanced to deviate from the leading thoroughfares and missed my way, he would set me right in a moment. This was rather mortifying to one who fancied himself well acquainted with London from frequent visits, but he smiled when he saw I was not a true guide. I asked him how he acquired his apt knowledge. 'On the second day,' he replied, 'when you were out, I took the map and studied it for two hours, so that now I am well versed in it.'"

In the spring of the following year the boy was in London, pursuing his medical studies in an irregular manner,—picking up a knowledge of anatomy in the Guy's Museum, witnessing surgical operations at the theatres of different hospitals, and attending Dr. Stenhouse's practical chemistry class at Bartholomew's Hospital. With the summer of 1852, however, his student-life in London ended; and on October 1st of the same year, he and a younger brother went on board the Janet Mitchell, emigrant ship, off Dartmouth, and on the first day of the following year sighted the Australian coast.

The young emigrants had to rough it. Their outward voyage they made as steerage passengers, and, bent on acquiring a knowledge of an ordinary sailor's duties, they exerted themselves on board as if they had been part of the crew. The elder brother soon mastered "the art of splicing and reefing, and was amongst the first to go aloft in a storm, and to lend a hand in taking in topsails." On reaching Melbourne they found, to their surprise, that they would have to take their possessions ashore at their own expense. "There was a good deal of fuss about it," they wrote home cheerily, "but all to no purpose." Having paid 2*l.* for getting their luggage into Melbourne, they found all accommodation in the town so dear, that they decided to go to the Immigrants' Home, where they, for ten nights, could obtain a bed for a shilling per night. They had already declined an offer of "lodgings at sixty shillings a week, to be paid in advance, and twenty-five persons sleeping in the same room." The influx of emigrants *en route* for the diggings had so raised the price of all necessaries, that the boys determined to lose no time before they looked out for employment. After sleeping eight nights at the Government Immigrants' Home, they were engaged to tend sheep on a station about two hundred miles north of Melbourne. Before starting to enter on their new duties they disposed of all their possessions, except those which might prove of immediate use. "I sold my box of chemicals, after taking out what I wanted, for 4*l.*, and the soda-water apparatus for 2*l.* 5*s.* I also sold some books that we could not carry, but got nothing for them. Scientific works do not take. The people who buy everything here are the gold-diggers, and they want story-books. A person I know brought out 100*l.* worth of more serious reading, and sold the lot for 16*l.*" The articles of clothing with which they had provided themselves in England they found either needless or useless. "Every one," William wrote home, "who comes out does a very foolish thing in bringing such a quantity of clothes that he never wants. All you require, even in Melbourne, is a blue shirt, a pair of duck trowsers, a straw hat or wide-awake, and what they call a jumper here. It is a kind of outside shirt, made of plaid, or anything you please, reaching just below the hips, and fastened round the waist with a belt." Thus equipped, the two brothers (one eighteen, the other fifteen years of age) entered their lonely hut on the Edward River, and became shepherds, earning 30*l.* per annum each and rations. The station was

about four miles from their hut; and of their flocks a lot of rams, numbering nearly fourteen hundred, was the smallest and easiest to manage. The young flock-drivers had little society save their own; but they fared luxuriously on Murray cod and mutton, pigeons, ducks and cockatoos.

In the August of 1853, Dr. Wills, who had long wished to visit Australia, surprised his sons by dropping in upon them near Edward River. The practice at Totnes had been sold, and the Doctor, having left his wife and younger children in Devonshire, had come out to push his fortunes in colonial life. Leaving the station, the boys returned with their father to Melbourne, whence they migrated to Ballarat, where the Doctor commenced practice, having his son William's companionship and assistance for the next twelve months. In writing to his mother, April 22, 1855, William said—

"My dear Mother,—I had the pleasure of receiving a letter from you a fortnight since. I was at Moora Moora then, as you will see by a letter I wrote just before I came down here, in the hope of joining a party that is spoken of as about to explore the interior of the country, which you appear to have such a dread of. It seems uncertain whether they will go at all. As to what you say about people being starved to death in the bush, no doubt it would be rather disagreeable. But when you talk of being killed in battle, I am almost ashamed to read it. If every one had such ideas we should have no one going to sea for fear of being drowned; no travellers by railway for fear the engine should burst; and all would live in the open air for fear of the houses falling in. I wish you would read Combe's 'Constitution of Man.' As regards some remarks of yours on people's religious opinions, it is a subject on which so many differ, that I am inclined to Pope's conclusion, who says—

For modes of faith let graceless zealots fight;
His can't be wrong whose life is in the right;

and I think we cannot have a better guide to our actions than 'to do unto others as we would be done by.'"

The proposal for an expedition thus referred to ended in nothing. But the young man was not at a loss for occupation. He acted as a doctor in the neighbourhood of Ballarat; and, ready to turn his hand to anything, he built an additional room to his father's house. That done, he became a surveyor, and by the August of 1856 was employed by an eminent Melbourne surveyor, at a salary of 150*l.* per annum, besides rations. Applying himself with characteristic zeal to the study of mathematics, he wrote home to his mother urging her to have the children taught Algebra and Euclid. "Mathematics generally, and Euclid and Algebra in particular, are the best studies young people can undertake, for they are the only things we can depend on as true (of course I leave the Bible out of the question)." In the same spirit, writing to his brother Charley in April, 1858, he said, "Mathematics are the foundation of all truth as regards practical science in this world; they are the only things that can be demonstrably proved; no one can dispute them." In the same letter he urged the necessity of industry on the boy, who was then employed in a bank: "You should remember never to waste a minute; always be doing something. Try and find out what things you have most taste for, as they are what you should study most; but get a general knowledge of all the sciences;" and he adds, "One other piece of advice I give you before I shut up; that is, never try to show off your knowledge, especially in scientific matters." All his earlier letters are marked by manly candour and blunt honesty, whilst some of them exhibit a lofty purpose and delicate perception as well as earnestness and sound com-

mon sense. To his mother, who had sent him a piece of gossip that wounded his generous nature, he wrote, "You talk about high and low people: I presume you use the words in a very different sense from that in which I understand them. I consider nothing low but ignorance, vice, and meanness,—characteristics generally found where the animal propensities predominate over the higher sentiments." The young man who had breathed the free air of Australia for six years makes himself heard rather roughly in these lines; but the general tone of his letters to his mother is tender and considerate, although admonitory.

On the recommendation of Mr. Ligar, the Surveyor-General, who had for some months had his eye on the young assistant-surveyor, William Wills received, in November, 1858, an appointment in the Magnetic Observatory of Melbourne. The change of employment and position was most grateful. The rude provincial lad, who had come out to Australia with steerage passengers, and on first landing had declared in a tone of exultation that a settler required no other clothes but a "blue shirt, a pair of duck trousers, a straw hat or wide-awake, and a jumper," had grown weary of bush life, and learnt to appreciate the refinements of civilization. "I hope," he wrote to his father, "I shall not have to go into the bush again; I like Melbourne and my present occupation so much." The society of the city, and intercourse with men of high culture, had speedy and beneficial influence on his intellectual and moral growth. Every day he lost something of the hardness and angularity and harshness of the young man struggling against adverse fortunes, under circumstances that precluded him from refining associations. His nature began to exhibit its grace as well as its strength. Instead of being over-anxious that his sisters Bessie and Hannah should learn mathematics, and pursue knowledge that could, as the phrase goes, "be turned to account," he wished them to read novels, and avail themselves of all opportunities for entering society. "One must," he wrote to Mrs. Wills, "make some little allowance for a mother's partiality in your account of B. and H.; I hope your prejudice against novels does not prevent their reading those of Thackeray and Dickens." The softening, mellowing process went on steadily, till he became a man of refined demeanour and subtle thought, as well as of energy and action. "You cannot fail to like him," wrote one friend in a letter of introduction given to the explorer. "He is a thorough-bred Englishman, self-relying and self-contained; a well-bred gentleman without a jot of effeminacy. Plucky as a mastiff, high-blooded as a racer, enterprising but reflective, cool, keen, and as composed as daring. Few men talk less; few by manners and conduct suggest more." And when the news came that William John Wills was no more, this same friend, addressing a crowded assembly, said, "But with all his labours, Wills never disregarded the commoner duties and virtues of life. Even at the breakfast-table he was as neat and clean as a woman. At the ball, of which he was as fond as a child, he was scrupulously temperate, and in speech pure as a lady." Of the change which had come over him, he wrote to his sisters with characteristic simplicity and good sense, in a letter dated the 18th of April, 1860:—

"You should cultivate, as much as possible, the acquaintance of ladies from other parts of the country, especially of those who have travelled much. This is the best way of rubbing off provincialisms, &c. Perhaps you think you have none; nevertheless I shall be prepared for some whenever

I have the felicity of seeing you. You cannot think how disagreeable the sound of the Devonshire drawl is to me now, and all people of the county that I meet have it more or less. You will, no doubt, wonder how I have become so changed, and what has induced me to adopt social views so different from those I formerly held. The fact is, that since I have been here, I have been thrown into every variety of companionship, from the highest to the lowest, from the educated gentleman and scholar to the uncultivated boor. The first effect was, a disposition to admire the freedom and bluntness of the uncivilized; but more personal experience showed me the dark as well as the bright side, and brought out in their due prominence the advantages of the conventionalities of good society. While in the bush, this conviction only impressed itself partially, but a return to town extended and confirmed it. When we are in daily contact and intercourse with an immense number of persons, some of whom we like, while we dislike or feel indifferent about many others, we find a difficulty in avoiding one man's acquaintance without offending him, or of keeping another at a distance without an insult. It is not easy to treat your superiors with respect void of sycophancy, or to be friendly with those you prefer, and at the same to steer clear of undue familiarity, adapting yourself to circumstances and persons, and, in fact, doing always the right thing at the proper time and in the best possible manner. I used to be rather proud of saying that it was necessary for strangers to know me for some time before they liked me. I am almost ashamed now not to have had sense enough to see that this arose from sheer awkwardness and stupidity on my part; from the absence of address, and a careless disregard of the rules of society, which necessarily induce a want of self-confidence, a bashful reserve, annoying to sensible people, and certainly not compensated for by the possession of substantial acquirements, hidden, but not developed, and unavailable when wanted. I find now that I can get into the good graces of any one with whom I associate better in half an hour than I could have done in a week two years ago."

On Monday, August 20, 1860, the fine-tempered man who thus wrote left Melbourne with the doomed expedition. He was twenty-seven years of age; but, though he wore a beard and had decision stamped on his face, it was remarked that he did not look more than twenty. Some photographic artists, present amongst the crowd who witnessed the exodus of the explorers, wished to take his likeness; but he put them aside, saying with a sad smile, "Should it ever be worth while, my father has an excellent one which you can copy from." On June 27 of the following year, the poor fellow, with unsteady hand, was penning these last words of his last letter to his father: "You have great claims on the Committee for their neglect. I leave you in sole charge of what is coming to me. The whole of my money I desire to leave to my sisters; other matters I pass over for the present. Adieu, my dear father. Love to Tom. I think to live about four or five days. *My spirits are excellent.*"

The Poet's Journal. By Bayard Taylor. (Low & Co.)

WITHOUT being charged with direct imitation, Mr. Bayard Taylor may be characterized as belonging to the school of Prof. Longfellow. His range of allusion is less wide than that of the author of 'Hiawatha'; he has not the command over fascinating words and delicate turnings in versification which force sound upon the ear, and sense, withal, into the memory. But he has gentleness, grace and purity, if no formidable amount of depth; a serene and meditative spirit, a happy choice of language, a laudable absence of affectation (which is much in these days), and a nice observation of natural things and objects. 'The Poet's Journal' is a collection of miscel-

laneous verses, bound together by a framework of domestic scenes. From time immemorial poets have enjoyed and succeeded in the connecting or episodic portions of their works. How charming are Scott's 'Epistles,' even if somewhat superfluous; how "brisk and airy," and thus influencing (as Dryden has it), are the connecting story and musical lyrics of 'The Princess.' Mr. Taylor has his fancy in framework, too; and it is different from theirs, as shall be shown in the following picture, which, of its kind, is attractive:—

For days before, the wild-dove cooed for rain.
The sky had been too bright, the world too fair.
We knew such loveliness could not remain:
We heard its ruin by the flattering air
Foretold, that o'er the fields so sweetly blow,
Yet came, at night, a banshee, moaning through
The chimney's throat, and at the window wailed:
We heard the free-toad trill his piercing note:
The sound seemed near us, when, on farms remote,
The supper-horn the scattered workmen hailed:
Above the roof the eastward-pointing vane
Stood fixed: and still the wild-dove cooed for rain.
So, when the morning came, and found no fire
Upon her hearth, and wrapped her shivering form
In cloud, and rising winds in many a gyre
Of dust foreran the footsteps of the storm,
And woods grew dark, and flowery meadows chill,
And gray annihilation smote the hill,
I said to Ernest: "T was my plan, you see:
Two days to Nature, and the third to me."

I know not, if that day of dreary rain
Was not the happiest of the happy three.
For Nature gives, but takes away again:
Sound, odor, color—blossom, cloud, and tree
Divide and scatter in a thousand rays
Our individual being: but, in days
Of gloom, the wandering senses crowding come
To the close circle of the heart. So we,
Cosily nestled in the library,
Enjoyed each other and the warmth of home.
Each window was a picture of the rain:
Blown by the wind, tormented, wet, and gray,
Losing itself in cloud, the landscape lay:
Or wavered, blurred, behind the streaming pane;
Or, with a sudden struggle, shook away
Its load, and like a foundering ship arose
Distinct and dark above the driving spray,
Until a fiercer onset came, to close
The hopeless day. The roses withered about
Their stakes, the tall laburnums to and fro
Rocked in the gusts, the flowers were beaten low,
And from his pigmy house the wren looked out
With dripping bill: each living creature fled,
To seek some sheltering cover for its head:
Yet colder, drearier, wilder as it blew,
We drew the closer, and the happier grew.

The transatlantic touches in the above landscape make it all the more welcome to us.

Here is one of the leaves from 'The Poet's Journal,' which, traced with a gentle yet firm hand, will recommend the entire book to readers of a certain class:—

THE CHAPEL.

Like one who leaves the trampled street
For some cathedral, cool and dim,
Where he can hear in music beat
The heart of prayer, that beats for him;
And sees the common light of day,
Through painted panes transfigured, shine,
And casts his human woes away,
In presence of the Woe Divine:
So I, from life's tormenting themes
Turn where the silent chapel lies,
Whose windows burn with vanished dreams,
Whose altar-lights are memories.
There, watched by pitying cherubim,
In sacred hush, I rest awhile
Till solemn sounds of harp and hymn
Begin to sweep the haunted aisle:
A hymn that once but breathed complaint,
And breathes but resignation now,
Since God has heard the pleading saint,
And laid his hand upon my brow.
Restored and comforted, I go
To grapple with my tasks again;
Through silent worship taught to know
The blessed peace that follows pain.

Many of the poems making up the second part of Mr. Taylor's volume have great merit. The following shows hardihood, its writer not shrinking in it from certain sectarian peculiarities and forms of expression, which during a long period have been made (and who shall wonder?) the butt of thoughtless ridicule. Besides its hardihood, there is a real understanding of the heart and of those affections which belong to no sect. It is a curious poem,

—a quaint picture of manners very imperfectly understood,—and will, by some, be found pathetic:—

THE QUAKER WIDOW.

Thee finds me in the garden, Hannah,—come in! 'Tis kind of thee
To wait until the Friends were gone, who came to comfort me.
The still and quiet company a peace may give, indeed,
But blessed is the single heart that comes to us at need.
Come, sit thee down! Here is the bench where Benjamin would sit
On First-day afternoons in spring, and watch the swallows flit:
He loved to smell the sprouting-box, and hear the pleasant bees
Go humming round the lilacs and through the apple-trees.
I think he loved the spring: not that he cared for flowers: most men
Think such things foolhardness,—but we were first acquainted then,
One spring: the next he spoke his mind; the third I was his wife,
And in the spring (it happened so) our children entered life.
He was but seventy-five: I did not think to lay him yet
In Kennet graveyard, where at Monthly Meeting first we met.
The Father's mercy shows in this: 'tis better I should be
Picked out to bear the heavy cross—alone in age—than he.
We've lived together fifty years: it seems but one long day,
One quiet Sabbath of the heart, till he was called away;
And as we bring from Meeting-time a sweet contentment home,
So, Hannah, I have store of peace for all the days to come.
I mind (for I can tell thee now) how hard it was to know
If I had heard the spirit right, that told me I should go;
For father had a deep concern upon his mind that day,
But mother spoke for Benjamin,—she knew what best to say.
Then she was still: they sat a while; at last she spoke again,
"The Lord incline thee to the right!" and "Thou shalt have him, Jane!"
My father said. I cried. Indeed, 'twas not the least of shocks,
For Benjamin was Hicksite, and father Orthodox.
I thought of this ten years ago, when daughter Ruth we lost:
Her husband's of the world, and yet I could not see her crossed.
She wears, thee knows, the gayest gowns, she hears a hiring priest—
Ah, dear! the cross was ours: her life's a happy one, at least.
Perhaps she'll wear a plainer dress when she's as old as I—
Would thee believe it, Hannah? once I felt temptation nigh!
My wedding-gown was ashen silk, too simple for my taste:
I wanted lace around the neck, and a ribbon at the waist.
How strange it seemed to sit with him upon the women's side!
I did not dare to lift my eyes: I felt more fear than pride,
Till, "in the presence of the Lord," he said, and then there came
A holy strength upon my heart, and I could say the same.
I used to blush when he came near, but then I showed no sign;
With all the meeting looking on, I held his hand in mine.
It seemed my bashfulness was gone, now I was his for life:
Thee knows the feeling, Hannah,—thee, too, hast been a wife.
As home we rode, I saw no fields look half so green as ours;
The woods were coming into leaf, the meadows full of flowers;
The neighbours met us in the lane, and every face was kind,—
'Tis strange how lively everything comes back upon my mind.
I see, as plain as thee sits there, the wedding-dinner spread:
At our own table we were guests, with father at the head,
And Dinah Passmore helped us both,—'t was she stood up with me,
And Abner Jones with Benjamin,—and now they're gone, all three!
It is not right to wish for death; the Lord disposes best.
His Spirit comes to quiet hearts, and fits them for His rest:
And that He halved our little flock was merciful, I see:
For Benjamin has two in heaven, and two are left with me.
Eusebius never cared to farm,—'t was not his call, in truth,
And I must rent the dear old place, and go to daughter Ruth.
Thee'll say her ways are not like mine,—young people now-a-days
Have fallen sadly off, I think, from all the good old ways.
But Ruth is still a Friend at heart; she keeps the simple tongue.
The cheerful, kindly nature we loved when she was young;
And it was brought upon my mind, remembering her, of late,
That we on dress and outward things perhaps lay too much weight.

I once heard Jesse Kersey say, a spirit clothed with grace,
And pure, almost, as angels are, may have a homely face.
And dress may be of less account: the Lord will look within:

The soul it is that testifies of righteousness or sin.
Thee must n't be too hard on Ruth: she's anxious I should go,
And she will do her duty as a daughter should, I know.
'Tis hard to change so late in life, but we must be resigned:
The Lord looks down contentedly upon a willing mind.

There is no need further to indicate the attractive qualities and the quiet individuality of Mr. Bayard Taylor's poems. We think they will—because we know that they should—find readers.

The House by the Churchyard. By J. Sheridan Le Fanu. 3 vols. (Tinsley Brothers.)

Taming a Shrew: a Novel. By Conway Keith. 3 vols. (Newby.)

MURDER, bigamy and circumstantial evidence seem the favourite points of interest with novelists at present. A trial for murder is the chief sensation scene of 'The House by the Churchyard,' and the feelings of the reader are more or less skilfully harassed by the fear lest the innocent man should be hanged in error. It is curious that just now, when the question of capital punishment is on its own trial, and public feeling is setting so strongly against it, that no protest or objection is ever made to "the extreme penalty of the law" in novels; it is accepted to quicken the interest, like suicide in a tragedy. In the second novel at the head of this article, the hero has a very narrow escape indeed: he is actually on his way to the scaffold, and five minutes more would have seen him hanged beyond reprieve!

Mr. J. S. Le Fanu, when a little boy, professes to have seen a skull turned up accidentally in a village churchyard which bore marks of fearful violence; there is an old tradition connected with the story of the murdered man buried in that grave, and this is the story which the author professes to tell as he heard it from the lips of an old pensioner of the Royal Irish Artillery, aided by the conventional "Diary" and "Family Letters" which always come to the assistance of authors in such cases. The date of the story is 1767. It begins with a midnight funeral, a nameless coffin, a mysterious and handsome stranger who comes to live in the "tiled house by the churchyard,"—a house bearing a fearful reputation of dark deeds done within its walls, and haunted by sights and sounds terrible enough to make

Thy knotted and combined locks to part,
And each particular hair to stand on end.

—The coffin contains the body of Lord Dunoran, who twenty-one years before had been tried for the murder of one of his gambling companions, and being found guilty, had poisoned himself to avoid the penalty of the law. This coffin is brought by his son to be interred, after all this interval, in the family vault; the son has come to take up his abode in the village, to elucidate points of interest connected with his own fortunes and his father's history: but all is told in a series of jerking, fragmentary hints, so obscure that we do not feel too sure that we have seized the facts. Zekiel Irons, the old, saturnine, puritanical parish-clerk, a very well-drawn character, knows all about the story, and keeps the secret. Another stranger, Paul Dangerfield, also comes to Chapelzod, who is well received by all the best society of the place and neighbourhood—a man of fortune and of the world, agreeable, witty, cynical, specious, with a high white forehead, silver spectacles and gleaming grey eyes; who, though highly respected by the world, is a most uncomfortable mystery to the reader: he exercises an occult influence on the affairs of all the people in the book. One man, the surgeon to

the Royal Irish Artillery, recognizes Paul Dangerfield, dimly at first, but afterwards with certainty, as the real murderer of the man for whose death Lord Dunoran had been condemned; he attempts to extort money for his secret, and is found murdered. An innocent man is arrested; but the clerk turns informer, and all the guilty mysteries of Paul Dangerfield are at length unravelled. By way of complicating the interest, a digression is made into the fortunes of many individuals; a *souppçon* of bigamy is raised, which is perfectly unnecessary, and excites neither interest nor sympathy: indeed, most of the characters, both male and female, are mere marionettes, stiff and stupid. A great deal of irrelevant comic business is also introduced, which is forced and wearisome, and in extremely bad taste. There are, however, one or two well-drawn scenes, which show that Mr. Le Fanu has power to write simply and forcibly, and to do something very much better than 'The House by the Churchyard.' The sketch of Dillon, the profligate surgeon of genius, is extremely clever, and worth the whole batch of the *dramatis personæ*.

'Taming a Shrew' is not by any means a pleasant or a probable novel. A young man, Vaughan Dacres, with a place in the Government Office of Tapes and Taxes, worth three hundred a year, falls in love with a dark, flashing, fast young lady of fashion; she declines to marry on that income, and he is fiercely indignant. The young lady engages herself to a man of fortune, who has a dreadfully tyrannical disposition, and a wonderful mesmeric power of bending people to his will. Vaughan Dacres goes to Switzerland, where he hears of something to his rival's disadvantage, and comes back to England in haste to warn Adelaide against the marriage. The rivals meet alone on the seashore, have a violent quarrel, come to blows, but are interrupted by a half-mad woman, who claims the intending bridegroom for her own husband, and reproaches him in the Crazy Jane style. Vaughan Dacres goes away, and the next morning the bridegroom is found lying in a pool of water with a bullet through his heart; and the gun of Vaughan Dacres is lying half hidden in the sand, recently discharged. They are known to have been rivals, to have met on that evening, and Adelaide is obliged to own that Dacres had come from Switzerland to try to stop the marriage. Of course, evidence is strong against Dacres. There is only the slender chance, that of finding the mad woman; and Vaughan Dacres's sister—a very well-drawn character—sets herself to try to hunt her out, after the police have been baffled. Adelaide, who loves Dacres in spite of having refused him, is in despair; the trial proceeds, the verdict is against the prisoner, who is left for execution. The best and most interesting part of the story is the devotion of Lettie Dacres to her brother, and the history of her efforts to find the only person who by any possibility could give evidence in his favour. The woman is found at the last moment, but dying; she has an interval of consciousness—makes her deposition, which is signed and witnessed, and Lettie reaches Newgate only just in time to stay the execution. All this portion is well told; but there is a great deal of vulgar smartness in the dialogues which make up the main portion of the book. Adelaide herself is an atrociously fast young woman of the worst style and taste possible; Vaughan Dacres, Vane Stanhope, and the shoal of secondary characters, are mere composition figures; and there is not sufficient strength of interest to bear the weight of three volumes. Life is too full of serious business to allow the flirtations of any young woman to occupy so much attention.

FRENCH BOOKS.

The Religion of Fools—[*La Religion des Imbéciles*, par Henri Monnier]. (Paris, Hetzel.)—This is a biting satire on the state of religion amongst the *boutiquiers* and the small *bourgeoisie* of Paris. The way in which the Sacraments are understood by them is given in the shape of dramatic conversations—caricatured, it may be, but true to life and the vulgarity of stupidity and selfishness. The heathenism of a Christian country is more painful than paganism, however dark, for there is no religion in it. Whoever would see a picture of the lower classes of the *bourgeoisie* in Paris may find it in this series of "Nouvelles Scènes Populaires." There is no disrespect offered or intended to religion; Monnier only shows that vulgarity of heart degrades the most sacred things, and makes them in its own image. This new series of popular scenes is wonderful for its delineation of the class of character represented. The same qualities would bear the same features in any time or place; but in the present work they wear a French guise, given with great artistic skill and spirit.

Science et Philosophie. Par M. Aug. Laugel. (Paris, Mallet-Bachelier.)—There is both philosophy and science in this book, in the correct meaning of both terms. The philosophy is contained in the general views of the introductory chapter; the science, in the accounts of portions of modern chemistry, optics, meteorology, &c., which fill the body of the work. We give a word to this book as to one which will interest those who take it up, and which might very usefully be taken up by young readers of France.

Railways and the Crédit of France—[*Les Chemins de Fer et le Crédit de France*, par G. Pougard'hieu]. (Paris, Jung-Treuttel.)—This treatise on the present mode of organizing railway companies in France; pointing out the method by which the author considers they might be more cheaply and advantageously constructed; deprecating government interference; and proving how much more expensive, and at the same time unsatisfactory, government works are than those managed by private enterprise. The author endeavours to show what the resources of commercial credit are in France, and the development of which they are capable. The motto of the work tells the line of argument. "The United States abuse the use of credit; we have not yet learnt the use of it." These are words employed by M. Gautier, Under-Governor of the Bank of France. This treatise on Railroads in France is a closely-written and elaborately-argued work; but that there are great differences of opinion may be gathered from the long list of journals to whose objections the author replies at page 109. The work will have an interest for those whom it may concern; but general readers will find it entirely out of their line of reading.

Lovers of the Present Day—[*Les Amants d'Aujourd'hui*, par Arnould Fremy]. (Paris, Hetzel.)—This novel has obtained some notoriety in France: it is an attempt to write a story in the style of 'Manon Lescaut'; but it lacks the indescribable grace which redeems that story from the disgust which the incidents are calculated to inspire. There was a touch of genius in the author, and of reality in the sentiment of 'Manon Lescaut,' which pleaded against the objections which rose every moment; but 'Les Amants d'Aujourd'hui' is a story which only proves that the entire breach of decency and discretion is not of itself sufficient to make a story amusing. The presiding genius of the present French novels seems to be dullness. Passion, imagination, emotion, satire, insight into human nature, have all disappeared; even the morbid anatomy of human nature, under temptation of the Evil One, has given place to a deadly paralysis, an insensibility to the difference of right and wrong. There is no sensibility left; no healthful play of any of the moral perceptions; dreariness and exhaustion prevail, with no signs of a future regeneration—no germ of noble or even of natural sentiments. A nation with such a literature of fiction as that of France at the present moment ought to pray for its speedy extinction and oblivion.

Women in the Provinces—[*Les Femmes de Province*]. (Paris, Jung-Treuttel.)—France does not seem to possess any adorable Lady Teazles waiting their promotion. It would seem, at least from the testimony of novels, that in France everybody who is sprightly, and with talents to be agreeable, goes to Paris as naturally as the cream rises to the top of new milk. These sketches of 'Les Femmes de Province' are dull; the fault lies either in the fact or in the author.

Brazil as it is—[*Brésil tel qu'il est*, par Charles Expilly]. (Paris, Jung-Treuttel.)—There is some good local colouring in this book; it is half story, half statistics, but not very amusing in either.

The Wild Sports of India—[*Les Chasses Sauvages de l'Inde*, par Germain de Lagny]. (Paris, Jung-Treuttel.)—Flippant, and neither graphic nor veracious; but they have a false air of being made romantic.

L'Espagne Contemporaine, ses Progrès Moraux et Matériels au Dix-neuvième Siècle, par Fernando Garrido. (Bruxelles et Leipzig, Lacroix, Verboeckhoven et Co.)—The object of 'L'Espagne Contemporaine' is to put before readers a complete picture of the resources, revenues, institutions and governmental arrangements of a country which, notwithstanding the part it has played in history and the importance of its existing power, is, the writer maintains, as little known to most European readers as China or Japan. M. Garrido's work has been conscientiously performed, and the statistical information of his volume will prove of great service to historians and politicians.

The Wedding Present—[*Le Présent de Noces*, par M. Arthur Ponroy]. (Paris, Hetzel.)—This story of the 'Présent de Noces' is entirely detestable—the worst style of the modern French novel. Under pretext of being a classical story about the childhood of Homer, it gives the indecencies of scanty drapery and *poses plastiques*. It is extremely stupid, and has no interest whatever as a story and no merit as a work of art.

A Young Girl's First Love—[*Le Premier Amour d'une Jeune Fille*, par Lardin et Mie d'Aghonne]. (Paris, Hetzel.)—Some English writer cynically declares that the first love of a woman can never be got at: the second and third, by dint of research, may be found, but the first never. The reason of this is, that a girl's first love is generally quite an ideal one,—a hero in a book, or a man she has never spoken to. This novel turns on this ideality. A charming young girl becomes fascinated by an elderly man—a good and chivalrous gentleman, quite interesting enough to excuse the romance with which she invests him; and he shows himself so much of a gentleman when he suspects the state of the case, and works so loyally to help on a more suitable match for her, that the reader takes him into friendship, and the real attachment comes for the right persons in due time,—and it is all managed very gracefully; in an English novel it would be difficult, but the French element renders it natural, and *Reine* is charming. The admiring affection of her father for her mother, and the little touches of genuine human nature which are scattered throughout the book, make it very pleasant reading, and a great relief after the deluge of nightmare books.

Les Demi-Dots, par M. Audeval. (Paris, Hetzel.)—This may be translated as Fortunes not paid down, but in contingency. It is a sprightly and rather interesting novel, combined with the wonderful advantage of being a book that decent people may read without having their feelings hurt.

Conversations of Goethe with Eckerman—[*Entretiens de Goethe et d'Eckerman: Pensées sur la Littérature, les Mœurs et les Arts*, traduits, pour la première fois, par J. N. Charles.]. (Paris, Hetzel.)—This is a good translation of a work well known in England. Eckerman loved Goethe as Boswell loved Johnson, and Goethe treated him with a great deal more courtesy. There is a pleasant account of Eckerman in the Introduction.

The Tropic Land: Scenes of Mexican Life—[*La Terre Chaude: Scènes de Mœurs Mexicaines*, par Lucien Béart]. (Paris, Jung-Treuttel.)—Mexico has a special interest for Frenchmen at the present moment, and this volume will give them some idea of the country; but Frenchmen always pose them-

selves as centres of a novel, and this gives 'La Terre Chaude' an air of false vivacity, which to an English reader is anything but attractive.

OUR LIBRARY TABLE.

The Mystery of Money Explained and Illustrated by the Monetary History of England, from the Norman Conquest to the Present Time. (Walton & Maberly.)—The writer of this absurd book states that he has been engaged in trade and banking ever since the year 1801, and that for more than forty years he has been a watchful observer of the events and changes which have taken place in the financial and political affairs of his country. Among the subjects which he discusses are Money in the time of Abraham—How Tribute was paid in the days of King Solomon—The Popularity of William Fitzosborn and Robin Hood—The Reform Movement and the Duke of Wellington—The Repeal of the Usury Laws—The Irish Famine—The Income Tax—The Deranged State of the American Currency in 1815—The Red-Sea Telegraph—Mr. Van Buren's Notion of the Supremacy of the Popular Will,—and Mr. Gladstone's Newcastle Speech on the 7th of October, 1862. His Table of Contents, indeed, ranges over all subjects, and over nearly every period of the world's history; but, unfortunately, it is hardly possible to open his book without discovering that he has not yet learnt the rudiments of the science which he undertakes to explain and illustrate. If the reader is sufficiently interested in this subject to get through this brief notice, he will probably require no further proof of this statement than the fact that the author of 'The Mystery of Money Explained,' after half a century's study of the subject, sticks fast at that *pons asinorum* of currency philosophers—the price of gold in England. The fact that the value of gold in this country is not suffered to find its price according to the laws of free trade, lies, he thinks, at the root of all our monetary troubles and financial disasters; and he twits Mr. Cobden and his "friend Chevalier" with not perceiving that gold is made an exception to their "cardinal rule of commerce." In short, he cannot understand why the price of gold should be fixed, while corn, sugar and cotton are left to find their own price in the market. The answer is, that the price of gold is fixed because, unlike the price of other things, it is estimated in the same substance as the gold itself. The price of gold, in fact, means how much gold of the same standard can be obtained for it; the gold being uncoined, and the sovereigns obtained for it being coined, making no difference—as the coinage, which is in fact only a notification of the weight and fineness, is performed gratuitously. In short, a pound of gold is worth a pound of gold coin, and always must be, however scarce or however plentiful gold may become. If the author will imagine the price of sugar and corn to be in like manner estimated in sugar and corn of the same quality, he will find these commodities must also remain at the same price under every variation in their scarcity or abundance. This appears simple enough; but our explainer and illustrator of the Mystery of Money will, no doubt, shake his head.

Notes on Mexico in 1861 and 1862; Politically and Socially Considered. By Charles Lempiere. (Longman & Co.)—It might have been thought next to impossible to produce a book concerning Mexico in 1861 and 1862 which should be hard to read, the present state of curiosity and political excitement considered. But Mr. Lempiere has done so, and, what adds to the singularity of the feat, has done so in spite of his having really collected some useful information regarding that rich but misgoverned kingdom. As regards want of arrangement, our author could not be exceeded. Details of personal adventure, told with no remarkable spirit or intelligence,—statistical and historical facts,—sketches of society and manners, pale and dull as compared with those of the lively Madame Calderon de la Barca,—strictures on the Intervention question, with political papers and reports,—foot-notes concerning natural productions and unnatural superstitions, are so mixed up together, as to make the book unreadable as a heap of cuttings from different newspapers would be. This is vexa-

tious: for, as we have said, now is the time for a lively or for an instructive book on Mexico, telling us how the French are thriving there.

Hymns for the Church of England. (Longman & Co.)—There is a certain air of self-satisfaction in this collection calculated to remove any hesitation which the reviewer might feel in speaking of a work that is, doubtless, well intentioned. First, we do not like the selection: because every sacred poem, such as that one here chosen for Good Friday, No. 72, however praiseworthy as a lyric, is not a hymn. There are many similar examples in this volume, both by their length and quality unfitted for congregational purposes or for private uses; unless the poem is to be read aloud, not sung. Secondly, we do not like tinkering of and tampering with known lyrics which have passed the ordeal and have been accepted. It can be only restless bad taste which could fancy the fine old Evening Hymn mended by the substitution of "All praise to thee," in the starting line, for "Glory to thee"; and we do not envy the modesty of that man or woman who conceives his or her pen capable of adding a new verse to "The spacious firmament on high." All such devices savour of book-making; and pious book-making is pre-eminently unwelcome.

Bacon's Guide to American Politics; or, a Complete View of the Fundamental Principles of the National and State Governments, with the respective Powers of each. (Low & Co.)—Since "the object of this book is to give a clear and brief explanation of the political and fundamental principles of the American Government," it must be condemned as a failure. Its information is so superficial and incomplete, that it will not assist those who are acquiring the first rudiments of American politics. Its deficiencies are rendered the more conspicuous by the sterling merit of the many cheap handbooks and introductory works which have been published on the same subject during the last two years.

Memoir of the late Rev. John Baird, Minister of Yetholm, Roxburghshire; with an Account of his Labours in Reforming the Gipsy Population of that Parish. By W. Baird, M.D. (Nisbet & Co.)—This brief memoir of the good minister, who died on November 29, 1861, after striving for more than thirty years to reclaim the Yetholm Gipsies from vagrant illness and plant within them the seeds of Christian life, contains many interesting particulars concerning the colony of tawny-visaged thieves who gave Sir Walter Scott his character of Meg Merrilies, and have for many a day roused and baffled antiquarian inquiry. The volume closes with "a list of words used by the Gipsies of Yetholm, compared with Grellman's list of the Continental Gipsy Language, and the corresponding words in Hindostanee." Collectors of Gipsyana should get possession of this unpretending narrative of a zealous clergyman's almost fruitless labours.

Songs on Italy; and other Poems. By Caroline Giffard Phillipson. (Hardwicke.)—The political songs in this volume show enthusiasm in a good cause; and there is much warm, womanly sentiment in the remaining poems. It is with reluctance, therefore, that we give an unfavourable opinion of the writer's powers. Her generous and kindly impulses deserve a fresher and more powerful utterance than she affords to them. The best lines here might find their fitting place in the albums of friends, with whom the personality of the writer would lend a charm to the verse. It is otherwise with the public, which must be charmed by the verse before it can take interest in the writer.

Poems of Early and Later Years. By D. M' Corkindale. (Simpkin & Co.)—The strings of Mr. M' Corkindale's lyre vibrate to very casual impulses. The loss of a dog, the sight of a sleeping infant, the perusal of a poem, the receipt of a picture, are among the subjects that stimulate his ever-ready muse. His strains are too quickly called forth to possess much depth or volume; and even where his theme is of general interest, the shallowness that attends undue facility is very perceptible. We hope the following lines written in the Album at Mont St. Jean are no fair sample of its contents:—

In this the spot at morn where met
Of combatants a flood;
The plains that were, ere sun had set,
Deluged with human blood;
Loved island home, whilst proud I rest
A moment, sorrow flows,
Remembering that thy bravest, best,
In thousands here repose!
Earth ne'er did see heroic dash
Like Waterloo's wild brilliant flash.

—So satisfied is the author with the last couplet, that he repeats it, with slight modifications, five times in the course of his poem. The specimen we have given will show that he is a master of that easy writing which makes very difficult reading.

Life Unfolding: a Poem for the Young. By Elizabeth Anne Campbell. (Wertheim & Co.)—'Life Unfolding' traces the various developments of Providence in sacred story, from the Patriarchs to Christ; the characters and events under review often enabling the writer to enforce a truth or to offer a devout suggestion. If an excellent purpose, earnest feeling, much good sense and a correct style, could pass for poetry—if it could dispense with emotion, fancy and original thought,—we might speak highly of the volume before us. As it is, we can only respect the intentions of the writer, and regret that the word "poem," as a part of her title, is a misnomer.

The Night Watches: and other Poems. By Alfred Ewen Fletcher. (Ward & Co.)—Our remarks on the preceding volume apply so thoroughly to this of Mr. Fletcher, that to criticize it would be to repeat them in substance. Many passages in 'The Night Watches' indicate a mind cultivated and amiable, and, except for the desire to express itself in verse, sensible also.

British Enterprise beyond the Seas; or, the Planting of Our Colonies. By J. H. Fyfe. (Nelson & Sons.)—In a style well suited to intelligent boys and girls, Mr. Fyfe tells again some of the oft-told stories of that British enterprise which has endowed Englishmen with rights of citizenship in every quarter of the globe. Mr. Fyfe's volume comes somewhat behind time. Had it appeared a few weeks earlier, we should have spoken of it favourably in our articles on the books of the "Children's Season."

Amy Thornton; or, the Curate's Daughter. By Edward Burlend. (Simpkin, Marshall & Co.)—Amy Thornton, the curate's daughter, loses both father and mother, and after encountering much harsh treatment in a workhouse, and undergoing corporal chastisement from the mistress to whom she is apprenticed, works on patiently and dutifully till the advent of brighter days. The story is extremely dull, and several of its scenes offend delicacy. Mr. Burlend may have sinned unconsciously, but not the less has he erred gravely.

Of Religious publications we have to mention—*Half-Hours with the Bible; or, the Children's Scripture Story-Book: an Epitome of the Histories contained in the Old and New Testament, simplified for the Use of Children,* by the Author of 'Happy Sundays' (Ward & Lock),—*Hymns of Love and Praise for the Church's Year,* by the Rev. J. S. B. Monsell (Bell & Daldy),—*Sermons on the Acts of the Apostles,* by the Rev. J. H. Gurney (Rivingtons),—*A Treatise on the Romish Tenet of Auricular Confession, wherein the Mind of the Reformed Church of England is fully shown, both in her Distinctive Teaching and Ministerial Practice, to be at utter variance with this Romish Dogma,* by the Rev. D. Ace (Westerton),—*Lines Left Out; or, Some of the Histories Left Out in "Irene upon Line"* (Hatchard & Co.),—*Watch and Pray,* by Newman Hall (Nisbet),—*Bishop Ullathorne and The Rambler; Reply to Criticisms contained in "A Letter on The Rambler and Home and Foreign Review, addressed to the Clergy of the Diocese of Birmingham, by the Right Rev. Bishop Ullathorne,"* by R. Simpson (Williams & Norgate),—*The Duty of Giving Away a Stated Proportion of our Income,* by W. Arthur (Nisbet),—*The Duty of Laying by for Religious and Charitable Uses a Stated Proportion of Our Income,* by R. S. Candlish (Nisbet),—*On Doing what One does with One's Might,* by the Rev. J. Cumming (Nisbet),—*"Bear ye One Another's Burdens," an Address on Practical Sympathy and prompt Beneficence,* by T. Guthrie (Nisbet),—*Choral Worship; its Design and Scriptural Authority; with an Exhortation to Choristers to Live as they Sing,* by the Rev. J. W.

Hewitt (Masters).—*The Interest of a Diocese in the Restoration of its Cathedral*, by the Rev. J. W. Hewitt (Parker).—Vol. II. of *The Monthly Paper of Sunday Teaching*, (Mozley).—Vol. XXIV. of *The Monthly Packet*, (Mozley).—A volume of the *Magazine for the Young* (Mozley).—Vol. II. of *The Children's Friend* (Seeley).—*Little People*, by the Author of 'The Two Mottoes' (Mozley).—*Brother and Sister*; or, *Margaret's Trial and the Two Temptations* (Mozley).—*The Two Cousins*; or, *the Story of a Week*, by H. S. E. (Wertheim).—*Made Clear at Last*; or, *the Story of Hannah Reade*, by H. S. E. (Wertheim).—*Three Years After: a Sequel to 'The Two Cousins'*, by H. S. E. (Wertheim).—and a Volume of *The Sunday Magazine* (Whitfield).

LIST OF NEW BOOKS.

Ada Fortescue, by the Author of 'The Dalrymple', 3 vols. 31/6 cl.
Alcock's Capital of the Tycoon, Three Years in Japan, 3 vols. 42/

ASSYRIAN DISCOVERY.

1, Hill Street, Berkeley Square, Feb. 2, 1863.

I had not intended to have published an account of Mr. John Taylor's recent explorations in Northern Mesopotamia and Kurdistan until the arrival in England of all the new cuneiform inscriptions, which he has been the means of bringing to light, had enabled me to do full justice to the importance of his discoveries; but as a brief notice of one of these discoveries which I communicated at a late meeting of the Royal Asiatic Society has already appeared in print, and as Mr. Fox Talbot, in his letter to the *Athenæum* of the 24th of January, has drawn attention to the subject by comparing a passage in the Annals of Sardanapalus with one of the actual monuments thus found in the country, I now deem it only due to Mr. Taylor's reputation that the nature and full extent of the labours on which he has been engaged for the last two years should be made generally known.

Mr. J. Taylor, already well known to Assyrian scholars for his successful excavation of the Proto-Chaldean ruins, was appointed Consul at Diyarbekir at the close of 1860. In the following year he made his first excursion to the eastward, and found an extensive city in ruins, on the right bank of the Tigris, about 20 miles below Diyarbekir. The ruins covered a raised platform at least six miles in circumference, and were crowned towards the south-east corner of the inclosure by a lofty mound, about 180 feet high, the site of the ancient citadel. On the summit of this mound had stood, until lately, two slabs imbedded in the earth, and exhibiting Assyrian sculptures and inscriptions. These slabs had been thrown down the slope of the mound, and one of them had been broken, a few years back, by some ignorant

Turkish officials in search of treasure; but Mr. Taylor uncovered them at the foot of the slope, and took paper casts of portions of the inscriptions, which he forwarded to me in England. The casts were not sufficiently perfect to admit of the inscriptions being completely restored and deciphered, but still, as I found from such portions as were legible that the monuments belonged to the most flourishing period of Assyrian history, the reigns of the great Sardanapalus and his son Shalmaneser, and promised to be of much value in affording the means of verifying the annals of those monarchs, I recommended the Trustees of the British Museum to secure the slabs at once, and, further, to expend a small sum of money (500*l.*) in experimental excavations at the same spot, under Mr. Taylor's superintendence. Her Majesty's Government, however, to whom application to this effect was duly made, declined to admit the small sum in question into last year's Estimates, and the marbles might thus have been entirely lost to the nation had not Mr. Taylor, acting on my suggestion, and fortified by a *firman* obtained for him by Sir Henry Bulwer at Constantinople, removed the slabs before the result of the application to Government was known, and despatched them *vid* Bussorah and round the Cape of Good Hope to England. They may be expected to arrive in the course of the spring; and in the mean time the Trustees of the Museum have consented to indemnify Mr. Taylor for his outlay, and to defray the cost of the transport of the slabs to England out of the fixed sum which is yearly allotted for the purchase of Antiquities; so that these curious tablets, set up as memorials of the foreign conquests of the Assyrian kings, will, after all, be added to our national collection.

I have not been able to find in the portions of the inscriptions which have been sent to me any notice of the actual erection of the memorial tablets, so as to be able to identify positively the site where they have been discovered; but I judge from many indications of relative geography which are given in the routes of the great Sardanapalus, that the city which Mr. Taylor has found below Diyarbekir is the *Tuskha* or *Tuskhan* of the inscriptions; and if this be the case, one of the slabs, now on its way to England, will be the actual monument which is described at the commencement of the second column of the Annals of Sardanapalus, in the following passage: "I made an image of my majesty on a carved slab of stone, and I wrote on it the glorious titles of my sovereignty and a record of the warlike achievements which I had performed in the country of *N'airi*, and I set it up in the city of *Tuskha*, and placed my written tablets in the citadel; and the people of Assyria who in consequence of a scarcity of food had ascended into foreign countries, *i.e.* the country of *Rura*, I brought them back and placed them in the city of *Tuskha* (See *Brit. Mus. Series*, pl. 20, lines 5-8).

The only portion, it is true, which I have been able to read from the imperfect cast of the slab of Sardanapalus now in my possession, refers not to *Tuskha*, but to the expedition which is narrated in the Annals, pl. 22. l. 86, and which was conducted against the districts around Mount Masius, south of the country of *N'airi* (*Mediyât*, where a memorial tablet was set up during the expedition in question, being *Mediyât*, the modern capital of *Jebel Tur*); but I think it probable that the *N'airi* campaigns are recorded at the back of the slab, and there also at the close of the record I should expect to find a notice of the erection of the monument.

The second slab found by Mr. Taylor, and also on its way to England, belongs to Shalmaneser, the son of Sardanapalus, whose annals are, as it is well known, recorded on the Nimrud Obelisk and Bulls. The portions of the inscription on this slab which I have read contain an account of the king's wars in Armenia, Mesopotamia and northern Syria, and add many new names, both of kings and countries, to those already known, besides describing the erection of two memorial tablets which are not otherwise recorded, one upon the sea of *N'airi* (Lake *Van*), and the other at the source of the river *Saluâra*, which issues, it is

said, from the foot of Mount Amanus in northern Syria; but I can find nothing which throws a light on the locality where the monument was found, nor do I think that the Annals on the Obelisk contain any allusion to the erection of this particular tablet.

With respect to the identification of the site where these antiquities have been found, in classical geography, though nothing positive can be affirmed, I can offer a very reasonable conjecture. The name of *Tuskha*—if that, indeed, were the Assyrian title of the city—is not to be recognized under any possible disguise either in ancient or modern authors, and it is probable therefore that the designation was lost at a very early period. At present, the ruins are only known in the country by the name of *Kurkh*, and in this title we may trace, I think, a relic of the "Carchiocrats" of the Greeks; at any rate the notices which are preserved of that city are sufficiently applicable, for Carchiocrats was on the Tigris ("Proxima Tigri," *Plin. lib. vi. p. 9*), and it was the capital of Sophene, which extended from the Anti-Taurus to Masius (*Strabo, lib. xi. p. 363*). Moreover the name of Carchiocrats appears to signify "the city of the Carchians," and *Kurkh* in the cuneiform inscriptions is a country which extends from the frontiers of *Bitân*, or Armenia, on one side, to the *Khetta*, or Hittites, on the other; or from *Bellis* to the east, as far as Edessa to the west; so that *Kurkh* would be nearly in the centre of this long strip of territory. The place, however, would seem to have remained uninhabited since the Parthian era, for there is no trace of the name in Syriac or Armenian or Arabic authors; and so much uncertainty has thus attached to the site of Carchiocrats that St. Martin and D'Anville have respectively placed it at *Miyafarikin* and at *Diyarbekir*.

A more extensive excursion which Mr. Taylor made in the same year (1861) led him from *Diyarbekir* by *Miyafarikin* to *Arzen*; thence by *Zoke* to *Sert*; along the *Bohtan* river to its junction with the Tigris at *Tillec*, where there is also a fine Assyrian ruin, frequently mentioned in the inscriptions; from *Tillec* by *Redhvan* (the Rhaddium of Procopius) to *Him-Keif*; then across the Tigris and by *Kejr-Joze* to *Mediyât*, and so on to *Mardin* and *Diyarbekir*. This route admits of the most copious illustration from the Assyrian inscriptions, and Mr. Taylor came upon many undoubted relics of the time of the Ninevite kings, though he found no sculptures or inscriptions above ground. His most remarkable discovery I consider to have been that of the ruins of *Kejr-Joze*, which he describes as an immense city at the northern foot of Mount Masius, and the great treasure-house from which the larger portion of the Greek and Parthian coins and gems current in northern Mesopotamia are procured: thus leading to the conclusion that we have at last found the site of the famous city of Tigranocerta, which has so long been the despair of modern geographers.

During the last autumn, Mr. Taylor has been again afoot, and has been rewarded by some discoveries of the very highest interest. On leaving *Diyarbekir*, he first visited *Egil*, which is situated to the north, on the right bank of the Tigris, some ten miles above the junction of the eastern branch, now called the *Tsebench*, and anciently the *Taupnah*, or river of Sophene. For a description of the place, I now quote his letter to me of August 6th, 1862: "I have no time to give you here a detailed account of *Egil*, although it deserves one. I will only report the existence, on an isolated rock at the western end of the old castle, of a cuneiform inscription and bas-relief of an Assyrian king. Both are unfortunately nearly obliterated, the outline of the figure being alone traceable, together with faint signs of the cuneiform character. However, there is quite enough to prove the origin of the sculpture. The inscription is in a sunken niche, three inches deep and six long by four broad, and reaches up to the waist of the figure, the upper portion of which is above it, while the feet rest on the lower edge of the inscribed niche, and the letters run across the figure. The whole mountain side is burrowed with grots, and most of them are finished with much

greater care than is usual in these primitive abodes."

Now it is not easy to identify in the cuneiform inscriptions, either the town of *Egil*, or the king who must have there sculptured a memorial tablet. The *Egil* sculpture cannot represent either of the tablets of Shalmaneser, which he engraved on the face of the rock, at the sources of the Tigris, in his seventh and fifteenth years respectively; for those works were executed at the spot "where the waters issue forth" (see Layard's 'Assyrian Inscriptions,' pl. 90, line 71, and pl. 16, line 47), and must be sought accordingly in the hill to the south of the little *Gokcha* lake, near the high road conducting from *Kharpat* to *Diyarbekir*; nor is there any record in the Annals of Sardanapalus of a work in this neighbourhood which is at all applicable. The name of *Egil*, although known to the later Greeks (compare the 'Inglene' of Pet. Patricius, Exc. de Legat. p. 30, and perhaps the 'Acilezene' of Strabo and Ptolemy), does not certainly date from the Assyrian period; and the only place mentioned in the Annals of Sardanapalus which appears to suit the locality is *Damadmusu*, near the *Tsupnat* or *Tæbeneh* river, and midway between *Amida* (or *Diyarbekir*), and *Arkania*, the modern *Arghaneh* (see B.M. Ser. pl. 26, l. 105, *sqq.*); but there is no account of a memorial tablet in that immediate vicinity.

Mr. Taylor's next discovery was at the village of *Tæbeneh*, probably the old capital of Sophene, where he found a capacious subterranean building, hollowed out of the solid rock, and now used as a church; but there were no inscriptions to attest the age of the work.

Ascending the river to its source, Mr. Taylor now made his crowning discovery, which I will communicate in his own words, copying from his letter to me of October the 2nd, 1862:—"My tour has been unfortunately cut short by a severe fever, which I caught in an unhealthy cave copying two cuneiform inscriptions which I found there. They are small, and one is much defaced; but the site is interesting, and they may prove of some geographical value. The Tigris above *Diyarbekir* is, as you know, formed of two branches,—the *Egil*, or *Gokcha* Lake branch, and the *Tæbeneh Su*, called also in Keiappert's map the *Uch-Gul Su*. This latter branch issues out of a cave some twelve miles north of *Sidjer*, close to a village called *Korkhar*. In this cave are the inscriptions. It is a most curious spot, and the river issues forth from it, after an underground course of very considerable length, but not quite so far as the Lake Thospitis of the ancients. I send you herewith a copy of one of the inscriptions; the other is much longer, but, unfortunately, a good deal defaced: however, I send through Constantinople paper casts of both, and I hope they will be acceptable to you. On the top of the cave are the ruins of an old castle, with curious tanks cut into the solid rock, and also a staircase cut through the rock forming the roof of the cave, one end of which is immediately above the water, the element having been, I suppose, drawn up for the use of the garrison by buckets and ropes."

Now, Mr. Fox Talbot is quite right in referring to this spot the account which is given in the Annals of Sardanapalus of a memorial tablet executed by him at the sources of the *Tsupnat* in the same locality, with similar monuments executed by his ancestors, *Tiglath-Pileser* and *Tiglath-Bar*. (See B.M. Ser., pl. 19, l. 101, *sqq.*) That the river, indeed, which issues from the *Korkhar* cave is the *Tsupnat* of the inscriptions, although mistaken both by the Greek and Arabic geographers for the true Tigris, there cannot be a doubt. The final *t* is a mere feminine termination, as in *Purat* or *Euphrates*, *Diglat* or *Tigris*, *Aranta* or *Orontes*, *Turnat* or *Torna*, &c. The true name is *Tsupna*, exactly answering to the *Σωφνη* of the Greeks and the *Tsuphanya* of the Syrians; and the modern title which some travellers write as *Sebeneh* and others as *Dibeneh*, but which should really be pronounced with a dental sibilant as the initial letter, is a near reproduction of the old designation. The natural phenomena which existed at this spot in the subterranean course of the river, and its exit from a dark and gloomy cave, appear to have

given greater prominence to the source of the *Tsupnat* than to the source of the true Tigris, and to have thus caused the one to be taken for the other both by the Greeks and Arabs; for it can hardly be questioned that the remarkable descriptions of Strabo and Pliny, although applied to the Tigris, refer in reality to the cave discovered by Mr. Taylor; and the Arab account also of the dark cave at *Hiluras* (the *Ἰλλύρας* of Procopius, 'De Ædific.', iii. 3) from whence the Tigris rose (see *Yacut*, in *voce*) is certainly intended for the same place; but the cuneiform notices of the two localities are quite distinct, and the right or western branch of the river, which rises near the *Gokcha* Lake, and thence passes by *Arghaneh* to *Egil* and *Diyarbekir*, is acknowledged in the country to be the true Tigris.

Mr. Fox Talbot's translation of the passage from the Annals of Sardanapalus referring to the tablets at the source of the *Tsupnat*, although not, I think, rigidly correct, especially in regard to the names, is sufficiently close to be adopted without cavil. It has long been known to me, and I have no doubt that the monument in the cave of *Korkhar*, of which Mr. Taylor has now furnished me with a sketch and copy, is one of the actual tablets alluded to by Sardanapalus, and that it was executed in the thirteenth century B.C. The tablet contains a figure of the king with his right arm extended and holding in his left the *Kharuth* or sceptre of dominion, and adjoining him is an inscription to the following effect: "By the Grace of *Asshur*, the Sun and Æther, the great Gods, my lords, I, *Tiglath-Pileser*, King of Assyria, son of *Asshur-ris-elim*, King of Assyria, who was son of *Mutaggil-Nebo*, King of Assyria, marching from the great sea of *Akhiri* (or the West, i.e. the Mediterranean) to the sea of *Nairi* (Lake Van) for the third time have invaded the country of *Nairi*." The only imperfect or doubtful word in this inscription is that which I have translated "marching," and the genealogy, which is the same as that on the *Shirgât* cylinders, positively identifies the king as the first *Tiglath-Pileser*. The cast of the second tablet has not yet reached me, and I am unable, therefore, to say whether it belongs to *Tiglath-Bar*, the father of Sardanapalus, or to Sardanapalus himself; but I expect, if the inscription is at all legible, to find it of the latter king; and think it probable it will furnish some further illustrations of the campaign described in the latter part of the first column of the Annals. There should, however, according to the passage quoted by Mr. Fox Talbot, be a third tablet at the sources of the *Tsupnat*, and this, perhaps, will still be found in some of the dark recesses of the cave.

Mr. Taylor also discovered a Parthian or Sassanian sculptured tablet at *Boshat*, near *Halda*, in the *Silwan* district, and he had positive intelligence of some more cuneiform inscriptions near *Moosh*, which he hoped to visit in the spring. It is probable, indeed, that what he has already found is but an earnest of future discovery, for there are at least twenty tablets commemorated in the inscriptions as having been executed by the different Assyrian kings in the Kurdish mountains, and Mr. Taylor will hardly give over the search for them until he has thoroughly ransacked the country from the Persian frontier to Syria.

And now a few words on the general question of cuneiform decipherment. Mr. Fox Talbot complains with some bitterness of the continued incredulity of some of our best orientalists as to the successful interpretation of the Assyrian inscriptions; but he does not trace that incredulity to its true source. I believe myself, that with such men as Ewald, and Renan, and Cureton, the tendency to disbelieve in our system of decipherment arises mainly from the importance and magnitude of the subject; for if we are in the right track the result of our researches threatens to dwarf all other branches of Oriental inquiry, and almost to supersede the hitherto cherished study of Hebrew and Arabic and Syriac literature. Mr. Fox Talbot, however, and M. Oppert are also, in some degree, themselves responsible for the result which they deprecate, owing to their want of care in distinguishing in their translations between what is certain and what is uncertain. No doubt, a very large

portion of every Assyrian inscription is now perfectly intelligible. Such portions would be read and explained and translated in the same way by Assyrian scholars, whether in England, or Ireland, or France, or Germany, and an analysis might be given, both etymological and grammatical, which would be entirely satisfactory to Semitic students; but there is also in all the Assyrian inscriptions a certain proportion of archaic forms, consisting of words and phrases borrowed from the Turanian dialects of the Proto-Chaldean Empire, which set at defiance all Semitic rules and analogies, but which are, nevertheless, usually read and translated as if they presented no linguistic difficulty. The weak point at present in Assyrian decipherment is the treatment of these archaisms. They are usually spoken of as ideographs, which, however, is a complete misnomer, and their incongruity—so offensive to Semitic scholars as, in their estimation, to discredit the whole system of interpretation—is rarely noticed. I would recommend translators to confess their entire ignorance of this branch of the subject, or to wait at any rate until the copious bilingual and trilingual vocabularies and grammatical tracts which I am now engaged in editing are available for general reference, before they attempt either to read or to explain the so-called Assyrian ideographs.

I will only add, in conclusion, that a new means of verifying our Assyrian readings is now opening out to us, which the most resolute disbelievers will hardly venture to gainsay. Having had occasion to examine the many hundreds of small "contract" tablets in the British Museum for the purpose of extracting their dates, and thus completing the Eponymous Canon which I discovered last year, I have found that a considerable number of these tablets have a memorandum in the cursive Phœnician character scratched upon their margin, intended, as it would seem, to assist the Nineveh Librarian in the arrangement of the documents. These Phœnician legends are rude and in many cases nearly illegible; but wherever I have been able to read them, I have found them to give the same names as are inscribed in the cuneiform character on the body of the tablet; the much-desired test of bilingual writing being thus at length obtained. I have not yet fully worked out this new mine of information, but I am in hopes of being able to resolve, by means of the Phœnician key, several doubtful points in the phonetic reading of Assyrian proper names, and especially to ascertain the vernacular titles of many of the gods, which are usually expressed by monograms, or which appear under the disguise of mere qualificative epithets. H. C. RAWLINSON.

CARDINAL MEZZOFANTI.

St. Patrick's College, Maynooth, Feb. 2, 1863.

THE experiment upon Cardinal Mezzofanti's powers in Chinese conversation which Mr. Waterton, in illustration of the Cardinal's knowledge of Chinese dialects, records on the authority of the late Dr. Donaldson, is probably the same (although the accounts do not tally in all particulars) with that of which Mr. Harford, of Blaise Castle, was informed by the Cardinal himself, in 1846 ('Life of Mezzofanti,' p. 224). Indeed, Mr. Waterton's statement and that of your Correspondent "W." as to Mezzofanti's acquaintance with other dialects of Chinese besides the *Whan-wha*, or Mandarin, are borne out by the unanimous testimony of all the *habitués* of the Propaganda, so far as the belief of non-experts in the language can be adduced as valid evidence.

I may add that, probably, the only address in the nature of a sermon in Chinese ever spoken in Europe was delivered by Mezzofanti, on occasion of a "Spiritual Retreat," to the Chinese students of the Propaganda. Among the autographs inserted in the new issue of the 'Life' (p. 368) is a very pretty specimen of his Chinese writing.

Your readers may be interested by a later pentameter which he composed *impromptu*, in reply to a compliment addressed to him by a Chinese priest. A Roman friend sent it to me soon after the publication of the 'Life.' Playing upon the name "Mezzofanti," which, resolved into Chinese monosyllables, signifies "he accomplishes in silence all virtues," the visitor addressed Mezzofanti—

Hic est qui tacitus virtutes perficit omnes.

Mezzofanti, without a moment's hesitation, completed the couplet :

Ast semper loquitur :—perficit ergo nihil !

The line, I think, is worth preserving, if not for itself, at least as an evidence of Mezzofanti's modest simplicity, and of his own regretful consciousness of what has often been imputed to him as a fault—the little permanent account to which he had been able to turn his wonderful faculty of languages.

C. W. RUSSELL.

The estimate of Mezzofanti formed by Dr. Smith, the Bishop of Victoria, as conveyed in Mr. Waterton's letter, is in the main correct. The Cardinal was "not a very profound Chinese scholar." No other evidence of this need be required than that which Mr. Waterton himself furnishes as having fallen from the Cardinal's own lips, if he be accurately reported to have said, "I put him (Dr. S.) through all the different dialects in turn, until I found out that he was talking the dialect used at the sea-coast; and then we were at our ease at once." Now, the Bishop is a very competent authority as regards the Mandarin, which he speaks with considerable fluency. This, however, is not a dialect at all, but the universal official language employed in every part of China, and spoken by all the authorities. I do not understand what is meant by "the dialect of the sea-coast"; there being in the district accessible to Europeans during Mezzofanti's lifetime at least three separate sea-coast dialects, so unlike one another that the inhabitants of the Kwang, Fookien and Kiang provinces can hold no oral converse together; and, I believe, Dr. Smith never pretended to a knowledge of "all the different dialects" through which he is said to have been "put" by the Cardinal, but has mainly confined his attention to the *Hwan Hwa* (or *Kwan Hwa*, if that mode of writing pleases your Correspondent, and be thought by him more accurately to represent—which it does not—the native sound). In the immediate scene of Dr. Smith's labours two dialects prevail, known by the names of the *Pun-ti* and the *Ha Ka*: the former is the aboriginal Cantonese, the latter is the idiom introduced by emigrant settlers. Since our possession of Hong Kong, more attention has been paid to both by foreign missionaries. I do not think Mezzofanti had much, if any, knowledge of either.

B.

LES MATINÉES ROYALES.

Hanover Square, Feb. 11.

The following may not be uninteresting to your readers:—

'Les Matinées du Roi de Prusse, écrites par Lui-même en 1764, copied from the original Manuscript found in the Library at Sans-Souci.' This is the title of the MS. copy in my possession. I will now give the history, such as I know of it.

During Napoleon's war with Prussia, a French officer is said to have found the MS. document with the above title at Sans-Souci, and gave it to Savary, Duke of Rovigo, who read it to Napoleon; Savary keeping it with great care amongst his private papers.

After Napoleon's exile to Santa Helena, Savary settled for a while at Smyrna, under the name of M. St.-Raymond, residing in the house of an English merchant, Mr. C. W., allowing him to take a copy of the 'Matinées.' Mr. C. B., a relative of Mr. C. W., took a copy of the copy, and on his return to England, in 1818, offered the document to Lord Dover, who replied that it was already known to him.

The document was offered to Baron Bulow, then Prussian Ambassador in this country, who declined purchasing it, informing Mr. C. B. that if he published it, he would have him prosecuted!

In 1849, Mr. C. B. handed to me the 'Matinées' to read, expressing a wish that I should offer the MS. to the Chevalier Bunsen. This I did, but received no answer to my letter.

I now translated the 'Matinées,' and they appeared in the November number of the *United Service Magazine* for 1850. In the months of November and December of the same year, Mr. Thomas, the proprietor of the *Courrier de l'Europe*,

published in London, printed the 'Matinées' in French from my MS.

Some time in 1851, another English translation appeared in *Hogg's Instructor*, from the *Courrier de l'Europe*. In April, 1851, I wrote a letter to Mr. Hogg, telling him all I knew of the 'Matinées'; I also freely distributed copies of the 'Matinées,' in English and French, to several literary men.

Whether the 'Matinées' be a "false shilling" or not; neither Carlyle, nor Pauli, whom he quotes, makes out a very good case against its genuineness; and although the German translator of Carlyle's 'History of Friedrich' gives us some curious information, still I think that a jury of literary men (not Prussians) would have doubts in regard to some of the assertions contained in his letter. In my MS. copy, the date 1764 is given as the period of the composition of the 'Matinées'; your Correspondent mentions 1756 as the date of a printed copy: however, farther on, he alludes to 1766. The letter of March 4, 1766, from Frederick's aide-de-camp, calling the 'Matinées' an *écécrable écrit*, by the King's order, does not quite satisfy me that the King did not write the 'Matinées.' They were not intended for publication, but for the private perusal of his nephew, who succeeded him in 1786.

W. B.

Hampstead, Feb. 9, 1863.

Allow me to correct some more or less grave misprints that occur in my letter in the *Athenæum* of Saturday last. P. 193, col. 3, "1756" should be 1766; "Jeilius" should be *Scilius*. P. 194, col. 2, in the "shape" should be *shops*.

THE GERMAN TRANSLATOR OF CARLYLE'S 'HISTORY OF FRIEDRICH.'

14, Henrietta Street, Feb. 11, 1863.

It is no part of our business to defend the opinions of any of the writers in the *Home and Foreign Review*; whenever the criticisms on them are of sufficient importance, they will doubtless do so for themselves. Our present object is, therefore, merely to protest against the impertinent tone of the letter in your last number respecting the 'Matinées Royales,' recently published by us. The arguments of a writer pretending to give an opinion on a point of German history, who imagines that the *Seven-Years' War* was terminated by the *Peace of Utrecht*, may surely be left to answer themselves! It cannot be expected that any Prussian will readily admit the Royal authorship of the 'Matinées,' much less that Dr. Preuss, the editor of the 'Works of Frederic the Great,' printed and published at the expense of the King of Prussia, should be unbiassed in his judgment; but that one having so little claim to be heard as an authority should treat the subject of which he evidently knows so little in so offensive a style, is scarcely tolerable. If we could hope that a title of your readers would read the article in the *Home and Foreign Review*, which your Correspondent so entirely misrepresents, we should have taken no notice of his attack, and would only refer those who take an interest in the subject to the article in question, out of which he appears to have gathered all the facts which he parades, omitting or misrepresenting the arguments. As to Dr. Preuss's recent manifesto, which in several places he (probably from ignorance) mistranslates, it was evidently written before he had seen either the new edition or the article in the *Review*, and therefore cannot count for much. A new edition of 'Buffon's Correspondence' is just announced in Paris—we shall see what use the Editor has made of his correspondence with Dr. Preuss. We are, &c.

WILLIAMS & NORGATE.

THE DUOMO AT FLORENCE.

Florence, Jan. 27, 1863.

THE *Concorso* or competitive exhibition of designs for the new façade of the Duomo of Florence has been open ever since the beginning of the month. It excites a strong feeling of interest among the Italians and their foreign visitors, and endless are the discussions to which the merits of the respective drawings give rise. The *Concorso* is open to artists of all nations; and of the forty-two exhibitors, one is said to be English, one French, one Danish and

two German; a not very abundant proportion of Ultramontane talent to join with that of Italian growth in striving for the honour of completing so grandiose a monument of ancient art as Santa Maria del Fiore.

At present, of course, the authorship of the respective drawings is a secret, and they are known only by the number attached to each, although report assigns them to such or such well-known architect, with more or less semblance of truth. The Committee entrusted with the prosecution of this great work has for its President the cousin of the king, Prince Carignano. It is to depute seven of the first artists of Italy to examine the claims of the designs, and award prizes to the best three designs, of 1,800, 1,500 and 1,200 *francesconi*. There will also be three smaller prizes of 300 *francesconi* each, the gainers of which will also have their drawings returned to them, while the Committee is to remain in possession of those which win the principal prizes, on the understanding, however, that it by no means binds itself to the execution of any one of the successful designs. Indeed, it is no easy matter to be dashed off at a heat, this putting the finishing stroke to the grand old church, and filling up the long unsightly blank wall which faces the baptistery, and stands aside byside with the peerless belfry-tower. More than one of the great men of old, the very men who designed and reared the Duomo, put their hands to the task and left it worse than incomplete. The façade has been commenced no less than three times, the first, about the year 1300, by Arnolfo, of which two nearly contemporary sketches still exist, one in the cloisters of Santa Croce, and the other in the chapel of the Spaniards in the cloisters of Santa Maria Novella. This first façade, of which a considerable portion was completed, was taken down by Giotto when employed on the completion of the cathedral, as being inferior in richness of design to the rest of the building. The second façade, designed by Giotto, was begun about 1332, and carried up nearly to the height of the western circular window. It is still to be seen represented in fresco in the first cloister of the Convent of San Marco, by Bernardino Toccetti. There are also engravings of it in the works of Nelli and Del Migliore, and in 'La Metropolitana Fiorentina Illustrata.' This façade also was taken down at a later date, when the classical restorers of the Renaissance period carried everything before them and opposed the finishing of Giotto's design. There was yet a third façade, designed by Dosio and Buontalenti; but it can hardly be said to have existed, for it scarcely rose above the foundations.

The difficulties which stand in the way of the accomplishment of this great architectural work are immense. They exist no less in the grand outlines of the design, than in making the details harmonize with the mixed character of the different parts of the building as it stands. The form of façade adopted by Arnolfo and Giotto was that of the triple-pointed gable pyramidally arranged, called by the Italian architects *tricuspidale-archiacuto*. The same form appears likewise in many of the most successful drawings exhibited, but it has serious disadvantages to meet with in the internal proportions of the church. As all may remember who have visited Santa Maria del Fiore, the height from the cornice, which takes the place of a clerestory, to the ceiling, is insignificant as compared with the majestic stature of the great arches of the nave below; and the proportions of the external gables which occupy a corresponding position in the building become necessarily dwarfed, and, as it were, tacked-on to the lower portion of the façade. Yet, on the other hand, infinite care is required to avoid detracting from the lithe elegance of the *Cumpanile* close at hand, by comparison with a too towering mass of façade, however well suited to the cupolas above it.

These are but a very few from among the host of conditions and obligations which the peculiar requirements of the work impose, calling for a complex adaptation rather than a reproduction or creation of a great architectural work. Many of the designs exhibited have no ordinary share of merit; and among these the drawings numbered 14, 18, 25, 29 and 35 are perhaps the most conspicuous,

especially as regards the lower half of the façade. Still, not one seems as yet to be designated by the public voice as entirely worthy of adoption, and the opinion of not a few of those best fitted to advise on the subject speaks out in the observations published in the *Nasione*, by some gentlemen of note in the Italian literary world, from whose remarks I quote a passage or two which contain a good deal that is worthy of attention. One point to which they especially seek to direct the public mind is the consideration of what is to be done if the definitive result of the Committee's deliberation should be, that the highest prize ought not to be awarded, because not one of the designs is entirely worthy of the proposed work.

In such a case they throw out the following very reasonable suggestions:—

First. That it should be at once announced that the highest prize will not be given away, for the reasons above mentioned.

Secondly. That each of the winners of the five inferior prizes should be *commissioned* to produce a new drawing of the façade of Santa Maria del Fiore, modified and corrected, to be presented to the Committee within a year from the date of such commission.

Thirdly. That to each of the five artists thus commissioned should be promised a sum of 2,500 *lire* (100*l.*), to cover the necessary expenses; and that, moreover, to the one whose design shall be declared the best, over and above the promised sum of money, shall be assigned a principal share in the direction of the building.

Fourthly. The Council of Judges, at the same time that the Committee gives commission for the new designs, shall direct whether the style to be adopted in the façade is to be the "horizontal monocuspidal" or the "pointed tricuspidal," in order that all their efforts may tend towards one and the same aim.

Some other pieces of good counsel are also offered to the Committee; such as that the execution of one of the five new designs shall necessitate no sort of change in the organic structure of the church, by enlargement, alteration or removal of any portion of it; that only one design, namely, that selected for execution, shall remain in the possession of the Committee; and that a fresh Council of Judges shall be chosen for the examination of the new designs. Meanwhile, the new façade of Santa Croce, commenced five years ago, is well-nigh finished, and it is expected that the scaffoldings which hide it will ere long be removed. The structure is highly praised by such as have been admitted to see it; and it is said that the architect, Signor Matas, has admirably carried out his design both in detail and general effect. This gentleman has also, I hear, completed a design for the new façade of the Duomo of much merit, which, however, he has not seen fit to exhibit at the *Concorso* among the other drawings for the great work on hand.

TH. T.

OUR WEEKLY GOSSIP.

Mr. John Stuart Mill is about to publish a volume on 'Utilitarianism.'

Lieut.-Col. Fisher is preparing for publication 'A Narrative of Three Years' Residence in China in 1859-1861.'—Col. Sir James E. Alexander announces 'Incidents of the Maori War in New Zealand in 1860.'—Lieut.-Col. Carreys, Deputy-Adjutant-General in the Australian Colonies, has prepared 'A Narrative of the War in New Zealand in 1860-1861.' These works will be published by Mr. Bentley.

Messrs. Williams & Norgate have in the press Prof. Huxley's new work, 'Evidence as to Man's Place in Nature.'—Messrs. Huxley and Hawkins's 'Comparative Osteology.'—Dr. Barlow's 'Contributions to the Critical Study of Dante's Divina Commedia,'—and M. P. Barrère's 'Écrivains Français.'

Sir Alexander Grant has in the press a lecture on 'Rome, England and India.'

At the Evening Meeting of the Royal Society on Thursday last, the Prince of Wales was unanimously elected a Fellow of the Society. We believe that His Royal Highness, following the example

of his illustrious father, will attend at some coming meeting of the Society to sign his name in the Charter Book, and be formally admitted. We should hope that whenever the admission takes place, there will be a goodly muster of the Fellows to render due honour to the occasion.

The Annual *Soirée* of the Photographic Society will take place on Friday evening next, February 20th, in the Gallery of the Exhibition, Suffolk Street.

On Monday next, Mr. Cowper will bring before the House of Commons his scheme for constructing the new street in the City in connexion with the Thames Embankment. The proposed street will run from Blackfriars to the Mansion House.

The ninth part of Mr. Collier's 'Illustrations of Early English Popular Literature' is a reprint of George Whetstone's very rare tract, 'The Censure of a Loyal Subject.' The subject is the execution of Babington, Salisbury, Tichbourne, Ballard, and ten other Roman Catholic conspirators, in Lincoln's Inn Fields, Sept. 20, 21, 1586; an event of the highest interest in connexion with Elizabeth and Mary Queen of Scots, and not without importance for the readers of Bacon and Shakespeare. That conspiracy was the seed-plot of Essex's Rebellion and of the Gunpowder Treason. Of course, the outlines of the transaction have been given by Stow, Camden and others, who have been copied, more or less faithfully, by the moderns. But George Whetstone's work contains many curious details not in Stow or Camden, so that this tract is absolutely necessary to a complete historian of Elizabeth's reign. Whetstone, a poet, a captain and a patriot, was an eye-witness of the scenes which he describes; but being called away from London on active military service under Lord Leicester, he left his paper with his fellow-poet, Thomas Churchyard, who brought it out and signed the Preface.

We have only to insert the following as we receive it:—

"7, Drayton Terrace, Feb. 8.

"Your notice of 'Married in Haste,' last week, concludes with the words, 'and so ends the author's idea of a tale of every-day life.' Will you permit me to remark, that I am in no way responsible for this unfortunate sub-title, of which I was unconscious till the advertisements appeared, and it was too late to object.—Yours, &c.,

"LASCELLES WRAXALL."

Among our readers there must be some who, in their studies at Kensington, have stopped before a charming picture called 'A View of St. Paul's.' The painter of this work was Joseph Axe Sleep, an artist of some power, who broke down after a long struggle with poverty, and died just as he seemed about to emerge into notice and into comfort. The patron who had found him out in his obscurity died twelve months after his *protégé*, leaving by will to the National Gallery a right to make a selection from the pictures in his possession. They selected a small Hogarth, a Berghem, and this very 'View of St. Paul's,' which is now in the Museum. The widow and daughter of the artist, although in bad health, have starved on a little needlework and on the proceeds of the sale of a few sketches and pictures left by Mr. Sleep. An attempt is being made by Mr. W. J. Thoms, of the House of Lords, Mr. Ouvry (Treasurer of the Society of Antiquaries), Mr. Woodward (Her Majesty's Librarian), Mr. John Bruce, of the Record Office, and a few other gentlemen, to raise a sum for their immediate wants. Any information which may be desired will be readily given by Mr. Bruce.

The Anniversary Meeting of the Geological Society will be held at the Society's apartments, Somerset House, on Friday next, February 20, at one o'clock; and the Annual Dinner will take place the same evening at six o'clock, at Willis's Rooms, King Street, St. James's.

An autograph letter of William of Wykeham, dated 1367, has just been sold at Messrs. Puttick & Simpson's, Leicester Square. It consisted of a few lines, somewhat obscurely expressed, but apparently referring to the payment of the ransom of the Duke of Bourbon as a bribe for his own appointment to the See of Winchester. It sold

for 29*l.* 10*s.* In the same sale were other literary curiosities:—a volume of Autographs of artists, authors, &c. of the present day, 16*l.* 10*s.*—two volumes of Chinese drawings, 45*l.*—Tyndale's Testament, 1550, 10*l.* 10*s.*—Bible, 1549, 11*l.*—Cranmer's Bible, 1549, 10*l.* 15*s.*—Cranmer's Bible, the only edition printed in the reign of Queen Mary, who is said to have ordered the destruction of it, 12*l.*—the first edition of the 'Breeches' version, 11*l.*—Clutterbuck's History of Hertford, 80*l.* 10*s.*—Dugdale's Monasticon, in parts, 16*l.* 10*s.*—Record of the House of Gournay, a privately-printed volume by Mr. Daniel Gurney, 16*l.*—Sacred Hymns (set to music), 1615, 4*to.*, 8*l.* 15*s.*—Gould's Humming Birds, in parts, 64*l.*—Higden's Polychronicon, printed by Wynkyn de Worde, 1495, 40*l.* 19*s.*—Marlborough Gems, 2 vols., (of this book one hundred copies only were printed for presents,) 14*l.*—Shakespeare's Plays, second edition, 1632, 16*l.* 5*s.* 6*d.*—Surtees's History of Durham, 4 vols., 28*l.*—an early MS. of Dante's Inferno, Purgatorio e Paradiso, 28*l.*—A Collection of Accounts of the Court of Leo the Tenth, with entries of payments to Raffaello and others, 20*l.* 10*s.*—a MS. copy of Tasso's Discourse on Feminine Virtue, in the autograph of the author, twelve leaves (not complete), 25*l.* About 250 Deeds and Charters from the Surrenden Collection formed by Sir Edward Dering, temp. Car. I., realized prices varying from a few shillings to 20*l.* each.

The Bishop of Exeter has expressed an intention of presenting to the county of Cornwall his extensive theological library, on condition that a suitable building shall be provided in Truro for its reception. At a general meeting of the Archdeaconry of Cornwall, it was agreed to accept the offer. A site has been selected in the town of Truro, and the purchase will shortly be completed. The Bishop has directed that a deed of gift shall be prepared forthwith.

The Correspondence which was issued from the Foreign Office on Wednesday respecting our relations with Japan mainly consists of despatches about the outrages committed on British subjects. In the midst of the voluminous papers on this subject will be found some interesting reports from the local merchants on the state of trade and commerce in Japan. Though an immense increase of commerce appears to be anticipated, many complaints are made in the merchants' letters relating to currency, credit, non-fulfilment of contracts, local obstructions in respect to boats and coolies, and interference of the Custom-house with the free action of trade. From the returns appended to these Reports we learn that English merchants have two-thirds of both the import and export trade of Japan with all foreign nations.

The opposition of the planet Mars last autumn appears to have been singularly favourable for observation, a circumstance which astronomers and physicists did not fail to take advantage of. Some of the results were laid before the Royal Society on Thursday last (12th inst.), in a paper by Prof. J. Phillips, of Oxford, and proved to be unusually interesting. With a few observations taken from other observers, a complete series has been made out, and drawings have been taken of the characteristic phenomena. The position of the planet was such that the entire circle of snow around the South Pole could be distinctly seen, and with such a well-defined edge as to have led to the conclusion that it terminates in a cliff. Owing to the position as above stated, only the glimmer of the North Polar snow was perceptible; but it is thought that (perhaps from a preponderance of water in the northern hemisphere) the North Pole is eccentric to the South Pole. The equatorial region is occupied by a broad greenish belt fringed with deep bays and inlets, which may perhaps be water. In one place it is relieved by an island, which exhibits the same ruddy colour as the hemispheres on each side of the central belt. These are the leading facts of the paper, concerning which there will be something further to be said by-and-by. The reading was followed by a discussion which was rendered the more interesting by the exhibition of

Mr. Nasmyth's effective drawing of Mars, representing the telescopic appearance on an enlarged scale. In concluding this notice we gladly remind our readers of the beautiful engravings, which may be termed portraits of Mars, which were published about two years since by Mr. Warren De La Rue.

An admirable medallion of Liebig has just been issued in Munich. The likeness is perfect. Every detail of the face is reproduced with care and fineness of workmanship incredible on so small a scale and such low relief, while the general expression is not weakened by too literal copying. English admirers of the celebrated chemist may be glad of the opportunity of procuring a cheap and portable likeness; casts of the medallion are to be had for rather less than three shillings each at Cotta's "Litterarische Anstalt."

The Expedition of Discovery despatched by the Russian Government to explore the Yenesi River, which falls into the Polar Sea between the 80th and 90th meridian, has returned to Archangel, after an unsuccessful attempt to carry out the objects of the Expedition. According to Capt. Krusenstern, progress was rendered impracticable by the immense quantities of ice, which so severely nipped one of the ships that the crew were compelled to abandon her. It is worthy of mention with reference to the above, that the Canadian papers state that an extraordinary number of Arctic birds have been seen during this winter on their way to the south.

The private correspondence between Goethe and Karl August, never published before, will soon appear in print. The present Grand-Duke of Saxe-Weimar has entrusted Dr. Vogel with the arrangement and publication of this correspondence, which, it is said, comprises about 600 letters, and will be ready for print in the course of the season.

A German friend, residing in London, writes:—"Friends and admirers of Emanuel Geibel in this country have felt grieved and surprised by the insinuations thrown out against the character of that poet by a Munich Correspondent. They had always known Geibel as a frank and honest man, and could not unite in their minds their personal recollections of their friend with the reproaches laid at his door. They thought the writer might have been misled by town-talk, and that, without intending to do so, he yet might have misrepresented facts. Having written to Munich on the subject, the answer which they received, and which comes from the most authentic and reliable source, shows that they were right in their suppositions. The facts, devoid of coterie feeling and personal sensitiveness, are simply these:—By the death of the late Justinus Kerner, a place had become vacant, for a poet, in the Maximilian Order. In the Chapter, of which Geibel is not only a member, but in which he is the only representative of *belles-lettres*, Eduard Mörike, the excellent Suabian poet, and Bodenstedt were proposed in the place of Kerner. Geibel, upon his conscience and conviction, voted for the Suabian, the majority voted for the Munich candidate, and the King (certainly not 'persuaded' by Geibel, although, perhaps, following Geibel's judgment, which may have appeared to him more competent than that of the other members) decided in favour of Mörike. Geibel, therefore, has done nothing but given an honest and independent vote, and this by no means in a meddling or interfering way, but in his official capacity and in duty bound. That he thinks Mörike (who, besides, is Bodenstedt's senior by fifteen years) a greater poet than Bodenstedt, (whose talents and merits at the same time he fully appreciates) is a matter of taste, and it would be more than unjust to accuse him, as of a crime, of the open avowal of his opinion. Altogether, it is thought that the fierceness of your Correspondent's attack is unjustifiable. Having allowed that attack a space in your columns, you will certainly not object to the present defence. It is, let it be repeated, a mere statement of the facts as they have really occurred."

By the sudden death of Baron Cotta, Germany has lost her Murray. The late head of the firm succeeded to his father's business in 1832, increased and extended it. Without enjoying such

a monopoly of the publishing trade, or coming in contact with such great names as his father, he distinguished himself by immense activity in and out of his business, kept his house at the head of German firms, and earned no less than seven decorations. Scarcely one of the more celebrated living authors of Germany but has been in relations with Cotta; and his name appears at the foot of more title-pages than almost any publisher since the times of Tonson and Doddsley. The history of the elder Cotta might be entitled the Romance of Book-selling. By the foundation of the *Allgemeine Zeitung*, in 1798,—after the plan of it had been concerted five years earlier with Schiller,—he tried a perilous experiment, but one whose later success had the most important results. Schiller's health was not equal to the work of a daily newspaper, but he edited the well-known magazine, the *Horen*, for Cotta, and thus brought the publisher into friendly relations with Goethe and Herder. Nothing has contributed more powerfully to the reputation of the house of Cotta than its editions of the German classics. As Murray is ever coupled with Byron and Moxon with Tennyson, so Cotta has at once the ancient connexion of the older race of poets and that of the new.

The *Forhandlinger* of the Videnskabs-Selskabet at Christiania contains a curious and interesting paper, by Prof. C. A. Holmboe, on the system of weights used in ancient Scandinavia, and its similarity to, if not identity with, a system of weights used in Southern India. He shows that when the Roman pound of twelve ounces was in use over great part of Europe, the old Scandinavian weights were, 1 mörk=8 aurar, 1 eyrir=3 ertugar. In this table mörk is the original of the later term *marc*; *aurar* is the plural of *eyrir*, and *ertugar* of *ertug*; in modern spelling, *öre* and *örtug*. The corresponding Indian table is as follows:—1 seer=8 pala, 1 pala=3 tola. The coincidence is remarkable, and not less so the fact as pointed out by Prof. Holmboe, that there is a perfect equality in the weights of the two systems. For verification of his conclusions, he gives a table of the weight of the ounce (*eyrir*, *pala*) in different countries of Europe and India, which may be consulted with advantage by those who are interested in the question; and he has endeavoured to find traces of the system of weights along the route taken by the Scandinavians in their migration from the East, which remained open as a much-frequented commercial route down to the time of the great Tartar invasion. But the result of his researches in this particular amounts to no more than that about thirty years ago a large number of silver ingots were dug up at Riazan, nearly in the centre of Russia, the average weight of which is very near that of the ancient Scandinavian mörk. And with respect to the equality of the weights, Prof. Holmboe puts forward the hypothesis that the ancestors of the Scandinavians took with them the system already established in India, in support of which he cites a list of useful articles which bear the same, or nearly the same, name in the languages of Scandinavia and of India.

SOCIETY OF PAINTERS IN WATER COLOURS.—WINTER EXHIBITION OF SKETCHES AND STUDIES by the MEMBERS, NOW OPEN, at their Gallery, 5, Pall Mall East, from Nine till Dusk.—Admission, One Shilling.
JOS. J. JENKINS, Secretary.

NOW ON VIEW, TWO important PICTURES painted by the late ABRAHAM SOLOMON; also, a Choice Collection of Modern Pictures by English and French Artists, at the Gallery of Moore, M'Queen & Co., 10, Fenchurch Street, E.C.—Admission, Free.

ART EXHIBITION for the RELIEF of the LANCASHIRE DISTRESS, 8, Suffolk Street.—Open from 10 A.M. until dusk.—Admission, 1s.; Catalogue, 6d.
F. W. DICEY,
A. L. CHETWODE, } Hon. Secs.

NOTICE.—The GALLERY, 14, Berners Street, W. is NOW OPEN, daily, to the Public, with a Splendid EXHIBITION of PICTURES, the selected Works of the leading Artists of the day.—Admission, One Shilling.
FREDERICK BUCKSTONE, Secretary.

NOVEL ENTERTAINMENT, SCIENTIFIC and ARTISTIC.—SAMUEL HIGGLEY, F.G.S., F.C.S., &c. will exhibit every Evening, at Eight o'clock precisely, his beautiful series of MAGNIFIED and ILLUMINATED PHOTOGRAPHS which were shown with great effect before the Society of Arts and the London Photographic Society in January. Programmes on Application to the Secretary.—Seats reserved, 2s., 1s., and 1s. (by post two stamps). Burlington Gallery, 191, Piccadilly, W.

PHOTOGRAPHIC EXHIBITION.—THE NINTH ANNUAL EXHIBITION of the PHOTOGRAPHIC SOCIETY of LONDON is OPEN DAILY, from Ten till Four, at the Gallery of the Society of British Artists, Suffolk Street, Pall Mall East.—Admission, 1s.

SCIENCE

SOCIETIES.

ROYAL.—Feb. 5.—Major-Gen. Sabine, President, in the chair.—The Earl of Caithness was admitted into the Society.—The following paper was read:—"On the Embryology of *Comatula rosacea* (Link)," by Prof. W. Thomson.

GEOGRAPHICAL.—Feb. 9.—Sir Roderick I. Murchison, President, in the chair.—Commander W. Arthur, R.N., Commander Charles J. Bullock, Capt. J. Clayton, Capt. R. B. Pearce, R.N., Col. R. C. H. Taylor, E. Armitage, W. Broughall, R. Corbet, Antoine Gabriele, W. E. Heathfield, J. Macbraire and W. H. Wyld, Esqrs., were elected Fellows.—Mr. J. A. Tinne gave some information concerning the Ladies who are ascending the Nile.—Dr. Norton Shaw read a letter from Mr. S. W. Baker, dated Khartum, Dec. 12th, 1862, stating that no reliable accounts had been received of Consul Petherick's movements since he left the river; and that he (Mr. Baker) intended to sail from Khartum on the following day, Dec. 13th, for Gondokoro, and thence on to the Lake Nyanza.—Mr. Galton read a paper, by Dr. Baikie, 'On the Countries in the Neighbourhood of the Niger.'—Mr. Spottiswoode read a paper, by Lieut. Oliver, 'On Madagascar.'

GEOLOGICAL.—Feb. 4.—Prof. A. C. Ramsay, President, in the chair.—W. Abington, Esq. and C. Le Neve Foster, Esq. were elected Fellows.—The following communications were read:—"On a Hyena-Den at Wookey Hole, near Wells, No. 2," by W. B. Dawkins, Esq.—"On the Discovery of Paradoxides in Britain," by J. W. Salter, Esq.—"On the Fossil Echinids of Malta," by Dr. T. Wright; with 'Notes on the Miocene Beds of the Island,' by Mr. A. L. Adams.

SOCIETY OF ANTIQUARIES.—Jan. 29.—J. Winter Jones, Esq., V.P., in the chair.—J. Ross, Esq., exhibited a MS. on vellum, formerly the property of Bardney Abbey. The last leaf offered to view a curious specimen of a chirograph.—R. T. Pritchett, Esq. exhibited some specimens of iron-work of the sixteenth century, such as rapiers, horse-muzzles, a portion of a casket, and other objects of great beauty and interest.—J. H. Parker, Esq. exhibited drawings of details of monuments of the Coronation Chair at Westminster, with remarks from W. Burges, Esq.—Mr. Parker also laid before the Society an account of a visit he had paid to the Church of St. Mary, Guildford.—W. Franks, Director, laid before the Society a description of some frescoes recently discovered at St. Albans, and which Dr. Nicolson was desirous should be examined by the Society. The Director had accordingly paid a visit to the church, and ascertained that the principal subjects represented were the Annunciation and the Crucifixion. Some of these frescoes had been very beautifully executed; but most of them were grievously injured by time.

ARCHAEOLOGICAL INSTITUTE.—Feb. 6.—Octavius Morgan, Esq., V.P., in the chair.—The Secretary announced the election of thirteen new Members.—A communication by Mr. J. E. Lee, Secretary of the Caerleon Archaeological Association, was read relating to a cromlech called "Arthur's Stone," on an elevated ridge in Gowa, a peninsula south-west of Swansea, and, like the "Englishry" of Pembrokeshire, chiefly inhabited by the descendants of Flemish colonists. Mr. Lee suggested a comparison between the monuments of this class and certain natural objects, of one of which a representation was exhibited, called "earth pillars," occurring in the valleys of the Alps and in the mountain districts of India.—Mr. Tite brought under the notice of the Meeting the recent discovery of Roman relics, consisting of a small chamber, with part of a tessellated floor of coarse character, which had been brought to light in removing the foundations of the front of the India House in Leadenhall Street. The vestiges lay at a depth of nearly

twenty feet below the level of the present street, and are sufficient to prove that extensive buildings existed there in Roman times, the site being, as Mr. Tite pointed out in a carefully-detailed plan, at no great distance from the superb mosaic floor discovered in 1803 opposite the eastern end of the portico at the India House. Mr. Albert Way, who had carefully examined these remains, stated that the little chamber brought to light at so great a depth beneath the actual level of the busy haunts of the present citizens was about twelve feet square, and that part of the internal face of the wall presents remains of colouring in fresco: the mosaic, however, is of a rude character. The extensive structure of which it may probably have been a part is supposed by Mr. Tite to have stood in the line of Roman way which led from the ferry across the Thames towards the great road across Essex and to Colchester.—The Rev. E. Trollope communicated an account of discoveries of Saxon sepulchral urns, with other ornaments and relics, in Lincolnshire.—Mr. Albert Way read a short account of the ancient Register of Chertsey Abbey in the times of John de Rutherwyke, and the reigns of Edward the Second and Edward the Third. This curious record had been sent for examination by Lord Clifford.—A fine old Andrea Ferrara was brought for examination by Mr. Pritchett. It is ornamented with medallions, accompanied with the name SIR FRANCISCUS DRACUS, and contains other devices appropriate to that great naval commander. In the discussion which ensued on its production, Mr. Hewitt, Mr. Bernhard Smith, and other members conversant with ancient arms, expressed various opinions regarding its date.—Lord Torphichen sent for examination a curious watch of early and curious construction found at his seat, Calder House, North Britain. Mr. Morgan remarked that the date of the object, properly to be described as a clock-watch, is about 1650, and that it was constructed by Samuel Aspinwall.—Mr. C. Villiers Bayley exhibited a bronze-headed *marotte*, or jester's bauble, an object of very rare occurrence, probably of the fourteenth century.—Mr. J. Henderson exhibited a beautifully-enriched sceptre of oriental damascened work.—Mr. Brett exhibited several Egyptian bronzes, and a beautiful collection of gold ornaments found in Sardinia.—Mr. Waterton sent a silver-gilt ring of unusual fashion, and inscribed with the salutation AVE MARIA.—The Rev. J. F. Russell exhibited a curious MS. Cartulary in the French language; Mr. W. Burgess, a singular piece of painted linen, which formerly served as a rude substitute for arras.—The Rev. H. Scarth sent a vase of mediæval green glazed pottery, and a collection of stamped pellets of lead, bearing legatory marks, and which are undoubtedly Roman.—Mr. Albert Way, having made some satisfactory observations with regard to the coming Congress of Archaeologists at Rochester in July, the Marquis Camden, K.G., said he could not leave the room without expressing his desire and willingness to further the purposes of the Institute, and the pleasure he had felt in consenting to take the part of President upon the visit of the Society to his county.

INSTITUTE OF BRITISH ARCHITECTS.—Feb. 9.—W. Tite, Esq., M.P., in the chair.—The result of the voluntary Architectural Examination, with the Report of the Hon. Secretaries of the Examiners, and of the Moderators, thereon, were read, adopted and ordered to be printed.

LINNEAN.—Feb. 5.—G. Bentham, Esq., President, in the chair.—R. Braithwaite, Esq. and J. B. Rowe, Esq. were elected Fellows.—The following communications were read:—'On the Existence of Two Forms, and on their reciprocal Sexual Relation, in several Species of Linum,' by C. Darwin, Esq.—A letter from Col. Yorke to Dr. Hooker, 'On the Spicula contained in the Wood of the Walwitschia, and the Crystals pertaining to them.'—'Catalogue of the Dipterous Insects collected by Mr. Wallace in Waigiu, Mysol and North Ceram, with Descriptions of New Species,' by F. Smith, Esq.

ZOOLOGICAL.—Feb. 10.—W. H. Flower, Esq. in the chair.—A communication was read from

MM. Jules Verreaux and O. Des Murs, describing a new Partridge from Daouria, closely allied to *Pardalipinnaria*, and proposed to be called *P. barbata*.—Papers were read by Dr. Baird, 'On New Shells collected by J. K. Lord, Esq. in British North America'; and by Mr. A. Adams, 'On the Genera and Species of Liotinæ found by him in Japan.'—Dr. P. L. Sclater pointed out the characters of a new species of Manikin, of the genus *Pipra*, from New Granada, which he proposed to call *Pipra leucorrhoea*.—A communication was read from Mr. W. C. Hewitt, giving a list of the diurnal Lepidoptera taken in the neighbourhood of Antananarivo, in Madagascar, by Mr. Caldwell; amongst which was a very fine new insect of the genus *Diadema*, for which the name *Diadema dextrithea* was proposed.—Mr. R. Swinhoe exhibited some new and remarkable species of birds obtained by himself in the Island of Formosa.

INSTITUTION OF CIVIL ENGINEERS.—Feb. 10.—J. R. M'Clean, Esq., V.P., in the chair.—The first paper read was, 'Description of the Drainage of the Borough of Dundee,' by Mr. J. Fulton.—The second paper read was 'A Description of the Sewerage and Drainage Works at Newport, Monmouthshire,' by Mr. A. Williams.

SOCIETY OF ARTS.—Feb. 4.—E. Chadwick, Esq., C.B., in the chair.—The paper read was, 'On the Cooking Depôts for the Working Classes recently established on self-supporting principles at Glasgow and Manchester, with Suggestions for introducing them in the Metropolis,' by Mr. A. Burrell.

PHOTOGRAPHIC.—Feb. 3.—*Anniversary Meeting.*—The Lord Chief Baron, President, in the chair.—The following gentlemen were elected Members of the new Council:—Lieut. Col. Stuart Wortley, Henry Pollock, John Cole, F. Hennal, Lord H. Gordon Lennox, M.P.; and Mr. Glaisher, as Vice-President.—The Viscountess Hawarden, and Messrs. Silvertown, Austen and Wensel were elected Members of the Society.—Lieut. Col. Stuart Wortley read a communication 'On the Taking of Instantaneous Pictures on Large Plates.'—Mr. Shadbolt read a communication from Dr. Van Monckhoven 'On the Theory of the Photographic Processes.'—The Society having determined to award prize medals for the best contributions sent to the Photographic Exhibition, a report from Messrs. Durham and Fenton, who had undertaken to act as judges, was read by the Secretary, when the decisions were declared to be as follows:—1. for Portraits, Mr. Claudet; 2. for Landscapes, Mr. Bedford; 3. for Instantaneous Pictures, Lieut. Col. Stuart Wortley; 4. for Composition Pictures, Mr. P. Robinson; 5. for Copies of Pictures or Reproductions, Mr. Thurston Thompson; 6. for best Amateur Contributions, not Instantaneous, Viscountess Hawarden.—Mr. England exhibited a simple arrangement of yellow glass for determining its powers of resistance to daylight in operating in the glass-house.—The President addressed the Meeting on the present and future prospects of the Society.

MEETINGS FOR THE ENSUING WEEK.

- Mon. Asiatic, 3.—'Bactrian Pall Inscription, Key to Bactrian Notation,' Prof. Dowson.
- Royal Academy, 8.—'Sculpture,' Prof. Westmacott.
- Tues. Horticultural, 2.—'Ballot for Seeds.
- Ethnological, 8.—'Gyphes,' Mr. Crawford; 'Yemades of Chingleput District,' Dr. Short.
- Statistical, 8.—'Patent Law,' 'Political Economy, University of Oxford,' Rev. J. E. Rogers.
- Civil Engineers, 8.—'Drainage of Dundee,' and 'Sewerage of Newport (Mon.).'
- Royal Institution, 8.—'Animal Mechanics,' Prof. Marshall.
- Wed. Meteorological, 7.—'Council.
- Society of Arts, 8.—'Means of Promoting Growth, &c. of Cotton in India,' Mr. Shaw.
- Geological, 8.—'Middle and Upper Lias, Dorset,' Mr. Day; 'Correlation of the Inferior Oolite, Middle and South of England,' Mr. Holt.
- Thurs. Royal Institution, 8.—'Chemical Affinity,' Dr. Frankland.
- Numismatic, 7.
- Royal Academy, 8.—'Painting,' Prof. Hart.
- Linnean, 8.—'Aculeate Hymenoptera, East Archipelago,' Mr. Smith; 'Guinea-worm (*Pilaria medicamentis*),' Mr. Bastian.
- Chemical, 8.
- Royal, 8.
- Antiquaries, 8.
- Fri. Horticultural, 11.—'Council.
- Horticultural, 2.—'Election of Fellows.
- Geological, 1.—'Anniversary.
- Philological, 8.
- Royal Institution, 8.—'Recent Discoveries, Jerusalem,' Rev. G. Williams.
- Royal Institution, 2.—'Language,' Prof. Max Müller, 2nd series.

FINE ARTS

BRITISH INSTITUTION.

NOTHING shows how much the standard of the British Institution has been degraded as the number of sentimental pictures the gallery this year contains. This proves a low order of taste in choosing, because men are not compelled to receive works of this mischievous class. F. Stone was responsible for the introduction of much of this sort of Art—wherein he was the antithesis of Leslie, a painter of sentiment. The pictures worth looking at may be noted in a few words.

Mr. J. Clark is not a brilliant painter: ever working in a low key, he does not attract the eye by the showiness of his pictures. There are, however, qualities in their execution, and, above all, in his feeling for the subjects, which are, to the expert, attractive and delightful. The fact of a hanger placing such a picture as No. 140, by this artist, below the line, shows his ignorance of Art and want of feeling for Nature. By the degraded position of this picture then, no less than the exalted places awarded to mere toys, we may, as by reflected light, discover that the hanger for this year was neither artist nor able person. Hereby we gain a glimpse into the secret which the British Institution Directors so carefully guard. That such a secret exists is in itself a wrong; with secrecy in such a case come irresponsibility and all its evils. Mr. Clark's picture is worthy of a place out of danger from scraping by crinolines, and where it can be seen. It is more complete as a design, being of a more equal character throughout than any of his former works. It tells a better story than any one of those (unless it be the well-known "Sick Child")—by adopting a key even lower than usual this seems to have been brought about. The composition is full of life and spirit. Two boys are seated on a grassy hill-side looking on to the sea. One of them plait a rustic garland, the other at his loudest sings some rustic ballad of the place; he has his face raised, and, looking upwards, he carols with boyish spirit from out of a singing heart. His hands are clasped round his knees. The theme charmingly illustrates the motto chosen, "*Auld Lang Syne*."

We twa hae run about the braes,
And pu't the gowans fine.

We should rejoice to see Mr. Clark aim at refinement in drawing, if not at finish.

A picture with the rare quality of pathos is ignominiously hung by the side of the fireplace in the middle room, much below the line of sight, in the shade, and so that its colour and handling are ruined by the near forelight, named *Passing into the Shade*, and represents two world-worn women trudging at slow pace into the shadows of a wood that darken at every step: their feeble limbs can scarcely lift the heavy *sabots* they wear; their meagre forms not even their clumsy garments hide; their faces have no graces left to be dignified by uncouth head-dresses, but are seamed, scarred and sunken almost out of shape of womanhood. The subdued, diffused light of the wood deprives their forms of marked shadows, so that both look ghostly and fading. This work is remarkable for good qualities of tone and colour. In the last it is a little French in manner—the work of Mr. G. W. Boughton (252). Mrs. Bridell's *Gretchen* (260), a girl seated with a distaff in her hand, shows some recognition of character and dashing handling much in need of discipline. Discipline may teach the artist to draw, or refrain from showing bad drawing, as in the picture before us. The arms are ill-considered, the hands absurdly small; the figure is dislocated at the waist.

Mr. Hayllar's *Practical Joke* (283) is not only one of the best pictures here, but the best we have seen from him. The subject is that hardly credible story of Oliver the Protector having compelled Jerry White, his foolish chaplain, to marry one of his daughter's waiting-women when he was caught making love to the daughter herself. The parson so detected averred he was seeking the lady's intercession with the maid; whereupon the Protector had him married on the spot. Accepting the story at what it may be worth, Mr. Hayllar

has managed the parson's lean and shadowy figure, his confused and awkward air when the abigail is presented by Oliver, and her action, exceedingly well. The colour and aerial perspective of the carpet on the floor, difficult as these are to render satisfactorily, are worth admiring; so is the treatment of the women's dresses, both broad and solid in their way. The lady looks stagey, her expression being incredible. We do not like Oliver.—Mr. G. D. Lealie's *Lost Carcanet* (288) lacks rather sweetness and variety of tone than any other qualities to make it a charming little picture. We have the garden entrance to a manor-house in old days; behind, the house itself and its trim surroundings. A moat, bright, slow-running and full of blooming lilies, is spanned by a bridge. On this last stands a lady watching anxiously the efforts of a page to recover from the waters a lost necklace. No great matter for a picture, but prettily and completely told; the best point being the action of the lady, whose hand fingers the place where the trinket has been, missing its warmth and weight.

Having watched the signs of the times in Art-matters, we believe that a new avatar of imitation of old styles is soon to manifest itself. There are fashions of plagiarism in Art as in other things: at one time we remember Rubens and Vandyck the idols of the hour; one class since then took up Watteau and Lancret,—others Bonington, Constable, Reynolds. The Early Italian masters had an appalling run made upon them, which, if ridiculous in its extreme character, had singular value in making the glories of a marvellous school popularly known. Now, we expect, the Venetian masters are to be worshipped in turn. Mr. D. W. Wynfield is one of the devotees, with his *Young Raphael showing one of his Works to the Duchess of Urbino* (305), a picture which would merit high praise if it were originally inspired. There are in it good composition, character, tolerably sound drawing, and even pleasant colouring; rare qualities indeed, most appreciable at the British Institution. If the Bellini, or even Carpaccio, had been unknown to Mr. Wynfield, it would have been well for him. In painting, as in architecture, archaeology is not Art; imitation, merely for reproduction, is the death of Art, which lives only in individuality. In this picture, which is hung high, some of the accessory figures are cleverly designed,—witness two ladies of honour who stand behind the painter: there is some grandeur of treatment in the enthroned Duchess.

Mr. J. A. Houghton has produced one of the few humorous pictures here in *Baby's Toes* (385), a knot of children left to themselves in a sunny garden; amongst them, an inquisitive urchin has untucked the rosy toes of a cradled infant, and quaintly admires them. Over the cradle is a huge umbrella, shadowing the occupant, and giving an opportunity, if to be found nowhere else in the subject, of dealing faithfully and lovingly with colour and atmospheric truth. The artist has failed in rendering these points, and produced a false and rather heedless effect. The picture is so well and solidly done otherwise that we hope better from the painter.—Mr. J. Burr's *Village Pump* (389), a girl loitering at the flirting-place, shows considerable improvement upon that work of his we saw at the Royal Academy last year. It is artistic in handling and colour; above all, good in the rare quality of aerial tone. If the painter succeeds in eliminating the Scotch fashion of heavy treatment of the pigments, so as to get clearness as well as cleanness in his work, we shall gain a sound artist.—In its coldness and academic success, Mr. W. Gale's *Entrance to the Holy Sepulchre* (429), a woman in a long blue robe standing before the portal, offers a remarkable contrast to the last. It is more complete than any of the artist's works we remember, having less of crudity. Mr. Gale forgot that the secret of fine colour lies in intense variety in unity when he gave us the nearly complete unity of the woman's blue dress; surely no such large mass of one colour could exist without break or change. When this painter in his practice acknowledges the truth of the above precept, he does so in excess; hence the spotty appearance, technically known as "fruiti-

ness," in his work. Should he hit the medium, he will be happy.

Valuable landscapes are scarce this year. Mr. G. C. Stanfield pursues his cold and photographic rendering of Rhine towns. Mr. De Fleury's *Pegwell Bay* (18), if thin and tinty, looks pleasant.—Mr. Ansdell's *Crossing the Moor* (20) is precisely what he has done before at least twenty times.—Mr. F. Dillon's *Sussex Farmyard* (35) shows, on the contrary, a great improvement upon his Egyptian scenes, being fresh and clear, which clearness the last needed exceedingly.—Mr. Dawson keeps his dry, sandy manner; his *Chepstow* (47) has a great deal of air and even colour, but little variety of tone or textures.—For mere execution, Mr. H. T. Scott's *Friends from the North* (55), two dried herrings, is the best thing in the Exhibition.—We have not before seen any picture by Mr. T. S. Cooper with such spirit, or even fidelity and manliness of treatment, as *Catching Wild Goats on Moel Siabod* (60) possesses. The beasts rush past us down the mountain side; their hides are finely expressed, giving hair-texture admirably. The landscape is better than usual with this artist; the high peaks above tell grandly. An excellent picture.—*Morning on Carmel Sands* (72), Mr. J. W. Oakes, gives, a little carelessly and without much finish, with truth the reflecting surface of the wet, flat shore when the tide has gone out. The sky is good.—There is motion in the sea of Mr. J. C. Dawson's *Off Douglas, Isle of Man* (78), notwithstanding its wooliness.—*Winter* (106), by Mr. L. R. Mignot, is a charming picture of snow upon a heath with its bare-limbed trees, tracing fine lines against the pale, brassy sky, and soft band of cloud, styled "the Evening Band," hanging behind. The warm hue of the pool that, barely frozen, reflects the sky, and the bluish shades that lie upon the snow in its ridges and undulations, show how well the artist has understood his theme.

VOLUNTARY EXAMINATION OF ARCHITECTS.

FOR some time past the zealous among architects have been urging upon their fellow-professionals the advantages that might be expected from the institution of a system of voluntary examination. These were obvious enough to some, while others—probably from apathy rather than prejudice—discountenanced the thing. The steady working of the Government Competitive Examination scheme seems, however, at last to have enabled the advocates of the like among architects to establish their point so far as to get the Royal Institute of British Architects to appoint Examiners of all candidates who choose to present themselves, voluntarily seeking an acknowledgment of proficiency from that distinguished body, which acknowledgment might afterwards be enhanced in value by a higher degree, so to say, being awarded to a class especially styled "of distinction." To the last honour the ascertained competency of the first and junior class would of course lead up.

The appointment of Examiners was made partially in compliance with a request from the Architectural Association of London, which comprises about three hundred of the younger members of the profession, after consultation with the other architectural societies in England, and, indeed, after taking the sense of those who were anxious to separate the sheep from the goats, and quash assumptions of the name of Architect by builders, surveyors and clerks of works, who had, by virtue of a brass plate on their front doors, so dignified themselves. It is hoped that in the course of a little while the public will see the impolicy, danger, and even expensiveness of employing incompetent persons, and that ultimately, the value of a certificate of competency being acknowledged, all earnest students will strive to obtain the same. In other professions the law itself demands from their practitioners submission to some examination at the hands of a qualified body of men. Such is the case in the law, medicine, surgery, church, army, navy and military engineers. Civil engineers have for some time past been under the very system of voluntary examination thus adopted from their brethren the architects. To the last, the objections that are valid against examinations in the purer and less

rigid arts of painting and sculpture do not apply, inasmuch as the examination is not so much upon matters of taste as on such executive and technical acquirements as can be readily made to pass under review. More competent men than the Examiners who initiated the practice so advocated would be hard to find. They were Messrs. A. Ashpitel, G. G. Scott and M. D. Wyatt. The examination, which is open to all British subjects, consists of the two classes before designated,—of proficient, and those who are considered worthy of "distinction." No candidate who is under thirty years of age may present himself for the higher, without having passed through the lower grade. In no respect is the examination *viâ* *roce*. It takes place in the last week in January, so often as there shall be five candidates for the certificates; it shall not occupy more than three days in the junior, nor three additional days in the senior class of "distinction." The first day's examination is in Drawing; the second, in Mathematics and Physics, with Professional Practice; the third day's, in Materials and Construction, with History (of the Art) and Literature. The fourth, fifth and sixth days are to be assigned to similar subjects in the like order, Languages being included on the fifth day. If fewer than six days be devoted to any examination, the Examiners are at liberty to vary the distribution of time prescribed. The Examiners are not to be less than three in number, and they shall be elected, as well as two Moderators, by the Fellows of the Institute, at the first general meeting in January. The Moderators always, and the Examiners, as far as possible, shall be members of the profession. No Examiner or Moderator shall be concerned in the examination of any candidate connected with him by any tie of relationship, tuition or business. After the third examination, the Council of the Institute shall request the Examiners to report any change desirable in the system. The papers of questions and requirements of work shall be framed, as much as possible, with direct reference to Architecture. The number of marks to be allotted shall be 10,000, of which 6,000 shall be for the class of Proficiency; the remainder for that of Distinction. Half the sum of the number of marks for each class shall pass the candidate; but he shall not be held to deserve the acknowledgment of proficiency without obtaining at least half the number of marks allotted to the divisions of Drawing and Design, Materials and Construction respectively, in addition to at least one-fifth of the number of marks allotted to each of the other divisions in that class.

The sketch-form of examination-papers, suggested for use in the first case, now lying before us, seems admirably fitted to its purpose, and is not by any means too obscure or difficult. That for the class of distinction contains tougher and more insoluble elements. This is as it should be. The question, "What is an architect?" is likely to get a satisfactory answer in the hands of men such as those who have earnestly striven to have this measure of examination wisely carried out. Purely voluntary as submission to it is, there can be doubt that therein consists the true value of the examination and its honorary certificate. We wish it every success, and append the names of those gentlemen who, out of nineteen submitting themselves, passed at the first examination, held on Monday last, the 9th inst.:—Messrs. D. E. Gostling, Upper Gower Street; R. O. Harris, Gloucester Place, W.; G. T. Redmayne, Ducie Street, Manchester; L. W. Ridge, Ellington Street, N.; R. P. Spiers, Upper Ebury Street; H. Stone, Great James Street, W.C.; T. H. Watson, Nottingham Place, W.; E. Wimbridge, Victoria Lodge, Hyde Park.

FINE-ART GOSSIP.—The Meeting for the election of new Members to the Society of Painters in Water-Colours, which took place last Monday, resulted in one of those rare difficulties, "a tie." No candidate of the twenty-seven offering themselves attained the required majority of votes. The candidates between whose claims the doubtful point arose were Messrs. E. Burne Jones and E. Duncan, jun.—the latter a son of M. E. Duncan, already well known as an

artist and a member of the Society. The disappointment of both candidates is, we believe, something more than a temporary one, as, according to the rules of the Association, an election can only take place once in each year. The date for that current has now passed. It is presumed that the matter will stand over, unless some modification be made in the custom. It appears that during the fifty-eight years' existence of the Society this incident has only once before occurred. There are six vacancies to fill up; it is the custom to keep two reserved.

Mr. E. B. Stephens has received the commission to execute the memorial statue of the late Duke of Bedford at Tavistock, recently referred to in the *Athenæum*.

The Winter Exhibition, French Gallery, Pall Mall, has received some additions of pictures. Amongst these, the following are best deserving of attention:—*Ben Venue and Portion of the Trosachs, from behind the Ardcheanochochan* (No. 290), by Mr. Creswick, gives a pleasant glimpse into the deep pass of the lordly mountains' sides, their scanty woods and bright stream at foot; a rustic bridge spans the last. In this work there is better, because warmer and more varied, colour than the painter usually attempts. It is also less mechanical in handling of foliage than his works frequently are.—*Choice Scraps* (288), by M. E. Frère, has all the humour and apt characterization we expect from this artist; his quiet, sweet and homely colour, and, withal, the flatness of tone which is his failing. Two boys, of the peasant type we know so well and pleasantly, are busy with a cooking-pot that has held something nice; one, having possession, diligently uses a spoon, his hungry companion awaits his turn of little promise.—Surpassing the last in tone, and more solid in representing texture, Mr. T. E. Duverger's *Pity the Blind* (26) is a superior work. It is a street-scene, where an old man, with his daughter to lead him, are begging. Standing a little in advance, the child seems to make the appeal for both; her action, in its natural truth, is a most pathetic and subtle point of design. Better still is the air of the old man, who, with stooped shoulders and head held aside, seems as if listening for any reply to their prayer. The diffident, hopeful expression of this action is very touching.

The application of intelligence and artistic skill, especially if original without being bizarre, to the construction and design of domestic or ecclesiastical furniture is interesting to the lover of Art; accordingly we have seen with pleasure the new pulpit for Mr. Bodley's church, St. Mary's, Scarborough, that has been executed by Messrs. Morris, Marshall & Co., Red Lion Square. This is of wood, decorated with colour and skilfully-executed figures: eight of these, the Evangelists and Latin Fathers, fill panels in the front; a very beautifully-designed picture of the Annunciation the situation of the pulpit will leave visible. The choice of subject for this last is suitable for its position on a pulpit. The general ground of the work is a rich green tastefully dispersed—a colour that harmonizes well with the glowing yet sober decorations that will surround it when placed. Another work by the same is a superb *dressoir*, or sideboard, for displaying plate and china, executed for Mr. C. Gurney, of Norwich. This is of polished black wood, the shelves supported by rods of the same passing up their front, the back of the same paneled with leather stamped in diaper, gilded and lacquered to a tawny hue, so as by its sober splendour to throw up admirably the lustre of silver and the cool tints of china to be placed before it. The lower or cupboard half is also of polished black wood; the handles to the doors of burnished copper, and panels of leather, as before. In shape and construction nothing can be simpler than these articles.

"Of Sculpture," writes a friend from Naples, "there is little to say. Angellini has on view a fine bust of Victor Emmanuel, which he is just about to take off to Turin; and models of a Statue of Victory, to be erected in the Largo della Vittoria, have this week been sent in to the Municipality."

MUSIC AND THE DRAMA

WELSH MUSICAL FESTIVAL ON THE EVE OF ST. DAVID'S DAY.—At St. James's Hall, on SATURDAY EVENING, February 28, to commence at Eight o'clock. GRAND CONCERT OF WELSH NATIONAL MELODIES, for the benefit of Mr. JOHN THOMAS (Pencorrd Gwallin).—Vocalists: Miss Edith Wynne (Roc Cymru, Pencorrd), who will sing a new Patriotic Song with Chorus, Composed by Mr. John Thomas; Miss Lestell, and Mr. L. W. Lewis (Ilew Llwyro, Pencorrd). The Band of Harps, including Mr. J. Belsir Chatterton (Harplst to the Queen), Mr. T. H. Wright, Mr. H. J. Trust, Mr. John Thomas, (Pencorrd Gwallin), &c., and the United Choirs, including the Students of the Royal Academy of Music, &c., will be on the same extensive scale as hitherto. Conductor, Mr. Henry Leslie.—Sofa Stalls, 5s.; Balcony, 3s.; Area, 2s. Admission, 1s. Applications for Sofa Stalls to be made to Mr. John Thomas, 109, Great Portland Street, W.—Tickets to be had of Addison & Lucas, 210, Regent Street; Austin's Ticket Office, 28, Piccadilly; and of all the principal Musicellers.

SURREY.—It was here that Tom Dibdin's drama from 'The Heart of Mid-Lothian' was produced, and that Mrs. Egerton created a sensation as *Madge Wildfire* for one hundred and seventy nights. That was a long run for those days,—in these the amount is more than tripled. The superior taste with which such subjects have been remodelled by the author of 'The Colleen Bawn' excites competition in every direction. It is not, however, in the elegance of the dialogue, or in the neatness of the structure, that rivalry is attempted, but in a more melo-dramatic illustration of the general argument by the addition of spectacular scenes and exaggerated situations. On Saturday Mr. Shepherd commanded an overcrowded house by the presentation of just such a drama as we have indicated. His new version of the old story is in four acts, and takes a wider range than most others. It begins, indeed, with the Porteous riots, and thus shows *Geordie Robertson* engaged in the act which afterwards rendered it difficult for him to do justice to the lassie whom he had wronged but really loved. The title of the piece is 'Effie Deans; or, the Lily of St. Leonards.' From its construction it would have been almost impossible to understand why this unfortunate young girl was imprisoned in the Tolbooth, unless pre-acquainted with Sir Walter Scott's romance. We have to wait until the close of the second act before the mist begins to clear away, nor is it fully dispersed until the remaining two have been nearly witnessed. But it is evident that no attempt has been made to place a perfect drama on the stage,—a series of startling *tableaux* formed the highest aim of the adapters; and these are found to answer the immediate purpose, though scarcely a single sentence of the dialogue is intelligibly rendered. Thus the first act ends with the proceedings of the Porteous rioters and the suspension of their victim in the Tolbooth, which is in a state of conflagration at the time of the descent of the curtain. The second act opens with *Effie Deans* in prison, and proceeds with the interview of *Jeannie Deans* with *Geordie Robertson* near Muschat's Cairn and St. Anthony's Chapel (exceedingly well painted by Mr. Johnson), where she is preserved from perils of the melo-dramatic kind by *Madge Wildfire*. It ends with the trial-scene, which, in its main outline, resembles Mr. Boucicault's, but falls short of it in effect as well as in the refinement of the general handling. As a picture, it is placed on the boards after Mr. R. S. Lauder's painting, the particulars of which are closely copied. The third act concludes with a "sensation scene," in which a cascade, with real water, rocks and chasms, set in Mr. Charles Brew's best style, do duty; and *Geordie Robertson* delivers *Jeannie* from the fangs of *Mey Murdochson* and her crew. The fourth act consists of the interviews with the *Duke of Argyll* and the *Queen*, and the return of *Jeannie* in time to save *Effie* from the gallows, which, in very bad taste, is exhibited on the stage. Mr. Shepherd acted the *Duke of Argyll*; and having encountered some hisses, addressed the house in terms which, we think, he will see reason to regret, insinuating that the sibilants were sent in by a person whom he named, and whom hypothetically he denounced as "a blackguard." Mr. Shepherd need not fear that his rival's performances will ever interfere with his; their respective dramas on the same subject address two quite different classes of patrons. In one or two respects the cast at this house is good; Mr. Gourlay is the best Laird o' Dumbiedikes, and Mr. F. Robinson as *Geordie*

Robertson is, perhaps, not to be equalled. Miss Pauncefort, as *Madge Wildfire*, was also satisfactory, and Miss Eburne looked *Jeannie Deans* admirably.

STRAND.—A new farce by Mr. Crawford Wilson has been produced here. It is entitled 'My Knuckleduster.' The allusions are, of course, to the practice of garrotting, now happily on the decline. Mr. Rogers represents a Manchester traveller lodging at Highgate, and protecting himself with the inventions that the timid are fain to patronize without knowing well how to use them properly. Anti-garotte collars, revolvers and knuckledusters, without skill and courage, are mischievous only to their owners. Our hero sits down on the collar, and suffers from its sharp points; pricks his fingers with the knuckleduster; and is alarmed at the possible explosion of the revolver. A previous tenant of his apartment returning to re-engage it, is mistaken by him for a burglar; and, as the former is under a similar impression in regard to himself, their mutual blunders amuse the audience. The trifle was received with approbation.

MUSICAL AND DRAMATIC GOSSIP.—The late period of its production renders it inevitable to postpone till next week a notice of Mr. Balfe's 'Armourer of Nantes,' which new opera was brought out at Covent Garden Theatre on Thursday night.

At Monday's *Popular Concert*, Schubert's Quintet was repeated. M. Halle was the pianist.

Mr. Morton ventures more than any other mortal English musical manager. It should make some of the fraternity who profess so much and perform so little, feel foolish to read in the "Oxford" bills of the week an announcement of the music to Gluck's 'Alceste.' Beethoven's *ballet*-music to 'Prometheus'—not one of his strongest compositions—(containing, by the way, among other movements, the melody which he employed in the last movement of his 'Eroica' Symphony, and again as a theme for pianoforte variations:—and thus proving his predilection for it) made part of the programme of the *Crystal Palace Concert* on Saturday last. Miss Armytage, whose name is beginning to be heard of, was the lady singer,—and Madame Arabella Goddard the pianist.

Our half-promise of speaking of Mr. Haigh's chances as an oratorio singer cannot be better redeemed than by saying that, so far as we followed him in 'Elijah' yesterday week, the performance could not be considered as conclusive. After years of not careful singing, with imperfect comrades, and before audiences too easily contented, it is impossible for the most strenuous man to leap at a bound into such proficiency as the highest, most refined and most poetical union of music with declamation, unaided by action, such as Oratorio demands. We will give Mr. Haigh a twelvemonth ere a final verdict be passed, and for a good reason. He merits such forbearance. The performance of 'Elijah,' as regards chorus and orchestra, was very fine. The Hall was crowded. To judge from the sight, the quality of the public and its obvious enjoyment, and further, from a late report of its Benevolent Society, the Sacred Harmonic Society must be prospering.

The Farewell Concert of Mr. H. Phillips, which is fixed for the 25th, in addition to the interest attaching itself to his leave-taking, will also introduce two daughters of the redoubtable *basso*, a *soprano* and a *contralto*, who have studied for their profession out of England. A duet is greatly wanted at the time being, as we had occasion to point out only the other day. If these ladies supply the want, they will at once take an ascertained place in the profession.

It is said that *Mlle. Carlotta Patti* will shortly arrive from America—under engagement to Mr. Gye. Her sister, we are assured by the Parisian Correspondent of the *Morning Post*, has tested her popularity in the most substantial manner, by demanding and gaining *five* times as much for singing in private as was given to her great predecessors, with whom no one pretends to compare her. It is fair, however, to recollect that so far back as the last century *La Bastardella*

received a hundred guineas a night for singing two songs at the Pantheon in London. *She*, however, was a world's wonder; whereas the fever of admiration excited by *Mlle. Patti* in Paris, and by *Mlle. Titiens* in Naples, can only be read as a sign of the decay, amounting to almost entire extinction, of the art of singing.

Mr. Mapleson has sent home a manifesto from Parma, promising that he will presently make promises of great performances for his coming opera-season: but as yet specifying nothing. It is said that *Madame Czillag* will this year be one of his company.

We have since last week received another "message from the sea" touching the doings of the Melbourne Philharmonic Society, which, under Mr. Charles Horeley's conductorship, seems to be assuming considerable interest and importance. "We shall perform," writes our Correspondent, "Abraham" on the 2nd of December, and as is always customary here, 'Messiah' on Christmas Eve,—a performance which will so far differ from home, inasmuch as the thermometer will probably be 95° in the shade, instead of 20° below freezing point."

A glance at the Christiania Theatre reveals the existence of a life and nationality in the drama of the far North little adverted to in these latitudes. Danish plays by Herr Andersen (in German, 'Mulatten' and 'Mehr als Perlen und Gold'), by Herr Gostrup, 'Ein nacht im Gebirge,'—Norwegian ones, Herr Goldschmidt's 'Rabbi Eliezar,' Herr Etlar's 'Im Dynekil,' Herr Björnson's 'Everre' and 'Hulda,' are mentioned as so many indigenous works having interest and consequence.

Our Naples Correspondent writes thus:—"The national effort for the relief of those who have been victimized by the brigands has led to the project of several musical and dramatic entertainments. The orchestra of San Carlo has led the way, and invited Signor De Giosa, a successful composer well known here, to organize a concert. Responding to the call, he has arranged for the execution of the overture to M. Meyerbeer's 'Pardon,' and of a *Sinfonia*, by Signor Mercadante, known as 'Il Lamento del Bardo.' This piece derives interest from the fact that it has been composed since Mercadante became blind. M. Dumas, requested to contribute, has consented, and a *Cantata*, which was composed for Mercadante in 1860, but never executed, will be performed."

Several numbers of Haydn's 'Orpheus' (as many as eleven) have been sung not long since at a concert in Munich. One of these, it may be presumed, was the melodious song 'Il Pensier,' better known, perhaps, in its sacred Catholic dress as 'O Jesu, bone Pastor,' a favourite offertory with baritone and bass voices.

M. Offenbach, we hear, is engaged upon a serious opera, the story German, arranged by a French dramatist, for Vienna.

MISCELLANEA

Trade Marks, Models and Designs.—The Commercial Treaty with Belgium, which has been published this week, contains the following stipulations:—Article 16. The subjects of one of the high contracting parties shall enjoy, in the dominions of the other, the same protection as native subjects in all that relates to property in trade-marks, as well as in industrial and manufacturing patterns and models of every description. The exclusive right to make use of an industrial or manufacturing pattern or model shall not, with regard to British subjects in Belgium, and reciprocally with regard to Belgian subjects in Great Britain, have a duration longer than that fixed by the law of the country for native subjects. If the industrial or manufacturing pattern or model is open to the public in the country of origin, it cannot be made the subject of an exclusive right in the other country. The rights of subjects of one of the high contracting parties in the dominions of the other are not subject to the condition that the models or patterns shall be worked there. The present article shall not be put into operation in either country, with regard to such models or patterns, until the expiration of a year from the date of the signature of the present treaty.—Article 17.

Belgian subjects shall not have the right to claim in Great Britain exclusive property in a mark, model or pattern, unless they shall have previously complied with the regulations, if any, which are or may be in force for the deposit at London, by British subjects, of marks, models or patterns (*dessins*). Reciprocally, British subjects shall not have the right to claim in Belgium exclusive property in a mark, model or pattern, unless they shall have previously complied with the laws and regulations on those subjects which are or may be in force in Belgium.

The North Atlantic Sea-bed.—Allow me to call attention to two rather serious mistakes in Dr. Wallich's 'Treatise on the North Atlantic Bed,' which the value of the book itself and its authority as sent forth by the Admiralty are sure to make pernicious. At p. 109, Dr. Wallich quotes Mrs. Somerville, 'Physical Geography,' vol. i. p. 318, as his authority for asserting that at a depth of 20 miles sea-water is compressed to $\frac{1}{10}$ th of its surface bulk. What Mrs. Somerville, however, says is, that "sea-water is reduced in bulk from 20 to 19 solid inches at a depth of 20 miles;" i.e. the compression is by $\frac{1}{10}$, not to $\frac{1}{10}$, as Dr. Wallich says. I have noticed the same mistake elsewhere made before now. The other serious error is at pp. 98, 99, where 39°.5 is given as the maximum of condensation temperature of sea-water, "after which," it is said, "it expands to 28°.5, where it freezes"; and from this fact Dr. Wallich, with many others, infers a general mean temperature of 39°.5 for the whole sea at a depth of 1,200 fathoms at the Equator, and of 750 fathoms in latitude 70°. Now 39°.5 is the maximum of condensation temperature for fresh water, and that, therefore, is the mean temperature for fresh-water lakes; but with salt water the case is different, its point of greatest condensation for temperature being very near, perhaps slightly below, its freezing point, which is 27° or 27°.5. The handiest reference I can give for these facts is the edition of 1860 (apparently the 9th) of 'Maury's Physical Geology of the Sea,' pp. 227, 228. B. E. W.

Bottling of Liquids.—In the *Athenæum* of the 10th ult. is a letter by Mr. Dircks, proposing a novel and ingenious method for bottling milk, &c. I beg leave to suggest a less complicated method for the same purpose. I would use carbonic acid gas only, and not any nitrogen gas. Carbonic acid gas is heavier than our atmosphere. Every one who has attended a course of chemical lectures has seen the experiment of the pouring of the latter (CO₂) from one beaker into another, and the demonstration of its being received by the extinguishment of a lighted taper. In place, then, of inverting the bottle,—a process requiring a trough, and the insertion of a finger in the milk,—I would propose to place the bottle containing milk in a standing position, and to displace the atmosphere contained in the neck of the bottle by carbonic acid gas, and then, of course, to cork immediately without moving the bottle. A common generating bottle, a couple of pieces of marble and some dilute hydrochloric or sulphuric acid, are all the apparatus necessary. No valve is required to the bottle-tube; for once that the air in the generating bottle has been displaced by the evolved carbonic acid gas, air cannot again enter as long as the process is continued. RICHARD EPPS.

Population of Algiers.—According to the statistical tables of the "Bureau des Longitudes," up to the 31st of December, 1861, Algiers had a European population of 205,888 souls, which shows an increase of 11,183 heads within the last three years, compared with the census of 1858 of the same date. In the course of the year 1861, 1,885 marriages, 8,227 births and 5,850 deaths took place in Algiers. Among the births were 7,072 legitimate, 671 recognized and 419 illegitimate born. The proportion of deaths was 1,603 men, 881 women and 3,366 children. Compared with the statistics of Paris, Algiers has less marriages, the number of births is larger and that of deaths smaller than in the twenty arrondissements of the capital.

LITERATURE

Reminiscences of Thirty Years' Residence in New South Wales and Victoria; with a Supplementary Chapter on Transportation and the Ticket-of-Leave System. By R. Therry, Esq. (Low & Co.)

A few days ago, a member of the House of Lords inquired if it were true that Redpath is at large in Australia with a ticket-of-leave. Lord Granville made a little sensation by replying that the report is true. The fact is making a tour of all the newspapers, and is, perhaps, dividing public attention with Dr. Colenso and Sir Charles Lyell. Our interest in the Australian career of notorious criminals may be compared to that which is felt in the married life of heroes and heroines of romance. Events have recently increased this interest. Grand jurors, chairmen of Quarter Sessions, and even the Justices of Assize, have, for many months past, been delivering presentments and charges about the danger of letting ticket-of-leave men loose on society. The Government has named a Royal Commission on the subject, and Sir George Grey has this very week revoked the remission of penal servitude in certain cases. At such a moment, Mr. Therry's thirty years' reminiscences of a convict colony are not to be despised; more particularly when their author is able to tell us that, from 1829 to 1859, he held various public offices—amongst others those of Attorney General, Resident Judge of Port Phillip, and Judge of the Supreme Court of New South Wales.

Mr. Therry's observations of our criminal population began in the old times of Norfolk Island. Now-a-days a prisoner occasionally prays for penal servitude in place of ordinary imprisonment. A quarter of a century ago it was a common saying that transportation was worse than death. In these *Reminiscences* a case is mentioned in which a convict actually preferred death to the punishment of Norfolk Island. In 1831, a desperate bushranger, William Webber, was tried and sentenced to death in New South Wales. The day before the one fixed for his execution he sent for Mr. Therry, who on entering the condemned cell found the prisoner to be apparently about twenty-five years of age and in the full vigour of a robust manhood. This youthful convict acknowledged that he was the perpetrator of a burglary for which two innocent men were then suffering, and on inquiry his statement was verified. Under the impression that a man who had thus rescued two fellow-creatures from an undeserved punishment might be put to a better account than that of being hanged, Mr. Therry visited Webber again, and told him that though he could hold out no hope of pardon on his own authority, yet that he would represent to the Government his meritorious conduct in this case, and that if he would follow up that conduct by making reparation to society by disclosing how he had disposed of the proceeds of the many robberies he had committed, it was probable his life would be spared. This suggestion was made after his death-warrant had been read to him, and at a time when he knew he had only a few hours to live: nevertheless, he replied—"No, sir, I thank you; but I will disclose nothing. All I could gain by it would be to be sent to Norfolk Island, and I would rather be hanged than go there. Don't trouble yourself about me; leave me to my fate." And he was accordingly left to his fate.

Though Mr. Therry's experience is strongly

in favour of the possibility of the reformation of prisoners after a first conviction, he has observed that reformation rarely takes place in instances where a criminal has been convicted more than once. He believes that after a second and third conviction the prisoner becomes so lost to a sense of shame, so inured to habits of crime, so reckless and unmindful of the punishment he has undergone, that he readily yields to any temptation that presents itself, and his after-life continues an uninterrupted career of crime. The most grievous offences he always found had been committed by oft-convicted criminals. Wilson, who murdered Dr. Wardell, had been fourteen times convicted of various offences in England and in the colony before he expiated the guilt of his last offence upon the scaffold. Knatchbull had been convicted over and over again. Farrell, originally transported for life for burglary, was the first prisoner Mr. Therry defended as counsel in 1831. He was one of a party that bored a subterranean passage under George Street, in Sydney, and abstracted from a vault where the money of the Bank of Australia was kept 5,000*l.* or 6,000*l.* in dollars and notes. He was the first prisoner the author afterwards tried, when Resident Judge of Port Phillip in 1845, for a burglary quite as audacious; and a few years before leaving Sydney he saw him in the Supreme Court—then a miserable old man—again under trial for felony.

In illustrating this incorrigible proneness to crime which, in some convicts, baffles all attempts at reformation, Mr. Therry mentions particulars about a notorious murderer whose case attracted attention in this country twenty years ago. John Lynch was transported for robbery to New South Wales in 1831. Accompanying him in the same ship was his father, also a convict under sentence of transportation for manslaughter. In the year 1835, Mr. Therry prosecuted several persons—servants on an estate near Berrima—charged with the murder of a man in the same employment, who had been suspected of disclosing some of their misdeeds to the owner of the estate. The trial lasted a whole day, and the evidence variously affected the prisoners; but there was one of them—John Lynch—on whom the evidence had fixed a more prominent part in the perpetration of the deed than the others. Towards the close of the trial a material witness, and one who was to have proved that Lynch had been seen, on the day of the murder, within a few yards of the spot on which an attempt was made to consume the body by fire, appeared in the witness-box in such a state of intemperance that his testimony was valueless; and to that incident is, probably, to be attributed the acquittal of the prisoners. As Acting Attorney General in 1842, Mr. Therry had occasion to put Lynch on his trial for the murder of Kerns Landregan, of which he was convicted, and for which he was executed. The confession of this miscreant is almost without a parallel in the annals of crime. He begins by describing how he got possession of a cart by murdering the driver and a black boy, and he then details the murder of two other people who accompanied him on the road, a man named Fraser and his son. The next evening he arrived at the house of a farmer named Mulligan. The following passages from that part of the confession in which he describes his treatment of the Mulligans we recommend to the attention of those convict chaplains who appear to fancy that a few pious phrases on the lips of a criminal are satisfactory securities for a ticket-of-leave:—

"In the evening we drank together and got very sociable, but I took care not to drink much.

Well! thoughts were in my head, and the time was coming on; I began to feel very disturbed, and I walked out of the hut. It was a clear, cold, windy night; I looked up at the bright moon, and I prayed to Almighty God to direct me. I said to myself, I am an injured man, and the Mulligans have defrauded me of what I perilled life and liberty to obtain. That fellow, when I was starving in the Berrima Iron Gang, has often passed me by without so much as giving me a shilling, when he had many pounds which were justly mine in his hands. And now, would it not be right that they should lose all they possess as a judgment upon them for withholding his own from the poor prisoner? Heaven guide me and point out to me what to do. Well, I went into the house again, and we had another glass of rum round. Now it was a cold, windy night, so I took up the axe and said I would go and cut a few barrow-loads of wood for the fire, if John (meaning the young man) would wheel them in. We went out. He said that Mulligan was an old man, that he should have the farm at his death. I was shocked to hear him speak in this way, knowing how near he was to his own departure out of this world; so I said, 'Ah! John, you should not speak in that way; you don't know what may be in store for yourself.' At this time he had taken in two loads in the barrow, and was come for the third. I had just finished my work, so I took the axe and gave it a backhanded swing against his skull. I threw a quantity of boughs over the body, and went back to the hut. * * * The old woman went out looking for her son. She went towards the spot and began moving the boughs which covered the body. Now or never, thought I. I prayed to God to help me, determined to succeed or perish in the attempt, and kept my eye upon Mulligan, who was close beside me. He turned his head—one blow and down he went. I then hastened towards the old woman: she was in the act of returning, having found her son's body; but playing the cunning, she said, 'Lord! what brings the police here! there are three of them getting over the fence.' I was not to be gulled that way, so I gave her my foot, which staggered her, and then brought her down. None now remained but the little girl: the poor little thing had never done me any injury, and I was really sorry for her. I went into the hut where she remained, and I said to her, 'Now, my little girl, I will do for you what I would not for the others, for you're a good girl; you shall have ten minutes to say your prayers.'

Having killed the little girl, he burned the four bodies, and took possession of the farm, where, he says, "I intended to live honestly, and do everything fair and square." He then engaged as a servant Kerns Landregan, the man for whose murder he was prosecuted to conviction by Mr. Therry. There can be little doubt that, under the convict system now prevailing, this canting villain would have enjoyed a ticket-of-leave soon after his first sentence, and probably contributed his share to the garotting force of the metropolis.

On the other hand, these reminiscences exhibit cases in which tickets-of-leave have been granted with the best results. On his visit to Bathurst in 1830, Mr. Therry met Strange, Wilson and Harrison, the three Cato-street conspirators, whose capital sentence had been commuted to transportation for life. Strange, it appears, still survives. He was for many years chief constable of the Bathurst district, and was then the terror of bushrangers. His career in the colony showed that the sparing of his life was a well-bestowed act of clemency. He was rewarded by the Colonial Government for having captured several bushrangers. The reckless disregard of danger that, in a bad cause, made him an apt instrument for the deed that doomed him to transportation, made him, when engaged in a good cause, an invaluable constable. He obtained a ticket-of-leave soon after his arrival from Sir T. Brisbane, for captur-

ing, in a single-handed struggle, Robert Story, the notorious bushranger of his time, and many other marauders of less note. If it were known that "the Cato-street Chief" (the title by which as chief constable he was known) was in search of the plunderers who then prowled along the roads, they fled from the district, and his name was quite a tower of strength to the peaceable portion of the community. At present he is the head of a patriarchal home on the banks of the Fish River at Bathurst, surrounded by children and grandchildren, all industrious persons, in the enjoyment of a comfortable competence. Wilson was also for some time an active constable under Strange. On obtaining the indulgence of a ticket-of-leave he married, and became the fashionable tailor of the district, with a signboard over his shop announcing him as "Wilson, tailor, from London." With Harrison, the Life Guardsman, Mr. Therry came into frequent contact. He describes him as a well-conducted man, and an industrious baker.

Hunt, the accomplice of Thurtell in that murder of Weare which attracted much attention about forty years ago for its deliberate atrocity, seems also to be a favourable specimen of a reformed character. Mr. Therry was present at his trial at Hertford, in 1824, and heard sentence of death passed upon him. This was commuted afterwards to transportation for life, as the magistrates had held out a hope that if he disclosed where the body of the murdered man lay, it would operate favourably for him. Sir R. Peel, then Secretary for the Home Department, reproved the justices for holding out this hope, but deemed it advisable that magisterial faith should be kept inviolate, and the sentence of death was accordingly commuted to transportation for life. Eight years after his trial, Mr. Therry again saw him at the antipodes. He was then a trustworthy storekeeper, assigned to the service of a Government contractor on the Blue Mountain road. For the last twenty years he held the petty office of Court-keeper of the Assize Court at Bathurst, and by his respectful demeanour and general good conduct enjoyed the favourable opinion of all who came in contact with him.

The apparently very devout criminals are a dangerous class. John Tawell's case caused no small sensation in England a few years ago, partly from its cruelty (poisoning a woman), and partly from the remarkable mode of its detection. He was a returned convict, and a model specimen of prison reformation. Previous to his transportation for forgery, upwards of forty years ago, his occupation in England was that of a commercial traveller. His career in the colony exhibited a strange mixture of shrewdness and money-making talent, combined with an outward show of religion. On obtaining partial exemption from convict discipline, he became the principal druggist, and had one of the showiest shops of that kind in Sydney. After a prosperous career he sold his business to a respectable chemist for 14,000*l.* This sum he judiciously invested in buildings and other pursuits of profit. For nearly two years Tawell occupied the house opposite to Mr. Therry's in Sydney. He struck the late judge as being a remarkably well-conducted person. He was a member of the Society of Friends, and he wore the broad-brimmed hat, appeared always in a neat and carefully-adjusted costume, and his whole appearance and manner impressed one with the notion of his being a very saintly personage. He always sought the society in public of persons of reputed piety. Mr. Therry often met him in the street accompanied by a secretary or collector to a charitable institution, whom he assisted in obtaining contributions

for benevolent objects. At one time he took up the cause of Temperance in such an intemperate spirit, that he ordered a puncheon of rum he had imported to be staved on the wharf in Sydney, and its contents poured into the sea, saying that he would "not be instrumental to the guilt of disseminating such poison throughout the colony." At another time his zeal took a religious turn, and he built in Macquarie Street a commodious meeting-house for the Society of Friends.

John Hardy Vaux was an educated man and a contributor to convict literature. His case is a strong instance of the constant tendency to crime that some individuals exhibit. He had been transported for life. After the usual probationary course, he obtained a conditional pardon, which placed him in the position of a free citizen in New South Wales, provided he did not leave the colony. The violation of the condition of residence subjected him to be remitted to his first sentence—transportation for life. He escaped, however, from New South Wales, and, on his arrival in England, had the hardihood to publish a book descriptive of his career in the colony, which attracted some attention in London about the year 1828. Soon afterwards he made his way to Dublin, where he was again convicted of larceny, and transported for seven years, under the assumed name of James Stewart. On the arrival of the ship that conveyed him to New South Wales, Mr. Therry went on board to see this then somewhat remarkable person. His address was very courteous, and his voice was of a remarkably soft and insinuating tone. In a conversation the author had with him, he expressed a deep contrition for his past life, vowed amendment, poured forth his gratitude for the mercy that had been shown to him, expressing a hope that by his future conduct he might prove that it had not been unworthily bestowed. Perhaps he meant at the moment all that he uttered, but, so incapable had he become of resisting any temptation to crime, that within a twelvemonth after his arrival a second time as a convict, he committed a felony, for which he was sent to work for two years in irons on the public roads. The last time the author saw him was in the dock, ten years ago, accused of a great crime.

The few United Irishmen left in New South Wales during Mr. Therry's official life were absorbed in the steady and industrious class of colonists. He mentions the case of D—, who was fortunate enough to be transported in 1798 for making pikes. D— was a first-rate blacksmith. About the time he became free, the charge for shoeing a horse was from fifteen shillings to a pound. He was an adept in this, as in all other branches of his business, and in the course of a long life of industry he acquired property to the estimated extent of from 20,000*l.* to 30,000*l.* This was not, however, the sole result of manual labour. He had, at an early period, made some judicious purchases of land, which in time had greatly increased in value. About two-thirds of this amount he devoted by will to religious and educational purposes. The remaining third he bequeathed to some relations whom he brought out at his own expense from Ireland. Some convicts made money as *artistes*, and others as members of the learned professions. Bushell—known by the *sobriquet* of the "Knave of Diamonds"—was a convict of very varied accomplishments. He spoke German and French as fluently as English. His knowledge of German facilitated the commission of the fraud for which he was transported. Personating a Prussian baron, well moustached and disguised in suitable costume, he gave an order to an eminent jeweller to provide him with diamonds of the value of several thousand pounds. For

these he managed to substitute a box of imitation diamonds. He escaped to the Continent, but was subsequently taken and transported. According to Mr. Therry, Bushell had a voice quite equal to Lablache, to whom in size and person he bore a strong resemblance. He was the principal singer for many years at the theatres and concerts in Sydney, where he made a respectable connexion by marriage.

Mr. Therry's acquaintance with another singing criminal was not made under such favourable circumstances. Going circuit in New South Wales was a perilous undertaking for the Judge and the Bar some years ago. At a lonely spot, on his way to the Bathurst circuit, about ten o'clock in the morning, he was hailed by two men, partially hidden behind a tree, their guns pointed at his head, with the cry of "Stop, or I'll send the contents of this through you!" On alighting from the carriage he put his hands instinctively into his pockets, the hope suggesting itself at the instant that by giving his purse he might perhaps save his life. The captain of the gang, however, an escaped convict named Russell, suspecting he had put his hands into his pocket to search there for pistols, desired him at once to take them out, or he would be shot on the spot. Mr. Therry confesses that no fugleman ever performed a motion more quickly than he disengaged his hands, as directed, from his pockets, which were then rifled by Russell. These fellows were afterwards apprehended for another and still more serious robbery. They were transported to Norfolk Island, where Russell, the captain of the gang, became leader of the choir in the little church on the island. His fine voice, no doubt, captivated the chaplain, and constituted "a case of special circumstances," and exempted him from hard labour.

In Mr. Therry's supplementary chapter, he points out that a ticket-of-leave in England does not correspond to a ticket-of-leave in the penal colonies, in its safest and most useful attribute—a police superintendence. The ticket-of-leave system, as it exists in England, is little short of an irregular, irresponsible and dangerous gaol delivery, without the sanction of any judicial tribunal. There is no family resemblance between the two systems, except in name.

Mr. Therry suggests that the present ticket-of-leave system in England, if it be continued, requires amendment in two points: first, the necessity of police supervision; and, secondly, as essential and necessary in aid of the attainment of that object, the restriction of residence of ticket-holders in certain districts, whether town or country. Without this restriction, police control is impracticable. To the observance of these principal points should be added a stern and unyielding attention to the enforcement of the conditions, by the breach of which the holder incurs a forfeiture of his ticket.

The interest of Mr. Therry's book is not confined to his reminiscences of the convict population or his remarks on the ticket-of-leave system. His sketches of colonial society, and of the various governors under whom he served, his description of the Bench and Bar, and his chapters on Emigration and Colonial Products, are valuable as contributions to the history of New South Wales. He tells us what he saw himself of the origin and consequences of the gold discovery, from the first moment when an unhappy convict produced a piece of gold and was rewarded with one hundred and fifty lashes by a sceptical magistrate, who said he must have stolen a gold watch and melted it down, to the case of the retired soldier who, with 100*l.* the accumulation of years of frugal habits, purchased one hundred acres of land, and re-sold

them in a few years for 120,000*l*. The story of the fortunate soldier ends better than many of its class. We are told that he has recently visited his native parish in Ireland and contributed liberally to the building of a church and a school-house, and that at this moment four of his sons are receiving the best education that money can get for them in England.

A Critical History of Free Thought in reference to the Christian Religion. By A. S. Farrar, M.A. (Murray.)

At last, a Bampton Lecture actually tells us when the series commenced. Not in the title-page, not by furnishing a date to the extract from John Bampton's will, but casually, in a note. From 1780 until now the topics of the time have been discussed in the Oxford pulpit year by year. In our day the subjects are changing with phantasmagoric rapidity. It has been said that a person has but a certain number of beats of his pulse to live through; so that anything which quickens his circulation shortens his life. If this be true of the controversial existence of a Church, our establishment may look for the rapid approach of a millennium of quiet. There is a fever of pugnacious inquiry which brings on the topics in rapid haste, and allows no one to hesitate about his Bampton subject from want of external suggestion. Our readers are aware that one person cannot give these lectures more than once. In like manner as the City aldermen are divided into those who have passed the chair and those who have not, so the Oxford notabilities, all at least who are conspicuous as preachers, are divided into those who have and have not given the Bampton course. The consequence is, that more than one is at any time of any year engaged in collecting materials for the one great effort which is to prove him worthy to have been placed on the list.

These lectures, when directed, as now they almost always are, against the abuses of the time, are never made of personal application. Mr. Farrar has not a word about the Essayists and Reviewers,—we do not remember that he cites any one of them,—nevertheless, at them are his lectures specially directed. He is the historian of "free thought," by which he means "revolt of the mind against the pressure of external authority." The term, he says, is generally used to denote three different systems—Protestantism, Scepticism, and Unbelief. Mr. Farrar objects to this classification of Protestantism, which, he says, "reposes implicitly on what it believes to be the divine authority of the inspired writers of the books of Holy Scripture"; while the others "acknowledge no authority external to the mind, no communication superior to reason and science." In this description there surely is a fallacy. Between the Protestantism of "implicit repose," and the systems of "no communication superior to reason and science," no middle is allowed. Where, then, does Mr. Farrar place those persons who, acknowledging that there is revelation from God in the Bible, do not believe in the "inspiration" of the written accounts? These intermediate acknowledge communication from a source superior to reason, and use their reason to find out what it is from the history which has been handed down.

The doctrine of implicit repose is now upon its trial. To speak of resting upon the "divine authority of the inspired writers," means, if it mean anything, to rest upon some system of interpretation, and upon the results of that system. In this sense, Protestantism is not, and never was, one thing. If Mr. Farrar

admit all the shapes it has taken, he does practically make it "free thought"; if he covertly intend that nothing shall take the name except that which admits one or more of the systems and excludes the rest, his classification is logically incomplete and theologically useless.

This method of using the words *free thought* as a synonym for what used to be called *free thinking* enables our author to write with learning and acuteness about all the phases of unbelief, without forbidding him to introduce names which he could not have brought into a professed history of infidelity. He is, we are entitled to suppose, a friend to free thought, though an enemy to particular results. He writes as follows:—

"In nothing is the Divine image stamped on humanity, or the moral Providence of God in the world more visible, than in the circumstance, of which we have already had frequent proofs, that thought and honest inquiry, if allowed to act freely, without being repressed by material or political interference, but checked only by spiritual and moral influences, gradually attain to truth, appropriating goodness and rejecting evil."

This is a protest against bringing in Dr. Lushington, whose proceedings, when he acts in the Court of Arches, cannot be said to be spiritual and moral influences, but rather material interferences, suspension from benefice and imposition of costs. Mr. Farrar is quite right, partly in his own sense, and partly in another. What says the epigram?—

Treason does never prosper; what's the reason?
Why, when it prospers, it's no longer treason.

When "thought and honest inquiry, allowed to act freely"—why not say "free thought" at once?—succeed in upsetting something and providing a substitute, that substitute becomes the acknowledged truth, and free thought has rejected evil, which once was held good. There are headlands which have permanently resisted the waves of inquiry, though at times so fiercely beaten that they could hardly be seen through the foam; and there are places in which stout cliffs once stood, which have been undermined and ground to pieces by the constant friction. But the rocks which are no longer rocks remain in the maps; the doctrines which have yielded to opinion are still among the subscriptions. It is this which led Tennyson to write, and Mr. Farrar to quote with approbation,

There lives more faith in honest doubt,
Believe me, than in half the creeds.

Of course; and for this reason—Doubt has in it a portion of belief, as well as a portion of unbelief. But a fraction of the creeds—Tennyson says half, but it is not so much—is a matter of general unbelief combined with enforced subscription.

Our readers would be interested by Mr. Farrar's book, which contains much clear and dated history, as well as discussion.

Lost among the Affghans; being the Adventures of John Campbell (otherwise Feringhee Bacha) amongst the Wild Tribes of Central Asia. Related by Himself to Hubert Oswald Fry. With Portrait. (Smith, Elder & Co.)

Hájí Bába, after a long absence from the earth, would seem to have returned in the shape of Sued Mustafá, otherwise Feringhee Bacha, otherwise "John Campbell," who, with the aid of Mr. Fry, has dished up a pretty "*piláo* of abominations." Oh, ye magnates of Cornhill and Pall Mall, must we believe in darker marvels than those of the Thousand and One Nights? Have we travelled so far to eat dirt? Shall our beards be laughed at? The editor of "Lost among the Affghans" states, in a guarded Introduction, that "should any question be

raised as to the *truth* of the narrative, he himself entertains no doubt of the substantial correctness of what is here related." Is the editor a griffin, "specially privileged to take the beards of human kind in his hand and spit upon them"?

When Major R. Taylor, of the Bombay Infantry, lately assistant to our Resident in Persia, reached Meshed in 1857, on his way to Herát to see the terms of treaty carried out respecting the latter State, a diminutive lad of about sixteen or seventeen years of age, who had been (by his own account) living with a band of burglars at Meshed, and was then in the prison of that city awaiting the punishment of his crime, took it into his head to call himself an Englishman, and claim that officer's protection. This lad described himself as the son of an English officer, Campbell, who was killed in the Tazeen Pass, on the retreat of our army from Kábul in 1841, and stated that he had been picked up by the Affghans, being then two years old. Unfortunately for the truth of this, his first statement, there was no officer of that name with the force at Kábul or during the retreat; and, consequently, no officer of that name was killed at Tazeen. Moreover, the English children who were taken by the Affghans were released with the other prisoners in their hands, as may be read in Lady Sale's 'Journal' and Lieut. Eyre's narrative.

We have reason to believe that the following is the true account of this lad's appearance in Bombay, and of his subsequent adventures until he reached the "preparatory school" of the Frys, together with the account he then gave of himself. The "Bacha" was sent to Bombay from Persia by our Resident at that court; but no inquiry appears to have been made in that country or at Herát as to the truth of the adventurer's statement. It is probable that he did not attempt to cram Major Taylor with the story (p. 274) that "I and about twenty other officers (this wretched-looking boy?) swore over the Koran that Esau Khán should be king (of Herát), and that we would defend him with our lives"; for Major Taylor would soon have sifted it. This tale was left for the Frys. A letter, with the hero, was sent to the Bombay Government, intimating that no inquiry had been made as to the truth of what he stated; and the late Lord Elphinstone, then Governor of Bombay, sent for and examined him. His Lordship put many questions through the Persian interpreter, and attempted to discover whether he could recollect a single English word. The word "foreign" was the only one, which, his Lordship remarked, he had, no doubt, picked up since he came under our protection. Lord Elphinstone was satisfied from the first that the boy was not of European parentage, and did not believe his statement. He might have remained at Bombay to this time, had he not been in the constant habit of causing disturbance wherever he was placed. He was put at the school of a respectable man named Boswell, who had long resided at Bombay; who was obliged to expel the "Bacha," for drawing a dagger on him, and endeavouring to take his life. He was then placed under the superintendence of Dr. Wilson, Presbyterian Missionary at Bombay, who made the boy over to one of his Parsee converts; and he did just what he liked, but learned nothing. He, however, became acquainted with Parsees and others, who made him believe that he might find some English people fools enough to take him as a relation, if he only got up a good tale, and would have all that life could desire, particularly if he seasoned it with a pretence that he was a Christian in faith. At

an interview which Capt. Raverty, of the Bombay Army, had with Lord Elphinstone, when about to leave India for England to publish his works in the Afghán language, the conversation turned upon "John Campbell," who had called upon that officer and asked him to take him to England. At this very time, there was a petition lying on his Lordship's table from the boy himself, written in bad Persian. This Capt. Raverty read and interpreted to Lord Elphinstone; and on his Lordship's remarking that he did not know what to do with the boy, he suggested that, as he desired to go to England, the best way for the Bombay Government to get him off its hands was to let him go; and Capt. Raverty offered to take charge of him on the voyage. His Lordship acceded at once, and "John Campbell" was warned accordingly. Before leaving Bombay for England, which was some weeks after the interview, Capt. Raverty made inquiry of the lad as to his antecedents; but before that officer he was guarded in what he said, as he, "the Bacha," knew of his being well acquainted with the countries beyond the Indus, as well as with the Persian and Afghán languages, and the manners and customs of Central Asia. At that time, Capt. Raverty had two Afghán Molowés (learned priests) present with him at Bombay, and they, after seeing a great deal of the lad for some weeks, and from his appearance, manner and mode of speaking Persian and Afghán, or Pushto, pronounced him to be a Jew of the parts about Bokhárá, who are remarkable for the impostures they affect; or otherwise a *litti* or mountebank of those parts, who might have been a slave in the Kunir (not Kounar) Suyed's family. He was a thin, sly-looking lad, about five feet two inches in height, stooped very much, had small hands and feet; a peculiar mark of the Asiatic Jewish, Armenian and the Indian races, and sometimes, but not always, of the Persian. He was no Afghán, for he bore not the most remote resemblance to that invariably fine race. His complexion was a dirty yellowish brown colour; and his hair was a dark reddish brown, inclined to purple—never seen in the European, but to be found amongst the mixed races of Badakhshán, Bokhárá, and parts north of Hindú Kush. He had a decided antipathy to water and soap, and had to be compelled to clean himself on the voyage. There was not the slightest trace of European blood about him. The peculiar hair was sufficient proof against such an assumption.

Mr. Fry has been made the victim of a very artful dodge. But we must take care that the public is not deceived like Mr. Fry. We are able to give a brief account of what his tale was to Capt. Raverty and his Molowés; and, to that officer's knowledge, the youth possessed no notes or memoranda whatever, except a statement of about two or three pages of letter paper, which the boy wrote out, at Capt. Raverty's request, before leaving Bombay. This account agreed in some few respects with that which he has, with Mr. Fry's assistance, swollen into the present volume. It was, that he was found in the Tazeen Pass, in the arms of a Hindústani nurse, after the skirmish and retreat of our troops, by some Afgháns, who immediately killed the woman, and would have killed him also, had not the Suyed of Kunir (a small town of the district of that name, lying in the lower or southernmost part of the valley of the Kunir Kámah, or river of Káshkár or Chitrál, about thirty miles before it falls into the river of Kábul, twelve miles east of Jelálábád, and, consequently, within seventy-five miles of Pesháwar) taken the soldier before Akbar

Khán, who commanded the Afghán troops, and represented to that chieftain that if the child were made over to him, he would adopt it, and bring it up in the faith of Islám. This was acceded to, and he was taken to Pushút (which is the chief town of the district, and where numerous gold-washers are employed washing for gold in the river), where one of the Suyed's childless wives adopted him. He was sent to the village school with other boys, and was taught what Afghán boys generally learn (there are no "military schools" (p. 7) or staff colleges in Afghán villages, or others subject to the Afghán ruler). When about ten years old, the Suyed, on one of his journeys to Kábul, took him with him (not that he "wished him to see and be seen in the capital," as Mr. Fry states); and when passing Tazeen and other places on the road which were the scenes of our disasters, the Suyed told him how he had found him, and that the ruins he saw on the roadside and at Kábul were the traces of his countrymen, the English. At Kábul, he met with a renegade European, in Dost Muhammad's service, who said he ("the Bacha") "must be the son of an officer called Campbell, and that he had known his father." From this statement, which he also appears to have made before the Governor of Bombay, he assumed the name of "John Campbell," after he reached Bombay. "On his return to Pushút (having been thus told he was an Englishman's son), he had a great desire, he said, to find his relations; and, being very restless, he decamped from Pushút, and made his way up the valley of the Kunir river to Cheghan-Saráe, and through Káfiristán to Badakhshán. From thence he made his way to Herát and Meshed, where, hearing of the arrival of an English officer at the latter place, he announced himself as the son of one of those killed during the retreat from Kábul. His journeys occupied him about seven years." This was his account to Capt. Raverty.

Arrived in England, our hero, as we read of him in the Introduction, so guardedly worded, was placed with the Rev. Mr. Small, with whom he remained for some months; but the Frys forget to state why Mr. Small (who will be able to give a clear insight into his character) got rid of him so suddenly. He was then placed with the Frys until the India Office authorities could pack him off to the place from whence he came. He made good use of the ten weeks, and he "endeared himself to his English friends by many evidences of a grateful and affectionate heart," says Mrs. Fry.

We fear these amiable people have been taken in with their eyes open. Their uninteresting *protégé* has been placed in a telegraphic office to earn his bread. Meantime, it would not be amiss for the respectable publishers of 'Lost among the Affghans' to make some inquiries about the man whom they have introduced to public notice. Capt. Raverty and many other Indian officers can supply them with information on the point.

A Tangled Skein. By Albany Fonblanque, Jun. 3 vols. (Tinsley Brothers.)

THE admirers of a tale of mystery will be entertained with 'A Tangled Skein.' When classified under that head, the reader must not look for another 'Castle of Otranto,' but, rather, what may be termed a modern tale of mystery, with detective police, telegraphic messages and express trains. Withal, it is well written, and there is nothing forced in the descriptions or in the manner in which the incidents are related.

Our first introduction is to Captain Stephen

Frankland, a brave officer, who suffered in the Indian mutiny, earned the Victoria Cross, and is returning home on sick leave, having been smitten by a sunstroke. This is the son of Sir George Tremlett, who had taken that name on his second marriage. He is much indebted for his life in the bush, as well as for much kindness during the voyage, to an entire stranger, who was thought by some to be his servant. The account which this stranger gave of himself to Frankland was, that his name was John Everett Brandson, an uncovenanted servant of the East India Company; that he was returning to Europe with but one object, "to do an act of justice"; and that as he had no friends in England, he should, upon the completion of his business, be on his way back to India within six months. But by the ship's books it appeared that there was no such person on board as John Everett Brandson, of the uncovenanted civil service: he had entered his name Robert Meynell, merchant, of Calcutta; he never returned to India, for he was murdered in a most mysterious way within a few days of his landing in England. And it thus happened that Frankland was in the neighbourhood of the scene of the murder. Brandson's first appointment in England was at a place near to Westborough, whither Frankland was bound with the object of delivering to Mr. Treherne the sword and other relics of a son who had bravely died in India. On this visit to Westborough, by Brandson, as well as by Frankland, the chief events of the story turn. "If he had known what would have been the consequences of his visit to Westborough, he certainly would have given that picturesque village the widest berth."

Now comes, as an interlude, well written and entertaining, a description of who Sir George Tremlett was, and who his fathers were before him. He was the only son of an old Derbyshire squire, and the pride of his parents. But he went to London to see the coronation of the "first gentleman in Europe," and, accidentally, the doors of the Abbey slammed in the face of the "first lady." From the time of this visit to the metropolis, he fell into the hands of the Jews and bad company. "So, black Care entered the old Grange"; he went further on his downward course, and brought his father's grey hairs with sorrow to the grave. The child being father to the man, he is weak at the outset and retains that character throughout the story. The only redeeming point was that he had married a good wife, whom he lost after the birth of their son Stephen. Irrecoverable ruin is now staring him in the face but for the good offices of the wife of his man of business, Mr. Coleman. Mrs. Coleman determines that he shall, at all hazard, marry Rhoda Tremlett, the niece of a rich, purse-proud iron-master, a friend of hers. And so he does; but, as she was a minor, and a ward in Chancery, he has to pay the penalty of spending the greater part of his honeymoon in the King's Bench prison. Eventually his wife's property is settled on herself and her son—a small annuity on Sir George, and he has to change his name to Tremlett. Sir George becomes thoroughly cowed, and stands in so much fear of his wife, that he has to resort to all sorts of artifices, both to conceal from her any secrets which he desires to keep from her, and to persuade her to enter into any plan upon which he has set his heart. One instance of this is the receipt of a strange-looking letter, written on a sheet of common rough paper, clumsily folded, and sealed with the impression of a thimble. Why this letter should disturb him so much we are not told; but on receipt of it he goes to London. At this time

we are introduced to Stephen's half-brother, Frank Tremlett. He was the heir to the estates, whilst Stephen would inherit the baronetcy; but, notwithstanding the difference, the idea of envying Frank his good fortune never entered his half-brother's mind. His only thought about him whilst on his voyage home, was an intense desire to see the one whom he pictured as "his little brother! the loved companion of all his expeditions—poor, gentle, delicate little Frank." But "little Frank" had by this time come of age, and had turned out a most insufferably obnoxious prig. He used long words, laid down the law to everybody, and "taught various persons, old enough to be his grandmother, how 'to suck eggs' of all sorts and sizes."

Sir George went his way, and most strangely met his son at Westborough. His object in going there is not at first told. And however much the reader's wonder and interest are aroused, they are considerably increased by the fact of Brandson being found half-murdered in a sawpit. Breathing-time is given in the account of the petty manoeuvres of Sir George upon his return home, to avoid the relation of any very full explanation of his adventures, and also to obtain his wife's and son's consent to a suitable public reception of Stephen on his arrival. Again the narrative of Brandson is resumed, and the way in which, before he dies, he is on the point of entrusting to Frankland the name of the one who had attacked him, and the great secret of his life, so far as he could be induced to divulge it, is an extremely exciting narrative,—inasmuch that the reader will be tempted to dip into the third volume to satisfy his curiosity. All that Brandson does before he dies is to commit to Frankland's care certain papers, amongst them a letter, the counterpart of the one sealed with the impression of a thimble, such as Sir George received on the day when he left home "on business." He also tells him that certain papers were "hidden behind a panelling in the room over the armoury at Mangerton Chase," and that the names of Sarah Alston and Father Eustace are the only clue which he leaves, and Frankland as well as the reader are left in wonder as to where Mangerton Chase can be. An inquest is held, in which a London detective police-officer takes a prominent part, and an open verdict is returned. But Captain Frankland must go on his way, and accordingly he is, to his own annoyance and his father's great delight, treated to a public reception on his return home. The festoons and arches and decorations are managed by Mrs. Coleman, her daughters, and their friend Grace Lee; and he receives a hearty welcome from all but "little Frank," in whose breast the green-eyed monster is evoked. So he makes an excuse to be absent. Speeches are made, and healths drunk, and an address made by the Member of Parliament. From the time of this visit to Tremlett Towers, the "skein" becomes gradually disentangled, and the varied threads work into one harmonious whole. Stephen becomes attached to Grace Lee, who proves to be the granddaughter of Lord Rossthorne, and the very person for whom Brandson had come from India to do an act of justice. Through Grace Lee he learns that the old name of Tremlett Towers was Mangerton Chase. He also discovers therein an old chamber where he finds the papers which Brandson had described to him on his deathbed. There does not appear, indeed, to be any sufficient reason why these facts should have been unknown to him hitherto. But these slight discrepancies are of less consequence when the interest of the tale is well told. The part of the detective, Lager, is ad-

mirably sustained; especially where he pays a visit to Craigsleigh, disguised as an entomologist; as such makes the acquaintance of the clergyman of the parish, is recognized by the clerk, who is a ticket-of-leave convict, and so obtains such extracts from the parish registers as prove the marriage of the father and mother of Grace Lee.

The mystery is in due time solved. It appears that Grace Lee's mother had married one George Howell, against the wishes of Lord Rossthorne. He, therefore, disowned her; but Brandson, who had long been devoted to Lord Rossthorne and his family, was fully persuaded of the injustice which was being done, and determined to demand reparation for the one who was injured. He, therefore, had secured a meeting with Lord Rossthorne at Westborough, near to the spot where he was found half-dead. A meeting was proved to have taken place, and Lord Rossthorne was accused of the murder. This was not likely, and so it is believed to have been committed by a tramp, in order that he might gain possession of a pocket-book, containing a bundle of bank-notes, which he saw in Brandson's hands. Stephen Frankland for his part is impressed with an idea that his father, Sir George Tremlett, was the murderer. Else, why the mysterious visit to Westborough? That is accounted for by the confession of Sir George:—he went to pay an annuity for the support of his natural daughter, who was supposed to be the sister of Jim Riley.

And so the tale concludes. There are no highly-wrought passages, wherein any appeal is made to the reader's feelings; but the interest is so well sustained, and the various incidents so ingeniously and mysteriously interwoven, that 'A Tangled Skein' bids fair to become a popular work.

The Life and Times of St. Bernard, Abbot of Clairvaux, A.D. 1091—1153. By James Cotter Morison, M.A. (Chapman & Hall.)

THIS new life of St. Bernard is dedicated by permission to Mr. Thomas Carlyle "with deep reverence and gratitude," and may be set down as one of the examples of that "hero-worship" which has become rarer of late years. St. Bernard is Mr. Morison's hero in the strict Carlylean sense of the word, the ideal of a monk in a day when monkery was the only form that could be assumed by moral force. But though a panegyrist to an extent that will displease many who imagine that a sort of halo belongs to the head of St. Bernard's victim, Peter Abelard, he is no blind idolater. He does not harbour the slightest wish to bring the Abbot of Clairvaux back into the world, or hold him up as a model for any one to imitate. Bernard was an excellent man for his own times, and for his own times exclusively. A Bernard now-a-days would be an absurd nuisance.

The years of the saint's mortal career, extending from 1091 to 1153, belong to a rough age. During the greater part of his active life the "feudal lord," who (to use Mr. Morison's expression) "enjoyed the title of King of France," was Louis the Sixth, commonly called the Fat. He was a very good king for his day, and an excellent friend to the Church, when the cause of the Church was identical with the cause of civilization. The Isle of France, the Orleanois and Picardy constituted the whole of his domains, and these had not only to be defended against powerful neighbours, of whom the most formidable was Henry the Sixth of England, whose Norman possessions bounded them on the east, but were always on the point of being reduced by the squabbles of knights and barons

who held castles within their limits. Thus, though Paris and Orleans indubitably belonged to the crown, the lords of Mont Clair could, whenever they pleased, cut off all communication between them, and the King never proceeded from one to the other save when surrounded by a strong force.

Flanders, where people wore cloth, and at least were devoted to other purposes than mutual destruction, and where, consequently, there was a strong middle-class element, was an oasis in the desert, but it was a very middling oasis after all. One of the most harrowing incidents that took place during the "times" of St. Bernard was the horrible murder of Charles the Good at Bruges, followed as it was by the still more horrible execution of Provost Bertolf at Ypres. To many readers this frightful story, which is exceedingly well told by Mr. Morison, will be the *bonne bouche* of the work.

Retirement from so turbulent a world, where people were either killing or being killed, would seem to demand but a small amount of self-denial, and he who shut himself up in the wealthy Abbey of Cluny (for instance) might pass his time comfortably enough. But Bernard was not the man to court the ease and luxuries incident to monastic life. When, at the age of nineteen, by birth a gentleman, he was free to choose his own occupation, he knocked at the gates of Cîteaux, near Dijon, where the whole of St. Benedict's rule was literally kept, where one meal per diem was eaten, and that not till the monks had risen twelve hours, sung psalms and worked in the fields, where meat, fish and eggs were never tasted, and milk rarely, and where the dress consisted of the coarsest wool. The Cistercians, who took their name from Cîteaux, were scarcely more propagandists than the Quakers. If any one wished to join their body, they made him wait for five days before he was taken to the Chapter, in the presence of the assembled convent. It was at Cîteaux that Bernard and several companions, whom he had influenced by exhortation and example, resolved to be monks.

Cîteaux is an important place in the history of monasticism,—inasmuch as its abbot, Stephen Harding, an Englishman by birth, and not only a devotee, but a man of practical mind, conceived and executed a system of government previously unknown. The rule of St. Benedict, the founder of cœnobitic life, had reference solely to a single religious house, and did not contemplate a connexion of monasteries with each other; but Stephen Harding united into one whole all the houses that had sprung from Cîteaux. A general Chapter met every September and lasted four days, and at this every abbot of the order was bound to attend; those who resided at a great distance being permitted to appear less frequently than the rest. Of all the monasteries of the order, the abbot of Cîteaux was head and master, but he was no irresponsible monarch. On the contrary, he was under the supervision of the Abbots of La Ferté, Pontigny, Clairvaux and Morimond, and if, in the event of vice or negligence, they were unable to reclaim him, they were empowered to call a Chapter and solemnly depose him. It was his duty, at least once a year, to visit all the abbeys which were of his filiation, and each of them had a similar right of inspecting the houses that had sprung from them. That a corporate spirit was engendered among the Cistercians, was the natural result of this organization.

Even the austerities of the Cistercians, severe as they were, did not satisfy Bernard, whose asceticism astounded the austere. His zeal and piety were duly appreciated by Abbot

Stephen, who appointed him, at the age of twenty, the chief of a new community, the establishment of which had been rendered necessary by the over-populousness of Cîteaux.

"Twelve monks and their young abbot—representing our Lord and His apostles—were assembled in the church. Stephen placed a cross in Bernard's hands, who solemnly, at the head of his small band, walked forth from Cîteaux. The monks who were to remain accompanied them to the abbey gates, for Bernard's powerful and assimilating nature had won all hearts, and the day of his departure was a sad one in Cîteaux. Till they reached the limit of their own land, they walked so closely together that it was not easy to say which were going and which were to remain; but the gateway revealed the emigrants. A Cistercian monk might not leave his own grounds on any pretext without permission. Bernard, cross in hand, passed over the prescribed boundary, and his allotted troop were severed from their late companions. Bernard struck away to the northward. For a distance of nearly ninety miles he kept this course, passing up by the source of the Seine, by Chatillon, of school-day memories, till he arrived at La Ferté, about equally distant between Troyes and Chaumont, in the diocese of Langres, and situated on the river Aube. About four miles beyond La Ferté was a deep valley opening to the east: thick umbrageous forests gave it a character of gloom and wildness; but a gushing stream of limpid water, which ran through it, was sufficient to redeem every disadvantage. In June, A.D. 1115, Bernard took up his abode in the valley of Wormwood, as it was called, and began to look for means of shelter and sustenance against the approaching winter. The rude fabric which he and his monks raised with their own hands, was long preserved by the pious veneration of the Cistercians. It consisted of a building covered by a single roof, under which chapel, dormitory and refectory were all included. Neither stone nor wood hid the bare earth, which served for floor. Windows, scarcely wider than a man's hand, admitted a feeble light. In this room the monks took their frugal meals of herbs and water. Immediately above the refectory was the sleeping apartment. It was reached by a ladder, and was, in truth, a sort of loft. Here were the monks' beds, which were peculiar. They were made in the form of boxes, or bins of wooden planks, long and wide enough for a man to lie down in. A small space, hewn out with an axe, allowed room for the sleeper to get in or out. The inside was strewn with chaff, or dried leaves, which, with the wood-work, seem to have been the only covering permitted. At the summit of the stair or ladder was the abbot's cell. It was of most scanty dimensions, and these were further reduced by the loss of one corner, through which access was gained to the apartment from below. A framework of boards was placed over the flight of steps, in such a manner that they were made to answer the purpose of a bed. Two rough-hewn logs of wood were his pillows. The roof was low and slanting, to such a degree that it was impossible to sit upright near the wall. It was also the sole means of obtaining both light and air; sometimes too easily, as, through its imperfect joining, wind, rain, heat and cold found a ready entrance. Such was the commencement of Clairvaux."

To the austerity of the Cistercians nothing could be more opposite than the luxury of the Cluniacs, with whom Bernard remained through his life on terms of a somewhat grim friendship. As Cluny was one of the most famous monastic institutions, he felt, as a monk, bound to show it all honour; but even while defending the Cluniacs against his own Cistercians, in what is called his "Apology," he contrived to give them a blow with the back of his hand.

Of Art, as an auxiliary to devotional feeling, Bernard had a very mean opinion. It might, perhaps, be usefully employed by the bishops, who, when they could not rouse the sense of religion in the carnal multitude by spiritual means, might do so by ornaments appealing to the senses; but monks who have gone out from

among the people, who have learnt to regard as mere dross all that is beautiful to the eye, soft to the ear, agreeable to the smell, sweet to the taste, what can monks have to do with such vanity?—

"Some beautiful picture of a saint is exhibited—and the brighter the colours the greater the holiness attributed to it; men run, eager to kiss; they are invited to give, and the beautiful is more admired than the sacred is revered. * * * The church's walls are resplendent, but the poor are not there. . . . The curious find wherewith to amuse themselves—the wretched find no stay for them in their misery. Why, at least, do we not reverence the images of the saints, with which the very pavement we walk on is covered? Often an angel's mouth is spit into, and the face of some saint trodden on by the passers-by. . . . But if we cannot do without the images, why can we not spare the brilliant colours? What has all this to do with monks, with professors of poverty, with men of spiritual minds?"

Different readers will hold different opinions with respect to the good saint's Art-criticism on the subject of those grotesque ornaments that are so common in mediæval architecture:—

"In the cloisters, what is the meaning of those ridiculous monsters, of that deformed beauty, that beautiful deformity, before the very eyes of the brethren when reading? What are disgusting monkeys there for, or ferocious lions, or horrible centaurs, or spotted tigers, or fighting soldiers, or huntmen sounding the bugle? You may see there one head with many bodies, or one body with numerous heads. Here is a quadruped with a serpent's tail; there is a fish with a beast's head; there a creature, in front a horse, behind a goat; another has horns at one end, and a horse's tail at the other. In fact, such an endless variety of forms appears everywhere, that it is more pleasant to read in the stonework than in books, and to spend the day in admiring these oddities than in meditating on the law of God. Good God! (*Proh Deo!*) if we are not ashamed of these absurdities, why do we not grieve at the cost of them?"

As an example of the value of moral force, when accompanied by indomitable energy, and dextrously applied to the most assailable side of a multitude, Mr. Morison could not have chosen a better hero than St. Bernard. The fighting barons, who were as full of reproach as they were void of fear,—to whom a system of mutual extermination was a source of exquisite enjoyment, were not at all in the condition of those men who are reputed by the vulgar to "fear neither God nor devil." They were terribly frightened at both, and well was this perceived by the Abbot of Clairvaux. By dint of asceticism, of preaching, of writing, and, be it added, of a reputation for miraculous power, Bernard made himself the virtual head of Christendom in Western Europe. A simple abbot, he could heal a schism in the Church by compelling the deposition of Anacletus II. and the elevation of Innocent II., whom when he had raised he rated without scruple, and who before he died began pretty heartily to detest his benefactor. Not Popes, not Councils, but Bernard, demolished heretics, for the detection of whom, although by no means a learned theologian, he had the keenest scent. He was not the man to dispute about subtleties; with him, reasoning about articles of faith, whichever way it tended, was intrinsically wrong, and to be stopped without hesitation. No infirmity of body could keep him from travelling to the most distant point, when a holder of heterodox opinions was to be brought to silence. Down flat before him tumbled the theological "swell," Peter Abelard; down fell the less famous Gilbert de la Porrée; till at last Rome itself grew uneasy at his exterminating power. The reproaches he addressed to Innocent II. show that he was anything but an Ultramontanist; and when Eugenius III., who had

been taken from Clairvaux, evidently little more than a creature of Bernard, sat in the papal chair the influence of the thundering saint became more formidable than ever. The Cardinals could not bear it, and when a confession of faith, drawn up by the French clergy headed by Bernard, was the chief instrument employed to put down Gilbert de la Porrée, they sniffed Gallicanism in its most offensive form, and marvelled with what authority the French Church dared to erect herself against the supremacy of the See of Rome. Something like an apology was required, and when it had been duly made by Bernard, the Cardinals became quiet, but they declared that the confession of the French bishops should not be regarded as the creed of the Church.

To a painter, Bernard becomes most interesting. When the news of the fall of Edessa frightens the whole Western world out of its propriety, and at the assembly of Vezelai, in the presence of King Louis the Seventh and his queen, the haughty Eleanor, the second Crusade is preached by the saint of the day, then in the fifty-sixth year of his age.—

"Pale and attenuated to a degree which seemed almost supernatural, his contemporaries discovered something in the mere glance of his eyes which filled them with wonder and awe. That he was kept alive at all appeared to them a perpetual miracle; but when the light from that thin, calm face fell upon them, when the voice flew from those firm lips, and words of love, aspiration, and sublime self-sacrifice reached their ears, they were no longer masters of themselves or their feelings. This occurred whenever Bernard preached to great numbers, and the meeting at Vezelai was not an exception. At the top of the hill a machine of wood had been erected, and on this platform Bernard, attended by the king, appeared. Raised thus high above the crowd, he could be seen, if not heard, from all parts of the vast concourse. He spoke; the mere sound of his voice was grateful to the loving admiration which surrounded him. Presently rose a murmur from the sea of faces, which rapidly swelled into a shout of 'crosses, crosses'; and Bernard began to scatter broadcast among the people, the large sheaf of them which had been brought for that purpose. They were soon exhausted. He was obliged to tear up his monk's cowl to satisfy the demand. He did nothing else but make crosses as long as he remained in the town."

This is a sublime picture, but unhappily the second crusade is the "Moscow" of St. Bernard. Never was expedition more unfortunate or more fruitless than that of which Louis the Seventh of France and Conrad the Third of Germany were the leaders. When the crestfallen Louis, attended by a few followers, returned home, having effected nothing but the destruction of his own army, the shout of indignation against Bernard was universal. What business had the saint to prophesy success and work miracles if ruin was to be the only consequence? Accustomed to guide, or rather to drag, public opinion, Bernard did not heed it much when it was turned against him. If the people imputed their misfortune to his advice, he could easily retort that their own sins had prevented his counsel from leading to wholesome results. Instead of losing heart, he wrote his biggest book, 'De Consideratione,' which he addressed to his disciple, Pope Eugenius the Third, pointing out the evils that were likely to result from Roman centralization, and exposing the vices of the Holy City with a vigour which causes Mr. Morison to trace a somewhat fanciful resemblance between him and Martin Luther. When we recollect how essentially Bernard was a monk, and how fiercely he attacked heretics whose doctrines were mainly those of the Reformer of the later age, we feel that no amount of ingenuity can make him look in the least like a Protestant.

To a modern reader, the most puzzling part of St. Bernard's history is that which relates to his miracles. They cannot be passed over, since he partly owed to them his immense influence over the multitude; but, after all, how were they wrought? Mr. Morison's doubtless correct assertion that a belief in miracles, as an almost necessary concomitant of ignorance with respect to physical science, was proper to the middle ages, rather evades than answers the question. But even Mr. Morison cannot take in the following ridiculous story, which is worthy of being placed among the most absurd legends of St. Patrick:—

"In the spring of the year 1137, Bernard, accompanied by his brother Gerard, set out for Italy. The devil, we are told, had a particular objection to this journey. He foresaw and hated what was to come of it. Therefore, when Bernard was passing along the Alps, the demon broke the wheel of the carriage in which the abbot travelled, in order to hinder him as much as possible, or even pitch him over a precipice. The saint took a saintly and yet a fearful vengeance on his enemy. Careless and contemptuous of the intended injury, he ordered Satan himself to become a wheel, and replace the broken one. The fallen angel obeyed the words of the holy man; the carriage moved on as before; and the worst and rotatory fiend, amid scorn and laughter, carried Bernard in safety to his destination."

Bernard died in 1153, at the age of sixty-two, having survived nearly all his friends, Malachy, bishop of Connaught, who might almost be considered the Bernard of Ireland, the illustrious Suger, abbot of St. Denis, who had governed France during the luckless expedition of the king to Palestine, Count Theobald of Chartres (nephew to Henry the First of England), who had been one of the saint's most powerful benefactors, and his disciple, Pope Eugenius the Third.

Mr. Morison has collected his facts with great care, and fashioned them into an interesting book; copious extracts from the sermons of Bernard giving an additional insight into the character of the saint, without destroying the symmetry of the work. He is a clear and eloquent narrator, and though he is now and then tempted to imitate the style of Mr. Carlyle, the temptation soon leaves off, and he proceeds in his own straightforward way.

The Capital of the Tycoon: a Narrative of a Three Years' Residence in Japan. By Sir Rutherford Alcock, K.C.B. 2 vols. (Longman & Co.)

"The mystery of the Japanese islands is fast rolling away, and the old voyagers bid fair to be forgotten, or be remembered only as painters of dreams. Quinsia and Kambalai have already melted into poems. Marco Polo, as a traveller of the Homeric sort, may keep his place; but Charlevoix is going out of date, and there is really no necessity in any future record of Japanese adventure for quoting Thunberg. Mr. Oliphant brought home some bright and faithful pictures from the Empire of the Tycoon; but Sir Rutherford Alcock's opportunities were larger, and his book is more elaborate. A considerable portion of it is occupied with illustrations of oriental diplomacy and politics, in connexion especially with the West; and the envoy was the more free to expatiate upon these topics, inasmuch as nearly the whole of his official despatches, in which he expresses himself on every topic, public and personal, without reserve, have been published for the use of parliament, in a cheap and accessible form. On subjects of this character the narrative contains only what in substance the reader might find elsewhere; but the details

are arranged in simple order, with explanations and illustrative anecdotes additional.

For some years Sir Rutherford had turned his eyes towards Japan, whether from the coasts of China or the Isles of Loochoo, and he had pondered much over the narratives of Polo, Pinto and Kœmpfer; but the Empire was practically unknown to him when he was first appointed Her Majesty's Envoy Extraordinary and Minister Plenipotentiary at the Court of the Tycoon. It was still to him the Utopia of romancing voyagers—like him who wrote that from the top of a single hill in Nipon could be counted a hundred cities, each as big as Babylon, only much loftier and more populous. His first impressions of Japan were taken at Nagasaki, in June weather,—a dreary glimpse of Dezrina, fine landscapes—partly of Norwegian, partly of Swiss tone, not very tropical, but beautiful nevertheless. Ashore, not even China had prepared him for the Japanese figure, physiognomy or costume. The women, he says, utterly confounded him. "We must be brought up from infancy to the manner to be able to look upon their large mouths full of black teeth, and the lips thickly daubed with a brick-red colour, and not turn away with a strong feeling of repulsion." Patches and powder were nothing to them. And first impressions in Nagasaki, it is to be observed, are less superficial than elsewhere; a walk up the street disclosing to you, on each side the shops, the sitting-rooms, the entire interior of the houses right through to the invariable little gardens behind. It was a holiday, and the town was alive and light with flags, fifes, drums and gala costumes. The palanquins and hammocks used instead of cabs and sedans, and the odd postures of the natives in sitting, saluting, walking or riding, were diverting; but business was on hand. His troubles began; it was difficult to find convenient rooms, and impossible to furnish them when found. However, the Envoy speedily began his excursions, and enjoyed them without alloy,—along the edge of Yeddo bay, from the suburb of Sinagawa into the city,—past the rows of shops and bazaars, and to a garden,—through the ward-gates, by stately Yamaralls, or palaces of princes, amid a motley populace—all very strange to a European eye, particularly the disgraced officers, walking about, unrecognized, with their heads in cages of basket-work.

We may leave undisturbed, for the most part, the Envoy's narrative of his diplomatic dealings, since with them most readers who interest themselves in the subject are tolerably familiar. The pictures of Japan as it lives and moves—as it eats, drinks, dresses and sleeps—as it rides, walks, jokes, bathes and goes to the play—as it buys, sells, digs, sows and reaps—are more tempting, and very capital pictures they are: however, it was necessary to know something of the people from themselves, and, hence, to acquire something of their language. Sir Rutherford found this no light task. There are two languages and systems of writing in Japan—the Chinese and another, nearly a thousand years old, consisting of "phonetic symbols,"—a "syllabary, or alphabet, of forty-seven letters, which, with the addition of certain accents, suffices to convey all the sounds in the language." The nouns have no genders, and they, like Tom Hood's deaf old woman, are "even deaf to the definite article." A speaker has no settled way of expressing I, in describing himself, but says "the person who is before your hand," or "something private." In his animals he has a different class for different classes of objects—as one for birds "including hares and rabbits," and others for liquids, ships, pipes or brooms! Speaking of Japanese paper

in its relation to the Japanese literature, the Envoy says:—

"I received a large box, in which were arranged no less than sixty-seven different kinds, with a description of their uses, carried out with such elaborate minuteness of distinctions, and total absence of all reserve, delicacy, or refinement, as to the details entered into regarding the uses to which each should be applied,—that I was compelled to revise the whole carefully, before it was fit for publication,—and to exercise a large discretion, in the way of omission."

And now for the real truth about Japanese manners and customs:—

"I can conceive nothing more elaborate in the way of tattooing than the specimens supplied by the male population of Japan. And really to see them in their habitual costume (*videlicet*, a girdle of the narrowest possible kind), the greater part of the body and limbs scrolled over with bright blue dragons, and lions and tigers, and figures of men and women, tattooed into their skins with the most artistic and elaborate ornamentation—'scantily dressed, but decently painted,'—as has been said of our own ancestors when Julius Cæsar first discovered them—it is impossible to deny that they look remarkably like a race of savages,—if not savages, in their war paint. The women seem content with the skin that nature gave them, in all its varying shades of olive, and sometimes scarcely a shade at all. I have seen many as fair as my own countrywomen, and with healthy blood mantling in their cheeks—that is, when fresh washed,—and before they have painted cheeks and lips, and powdered all the face and neck with rice flower, until they look like painted Twelfth-night Queens done in pastry and white lead. When they have renewed the black varnish to the teeth, plucked out the last hair from their eyebrows, the Japanese matrons may certainly claim unrivalled pre-eminence in artificial ugliness over all their sex. Their mouths thus disfigured are like open sepulchres, and whether given to 'flatter with their tongues' I cannot undertake in this my novitiate to say, but they must have siren's tongues, or a fifty-horse power of flattery—to make those red-varnished lips utter anything which could compensate man or child for so much artificial ugliness!"

Yet the features of the women, as illustrated in these volumes, are not repulsive, and are sometimes pretty. "The village beauty" and "the house-attendant" might be belles on an English village green. Then, it has been a favourite saying that the Japanese are "ignorant of alcohol," and, therefore, a nation of abstainers. All that Sir Rutherford Alcock has to say is, that he saw in Japan an abundance of drunken people, and that *saki* is an intoxicating liquor. Next, as to the vexed question of public bathing:—

"We pass along the great *tocado*; the people in the streets and shops, attracted by the jingling of the iron stove-men and a line of march, squat down on their heels, as is their manner, to get a peep into the *Norimon*. Men and women steaming in the bathing houses, raise themselves to the open bars of the lattice fronts to look out."

The sketch of a lady's bath-room, by a native artist, is amusing, and reminds one of Lady Wortley Montagu's picture drawn at Constantinople.

The agricultural chapter is agreeable and instructive reading, with its quaint sketches from Japanese pencils. Sir Rutherford Alcock describes the Japanese, those of the provinces especially, as, in the simplicity of their wants, a race of Spartans, with whom fish and rice, tea and *saki*, a shampooing and a bath, constitute the necessities and desires of life. From their agriculture he turns to their manufactures, and indeed they are marvellous craftsmen; but, suddenly, after talking of Arcadia, he roams into a gloomy mood, descants on ant-life and emmet-life, and a "life of respectable brutishness."

"Thus live and die these thirty millions of

human beings, from one generation to another. Yet they do not seem to become more brutish, more degraded, more immoral. What they are now, they seem to have been, without change, centuries ago; perhaps neither much better nor worse, than millions in other lands claiming to be both civilized and Christians!

We have not yet been introduced to the Tycoon himself, "the Most High, Mighty and Glorious Prince, His Imperial and Royal Majesty," as Queen Victoria's letter styles him! Sir Rutherford Alcock had audience of him in his palace—a world of dignitaries in gauze and silk, of black capes, figured trousers, swords and prostrate corpulence—of painted screens, embroidered matting, lacquer, gold, and a sort of cool, airy, cheerful splendour.

The proper reverences having been made and an address delivered, the Most High, Mighty and Glorious Prince said three or four words; Sir Rutherford bowed, the Tycoon nodded, and the Envoy Extraordinary went home.—

"Immediately after, Oribeno-no-kami, a second Governor of Foreign Affairs, made his appearance with a box carried by eight men—a present from the Tycoon, with which he was specially charged, as a time-honoured custom. On the top was a roll of dried fish and seaweed, tied round by a red and white string, made of twisted paper, the only string they use—supposed to be emblematic of humility, and to remind the Japanese that they were 'once a race of poor fishermen, and that by temperance and frugality they had risen to greatness, which only by such virtues could be preserved.' The box contained a series of trays, with a variety of the most *recherché* confectionery, tastefully arranged in variegated rows and figures. The two Governors and chief interpreter, Moriyama, accepted my invitation to breakfast, this answering to their usual noon meal, and seemed to enjoy some preserved mutton and green peas, as well as the champagne; and did not even refuse to eat—in courtesy to their host, probably—some remarkably tough beef, of Japanese growth."

The Envoy made an interesting account of the Holy Mountain Fusi-yama, and a visit to the Spas of Atami, observing a good deal of primitive life by the way, and describing much magnificent scenery. He afterwards undertook a journey over from Nagasaki to Yeddo across the Island of Kiusiu, the narrative of which is equal in interest to anything else in a book interesting throughout, and accomplished a romantic voyage in a junk over the Suonada or Inland Sea, as it is inaccurately termed.—

"The few Europeans who had hitherto taken this inner passage had generally given very glowing descriptions of the surpassing beauty of the scenery. I cannot say I felt disposed to fall into ecstasies of admiration on either occasion."

At Simonoséki, on the shore of this sea, are the head-quarters of a class usually represented in the East by dancing-girls—an organized institution of Japan.—

"Of all things strange and incongruous connected with such a national 'institution,' nothing can well be more extraordinary or bizarre than the gala costume of the whole class, which is closely regulated by sumptuary laws, as is everything else in Japan. With a forest of metallic hair-pins of large dimensions, the hair is trained back from the face, which is elaborately painted and powdered. Rich brocaded robes lightly swathed round the waist and secured by a girdle of many folds, forming a sort of bag or muff in front, complete the costume. The robe descends below the feet, and sweeping behind in a train, gives them very much the appearance of mermaids."

—The girls are sold into this degradation by their parents, and, after some years of it, return to domestic life. Another very peculiar class is that of Daimios, or Princes, the nobility of Japan not being an exclusively happy race, but, on the contrary, pitied for the monotony of their lives by Sir Rutherford Alcock.

We have not previously had a book like this on Japan. As a narrative, it is excellent; and as containing the results of large observation and close study among a strangely-interesting people, it possesses an importance for all thinking readers. Certainly, every reader who takes it in hand will find that, with the help of the very meritorious illustrations, he knows more, at the conclusion, of Japan and the Japanese than he knew before; and, perhaps, that the Island Empire loses nothing, when accurately painted, in contrast with the pictures, in vermilion and gold, which have so often been foisted upon the market, and labelled "Japan."

LAW BOOKS.

Shall we Register Title? or, the Objections to Land and Title Registry Stated and Answered. By Tenison Edwards, Esq., Barrister-at-Law. (Chapman & Hall.)—Shall we register title? The question is one of some importance to a large part of the owners of land in England, and one which, so far as we can judge at present, they are disposed to answer in the negative. We were assured, in the speech on the prorogation of Parliament last year, that "the Act for rendering more easy the transfer of land will add to the value of real property, will make titles more simple and secure, and will diminish the expense attending foreclosures and sales." But this Royal prophecy yet remains to be fulfilled. Since that time an office has been established, and certain gentlemen, learned in the law, have for some time been seated therein, prepared to carry out the beneficial objects contemplated by the Act. But nobody comes to register his title. That an Act of Parliament attempting to deal with an evil so great, and so generally felt, as the complication of our law of real property, should thus become a dead letter, even for a time, will surprise all that are not aware of the immense power of the attorneys in such matters. They have, with very few exceptions, used every effort to dissuade their clients from applying for registration under the Act. Many, no doubt, have done this honestly, from that dislike of all change which is strong in every class, but is especially powerful in the law. It is, nevertheless, in our opinion, certain that a large portion of the landowners of this country might obtain most substantial advantages by bringing themselves within the operation of this statute. Few of its opposers are, indeed, hardy enough to deny that to persons possessed of large properties which they are about to sell or lease in building lots, the effect of the Act would be most beneficial; and that this is no small class, the appearance of the country about London and other large cities sufficiently testifies. In this state of things it is well that the public should be made aware of the provisions of this Act, and of the benefits which are within their reach, but which they will not attain, unless they insist upon registration. This is the object of the little book before us, and Mr. Edwards has expended considerable care upon it. The objections which he answers have but little weight; indeed, it speaks much in favour of the Act that, notwithstanding the number of its assailants, their cleverness, and the hearty good-will with which they have made their assaults, so little that is really objectionable has been discovered.

Every Man's Own Lawyer. A Handy-Book of the Principles of Law and Equity; comprising the Rights and Wrongs of Individuals. By a Barrister. (Lockwood & Co.)—The author, with professional prudence, fully recognizes the fact that the assistance of a lawyer is sometimes a necessary evil. Yet, as this recognition is contained in the preface, which of course few of those who consult this book will read, we consider that the tendency of the volume is extremely dangerous. It is, no doubt, to be desired that all persons should have a general notion of the laws under which they live; but any book which endeavours to do more than to supply such a general notion will, we believe, be found to be a snare which will entangle many of its readers in lawsuits, Chancery suits, county courts, bank-

ruptcies, and all sorts of abominations. What can be the use of instructing the unprofessional reader (and for such only is the book intended) in the different kinds of actions at law, the effect of the death of plaintiff or defendant, or such like matter? Such information is perhaps no worse than useless; but there is much in this book which is not only useless, but dangerous. Amongst the latter we must class the directions as to the making of wills. That any non-professional person should now be found rash enough to make his own will, is a phenomenon only to be accounted for by the supposition that it is ordained that Chancery barristers shall never disappear from the earth, and that the public are imbued with a self-destructive instinct for the purpose of carrying out this ordinance.

A Practical Treatise on the Law relating to Mines and Mining Companies. By Whitton Arundell, Attorney-at-Law. (Lockwood & Co.)—This little book is calculated to convey such a general knowledge of the laws relating to mines and miners as an intelligent man, connected with this branch of trade, and too wise to aspire to be his own lawyer, would wish to have. It gives the outline of the legal management and working of a mine from its formation to its winding up, whether it be a joint-stock company, or be carried on upon the cost-book system, with the rights and privileges of the miners, and the law as to the rating of mines. There is also a sufficient sketch of the history, jurisdiction and practice of the Stannaries Court, with a useful appendix of simple agreements, leases, &c. The author has executed his work with care and ability, and has produced a "handy-book" on the law of mines, which will be found sufficient for all purposes which a work of this kind can be expected to answer.

OUR LIBRARY TABLE.

Notices of Rocks and Fossils in the University Museum, Oxford. By John Phillips, M.A.—Good museums seldom have good catalogues. That which would be thought to come first often comes last; and we could name first-class geological collections with third-class catalogues, and some with none at all. Not only should there be good catalogues, but all the fossils should be labelled and numbered,—and the numbers refer to fuller explanations in catalogues. Something of this kind is in progress at the Oxford Museum. The present publication is intended as an interim help, and such it will certainly prove. Let us hope that, in the end, Professor Phillips will issue a full explanatory catalogue which shall prove a model for other museums. That he can do this is quite certain; whether he will do it remains to be ascertained.

Elementary Treatise on Physics, Experimental and Applied. By Prof. Ganot. Translated and Edited from the Ninth Edition, with the Author's sanction, by E. Atkinson, Ph.D. (Baillière.)—This treatise may be safely recommended for use to the classes devoted to the several branches of physical science in schools and colleges. In nearly every section we find the information is brought down to the most recent periods: it is to be regretted that it is not so in all. We do not see that anything could be more satisfactory than the chapters devoted to the mechanical powers, to hydrodynamics, and to heat. We could, however, have desired that the sections devoted to light—especially in its chemical relations and to electricity—should have treated of the recent discoveries in those sciences more comprehensively. It may be that the author, and the translator and editor, felt it to be impracticable, within the limits to which they have confined their labours, to do more than glance at those discoveries which are opening out some of the widest fields upon which to exercise the powers of the intellect; especially those of spectral analysis, and those which embrace the all-important study of the osmose forces of Professor Graham. It should, however, have been remembered that there is no single work to which the student can be referred for information. He must plod with much industry through the Transactions of British and Continental societies before he can make himself

acquainted with the present state of our knowledge on the subjects referred to. It is not unusual for writers on science in France and in Germany to ignore the labours of English scientific discoverers. This is to be regretted; but it is still more to be regretted that the editor of the present work has not relieved it from the liability to censure on these grounds. The "getting up" of this 'Elementary Treatise' is good; the illustrative woodcuts are excellent, alike in drawing and in execution.

Holiday House: a Book for the Young. By Catherine Sinclair. (Edinburgh, Wood; London, Houlston & Wright.)—Miss Sinclair is of opinion that children are sore sufferers from the pedantry and stiffness of the literature provided for their amusement and edification. Exclaiming against the tractates on the 'ologies which now-a-days make up the chief part of a child's library, she endeavours to "paint that species of noisy, frolicsome, mischievous children, now almost extinct, wishing to preserve a sort of fabulous remembrance of days long past, when young people were like wild horses on the prairies rather than like well-broken hacks on the road; and when, amidst many faults and eccentricities, there was still some individuality of character and feeling allowed to remain." To effect this, the author puts upon the stage a heedless and frolicsome boy and girl, named Harrie and Laura, who have no sooner been whipped for one piece of mischief than they are engaged in a fresh prank which renders necessary another application of birch or tawse; "for," observes the writer, derisively alluding to the humane system which prevails in nurseries of the new fashion, "in those days it had not been discovered that whipping is all a mistake, and that children can be made good without it." Unquestionably, Harrie and his merry little sister thrive and do well, in spite of Mrs. Crabtree's severe penal code. Although so much is said of their punishments, the reader neither sees their tears nor hears their cries; and at the end of the volume, after they have kept all their friends, except awful Mrs. Crabtree, in long, unbroken laughter, they make up their minds to be good upon earth until they may be happy in heaven. That there is an abundance of fun in 'Holiday House,' buyers of children's books may be assured; and the worst result that can follow from a perusal of its incidents will be an erroneous impression on the minds of little readers that it would be very nice to be like Harrie and Laura, and have plenty of whippings.

Tales and Sketches. By Hugh Miller. Edited, with a Preface, by Mrs. Miller. (Edinburgh, Black; London, Hamilton, Adams & Co.)—Those who wish to possess the writings of the author of 'The Old Red Sandstone' complete will buy this book; few other persons, we imagine, will do so. Buying, moreover, does not imply reading, which, in this case, will be found tedious work. There are not many tales which cannot, by their fancy or their folly, amuse a lover of fiction who has a willing mind; but these are among the exceptions. They are not so much positively bad as tediously respectable. They do not contain a single character for whom we can prevail on ourselves to care—a single passage that invites us to pause and think—a single touch that draws tears. The Sketches, which are recollections of Ferguson and Burns, and a character of Mr. Forsyth the merchant, are not more happily executed. Indeed, the accuracy of Miller's recollection may be in some cases doubted, provided that we are not to accept these as among "imaginary conversations," but as *bond fide* records of that which the recorder believed to have passed. We cannot conceive that the Ayrshire Ploughman was so heavy a talker as he is here made out. The fame of Hugh Miller is too firm to be endangered by this publication of his minor literary efforts; but it is none the less injudicious.

Sir Aberdour; or, the Sceptic. A Romaunt. By Walter P. J. Purcell, Esq. (Pickering.)—This is a book of verse in the Spenserian stanza, with amazing notes, the praising of which may be fairly handed over to persons less sceptical than we are.

Karl and the Six Little Dwarfs. By Julia Goddard. (Bell & Daldy.)—The six tales for children

contained in this pretty gift-book are greatly superior to the ordinary run of nursery literature. The one we most like is the last, "An Episode in the Life of Andreas Toffel." Little readers will approve the moral of the story, and resolve not to imitate the worldly-minded shoemaker, who threw off his "true love" because she remained poor, when he suddenly became rich.

Parvula, &c. By Minimus. (Trübner & Co.)—We are informed by a sub-title that 'Parvula' is a collection of little rhymes concerning little flowers, little birds, little girls, &c. In fact, everything in the plan of the book is "little." The merit, unfortunately, is no exception to the rule of diminution. Good intentions and kind feelings are always apparent; but, in seeking to adapt himself to juvenile readers, the author becomes, not child-like, but childish.

The Crown of Success; or, Four Heads to Furnish: a Tale. By A. L. O. E. (Nelson & Sons.)—Dame Desleg makes over the guardianship of her four little children, Matty and Lubin, and Dick and Nelly, to Mr. Learning, who presents each of the children with a cottage of Head, and exhorts them to buy furniture for the new dwellings at the neighbouring town of Education, and promises a crown of success to the child whose house, on examination, proves to be best furnished. The story goes on to set forth the various ways in which the children go to work, and to describe the various degrees of success and failure consequent on their exertions. The moral is, that no child deserves a crown of success who is not industrious, and that no industrious child can make sure of winning a crown of success whose labour is not judicious as well as persistent. A more entertaining and salutary story for merry, scatter-brained, careless children has rarely been put on paper.

The Holiness of Beauty; or, the Conformation of the Material by the Spiritual. By W. Cave Thomas. (Ellis.)—That spiritual forces have a conforming influence upon matter, is the thesis which Mr. Ellis maintains. His particular deduction from it is the power of Christianity to restore man to physical beauty, health and longevity. The tone of the book is earnest and thoughtful, though the facts and authorities cited do not always bear out the conclusions drawn from them. We cannot enter minutely into the argument, which, being chiefly theological, is beyond our province.

The Light in the Robber's Cave. By A. L. O. E. (Nelson & Sons.)—The interest of this well-written story, by a practised writer of tales for children, is concentrated in the character of Horace Cleveland, a hot-tempered, domineering lad. Whilst he is travelling in Calabria the boy is captured by banditti, and after undergoing many hardships and perils contrives to escape. The incidents of the narrative are improbable, and a tone of false romance pervades many passages; but the book is spirited enough to amuse young readers, and, on the whole, good enough to merit commendation.

Wrong Roads—[Les Fausses Routes, par André Boni.] (Paris, Jung-Treutzel.)—These mistaken routes do not lead through pleasant pastures; they are very dull indeed, and not worth following.

Pompadour Tales—[Contes Pompadours, par Alfred des Essarts.] (Paris, Dentu.)—Slight, light, and not very amusing.

Of Miscellaneous Publications we must announce, Volume I. of *Theodore Parker's Collected Works*, Edited by Frances Power Cobbe (Trübner & Co.)—The volume of *Cassell's Illustrated Exhibitor* (Cassell, Petter & Galpin).—*Transactions of the National Association for the Promotion of Social Science, London Meeting, 1862*, Edited by G. W. Hastings (Parker, Son & Bourn).—*Mr. Thom's Irish Almanac and Official Directory for 1863*.—*The Clergy List for 1863* (George Cox).—*Mr. William Thomas's Universal Newspaper and Periodical List*.—*The Newspaper Press Directory and Advertiser's Guide*, by C. Mitchell & Co.,—*The Post Magazine, Almanac, and Insurance Directory, 1863* (Pateman).—*Post Office Almanac* (Tresidder).—*L'Année Scientifique et Industrielle*, par Louis Figuier (Hachette).—Parts VI. to XXII. of the Re-issue of *British Wild Flowers*, Illustrated by John E. Sowerby, Described by C. P. Johnson (Van Voorst).—*On Our Knowledge of the Causes*

of the Phenomena of Organic Nature: being Six Lectures to Working Men, by Prof. Huxley (Hardwicke).—*Science Elucidative of Scripture and Not Antagonistic to it*, by J. R. Young (Lockwood & Co.).—*Count Eymont as Depicted in Painting, Poetry and History*, by Gallait, Goethe, and Schiller, by H. Schütze Wilson (Smith, Elder & Co.).—*A Trip to Constantinople; the Women of Turkey; Harem Bondage; and Miss Nightingale at Scutari Hospital*, by L. Dunne (Sheppard).—Volume II. of *Tales and Sketches of Lancashire Life*, by B. Brierley (Simpkin).—*A Visit to Lancashire in December 1862*, by Ellen Barlee (Seeley).—*Date Obolus Lancastria*, F. E. G. (Bell & Daldy).—Part I. of *Dictionnaire Général de la Politique*, par M. Maurice Block (Williams & Norgate).—*Le Coton, son Régime: ses Problèmes, son Influence en Europe*, par Louis Reybaud (Paris, Lévy).—*Essai d'un Dictionnaire des Homonymes Français*, par E. Zlatogorskoi (Trübner & Co.).—*Les Matinées Royales, ou l'Art de Régner, Opuscule Inédit de Frédéric II., dit le Grand, Roi de Prusse* (Williams & Norgate).—*The Records of a Banished Life*, by H. Schütze Wilson (Waterlow).—*Kaiser Sigmund, a Ballad*, by H. Schütze Wilson (Waterlow).—*Philo-Socrates, Part V., Among the Boys* (Smith, Elder & Co.).—*An Answer to Mr. Falconer on the Assumption of Surnames without Royal Licence* (Simpkin).—*Proceedings of the International Temperance and Prohibition Convention held in London, 1862*, Edited by the Rev. J. C. Street, Dr. Lees, and Rev. D. Burns (Caudwell).—*The Card Ornament Maker* (Myers & Co.).—*Dr. Roth's Gymnastic Games: a Series of Illustrated Cards* (Myers & Co.).—*Report of the Weather of 1862*, by T. Plant (Smith & Son).—*Pattie Durant: a Tale of 1662*, by Cycla (Virtue, Brothers & Co.).—*Retribution*, by Mrs. C. L. Balfour (Glasgow, Scottish Temperance League).—*A King Play and Earl Gerald*, by Mrs. T. E. Freeman (Freeman).—and Part I. of *The Key* (Henderson).

LIST OF NEW BOOKS.

- λ Beckett's (Sir W.) The Earl's Choice, and other Poems, 6s. 8v.
- Adventures of a Sailor-Boy, by an Old Sailor, 12mo. 2/6 cl.
- American Question, and How to Settle it, post 8vo. 10/6 cl.
- Bateman's General Highway Acts, 2nd edit. by Welby, 12mo. 9/
- Blunt's Readings on the Morning and Evening Prayer, 3rd ed. 3/6
- Child, The Woman's Story, 3 vols. post 8vo. 3/6 cl.
- Byrne's Dual Arithmetic, 8vo. 10/6 cl.
- Cairnes's The Slave Power, its Character, Career, &c., 2nd edit. 10/6
- Caupbell's Poetical Works, with Notes by Hill, new edit. 6s. 8v.
- Chamberlain's Plain Reply to Bishop Colenso, 8vo. 4/ cl.
- Child, The Illustrated, &c. 2/1 cl. ft.
- Clark's The Redeemer, a Series of Sermons, 12mo. 5/ cl.
- Clyne's Ballads from Scottish History, 6s. 8v. 6/ cl.
- Colonial Office List for 1863, by Sergeant and Birch, 8vo. 7/ cl.
- Cornish's Religion of School Life, Addresses to Boys, 6s. 8v. 2/6
- De Porcet's Fables Parvenues, in French, 12mo. 4/ cl.
- Dod's Peerage, Baronetage and Knightage, for 1863, 12mo. 10/ cl.
- Domesday Book, the County of Surrey, Latin & English, 4to. 14/
- Douglas (General Sir H.), Life of, by Fullum, 8vo. 15/ cl.
- Eulenstein's Easy Grammar of the German Language, 5th ed. 4/ cl.
- Exchange, The, Vol. 2, 8vo. 7/6 cl.
- Freer's Last Decade of a Glorious Reign, Henry IV., Parts, 2/1 cl.
- Gaskell's Sylvia's Lovers, 3 vols. post 8vo. 3/1/6 cl.
- Girdlestone's Mechanics and Hydrostatics, 8vo. 5/6 cl.
- Goodman's Sisterhood in the Church of England, 2nd edit. 6/ cl.
- Harmonious Chromas as Applied to Photography, 4th edit. 1/ cl.
- Herbert's Poetical Works, Introduction by Nichol, 8vo. 3/6
- Hutchinson on Certain Diseases of the Eye and Ear, 8vo. 9/ cl.
- Huxley's Evidence as to Man's Place in Nature, 8vo. 6/ cl.
- Irvine's The Sketch Book, 12mo. 2/6 cl.
- Johnson's Memorials of the Rev. J. Galtley, or 8vo. 5/ cl.
- Kirkus's (Rev. W.) Miscellaneous Essays, post 8vo. 7/6 cl.
- Laurie's Fifth Standard Reader, 6s. 1/3 cl.
- Letters on Questions of International Law, 8vo. 7/6 cl.
- Lewis's Principles of Conveyancing Explained, 8vo. 12/ cl.
- Life in Normandy, 2nd edit. 3 vols. 8vo. 9/4 cl.
- Macaulay's Lays of Ancient Rome, illus. new edit. sm. 4to. 2/1 cl.
- Mackay's Via Dolorosa and Hymns to Christ as God, or 8vo. 3/6
- Marcus's Elementary Latin, Progressive Exercises, 12mo. 2/6 cl.
- Marcy's Prairie Traveller, ed. by Burton, or 8vo. 4/6 cl.

[ADVERTISEMENT.]—THE HISTORY OF THE SCOTTISH REGIMENTS IN THE BRITISH ARMY, by ARCHIBALD K. MURRAY, Major of the Ninety-seventh Lanarkshire Volunteer Guards, published by request of his brother Officers, Now Ready, with numerous Illustrations, fcap. 4to. price 10s. 6d. cloth; or with Coloured Plates, morocco, gilt edges, 21s.—"For reliable information this book is valuable, and we hope that many if not all corps of volunteers as well as regiments of the line will add it to their libraries."—London: WARD & LOCK, 158, Fleet Street.

APE-ORIGIN OF MAN AS TESTED BY THE BRAIN.
Athenæum Club, February 12, 1863.

Returning yesterday with a friend, Mr. Pollock, from a Committee of the Royal Literary Fund, he asked me if I had read Sir Charles Lyell's new work. I said I had not: being generally cognizant of the matter of the volume, I had not competed with the eager applicants for it at the Club. "Oh!" he replied, "you ought to see it—you are attacked in it." "How so? I have accepted its best evidences of man's antiquity." He rejoined,—"It is not that; it relates to the Ape-origin question. You are charged with continuing to cite or use erroneous figures of the ape's brain by foreign anatomists after they themselves had admitted them to be erroneous. I assure you it has left an impression, on those who don't know you, of unfairness on your part, which you ought to remove if the imputation has not been fairly made." Of course I went to the Club, got the volume, and found that some observations of mine on the cerebral characters of Man and Apes were so set forth, with remarks and statements, as to convey, and apparently with intention, the impression they had made on Mr. Pollock.

The author refers, *e. g.*, to my Paper, read to the British Association, 1862, in which, "without alluding to the disclaimer by the Dutch anatomists of their defective plates, he (Prof. Owen) observes, that in the Gorilla the cerebrum 'extends over the cerebellum, not beyond it';—correcting the description of the same brain given by Prof. Owen in 1861,—'in which a considerable part of the cerebellum of the gorilla is represented as uncovered.'" This conveys the impression that, in regard to the same brain, I represented it as showing one structure in 1861 and a different structure in 1862.

These are the facts. In 1861 I received a brain which I expressly described as "a partially-decomposed one of the gorilla,"—*Annals and Magazine of Natural History*, vol. vii. p. 457. It had been transmitted in spirits, and served only to show the general characters of the lateral ventricles: the absence, *e. g.*, of the prolongation, as in man, of the "anterior cornu," beyond the "corpus striatum," and the extent of the ventricle backwards into the part called by Tiedemann "scrobiculus loco cornu posterioris." In making this dissection, much of the outer partially-decomposed convolutions were removed, and the figure of the ventricles of the cerebrum accordingly shows a part of the cerebellum exposed. This figure is given in the *Athenæum* report of the Royal Institution Lecture, March 23, 1861. As the state of this brain did not permit me to determine the precise backward extent of the cerebrum, I said nothing about it. My remarks were limited to the internal structures, distinguished by the transverse lines in the diagrams. But I supplied the information as best I might, by subjoining to the figure of my dissection figures of sections of the skulls of the negro and gorilla, from which a true inference might be drawn of the extent of the cerebrum in question, provided allowance was made for the lateral sinuses. Therefore, what Sir Charles Lyell states that I "represented" on this subject is to be understood as merely that which the figure of my dissection represents. I subsequently obtained a satisfactory cast of the interior of the cranium of an adult male gorilla; and my description of this cast in 1862 contains my first and sole statement as to the relative backward extent of the cerebrum and cerebellum in that ape.

My case, therefore, in this matter, as stated by Sir Charles Lyell, is not correctly stated. I do not say that it is unfairly stated, because by "the same brain," he might have meant "brain of the same species," and by "represented," merely that the figure in the *Athenæum* showed so and so. In reference to the figures of the chimpanzee's brain (Lyell, *op. cit.*, p. 482, fig. 54), referred to by Lyell as "distorted," "shrunk" and "defective," it is simply one in which the cerebral hemispheres have glided forward and apart behind, so as to expose a portion of the cerebellum. No part is wanting or shrunk, nor is any part in excess. The true dimensions of each cerebral hemisphere are given, as also a good idea of that of the cerebellum. If, when I published this figure, I had desired to

show, or been at all concerned to show, that the cerebrum in apes did not overlap the cerebellum, I should have been amenable to the imputation which Sir Charles Lyell has sought to fix upon me: if I desired and was really only concerned to show the difference of size in the cerebrum of the highest ape and in that of the smallest normal human brain, the fair and impartial spirit in which I sought to put this character before the public will be vindicated by the choice which I made of the figures of the chimpanzee's brain extant in 1857.

There were two: one by Vrolik and Van der Kolk, in the *Transactions of the Royal Netherlands Institute for 1849*; the other by Gratiolet, in 1854. The latter was the smaller brain: it had been taken from a younger specimen of chimpanzee; the length of the cerebrum, *e. g.*, was 3 inches 10½ lines: in the brain figured by the Dutch anatomists, from a larger and older chimpanzee, the length of the cerebrum was 4 inches 3 lines. I chose, therefore, the latter figure, and selected to contrast with it the smallest of the normal negro's brains figured by Tiedemann in the *Philosophical Transactions*.—"On the Brain of the Negro compared with that of the European and of the Orang-utan," *Phil. Trans.* 1838. 'Descriptions of Hunterian Specimens,' *Physiol. Catal.* vol. iii. No. 1,338 (1835).

The occasion of the reproduction of these figures was the desire to illustrate, from sources not pre-engaged to a special theory, my own in respect to the value of cerebral characters in the classification of the mammalia. Save on this point—the hiatus between ape and man—I derived the other figures of the brains of mammalia from originals, by which I had illustrated previous papers in the *Philosophical Transactions*. And, in regard to the illustration of the quadrumanous character of the backward growth of the cerebrum, I selected therefrom the figure of the smooth brain of the South American ape (*Midas rufimanus*), as showing the cerebrum covering the cerebellum, with a fissure defining the anterior lobe, but without any indication of such definition of a posterior lobe. That name had been loosely given by myself and others to the part of the hemispheres which is co-extensive backward with the cerebellum in most *Quadrumana*.

Our best anthropotomists had confessed that there was no precise boundary, but a gradual transition between the so-called middle and posterior lobes: for the purpose, therefore, of one of the zoological characters of the archencephalous brain, I proposed "relative position to the cerebellum." Before the audience I was addressing, and with the illustrations even of a low form of Quadrumanous brain submitted to them, I assumed that it was understood that in all, save the Lemurine *Quadrumana*, the cerebral hemispheres overlapped both the olfactory lobes and the cerebellum,—at least to the degree shown in my figure of the small ape's brain, fig. 3, p. 19. Entering, then, upon the characters of the human brain, I state, "Not only do the cerebral hemispheres overlap the olfactory lobes and cerebellum, but they extend in advance of the arc and further back than the other."—(*Proceedings of the Linnean Society*, February 17th and April 21st, 1857, p. 19.) In both the original Paper on the Cerebral Classification of the Mammalia and in my 'Reade's Lecture' of 1859, the figures of the larger brains were reduced, and in different degrees. I therefore republished the figures of the chimpanzee and negro brains of the full size in 1861,—with the same view, however, of showing the degree in which that ape's brain "approaches in size and structure" to man. There is no other reference to the cerebellum, or to its proportionate size, than the remark that, as compared with the gorilla, the chimpanzee seems to approach nearer to man. Not one word is said about the relative positions of the cerebrum and cerebellum, or the degree in which the former overlaps the latter in the ape and negro. Yet Sir Charles Lyell (p. 485) quotes this Paper in the *Annals and Magazine of Natural History*, vol. vii., p. 456, 1861, as having been published. His words are, "came out with a new paper,"—"expressly to show the relative and different extent to which the cerebellum is overlapped by the cerebrum in the two cases respectively." This mis-statement is made by Sir C.

Lyell in order to impress his readers with the notion that I had a design to promote and persist in promoting an error, and to mislead the public. In the same spirit, Sir Charles Lyell represents me to state, in regard to the *Quadrumana*, that the "cerebrum extends over more or less of the cerebellum." I nowhere make such a statement. The proposition is affirmed of "the third leading modification of the mammalian cerebrum" (*Linnean Proc.* p. 17)—of that which, "save in very few exceptional cases of the smaller and inferior forms of *Quadrumana*," shows "the superficies folded into more or less numerous gyri or convolutions": it is affirmed of the *Gyrencephala* generally, *i. e.* of *Cetacea*, *Sirenia*, *Proboscidea*, *Perissodactyla*, *Artrodactyla*, *Carnivora*, as well as of *Quadrumana*. Most of these *Gyrencephala*, including the *Ruminants*, show the degree of "less" in the character assigned; almost all the *Quadrumana* show the degree of "more"; and the extent of that degree is exemplified by me in the smooth brain of the little marmoset. It must be remembered that I was communicating a classification zoological paper to a Linnean society, and had the example of Linneus to follow in the succinctness and brevity of my characters. I assumed the requisite amount of zoological knowledge in my candid readers. I did not foresee that forensic craft would be brought to bear upon making out a bill of indictment against me, by reckoning up reticences as negations, and mis-stating the extent and meaning of the application of the characters I proposed. Besides the difference of size between the highest *Gyrencephala* and the lowest *Archencephala*, there was a relative character by which that difference could be zoologically defined; the extension, *viz.*, of the cerebrum beyond the cerebellum in the human brains. No subsequent definition of the front boundary of the posterior lobes, applicable to classificatory purposes, has since been given, excepting that which I proposed, from the relative position of the cerebrum to the cerebellum; whereby the *Archencephala* are characterized, and can be intelligibly defined, as possessing "posterior cerebral lobes." But these lobes, and the supra-cerebellar parts of the hemispheres in man and apes, have certain cavities and structures. Tiedemann, whose labours had added most to our knowledge of the development and comparative anatomy of the brain, had described and figured those which the supra-cerebellar part of the brain of the *Macacus nemestrinus* displayed (*Icones Cerebri Simiarum*, p. 14, tab. ii, fig. 3); and the valuable descriptions of the corresponding structure in the brains of other *Quadrumana* by the anatomists cited by Sir Charles Lyell have confirmed the exactitude and acumen of Tiedemann's perception of the relation of these structures to the more complex infoldings and windings of the posterior parts of the ventricles in them. It suits Sir Charles Lyell's aim to decry this discovery of Tiedemann's as "mere negative evidence." It is a positive demonstration, and the first, if not the best, of the "scrobiculus parvus loco cornu posterioris" (*tom. cit.* p. 14). The archencephalous brain can accordingly be defined, with accuracy and precision, as possessing the "posterior horn of the lateral ventricle," as contrasted with the "scrobiculus in loco cornu posterioris." But are they not homologous parts? it has been asked, or rather howled. Unquestionably. Just as the "foot" of man is homologous with the "lower hand" of the ape. You may say, indeed, of that "hand," that it is "a foot modified for grasping"; and in the same sense you may say of the human foot, that it is a "hand modified for walking." When Cuvier, in his zoological definitions of *Bimana*, affirmed—"L'homme est le seul animal vraiment *bimane* et *bipède*" (*Règne Animal*, tom. i. p. 70), he offered an unscrupulous antagonist an analogous opportunity for flat contradictions. Young anatomists might have been beguiled to prop up such contradictor, by publishing descriptions and figures of the bony structure of the limbs in oranges, macaques, South American howlers, and other apes, demonstrating "every bone strictly homologous"; and might flatter themselves and impose on some others, that they were exposing the ignorance and mistakes of the master, and supply-

ing him and the world with desirable information. Nevertheless, for the purposes of zoology, it remains necessary to name certain modifications when found to be fixed characters of groups, as, e. g., "manus," "pes," "pollex," "haller," "cornu posterior," "scrobiculus," "hippocampus minor," &c., and to predicate of these as being peculiar to the groups they characterize. The time may arrive when such helps and artifices of the classifier will be no longer needed; when they may give way to higher considerations or to still wider generalizations. But it had not arrived when I submitted to the Linnean Society, in 1857, my proposed improvement in the classification of the Mammalia.

The largest brain of a chimpanzee there figured was the fairest and most appropriate subject of comparison with the smallest normal human brain. What I have read of the history of the Hottentot Venus, of the absence of some of the common instincts of her sex as they are manifested by other females of her race, impresses me with the conviction of her idiocy. There are skulls of both males and females of the Boschman in this country which afford a truer average of their cerebral development than is represented by the abnormal brain selected by Lyell to compare with the chimpanzee. But this leads to considerations quite apart from those of the Zoological Memoir which he criticizes. The cerebral characters of the Archencephala, according to the definitions given, are true. Sir Charles Lyell represents their promulgation as causing a general astonishment in the anatomical world. This is a figure of rhetoric, to use the mildest term. No exception to them was taken until the ape-origin of mankind began to be remooted; and the nature of this objection I have already exemplified. Does Sir Charles Lyell really think it believable that a communication formally read and fully discussed at two meetings of the Linnean Society (February 17 and April 21, 1857), referred, reported on, published,—I say nothing of the author and the pains he had long bestowed on it,—could have been suffered to appear with errors so gross as to astound the whole anatomical world? And that too in respect to large and conspicuous structures! He is deceived. All the points to which exception has been taken were fully discussed in 1857. The "supra-cerebellar part of the ape's brain," the "scrobiculus in loco cornu posterioris," were as well understood by the anatomists and physiologists then present as now. It was admitted that, subject to the definitions I had given, the archencephalous characters might receive the brief and intelligible definitions which I proposed for them. Their analogy with the Cuvierian definitions and restricted terms and applications of locomotive characters was obvious. My arguments for the superior importance of cerebral over pedial structures were unrefuted; if the latter supported an ordinal distinction, the former must support a subclass. Of course I am aware of the inferior nature of such considerations—of these zoological artifices and distinctions,—only at present we cannot get on without them. What I chiefly desiderated at that time was some knowledge of the gorilla's brain: I had sought to exemplify it by the section of the adult cranium figured in the *Athenæum* for March, 1861, and in an earlier part of the *Zoological Transactions*; the only example that reached me was in a state yielding little more than some idea of the form and extent of the latent ventricles, and the degree in which the "scrobiculus" was developed. I then obtained a cast of the interior of the cranium, and when, in pointing out its characters by comparison with the human brain at Cambridge, I did not allude to the fact that in Vrolik's figure of the largest specimen of a chimpanzee's brain then extant, the displacement of the cerebral lobes exposed a part of the cerebellum, and that more of the cerebellum was visible than would be seen if the brain were *in situ naturalis*, as Prof. Vrolik had very recently admitted: or, as Sir Charles puts it, I described the gorilla's brain "without alluding to the disclaimer by the Dutch anatomists of their defective plates" of the chimpanzee's brain. In order that this remark should produce the effect and leave the impression intended, Lyell pleads to show that I was mainly concerned in misinforming the world that, in the

Quadrumana, the cerebrum does not overlap the cerebellum. I have already refuted that by referring to the brain of the small ape figured side by side with that of the one which I selected on account of its large size, in the Memoir of 1857, p. 19. Yes, says Lyell (p. 481), "in that Memoir you illustrated the difference between the Human and Simian brain by figures of those of the *Midas rufimanus* and one of the chimpanzee." But, adds my accuser (p. 485), in 1859, "In his Reade's Lecture, delivered at the University of Cambridge, the only illustration which he gives of an ape's brain was a reproduction of that distorted one of the Dutch anatomists already cited." Now, this assertion is not merely inaccurate,—it is the opposite of truth.—Whoever will turn to page 25 of the Lecture cited, will see that the same illustrations from the ape-series of the overlapping cerebrum are given (figure 6) to correct the impression which a non-anatomist might derive from the figure of the larger ape's brain (figure 7), selected, as appears, in the original Memoir published in the Linnean volume of 1857! The refutation is, indeed, so easy and obvious, that I believe the mistake has been made accidentally, and quite unintentionally, by Lyell. At most, it may indicate the *animus*. The subject of my 'Reade's Lecture' being also that of my original 'Memoir,' to illustrate the classification of the mammalia, and their primary distribution according to cerebral characters, the same obligation weighed with me not to understate the size which the brain reached in the ape-series; and I again gave that figure, which, however often it may be stigmatized as "defective, shrunken or distorted," still shows the full and true dimensions and convolute structure of the cerebral hemispheres; and at that period even the Dutch anatomists had not deemed it necessary to own the impeachment that the cerebellum was unnaturally exposed.

Mr. Pollock might well ask, "Are not you and Lyell on good terms?" Of a surety, it is no friend's work to so state a case as to leave the impression which that statement had left on the mind of the Master of Exchequer; to so mingle facts with rhetorical comments and mis-statements of different degree, as to build up the imputation without directly uttering it. Had Sir Charles been on his old circuit, he could not have drawn up the bill of indictment and pleaded for a verdict more subtly. But then the accused would have had the opportunity to make at once his defence, and an impartial judge would have summed up before the verdict: the poison would have been properly met by its antidote. But now this infernal calumny goes forth in the most popular book of the season, and produces its blight before any remedy can be applied. Sir Charles has here a great advantage over me; but it is one of which no kindly-disposed nature will envy him. The tree is known by its fruit; and if such be the produce of the fair tree of knowledge which Lyell has so skillfully decked and set off to the world, it cannot be a sound and wholesome one. RICHARD OWEN.

LES MATINÉES ROYALES.

Hampstead, Feb. 17, 1863.
A contemporary, in discussing the 'Matinées,' mentions Bonneville as connected with the original publication. This, I believe, is after a statement or suggestion of Thiébault's, though Thiébault does not name Bonneville. Nicolai, always a trustworthy guide than Thiébault, incidentally touches the subject twice, and puts it on its proper footing. Speaking of some pamphlet, 'De l'Amérique et des Américains'—another of those numerous pieces which were fathered upon Frederick by speculative publishers and others—he says,— "This pamphlet, still well known in Berlin, is not by the King; its author is a Frenchman of the name of Bonneville, who for unknown reasons has been several years a prisoner in the citadel at Spandau. People thought that he wrote the pasquil, 'Les Matinées du Roi de Prusse,' and also that he purloined—but it is not known from whom—the 'Poésies Diverses' (Poems by Frederick, which were stolen and surreptitiously published). Whether this (of the 'Matinées' and the

'Poésies Diverses') be true, is a matter of conjecture (*sei dahingestellt*)."—(Nicolai, 'Freimüthige Anmerkungen über Zimmermann's Fragmente,' Berlin, 1791, i., 181.) Then, at a later period, again recurring to the subject, he gives what he has learnt, from good authority, to have been the reason of Bonneville's imprisonment (some swindling transaction), and adds—"That there was any charge against him about the 'Matinées' and the 'Poésies Diverses,' is considered doubtful by some (*wird von einigen bezweifelt*)."—Ib., ii., 254. I give the more important original German words for the especial behoof of my candid critics, Messrs. Williams & Norgate, who, in a pleasant manner of their own, but resting in mere general insinuations, accuse me of mistranslating, "probably from ignorance," and of misrepresenting. If these erudite and polite gentlemen will specify *what* passages I mistranslated, and what "facts" I misrepresented, I shall, if needful, be happy to meet their charges. In the species of amenities which form the staple of their letter, they shall have the field all to themselves. The announcement of the intended commemoration of the Centenary of the Peace of Hubertsburg I took from Prof. Preuss's 'Notice' in the *Nationalzeitung*, to which I otherwise repeatedly referred in my former letter. That, with this 'Notice' before me, I inadvertently seem to have written "Utrecht" for "Hubertsburg," has proved such a godsend to the publishers of the 'Opusculé Inédit' and of the *Home and Foreign Review*, that they really owe some small hecatomb to Mercury for it. But what they still owe to the public—and all the more after your Correspondent "W. B.'s" straightforward history of his copy of the 'Matinées'—is, a statement of the source from which they derived the exclusive knowledge of M. de Méneval's feat at Sans-Souci, and of the successive stages by which their "texte authentique," with the original spelling unaltered, has come into their hands.

THE GERMAN TRANSLATOR OF CARLYLE'S 'HISTORY OF FRIEDRICH.'

LITERARY LARCENY.

Hammersmith, Feb. 14, 1863.
SOME four or five years ago I published a little book of travels called 'Southern Lights and Shadows,' which—thanks to kindly notices in your columns and elsewhere—was tolerably successful. The work, however, was sadly abused in the Australian colonies, and, for some reason or other which was never made apparent to me, gave some offence to the Methodists of New South Wales. The volume has, I think, run out of print, and is probably by this time forgotten. Nevertheless, it has strangely been decreed that a leader of the body who were most offended at it shall revive and perpetuate its "obnoxious" pages.

Within the last day or two a "second edition" of a book entitled 'Australia; with Notes by the Way,' by Frederick J. Jobson, D.D., has come under my notice. I cannot exactly tell what led me to look into its pages, unless from a desire of seeing how a Methodist divine would deal with a subject which, under my treatment, had proved so unpleasant to the Wesleyan community of Trans-Pacifica. Imagine my surprise when I found that, from the opening to the close of Dr. Jobson's volume, the leading paragraphs were stolen from my 'Southern Lights and Shadows'! This is a serious charge to bring against any author, and especially serious when brought against an author who carries 'D.D.' at the end of his name, that I feel bound to support it with direct and unmistakable evidence. I append, therefore, in parallel columns, a few of the passages which appeared in 'Southern Lights and Shadows' in 1859, and which now re-appear, with but the slightest and shallowest disguise (a disguise of so transparent a character that, like the *coa vestis*, it only serves to reveal what it affects to hide), in 'Australia; with Notes by the Way,' in 1863:

My Book. The evenings in Australia are singularly beautiful. I were, at times, singularly have often read a newspaper beautiful. The moon was so by the light of the moon. bright and large that you The stars are very white and could see to read by it. The

large, and seem to drop pendulous from the blue, like silver lamps from a dome of calaita.—P. 85.

All Dr. Jobson does here is to give us his new lamps of crystal for my old ones of silver.

My Book.

In Sydney and its immediate neighbourhood there are no less than five hundred public-houses, many of them as great and garish as the gin-palaces of London.

P. 52.

As Dr. Jobson was writing three years after me, he, no doubt, conceived it a safe and subtle alteration to turn the word "less" into "more"; but as the "five" was a misprint for three in my book, his caution has only made the trap into which he has put his foot clip it the closer. A similar maladroitness characterizes the reverend author's picking and stealing throughout. The reader will see it strikingly displayed in the next example, where the sentences are so unaltered in themselves, and yet so changed in their sequence and order, that, like the boy who steals the eggs in 'Parents and Guardians,' Dr. Jobson evidently thinks he has only to shift position to annihilate identity.—

My Book.

The white earth cracks as it passes over it, as though it were a globe of crystal struck by some invisible and mighty hand. The air is hot and murky, as the breath from an oven; and you see trees wither—the fruit shrivel and drop from the vines—as though the Last Seal were opened, and the breath of the Destroying Angel had gone forth.... The dogs in the street lie down and hide their dry protruding tongues in the dust.... The "Southernly Buster," as the change is called, generally comes early in the evening. A cloud of dust—they call it, in Sydney, a "brickfielder"—thicker than any London fog, heralds its approach, and moves like a compact wall across the country. In a minute the temperature will sink fifty or sixty degrees; and so keenly does the sudden change affect the system, that... your great-coat is buttoned tightly around you until a fire can be lighted.... The sight is grand and awful, and hints of the Final Apocalypse.—Pp. 86-88.

stars, too, were brighter and larger than ours in appearance, and seemed to drop like pendent lamps of glittering crystal from the deep blue dome above.—P. 166.

Dr. Jobson's Book.

There are more than five hundred public-houses in Sydney and its immediate neighbourhood, and some of them are... gay and garish as our own street-corner gin-palaces.—P. 167.

There are also storms of heated dust, which pass over the city, and move like a compact wall across it, darkening the sun, reddening the sky, withering the trees, and making the scorched earth crack under them, as if it were a globe of brittle pottery. These hot dust storms are terrific in their aspect to strangers. One would suppose that the Seals of the Apocalypse were being broken.... At these times, the thermometer rises to one hundred, and more, in the shade, and all things are still and breathless. The "brickfielders" are usually followed, before the day closes, with "south-busters," as they are named, from their coming from the sea at the south; and then the mercury will suddenly sink down forty or fifty degrees, until fires and great-coats seem desirable. One of these "brickfielders" passed over Sydney while we were there: when it seemed, as we looked from our balcony at the Glebe towards the city, as if the Last Seal were opened, and the destroying angel had received his commission to go forth.... Birds drop dead from the trees, insects die, dogs and cattle put out their tongues with burning dryness, and trees and plants shrivel up like bunches of scorched sticks and straws. Scarcely a blade of grass, or a leaf upon a tree, is left; and human beings fall down dead in the streets.—P. 167.

In the first-quoted plagiarism Dr. Jobson gave "crystal" for "silver"—in the above he supplies "brittle pottery" for "crystal." My "dogs" only are afflicted by the hot wind—Dr. Jobson blasts the beasts of the field and the birds of the air. My "great-coat is buttoned tightly around" me—Dr. Jobson's "great-coat" is only thought "desirable." But this is accounted for, as with me the thermometer "sinks fifty or sixty degrees," while with Dr. Jobson it "sinks down" but "forty or fifty." My "compact wall," "Last Seal" and "Apocalypse," however, are taken bodily. It is scarcely worth while pointing out the ludicrous errors which, in "dodging" my description about, Dr. Jobson has committed. The "brickfielder" is not the hot wind at all; it is but another name for the cold wind or "southerly-buster," which follows the hot breeze, and which, blowing over an extensive sweep of sand-hills, called the Brick-fields, semicircling Sydney, carries a thick cloud of dust (or "brickfielder") across the city. How true is old Butler's remark that some plagiarists

accompany their robberies with murder to prevent detection!

My Book.

It (the mosquito) comes buzzing against your cheek with a drowsy-sing-song whir, fixes its suckers into the flesh, and bounds off with another song—a kind of *carmen triumphale*—leaving a large red mark behind it, which is far more irritating than a healing blister.... They have a great relish—being epicures in their way—for the round, fat, mottled part of the hand riding the off-side of the palm. In about two seconds one will sow it with bumps and blisters from the wrist to the little finger.... They, too, especially, hate and harass the new chum.—Pp. 83-4.

Dr. Jobson's Book.

The pungent bites of musquitoes, which in the evening, whether in public, social, or private life, come buzzing against your cheek with a peculiar whir, fixing their blood-suckers in the flesh, and then, after drawing their full portion, flying off with a flutter of triumph, leaving a blotch behind, which, until ripened to a yellow head, is far more irritating than a healing blister.... And they have evidently a high relish for the round fat part of the hand, from the wrist-bone to the little finger. If this part be exposed from under the coverlid for five minutes, it will be sown all over by them with bumps and blisters, not to be forgotten till the next night, if so soon. They, too, like the boys in the streets, have wanton pleasure in vexing "new chums."

Pp. 158-9.

One very brief illustration more, and I have finished with Dr. Jobson:—

My Book.

The shark gleaming, green and still, just an arm's depth below the surface.—P. 131.

Dr. Jobson's Book.

Sat., March 2.—Pleasant passage down the harbour, in which, gleaming, still and green, at not more than an arm's depth from the surface, the ravenous shark might be seen.—P. 173.

This last example raises one's gorge. I close my book with an attempt at a panorama of scenery, and, in the middle of a sentence, are the words quoted in the left-hand column above. Dr. Jobson, after concluding his description of Sydney with these words,—"Only let the churches of Christ send an adequate number of missionaries to India, China, the multitude of the isles, and to the interior of Africa, and these heathen regions shall assuredly be evangelized; these realms of sin become the kingdom of our God and of His Christ!" (p. 174)—opens the next section of his book with—*my fish!* If a whale once appropriated a missionary, verily here is a missionary appropriating a shark!

In closing, let me say that my only object in asking you to insert this letter is to direct other writers on the subject to Dr. Jobson's book. If he has taken so much from me, I have no doubt he has—to use an Australian phrase—"jumped other claims" for the balance of his nuggets.

FRANK FOWLER.

SISTERHOODS IN THE CHURCH OF ENGLAND.

February 16, 1863.

MAY I, in justice to my co-religionists, ask for a few lines in your journal, to say that we Catholics share to the full the disgust and horror so ably expressed by your reviewer in his notice of Margaret Goodman's revelations of the cruel mummeries practised by Miss Sellon. That a portion of "ye Lady Superior's" plan should be a hideous and foolish travestie of some parts of the constitutions of our religious orders, makes us perhaps feel, even more than Protestants, an anxious desire that these retreats of inhuman torture should be subject to some control and some inspection.

I will not lengthen my note to mention even one of the safeguards with which our religious establishments are jealously surrounded:—suffice it to say, that, with us, so close and so careful is the network of supervision—so simple and so available the power of appeal, either to ecclesiastical authority or to any chosen spiritual adviser, that it would not be many days (were they indeed Catholics) before "ye Lady Superior" would be expelled her house, and the reverend guide of these unfortunate young women would be suspended for the assumption of a special spiritual power which we do not hold as belonging to our priesthood.

A. P.

DECORATIONS FOR ST. PAUL'S.

FOR a long time the idea of completing the metropolitan cathedral with something like its architect's originally intended splendour has been before the public. Mosaics, frescoes and other forms of ornamentation have been suggested, many methods of applying each mooted, and something done so far as subscription from the City companies and private persons permitted. This beginning took the form of gilding, applied to the bends of mouldings that traverse sections of the choir, enclose the great arches bearing up the cupola, or go overhead from side to side in the nave. A new life came upon the cathedral when it began to be used as a church, by holding special services in the vast "crossing" the dome roofs in. Subscriptions purchased the new organ. A pulpit has been added, and new statues have filled some of the space that seemed fit only to hold the mighty dead of an empire. So much had been actually done, that to do more seems practicable, if not imperative: therefore, the authorities cast about for artists to supply designs with which a beginning of the scheme of decoration might be made. A broad suggestion, as to the general effect of the whole, was given by Mr. Penrose, cathedral architect, or "surveyor," as he is styled, after the fashion of Wren's time, which no man, filling the post of Wren, would desire to change.

A part of this general suggestion, which, by the way, was exhibited at the International Exhibition (No. 1546), pointed to filling with pictures the spaces upon the ceiling of the roof, or semi-dome, as it is styled, of the east end, or apex immediately behind the altar. These spaces are three in number, and their position indicates the desirableness of having some grand subject, apt to the uses and character of the building, as a whole, in the centre compartment, and a subordinate subject in the lesser divisions. The situation, which makes these spaces visible from nearly the whole length of the church, suggests this as the fittest point for beginning a scheme of decoration. If satisfactory, the works would certainly enlist sympathy with the plan, and bring aid towards its completion; if unsatisfactory, they would not, as on other spots they must, break up any portion of the interior into two parts. The Protestant origin, the uses and actual shape of these spaces, may be said to have suggested the subjects for the designs. Where in a late Mediæval or Roman Catholic structure the picture of the Virgin would find place, in St. Paul's might best be that of Christ the Intercessor. So it has been planned, and directions were given to the artists to place in the side spaces figures of Moses and Elias. Messrs. G. F. Watts, F. Leighton, A. Stevens and Henri de Triqueti were invited to furnish designs in competition. The first-named of these artists declined to compete, but agreed to contribute a design. Mr. Stevens did not respond; the others compete with drawings that are now open to inspection: a decision will shortly be made upon their merits. It is understood that funds are in hand sufficient to execute this part of the scheme.

The idea to be expressed is that grand one of the Saviour and Prophets uniting in the impressive theme of the Transfiguration. The figures are to be seen at a height of eighty feet from the ground, so their size admitted grandeur of treatment rarely attainable. The work of M. de Triqueti, who is, we believe, a young artist, fails to attain this grandeur of treatment. Mr. Leighton's design has, in the centre, Christ seated, with hands slightly advanced from his side, their palms brought forward as in intercession: the face is seen in full front and raised, the eyes looking upwards; the visage slightly bearded, the expression intense and admirably rendered. The artist has given an air of extreme repose and immobility to his composition, fit for the situation proposed for it: that aspect is attained by sobriety and simplicity of the actions, general breadth and massing of the draperies, which cover the whole of the figures, leaving no openings for display of the nude. The figure of Christ seems steadfast, and without manifestation of passion in action. As an architectonic decoration, there is great propriety in so designing the picture. Be-

fore the feet of the Saviour, and bending down, kneeling, with faces to the earth or looking upwards, are figures of worshippers in an ecstasy of adoration, corresponding in the reticence of their actions with that of the principal figure. Moses is placed in the left hand of this division: he kneels, looks upward and forward; his hands, the figure showing in profile, are put slightly back, their palms open to his front—an absorbed action that is singularly expressive. On the other side is Elias, who, kneeling, bends his head and sinks his hands as in adoration.

Mr. Watts has avoided the error of depressing his central and most important figure by too great enlargement of the subordinates. He has given quite a different motive to his design from that of Mr. Leighton. His composition and the attitudes are full of mobility, expression and passion, suited to the theme. Christ soars with a song of glorifying praise, "as upon the breath of a psalm"; his arms, their palms uplifted, are expanded in ecstasy, and raised, as welcoming the light. The face looks straightforward and a little upwards, having a noble spirituality upon the features. About the feet of the figure are angels circling, some shading their eyes from the light above. The overruling effulgence thus most skilfully used to give a central idea and point to the companion is further expressed by the actions of the subordinate figures. On the right of the picture Moses approaches, bending, not with the weight of the tables he bears, but before the central light and the Godhead it symbolizes. The horns of glory his forehead has are made pale, and fade in the brightness from above. On the left is Elias, kneeling, with the light full upon his face; his arms are open, as to embrace it with an air ecstatic and devout—an action grandly mobile. Filling the inner and lower corners of the composition, connecting the whole, so to say, are figures of men and women, souls sleeping.

OUR WEEKLY GOSSIP.

Lord Rosse's installation as Chancellor of the Dublin University took place on Tuesday, when honorary degrees were conferred, amongst others, on Mr. Whitworth as a mechanical inventor, and on Mr. Cooper, of Markree, as an eminent astronomer. During the proceedings it was announced that Sir James South took that opportunity of presenting his twelve-inch achromatic object-glass, with its appendages, to the Observatory of the University. The installation Ode, written by Dr. Waller, and set to music by Dr. Stewart, mentions some of Lord Rosse's predecessors in the Trinity College Chancellorship.

The late prevalence of delightful weather has set thousands of persons asking, "Did you ever see such a February before?" Perhaps Mr. Glaisher, who knows what the weather has been for fifty years or more, will answer the question. Such calm, sunshiny weather during the month which proverbially "fills the ditches" is remarkable. The elder, lilac and black currant trees are in some places bursting into leaf. Gnats have appeared in warm, sheltered lanes; flies have been seen disporting in the sun; and on the 16th a bee was observed foraging among the yellow blossoms of the furze on the heights of Hind Head. The students of periodical phenomena will, no doubt, take note of these particulars. By accounts from Belgium, we learn that genial weather is also prevalent there: more than ten days ago the chestnut trees were in leaf and roses in bloom.

Messrs. Adam & Charles Black have issued a 'General Atlas of the World,' on a scale sufficiently large for the man of business, yet not too large for the elder classes of students. There are fifty-eight plates in all, as many as seven of these being devoted to the illustration of the earth's physical aspects,—land and water—wind and snow—mountains and valleys—the sea-bed, and so forth. The maps are of high excellence as regards drawing and engraving, and the information given in them is brought down to the latest time. A more handy atlas could scarcely be made.

A movement is on foot to erect a statue in memory of James, seventh Earl of Derby, who

was executed for treason against the Commonwealth, 1651, at Bolton-le-Moors, in which town the statue will be placed. Mr. Calder Marshall is preparing the model.

Dr. Gray, in the Preface to his 'Catalogue of Postage-Stampes,' suggests a remedy for the expense of keeping accounts for the few letters not prepaid which may be worthy of consideration, as the question is one of saving several thousand pounds. The system which he suggests has very lately been brought into use on the Continent to a certain extent. In France, they have very lately issued a special stamp, which is employed when local letters in the provinces are insufficiently, or not at all, prepaid. It is inscribed,—"*Postes-chiffre* taxe, 10 (or 15) centimes à percevoir"; that is to say, "to be paid on delivery." The Bavarian Post-office has a special stamp, used for a similar purpose: it is inscribed, "*Bayer Post-taxe, 3 kreuzer, vorn Empfänger zahlbar*"; which may be translated, "Bavarian postage, 3 kreuzer, payable by the receiver." And, we are informed, there are stamps used for the purpose in other parts of Germany. Could not this plan be tried in St. Martin's-le-Grand?

Last year the Government sold 18,845 copies of the *Nautical Almanac*, being an increase of more than 2,000 over the year 1861. The number of Admiralty Charts sold in 1862 exceeded 75,000, being much more than the average annual sale. The number of Admiralty Books sold during the same time was a good deal under the average, being only 1,242. On the joint sale of charts and books the Board of Admiralty paid over to the Exchequer 4,277*l.* in the past year.

The Registrar General and Dr. Farr have complained year after year that the vital statistics of the United Kingdom are imperfect owing to the want of a registration of births and deaths in Ireland. We are glad to see that a Bill to remedy this want was read a second time in the House of Commons this week. Last year the Government measure had to be withdrawn because it proposed to place the registration in the hands of the police. Sir Robert Peel's present scheme gives the post of registrar to the local medical officer of the Board of Guardians,—a decided improvement on his former plan.

It appears from the Navy Estimates issued this week that, though there is a net decrease of more than a million in the whole service, there is a slight increase (from 68,045*l.* in 1862 to 71,961*l.* in 1863) in the cost of the scientific branch. This is owing to the expense of additional surveys under the hydrographical department. The surveys now in progress are, in England, on the East Coast, the Bristol Channel, Portsmouth Bar and the Scilly Islands; in Scotland, Argyle and Inverness, the Hebrides, Barra Island, and South Uist Island; in Foreign Stations, on the Coast of Syria, the Greek Archipelago, the Cape Colony, Korea and Japan, the China Seas, Vancouver's Island, British Columbia, the Bay of Fundy, Newfoundland, the West India Islands, the Coasts of New South Wales, Victoria, South Australia, Queensland and Tasmania. The estimates for the Royal Observatory and for the Observatory at the Cape of Good Hope are less than they were last year.

The Archaeological Congress will be held this year at Rochester, under the presidency of Marquis Camden, K.G. The sections of Architecture, History and Mediæval Antiquities will be presided over respectively by Professor Willis, the Very Rev. Dean Hook, and Lord Talbot de Malahide.

The first meeting of the Anthropological Society of London will be held on Tuesday next, the 24th of February, at 4, St. Martin's Place, when an introductory address will be delivered by Dr. James Hunt, the president.

In the notice of Prof. Phillips's communication to the Royal Society on the planet Mars, occurs an error which alters the meaning. In line 11 from the bottom, the word "northern" should be "southern"; and for "North Pole," read "southern snow." It was only in Mr. Nasmyth's drawing that the green equatorial belt, with its island, appeared.

Mr. Morris Moore has received from the authorities on Art in Rome an important testimony in favour of his 'Apollo and Marsyas.' The Commission of the Pontifical Calcographic Department, composed of Commendatore Tommaso Minardi, Pietro Folo, Comm. Pietro Tenerani, Comm. Antonio Sarti, Cavaliere Paolo Mercury (Director of the Pontifical Calcographic Department), the Cav. Alessandro Capalti, Nicolò Consoni, and Giuseppe Marucci (acting coadjutor of the Director of the Pontifical Calcographic Department), have requested Mr. Moore to allow a drawing to be made from the work, with a view to its being engraved and published on account of the Calcographic Department. The Commission speaks of the picture as an undoubted Raffaele. Prof. Consoni undertakes to superintend the drawing, assuming the entire responsibility of it; and to still further insure its success the Commission proposes that the same Professor should make a tracing from the picture with his own hand. The engraving, it is further said, will be executed under the care of Signor Paolo Mercurj, whose name is to appear on the plate, as well as that of the actual engraver.

Now Parliament has met, attention should be recalled to the defects of the English Ordnance Maps—a subject brought forward last summer through complaints in the newspapers, having led to statements, on the one hand, from the officials of the Survey Department, and on the other, from the mapsellers. It appears that twenty-five years have passed since any change was made in several of the maps, although the country has undergone many changes. A quarter of a century seems a long period for the Survey Office to sleep upon its labours; yet what is it to that shown by the example of a map (No. 27, Exmoor), dated the "11th of October, 1809," and "Engraved in the Drawing-room of the Tower by Benjamin Baker and Assistants"? It was said that various additions have kept the maps nearer to modern requirements than their dates suggest. In No. 27 nothing of this sort has been vouchsafed;—woe to the pedestrian who trusts himself on Exmoor with no better guide! He will need infinite patience and a tent. There are roads upon that map which have no existence; there are existing roads unmarked. On it, elsewhere, other blunders are rife. We know a hamlet, with a Saxon name, omitted; roads made forty years since have no place; misspelling of names is common. There is another fault upon the same sheet even less creditable to the Office, in its being so worn as to be nearly illegible; and, contrasted with the adjoining sheet (No. 20, Bridgewater, same date), which seems to have been re-cut at a less remote period, it is but a shadow. So weak is it in "colour" of the engraving, that hills whose loftiness should be indicated by the depth of "colour" shrink in comparison with mere knolls, which No. 20 shows boldly. Upon the last the latitudes and longitudes are not marked—on No. 27 they appear. No. 5 (Hastings), dated 1813, has had the railways added; but is as worn as No. 27, and looks like a cheap lithograph instead of a Government copper-plate engraving. The sheet containing Scarborough has a railway-station (Grithorpe) omitted. Every one using these maps confirms all that is said of their shortcomings. Yet they are sold so cheap that "the trade" cannot hope to supplant them by a better article.

At a meeting of the Irish Archaeological and Celtic Society on Monday last, Dr. Todd reported that the printing of the text of the Calendar of Ancient Irish Saints commonly called the Martyrology of Donegal had been completed from the transcript made for him from the original belonging to the Burgundian Library, by the late Prof. O'Curry, accompanied by an English version, presented to the Society by the late John O'Donovan. It was also stated that the Council has decided to print, as the Society's volume for 1863, the 'Antiphony of Bangor,' from a fac-simile of the original now preserved in the Ambrosian Library at Milan. This document is one of the most ancient surviving monuments of Irish learning, and is known on the Continent from having been noticed by Muratori, who, however, fell into many errors in his descrip-

tion of it, as well as in the printing of the Irish words and names with which it abounds. The accounts for the year showed a balance in favour of the Society of nearly 500*l*.

The last mail from Australia informs us that the veteran explorer, Mr. Stuart, has arrived at Adelaide, after having crossed the continent to Van Diemen's Gulf at a point on the coast thirty miles east of Cape Hotham. It took him and his party six weeks to cut through the dense scrub which stopped him in the November of last year. North of this they came on fine rivers and beautiful country, both pastoral and agricultural, with many auriferous indications at intervals. Water was abundant, and hot winds unknown. Mr. Stuart pushed across alone from Van Diemen's Gulf to the Gulf of Carpentaria; and it is stated that hardship and anxiety have so exhausted him, that absolute rest is essential to his restoration. By the same mail we hear that the remains of Burke and Wills are to be interred at Melbourne.

There appear at present in Paris no less than 578 journals and periodicals; among them, fifty *Moniteurs*. There is a *Moniteur de la Coiffure*, a *Moniteur de la Cordonnerie*, &c. There is also a *Journal des Commissaires de Police*, and a *Journal de la Gendarmerie*.

Foreign journals announce the death at Lisbon, aged seventy-five, of Carl Rünker, Director of the Observatory and School of Navigation at Hamburg. In early life he was in the service of the East India Company. In 1822 he accompanied Sir Thomas Brisbane to New South Wales, and was appointed director of the private observatory erected by his patron at Paramatta. He returned to Europe in 1831. He is chiefly known for his works on navigation and the large star-catalogues which he published. He was elected a foreign member of the Royal Society in 1855.

Another instalment of the civilization of western Europe has been adopted in Turkey, news of which will be especially interesting to a large class of collectors. The Moslem have begun to use postage-stamps; being the last, we believe, of European nations to avail themselves of these useful articles. These new Turkish stamps are of four different colours; but as the Mohammedan religion forbids the taking of portraits, or representation of the human form, they bear a *fac-simile* of the Sultan's signature, instead of his effigy.

The highest peak of Monte Rosa, which has been hitherto known by no other name than "the highest peak," is, according to the *Ticino Journal*, now named by the Federal Council of Switzerland 'Dufour Summit.'

On the 29th of January last, the centenary birthday of Johann Gottfried Seume was celebrated in many parts of Germany, especially in Bohemia and Saxony. If Seume was not an eminent poet, and may not rank with Lessing, Schiller and Goethe, he yet occupies a distinguished place in German literature, owing to his thorough good sense, unflinching truthfulness, and courage in pointing out "what was rotten in the state of Denmark": and oh, how many things were rotten in his German fatherland! It fairly broke the heart of the honest and true patriot, not only because he was himself made a victim of the political foulness of Germany (he was among the Hessian troops sold to England, "to help England to lose its thirteen American provinces," as he himself says ironically), but because he lost all hope to see his beloved country freed from foreign yoke. The course of his life ended peacefully on the 13th of June, 1810, after he had been tossed about on it roughly enough. Of his writings the 'Spaziergang nach Syrakus' is the most popular, and was for some generations the delight and favourite book of the young. Nor does it deserve to be forgotten now; and, indeed, Germany in its present struggles can do no better than look up to strong-minded, unyielding and unbending characters, such as Seume was, for comfort and example. A slab to his memory has been erected at the new house which now stands in the place of the poor little hut in which Seume was born, in a village near Weissenfels, in Saxony. The Turn- and Gesang-Verein at Teplitz is going to raise a monument on

his grave, which is sheltered by a large oak in the churchyard there.

"Pompeii," says a Neapolitan friend, "has awakened a greater interest than usual by a very important discovery recently made. The workmen a few days since were excavating about ten feet beneath the soil in a little street behind the 'Postribolo' lately brought to light, when suddenly they came on a mass of coins and jewels. Orders were given to continue the operation with the greatest precaution, and after two hours' work the perfect form of a man was discovered, petrified, in the ashes, stretched at full length. The flesh was dried up, but the skeleton was entire. Fearful of accident in taking up these interesting remains, Signor Fiorelli, the director, ordered the form of this quondam citizen of Pompeii to be taken in plaster: and the operation succeeded completely, with the exception of two fragments of the arm and the leg, against which lapilli, instead of ashes, had come in contact. The impression has been taken with remarkable precision,—the hair, the moustaches, the folds of the garment, and even the dress of the legs and feet, being perfect. It is a discovery of the greatest importance in archæology, and great merit is due to Signor Fiorelli for his vigilance and attention. I have already called your attention to the impolitic tax which has been imposed on visitors to Pompeii, and I return to the subject. In the month of January 1,668 francs were collected, of which 1,038 francs were distributed amongst the *employés*. Two francs are not a heavy sum for an individual to pay, but in the case of families it may be an inconvenience, and I have heard of parties paying as much as 17 or 18 francs for admission. It is not at all unlikely, therefore, that the imposition of such a tax will lead to the restriction of the numbers of a party, and to the deprivation on the part of some of seeing one of the most interesting sights in this neighbourhood. On the working classes it will act almost as a prohibition; a circumstance greatly to be regretted in a country where the great effort should be to develop and raise the public mind as much as possible."

SOCIETY OF PAINTERS IN WATER COLOURS.—Will shortly close.—WINTER EXHIBITION OF SKETCHES and STUDIES by the MEMBERS, at their Gallery, 5, Pall Mall East. Open from Nine till Dusk.—Admission, One Shilling. JOS. J. JENKINS, Secretary.

NOW ON VIEW, TWO important PICTURES painted by the late ABRAHAM SOLOMON—also, a Choice Collection of Modern Pictures by English and French Artists, at the Gallery of Moore, McQueen & Co., 10, Fenchurch Street, E.C.—Admission, Free.

ART EXHIBITION for the RELIEF of the LANCASHIRE DISTRESS, 6, Suffolk Street.—Open from 10 A.M. until dusk.—Admission, 1*s*.; Catalogue, 6*d*. F. W. DICEY, A. L. CHETWODE, } Hon. Secs.

Mr. EDMUND YATES'S INVITATIONS to EVENING PARTIES and the SEASIDE will be issued at the EGYPTIAN HALL, EVERY EVENING (except Saturday), at Eight o'clock. Mr. HAROLD POWER will be one of the party. A Morning Performance on Saturday, at Three o'clock.—Stalls, 3*s*.; Area, 2*s*.; Gallery, 1*s*. The Box-Office is open daily, from 11 till 5 o'clock.

NOVEL ENTERTAINMENT, SCIENTIFIC and ARTISTIC.—SAMUEL HIGLEY, F.G.S., F.C.S., &c., will exhibit every Evening, at Eight o'clock, precisely, his beautiful series of MAGNIFIED and ILLUMINATED PHOTOGRAPHS which were shown with great effect before the Society of Arts and the London Photographic Society in January. Programmes on Application to the Secretary (by post two stamps).—Seats reserved, 3*s*.; 2*s*.; and 1*s*. Burlington Gallery, 191, Piccadilly, W.

SCIENCE

SOCIETIES.

ROYAL.—Feb. 12.—Major-General Sabine, President, in the chair.—His Royal Highness the Prince of Wales was elected a Fellow of the Society. The following papers were read:—'On some Compounds and Derivatives of Glyoxylic Acid,' by Dr. Debus.—'On the Telescopic Appearance of the Planet Mars,' by Prof. J. Phillips.

ASTRONOMICAL.—Jan. 9.—Dr. Lee, President, in the chair.—Major J. T. Walker, H. M. E. Crofton, A. J. Melhuish, and R. Munday, Esqrs., were elected Fellows of the Society.—'Observations on Saturn,' by W. Wray, Esq.—'On the Observations of Saturn made at Pulkowa and Greenwich,' by the Astronomer Royal.—Mr. Joynson communicated to the Society a series of thirty-six drawings of Mars, taken at Waterloo, near Liverpool.—'Note on U Geminorum,' by J. Bax-

endell, Esq.—'On the Elchies Equatorial,' by G. Knott, Esq.—'Observations of Comet II., 1862, taken at the Observatory of J. Gurney Barclay, Esq., at Leyton, Essex, and communicated by him,' by Hermann Romberg.—'Observations and Elements of Comet II., 1862, by J. Tebbutt, Esq.—'Places of Comet II., 1862, observed at Armagh,' by N. M'N. Edmondson.—'Results of the Meridional Observations of Small Planets, and an Occultation of a Star by the Moon; observed at the Royal Observatory, Greenwich, in the month of December, 1862,' communicated by the Astronomer Royal.—'Observations of Asia, 67, taken with the Equatorial of the Liverpool Observatory,' by J. Hartnup, Esq.—Mr. Warren De La Rue exhibited a photograph of the moon, taken near the dichotomy, enlarged so as to correspond in size with the map published by Beer and Mädler, and called the attention of the Fellows to the great progress which has been already made in Photographic Selenography.—'Remarks upon the Phenomena attending the Disappearance, by Rotation, of the great Solar Spot of August 4th, 1862, as recorded by both Heli-photography and ordinary Telescopic Observation,' by the Rev. F. Howlett.

ASIATIC.—Feb. 16.—Lord Strangford, President, in the chair.—A paper was read by Prof. Dowson 'On some Bactrian Pali Inscriptions.'

SOCIETY OF ANTIQUARIES.—Feb. 5.—O. Morgan, Esq., M.P., V.P., in the chair.—Mr. C. R. Bartrop exhibited a sword blade dredged up from the Abbey River, near Chertsey.—Mr. J. Brent exhibited some Roman remains found at Canterbury; comprising a glass bottle; some Samian ware, with names of potters; a spiral glass rod surmounted by the figure of a cock, similar to that laid before the Society by the Abbé Cochet, but not hitherto found, as Mr. Brent believed, in this country. Mr. Brent also exhibited an enamel plaque very similar in its ornamentation to those found on the Lullingstone bowl exhibited some time ago by Mr. Ireland.—Mr. W. S. Walford laid before the Society a transcript of a Roll of Arms of the thirteenth century, together with some remarks. It consisted of about 180 coats, comprising the arms of the Emperors of Germany and Constantinople, and of most of the kings of Christendom, of several French and German dukes and counts, and about an equal number of English coats, among which are those of a few earls and barons. There is one point mentioned by Mr. Walford which it is of importance to notice. The Roll affords an early example of the double-headed eagle for Germany, which is generally supposed to have commenced about the end of the fourteenth century. But a still earlier example, Mr. Walford remarked, on the authority of Sir F. Madden, is to be found in a MS. copy of Matthew Paris in the British Museum, of about the year 1250, and supposed to have been the author's own copy. The illuminations in that copy of the 'Historia Minor' are curious, especially in regard to heraldry and early mediæval usages. Mr. Walford hoped that the printed copy of it, about to be published under the sanction of the Master of the Rolls, would be enriched with woodcuts of these unique sketches, which are believed to be by the author himself.

Feb. 12.—The President, Earl Stanhope, in the chair.—Mr. J. R. Wyse exhibited a Roman fibula found at Yeovil, and a nest of weights found on the site of the priory at Yeovil.—Mr. J. Y. Akerman and the Rev. J. C. Clutterbuck exhibited a drawing of an urn found at Drayton.—The President read the correspondence which had taken place between the Council of this Society and the Admiralty since the month of March, 1862, on the subject of the tides off the Straits of Dover, with a view to determining the point at which Caesar landed on our shores. The perusal of the correspondence was followed by that of the Report of the Board of Admiralty on the Hydrographical Observations taken by them last autumn at the request of the Council of this Society, and communicated to the President on the 20th of January, 1863. Vice-Admiral Smyth had favoured the Society with a digest of the scientific results arrived at by the Admiralty,—results which

entirely corroborated the examinations of the tides made by the late Captain (afterwards Admiral) Beechey. The accuracy of Admiral Beechey's observations the late Dr. Cardwell, in a paper to the 'Archæologia Cantiana,' had ventured to impugn. The steps so courteously taken by the Admiralty have, however, set the questions at rest. The supposition that Cæsar landed at Deal or Walmer would appear from thenceforth to be "absolutely untenable." Such, at least, was the opinion ably advocated by the Astronomer Royal, whose attendance at the meeting had been specially requested, and who endeavoured to explain the grounds of the fallacy into which Dr. Cardwell had been betrayed. Mr. Airy was followed by Mr. Lewin, who briefly set forth the views he has endeavoured to establish more at length in his published works. The discussion will be returned to at an early period after the Report of the Admiralty has been printed, and placed in the hands of those most competent to deal with and profit by its results.

ROYAL SOCIETY OF LITERATURE.—Feb. 11.—Sir H. C. Rawlinson in the chair.—The Report of the Council was read on the Papyri from the Museum of Mr. Mayer, at Liverpool, strongly condemning the whole collection as forgeries, probably of recent times; after which, Mr. W. Aldis Wright read a paper 'On the Codex Sinaiticus,' in which he traced its history, and showed by what means M. Tischendorf had procured it. Mr. Wright then noticed the strange assertion of Simonides that he had written this Codex himself, and produced the original letter addressed to the *Guardian* newspaper by a person calling himself Callinicus Hiero-monachus, and written ostensibly at Alexandria. Mr. Wright showed by a comparison between this letter and other letters of Simonides, admitted to be genuine—and exhibited side by side with it—that the epistle of the so-called Callinicus Hiero-monachus was in the handwriting of Simonides himself; and that, therefore, he must have written this letter in England and sent it out to some person in Alexandria, who posted it back again to London. The inference drawn from these facts may be supposed.

BRITISH ARCHEOLOGICAL ASSOCIATION.—Feb. 11.—G. Vere Irving, Esq., V.P., in the chair.—Messrs. J. T. Irvine and W. H. Cope were elected Associates.—The Rev. Prebendary Scarth made a communication relating to the discovery of some coffins at Combe Down, Bath, with which were also found a very large collection of Roman antiquities, many of which were sent to London for examination.—Mr. H. Syer Cuming exhibited, on the part of Mr. Gunston, a large collection of Roman antiquities, obtained in recent excavations in Southwark.—Mr. Gunston exhibited several curious unguent pots, found during the formation of Victoria Street, Farringdon Street, having various glazes; many pewter spoons, having dates of the 16th and 17th centuries, and a portion of a pocket ring-dial or solarium, of which also Mr. Cuming produced an excellent example.

ETHNOLOGICAL.—Feb. 17.—J. Crawford, Esq., President, in the chair.—The following papers were read:—'On the Origin of the Gypsies,' by the President.—'Account of the Yenadies of the Chingleput District,' by Dr. Shortt.

SOCIETY OF ARTS.—Feb. 11.—W. Hawes, Esq., President, in the chair.—The paper read was, 'On Submarine Telegraphy,' by Mr. T. Webster.

SYRO-EGYPTIAN.—Feb. 10.—Dr. W. Camps in the chair.—M. le Duc de Roussillon communicated a memoir upon the discovery of a date of the year 135 of Our Lord, as well as of the pace and sacred cubit of the Hebrews, in the ruins of an ancient stronghold at Saalburg, near Homburg, where an inscription, with the letters and numerals, C I I B, are met with on the bricks. The Duke of Roussillon read these letters and numerals as signifying Centesimo Secundo Resurrectionis (Anno being understood), and he supported this view of the case by various facts; among others by the fact of a Latin cross being marked out in the plan of the edifice, composed of two avenues which cross

at right angles, and that the relations of the dimensions of this cross present the proportions of the sacred cubit of the Hebrews and of their pace, consisting as it did of a cubit and a half.

- MEETINGS FOR THE ENSUING WEEK.
- MOR. Actuaries, 7.—'Interpolation and Adjustment of Numerical Tables,' Mr. Woolhouse.
 - Royal Academy, 8.—'Sculpture,' Prof. Westmacott.
 - Architects, 8.—'Discharge of Water from Interior of Greenland through Springs below the Ice,' Dr. Rink; 'Rupert Land,' Capt. Millington.
 - TUES. Royal Institution, 3.—'Animal Mechanics,' Prof. Marshall.
 - Engineers, 3.—'American Tubular Bridges,' Mr. Mosse; 'Reconstruction of Dining and Mottram Viaducts,' Mr. Fairbairn.
 - Zoological, 9.—'New Musk Rat, British Columbia'; 'New American Bat,' Mr. Somes; 'Rearing Salmon Artificially,' Mr. Buckland.
 - WED. Horticultural, 1.—'Hyacinth Show.'
 - Society of Literature, 4.
 - Society of Arts, 8.—'Means for Promoting Supply of Cotton,' Mr. Cheetham.
 - Anthropological Association, 8.—'Ancient Remains, I. W.' Rev. E. Kell; 'Ancient Niell,' Mr. Syer Cuming.
 - THURS. Royal Academy, 8.—'Painting,' Prof. Hart.
 - Royal Institution, 3.—'Chemical Affinity,' Dr. Frankland.
 - Antiquaries, 8.
 - Royal Institution, 8.—'Ancient Lake Habitations, Switzerland,' Mr. Lubbock.
 - SAT. Royal Institution, 3.—'Language,' Prof. Max Müller.

FINE ARTS

FINE-ART GOSSIP.—The hangers at the Royal Academy this year will be Messrs. Frith (not Solomon Hart, as reported), C. Landseer and Abraham Cooper.

Baron Marochetti's statue of the Duke of Wellington, to be erected at Strathfieldsaye, is to be placed upon the capital (Corinthian), of bronze, of a monolithic granite shaft that weighs twenty tons and is thirty feet high: beneath this is a square plinth of granite with moulded ornaments. This will be nine feet six inches high, seven feet square, and weighing forty-five tons. This plinth rests upon another, also of granite, twelve feet square and six feet high. Lowest of all comes a base in three steps of granite, thirty feet square on the ground plan. The granite is from Messrs. Freeman's works at Penryn, and wrought by them.

Mr. Leonard Wyon is engaged upon a medal to be struck in commemoration of the marriage of the Prince of Wales and Princess of Denmark. It will be in gold, silver and bronze.

We learn with regret that the resident artists comprising the Liverpool Academy have determined, for the present, to discontinue their annual exhibition, after it has existed for forty years. This interruption may be but temporary, as was that which occurred in 1833. Among the painters to whom the annual prize of 50*l.* has been awarded are the distinguished names of Messrs. Macchie, Herbert, Cope, Poole, Elmore, Frith, Harvey, E. M. Ward, Holman Hunt, Millais, Anthony, Egg, Dyce, T. Faed and Hook. This prize has always been considered, in the artistic profession, as worthy of the highest consideration.

Mr. Steele's statue of the Marquis of Dalhousie, for Calcutta, has been completed. Mr. Brodie is to execute a statue of the Prince Consort, by way of memorial, for Perth. The price is reported as 230*l.* Mr. E. Davis's 'Wedgwood' is to be inaugurated at Stoke next Tuesday, 24th inst.

M. Gerome, who since his recent marriage has been travelling in Italy, is understood to have collected materials for several important pictures.

'The Parables of Our Lord Illustrated' is the title of a set of engraved drawings by Mr. P. Priolo, published by Messrs. Maclure, Macdonald & Macgregor. These are designed and executed on a better, because a more robust and complete, system than was shown in the same gentleman's designs from the 'Idylls of the King,' recently noticed by us. Many portions of the drawing, however—witness that of the legs in the 'Blind Leading the Blind'—are ridiculous; but the composition of almost every plate has been mastered more as a whole than in those we saw before: the element of finish, and what mechanical, thoughtless teachers style "fine-lining"—pure excuse for idleness as that is—dominate less than before. It may be that this superiority arises less from any real improvement in the artist, or recognition of the limits and

nature of the methods of design he has chosen, than freedom from restraint of the competition that produced the first set. We can hardly imagine any such recognition has been present in the artist's mind, because his work is not less offensive to taste than before. The sculpturesque reserve of simplest form—absolute outline in its severest phase, such as best suits the most cunning powers of the art of composition—has been sacrificed to reproduction of insignificant details, having nothing to do with the motive of the subject. Misunderstanding the nature of his task, Mr. Priolo has fallen into the snare of imitation, and given us light and shade by way of making his work interesting to the popular eye. However trite this thing may seem, and so be pardonable, if his aim be low, there can be no justification for the draughtsman's absurdity in putting shadows where they cannot possibly exist, as many of these designs show. Thus he has violated an æsthetic law in order to make his work attractive; and yet, adopting a merely imitative system of execution, apparently "to save himself the trouble of thinking," has neglected to give that charm of imitation to his work which fidelity alone can win. We have given more space to these commonplace productions than their intrinsic merits deserve, because they represent the most mischievous and hopeless class of Art-productions,—i. e., the *pseudo-severe*.

A collection of water-colour drawings was sold last week by Messrs. Foster & Co. The prices they fetched are quoted as follows:—Mr. T. S. Cooper, Cow and Sheep in a Meadow, 87 guineas (Moore),—Mr. Stanfield, The Port and Fortress of St. Malo, and Givet and Charlemont, 50½ gs. (White),—Mr. W. Hunt, 'Still Life,' a group of homely flowers in a blue-necked Wedgwood jug, a bird's nest lying near, a well-known and admirable drawing, 53 gs. (Moore),—Mr. E. Duncan, Pozzuolo, Naples, 58 gs. (Hardwicke),—Mr. T. S. Cooper, Sheep, Winter, 62 gs. (Colnaghi),—Mr. W. Hunt, A Bird's Nest, Wild Rose and Mossy Bank, circular (8 in. diameter), 78 gs. (Rowney),—Mr. W. Duffield, 'Still Life,' wild duck, wood-pigeons, &c. (oil), 56 gs. (Peele),—D. Cox, The Road Home, a well-known and singularly fine drawing, from Mr. Langton's collection, 78 gs. (Colnaghi),—Mr. F. Goodall, Scene in Brittany, 50 gs. (Isaacs),—Copley Fielding, A Scottish Lake, mist clearing off, 105 gs. (Agnew),—Mr. W. Hunt, A Bough of May and a Hedge-sparrow's Nest, 11 by 9 in., 152 gs. (Vokins),—Mr. B. Foster, The Setting Sun, 50 gs. (same),—S. Prout, The Lake of Como, 116 gs. (Bridgenorth),—Mr. D. Roberts, The Pass of Pensarosa and Porch of a Gothic Cathedral, 63 gs. (White),—Mr. W. Hunt, Fruit: purple grapes, pear and apple, 91 gs. (Rowney),—Mr. F. Taylor, The Fern Gatherers, 70 gs. (E. F. White),—Mr. W. Hunt, Fruit: purple grapes and peach, mossy background, 50 gs. (Agnew),—Mr. D. Cox, The Hayfield, 81 gs. (E. F. White),—Mr. W. Hunt, Fruit Piece, 60 gs. (Gilbert),—Copley Fielding, The Approaching Storm, 150 gs. (Merewether),—Mr. B. Foster, Children gathering Wild Roses, 200 gs. (Vokins),—J. M. W. Turner, Lochmaben Castle, vignette, 50 gs. (Greateorex),—Mr. C. Stanfield, 'Off the Coast, picking up a Lame Duck,' oil, 74 gs. (Vokins),—Same, Pic du Midi, Val d'Oiseaux, and Beachy Head, from Newhaven, all oil, 131 gs. (Price),—Mr. W. Hunt, Windsor Castle, oil, 50 gs. (Vokins). The money received is reported as exceeding 4,500*l.*

MUSIC AND THE DRAMA

WELSH MUSICAL FESTIVAL, on the EVE of ST. DAVID'S DAY.—GRAND CONCERT OF WELSH NATIONAL MELODIES, at St. JAMES'S HALL, on SATURDAY EVENING, February 28, at Eight o'clock, for the BENEFIT of Mr. JOHN THOMAS (Pencerdd Gwallai).—Vocalists: Miss Edith Wynne (Ees Cymru, Pencerdd), who will sing a new Patriotic Song, with Chorus, composed by Mr. John Thomas; Miss Eyles, Mr. Tennant, and Mr. L. W. Lewis (Llew Llwyro, Pencerdd). The Band of Harps, including Mr. J. Baldr Chatterton (Harpist to the Queen), Mr. T. H. Wright, Mr. H. J. Trust, Mr. John Thomas (Pencerdd Gwallai), &c., and the United Choir, including the Students of the Royal Academy of Music, &c., will be on the same extensive scale as hitherto. Conductor, Mr. Henry Leslie.—Sofa Stalls, 5*s.*; Balcony, 3*s.*; Area, 2*s.*; Admission, 1*s.*—Applications for Sofa Stalls to be made to Mr. John Thomas, 109, Great Portland Street, W. Tickets to be had of Addison & Lucas, 510, Regent Street; of all the principal Music-sellers; and Mr. Austin, 33, Piccadilly.

ST. JAMES'S HALL, THURSDAY, March 5.—Mr. HENRY LESLIE'S GRAND CONCERT.—Sims Reeves, Arabella Goddard, Edith Wynne (Eos Cymru, Pencerdd), John Thomas (Pencerdd Gwalla), J. B. Chatterton (Harpist to the Queen), T. H. Wright; full Band of Scots Fusilier Guards; and splendid Choir.—Family Tickets to admit four, 31s.; Stalls, 6s.; Balcony, 2s.; Area, 2s.; Admission 1s. Tickets at Addison & Lucas's, 210, Regent Street; Austin's Ticket-Office, Piccadilly; the Hanover Square Rooms; and all Music-sellers'. Family Tickets to be had only at Addison & Lucas's, and of Mr. Austin, 28, Piccadilly.

CRYSTAL PALACE CONCERTS.—Probably for the first time in England, a selection from Cherubini's noble opera 'Medea' was given at—not the Royal Italian Opera, not the Philharmonic Concerts,—but the Crystal Palace, this day week. The Overture, it is true, was known here; not so the magnificent "Storm Symphony" to the third act. The two, in the drama, are separated by a wide space; when brought together, one must impair the effect of the other. Then, the Crystal Palace band, complete as it is, and admirably conducted by Mr. Manns, has not force of violins sufficient to bring out all the contrasts and combinations assembled by Cherubini in the descriptive prelude. Yet, heard as "the storm" was, how grand it is!—the only one land-storm in music which can match with that in Beethoven's 'Pastoral Symphony'. The monologue of 'Medea', which followed in the selection, intelligently sung, and thoroughly wrought out by Madame Rudersdorff, is, again, in the opera, detached from the "Storm Symphony" by spoken dialogue;—for 'Medea' was produced at the Opera Comique of Paris, in which theatre spoken dialogue was and is an official necessity. It is the scene in which the sorceress meditates the murder of her children, the one so wonderfully filled out in a much feebler 'Medea' by Madame Pasta's tragic acting and vocal pathos given to the lean 'Miseri pargoletti' of Simone Meyer;—no concert scene, in short, if rightly set to music—nevertheless, stupendous as an example of overwrought expression. Could it be played on the stage and sung as conceived (which caution applies to much other vocal music—Weber's 'Euryanthe' and Beethoven's 'Posthumous Mass,' among the number) this 'Medea' would be the grandest classical opera in being. But Gluck's four Greek operas have been, and are, and can be played and sung as conceived—whereas Cherubini's exactions tore the original *Medea* (Madame Scio) to death. There can be no possible representation of the part. The strength of the scene selected, however, was to be felt,—on comparing it with the more winning, more vocal Greek *cantata* (somewhat too long-drawn) by Mozart—his 'Andromeda,' which Madame Rudersdorff sang later.

The 'Overture, *Scherzo*, and *Finale*,' by Schumann (Op. 52) were played, if we recollect rightly, many years ago, at one of the Philharmonic Concerts. The *suite* is one of the clearer and more pleasing of its author's compositions. We have, as a duty of the time, so lately put in a detailed form our deliberate opinion of Schumann's style and characteristics, that it would be needless to repeat it here. Suffice it to say, that though the peculiarities to which we object are tempered in this peculiar work, they are to be felt there;—and, to our thinking, are so many sufficient reasons for not awarding to Schumann a place in the Pantheon of great German composers.—Herr Deichmann played a concert-piece by M. Vieuxtemps. Why should he try to show the world what he cannot do?—and the concert-piece is affected and tiresome, even when M. Vieuxtemps plays it, save for the *coda*, which is excellent.

To-day, these excellent Concert-givers will perform, among other interesting things, a *Scherzo* by M. Cusins, of which we may speak; Spohr's "Power of Sound" Symphony; and Spontini's overture to 'Nourmahal':—next week, we are informed, Beethoven's 'Egmont' music, much of which is hardly known in England.

ROYAL ENGLISH OPERA.—Another success proclaimed to a crowded theatre by more *encores* than can be easily counted!—another of those events, we are sorry to add, which hold back our hope in national Opera, and tempt us to echo the Continental inquiry, for ever sardonically put, "Are the English a musical people?" The matter is one not to

be dismissed briefly; the success is too discouraging not to claim the closest examination.

To take Victor Hugo's ferocious yet remarkable tragedy of 'Marie Tudor' as subject for opera was in itself a cardinal mistake. The cameleon character of *The Queen*, with all its lurid lights and dull shades, its passion and its pettiness, is untranslatable in music. Then, the incident which gives the deadliest sting of poison to her gloomy vengeance,—namely, the seduction of the younger heroine by the Court adventurer who has practised on the credulity of the Queen,—when it is modified, as here, to suit English requirements, into a mere case of temptation, renders her position with her burgher lover and protector without consequence or probability: Mr. Bridgeman having retained her remorse in full, while he has softened her infidelity. The story is destroyed thereby. The long explanations in dialogue which lead up to the most striking and intricate situations, such as those of the first and third acts, must engender heaviness, were they treated by the most masterly hands. Lastly, to lighten the oppressive gloom of so dark a tragedy, it has been thought necessary to introduce a liberal allowance of ballads; to suspend a grave situation by thrusting in a band of gipsies, who dance when murder is afoot; to sanction the monstrosity of the final cuckoo rondo of exultation by regulation "made and provided," after the ears have hardly been cleared of the boom of the cannon announcing a popular riot quelled by the execution of a royal favourite, for whom, by one woman, so much sin had been dared—by another, so much agony endured. 'Titus Andronicus' is little more irrational as a theme for operatic illustration than 'Marie Tudor.' The heap of horrors and complications, which it would be superfluous further to disentangle for the benefit of those not well read in French tragedy, is not madelighter by the scene being transferred from the Thames to the Loire—from London to Nantes. The words, again, of 'The Armourer of Nantes' are remarkable enough to depress the most sanguine hopper. Yet they come from the pen of the author of 'The Puritan's Daughter'; a book, it may be recollected, which promised better things from its writer. That such text could be by anyone or anywhere accepted is almost inconceivable;—its adoption by Mr. Balfe argues an indifference to every consideration of art or sense which amounts to a cynicism not gratifying to contemplate. No wonder that we have no real English Opera, so few articulate English singers!—no wonder that persons of taste and intelligence prefer burlesque and "screaming farce" to situations of passion and moments of sentiment made ridiculous by the language in which they are conveyed.

Even Mr. Balfe, habitually unselect as he has proved himself in choosing his subject, has been on this occasion overborne by the dead weight imposed on him. His oldest and most frivolous phrases, his best-used forms, his least skillful combinations, are here assembled, as though he had been aware that labour and pains would be thrown away. There is motion in some of his music; but the rhythms are affected, and the tunes are far-fetched and faded. There are many ballads; but there is not one which will, we think, remain. The example of the Italian composers (disastrously set by Signor Rossini in the trial-scene of his 'Gazza Ladra', and followed by Donizetti and Signor Verdi to satiety) of making passion, surprise and despair speak to the most frivolous rhythms, is here followed out to its extremest consequences. Crime and cheatey traffic in a waltz tempo; *vide* the scene which precedes the murder of the Jew. Anguish and madness walk in a *Polonaise*; *vide* the concerted piece in the second *finale* (which, however, considered without reference to its purpose, is one of the best numbers of the score). The best music in the opera, because having the most propriety, is that of the Gipsy *ballad*. Nor has Mr. Balfe ever (and this is saying much) been so disregardful of connexion, meaning and accent in the setting of his words.

Yet 'The Armourer of Nantes' is a great success! In one respect, the opera merited a favourable reception. Most of the singers did their utmost with the music, and showed a feeling for the difficulties of the story by grappling with

them sedulously: though none of them are tragedians. Miss L. Pyne was in excellent voice; to her the part of interest, that of the heroine *Marie*, beloved by *Raoul* (Mr. Harrison) the *Armourer*, is allotted. Miss Hiles had a terrible task in *Duchess Anne*, who here replaces *Marie Tudor*. For a lady so inexperienced on the stage as she is to represent the dark, tyrannical passion-wasted woman who flung her heart away on the wicked and false Italian adventurer *Fabio Fabiani* (Mr. Santley), is impossible. According, however, to the measure of her strength, and the length of her service considered, she expressed the situations of the drama with remarkable ease, elegance and propriety. Her countenance can speak; she sang throughout very well, with precision, with refinement and with untiring certainty. Mr. Santley was, as usual, excellent and popular; but, with a view to popularity, he is hazardously using the upper notes of his voice. No strength will hold out after a time against such mistaken practice. Mr. H. Corri and Mr. Weiss (the former in the small character-part of a Jew) did their best. If Mr. Harrison will play the lover still, and will sing love-ballads, there is no help for honest writers save to tell him that he *should* commit such youthful follies no more. We had hoped he was passing into a wiser occupation. The orchestra and chorus were, as usual, very good. The work had been thoroughly studied.

PRINCESS'S.—An attempt was made on Monday to place a poetic drama on the English boards; and it is to the credit of the new management that the attempt was honestly made, and that, to a great extent, it was successful. The new piece, which is in four acts, is entitled 'A Winning Suit,' and written in blank verse, which sparkles with gay fancies and witty points that communicate to the auditor a specific pleasure apart from the interest of the story. It is, fortunately, a play to be listened to as well as witnessed. The author is Mr. Lewis Filmore. The fable and manners of this elegant play are undoubtedly ideal, and the structure is simple to a fault; but the spirit of it is so good, and the beauties are so many, that just and reasonable criticism must be favourable to its claims. The character which Miss Sedgwick has selected to embody is that of a *Princess Orelia*, the niece of a king of Castile, who wishes to marry her to the King of Arragon. The young lady has not yet seen her wooer, and objects to having a husband chosen for her by an uncle who is disposed to be tyrannical. He is, indeed, prepared to stretch his royal prerogatives to the utmost, and evidently believes in "the right divine of kings to govern wrong." On very slender grounds, he suspects his niece of having a lover, and dooms her at once to prison and to death. But her cousin *Count Roderick* (Mr. H. Vezin) and the King of Arragon understand one another, and arrange a little plot by which the Princess escapes from her dungeon disguised as a peasant. In the third act we find her the waiting-maid at an inn, under the care of a kind hostess (Mrs. H. Marston), who values the services of so charming and honest a servant; but when she finds that she indignantly resents the liberties taken by her customers, and not only breaks the head of one of the delinquents, but lets him go without paying his score, she naturally becomes irate, and dismisses the poor girl as above her place. In her distress, a stranger, who represents himself to be a goldsmith, comes to her aid, and after some pretty speeches about the specialities of his trade, which he describes to be as old as Nineveh, and some interchange of sentiment as to the beauty of pastoral scenery, and the right which the affections derive from their sincerity and depth, they travel together. But they are pursued, and the lady is in danger of being carried back to her uncle. A way of escape presents itself, if the damsel will consent to marry the goldsmith. This she reluctantly does; but when he proposes to take her to his home instead of a neighbouring convent, she demurs. At length her scruples are overcome, and she becomes a happy wife. Of course, the goldsmith turns out to be the King of Arragon, and in the end the uncle and cousin re-appear on the scene, and all requisite explanations are given of what had been mysterious in the progress of the

action. Mr. Marston's presentation of *Pedro*, the goldsmith and king, was dignified and tender, and his delivery of the poetical speeches was sustained with admirable elocution. Miss Sedgwick acted with great spirit, and in the more natural situations of the story was especially pleasing. The applause during the performance was frequent, and unanimous at the descent of the curtain.

ADELPHI.—Two new pieces have been produced here: the first, 'A Grey Mare,' by Mr. Benjamin Webster, jun.; and the second, 'A Valentine'; in both of which Mr. Toole is the principal attraction. The first has a French basis, and presents the performer we have just named as a speculative gentleman whose practice and theory are not in exact accordance. He has written a book on universal peace, but himself is a most irascible personage. When a railway is projected whose lines will cross the grounds of his own villa, he is most intolerant and violent. Miss Marie Wilton, however, as his niece, resolves to gain the heart of the railway surveyor, notwithstanding all the annoyances he is subject to from her infuriated relative, and succeeds in her project.—The 'Valentine' derives its interest from a sensitive post-master, whose feelings are excited on St. Valentine's day by the number of love-missives that pour through the letter-box on to his counter, and who suspects that one is addressed to his own Mary Anne. He is tempted to withdraw it from circulation, and then is alarmed lest he should have committed felony. His humorous distress is richly interpreted by Mr. Toole.

MUSICAL AND DRAMATIC GOSSIP.—Yesterday week was held one of the choral rehearsals of the *Sacred Harmonic Society*. The music practised were three Motetts by Mozart—Haydn's "Insanæ et vane curæ,"—Handel's "Sing, O ye heavens," "As from the power," and "Tyrants now no more shall dread,"—a Part-Song by Mendelssohn, and the Prayer from 'Masaniello.' The next oratorio is to be 'Israel.'

Madame Arabella Goddard was the pianist at Monday's *Popular Concert*—Herr Moliqne the principal violinist.—Mr. Howard Glover gave a third concert on Ash Wednesday at Drury Lane Theatre.

Mr. H. J. Lincoln is delivering his lectures on the German Musical Composers, at the Russell Institution, to the satisfaction of his audiences.

Miss Alice Mangold, whose grace and promise as a pianist are well known, gave a concert on Saturday evening.

St. David's Eve is to be kept this year in high state by Mr. John Thomas and his band of harpers and singers, in co-operation with Mr. Henry Leslie. The number of foolish concerts, without pretext or motive, which have sprung up in imitation of these Welsh entertainments, is on the increase. We shall be next hearing of 'The Messiah' accompanied by a band of harps.

Our contemporaries state that Mr. Mapleson's treaty for the management of the Neapolitan theatres, announced in the *Athenæum* as pending, has been ratified. All does not seem to be as yet gold that glitters at Naples. The theatres, however, have been placed under a superintendence much stricter than formerly, according to our Correspondent, though many of the inefficient folk already in possession of engagements resist every measure of purge and remedy.—"After every effort," writes our friend, "had been made in vain to induce the first tenor and contralto to give up their engagements, an order has now been issued that 'Lucrezia Borgis' shall for the present be performed, absolutely without the tenor, Signor Armandi, and the contralto. Even Mdlle. Sarolta, in spite of her beauty, has been condemned. The new singers will be a necessary condition to the introduction of other operas. Signor Mirate has been engaged, I understand, as the first tenor, and will make his first appearance in 'Roberto il Diavolo.'"—We fancy that it may prove more difficult to regenerate a theatre sunk to so low a point as the above indicates than sanguine persons conceive.

Mr. Benedict's 'Rose of Erin' (in Germany), at home 'The Lily of Killarney,' has been produced at Brunswick.—Mdlle. Artot, whose success is deservedly great wherever she is heard, is about to sing the part of *Margaret* at Berlin, in M. Gounod's 'Faust.' The opera is "running" for a second time in Paris. The curiosity to hear it in England is wide and increasing—accordingly it is not played.

'Les Troyens'—the Homeric opera of M. Berlioz—will possibly be given at the Théâtre Lyrique. The rapture excited by Mdlle. Patti's performances increased to the last hour of her stay in Paris. The Grand Opéra is about to receive several reinforcements from the theatre across the Boulevard—the Opéra Comique. M. Massé's new opera is "just ready," as the publishers say.—'Stradella,' by M. von Flotow, should by this time have appeared at the Italian Theatre.—The evergreen Mdlle. Déjazet (a quarter of a century ago people were beginning to speak of her as "passed") has been singing, acting, dressing as successfully as ever in a new three-act piece, at her own theatre—'L'Argent et l'Amour.'—It is said that great efforts are being made to break the blockade, by which (as a condition of her last engagement) Madame Grisi is excluded from singing here for some years to come. These, if authorized by herself, are less than undignified.

A new five-act play, 'François les Bas bleus,' founded on the fate of Henrietta of England, Duchess of Orleans, has been produced at the Théâtre de l'Ambigu-Comique. The author is M. Paul Meurice.

More than one friendly critic has drawn our attention to the fact, that the first line of Bishop Ken's Evening Hymn, beginning 'Glory to Thee,' was originally written 'All Praise to Thee,' and was subsequently altered for choral reasons. We think it would have been better, in the compiler of a hymn-book, to let the line stand as the world knows it.

MISCELLANEA

Bottling of Liquids.—A letter from Mr. Epps, in the *Athenæum* of last week, pointing out an improvement on Mr. Dircks's proposition for bottling milk, &c., reminds me that I had intended to notice Mr. Dircks's original communication, and point out its want of novelty. So long back as January, 1860, I exhibited, at one of the Society of Arts meetings, bottles treated on this principle, sent me by Sir James Murray, M.D., of Dublin, when I described the process adopted by that gentleman, and applied by him to various liquids and articles of food. It was nearly similar to, but more complete than that described by Mr. Epps, and much simpler than that of Mr. Dircks. In the Society's *Journal* of that date the description of the process is given thus:—"The plan adopted consists in placing the bottles, previously to their being filled with the liquor, in a vessel containing carbonic acid gas, of a depth more than sufficient to cover the bottles. The gas, by its greater specific gravity, enters the bottles, driving out the common air. The liquid is then poured in, and the bottles are corked while still in the gas. By this means the liquid entering the bottles does not come in contact with the common air in the bottle, as in the ordinary mode of bottling, and the interval between the surface of the liquid in the bottle and the cork is thus filled with a powerful antiseptic." Mr. Matthews, managing brewer at Messrs. Bass & Co.'s, in the *Journal* a few weeks later, claimed precedence of Sir J. Murray, having applied the process two years previously to the above date, and with success, to the bottling of beer. Sir James Murray, however, in a letter to the *Journal* shortly afterwards, points out that so far back as 1832 he (Sir James Murray) had practised this plan for preserving various kinds of food and drinks, and also that he had, in 1855, adopted the principle for preserving cod-liver oil, and also for protecting the livers themselves whilst under manipulation, and had patented the invention. P. LE NEVE FOSTER.

NEW WORKS.

HISTORY OF FREDERICK the SECOND,
EMPEROR OF THE ROMANS.

By T. L. KINGTON, M.A.,
Of Balliol College, Oxford, and the Inner Temple.
3 vols. 8vo. cloth, 22s.

SATURDAY REVIEW.

"The merits of Mr. Kington's book are real and sterling. . . . It is a book which shows real power, and it is power without extravagance. He shows an understanding of the time with which he has immediately to do. . . . He shows a full appreciation of the wonderful man of whom he writes, without any foolish hero-worship, any tendency to conceal or to extenuate the darker features of his character."

ATHENÆUM.

"The ground which Mr. Kington has taken possession of in the present volume may be fairly considered unoccupied, and the work deserves a warm welcome from the historical student. The author has evidently sought out, with the utmost diligence and industry, every available source of information; and the style, though somewhat diffuse, is vigorous and flowing."

ON CLERICAL SUBSCRIPTION:

An Inquiry into the Position of the Church and the Clergy.
In reference—I. To the Articles; II. To the Liturgy;
III. To the Canons and Statutes.

By the Rev. CHARLES HEBERT, M.A.

Crown 8vo. cloth, 7s. 6d. [This day.]

* * * This Work contains a complete reprint of Dr. Lushington's Judgment in the cases of Dr. Williams and Mr. Wilson, delivered June 25, 1862.

JOHN BULL.

"A very useful manual of information relative to the various changes in our formularies of worship and belief. . . . Those who take an interest in a question which is continually increasing in importance, will do well to consult Mr. Hebert's temperate and ably-written volume. It will point out the historical facts which require to be examined before the practical part of the question can be approached."

Eighth Thousand.

THE BOOK OF PRAISE:

From the best English Hymn-Writers.
Selected and arranged by ROUNDELL PALMER.
With Vignette by Woolner.

18mo. Eighth Thousand, handsomely printed and bound in extra cloth, 4s. 6d.; morocco, 7s. 6d.; extra, 10s. 6d.

FREEMAN.

"Comprehending nearly all that is of highest excellence in the hymnology of the language. . . . by far the finest existing book of English Hymns: the Hymns are unquestionably the most beautiful in the language, and in the details of editorial labour the most exquisite finish is manifest."

GUARDIAN.

"There is not room for two opinions as to the value of 'The Book of Praise.'"

RECORD.

"Throughout the whole volume we see little to criticize and much to admire. . . . It is a book which ought to find a place in every Christian library."

A PAINTER'S CAMP IN THE
HIGHLANDS;

AND

THOUGHTS ABOUT ART.

By P. G. HAMERTON.

3 vols. crown 8vo. 22s.

ATHENÆUM.

"The book of a man with a purpose and with special talent, if not genius: as such, one to be treated carefully. . . . For all that Mr. Hamerton says on the subject, every honest labourer in the cause of Art should thank him heartily, as for strengthening of hand."

NONCONFORMIST.

"We are not exaggerating the charm of these volumes. . . . they are written with infinite spirit and humour, and abounding in those touches of minute and faithful detail which transport the reader with the sense of reality."

VITTI:

AN ACCOUNT OF A GOVERNMENT MISSION TO THE
VITIAN OR FIJIAN GROUP OF ISLANDS.

By BERTHOLD SEEMANN, Ph.D. F.L.S.

With Map and Illustrations. 8vo. cloth, 14s.

ATHENÆUM.

"We can warmly recommend this 'Account of a Government Mission' to our readers."

OBSERVER.

"It contains a mass of curious information. . . . Dr. Seemann's book may be warmly commended to public perusal. It treats of a curious people, of whom, although presenting some faint lineaments of civilisation, very little is known; while the facts, collected as they are from personal investigation made under circumstances of peculiar opportunity, are as interesting as they are instructive."

EXAMINER.

"Dr. Seemann's opinions as to the political and commercial importance of the Fijian Islands, his account of their inhabitants and natural peculiarities, have interest."

MACMILLAN & Co. London and Cambridge.

UNDER THE SPECIAL PATRONAGE
OF HER MAJESTY.

Now ready, Thirty-second Edition, 1 vol. with the Arms beautifully Engraved, handsomely bound, gilt edges, 22s. 6d.

LODGE'S PEERAGE
AND BARONETAGE
FOR 1863.

CORRECTED BY THE NOBILITY.

"This is the THIRTY-second issue of the only Peerage that is bound *Adis* corrected by the Nobility and Gentry themselves, and never derives its information from second-hand sources. It is thus emphatically the book for an authentic picture of the Aristocracy as existing at the very time of publication. The changes among the higher classes have been very numerous in the past year, and we find them all duly recorded in 'Lodge.' We cannot do less than heartily recommend the work, if indeed recommendation be not superfluous with such an established publication. — *Gentleman's Magazine*.

"The reader, the most useful, and exactest of modern works on the subject." — *Spectator*.

"The best Peerage and Baronetage." — *Messenger*.

HURST & BLACKETT, 13, Great Marlborough-street.

NEW NOVELS

In Circulation at all the Libraries.

This day, the Fourth Edition, in 3 vols.

AURORA FLOYD.

By the Author of 'Lady Audley's Secret.'

"We are surprised in looking back upon it to observe in how few sentences the character is unfolded; yet how completely we can conceive the personage sketched, so simple and straightforward, so honest and so true. For this piece of prose painting, slight as it is, we are inclined to compliment the authoress highly." — *Times*.

The Eighth Edition, in 3 vols.

LADY AUDLEY'S SECRET.

By the Author of 'Aurora Floyd.'

"Full of rapid incidents, well put together: when we begin to read, we cannot choose but go on. . . . It is a good galloping novel like a good gallop, to be enjoyed rather than criticised." — *Times*.

This day, in 3 vols.

The HOUSE by the CHURCHYARD,

By J. SHERIDAN LE FANU.

"Just as Mr. Thackeray speculates over his 'puppets,' and says, 'I think Arthur was not quite satisfied with his own apology for himself to Warrington,'—or, 'did Mr. Pendennis grieve the less for his mother, because he had got a white hat?' and so forth,—just so Mr. Le Fanu half quizes his own characters, and half converses to you, after Mr. Thackeray's fashion, that there is a point not very far down, at which his own knowledge of them completely stops, and beyond which he is as much in the dark as his readers about their spiritual secrets." — *Spectator*.

THE NEW SENSATION STORY.

This day, in 3 vols.

A TANGLED SKEIN.

By ALBANY FONBLANQUE.

TINSLEY BROTHERS, 18, Catherine-street.

LONDON, SATURDAY, FEBRUARY 28, 1863.

LITERATURE

Recollections of Tartar Steppes and their Inhabitants. By Mrs. Atkinson. With Illustrations. (Murray.)

EVEN after the very full and highly-coloured works on 'Oriental and Western Siberia,' and on 'The Upper and Lower Amoor,' produced by the pen and illustrated by the pencil of Thomas Witlam Atkinson, there was still room for this pleasant little volume by his wife. The married pair made their great journey through the Steppes together; and if he was the better artist, she excelled in a more available knowledge of the Russian idiom and race.

Besides, a woman's points of view, when visiting a strange land and mixing in a new society, are different from those of a man. If she is apt to omit a good many things which he might consider of leading interest, she will be pretty sure to describe for us many scenes which he in his pride would have overlooked. A man will commonly seize on the masses, a woman on the details; he will take count of the landscape, she give her eyes to the roadside. If it pleases him to depict the mountains and the sunsets, she will delight in collecting and preserving the flowers. If he deals mainly with the important topics of history, ethnology and physics, she will pay attention to the domestic arrangements, the customs of society, the manners, and the dress. If nothing is too large for him, nothing, on the other side, is too small for her. If he has more sympathy with nature, she will probably have more sympathy with life. The feminine mind has a peculiar genius for that detail of observation which is the soul of recorded travel. Whether rolling through Hyde Park or scampering over the Tartar Steppe, a woman will avoid, so far as she can, the distant, the ideal and the complex; loving what is near, appreciating what is useful, and enjoying what is plain. Women hate nonsense. The most practical engineer that ever built a bridge or a mill, was probably a dreamer and a theorist when compared against his wife. The one sex speculates, the other acts. A man feels a thousand temptations to wander into space; while his companion plants herself immovably at the kitchen-fire. One is discursive, the other adhesive. One is centrifugal force, the other centripetal force. A man yearns to establish relations between his own being and the universe; a woman is satisfied when she has come to a cordial understanding with her housekeeper's book. The real and the near have an enduring charm for her, to which the poetic and the romantic can make but a vague and passing pretence. Every one has met that pair of rosy Britons who are always studying nature on Lake Lemán, or in the Bay of Naples, or on the Rhine. The male points to the snowy Alps, to the smoke of Vesuvius, to the ruined schloss among the vineyards, as the case may be; spouts a mouthful of Byron, or mumbles some filmy and Shelley-like stuff about the spirit of the scene: the female lifts now and then a rebuking blue eye, smiles meekly at her slave, and falls back again to the realities of a collar with a rent. That woman will take a stroll in the Coliseum by moonlight with a man she loves; but the chances are many that her attraction to the walk, and the object of her thoughts, is the living lover at her side, not the melancholy arena or the storied arches overhead. She would lose the finest sunset in the world to go in and make tea; and in doing so she would be acting by the

best lights of her sex. A woman first looks to the useful, and, reversing the saying of Goethe, leaves the beautiful to take care of itself. She has a very poor opinion of abstract truth, and she barely finds toleration in her heart for endeavour which brings no visible return in either meal or malt. No woman has ever tried her hand at speculative philosophy. Women have no imagination, though they have active and abundant fancies. All the larger exertion of the race must be achieved by men. Yet much remains for the other sex to do. The male investigates, the female applies. To one belongs the distant, to the other the proximate. Man creates, and woman cooks!

This diversity of function lends a charm and imparts a character to the observation of each. In some departments of literary art, such as story-telling and travel-talk, the ladies have a place of their own, distinct from that of their masculine rivals, and certainly not below it. We have a noble army of female tourists, each of whom has left her mark on the country through which she passed. Italy has won the attention of a thousand writers; but has any of them left us brighter pictures of her beauty than Lady Morgan, Fanny Kemble and George Sand? Has any pen done more than Harriet Martineau for the Holy Land? Has any one described the Sogné Fjeld in a style to compare with the Unprotected Female?

Then, again, we have to remember that in some countries, with very peculiar and highly exciting domestic institutions, women are the only explorers of the seraglio, the harem, the zenana: a male inquirer can learn nothing beyond the vaguest of travellers' tales. His eyes may not profane the family precincts. He is an outcast from the hearth. One-half of life, and that the most interesting to strangers of another creed, is hidden away from him. Here the female tourist comes to our aid. Lady Mary Wortley Montagu makes us amends for the silence or the blunders of a hundred writers of the less privileged sex. This advantage of womanhood lends a charm to Madame Pfeiffer's volumes.

Mrs. Lucy Atkinson, in her long ramble through the wild districts of Northern Asia, had all the privileges of her sex. She was a woman, and was therefore admitted to the intimacy of women everywhere, in the Russian *auil* and in the Tartar harem. Her husband was an artist, an explorer, a sportsman; where he moored his boat or tied up his horse, it was to use his paint-brush or seize his gun. She had hours, and even days, to herself in the savage desert, which gave her plenty of time, not only to observe, but to write. She knew the languages of the country, for she had resided in Russia from the days of her youth. She had also the great advantage, for a Siberian traveller, of having enjoyed, in St. Petersburg, an acquaintance with the families of many of the public men who had been exiled for political crimes against the Czar, which caused her to be everywhere received as a friend. She entered the houses of these exiles, and saw the conditions under which they live. The glimpses which she gives of these exiles will, to many persons, make the charm of her book.

The Russian question has arisen once more; and men who had almost forgotten the existence of our Literary Association of the Friends of Poland are again looking back to the poetic ardour of Campbell and Tennyson in the cause, and are even recalling their romantic sorrows over the Exiles of Siberia. At the very outset of Mrs. Atkinson's book, we stand in presence of the frightful realities of banishment to the mines:—

"During my short stay in Moscow, it became known to the families of many exiles that I was going to visit regions where their husbands, fathers and brothers had spent more than twenty years of their lives. Each member of these families had something to communicate—a wife, who had stood at the gate of Moscow with an infant in her arms, to take the last look at the husband and the father as he was driven slowly past; young children, who were now men and women, who had been horrified with the clanking of chains when receiving the last embrace; then there were mothers who had gazed with agony on their sons as they passed under the great archway, and were lost to them for ever; sisters who had received the last salute of those so dear, and brothers who had met here and grasped each other's hands, but were destined never to meet again: all these had some message which they wished to be delivered."

Each family that had a son, a father or a brother at the mines—and these were of the best and bravest in the land—would have had the English travellers for their guests. They dared not write to their beloved ones far away. They could only send to them a message of affection and of comfort by word of mouth, and so each one would have had the two travellers make of their grief a particular case. They loaded them with details of distress, many of them dramatic, and all of them melancholy to the last degree. But who can blame them? How the wife who had been parted from her husband for twenty years, how the mother who had been torn from her son, must have envied the English lady who was going where she would look on the well-remembered face!

"There was a melancholy interest in these gatherings which few can appreciate; it was only by a knowledge of the circumstances which had sent their friends into exile, and the difficulty of making any confidential communication to those so dear to them that I could understand their anxious desire to detain us;—nor shall I ever forget the parting and the blessing which they bestowed upon us."

At length the travellers started. The first pause in the journey was at the Siberian Gate of Moscow:—

"The horses were soon in a gallop, dashing up the snow and slush in showers. In some parts we were really brought to a stand on the bare stones, and at five o'clock the sentinel stopped us at the gate of Moscow, an officer demanded our passports, which were shortly returned, and the bar was ordered to be raised. As we passed through, I seemed to be bidding farewell to the world; I thought of the many exiles who had crossed this barrier; and it was a relief when we had passed beyond the great archway. Amongst the prisoners who are marched through this portal on their way to Siberia, some are steeped in the deepest crimes, others are convicted of minor offences, and hundreds have passed this spot whose only crime was resisting the cruel treatment of their brutal masters."

And so they rode into the clear night and the frosty air, alone with nature and their Cossack guides.—

"Mouravioff was looked upon as one of the most determined of the conspirators of 1825. His brother Serge was hanged. His was a hard fate, for the rope broke before life was extinct, and another had to be procured; in the mean time, consciousness returned, and he became aware of what was going forward, when he mildly said, 'it was very hard for a man to have to die twice.' The one who was exiled was condemned to solitude on reaching Siberia; he was separated from his comrades, and banished to the forests of Yakoutak, where he spent a wretched life; his food was of the coarsest kind. The ground on which he had to lie was nothing but a marsh; here he dwelt two years, having intercourse with no one. Every comfort was denied him, even to books and writing materials. Count Orloff, in one of his despatches to the officer of justice who had him in charge, and who had re-

ceived strict injunctions that a rigid supervision should be kept over the poor exile, demanded how he spent his time. His reply was rather laconic, 'he sleeps—he walks—he thinks.' He was after this never interfered with, till he joined his companions in exile. He is a most perfect gentleman, but there is no doubt that he has great determination of character; and I should think, to look at him, years of exile have not changed his indomitable spirit."

At Jaloutroffsky, the town in which Czar Nicholas confined the chief conspirators of 1825, the year of his accession, they went to see M. Mouravioff, one of the exiles, and a member of the great Russian family of that name. At M. Mouravioff's house Mrs. Atkinson came upon one of the most common and most melancholy incidents of the Siberian exile's life:—

"On entering the dwelling, a gentleman in the prime of life came forward to meet us; he appeared not a little surprised at seeing strangers, Jaloutroffsky being off the great post road. I inquired for Mouravioff; he said he was the person I required. I told him I had come from Petersburg, and gave him my maiden name; I was instantly received with open arms; he then hurried us into his sitting-room, giving me scarcely time to introduce my husband. I was divested of all my wrappings, although we stated that our stay would be short; he then seated me on a sofa, ran himself to fetch pillows to prop against my back, placed a stool for my feet; indeed, had I been an invalid, and one of the family, I could not have been more cared for, or the welcome more cordial. One of his comrades, whose family I was likewise acquainted with, was immediately sent for, as also the wife of one of the exiles, a peasant woman; her husband was dead; many of these poor 'unfortunates' have married with the peasantry, or with the daughters of the Cossacks. This woman came with her two children; I was the bearer of many a message, as well as little gifts for all. There was likewise a request for her to part with her children, so that they might receive proper education. She told me she would think the matter over; we all urged her to consent, seeing it was for their future well-being; she left us, promising to do her best in bringing her mind to look upon the separation as she ought to do. I am happy to say that I have just heard she has allowed the children (a boy and a girl) to go to their aunt's, in Ekaterinburg, with whom we are acquainted, and who will receive them with great affection. Poor mother! at the same time, I know the pang of parting with her little treasures must have been great; but by the parting from them she has shown her great love."

In some respects, the exiles of Jaloutroffsky are leniently treated; their crime being one of very old date. According to our countrywoman's report, they "form quite a little colony, dwelling in perfect harmony, the joys and sorrows of one becoming those of the others; indeed, they are like one family. The freedom they enjoy is, to a certain extent, greater than any they could have in Russia; for instance, full liberty of speech. They fear nothing; the dread of exile has no terrors for them. But what they have not, is liberty to go where they please; they are restricted in distance, as also in the use of fire-arms; however, the authorities in the town are exceedingly lenient towards them, permitting those who are fond of the chase to hunt wherever and whenever they please. These gentlemen, grateful for the indulgence given them, never fail to return the same night." M. Mouravioff, from his family connexion with powerful governors and active generals in the service, was perhaps enabled to shield from the petty malice of subordinates his companions in disaster. One of the stories told by him of the long march from Moscow to Jaloutroffsky is rather droll:—

"The officer in command, after they had reached a certain distance from the capital, relaxed in his

treatment, and made associates of them, inviting one or more to partake of the meals prepared for himself. At one little place where they stopped, the officer breakfasted with one of his prisoners; he then stepped out of the room to see that all was in preparation for departure, leaving his companion seated on a bench at a table. The exile was sitting reflecting on his position, when one of the authorities of the village entered the room, the doors of which were so low, that every one had to bend the body to be able to enter. This man came to say that all was ready for starting. He bowed low on perceiving a gentleman sitting, whom he concluded to be the officer. He then entered into conversation which naturally turned upon the scoundrels that were being conveyed into exile, and (continued this man, looking into his face,) 'there is no mistaking they are villains of the blackest dye; indeed, I should not like to be left alone with any one of them, and, if I might presume to offer a little advice, it would be to observe well their movements, as they might slip their chains, and not only murder you and all the escort, but spread themselves over Siberia, where they would commit all kinds of atrocities.' At this point of the conversation, the bell rang to summon them all to depart, whereupon the exile arose, but when the visitor heard the clanking of the chains, the farce was complete. Mouravioff told us, he never saw a man look so aghast; when he saw the object of his terror about to move forward, he made a rush at the door, but, not having bent his head low enough, he received such a blow that it sent him reeling back into the room, and sprawling on the floor."

One is sorry to learn that these poor fellows meet with little or no pity from the inhabitants of the towns through which they have to march. M. Mouravioff said the people in one place wanted to stone them, and their guards had the utmost trouble in saving them from the mob. In Siberia the lower classes are said to adore the Emperor: a fact which political men ought never to forget. It is one of the elements of his power.

If our countrywoman's pictures of the Russian people be in the main correct, we have very little room to congratulate the Czar on the virtues of his adorers. High and low, with a mere surface difference, are shown to be idle, profligate, drunken, dirty and dishonest. The trader of Nishni Novgorod is not much superior in these respects to the savage of the Steppe. They may be said to be the same in everything except their clothes. If you strip a Russian, you find a Tartar. At the first stage of the journey from Moscow, the sledge drew up for a change of horses. The ostlers of the post were long in coming, and Mr. Atkinson sent his Cossack to stir them up. More time elapsed, when Mr. Atkinson went into the house himself. Every man was lying drunk and asleep on the floor, including his own servant, who had joined the toppers, and drunk himself insensible. How are you to deal with such fellows? They know no argument except the knout. Hence the whip is in universal use among the Russians; and there are whipping-houses for servants in every considerable town of Siberia, just as there are whipping-houses for slaves in New Orleans and the cities of Louisiana. The peasants submit to the lash without shame. Mrs. Atkinson never mentions any Cassy-like protests against the rod and the cat. On the contrary, the Muscovite seems to expect his fate. She tells of one fellow who went to the guard-house for his usual drubbing, and being refused by the officer of the day on the ground that he had no orders to beat him, prayed that he might have his lashes, saying he had come a long way for them, and would be sure to be sent back should he go home with a whole skin. In short, the genuine Russian adores the Czar and expects the knout.

Men and women are alike described as

wallowing in dirt. Even in places where she found the houses clean, the people were themselves unutterably filthy. No Russian, in his own country, ever washes his skin while on a journey, for he requires, as he alleges, the dirt to keep him warm. This antipathy to soap and water is found, however, in many places to which the argument of frosty air and icy wind would not apply. The Andalucian, the Sicilian, the Levantine, has each the same love of dirt, though he gives the contrary reason, that it helps him to bear without injury the sultry heat. It is a curious fact, that the dirtiest nations in the world are those which have been in fiercest conflict with the scrupulously clean Mohammedans; the bad habit starting, perhaps, from a religious point. We know how the Gothic conquerors of Seville and Granada destroyed the Moorish baths and water-ways; making soap suspicious and bathing penal. Under the rule of Mendoza, a Spaniard who appeared in the street clean was suspected of having a bath in his house and a recollection of the crescent in his heart. To wash was to be as bad as a Moor, while to be unkempt and dirty was to be orthodox. A traveller may trace the influence of these ideas and events in the south of Spain at this very hour. The same set of ideas must have operated, more or less powerfully, on every frontier of Islam, from the Vega of Grenada to the Kirghis Steppe. It is certain that if dirt is an evidence of sound faith, the Russians are safe. More than once our fastidious countrywoman could not sleep under their roofs for the stench; more than once she had to cast away the clothing that should have kept her warm. The people in towns were dirtier than those in the country places. "We invariably found the peasants dirtier and poorer the nearer they are to large towns." The women she found dirtier than the men.

Dirt, however, is not the only kind of fanaticism in which the Muscovite peasant rivals his fellow-Christian in the South of Spain. He is very solicitous, in his wild fashion, for the salvation of souls. Here is the story of a man who in other circumstances might have become a Russian Torquemada:—

"A father and son were travelling together on the same route we intend taking: they stopped one night at a peasant's cottage; it was late, and the inhabitants had retired to rest. Amongst this class of people the top of the stove forms the sleeping apartment of as many of the family as can be stowed away upon it. The travellers were admitted to the only room the house contained; and, having been many hours without food, brought forth their provisions and commenced eating their supper, which consisted of cold meat, &c. Their supper ended, they lay down on one of the benches to sleep, which was not long in overtaking the weary travellers. They had been but a short period in the land of dreams, when one of the men on the stove slid gently down, and, taking in his hand a hatchet (which every peasant carries with him in his belt), with cautious steps approached the sleepers, and, lifting the instrument with both hands, brought it with such force down upon the head of the poor father, that he literally cleft it in two; he then turned to the son, who was in a sound sleep, and despatched him likewise. The brutal murderer then returned to his berth and slept till morning, when he went and informed the nearest authorities of the two murders he had committed. His object was not plunder, he said, when asked his reason for committing so horrible a deed; he described how he was sleeping, and hearing these two men conversing, he was induced, from what he heard, to watch their actions, and saw them committing the awful sin of eating meat in Lent, how it weighed upon his soul, how he turned away and tried to sleep but could not, how he felt that for the sake of Him who had died to save sinners, he ought to prevent these men from sinning again;

he had tried to avoid committing a crime, which he knew it was, but a voice kept continually urging him on, and saying that he was only putting an end to sin."

Thieving is common among all classes, and is consequently not so disgraceful as in civilized lands. A Russian does not even take the Greek precaution, of not being found out in his offence. The servant robs his master, the master robs his neighbour. Everybody cheats the Czar. Mrs. Atkinson tells us how the tribute furs from Siberia are delivered to the Emperor. These tribute furs are of the finest kind, and of very great value, the peasants supposing that his Majesty will receive them in person and inquire the names of his tributaries. "These furs pass through the hands of many individuals, and each one substitutes another of an inferior quality; so that when they arrive at their destination they are of a very different value to those given by these simple people, who would scorn to present such miserable articles to his Majesty."

Those who cheat the Emperor will not hesitate to rob his people. "I was once told by a Cossack officer," says Mrs. Atkinson, "that their pay was inadequate to their wants,—it was really insufficient to purchase a uniform; 'and yet,' said he, 'we are expected to have it always good, and, besides, we must have a horse; so what are we to do? why, steal one.' To my knowledge, it is not alone horses, but other things likewise. At one time we used to consider their conduct very reprehensible, but after becoming acquainted with all their means, we were much more lenient in blaming them; it is the system which is defective."

But the soldiers are worse than their officers. Mrs. Atkinson had two in her service, "both of them thieves." There is one condition, and only one, under which she found them honest: when they had charge of the travellers and were responsible for their safety. Their integrity was then like that of José Maria, the famous Alabama bandit. But while guarding their particular charge, the Cossack gentlemen would steal from others whatever they could lay their hands on. If they discovered that Mrs. Atkinson was carrying a present to some one, they considered that present, as belonging to a third party, lawful spoil. A gun, a tub of honey, a fur cloak—any article which did not actually belong to the traveller they thought they had a right to steal.

Of course, we admit that accusations like these of lying and theft and corruption are very easily made. We admit, too, that even when they are unquestionably true in many particular cases, they may not be true in the main. England is not a nation of wife-beaters, though a good many examples of that offence may be heard in the police courts. France is not a country of drunkards, though a tipsy man is very often thrust out of the wine-shops. The American people are not to be fairly described as table-turners, though they send us a number of mediums. We must not put a part for the whole, unless we would fall into the blunder of M. Ledru Rollin in his 'Décadence de l'Angleterre.' We were inclined to do so, we should be instantly met by a counter-point. A Russian writer might assert that our clothing colonels take (or until lately took) bribes from the army tailors, and thereupon declare that the higher and more aristocratic grades of our army are incurably corrupt. We should only smile at such a statement and such an inference. We must allow something for custom in the Muscovite as in the English case.

Evidence as to Man's Place in Nature. By Thomas Henry Huxley. (Williams & Norgate.)

THE 'Evidence as to Man's Place in Nature' may be regarded as a supplement to Sir C. Lyell's geological plea for the great antiquity of man. Again we have before us the Engis and the Neanderthal skulls, but more intelligibly sketched and more fully described. Again we have the Darwinian theory, but more positively espoused and more openly advocated. The present, indeed, is a small volume, and merely the substance of various lectures; yet, small as it is, it treats, as its author says, of "the question of questions for mankind—the problem which underlies all others, and is more deeply interesting than any other—the ascertainment of the place which Man occupies in nature and of his relations to the universe of things."

As Sir C. Lyell's chief object is to remove man remotely back in the scale of geological time, so Prof. Huxley's aim is to degrade man deeply in the scale of animal existence. The one puts him back on the huge dial of time, the other puts him down in the grade of Nature. Man is no longer "a creature of yesterday," in the opinion of Lyell; man is no longer a distinct sub-class, in the view of Huxley. Man probably lived a hundred thousand years ago, according to Lyell; man probably had a hundred thousand apes for his ancestors, according to Huxley. If this author be right, poets must have been utterly wrong. They have sung of men as little lower than angels, while they ought to have sung of apes as little lower than men.

Our readers know something of the much-disputed hippocampus minor, both from the contributions of Profs. Owen and Huxley to our columns, and from reports of the animated controversy about it at the late meeting of the British Association at Cambridge. At that scientific gathering, Profs. Owen and Huxley were as first and second wranglers; while the other wranglers applauded the cranial and cerebral contest. Sir C. Lyell has repeated the assault upon Prof. Owen, and in this book the same subject re-appears. To those whom it personally concerns we commit it, and simply advert to the special topic in hand. Whereas the wisest man of old gave this advice to the idle—"Go to the ant, thou sluggard," the wise men of this school give this advice to the inquisitive—"Go to the gorilla, ye students." "Consider her ways," added Solomon; "Consider his skull," say the Simian physiologists. How fortunate, under such circumstances, that, as we could not all go to the gorilla, the gorilla has come to us!

It was a comforting opinion that we had, as men, a cerebral distinction, even though it was but a minor hippocampus: but we are assured by Prof. Huxley that "all the abundant and trustworthy evidence which we now possess leads to the conviction that, so far from the posterior lobe, the posterior cornu, and the hippocampus minor being structures peculiar to and characteristic of man, as they have been over and over again asserted to be, even after the publication of the clearest demonstration of the reverse, it is precisely these structures which are the most marked cerebral characters common to man with the apes. They are among the most distinctly Simian peculiarities which the human organism exhibits." Thus, then, it appears that while Owen and Huxley differ, apes and men do not. It is an unfortunate circumstance that the more we are developed from apes, the more we differ from each other. Two primordial men might be conceived of as quarrelling about a bone, but never as disagreeing about a brain.

But, leaving this matter to learned anatomists, Prof. Huxley has now to attend to his onward pressing foes from other quarters:—

"On all sides I shall hear the cry—'We are men and women, not a mere better sort of apes, a little longer in the legs, more compact in the foot, and bigger in brain than your brutal chimpanzees and gorillas. The power of knowledge, the conscience of good and evil—the pitiful tenderness of human affections, raise us out of all real fellowship with the brutes, however closely they may seem to approximate us.' To this I can only reply that the exclamation would be most just and would have my own entire sympathy, if it were only relevant. But it is not I who seek to base man's dignity upon his great toe, or insinuate that we are lost if an ape has a hippocampus minor. On the contrary, I have done my best to sweep away this vanity. I have endeavoured to show that no absolute structural line of demarcation, wider than that between the animals which immediately succeed us in the scale, can be drawn between the animal world and ourselves; and I may add the expression of my belief that the attempt to draw a psychical distinction is equally futile, and that even the highest faculties of feeling and of intellect begin to germinate in lower forms of life."

That this close affinity to our "poor relations" is not acceptable or consoling doctrine to the common people, the Professor is well aware:—

"Brought face to face with these blurred copies of himself, the least thoughtful of men is conscious of a certain shock, due, perhaps, not so much to disgust at the aspect of what looks like an insulting caricature, as to the awakening of a sudden and profound mistrust of time-honoured theories and strongly-rooted prejudices regarding his own position in nature, and his relations to the under-world of life; while that which remains a dim suspicion for the unthinking becomes a vast argument, fraught with the deepest consequences, for all who are acquainted with the recent progress of the anatomical and physiological sciences."

Most people as they advance in life are apt to disown their poor relations; but our Professor takes an honest pride in parading them all before us in his frontispiece. Certainly, when thus brought skeleton to skeleton with "these blurred copies of himself," man may fairly feel a little shocked. Here is skeletonized Man lightly tripping forward, followed by skeletonized Gorilla, who is heavily bending downward; after whom come Messieurs Chimpanzee, Orang and Gibbon, all in their best bones, and with their best legs foremost. How man can be so gay with such a following of grim relatives, it is hard to conceive. Yet the whole train appear as gleesome as if they were going in procession to meet the Princess on her entrance into London, and to claim a not very agreeable kinship with her. Certainly, there is a difference in weight; for the Professor informs us that "a full-grown gorilla is probably pretty nearly twice as heavy as many an European woman"; but, possibly, "the pitiful tenderness of human affections" may have diminished our weight, and account for the difference between a princess and a chimpanzee. Most of us know what it is to "pine away" with love; and perhaps a love-struck gorilla might pine down to the weight of a healthy Yorkshire woman.

As to cerebral structure, "it is clear that man differs less from the chimpanzee or the orang, than these do even from the monkeys; and that the difference between the brains of the chimpanzee and of man is almost insignificant, when compared with that between the chimpanzee brain and that of a lemur." As to cerebral weight, "there is a very striking difference in absolute mass and weight between the lowest human brain and that of the highest ape. It may be doubted whether a healthy human adult brain ever weighed less than 31 or 32

ounces, or that the heaviest gorilla brain has exceeded 20 ounces." Yet, as we read in the next page, "the difference in weight of brain between the highest and the lowest men is far greater, both relatively and absolutely, than that between the lowest man and the highest ape"; and again, "regarded systematically, the cerebral differences of man and apes are not of more than generic value—his Family distinction resting chiefly on his dentition, his pelvis and his lower limbs. Thus, whatever system of organs be studied, the comparison of their modifications in the ape series leads to one and the same result—that the structural differences which separate man from the gorilla and the chimpanzee are not so great as those which separate the gorilla from the lower apes."

The critic who desires fairly and yet briefly to state the views of the author finds himself occasionally baffled. No sooner, for instance, has he cited the above apparently definite conclusion, than he finds it qualified by an assurance that the structural differences between man and the highest apes are not small or insignificant. "On the contrary," says the Professor, "let me take this opportunity of distinctly asserting that they are great and significant; that every bone of a gorilla bears marks by which it might be distinguished from the corresponding bone of a man; and that in the present creation, at any rate, no intermediate link bridges over the gap between *Homo* and *Troglodytes*." Now, at least, we may imagine that we have grasped a definite difference; for if every bone differs, there is a general as well as wide distinction between man and the nearest ape. Yet the next sentence but one is this: "Remember, if you will, that there is no existing link between man and the gorilla; but do not forget that there is a no less sharp line of demarcation, a no less complete absence of any transitional form, between the gorilla and the orang, or the orang and the gibbon. I say, not less sharp, though it is somewhat narrower. The structural differences between man and the man-like apes certainly justify our regarding him as constituting a family apart from them; though, inasmuch as he differs less from them than they do from other families of the same order, there can be no justification for placing him in a distinct order."

It is to be hoped that the reader now clearly understands our Professor. There will be no difficulty in understanding his views on natural theology; for, after stating that he adopts Mr. Darwin's hypothesis, he adds: "But even leaving Mr. Darwin's views aside, the whole analogy of natural operations furnishes so complete and crushing an argument against the intervention of any but what are termed secondary causes in the production of all the phenomena of the universe, that in view of the intimate relations between man and the rest of the living world, and between the forces exerted by the latter and all other forces, I can see no excuse for doubting that all are co-ordinated terms of Nature's great progression, from the formless to the formed—from the inorganic to the organic—from blind force to conscious intellect and will."

This is honest though heterodox, and candid though heretical. "It would be unworthy cowardice," adds the Professor, "were I to ignore the repugnance with which the majority of my readers are likely to meet the conclusions to which the most careful and conscientious study I have been able to give to this matter has led me." As to those who revolt from a direct Simian descent, and especially those who are orthodox, our Professor thus comes down upon them with the slap of a gorilla's strong hand:—"Healthy humanity, finding

itself hard pressed to escape from real sin and degradation, will leave the brooding over speculative pollution to the cynics and the 'righteous overmuch,' who, disagreeing in everything else, unite in blind insensibility to the nobleness of the visible world, and inability to appreciate the grandeur of the place man occupies therein." Many, indeed, may find it hard to assent to such teaching, and can scarcely admit with this teacher that "our reverence for the nobility of manhood will not be lessened by the knowledge that Man is, in substance and in structure, one with the brutes."

After all this, another look at the grim procession of skeletons in the frontispiece is rather discouraging. If the beholder can but conclude that he is one "in substance and structure" with those gibbering, grovelling apes behind man, then where is our pride of ancestry, our heraldic pomp, our vaunted nobility of descent? Any man can now mount armorial bearings in the shape of the long arms of the gibbon or the gorilla. These are our true "kings-at-arms"; and sculptors, painters and poets have omitted the greatest of themes.

On the presumed antiquity of man, Prof. Huxley, as at first intimated, thinks with Sir C. Lyell, as the following will show:—

"The fossil remains of Man hitherto discovered do not seem to me to take us appreciably nearer to that lower pithecoid form, by the modification of which he has, probably, become what he is. And considering what is now known of the most ancient Races of men; seeing that they fashioned flint axes and flint knives, and bone skewers, of much the same pattern as those fabricated by the lowest savages at the present day, and that we have every reason to believe the habits and modes of living of such people to have remained the same from the time of the Mammoth and the tichorhine Rhinoceros till now, I do not know that this result is other than might be expected. Where, then, must we look for primæval Man? Was the oldest *Homo sapiens* pliocene or miocene, or yet more ancient? In still older strata do the fossilized bones of an Ape more anthropoid, or a man more pithecoid, than any yet known await the researches of some unborn paleontologist? Time will show. But, in the meanwhile, if any form of the doctrine of progressive development is correct, we must extend by long epochs the most liberal estimate that has yet been made of the antiquity of Man."

Those who like serious and scientific discussion will be glad to read what has been brought together in this publication. After all, assuredly, man is best characterized by the psychical distinctions which, in such treatises as the present, are left wholly out of view or dismissed in a passing sentence. Conscience, remorse, ambition, sense of responsibility, improbability of reason, immense advances in knowledge, self-cultivation, æsthetic sensibilities—these and other qualities of the *Homo sapiens*, not to speak of religious sentiments, broadly and plainly distinguish man from all the Simians and Troglodytes. Grant for a moment (what is manifestly inconsistent with the previous statement, that "the structural differences between man and the highest apes are great and significant"), that man is one in substance and structure with these creatures; grant even that their instincts simulate our reason in some remarkable instances; and when all is granted, the vast and varied differences just intimated remain as towering distinctions. To these is added that gift of articulate speech which, though mechanically organized, imparts supreme value to them all; which makes man a communicative being; which gives to a lecturer, such as Prof. Huxley, that power to instruct, amuse and illustrate, by which he is raised immeasurably above the cleverest ape that ever climbed a tree, or built a nest, or

buried his dead companion under the dried leaves of an African forest.

The History of the Supernatural, in all Ages and Nations, and in all Churches, Christian and Pagan: demonstrating a Universal Faith.
By William Howitt. 2 vols. (Longman & Co.)

Mr. Howitt is the partisan of partisans! Time has brought no diffidence to the author of 'The History of Priestcraft.' He turns a clear and vigorous style to forcible account in assertion and vituperation.—He is, as of old, impatient of every man's sincerity, save his own. He is credulous to carelessness in the admission of every tale as evidence which suits the belief which has possessed him. He has no choice among his witnesses. For him Mrs. Crosland and Mrs. Crowe are allies just as valuable as Cudworth and Confucius, Mr. Home as Herodotus. Marvels are welcome to him in proportion as they are monstrous; and they troop through his pages in hundreds. "The ten thousand haunted houses in London which the police have strict orders not to mention" (a fact which we have heard gravely asserted in good society), are not one too many for him. No amount of vitality in furniture is strange. The wonder rather is that there are any fixed and immovable things on the earth—that trees hold by their roots, and that church-towers do not walk about the streets to preach to the faithful and to rebuke the unbelieving.

That we may not be thought exaggerating, let us take merely a few instances of occurrences for which Mr. Howitt vouches:—

"A lady of literary reputation of the Catholic Church asserts herself to be frequently raised from the ground during her prayers; and we know a young Protestant lady who ceased to attend a certain church from feeling herself repeatedly lifted up and fearing to make a spectacle of herself."

Our author asserts that during a certain period the spirits constrained his hand to trace regular circles and geometrical figures, without any volition or previous training on his own part, and asserts that the pencil-drawings of his daughter, Mrs. Watts, own the same dictation:—

"In the *Spiritual Magazine*, from time to time, are still published letters from a distinguished gentleman of New York, in which the frequent appearance of the gentleman's deceased wife and of Dr. Franklin to him, and other well-known friends, are unquestionably unequalled in the annals of the marvellous. Fac-similes of letters written by the deceased lady are given, and it is solemnly stated that the witnesses have not only seen, but touched these spirits, and handled the clothes and hair of Franklin. I have seen some of the letters themselves, and compared them with the lady's letters whilst in the body, and the identity of the cheirography is perfect. * * All that has occurred [he says in another page] in regard to rapping and gaining intelligence by the alphabet, to the lifting and moving of tables, chairs and other articles of furniture, to the floating of persons, the appearance of spirit hands, and even spirit forms, to the ringing of bells and playing on instruments, and the like phenomena, have, on the whole, been more powerfully exhibited in America than here. We have seen tables often enough lifted by invisible power from the floor; seen them give answers to questions by rising and sinking in the air; we have seen them in the air keep time by their movements to a tune playing on a piano; seen them slide about the floor of a room, laying themselves down when touched, and refusing to do anything for a fortnight together, but thus to creep about the floor whenever touched. We have heard bells ring in the air, and seen them thus ringing move about a room; seen flowers broken from plants, and carried to different persons, without any visible hand; seen musical instruments play correct airs apparently of themselves, and even rise up, place themselves on a person's head, and there, just over it, but not

touching it, play out a well-known air in fine style. We have heard remarkable predictions given through mediums, and which have come literally to pass; heard wonderful descriptions of scenes in the invisible world made by persons in clairvoyant trance, which would require the highest imaginative genius to invent or embody in words; have seen writing done by pencils laid on paper in the middle of the floor, not within reach of any person present, and innumerable such things; but all these have been done more powerfully and perfectly, in hundreds and thousands of cases, through a course of fifteen or sixteen years previously in America. * * In the case of Mary Jobson, of Sunderland, published by Dr. Reid Clanny, physician to the Duke of Sussex, the sun and moon, and other things, were painted on the ceiling in colours, which her father whitewashed over once or twice, but they still came through, and were seen by hundreds of people, several medical men amongst them, and could only be destroyed at last by destroying the plaster. The wonderful powers of representation and presentation in varied forms is one of the most remarkable and best attested facts of modern spiritualism. Spirit-writing and spirit-drawings now exist in abundance. Of the former, Baron Guldenstube, of Paris, possesses upwards of a thousand specimens, and has published fac-similes of some of them in his work 'Pneumatologie Positive.' * * An Italian physician assured Mr. Elibu Rich that he was an eye-witness to the following circumstance, which took place at a camp fire, where one of the ponderous saddles used by the horsemen of the prairies was brought forward, and the owner of it, by the contact only of his fingers, caused it to bound like an india-rubber ball from the ground till it finally sprang to twice the height of a man. This took place in the open field, to the astonishment of the spectators of a saddle galloping without a horse."

The above are surely samples sufficient to prove that the case has not been overstated by us in the foregoing paragraph. If any one inquires of our author what is the *rationale* of such phenomena, he appeals to the Christian Miracles. If any one ventures to doubt the use or significance of leaping saddles and dancing tables, he turns round and asks, "What is the use of a flea?" The book is neither more nor less than our experience of Mr. Howitt's strength and weakness as a literary man had led us to expect; but it is not, therefore, the less melancholy.

The idea appears to be, in regard to the so-called miracles of the times present, which have set a company of enthusiastic persons raking among the superstitions of the past for precedents, that the petrifying influences of Protestantism have made such a new manifestation and outbreak necessary on the part of Omnipotence. This is, of its kind, as daring a theory as the one in which M. Victor Hugo accounted for the first Napoleon's downfall. Little less hazardous seems to us the argument of evasion by which those holding Mr. Howitt's superstitions manage to get rid of any fact found troublesome,—the power which elect mortals possess "to test spirits," and to ascertain which are angelic, which diabolical.

Such being the character we have to offer, it is needless to go over ground so beaten, to dwell much longer among legends which have been worn so threadbare. Mr. Howitt adds no novelties to the list comparable to the sea ghost story so excellently told in Mr. Dale Owen's book. Here, however, is his character of a living Professor, whose name has been pronounced in many tones by orthodox and heterodoxy, which will have its interest:—

"Amongst the innumerable mediums who have arisen in America, besides those trance and lecture mediums already referred to, the three most remarkable, or most familiar on this side of the Atlantic, are Daniel Dunglas Home, Andrew Davis Jackson, and Thomas L. Harris. All these are

perfectly distinct in the character of their mediumship, and in the field of their spiritual missions. Mr. Home is an exhibitor of what are called physical phenomena, but which are spiritual agencies acting on matter. Through him raps have been given and communications made from deceased friends; tables have been raised into the air, or have moved themselves, as it were, from one place to another in the apartment; his hand has been seized by spirit influence, and rapid communications written out of a surprising character to those to whom they were addressed. Spirit hands have appeared, which have been seen, felt, and recognized frequently by persons present or those of deceased friends; bells have been lifted up and rung about a room; persons in their chairs have been suddenly transported from one end of a room to another; he himself has been frequently lifted up and carried, floating, as it were, through a room near the ceiling. Numbers of such facts are recorded in the *British Spiritual Telegraph*, and the *Spiritual Magazine*, as well as in the *Cornhill Magazine*, with the names and testimonies of well-known witnesses. Such manifestations have been made in very many of the houses of our leading nobility, cabinet ministers, and gentry, in the palaces of nearly half the principal monarchs in Europe. I myself have been witness to many of these phenomena through Mr. Home. The fact that the English press has made a great outcry against the truth of these statements is no proof that they did not take place, but only of the astounding ignorance of the press that all history abounds with such facts; that in all times they have been familiar phenomena, attested by the most celebrated men; and that for the last fifteen years they have been so common in America, that they have convinced 3,000,000 of people. In America all these phenomena have displayed themselves in far greater force than here. Mr. Home's mission seems to have been to go forth and do the preliminary work of restoring faith by the performance of these outward marvels. Till that foundation was laid there could be no faith in higher and more physical efforts. He was the herald of more interior truths. By a remarkable dispensation, like the apostles of old, he was taken from the class which had no power in itself, that all the power might be seen to come from on high. He was, though of old and aristocratic descent, from the Homes of Scotland, a poor Scotch adopted boy in America. Whilst quite a child, the spiritual power manifested itself in him to his own terror and annoyance. Raps came around him on the table or desk where he sat, on the chairs, or walls of the room. The furniture moved about and was attracted towards him. His aunt, with whom he lived, in consternation at the phenomena, and deeming him possessed, sent for three clergymen to exorcise the spirit; but as they could not do it, she threw his Sunday suit and linen in a bundle out of the chamber window, and pushed him out of doors. Thus was Daniel Dunglas Home, at the age, I believe, of eighteen, or thereabout, thrust a homeless youth into a world without friends. But the power that was upon him raised him friends, and sent him forth to be the planter of Spiritualism all over Europe. By circumstances that no man could have devised, he became the guest of the Emperor of the French, of the King of Holland, of the Czar of Russia, and of many lesser princes. The narrative of these events is to be found in numerous articles in newspapers, and in the *Spiritual Journals* of America, France, and England. Mr. Home returned from this unpremeditated missionary tour amongst principalities and powers, *endowed with competence, and loaded with testimonies of the thanks and approbation of emperors, kings, and queens.* At the Tuileries on one occasion, when the Emperor, Empress, a distinguished lady, and himself only were sitting at a table, a hand appeared, took up a pen and wrote, in a strong and well-known character, the word **NAPOLÉON**. The hand was then successively presented to the several personages of the party to kiss. It is not my business here to detail the long and well-substantiated series of the supernatural circumstances attending Mr. Home's career. They would form a volume of themselves, and I hear that

it is Mr. Home's intention himself to record them. My concern only is to note his place in the history of spiritualism, as the herald of a coming restoration of faith in the indissoluble union of the natural and supernatural, of disembodied and embodied spirits, which Protestantism, in what the Rev. John Henry Newman calls its 'dreary development,' has for a time destroyed. Mr. Home has not assumed any other character than the foundation layer. He has not pretended to enunciation of merely spiritual views. He has not come forth as the prophet, but only as the seer. And his work has not been the less important or less valuable. Without the foundation stone, there can be no building. Without faith, promulgation of sublime and spiritual truths would fall dead, upon dead souls. They would be like the rays of the sun not falling on the solid and respondent earth, but on the barren vacuity. In vain would Jacob's ladder have invited the angels, who issue from temporal bodies to climb it to heaven, had not its foot been set upon the earth. Men sunk in their spiritual condition to the earth, must have manifestations of the earth first to awake them. For this reason the much-despised and ridiculed physical manifestations have come first, as the *only* ones adapted to the degraded physical status of men, many of them at the same time imagining themselves peculiarly enlightened and refined. It was truly said by Abraham to Dives that it was useless sending him to his brothers, because they, doubtless, were in a condition in which one rising from the dead would have been to them no fitting or effective message. A wooden chair dancing, or a money-table lifting itself up before their sordid eyes, would have spoken much more intelligible things. The office of Mr. Home has been the first great and necessary office of awakening; as the watchman crying the approaching hour of the morning of recompleted man, he has done much, and there remains much yet to do. But perhaps nothing connected with Mr. Home has given more profound evidence of the truth and tendencies of the consoling and divine effects of spiritualism, than the circumstances attending the decease of his most interesting wife. Mrs. Home, who was a Russian lady of high family, died at the age of only twenty-two. From the moment that it was announced to her that her complaint, consumption, was past cure, she exhibited no alarm or regret at the prospect of death. She had learned, by conviction of the truth of the views of her husband, that death was only apparent. She had long been in daily communication with the spirits of her departed friends; and the life about to open before her was certain, and beautiful beyond conception. Moreover, the Greek Church, in which she had been educated, has always recognized the Saviour less as the Crucified than as the Arisen, the triumphant over suffering and death; and her faith and feeling were in glad accordance with it. The Bishop of Périgueux, in France, near which place she died, and who administered to her the last sacrament, remarked that 'though he had been present at many a death-bed for heaven, he had never seen one equal to hers.' Can the end of any genuine Christian spiritualist be otherwise?"

There is a *Court Journal* tone in the two passages which we have italicised. The complacent allusion to "our leading nobility, cabinet ministers and gentry,"—to "testimonies, thanks, and approbation" won by Mr. Home's exhibition of the spirits to foreign kings and queens,—will strike oddly on the ears of some who hear it. It has reminded us of the testimonial put in by the lady's-maid who had been treated by her mistress to see what Mrs. Thrale justly called "Hannah More's foolish play," the tragedy of 'Percy.' "Why, Betty," said her mistress when the abigail came home at night, "you have been crying!"—"Well, ma'am, and if I did, a great many ladies of quality cried too."

Let us not be misunderstood as making light of a grave subject; for what can be graver, as a matter for meditation, than the sanity or insanity of faith? Whether espoused or denied,

the opinions of the hour on so serious a question are well worth pondering. But disservice is done alike to friends and enemies by such a parade of unblushing and presumptuous confidence as fills Mr. Howitt's book.

The Gate of the Pacific. By Commander Bedford Pim, R.N. (Reeve & Co.)

If we had to justify our recent intrusion into China and Japan, after the door of those countries has repeatedly been slammed in our faces and the national porters received strict orders to forbid us calling again, we should simply, falling back upon first principles, plead our national rights as citizens of the world. We should have to explain that, looking as we do upon the whole of mankind as one great community into whose keeping it has pleased Providence to place the earth and the fullness thereof, we have a right as members of that community to share in *all* the good things our planet brings forth. We should have to add, that as all the products are distributed in a manner which renders it impossible for one nation to derive full advantage of this state of things without an active and unrestricted intercourse with the rest, the refusal of China, Japan or any other country to admit foreigners to a friendly and commercial intercourse is an act of injustice not to be borne without an indignant protest. Our Chinese and Japanese friends, under the tuition of Europeans, are just now familiarizing themselves with these principles, and they will be all the better when they have mastered them. There is, however, another nation, not in the East, but in the West, who will have to go through a somewhat similar course of instruction before being brought to see the folly of proclaiming such principles as those involved in the "Monroe doctrine." The doctrine is familiar to every one who has come in contact with Americans: in fact, it is one of the topics with which "strangers" are invariably bored—the infatuation that the whole of the New World from Point Barrow to Cape Horn belongs to the Americans, that the Stars and Stripes will one day float over the entire length and breadth of that continent, and that no European power has any right or business either to form settlements or interfere in the affairs of all the countries which the genius of Columbus discovered for us. The colonies which European nations possess on American soil are spoken of as already annexed, and the various independent governments of Brazil and the Spanish Republics are openly regarded as so many American stewardships, to be done away with when no longer required. The different administrations in the United States, whatever party they belong to, have without exception upheld these pretensions, and every effort made by our own country to counteract them has hitherto been attended with little success. The forbearance exercised by our ministers has been interpreted as weakness by the Americans, who, presuming upon it, have, step by step, driven us from a most important position on the Isthmus of Central America. In a weak moment we gave up the protectorate of the Mosquito Indians, who had been our allies ever since the discovery of the New World—proved staunch friends when Lord Nelson made his successful inroad into Spanish territory, and had been converted to the Protestant faith by our missionaries. Meanwhile, the Americans did everything in their power to possess themselves of the territory from which, for the sake of peace, we had consented to withdraw; and they did not fail to secure from the Republic of New Granada the exclusive right of transit across the Isthmus of Panama. The Congress of the United States

was made fully alive to the importance of having an iron road across the narrow neck of land, the first tropical railway—and one of the few, we may add, that returns twenty per cent. to the shareholders; and we can well understand the alacrity with which the undertaking was sanctioned and supported, when we find in the able report which the Committee on Naval Affairs presented the following theses demonstrated:—

"Great Britain is principally indebted to her skill in commerce and manufactures for her commercial ascendancy, but she is also indebted in no small degree to her position. She not only has the ports of the Continent of Europe as her neighbours, but she is 1,500 miles, or two weeks, nearer than we are to all the other parts of the world, except the Atlantic ports of the American Continent north of the Equator and the West Indies. * * The construction of the proposed railroad across the Isthmus will not only do away with this advantage over us now possessed by European commerce and navigation, but will turn the tide in our favour. * * This railroad will throw into our warehouses and shipping the entire commerce of the Pacific Ocean. * * The Committee have deemed it proper to provide that a large majority of the stock of the railroad shall be held by, and place the future management of the undertaking in the hands of, our own citizens."

If the Panama railroad were a general highway of nations, all would be well. But that such is not the case might have been suspected from the motives which prompted its construction. The Americans regard it as their monopoly, charge an exorbitantly high tariff, and think nothing of keeping European passengers who may have come by the Royal West India Mail a couple of weeks at Panama. What is still more important, official despatches cannot be sent safely across in case of misunderstanding arising between the English and American Governments. During the late Trent affair, our Colonial Secretary was compelled to hold them back for the space of six weeks, because it was deemed unsafe to trust them to such a channel as that afforded by the Panama transit. Now, what Capt. Pim proposes is to make us altogether independent of the Americans, by constructing a general highway of nations across the Mosquito territory and the Republic of Nicaragua. Both these States are willing to make liberal grants of land to any company who will engage in the undertaking. The railroad would start from Gorgon Bay, a fine and well-protected sheet of water discovered by Capt. Pim, situated on the Atlantic, and it would terminate at Realejo, on the Pacific Ocean, the whole distance being 225 miles, about equal to that between London and Darlington. There seems to be no high mountains or any other natural obstacles; labour is obtainable on or near the spot; and, so far as our present information goes, we see no reason why the line should not be worked with profit. Capt. Pim proposes that after the railroad has been completed as far as San Miguelito, on the shores of Lake Nicaragua, it should at once be made available for traffic; steamers plying on the lake, and there being already a good carriage-road over the few miles of land intervening between the western shores of the lake and San Juan del Sur. Independent of all political consideration, the scheme merits attention from promising to shorten, by many days, the distance between England and British Columbia, Japan, China, Polynesia, New Zealand and Eastern Australia. Capt. Pim has weighed the different transit schemes that, since the time of Columbus and Cortes, have been before the world, and discusses, at some length, the merits of the Tehuantepec, Honduras, Chiriqui, San Miguel and Atrato projects, but shows that none of them hold out fairer hopes of success than that of Nicaragua.

The present Emperor of the French, when a prisoner at Ham, also devoted a great deal of thought to Central American transits; and after his escape to London, he was prompted to read a paper on the subject, at a meeting of the Institute of Civil Engineers, and also to publish a pamphlet which is just now assuming more than ordinary importance, when taken in connexion with the French invasion of Mexico, the alleged intrigues of the French Consuls for the severance of Texas from the Confederate States, and the Emperor's letter to General Forey, where he talks of "restoring to the Latin race all its strength and prestige on the other side of the Atlantic, and establishing a friendly influence in the centre of America"—in fact, where he boldly defies the Monroe doctrine:—

"There exists in the New World [he says] a state as admirably situated as Constantinople, and we must say, up to the present time, as uselessly occupied; we allude to the state of Nicaragua. As Constantinople is the centre of the ancient world, so is the town of Leon, or rather Massaya, the centre of the new. . . . Like Constantinople, Massaya is situated between two extensive natural harbours, capable of giving shelter to the largest fleets, safe from attack. The state of Nicaragua can become, better than Constantinople, the necessary route for the great commerce of the world; for it is for the United States the shortest road to China and the East Indies, and for England and the rest of Europe to New Holland, Polynesia, and the whole of the western coast of America. The state of Nicaragua is then destined to attain to an extraordinary degree of prosperity and grandeur; for that which renders its political position more advantageous than that of Constantinople is, that the great maritime powers of Europe would witness with pleasure, and not with jealousy, its attainment of a station no less favourable to its individual interests than to the commerce of the world. France, England, Holland, Russia, and the United States, have a great commercial interest in the establishment of a communication between the two oceans; but England has more than the other powers a political interest in the execution of this project. England will see with pleasure Central America become a flourishing and powerful state, which will establish a balance of power by creating in Spanish America a new centre of active enterprise, powerful enough to give rise to a great feeling of nationality, and to prevent, by backing Mexico, any further encroachment from the north. England will witness with satisfaction the opening of a route which will enable her to communicate more speedily with Oregon, China, and her possessions in New Holland. She will find, in a word, that the advancement of Central America will renovate the declining commerce of Jamaica and the other English islands in the Antilles, the progressive decay of which will be thereby stopped. It is a happy coincidence that the political and commercial prosperity of the state of Nicaragua is closely connected with the policy of that nation which has the greatest preponderance on the sea."

A real gate of the Pacific, open to all nations, may speedily be made. The importance of the Australasian Colonies is now so great, that a monthly mail to them, and despatched over the longest route, is altogether an anachronism, which New Zealand and New South Wales by their proposed subsidies of 100,000*l.* per annum hope to remove. If no weekly mail can as yet be established, there should at all events be a semi-monthly one, and, if possible, by way of Central America. It would be the surest way of knitting our colonies to us and retaining their commerce.

The author was for some time senior naval officer of the Central American station, and availed himself of the opportunity to explore the country about which he now writes. The chapters which more especially relate to these explorations, being written in the lively strain of a sailor, will be read with interest by those who care little about the political and com-

mercial questions brought forward. He had repeatedly intercourse with the King of Mosquito, and paid a visit to his Majesty's residence, a large American lumber-house most tastefully built in the villa style, where he found a good collection of books by some of our best authors. The Captain was also introduced to the mother and the two sisters of the king:—

"I found the queen-dowager, a singularly firm and upright old lady, much taller than the generality of her countrywomen. She was very plainly and neatly dressed, as also her daughters, who closely resembled their mother. They have not received any education beyond that obtainable in Mosquito, but nevertheless seemed to exercise considerable influence over their kingly relative; indeed, it appeared to me that, although by no means houris, their position was far superior to that of their sisterhood in Turkey. The dresses of the princesses were not remarkable either for elegance or pattern; the puffers or gathers were few and far between; indeed, the ladies appeared straight up and down, like 'a yard of pump-water.' I thought of the full skirting of our ladies at home, and could not resist speaking, through the medium of his Majesty as interpreter, of the utility and elegance of a certain article of dress much in request in my own country. The youngest princess, however, with charming *naïveté*, remarked that one garment was quite enough in their country, and that the addition of another would be a burden grievous to be borne. I eagerly rejoined that she could not have the least idea of the light bird-like airiness of the garment in question, if she looked upon it as a burden. After a little more conversation on this interesting topic, upon which I became quite confidential, we adjourned to the king's residence, where a plentiful dinner was served quite in the English style—plates, knives, forks, &c., all of English make."

'The Gate of the Pacific' will be read for the important political and commercial questions it raises, and even those who widely differ from the author in the opinions advanced will peruse it with benefit.

NEW NOVELS.

Sylvia's Lovers. By Mrs. Gaskell. 3 vols. (Smith, Elder & Co.)

THE story of 'Sylvia's Lovers' is laid in humble life, and is narrated chiefly in the broad vernacular Yorkshire dialect, which, although it gives the local colour, is a drawback to the comfort of the reader, and fatiguing to the eye. But for true artistic workmanship we think 'Sylvia's Lovers' superior to any of Mrs. Gaskell's former works. The scene of the story is laid at a fishing-town on the Yorkshire coast, called here Monkhaven; the time, the close of the last century, when the war with France was rife, and pressgangs were in all their cruel authority. Monkhaven was the seat of the Greenland whaling-trade; and the best scene in the book is the description of the return of a whaling-vessel, the first of the season, waiting to get over the bar, all the inhabitants assembled in breathless excitement to hear news of sons, brothers, husbands and lovers who had sailed on the voyage. Just as she clears the bar and gets in, the pressgang is upon her, seizing half-a-dozen of the crew, and carrying them off to the rendezvous, without allowing them a word with their half-frantic relations waiting and watching for them. It is a highly-wrought scene, and yet there is not a trace of straining for effect or of exaggeration; it is true pathos, and relies only on the simple truth of the reality. Sylvia, the heroine, is the daughter of a retired whaling-sailor, who has become a farmer, but who still loves whaling and smuggling far better than ploughing or seeing after sheep and cattle. Old Daniel Robson is a capital portrait: Sylvia is as charming and pretty a damsel as ever tormented the heart

of a lover; but she has a dash of fierce, persistent resentment in her character that effectually redeems her from perfection. The mother is an excellent and skilfully-drawn character—a respectable, sensible, religious woman, whose one inconsistent act had been the choice of her husband; but she behaves so wisely and well, that it would have been a pity to deprive her of such an opportunity to exercise her virtues. Sylvia's cousin, Philip, is desperately in love with her, against all his sense of prudence; for he is as wise and excellent and disagreeable a young man as can well be imagined. There is no fault to be found with him, except that he is detestable. Sylvia hates him, and the reader sympathizes with her heartily; and yet he never does anything but good, nor says anything but what is unexceptionable. He loves Sylvia with a remorseless pertinacity which affects the reader with a positive dread, it is so certain to tire down all opposition and wear out obstacles: of course he suffers a great deal, and the reader feels a malignant pleasure in every rebuff he receives. He is a man who can talk of the respect due to the law to the poor people who are driven wild by seeing the pressgang carry off their relatives as they touch the land. In one of the returning whalers which the pressgang boards, a young man distinguishes himself by his resistance, and gets nearly killed; in fact, there are several lives lost in the affray. This young man is the type of a fine, high-spirited sailor: Sylvia exalts him into a hero; he tells tales of adventure which would have won Desdemona herself. He falls in love with Sylvia; and though the mother favours Philip and does not like Charley, circumstances are, however, propitious,—the father gives his consent, and the two plight their troth; but they have to part immediately, for he has to join his ship, a whaler: he is the best harpooner in all the service. On his road he is seized by a pressgang in the sight of Philip, to whom he gives a message for Sylvia. Philip never delivers it; lets her believe him dead; sees her breaking her heart, and only thinks of the steadily-increasing chances for himself to win her. Mrs. Gaskell tries very hard to furnish him with redeeming traits of character, and to make excuses, and to get up the reader's pity for him, but quite in vain. Poor old Daniel, the father, gets mixed up in a riot and a rescue from a pressgang, in which a house is broken into and destroyed. For this he is committed to York Castle, and takes his trial, is condemned to be hanged, and the law takes its course. This part is told vaguely and feebly. Mrs. Gaskell does not let her sympathies go with the poor old man, and she shrinks from this part of her narrative; it is hastily huddled over. After this terrible catastrophe, Sylvia and her mother are left helpless and alone, with no one to assist them or protect them but Philip, who has certainly been a good friend in their trouble. Sylvia marries him for the sake of a home for her mother. The real genius of the story now begins. Nothing can be more true and delicately indicated than the cold, disappointed married life of Philip. The treachery he has practised begins for the first time to weigh heavily upon him: his punishment lies in his sin; even the reader feels sorry for him. Of course, Charley Kinian comes home, and Sylvia learns the truth. There is a very strong scene, excellently done: the fierce, unforgiving side of Sylvia's character comes out towards her husband. She has by this time a child: this, and her sense of honour, enable her to refuse to leave him; but he cannot stand her wild, contemptuous, indignant misery,—he leaves home, and in a fit of reckless despair

enlists for a soldier, and never lets his wife know what has become of him. Years pass by, and the triumph of Mrs. Gaskell's art is shown in her power to bring over the sympathy of the reader to Philip. Charley goes away and makes a fine marriage; he has risen to be an officer, and become so prosperous that the reader cares no more for him. Philip saves his life; but he meets with no success himself; he is in a terrific explosion, and scarred, maimed, and disfigured so as not to be recognized. He is sent to England and discharged. His deep, passionate love for his wife remains all unchanged; but he dares not return to her—the memory of her curse lies heavy on him. The reader not only forgives him, but the intensest sympathy is roused for him. We will not spoil the reader's interest, by narrating the end of the story; it is very finely worked up, and is as true as it is powerful. When once the reader has got over the provincial dialect and the peculiar orthography, there will be nothing more to find fault with.

A Point of Honour. By the Author of 'The Morals of May Fair,' &c. 2 vols. (Hurst & Blackett.)

IT is some relief to meet with a novel which contains no very startling incidents, no impossible and intricate plot, and only a very "mild mystery." We believe it will be a recommendation to many readers, if we mention with respect to this work that nobody even attempts to poison anybody else; that all the gentlemen are contented to be "the husband of one wife" at a time; and that the ladies, though subject to little disappointments in their matrimonial speculations, conduct themselves very much as ladies in real life do under similar circumstances. They fret a good deal quietly in their own rooms, and they fall in love with somebody else when a proper time has elapsed. They find their relations slightly tedious during the interval; but they do not run away and lose themselves, or commit suicide, or go on the stage, or do anything outrageous and offensive to feminine dignity; and therefore we repeat that 'A Point of Honour' will be found refreshing after many of the books that have been lately published. It is not a dull book, for the writing is clever and pleasant, and the plot is sufficiently interesting to attract the attention of the reader; but it is a melancholy book upon the whole, and impresses us with an idea that the story is a true one, and that Jane Grand was a real woman, who once lived and suffered, and who recovered her spirits sufficiently to relate her troubles, simply and naturally, just as they really occurred. The opening sketch will sufficiently reveal the style in which the whole book is written:—

"She was a woman of nearly thirty when I first saw her; a woman spiritless and worn beyond her years; with sorrowful brown eyes, deep sunken; a complexion white with the very whiteness of death itself; and hair already lustreless and thin, although of that blond asburn colour which, in most women, survives unchanged when all other charms of youth are faded or dead. Yes, this was Jane Grand, as I first saw her, dressed in deepest black, and walking wearily along the weary village street of Chesterfield St. Mary. But when Gifford Mohun first saw her, she was in the pride and freshness of her youth; a soft-faced girl of twenty, standing beneath the shades of broad-leaved forest trees, and with the glow of a June sunset lighting up her lips and eyes and hair with radiant gold."

Gifford Mohun is a young squire of some importance in his own immediate circle; and Jane Grand is a young lady who is not in the county society, and who lives with a very commonplace old lady,—half governess, half com-

panion, — close to Mr. Mohun's park-gates. Gifford cannot come out of his own grounds without seeing Jane; and he cannot walk in his own woods without catching a glimpse of her graceful figure, passing in and out beneath the shadow of his trees: and, having very little else to do, the young man makes the most of his opportunities, and falls in love with Miss Grand as fast as he can. Jane, nothing loath, reciprocates his affection accordingly, and an engagement ensues, much to the scandal of the neighbourhood; for Jane is not visited, and her marriage with the young squire is reckoned an insult to every individual in Chesterfield, and an outrage to society generally. Though Jane is an orphan, she has been kept in strange ignorance as to her birth and parentage, and questions Miss Lynch rather closely on the subject. Miss Lynch, in distress and confusion, consults Mr. Follett, the excellent clergyman, and the object of her humble admiration. Mr. Follett is an elderly widower, and is much admired by all the unmarried ladies of his parish, especially Miss Lynch. He has always made a great pet of little Jane Grand; and he takes an interest in her affairs, but sends her up to town alone to her solicitor, knowing she will hear no good report of her father, and dreading to witness her surprise and grief when she learns that he was a swindler and a convict. This journey to town and Jane's horror at the revelations of Mr. Clithero are the grand events of the book, and are remarkably well described. Knowing that Gifford Mohun is sensitive on the score of family connexions, Jane at once resolves to free him from his engagement; and though he makes a feeble attempt at remonstrance, Mr. Mohun is easily persuaded that it is his bounden duty to give up Jane, and he shuts up his house and is absent for about ten years, while Jane gives herself up to a state of morbid misery. Everything is hateful to her, and she declines to see anybody but the Vicar, who forces his way in to her company, and, in hopes of rousing her from her lethargy, relates to her the history of his own experiences, his love for his first wife, his short bit of happiness in married life, his wife's early death, and his disappointment in finding that she had never loved him all the time, and had only married him under the belief that a former lover was dead. All this is very prettily told, and Jane takes an interest in the story, though not much in the Vicar. The Vicar, however, suffers the penalty of falling in love with Jane, and tells her so several times without the slightest effect. Miss Lynch dies; Gifford Mohun returns to Chesterfield, and treats Jane as an old friend, and spends most of his time in her cottage; and the Vicar retires in deep dudgeon.

Why Jane does not lose her character through the constant visits of her two lovers does not transpire; but it seems she is by this time so elderly, and so faded, and so forlorn-looking, that she has established a right to flirt as much as she pleases without attracting any ill-natured remarks; and the squire sits with her morning, noon and night, sometimes sober and sometimes drunk, but generally very irritable, and selfish, and disagreeable.

When Mohun goes away for a time, Mr. Follett takes his place, and sighs in vain, for the love that is being wasted on the ungrateful Mohun. In time a blooming and vulgar young lady appears on the scene, and Gifford Mohun is caught in a trap, and made to propose and marry her before he knows where he is; and then at last Jane's eyes are opened, and she suddenly discovers she is very fond of the Vicar, and he, seizing a fortunate moment, pro-

poses once more and is accepted; and though they must be far advanced in years by this time, the Folletts are supposed to be a very happy couple, and end by having two handsome sons; while poor Gifford is very much henpecked, and finds his home so uncomfortable that he spends most of his evenings at the vicarage, which evinces a very praiseworthy forbearance on the part of Jane's husband.

The Life of General Sir Howard Douglas, Bart., G.C.B., from his Notes, Conversations and Correspondence. By S. W. Füllom. (Murray.)

WITH one exception, all the conditions necessary for the production of a good biography were at hand to the writer of this volume. The subject was good, the written materials were abundant, and the family and personal associates of the hero were communicative and trustful. Unfortunately the competent historian was absent. Readers have, therefore, to regret that so good and memorable a man as Sir Howard Douglas, instead of being handed down to posterity by an intelligent biographer, is transmitted to oblivion by a writer whose ungrammatical style is as obscure as it is turgid, and who, whenever there exists a reason for stating a fact in six plain words, takes perverse delight in covering it from sight with a hundred cumbersome ones.

Born at Gosport, January 23, 1776, Sir Howard Douglas, whose honourable and useful life terminated on November 9, 1861, was the third and youngest son of the naval officer whose services in American waters were rewarded with a baronetcy in 1777, and who, whilst acting as Captain of the Fleet to Sir George Rodney in 1782, originated at the moment of action that manœuvre of breaking the line which enabled the English Admiral to overcome the French fleet under De Grasse. Howard was still in his third year when he lost his mother, and was placed, during his father's absence at sea, under the care of his Aunt Helena, wife of Mr. James Baillie, of Olive Bank, near Musselburgh. Combining gentle temper with lively humour, Mrs. Baillie was very popular in that "auld world" Scotch society, of which in after years Walter Scott used to seek traditions from her gossiping lips. Scotch in tone and tastes, as well as blood, this lady betrayed her nationality in nothing more strongly than in her dialect. Entering a confectioner's shop in London with a party of children, she asked the man behind the counter if he could supply her young friends with some sweetmeats. "Oh, ay, a' got sweeties for the bairns," was the reply: to which Mrs. Baillie, with an air of slightly-offended dignity, rejoined, "I asked for sweetmeats; I did not say sweeties for the bairns."—"Ay, but ye *suld* have said it," retorted the confectioner, who, though he detected a countrywoman from his own land on the far side of the Tweed, little imagined that he was addressing the lineal representative of the Regent Morton and the Lady of Lochleven.

Dying suddenly in 1789, just after he had been appointed to the command-in-chief on a foreign station, Admiral Sir Charles Douglas left his young family in the hands of guardians. The two eldest boys entered the navy; but Howard, notwithstanding his strong desire to follow his father's profession, was destined for the army by guardians who, Mr. Füllom says, "applied to have him nominated for admission into the Royal Academy at Woolwich without deeming it necessary to consult *himself*." Quitting Musselburgh, the lad made the voyage to London in a Scotch smack, and

reached Woolwich in time to be plucked at the preliminary examination. At a second attempt he was more successful; and, before the close of 1790, he took his place amongst the cadets, soon after the discipline of the college had been improved by enactments which forbade students to "go out after tattoo, either over the wall or any other way," and enjoined them not to "break open the desks or drawers of the inspectors, professors and masters, or even to attempt to take anything out of them under the name of *smouching*."

Leaving the Academy in 1795, Howard Douglas received his first commission in the Royal Artillery, and before many weeks had passed was sent to Tynemouth Castle, to command the artillery of the northern district. Two sergeants, four corporals and thirty gunners at Tynemouth; a non-commissioned officer and three gunners at Sunderland; the same number of men at Hartlepool; and a small body of invalid artillery at Berwick, formed the entire strength of his command on his first arrival in Northumbria. But the young lieutenant worked hard, and as he could not get more "regulars," he put Tynemouth in a good posture of defence by means of volunteers, whom he instructed in artillery practice. His leisure he occupied in yachting, and in shooting the rats which infested his barrack-room. In the North, however, his stay was of no long duration; for, early in August, 1795, he was ordered to join the *Phyllis* transport at Gravesend, and take charge of a detachment of troops that were going out to Quebec. He was only nineteen years of age; but when he went on board the transport, he found himself in command of six subaltern officers.

The voyage was one of disaster so terrible, that it deserves to be recorded in books that describe the perils of the deep; and one of the chief faults of the present work is the omission of a letter, preserved amongst the Douglas papers, in which young Howard Douglas described to his friend Capt. Frazer the incidents of the passage. Marred as the story is by Mr. Füllom's efforts at fine writing, it is a narrative which neither landsman nor sailor can peruse without deep emotion. After nine weeks of trouble on stormy seas, the *Phyllis* sighted the island of St. Peter's, about forty leagues to the east of the southern entrance of the Gulf of St. Lawrence, when a tempest occurred which tore the ship's boats from their lashings, and threw them upon the deck, where they were with difficulty secured. The next day the gale subsided: but with the coming of night, it rose once more with increased violence. Drifting towards a rock-bound coast, the vessel struck again and again. The crew were scarcely more obedient than the passengers; and when the captain gave orders to his men to lower a boat, only the two mates and the carpenter answered to the command. Lieutenant Douglas and two of his comrades, Lieutenants Caddy and Forbes, sprang forward to aid the three sailors, when the united efforts of the six men just managed to get the boat over the side. But the attempt was vain. For a minute it seemed that the boat would stave the ship, and the three lieutenants leaped into her in the hope that they might keep her off. But before they reached the boat, she was half full of water; and they were obliged to spring back, in doing which Lieutenant Douglas missed his footing and fell into the sea. Fortunately, Lieutenant Forbes seized him by the collar and pulled him on deck. But already the *Phyllis* was sinking, and every person on board expected instant death. For another quarter of an hour the ship drifted onwards, and then settled on the slope of a bank, which kept

her deck above water, and rendered it possible that she might hold together till daylight. "We stood," wrote Lieutenant Douglas, "during the remainder of that long, long night, wet through with the continual dashing of the breakers, eagerly wishing for day." But day took away their last hope, showing them that the space between the wreck and the shore was studded with rocks, through which high waves were surging. At this crisis Lieut. Barclay essayed to swim to the shore, but he was caught by a rushing surf and was seen no more. Soon afterwards, another of Lieut. Douglas's brother-officers, Lieut. Barnes, was swept away by a mighty sea. "Another wave broke over the deck and tore Mrs. D'Ellmonville from the arms of her husband, sweeping her overboard in the same way; and a soldier's wife was seen holding her two children above the wave till they sunk together. Sea upon sea struck the ship, and successive breaches carried off half-a-dozen others, Lieut. Barclay's servant following his master, and bearing with him one of the boys who had followed Lieut. Douglas aloft":—

"The women lost their hold of the ropes and were washed overboard, with one exception: nor did the strongest men expect to see morning. Four of the crew determined to seek refuge below, and contrived to descend the main hatchway, where they obtained a light, and broke into the store-room. Here they found a cask of rum, and their draughts were deep and long, till they became mad drunk; and the gale brought up their shouts of laughter, mingled with curses and snatches of song. It was like the revelry of demons, exulting in the darkness and tempest, and heightening their horrors. But these orgies hushed as the night advanced; nothing was heard but the raging of the storm, and the hatchway gave out the silence of death. The drunkards had sunk into sleep, and two of them never awoke. The weather moderated towards morning, and it became possible to move about the deck, which suggested immediate action; and Lieutenant Douglas proposed the construction of a raft capable of bearing two or three men, who might aid the rescue of the rest. His counsel was adopted, and two of the crew succeeded in landing. But they wandered off inland, without carrying out their orders, and regardless of shouts from the wreck and the Captain's signals, which they showed no intention of obeying. Their desertion caused the more dismay, as the wreck was found to be sinking, and the chance of escape lessened with every moment. Not a heart but throbbed while the carpenter prepared another raft; no one ventured to speak; and the ear thrilled with the ring of the hammers and clatter of spars. Then came the splash of the launch; it floated and lived; and the second mate, carpenter, and two seamen pushed for the shore. There they established a bridge to the wreck by making fast a hawser from the bowsprit, and all on board were brought safe to land."

Some bales of cloth having by good luck been washed ashore, each of the party had a wrapper when he lay down on the snow-covered ground. Huddling together, the exhausted survivors of the wreck fell asleep, and were on the point of being killed by frost, when cries of anguish, breaking from the only woman who had outlived the trials of the two preceding nights, awakened her companions. On the following day, those of Lieut. Douglas's miserable party who were able to stir set forth and marched towards the interior of the island in search of a human settlement. "In solemn silence," wrote Lieut. Douglas, "we continued the day's journey over almost inaccessible mountains and through almost impenetrable woods till about two o'clock, when we took up our quarters for the night in a wood on the side of a hill." Later in the day, symptoms of mutiny amongst his men were added to the troubles of the young commander. Some casks of wine, together with a supply of pork and cheeses, had

drifted ashore from the wreck, and the sailors, seizing upon them, had made a bivouac of their own on the beach. As night again approached, a few of the soldiers were leaving the military party with the intention of joining the sailors, when young Douglas called them back. "No more of your orders," answered their ringleader defiantly; "we are all equal now." In a trice the boy-Lieutenant flew at the man's throat with a knife, exclaiming, "We are equals in misfortune, and your officers are willing to bear equally all your privations; but you shall discharge your duty, and we will be obeyed. You are under my command, and I shall act as if we were in the field. Obey my orders, or, by Heaven, I'll kill you on the spot!" Quelled by this firmness, the man submitted, and his companions in mutiny followed his example. How long the party remained in their desolate position on the island, inhabiting a hut which they constructed, Mr. Fullom does not say; but the last words of a melo-dramatic chapter, entitled 'Cast Away,' concludes with the advent of a rescuing vessel after "a feeling of despair had seized each other and brought no prospect of relief."

This ship conveyed the Lieutenant and his men to Great Jervis, from which settlement they were taken up in the April of the following year by a Newfoundland schooner. On reaching Halifax, Lieutenant Douglas and Lieutenant Forbes were led to Prince Edward, who at that time commanded the forces in Nova Scotia. Having heard their strange story of adventure, the Prince invited them to dine with him in the evening at the lodge; and, as they had no better costume at hand, the two friends appeared at the Royal dinner-table dressed like common sailors, in clean check shirts.

In 1799, Howard Douglas returned to Great Britain, married Miss Anne Dundas, an Edinburgh lady, and obtained his company in the 5th battalion. In 1804, he retired from the Artillery with the rank of Major in the line, and accepted the post of Superintendent of the Senior Department in the Royal Military College at High Wycombe. Speaking of his hero's services in that academy, Mr. Fullom observes, "Rugby has canonized Dr. Arnold, who cast the slough from the teacher's office, and raised it to a ministry. Major Douglas achieved the same result on a rougher field, cultivating the minds of grown men who were versed in the uses of the world and the camp." Such is Mr. Fullom's style of eulogy when he extols a soldier whom the great Duke described in these words, 'Douglas is a d—d clever fellow.'

On the death of General Jamy, in the December of 1806, Howard Douglas was made Commandant of the Senior College, with the rank of Lieutenant-Colonel. In the autumn of 1808, having been appointed Assistant Quartermaster-General to the ill-starred expedition under Sir John Moore, he reached the Peninsula in time to meet the retreating army at Benevente. In the chapter which touches on the battle and retreat of Corunna, an error which appears in Sir William Napier's noble history of the Peninsular War is corrected:

"Colonel Douglas was in another part of the field at the moment that Sir John Moore thus fell, shattered by a cannon-ball; and his duties prevented him joining the little train which carried the body to the ramparts, though he saw it borne away as the dirge narrates. A later incident of his life connects him with the story, and forms its sequel, now related for the first time. After recording the hero's death, Napier says, 'the guns of the enemy paid him funeral honours, and Soult,

with a noble feeling of respect for his valour, raised a monument to his memory.' Sir Howard Douglas has left a note disproving this statement. The monument was not erected by Soult, but by the Marquis de Romana, who returned to Corunna at the head of a Spanish army on its evacuation by the French, when they advanced into Portugal. The gallant Spaniard saw the unmarked grave, and placed over it a memorial of timber, painted to imitate stone, and representing the broken shaft of a column, rising from a pediment, with trophies formed of real guns and shells. He repaired to the spot in state on the completion of the structure, attended by his staff, the civil authorities of the town, and the garrison, while the whole population lined the way, and the solemnity was heightened by the mournful strains of bands of music. The Marquis uncovered the monument in presence of this assembly, and wrote on it the following inscription in black chalk, with his own hand:—

A la gloria del Excellentissimo Señor
Don Juan Moore,
General en jefe del Exército Británico,
Y a la de sus valientes soldados
La España Agradecida.
Batalla de Elvina: Januario 16 de 1809.

Spain has been reproached with ingratitude to England, but gratitude never looked nobler than in this incident. A description of the memorial was forwarded to the Prince Regent by Major-General Sir Robert Walker, and Colonel Douglas was ordered by the Minister for War to convert it into a permanent structure, on his being employed in Spain a second time. He was to carry out the work by fitting the compartments with slabs of marble, which were to bear a Latin inscription furnished by Dr. Parr. But the proposed change of inscription struck him as injudicious, and he suggested that nothing could equal what had been written on the monument by Romana, and urged that it should be retained. Government adopted his counsel, and he had the satisfaction of completing the work, thus paying the last duty to his commander."

Having succeeded to his father's title and estate, Sir Howard Douglas took part as Assistant-Quartermaster General in the Walcheren expedition, and on his return to England "gave testimony to the authorities in favour of Lord Chatham, ascribing the detention at Walcheren to the imperfect co-operation of the naval force, though he expressed doubt whether any combination of the two commanders would have achieved the design on Antwerp." In the summer of 1811 he was "appointed to reside in the province of Galicia, for the purpose of communicating with the commanders of the Spanish armies in that and the adjoining provinces of Spain, and of distributing such arms and stores as may be sent from this country"; and he remained in Spain till Wellington was on the point of raising the siege of Burgos. It is matter of notoriety that Sir Howard Douglas disapproved of Wellington's operations against that fortress; and Mr. Fullom informs the world that when the British Commander was at length compelled to retreat, after five assaults, several sallies and thirty-three days of investment, he exclaimed, "Douglas was right; he was the only man who told me the truth."

In the account of Sir Howard's Gallician labours, we have some glimpses of camp-life in Spain. Of the atrocious barbarities practised alike by French and Spanish soldiers, stories are told, of which the following may be taken as an example:—

"The guerilla successes exasperated the French, who resorted to the severest reprisals, and the peasants returned from their forays to find their homes devastated and their wives and daughters dishonoured and sometimes butchered. These atrocities were so common that they are mentioned as things of course by the guerilla chiefs in their despatches to Sir Howard. But he relates one enormity that drove them to madness, and excites

a shudder even at this distance of time. The French desired to occupy a monastery commanding a strong pass, but admission was denied by the monks, who made a stout resistance. They were overcome, and the French punished their temerity by roasting several of them, and putting the rest to the sword. A party of the French afterwards fell into the hands of the guerillas, who obtained possession of an immense oven constructed for the use of a regiment, and baked them alive. Such are the horrors of invasion!"

Retaining his post of Commandant of the Senior College at High Wycombe, Sir Howard received, in 1813, the additional appointment of Inspector General of Education; and on the final overthrow of Napoleon the First, he was made a Companion of the Bath and Knight of the Spanish Order of Charles the Third.

For the next few years he pursued his professional studies with increased zeal, publishing in 1819 his 'Treatise on Naval Gunnery' and 'Essay on Fortification.' In 1824, having gained the rank of Major-General, he was appointed Lieutenant-Governor of New Brunswick, and Major-General in command of the troops in that province, and the forces in Nova Scotia, Cape Breton, Prince Edward Island, Newfoundland and Bermuda. Differences with Government about the timber-duties, led to his resignation of the governorship in 1831; and no new employment was found for him till 1835, when he was made Lord High Commissioner of the Ionian Islands, which office he held till the March of 1841. On his return to England, Sir Howard was sent to Parliament by the Conservative electors of Liverpool, and remained a Member of the House of Commons till 1847, when he retired from political life, in the seventy-second year of his age. Towards the close of his career the veteran was seduced into a controversy on the merits of armour-ships, against which he used his voice and pen with characteristic decision and ability, although he allowed that England had no choice but to follow the example of France in building iron-cased vessels. We learn that the General's last days were disturbed by the bitterness of this discussion. "Sir Howard's stand against the iron clamour," says Mr. Fullom, "exposed him to the taunts of Mr. Scott Russell and other theorists, and drew down upon him an anonymous letter, warning him to 'take care what he was about.'" To the last, however, the veteran remained confident that experience would justify the position he had taken. Twenty-four hours before his death he remarked, "All that I have said about armour-ships will prove correct. How little do they know of the undeveloped power of artillery!"

The Value and Influence of Art as a Branch of General Education. Lectures delivered at Oxford by W. Collingwood. (Kent & Co.)

Mr. Collingwood, who is a member of the Society of Painters in Water Colours, delivered a series of lectures at Oxford on the above subject. Of this two discourses are before us. Notwithstanding a sad disregard of Lindley Murray and his successors, they show earnestness and appreciation of the importance of popularizing the study of Art. The author would have drawing, or, as he calls it, the study of Art (which last is indeed only based soundly when founded upon drawing), to hold a place in general education, attracting and embracing in its pursuit young and old, rich and poor, learned and unlearned, gifted and ungifted alike. He would refer this branch of education entirely to Nature herself for objects, and vigorously disclaims all hope of benefit for any one from merely copying the works of other men. He would have drawing to be much more than a pretty accomplishment. The result of reducing it to such is, he rightly says, merely to enable the practitioner to produce a pretty and showy effect, a toy-like

manufacture, endowing its author with no knowledge of beauty, truth, or dignity. It is practised, not as a stepping-stone to a knowledge of Nature, but as a separate and distinct affair. It is purely mechanical. The eye and hand are at work, but the mind gains nothing, or next to nothing. Useful in its place, as the means of producing mere copies or memoranda of pictures, copying in general, unless with a constant view to the better perception of Nature and reproduction of her effects, is but time and toil thrown away. Anybody may learn to draw, says the author, although some have drawing as a gift, so to say, than which gift nothing is more mischievous in Art, unless duly subordinated to use and service in better comprehending Nature. Pattern and mechanical drawing, and the like, are for the most part distinct from those forms of the attainment desirable for men, women and children. "He who has learned to draw from Nature will be a better pattern or mechanical draughtsman than those who have spent all their time in studying those departments exclusively."

This last piece of experience is a thing beyond all challenge in practice; it is imparted to us by every great artist, from Leonardo to yet living men; it indicates the system of teaching not only advocated, but actually carried out in all the continental schools of Art. In matters relating to music or other arts than the formative ones, all men bow to the opinions of those who have distinguished themselves in their practice; yet in this country, practical artists and critics have for years denounced the wretchedly mechanical system followed not alone at young ladies' and boys' schools, but in those supported by the Government for instructing the people in this very art of drawing,—and all without effect. Their intelligence not aroused, and all independent thought sleeping, as if thought were no part of their business, the unhappy students of the Government schools go on year by year adding copy to copy in a way which is enough to make men despair of anything to come out of such a system of drudgery. Under quite another system than theirs the value of drawing is precisely in proportion to that of the intelligence it evokes and delights. "The practice of drawing is the very thing to open the eyes and quicken the sense of perception,—to enable the student to search out the beauties before him, seeing in what they consist. It can lay a foundation on which to build a vast superstructure of delight. The eye that has once drawn a graceful line will discover graceful lines everywhere around. He that has occupied himself with the shapes of objects will find endless delight in comparing and combining them. He that has drawn a leaf or a bird's nest will think of such things as he never could have thought of them before. He that has tried to lay a tint like nature's will never open his eyes but he will see something to admire and to enjoy, though he cannot do it,—the more, perhaps, because he cannot do it." All this cannot be learnt without drawing; a refined mind or poetic feeling may see and enjoy much, but still be far behind in all the power which drawing can render. Without drawing, a man, so far as he can enjoy must enjoy alone, without delighting others; words are but mockeries of the delight beautiful forms and colours give; memory soon fades, leaving of nature's glory only regret: if the art be never practised after attainment, still the faculty of perception and its due enjoyment remain always.

NORWEGIAN BOOKS.

WE have received the publications issued by the Royal Northern Academy of Christiania, which celebrated its first jubilee of fifty years on the 2nd of September, 1861. This event was made the cause of great rejoicing, accompanied by the issuing of a well-executed medal, the obverse of which bears the representation of a lion lapping water from a vessel held by a seated youth, with the inscription, "Ex haustu olympico valentior." A concert was performed on the occasion, of which the words, handsomely printed, are also before us. Several scientific treatises were also printed, including one by Dr. Michael Sars, on

Siphonodentalium vitreum, a new gasteropodous mollusc, illustrated in three quarto plates; a remarkable paper on 'Comets,' by Mohr; and a carefully-edited transcript of the Charlemagne Saga, by Unger,—a poem which owed its origin in the first place to the French Troubadours, having been probably composed in the first half of the thirteenth century, but somewhat altered at the close of that century. Manuscripts exist of both these versions, which have been carefully collated, and a comparison made with a Danish version, which last was subsequently translated into Icelandic; and it is this translation of a translation that has been hitherto known as the Saga of Charlemagne.

The Proceedings of the Academy for 1858, and three following years, are also before us, and contain a great number of interesting papers on general literature and science, both physical and mathematical. Amongst these we may especially mention several papers by Holmboe, in most of which the Northern antiquities of different kinds are compared with those of the East; a remarkable memoir, by Caspari, on 'The Apostles' Creed' in the early Church, having for its text the article of St. Ambrose, published by Cardinal Mai, "Beati Ambrosii Episcopi Mediolanensis explanatio Symboli ad initiandos." Numerous papers by Dr. Sars appear in each of these volumes, illustrating the various tribes of marine invertebrated animals of Norway, such as the Mollusca, Crustacea (with many new species and genera described), Holothuræ, Pennatulæ, Polynôæ, and a number of new species of Coelenterata. The volume for 1861 contains a revision of the Crustaceans of the tribe Cladocera, with descriptions of many new genera and species, by G. O. Sars; papers on the Crangonidæ and Sabellæ, by Dr. Sars; also the curious memoir, by Holmboe, 'On the Comparative System of Weights in Scandinavia and India,' of which we gave an account in a recent number. These volumes also contain numerous mathematical, chemical and geological, as well as archaeological and ethnological, memoirs, and testify to a great amount of scientific activity which has, we fear, been too much overlooked in our own country.

Oversigt—[Revision of the Northern Echinodermæ], with 16 plates; and *Beskrivelse—[Description of Lophogaster typicus, a remarkable form amongst the Crustacea]*, with three plates; both by Dr. Michael Sars, Professor in the University of Christiania.—It will be sufficient for us to introduce these two excellent memoirs to the notice of our zoologists. In the former work the author has given a graceful description, with excellent figures (accompanied by anatomical details), of 79 species of Northern Echinoderms, being nearly 20 more than had been catalogued as Scandinavian by Duben; and in the latter memoir is described a very remarkable new Crustacean, allied to the Opossum shrimps, but having each of the branchiæ formed of a great number of branches,—a structure hitherto found only in Sergestæ and Aristeus, both belonging to a different tribe of decapod Crustaceans. The author has also been fortunate enough to observe the earliest stage of his new animal.

Synopsis of the Vegetable Products of Norway, by Dr. F. C. Schübeler, translated by the Rev. M. R. Barnard, B.A.—This excellently-compiled, and as excellently-printed, little treatise was produced at the request of the Central Committee appointed for the arrangement of the Norwegian contributions to the International Exhibition of 1862. It has been printed at the expense of the Norwegian Government, and is intended to serve as a guide to the vegetable products of Norway there exhibited. Considering that the greatest length of the country from Cape Lindesnaes in the south to the North Cape is not less than 900 miles, it will be easily conceived that there will be much difference in the vegetable products of its different parts, whilst the great variation in the elevation of the different parts will also induce corresponding modifications in their distribution. In an excellent introduction of a few pages the author has noticed most of these facts, of which perhaps one of the most remarkable is the exceedingly rapid growth of vegetables in certain parts. Thus, from observations made at Alten Copper

Works, W. Finmarken (lat. 69° 57' 30"), it has been ascertained that barley will grow 2½ inches and peas 3 inches in the twenty-four hours for several consecutive days. "Whether it is the heating or the actinic rays of the sun that here play the principal part, or whether it is both of these combined, or whether it is due to other still unknown solar influences, must be left for future investigation to ascertain." The vegetable products themselves are ascertained to be—1. Fruit trees and shrubs; 2. Forest and ornamental trees and shrubs; 3. Cereals; and 4. Other plants cultivated for economic purposes. Under each of these heads the different trees or plants are described, so far as their economic properties are concerned, in an alphabetical series. An excellent map showing the limits of the most important vegetable products is also given in illustration of their distribution.

OUR LIBRARY TABLE.

Lord Robert de Clifford: where was he Buried? By C. Nicholson. (Whittaker & Co.)—Robert de Clifford was one of the warriors who went to Bannockburn with King Edward, and did not come back. A grassy knoll near the field is the traditional burial-place of this, the first Lord Warden of the Marches, and other brave but luckless fellows. The Rev. James Simpson finding the figure of a naked sword on a flag in Shap Abbey, Westmoreland, first says that such an emblem signified a soldier who had fallen in battle—which it does not,—and then adds that here most likely Robert was buried, as had he been buried elsewhere we should have heard of it! Well, we know that tradition buries him where he fell, and no legend even hints at his interment in Shap Abbey. Mr. Nicholson would be glad enough to get a Westmoreland hero back into his county; but he leaves him as we do, with tradition and five centuries over his grave on the banks of the Bannock. The controversy is here published in a pamphlet; and there is a curt, snappish tone about the disputants, such as distinguishes adverse parties in *Notes and Queries* when they are quarrelling over a mare's nest. Wherever the first Lord Warden of the Marches may be sleeping, he was the father of a very lively race. Mr. Nicholson thinks the grave in Shap Abbey may be that of his son Roger—"Julian's adorable Lothario." He should have explained this epithet. Roger, who once made a pursuivant eat the wax off a writ served on him, was the famous lover of a famous mistress, "Gillian of the bower": she was too humble for him to marry, but, for her sake, he would not marry any other woman. The mishap at Bannockburn was fairly avenged at Flodden Field, when the fourteenth Baron—that Henry who from seven years old to thirty-two was brought up (out of fear of the Yorkists) as a "shepherd-boy," which must have been a difficult matter towards the end of the time—led a body of men there with ability. Like other shepherds, Henry, unlearned in all besides, became skilled in astronomy, especially in his after-life. His son Henry, subsequent to his first illustration of baronial tastes, when he was a drunken debauchee, and a plunderer of churches, was created Earl of Cumberland, and took to living like a man who cared to be well with his neighbours. In the person of this last Henry's grandson the title expired; but the last holder of it was father of that renowned "Anne Clifford, Dorset, Pembroke and Montgomery," through whose daughter the barony subsequently fell to Tufton, Earl of Thanet, in 1691. At his death the title fell into abeyance, till documents were found which proved the right of the Southwells to the dignity, which is now held by a lady; and Sophia, Baroness de Clifford, is at this moment the representative of that soldier of five hundred years ago, who, according to well-sustained tradition, lies buried at Bannockburn,—but who, according to the Rev. James Simpson, must be interred in Shap Abbey, because there is no record of the fact—and if he had been buried in any other locality, local history would be sure to have registered it.

The Scholemaster. By Roger Ascham. Edited, with Notes, by J. E. B. Mayor, M.A. (Bell &

Daldy.)—This is a charming edition of old Roger Ascham, a man of much good sense, and a little not very bad nonsense. The text is carefully revised by comparison of editions, and a large mass of valuable notes of reference is added. Few books are of more avail in the history of English classical education; and the notes to this edition must make it indispensable.

The New Theology. By John Smart. Edited by his Wife. (Glasgow, Bryce.)—Mr. Smart is no more; but the work cannot be said to have been edited by his widow, for it was in progress during his life, under the care of his wife. The biography, and the theological lectures which follow, have an interest to surviving friends. The sentiments and feelings are pious, with a decided dash of liberalism, which indicates an author who would fight, upon some points, by the side of the Essayists, the Bishop, &c. For example, he thinks the value of Genesis not at all impaired by the supposition that Moses, observing the cruel usage of their wives practised by Egyptians and Jews, "in a highly-figurative style, fashioned Eve out of Adam's rib, to teach woman submission and man tenderness." Thus we see in how many quarters the spirit of resistance to old interpretations is springing up. The authorities forget that in dealing with the heretic they are dealing with the representative of a class. They may put down Williams, or Colenso, or Jowett, if they can; but new officers will arise out of the ranks. They must have recourse to argument: if that will do it, it is done; if not, there is no other way.

Contribution towards a History of Electro-Metallurgy, establishing the Origin of the Art. By Henry Dircks. (Spon.)—The less we say about this work the better. The history of electro-metallurgy has been written—the claims of Jacobi, Spencer and Jordan have been long since settled. Since, in May, 1839, the *Athenæum* published the earliest announcement of Jacobi's 'Galvanic Engraving in Relief,' upon which followed the statements of Spencer and Jordan that they had independently made the discovery of the electro-chemical deposition of copper, twenty-four years have passed away. Twenty years since the rival claims were discussed with a very unfortunate amount of personality, but eventually the question was settled. Why Mr. Dircks should again open the discussion without having a single new fact to contribute, we cannot tell. It is with deep regret that we find old prejudices appearing in every page of his book.

A Handbook of Volumetrical Analysis. By Robert H. Scott, M.A. (Longman & Co.)—The design of this small volume is to supply the chemical student with the means of determining any one constituent of a chemical compound by the methods of volumetrical analysis. This method is now rapidly supplanting that of ordinary weight analysis, and Mr. Scott's volume will be found a useful companion to all who are engaged in laboratory work. The metrical system of weights and measures has been adopted throughout the work,—a system which is gradually gaining ground amongst the chemists of this country. The work treats of analyses under the three heads of saturation, oxidation and reduction, and precipitation. It contains also an introductory description of the apparatus required. The work is also illustrated with woodcuts of apparatus, and will be found a valuable addition to the books written for the use of advanced students in chemical analysis. There is also a chapter on the method of testing the presence of cane-sugar, fruit-sugar and glucose in solutions by the aid of polarized light. This method, first introduced by M. Biot, has been recently considerably improved, and we know of no better account of this simple and beautiful process of testing the qualities of sugar than that here given by Mr. Scott.

Hymnologia Christiana; or, Psalms and Hymns selected and arranged in the Order of the Christian Seasons. By Benjamin Hall Kennedy, D.D. (Longman & Co.)—A copious and well-executed collection of hymns. Mr. Kennedy is, perhaps, too critical in his Preface; but over-care is the natural consequence of time and zeal spent in accumulation.

The Social Science of the Constitution of Society.

(Wilson.)—The object of this rambling book is to unfold a scheme for what the writer calls a constitution of "natural society," in which private property, interest and rent, which he holds to be the chief sources of our social troubles, shall no longer exist. There are to be industrial workers and managers, a common council of managers choosing the justices; a national assembly, and a reigning queen and king with a house of councillors; while the members of his commonwealth are to live together in what he calls "a community town," with a centre for the married members, a right wing for the daughters and a left wing for the sons; the workshops being "within an easy distance for communication." Clothing, food and other necessaries are to be "plenty as blackberries"; and in answer to "the specious and plausible objection," that poor folks, suddenly plunged into prosperity of this sort, might indulge to excess, the author remarks—"Starved beings, when introduced to plenty will for a short time go deep with the necessaries; but they become filled and satisfied in body and blood, and then they become quite respectable at meals." Nevertheless, he thinks, as Nature herself gives an intimation of when a man has had enough, the waiters in his community house,—or, as he, more elegantly, expresses it, "those who present supplies,"—might by the very manner of their service hint at moderation. "If you go into an eating-house of any considerable town," he observes, "you may have a small plate of meat, or one larger if only asked for as 'a plate'; and if you add 'a large plate' of meat you will have three sizes to choose from: and surely this might be without envy or quarrel." The worst fault of our author is his affectation, which gives to his style a curious resemblance to that of the courtier in Hamlet. He quotes extensively from other authors, generally introducing them with such remarks as "Now we may hear Thomas Carlyle in regard to the external"; "Allow the gifted Shelley to say a word here"; "We shall give audience to another George Combe"; "Hear Hugh Miller on labour in present society"; or, "We will introduce Shelley in prose on the subject in hand." He is, no doubt, an amiable gentleman, who wishes well to mankind; and as there is no danger of his scheme being put in execution, we may regard his book as one which may provoke some merriment, and which can do no harm.

Compendium of Mathematical Geography. By A. H. Dick, M.A. (Longman & Co.)—Mr. Laurie, who writes the preface, informs us that this work is founded upon Brettnet's 'Mathematische Geographie,'—a simple translation having been judged inexpedient by reason of certain omissions. The work, as now presented, is valuable: it is mathematical, but not overmuch. The subject is one the points of which are usually scattered through books of astronomy and general geography.

A Short Treatise on the Longevity ascribed to the Patriarchs in the Book of Genesis, and its Relation to the Hebrew Chronology; the Flood, the Exodus of the Israelites, the Site of Eden, &c. &c. From the Danish of the late Professor Rask, with his Manuscript Corrections, and large Additions from his Autograph, now for the first time printed. (Trübner & Co.)—We transcribe this long title, because it gives the bulk of what we need to say. We must add, that this translation, made in 1830, is now brought forward by the spirit of inquiry created by the Essayists and Bishop Colenso. Rask's theory is the very probable one, that the year of the historian is less than twelve months; and the references made by ancient writers to Egyptian years of six, four, three, two, and even one month, are brought forward and discussed.

A neat and portable edition of *The Acharnians of Aristophanes, with short English Notes, for the use of Schools* (Parker), prepared by Dr. Dawson W. Turner, has taken its place among the Oxford Pocket Classics. The notes abound in useful information, apt renderings of difficult passages, and appropriate illustrations, with references to authorities of recognized value.—Messrs. Chambers have commenced a *Narrative Series of Standard Reading Books, specially adapted to the Requirements of the Revised Code of the Privy Council Committee of*

Education. The first three books have appeared: *Infant School Primer; Book I., adapted to Standard I.; and Book II., adapted to Standard II.* They appear to be the work of a practised teacher, who is fully alive to all the difficulties and wants of the youngest learners. The books are carefully graduated, to suit the growing ability of the reader, and have the advantage of being available for whatever mode of teaching to read may be preferred. Another great excellence is the frequent repetition in varied form of what has been previously done. The reading lessons are not only admirable as exercises, but easy of comprehension, and very amusing. Besides furnishing excellent practice in reading and spelling, the books supply as much assistance as is required in writing and arithmetic.—There is nothing remarkable in *A Simultaneous Method of Teaching to Read, adapted to Primary Schools*, by G. White (Houlston & Wright), which is simply an explanation and recommendation of the plan of teaching children to read in large numbers, at the same time, instead of separately, one after the other. Such a wholesale method may be expeditious and easy for the teacher, but can hardly be effectual in securing individual accuracy in the scholars. Whether or no, many of the directions here given are worth little to either teacher or scholar, consisting chiefly of remarks too obvious to need mention, or too indefinite to be of any practical use.—*Modern Geography: Descriptive, Political, and Physical*, by W. J. Unwin, M.A. (Longman), is as dry and hard a geography as such books can well be made, and inferior, on the whole, to several existing manuals; though we must say we like the way in which the rivers are arranged, according to the slopes of the land through which they flow. It is right also to observe, that at present we have only the first part, on Descriptive Geography, to assist us in forming a judgment.—*A New System for the Declension of German Nouns*, by P. A. S. Junod (Nutt), divides German nouns according to their gender, which the author thinks a simpler and easier, though less philosophical, classification.—*The Method of French Methods, or Practical Grammar of the French Language, with a Vocabulary*, by C. Badois, B.A. (Nutt), is not so much a grammar or method as a combination of both, containing vocabularies, grammatical materials, and conversational writing exercises.—We need only transcribe the titles of the following: *French Exercise Copy-Book, No. 1., Accidence for Beginners; No. II., Syntax for Advanced Pupils, with the Essentials of French Grammar; French Verbs Copy-Book; and Latin Verbs Copy-Book*, by L. Nottelle, B.A. and A. Albitas, LL.B. (Simpkin);—also *The Improved Copy-Book, containing complete Sets of Text and Small-Hand Copy Lines*, by Patrick Johnson, Royal Academic Institution, Belfast.

LIST OF NEW BOOKS.

[ADVERTISEMENT.]

To the Members of the Anglo-Biblical Institute.

DEAR BROTHER MEMBERS.—Allow me on the present occasion to direct your attention to the Pentateuch, as regards the charges of Bishop Colenso against its want of *Historic Truth*, and of its not being the production of a *Single Author*. May the giver of every good and perfect gift, who has blessed us with the gift of His Son, Jesus Christ, in the Person of His only begotten Son, the Lord Jesus Christ, who has redeemed us from all iniquity, unto Himself, a peculiar people, zealous of good works, preserve us from all temptation, and keep us from falling, and bring us forth unto the Father in glory, Amen.

Ep. Colenso in the Preface to the 2nd Part of his work says, "I hope that I have put the main points of the argument within the grasp of any one, whether clerk or layman, though unacquainted with Hebrew or German, & only he will give the careful attention, free from prejudice, to the consideration of the points at issue." After such a statement, our attention is naturally directed from the various arguments connected with these Subjects, and directed to the particular ones selected by the Bishop, as, in his opinion, sufficient to prove his assertions.

We are indebted to the Bishop for having thus restricted the limits of our inquiry, and still more, by his having boldly so set forth in his Preface a single subject, the Mosaic Record of the Deluge, as sufficient not only to prove the want of *Historic Truth* in the Pentateuch, but also to authorise him to urge his lay Brethren to require Parliament to change the Ecclesiastical Laws of the Country;—to regard his Ecclesiastical Equals as Individuals whose minds are so impregnated with prejudice, as to render them incapable of correct judgment;—and to treat his poor brethren of the Clergy who accept the Record of the Deluge, almost, as persons "deprived of the capacity of reasoning, and unable to require multiplication of the number of Records that he considers favorable to his views will assist the Bishop, since the arguments which destroy the force of the one he has produced are equally applicable to every other.

If the Bishop's prescribed canon of inquiry be followed, namely, that "in the record of the Deluge, as presented, there is no evidence, free from prejudice," I, who am but a humble layman, cannot perceive that that Record supports his views.

The Statist may indeed avail himself of our limited knowledge of the Deluge to paint with much effect the natural difficulties attending an exact and complete history of the Deluge, as it was, and the wild, and the tame creatures mixed together, shut up in a dark hole, without air, with bare attendance, and stale food. Or should he please to draw a more agreeable picture, he may appoint to describe the habits of the animals in the zoological gardens, and describe their times as passed in the most natural manner. But after all such exhibitions, when the meer has vanished, the single question remains unanswered. Are such statements just? Can the Supernatural be weighed in Human balances? Can the mind so far disregard the Laws of Nature, as to have a *Thou* speak so unwarped of *God*, as to speak a coming flood, and prepare an ark? (See 1 Pet. iii. 20), and then justly class it, as only a proof of Prejudice and Ignorance to teach, "That the fountains of the great deep were broken up, and the windows of heaven opened," that the modes of preserving life, and the means of escape of the human race, of such masses of water, were not effected by, or attended with results proper to, Natural operations. Thus making *True Wisdom* to consist in proclaiming to the Supernatural sea, "Thus far shalt thou go but no farther."

If the design of the Almighty alone be the destruction of the whole human race, save the selected few, He might have effected it by many far less cumbersome means than the Deluge:—as by pestilence, by famine, or by His simple decree that it should be so. But would such visitations have pointed out to the men of that age Divine Creator, and to those who were to age the same Revelation, unless in such visitation the Natural Laws had been shown to have been disturbed?

Had only Natural Results from the Deluge or any other occurrence remained to Man, where is his proof that there is a God?—where is his evidence that there is a God, who has revealed Himself to make any Revelation to Man? What is to make our Blessed Lord's claim to teach more authoritative than Bishop Colenso's or Sikh Gooro's, if His possession of the Supernatural be taken from Him?

The fact of the Deluge, produced by Supernatural means, and attended with Supernatural results, is in perfect accordance and consistency with *Perfect Reason*; deprive it, and Divine Revelation, of the Supernatural element, and *Perfect Reason* requires Man to deprive himself of *Deity and Life*, and everything save the effects which his own experience has taught him must result from his own existing causes.

Bishop Colenso is well entitled to our thanks for stating his opinion, that the proof that the Pentateuch was not the work of a Single Author is placed beyond the possibility of contradiction, by the Record of two events contained in it, That of the Creation, and That of the Flood. Let us examine each separately.

He contends that in the Records of Creation in the first and in the second Chapters of Genesis there are statements that are in direct contradiction to each other. Respecting these he thus writes, page 171. "The following are the most noticeable points of dissent between the two cosmogony."

(i) "In the first, the earth emerges from the waters, and is, therefore, saturated with moisture, 1. 9 and 10."

"In the second the whole face of the ground requires to be moistened, 1. 6."

If Bishop Colenso will refer to the language of the Original Record, he will observe, that the Article is omitted before the enumeration of the days of creation; it is not, *The first day—The second day, &c.*; but—*One day—A second (one) day—A third (one) day, &c.* till it arrives at the sixth and seventh days, before each of which days the Article is prefixed; thus might we know, had not Modern Scholars discarded the estimate of the Article, that it is from the Sixth Day that our present computation of time commenced;—and that previous thereto, each day of Creation, although in itself limited in extent of time to that of our present day, yet might, and in all probability was, separated the one from the other by millions of years; yes, by numbers beyond the complete comprehension of the human mind. Does Bishop Colenso question whether such a space of time was sufficient for the earth "though once saturated with moisture, to have passed into such a state as to be fit for the face of the ground to be moistened?"

The Bishop further writes,

(ii) "In the first (cosmogony), the birds and beasts are created before man, 1. 20, 24, 25."

"In the second, man is created before the birds and beasts, 1. 7, 19."

Is this last statement *Historically True*? In 1. 7 and 19 there is a bare record of what God did create, and out of what He did create the creatures that He created; but as regards the order of time, and the order of the work, Colenso and not Almighty God that has thought proper to instruct Mankind.

The Bishop further writes,

(iii) "In the first (cosmogony), all fowls that fly are made out of the waters, 1. 20."

"In the second, the fowls of the air are made out of the ground, 1. 19."

Is it consistent with *Historic Truth* to say, that we read in 1. 20, "that all the fowls that fly are made out of the waters?" It would be more just to say, as made, that *19, are created by the waters*, if we do not read, verse 21, that, "God, / not the waters, / created or made every winged fowl." Does not 1. 20, out of which our inference we may conclude that the statement 1. 19 is quite correct, "And out of the ground the Lord (God) formed every fowl of the air." Let the Bishop reflect, that if the Hebrew words translated 1. 20, bring forth *historically*, 1. 21, created, and 1. 19, formed, all mean one and the same thing, namely, "Created," they would in the Original be one and the same word; and this the Bishop knows that they are not.

The Bishop further writes,

(iv) "In the first (cosmogony), man is created in the image of God, 1. 27."

"In the second, man is made out of the dust of the ground, and merely animated with the breath of life; and it is only after his eating the forbidden fruit that the Lord God said, Behold, the man has become as one of us, to know good and evil, 1. 7, 18, 22."

To satisfy the demands of *Historic Truth*, let it be noted, that nothing is stated above in what Bishop Colenso terms the second record of Man's creation, that has any relation to the image that Man possessed; and consequently, the declaration in the first case of what the image was, namely, "Created," is not confirmed or refuted; consequently, neither of the records contradicts the other in relation thereto.

The Bishop further writes,

(v) "In the first (cosmogony), man is made the lord of the whole earth, 1. 28."

"In the second, he is merely placed in the garden of Eden to dress it and to keep it, 1. 8, 15."

The Bishop will pardon my observing, that the word, *merely*, is supplied by himself, it is not in the Sacred Text; also, that Adam being placed in the garden of Eden to dress and keep it, does not prevent his enjoyment of the fruit of the tree of life, which he used multiply; and replenish the earth, and subdue it; and to have dominion over the fish of the sea, and over the fowl of the air, and over every living thing that creepeth on the earth; and so does not prove that either one of the Records contradicts the other.

The Bishop further writes,

(vi) "In the first (cosmogony), man and woman are created together, as the closing and completing work of the whole Creation,—created also, as is evidently implied, in the same kind of way, to be the complement of one another; and thus created, they are blessed together, 1. 28."

"In the second, the beasts and birds are created between the man and the woman. First, the man is made, of the dust of the ground; he is placed by himself in the garden, charged with a solemn command, and threatened with a curse if he breaks it; then the beasts and birds are created, and the man is permitted to eat of them; and lastly, after all this, the woman is made out of one of his ribs, but merely as a helpmate for the man, 1. 7, 8, 15, 22."

What is *Historic Truth*. Is it *Historically True* to state, that Man and Woman were created together, meaning, at the same exact time, 1. 27 (although nothing is said in relation to actual time) we read, "So God created Man in his own image in the image of God created he him; male and female created he them." As to the time when either of them were created, it is Ep. Colenso that alone informs us. Neither have we other authority than that which they give, "created also, as is evidently implied, in the same kind of way;—or for stating in relation to what he terms the second record, "That the beasts and birds were created between the man and the woman." All that we read therein is, "That the beasts &c. were formed whensoever they were created out of the ground; but as to the time when they were created," it is Ep. Colenso that alone informs us. The remainder of the Bishop's remarks here is unnecessary to notice, as he alone, I conceive, can now discover any statement in which either record contradicts the other.

The Bishop's second argument to prove that the Pentateuch has not proceeded from the pen of one Author, and the same Author is derived from what he contends are contradictory records of circumstances connected with the Deluge.

Thus in Gen. vi. 19, 20 we read,

"Every living thing of all flesh, two of every sort shalt thou bring into the Ark, to keep them alive with thee; they shall be male and female, of fowls after their kind, and of cattle after their kind, of every creeping thing of the earth after his kind, two of every sort shall come unto thee, to keep (them) alive."

But in Gen. vii. 2, 3, we read,

"Of every sort that breatheth shalt take to thee by sexes, the male and his female, and of beasts that are not clean by two, the male and his female; of fowls also of the air by sexes, the male and the female, to keep seed alive upon the face of all the earth."

Writers on *Historic Truth* cannot be too exact in quoting Holy Scriptures, but in this case the Bishop has been very exact in the Authorized Version (pointed out above by Brackett), marking the absence of the Word or Words so written in the Divine original, Ep. Colenso ignores, and by so doing discards the sense that is revealed for one that he sets forth in its place. The Divine command Gen. vi. 19 is as follows, "To bring Two of every sort to keep alive; that is, that were not to be killed; whereas in Gen. vii. 2 the command is to bring of each kind *Sexes*, it does say, to keep alive; for what purpose Ep. Colenso alone informs us, as the Divine Text only adds, that they were to be "the male and the female to keep seed alive upon the earth," and hence it is permitted to us to conjecture, that possibly Five of them were to be offered in sacrifice, or otherwise made useful by their death. Wherein therefore the Two in the one case are in the smallest degree a contradiction, or even an obscuration of the command in the other to bring *Sexes*, seeing that a separate and jointly consistent Reason may be imagined for each command, I must leave to the Bishop on a future occasion to explain.

We have now examined the foundation of the Bishop's palace, let him who thinks it safe to do so, proceed to inspect its other portions. No argument constructed on the single use of Words or Phrases, but on the uncertainty of the meaning of the Authenticity of portions of the Sacred Text, can, with just reason, prove its want of *Historic Truth*; and therefore all the Bishop's objections connected therewith we leave unnoticed. The Bishop's views respecting the use of the appellations Elohim and Jehovah have doubtless afforded him no small amusement; but the Record, vi. 3, we saw that Moses had knowledge of both of these Appellations; to regard him therefore, under the Divine guidance, to be the Author of the Pentateuch is more Reasonable, than to attribute its authorship to Two or Three Imaginary persons.

Let us now turn to the Bishop's argument in numbering the grains of sand on yonder shore. Verily "we strain at Gnat and swallow Camel." Who sees the Bar that gathers each passing word? Who discerns the Eye that sees each present thought? Who comprehends the Knowledge that masters each form of language? Who penetrates the Mind that sees the past, and the future, and the Thought; and Who then is there, that has not seen, yet, that does not now, this very minute, and every minute, *Itself* See, Supernatural operation, in other words, *A Miracle*? A Miracle as much beyond the grasp of Reason as all the wonders of Creation. A miracle performed once for all time; and that is the Record, The Exodus of the children of Israel The Deluge, or the Creation, but one

being performed each minute, not of our lives alone, but of the lives of all that were, that are, that shall be.
 My Brother, first of all make plain to *Human Reason* this Miracle, and then will you have no difficulty in proving, That the wonders of Creation, and the glories of Revelation, are only Ancient Legends, or Natural Operations recorded in Figurative Language.
 I remain, dear Brother Members, ever truly yours,
 HERMAN HEINFETTER.
 17, Fenchurch Street, 23rd February, 1863.

BISHOP COLENSO AND HIS CRITICS.

23, Sussex Place, Kensington, Feb. 24, 1863.

THE inclosed extracts were intended to have been read by a friend at the recent meeting of the Gospel-Propagation Society. As no opportunity occurred for this, I beg to request the insertion of them in the *Athenæum*. When so much has been said on the other side, it seems to be only fair and right that English readers should now have an opportunity of knowing what is said about my book by real scholars, well qualified to pass a judgment in these matters. Dr. Hupfeld, it may be as well to mention, was selected to fill the chair left vacant by the death of Gesenius. The peculiar circumstances of the case will, I trust, serve as an apology to yourself and to your readers for my departing from the usual course in requesting the publication of these extracts from letters addressed to myself.

J. W. NATAL.

Dr. Kalisch to Bishop Colenso.

Dec. 20, 1862.

"Dr. Kalisch may be allowed to assure the Right Rev. the Bishop of Natal that he most cordially appreciates his critical labours, that he is aware of their paramount importance, and that he confidently expects from them the most essential advantage for the interests both of historical research and of religious truth. If Dr. Kalisch was more cautious in his 'Commentary on Exodus,' which was published first, he has proved, by his exposition of Genesis, that continued study has led him to much more decided results; and he is determined conscientiously to pursue the same path in the subsequent volumes of his work. But he will ever gratefully acknowledge how much the Bishop's lucid and fearless criticism contributes to open the public mind for an intelligent and unbiased investigation of the Scriptures."

Dr. Kalisch to Bishop Colenso.

Dec. 27, 1862.

"I have no objection to any use which your Lordship may deem proper to make of my words alluded to in your kind letter of yesterday, since they are the expression of my sincere conviction, which I shall in future take every opportunity to uphold and to confirm. The manner in which your Lordship has opposed some of the views defended by me in my 'Commentary on Exodus,' so far from causing me any feeling of disappointment, serves me, on the contrary, as a most cheering proof that the earnest search after truth is rapidly taking deeper root and taking wider ground. . . . In the mean time, accept my cordial wishes for your triumph in the struggle which you have so nobly undertaken. May you be armed with strength and hope! May the new year witness the victory of truth and manly sincerity! M. KALISCH."

Prof. Hupfeld, of Halle, to Bishop Colenso.

Dec. 25, 1862.

"I am quite agreeing with the views and principles of the proceeding in your book (Part I.), which I at once appreciated in reading it, as they are now explained in your letter. . . . But I am far from thinking it appropriate only to the English mind: the same method would be to the purpose also in Germany, and it is hitherto too much neglected by our critics. I am not at all satisfied with the common method and manner of our criticism, and the present state of it, well established as it seems to be, and highly esteemed by foreigners. It suffers greatly from the contempt and neglect of form and strict scientific method, which is the common fault of my countrymen, and peculiarly so of our works belonging to the (so-called) 'higher criticism.' This is commonly so exercised as if it was nothing more than conjecturing and filling up voids of every kind with hypotheses, to which everybody feels himself entitled. . . . The first condition of a decided advancement in this department and of univer-

sally-acknowledged results is, in my opinion, the distinction between *proved* or *provable* facts, which are capable of demonstration or a probability next to certainty, and such as are not, and cannot be from their nature, lying beyond our horizon, and on which to amass conjectures and pronounce a judgment would be to no purpose; and the second, to be fully aware of the *bearings* of each proof (i. e. how far it proves), and be careful in the use of arguments. In one word, it proceeds from a stricter and severer critical method than it has hitherto been [has hitherto been applied]. From all this you may infer how much I am agreeing with your method, and how welcome such a book was to me, although the results, for the most part, are not new to my researches, and in some points even left behind my observations, but, no doubt, finding their complement in the Second Part. Not the *particulars*—the *method* is the point which I shall dwell upon in my Preface, and show the way to be pursued, compared with what is done hitherto. . . . So go on undauntedly, and may God prosper your efforts! D. HERMAN HUPFELD."

Prof. Ewald to Bishop Colenso.

Göttingen, Feb. 15, 1863.

"I thank you for the Second Part of your work. . . . In the Preface of this Second Part, and elsewhere in the body of it, I find very excellent truths spoken out by you beautifully and powerfully; and I gladly here repeat how sincerely I rejoice at your freedom and courage in Christian matters, and how firmly I am convinced that you for this very reason will hold so much the more firmly the essential and eternal substance of Christianity. The conflict which you have thus called forth in England is at this day no longer to be avoided; and, under the power and wonder-working might of the Spirit of Christ, it may be carried through to the attainment of a grand new triumph of Christianity, such as all the best men long for. In this respect you may be ever sure of my deepest sympathy. . . . I need hardly say how very eager I am for the continuation of your work; and I beg you, for love and friendship's sake, to send it to me in the same way as soon as it appears."

APE-ORIGIN OF MAN.

Oxford, Feb. 24, 1863.

THERE are three important statements in Prof. Owen's letter published in your Journal of last Saturday, to which I should be glad to be allowed to reply in your columns.

1. I find Tiedemann's phrase "Scrobiculus in loco cornu posterioris" quoted four times, and the word "scrobiculus" by itself twice, in Prof. Owen's letter. The history of the employment of this phraseology by the Heidelberg Professor is as follows:—Writing in 1821, he employed the entire phrase, once, at page 14 of his 'Icones Cerebri Simiarum,' to denote in a Macaque monkey what we call the posterior horn of the lateral ventricle in man. But, writing in 1825-1826 of precisely the same structure in the brain of an orang-utan, Tiedemann makes use of no diminutive term whatever. He says of the lateral ventricles, "The great lateral ventricles consisted of three horns, an anterior, a middle or descending, and a posterior horn." To this very account of his dissection of an orang's brain, as contained in the 'Zeitschrift für Physiologie,' Bd. ii. Heft i., which bears his name, I find Tiedemann referring, ten years later, at page 518 of the *English Philosophical Transactions* for 1836. Both these papers, therefore, should be equally familiar to the anatomist; but in neither can I find anything corresponding either in sound or signification to the "scrobiculus" of the 'Icones.' Practical anatomists will understand how Tiedemann came to alter his nomenclature; and the general public will understand that the fact that he *did* alter it destroys the argument which Prof. Owen's reiteration of a word employed once, to be discarded for ever, may have suggested to some of your readers.

2. Prof. Owen says (page 262, column 3, *Athenæum*, Feb. 21), "The archencephalous brain can accordingly be defined with accuracy and precision, as possessing 'the posterior horn of the lateral ventricle,' as contrasted with the 'scrobiculus in

loco cornu posterioris.' But are they not homologous parts? it has been asked, or rather howled." Prof. Owen's antagonists have never put the question upon this issue; indeed, it is difficult to see how there could be any question at all upon such a self-evident matter. They have, however, said that the posterior horn in the ape's brain is relatively always, and absolutely frequently, a larger and more developed horn than the corresponding segment of the human lateral ventricle. They have taught and proved, by measurement and by the photographic process, that what Gratiolet, "the highest authority in cerebral anatomy of our age," has said of the convolution it contains applies equally to the containing cornu: "Il est plus évident encore dans les singes que dans l'homme." — (*Mémoire*, p. 16.)

3. Finally, Prof. Owen says (p. 263, col. 1, *Athenæum*, Feb. 21), "What I have read of the history of the Hottentot Venus, of the absence of some of the common instincts of her sex as they are manifested by other females of her race, impresses me with the conviction of her idiocy." We have an authentic and thoroughly reliable history of this person from the pen of the great Cuvier; it will enable your readers, even though they may not be Commissioners in Lunacy, to form a fair judgment of her mental constitution. This history is to be found in 'Mémoires du Muséum,' tom. iii., 1817, p. 263, 264:—"Ses mouvements avaient quelque chose de brusque et de capricieux qui rappelait ceux du singe. Elle avait surtout une manière de faire saillir ses lèvres tout-à-fait pareille à ce que nous avons observé dans l'orang-outang. Son caractère était gai, sa mémoire bonne, et elle reconnaissait après plusieurs semaines une personne qu'elle n'avait vue qu'une fois. Elle parlait tolérablement le hollandais qu'elle avait appris au Cap, savait aussi un peu d'anglais, et commençait à dire quelques mots de français. Elle dansait à la manière de son pays, et jouait avec assez d'oreille de ce petit instrument qu'on appelle guimbarde. Les colliers, les ceintures de verroteries, et autres atours sauvages, lui plaisaient beaucoup; mais ce qui flattait son goût plus que tout le reste, c'était l'eau-de-vie. On peut même attribuer sa mort à un excès de boisson auquel elle se livra pendant sa dernière maladie. * * Au printemps de 1815, ayant été conduite au Jardin du Roi, elle eut la complaisance de se dépoiler et de se laisser peindre d'après le nu." Gratiolet, of whose merits Sir Charles Lyell has spoken in the high terms above quoted, says, when referring to this woman (at page 65 of his 'Mémoire'), "Cette femme, disons-le tout d'abord, n'était point idiote;" and (at page 67), "Loin d'être idiote, elle n'était point imbécile."

I have dealt with these three questions as if they all three alike were questions of authority and not of facts. Certainly, the argument from authority, coupled with that from literary history, is sufficient to cast the gravest doubts upon Prof. Owen's interpretation of the history of the Hottentot Venus, upon his ascription of certain views to his opponents as specified above, and, thirdly, upon his argument based on Tiedemann's nomenclature.

There are many other statements in Prof. Owen's letter to which exception might well be taken; but as most of these will be found to have been answered by anticipation in Prof. Huxley's 'History of the Controversy respecting the Cerebral Structure of Man and the Apes,' contained in his recently-published work, which, like Sir Charles Lyell's, will no doubt shortly be in the hands of every one interested in such subjects, I forbear to occupy more of your valuable space.

GEORGE ROLLESTON, M.D., F.R.S., Honorary Fellow of Pembroke College, Oxford.

STATICAL MEASURE OF TERRESTRIAL GRAVITY.
 United College, St. Andrews, Feb. 18, 1863.

I observe in the *Comptes Rendus* of the French Academy for the 9th instant, and also in Moigno's *Cosmos*, an account of an ingenious suggestion of M. Babinet for the measurement of gravity (statically) by the application of torsion to a weight with a bifilar suspension. I think it right to call attention to the circumstance that Mr. John Allan Broun proposed a nearly similar arrangement for

the same purpose two years ago. Mr. Broun's absence on his astronomical duties in India makes it desirable that I should state his claim to the suggestion, and, I believe, also to its practical trial. The suggestion was made in a communication to the Royal Society of Edinburgh on the 4th of February, 1861, and a sufficient account of it is embodied in the *Proceedings* of that body. The arrangement is substantially the same as that proposed by M. Babinet; only the French philosopher varies the suspended weight until the same angular deviation is produced by a given force of torsion, whilst Mr. Broun measures the angle of torsion by a mirror and scale. Mr. Broun, I know, had the apparatus made (I believe by Mr. Adie, of London, in 1861). I cannot be certain whether he has applied it to use in India.

JAMES D. FORBES.

DR. D'ORSAN AND MR. WARREN DE LA RUE.

February 20, 1863.

HITHERTO, for various important reasons, I have forbore to notice the numerous mis-statements published in recent numbers of your periodical relative to the photographs which illustrate my folio work entitled 'Our Satellite.' I now give to those mis-statements my most unqualified and emphatic contradiction; and I am prepared to adduce unquestionable proof of the complete originality of my negatives, and to submit them to the severest scrutiny.

I have been accused of copying from certain photographs issued by Mr. Warren De La Rue. As this gentleman has thought fit to publish an unwarrantable attack upon my scientific and personal character, I shall act in the matter as advised by competent legal authority. Prior to the publication of the first of the twelve Parts into which my work is to be divided, I arranged with my publisher (who had, of course, seen my negatives before he undertook so extensive and important a book) that the dates of the photographs accompanying the general remarks which formed the text of Part I. (the only one yet published) should be given in the text of Part II., where they are intended to be described in detail; and a slip to this effect was actually inserted by Mr. Alfred W. Bennett in the specimen number. We agreed upon this because the same date would otherwise have appeared upon several of the impressions, in consequence of these impressions being taken from sections of one of the original negatives.

Before and while being published my negatives were most minutely scrutinized by some of the greatest living astronomers, and I can adduce their high authority in confirmation of my statement that the stage of illumination given by me is not identical with that published by Mr. Warren De La Rue in any case. "Applying almost exactly to the same stage of illumination, and I think that, upon the whole, yours is the better," are the words of one illustrious *avant*. I am charged with copying from Mr. Warren De La Rue. Now, the impressions from my negatives are pronounced by the above and other unimpeachable authorities in astronomical science to be not only different from, but absolutely better and clearer than, those taken by Mr. Warren De La Rue from his negatives. How, then, is it possible that my impressions, taken from negatives asserted by Mr. De La Rue to have been taken from positives taken off his original negatives, could be other than and different from Mr. De La Rue's own impressions taken from his own original negatives by Smith, Beck & Beck? Had our negatives been compared, as was proposed by me long ago, the fallacy of the issue raised about certain imaginary spots would have been at once exploded, and much ingenuity in assertion and implication expended to better purpose.

The dates at which my various negatives were taken have for many years been given to my scientific friends as each has been procured. I have even given them to strangers who have applied in a proper and gentlemanly manner: to this many will testify. I shall publish these dates in their proper places in the text of my work for the benefit of the public, but do not choose to be bullied into satisfying the mere curiosity of any one, not even

of so erudite a gentleman as Mr. Alfred W. Bennett, my recalcitrant publisher.

With many apologies for trespassing upon your valuable space, I remain with much consideration, yours obediently,
A. LE VENGEUR D'ORSAN.

HERR GEIBEL.

Munich, Feb. 10, 1863.

YOUR German friend accuses me of having, unintentionally, misrepresented facts, of having been misled by town-talk, and having paid too much attention to coterie feeling and personal sensitiveness. It would be easy for me to retort the first and third charges, but I believe it is better to refute all three. To this I feel myself pledged, and I sign my name at the foot of this letter to vouch for the care with which I have examined the evidence, and for the accuracy of all my statements. When I say that I have received every fact at first hand, have read the letters in which Herr Geibel attempted to excuse his conduct to his colleague, have spoken with the friend who acted as mediator between them, have obtained an account of the proceedings of the Chapter from official sources, and seen the "vote" recorded by Herr Geibel, I think I shall hardly be taxed with having thrown out insinuations which were not warranted, or having employed fierceness which was not justifiable.

The point in question is not whether Geibel considers Mörke a greater poet than Bodenstedt, or whether Mörke is fifteen years older than Bodenstedt. It is simply this: Did Geibel do nothing but give an honest and independent vote, and this by no means in a meddling or interfering way, but in his official capacity and duty bound—as your German friend asserts; or did he, as I asserted, show his ill feeling in ways that can hardly be explained by any rules of open warfare, as they are beyond all bounds of courtesy or literary honour? I do not for a moment deny that Herr Geibel had a full right to his opinion, and a full right to express it. I accuse him of having availed himself of his position, as sole representative of *belles-lettres* in the Chapter, and of his influence with the King, to gratify a personal spite, and I take his own words as well as the facts of the case to bear out my accusation.

The full particulars must needs be known before judgment can be passed, and unfortunately the version given by your German friend is incorrect from one end to the other. He promises "a mere statement of the facts as they have really occurred," and a statement drawn from "the most authentic and reliable source." How far both his statement and his informant are worthy of the names he gives them shall presently be shown. I can say, without exaggeration, that only one of his assertions is accurate, and this one has no bearing on the point at issue. He begins by misunderstanding or misrepresenting the nature of the Maximilian Order. It is not necessary that a vacancy should occur before each fresh appointment, or that one poet should succeed to another, as in the French Academy. The Maximilian Order was originally founded by the King to make the distinguished men whom he called to Munich *hoffähig*, so that they might not be reproached with having been summoned to the neighbourhood of the King without being able to appear at his Court. The full complement of members should be a hundred, but there are at present scarcely seventy, and till the list is filled up there is no need to wait for vacancies. Every year nominations are made without vacancies; last year there were two appointments without any vacancy, and in some years there have been as many as six appointed. Thus your German friend's statement about the vacancy for a poet falls to the ground. I am not disposed to lay much stress on this mistake, except so far as it shows the nature of his information. If I was desirous of arguing the case on its merits I could easily show that an order conveying certain privileges in Munich, and designed especially for residents in Munich, would more fitly be bestowed on one of the poets summoned by the King, than on one with whom the King has not the slightest connexion. But I am dealing only with

the facts, and I proceed to the second statement made by your German Correspondent.

"In the Chapter," he says, "of which Geibel is not only a member, but in which he is the only representative of *belles-lettres*, Eduard Mörke, the excellent Suabian poet, and Bodenstedt were proposed in the place of Körner." This sentence is entirely incorrect. The real facts of the case are these, as they were told me by the head of the Chapter, and confirmed by official documents. The Chapter meets every year in November to elect new members. Geibel was absent, and was not expected back till December. It therefore devolved on Liebig to propose new members, and Bodenstedt's name was put up with the concurrence of the rest. Just before the day appointed for the election Geibel returned, expressed great dissatisfaction at any name being put up without him, and announced his intention of voting against Bodenstedt. At the same time he proposed Halm, the Austrian poet, whom the rest of the Chapter accepted. Geibel wished only one name to be taken; but the other members of the Chapter resolved on taking two, partly because two vacancies had occurred that year, partly because they were unanimous in favour of Bodenstedt. The election therefore resulted in favour of Halm and Bodenstedt. There was no proposal of Mörke, no vote given for or against him. And thus, instead of the majority having voted for Bodenstedt, and Geibel having voted for Mörke, the whole Chapter, except Geibel, voted for Bodenstedt, and Geibel voted against him.

So much for your Correspondent's statement of the election. When he comes to the part relating to the King, his inaccuracy is even more decided. The King, he says, was not persuaded by Geibel, but he probably followed Geibel's judgment, which may have appeared to him more competent than that of the other members; and Geibel did nothing but give an honest and independent vote, in no meddling or interfering way, but in his official capacity and duty bound. If this were so, how did the King hear of the difference of opinion? In ordinary cases, the results of the Chapter's deliberation are communicated to him, the debates are not reported, nor is any division list made public. But it is open to any member who differs from the rest to give what is called a "separat votum," that is, to express his dissent in writing in the form of a protest. Your German friend should have explained, that in using the word "vote" to describe Geibel's action, he used the word in its German sense, not in its English sense. In England the word "vote" is generally used to imply a silent vote; but in Germany—I refer to the *Conversations-Lexikon*, as the universal authority on such matters—the word *votum*, originally the same as *Stimme*, or voice, has come to mean the expression of opinion on any subject, whether verbally or by means of the press. If an eminent jurist writes a pamphlet on any legal question, he is said to have delivered his *votum* on the subject. It is this that Herr Geibel has done. I have seen and read the *votum* which he sent to the King; it occupies a side of foolscap, and states with exceeding fullness the reasons which induced him to oppose Bodenstedt's election. "While doing full justice to Bodenstedt's talents as interpreter between different nations," such is the sense of the *votum*, "and especially as translator of Shakspeare's 'Sonnets,' the writer is nevertheless bound to protest against the Maximilian Order being given to Bodenstedt as poet (sic) before it has been given to such men as Mörke in Stuttgart and Paul Heyse in Munich." Will any one say that this is the same as a vote? Would it be said that a Member of Parliament did nothing more than vote against the Ministry if he delivered such speech against it? Or, to take a case exactly parallel with this, if the Lord Chancellor entered such a protest as this in the books of the House of Lords upon any legal subject, would it be said that he had merely recorded his vote? Certainly it would not, for the essence of voting consists in each single vote being of equal force with every other one, whether the voter be at the top of the scale or the bottom. It comes, then, to this, that Geibel protested against the election of Bodenstedt, and that being the repre-

representative of *belles-lettres* in the Chapter, his protest had more weight with the King than the votes of all the others.

That it is the first time such a protest has been made,—the first time that the King has departed from the choice made by the Chapter, shows the practice of the other members, as well as the amount of Geibel's influence with the King. But the production of Geibel's protest—or vote, as your German friend would have it—proves the exceeding unfairness of bringing in Mörrike's name. Your German friend gives a colour to the election as if it had been a question between Mörrike and Bodenstedt, as if Mörrike and Bodenstedt were rivals, or as if the Chapter had voted for Bodenstedt from local partiality. He would have us look on Herr Geibel as superior to petty considerations, and actuated only by a desire for recognition of the most decided merit. But when we remember that Mörrike was never once proposed in the Chapter, and that his appointment was entirely owing to Geibel's subsequent suggestion of him in the protest which went to the King, we are entitled to demand that the name be omitted from the argument. That the difference of age had nothing to do with the question is shown by Geibel having mentioned Heyse as well; and if Mörrike is fifteen years older, Heyse is ten years younger than Bodenstedt.

But the real point to be considered is not the step that Geibel took, or the arguments by which it may be made to seem reasonable, but the motives by which it was suggested. If it were true that Geibel appreciated the writings of Bodenstedt—as your German friend asserts—excuses might possibly be found for his protest. But his entire ignorance of Bodenstedt's works is fatal to his sincerity. He has said to hundreds of people that he has never read Bodenstedt,—that Bodenstedt is not a poet; I do not take this from town-talk,—I have it from people to whom he has said it. If the most authentic and reliable source from which your Correspondent has drawn his information had been one of the members of the Chapter, he would have known that every one of them expressed astonishment at Geibel's ignorance of Bodenstedt's works. If it had been any one of the members of the literary society to which Geibel belongs, he would have known that every member of the society protested to Geibel against his injustice to Bodenstedt's writings, and against the baseness of his conduct. Let your Correspondent write again to Munich, and ask his authentic and reliable source if Geibel has not expressed his intention of reading Bodenstedt's works, and has not said as he went on reading that his admiration for Bodenstedt increases every day. Let him ask if Geibel has not acknowledged to others that he was so much provoked at the Chapter having proposed Bodenstedt in his absence that he was determined he should not receive the order. It is scarcely necessary to argue the question when we have avowals such as these; and with Herr Geibel's own acknowledgment that he is ignorant of Bodenstedt's works, with his avowal that he opposed himself to Bodenstedt's election from personal feelings, with the "vote" in which he brought all his influence to bear on the King, I need hardly ask what will be the general verdict on the uprightness of his conduct.

EDWARD WILBERFORCE.

THE DUCHY OF CORNWALL.

SINCE 1337, when Edward the Third presented his son with the Duchy of Cornwall, very few heirs apparent, it may be fairly affirmed, took possession of the Cornish estates with less arrears and incumbrances than the present Prince of Wales. Three years after the death of the first Duke of Cornwall (Edward the Black Prince), the annual income of the Duchy was said to be 2,500*l.* In the reign of Henry the Eighth it was calculated to be worth about 10,000*l.* a year; but, mainly owing to the ecclesiastical reforms, it fell to 4,500*l.* in the time of Elizabeth. With the prosperity of the country the value of the Duchy manors of course increased; but a system of anticipating the income by selling grants and levying fines interfered with the natural growth of the rent-roll.

The last instances of this practice are not of a very remote date. From 1783 to 1830, when the late Prince of Wales (George the Fourth) was in possession of the Duchy, the fines taken upon the renewal of leases amounted to about 370,000*l.*; and from 1830 to 1837, when William the Fourth was in possession of the Duchy, these fines amounted to 171,343*l.* These amounts passed to the privy purse of the Duke of Cornwall, or of the Sovereign, and tended materially to diminish the income derivable from the property.

Soon after Her Majesty's accession, a Royal Commission was issued to inquire into the management of the Duchy. It was then clearly shown that, under the old system, valuable customs had been abandoned, courts had been lost, fees and heriots had not been duly received, boundaries had become matters of doubt, and many adverse claims had been permitted to grow unchecked.

At that time the ministerial officers of the Duchy, with the exception of the Lord Warden, derived a considerable portion of their emoluments from fees; and it appeared that the annual rental of the estates was only 6,211*l.*, with a prospective increase of 6,012*l.* secured by leases which had been then granted, making the prospective annual rental 12,223*l.*; which with the system of fines would give a gross annual income of about 40,000*l.* It was, however, found that the expenditure from 1823 to 1829 averaged 10,265*l.* a year, and for the next six years 14,884*l.*, being for the former period about 30 per cent. on the gross income, and for the latter more than 35 per cent.; and this was exclusive of the fees (amounting to nearly 10,000*l.*) received by the officers of the establishment. Having satisfied themselves that such a system of management was not adapted for maintaining an efficient control over the receipts and expenditure, or for promoting the general improvement of the estates, the Commissioners recommended certain alterations in the appointment and functions of the officers of the Duchy: the nomination of local agents, who would permanently reside upon and superintend the management of the property, and would collect the revenues arising within their respective districts; the discontinuance of grants for lives, or otherwise than for terms of years certain; the granting of leases for terms certain upon the surrender of existing grants for lives, with an adequate allowance for the value of the existing interests; the abandonment of the previous practice of taking fines upon the granting of leases, except to a very limited extent; and the immediate abolition of all fees and perquisites received by officers of the Duchy.

The duty of carrying these recommendations into effect devolved upon the Prince of Wales's Council, who, with the aid and assistance of the Commissioners of Woods, administered the affairs of the Duchy. The late Prince Consort presided over the Council, and for twenty years they continued to enjoy the advantage of his superintendence of the varied business which came before them. In a recent report to the Queen, the Council record their sense of the loss which they sustained by his death. To his clear judgment and quick perception of what was right, his singular discretion, his remarkable aptitude for the conduct of affairs, they never looked in vain for guidance and advice on any occasion of difficulty. The soundness of his opinions in all their deliberations was rendered more apparent by the toleration with which he was ready to defer to those of others. He never lost sight of the improvement of the condition of the tenant and the labourer, whilst anxiously seeking to restore the property of the Duchy to a state of prosperity; and to him, the Council assert, is mainly due the fact that the Prince of Wales now enters into the possession of an estate greatly increased in value, and free from nearly all the disputes with neighbouring proprietors which at one time prevailed.

In addition to the original powers of the Council, the Legislature authorized, from time to time, the alienation of lands forming part of the possessions of the Duchy, and the investment of the money arising therefrom in the purchase of other lands, to be annexed to the Duchy, in the same manner as the original possessions. Free grants were also

authorized to a limited extent for ecclesiastical and educational purposes.

Under these Acts, the Council sanctioned sales and enfranchisements of portions of the Duchy possessions, which have realized in the whole a sum of about 300,000*l.*, of which upwards of 40,000*l.* has arisen from sales made to railway and other public companies, including 28,000*l.* for the lord's interest in copyhold property within the Manor of Kennington sold to the London and South-western and the Charing Cross Railway Companies. Other enfranchisements of copyhold property, effected by the copyholders themselves, have produced 26,038*l.*, in addition to the 28,000*l.*, making a total of 54,038*l.* within this manor alone.

The most important sale which the Council have sanctioned is that of the Berkhamstead Estate, the sole possession of the Duchy in the county of Hertford. The possession of this estate was of great importance to the family of Earl Brownlow, as connected with their estate at Ashridge, which it adjoins, so much so as to induce them to pay for its acquisition 144,540*l.*, a sum exceeding what was considered to be the value of the estate to an ordinary purchaser. Under these circumstances, the Council considered it advisable, in 1861, to sanction the alienation of the property, reserving, however, to the Duchy the advowsons of the two churches of St. Mary and St. Peter, which were attached to this estate, and also the site, containing about 13 acres, of the ancient castle of Berkhamstead, which is now in ruins. The purchase-money has since been re-invested in the purchase of estates in the counties of Somerset, Wilts, Dorset and Cornwall, which in each case adjoin the property of the Duchy, and afford an improved revenue.

Another sale of importance was effected in the year 1857, being of a moiety of an extensive common belonging to the Manor of Treverbyn, in Cornwall, the other moiety being held by the representatives of the late Mr. Trevanion. The difficulty of dealing with the property, owing to the divided tenure, was so great that the proprietors of the other moiety offered either to sell their own or to purchase the Duchy share in order to get rid of the objectionable tenure; and under the circumstances it was thought advisable to accept the latter offer, and the sale was effected for the sum of 18,000*l.*

All the other sales which have been made were of outlying and detached portions of the Duchy property which were inconveniently situated for management.

A few purchases have also been made from time to time, chiefly of lands intermixed with the Duchy estates. The general result of the new system is very satisfactory. In the year ending at Michaelmas, 1838, being the first account for an entire year after the Queen's accession, the gross revenue of the Duchy of Cornwall was 24,886*l.*, no part of which arose from fines on renewals, which had then been abolished. The expenditure during this period was for the expenses of management 11,111*l.*, and for other outgoings 2,238*l.*, making together 13,349*l.*, leaving a clear revenue of 11,536*l.*

The revenue has since steadily increased, although (except in the case of leases of house property within the Manor of Kennington) the income formerly derived from fines on renewals on lease has been entirely abandoned. The gross revenue for the year ending on the 31st December, 1861, was 60,735*l.*; the expenditure during this period being for the expense of management, 6,865*l.*, and for other outgoings 7,254*l.*, making together 14,119*l.*, leaving a clear revenue of 46,616*l.*

OUR WEEKLY GOSSIP.

Mr. Carlyle has completed the fourth; and half of the fifth and concluding volume of the 'History of Frederick the Great.' He dwells with less amplitude upon the latter part of his hero's career than he did upon its commencement.

The Life of Blake, the visionary painter, left nearly complete by the late Mr. A. Gilchrist, and carried on by his widow, will soon be published. The industry of the editor and his assistants has discovered a great deal of matter not before known relating to the extraordinary man in

question. A considerable number of illustrations accompany the work, showing the several styles of thought and execution Blake evinced. His singularly characteristic diary and many letters will be included in the book; also a complete catalogue of his pictures, drawings and engravings.

Mr. Richard Williams, of Welshpool, has translated Bacon's 'Essays' into Welsh. This is the first time, we believe, that these 'Essays' (or perhaps any other of Lord Bacon's writings) have appeared in the idiom of the Principality; and we are glad to see them make a first appearance in a form so handy and in a style so able. Mr. Williams is an earnest student of the works with which he deals; and he has prefixed to his translation a short memoir of the philosopher, in which, we need scarcely add, he adopts that noble theory of Bacon's life which was the creed of Raleigh, Herbert, Jonson and Falkland, and which has become once more the conviction of living men.

A translation of M. Pietrowski's 'Escape from Siberia,' written by himself, is about to appear, under the express sanction of the author, from the press of Messrs. Routledge & Co.

Although it may seem a little like counting our chickens before they are hatched, let us enter an early protest against the new Thames Way being cumbrously called Thames Embankment Street, as is threatened; still less, Metropolitan-Board-of-Works Thoroughfare, or Thwaites's Road. Let us hope the authorities will be less exuberant than usual, and refrain from giving us another Victoria or Albert Road, unless accompanied by vigorous suppression of all "Victoria" or "Albert Roads" which parochialism has as yet inflicted upon us. There are fourteen Victoria Roads already in London, besides twenty docks, terraces, squares, rows and what not. One is bewildered by the number of railway stations, bridges, barracks, &c. at home, and colonies abroad, that flaunt this name. We have at present three, if not four, colonies called Victoria; about half-a-dozen metropolitan cities; to say nothing of bishoprics, and patents for every conceivable article, mostly shams, that can be patented, under that designation. The Prince Consort's name is already connected with nearly forty Metropolitan localities. Thames Way or Thames Bank is the proper English name for the street.

The opening of the New Charing Cross Railway Station will bring an enormous accumulation of traffic to that end of the Strand: a large portion of this must come from the west and north-west, the ordinary access being by way of the Haymarket or by Waterloo Place. Both of these roads are objectionable, as having steep gradients and being at right angles to the lines of the Strand and Piccadilly, so that the traffic must proceed along two sides of a square. For a long time past the formation of a new street, by widening Hemming's Row and extending it into Leicester Square, has been talked of. This would afford a shorter route and gentler incline. Now is the time to do it.

We have only to give the following as we receive it:—

"10, King William Street, Feb. 24, 1863.

"The letter of Lascelles Wraxall in your journal of the 14th inst. escaped my notice until too late for a reply in the ensuing number. I beg to state that the sub-title of 'Married in Haaste' was supplied by the author with the first volume in June 1860; and his forgetfulness of this fact is one of the consequences of the long delay which took place in the completion of the novel.

THE PUBLISHER."

A company has been formed in the State of New Jersey to promote the cultivation of the *Hibiscus Moscheutos*—the swamp hibiscus, a plant of the mallow species, which grows wild in great abundance in New Jersey and the adjoining States. The plant is a perennial, sending up fibrous stalks year after year, in greater number after the first cutting. The quantity of fibre obtained from an acre of hibiscus is three tons and a half, valued by the paper-makers of America at 100 dollars the ton; and it is described as suitable for ropes, for various textile fabrics as well as paper. The company are sanguine in their expectations, because there are

large swampy tracts in the states, at present lying waste, which with one sowing will become valuable plantations of paper-making material. A variety of the plant—*Hibiscus tiliaceus*—is used by the natives of Tahiti in the manufacture of a fine kind of matting, fishing-nets, cordage and thread.

The other day we stated that M. Dumas had written a tragedy, in five acts, in five days for Madame Ristori, and was engaged in writing two other tragedies for the distinguished artist, to be brought out in England. The arrangements are, however, now broken. M. Dumas's pen is suspended, and the Cleopatra and the Maria Antonietta are to slumber in his brain. The Prologue and the plan of the latter had been completed and read to Madame Ristori, who expressed her satisfaction with them; but some serious differences have arisen between the author and the actress, and hence the interruption. It appears that the 'Notte di Firenze,' the production of five days, was brought out at the Fondo, in Naples, on the 13th inst. without the intervention of Madame Ristori, though written at her request; and notwithstanding the success which attended its performance, the 'Administration' of the company has shown no eagerness to bring it out a second time.

The members of the Chemical Society, adjourned from their own quarters to the meeting room of the Royal Society on Thursday (19th inst.), to hear Mr. Crookes's paper on Thallium; a paper which, at the close, was pronounced by the leading chemists present to be one of the most important contributions to chemical science that has of late appeared. Since his discovery of the metal, Mr. Crookes has been engaged in further researches and experiments into its properties, and the sources from which it is derived. In the latter quest he applied to manufacturers of oil of vitriol for specimens of the pyrites burnt by them in the process, and of the deposit left in their leaden chambers; and we are glad to record the fact that the much-desired specimens were sent to him from nearly thirty manufactories. He tested also the various minerals collected in the International Exhibition, to verify his former opinion that "thallium is a very widely distributed element," and found ample confirmation. Thallium exists not only in iron pyrites, but also in native sulphur, zinc, cadmium, bismuth, mercury and antimony ores, as well as in their manufactured products. As yet Mr. Crookes has failed to detect the "law" of the distribution of this remarkable element; but he has ascertained that it is confined to no particular country, though by no means uniformly distributed in mineral veins from the same locality. Owing to the delicacy of the test employed—the spectroscope—thallium can be detected if present in the proportion only of 1 in 100,000. In his statement of the physical characteristics of thallium, Mr. Crookes shows that it has a distinct colour of its own—has no perceptible taste when bright, but is pungent and biting after long exposure to the air—that it is the softest of known metals, and marks paper as easily as lead, with a streak which changes from blue to yellow—can be compressed in a mould or die, and formed into wire by pressure—that it volatilizes easily, and is a pretty good conductor of heat and electricity—that it is strongly diamagnetic, and readily alloys with other metals. These are but a few of the principal facts brought out during the reading of the paper, which elicited approval, as much for the variety and ingenuity of the experiments by which they had been demonstrated, as for the clearness with which they were described. The paper is to be regarded as an instalment of a subject which has yet to be worked out by laborious research. It cannot be in better hands than those of Mr. Crookes; and considering the attempts that have been made on the other side of the Channel to deprive him of the merit of his discovery, we notice with pleasure that a sum from the Government grant administered by the Royal Society has been allotted to him in aid of the further work which he hopes to accomplish.

The Army Estimates were issued on Thursday in last week. Though they show a net decrease of

about one million, there is an increase—as in the Navy Estimates—in the surveying and topographical departments. This year the House of Commons will be asked to vote 67,000*l.* towards the Military Surveys of the United Kingdom, being 10,000*l.* more than the vote of last year. In addition to this, about 8,000*l.* will be required for engraving some of the results of the Geological Survey, and publishing the maps prepared in the department. A portion of this sum will be covered by the sale of maps, the proceeds of which for the year ended 30th September, 1862, amounting to 5,185*l.* 8*s.* 8*d.*, was paid over to the Exchequer as an extra receipt. The value of the maps supplied to public departments for the same period is estimated at 2,024*l.* 14*s.* 7*d.* We should like to see a more detailed account of the expenses and receipts of this publishing department of the Army. As a general rule, private enterprise in such matters is cheaper and more satisfactory to the public than Government work.

The 'Homerton College Atlas,' edited by W. J. Unwin, and published by Messrs. Longman & Co., represents the world under its three aspects, hydrographical, physical and political, in a series of twenty-seven maps. Three of these maps are devoted to the world in hemispheres, three to Europe, eight to the British Islands, three to Asia, three to Africa, six to America and one to Palestine. It contains no separate map of France, Italy, or any country not already mentioned: its space being wholly devoted to the three grand divisions. The maps are pretty well drawn and printed, and as an elementary school-book the 'Homerton College Atlas' has considerable merit.

The works at Clifton for the adaptation of the chains of Hungerford Suspension Bridge to crossing the Avon have been commenced. The old footway which once hung from them has been removed, and they are being unlinked, the traffic being carried on by the temporary wooden path that occupies the line of the intended permanent balcony by the side of the now rapidly advancing railway bridge. In speaking of the last-named work a few weeks since, we lamented that a legitimately decorative appearance had not been obtained by the expansion into capitals of the granite blocks forming the summits of the bearing cylinders. Merely ornamental castings of iron, by way of masks for the rectangular junctions of the roadway and cylinders, are to be used. This is a singular instance of neglect to use constructional ornament, and the introduction of a sham in its place. What dignity the bridge will have will arise from its structural fitness to function, of course including its material bulk and height. What beauty it will have will come from its structural lattice-work enriching its appearance by variety of lines when seen in proportion; and last, not least, the breaking of its stark sides by the balconies or footways on each face.

Pending the completion of the great Mont Cenis Tunnel, which will not be finished in less than seven years, a plan has been laid before the Italian Government for constructing a railway over the mountain. It is proposed to lay the rails on the present carriage-road, using in some places, however, the old road, which is less steep, but which was abandoned on account of its exposure to avalanches. These can be guarded against by efficient roofs, and the gradients could be overcome without any difficulty by powerful engines. Indeed, the success of the railway over the Alleghanies demonstrates the practicability of the undertaking. The English company who have projected this work are willing to lay down an experimental railway at their own expense.

A new scientific periodical has appeared in Paris, which is to give a weekly summary of scientific facts from all parts of the world, a report of the meetings of the Academy of Sciences at Paris, and articles on special subjects. It is entitled *Les Mondes*, and resembles in its general plan the weekly *Cosmos*, well known to scientific students, whose late editor, the Abbé Moigno, appears to have transferred his name and services to the new journal.

Some time ago, the little church of Sta. Maria,

at Rome, situated near the Forum of Trajan, was pulled down, because it obstructed the street. While digging for the foundation of a house to be built there, two antique fragments of architecture have been found;—the one a beautifully-worked piece of cornice, and the other a more than life-sized torso of a barbarian, which in its style reminds one of the statues on the Triumphal Arch of Constantine. This discovery seems to confirm an assertion, frequently made by modern topographers, viz., that the triumphal arch erected to Trajan on his Forum must have been situated between the Forum and the Basilica Ulpia. A passage in the Memoirs of Flamininus Vacca gives strength to this assertion: "I remember," says this sculptor, "that one has discovered near the Spolia Christi (which was the name at its time of the Church Sta. Maria) remnants of a triumphal arch and several historical fragments of sculpture, which have been deposited at Prosper Boccapadulle, the Maestro di Strade. Among them was a Trajan on horseback, crossing a river; also the statues of prisoners, very like those on the Arch of Constantine." Most of the sculptures, at least the best, which we now see on the Arch of Constantine, were taken from the Arch of Trajan.

"In a short time," writes a friend from Naples, "it is probable excavations will be recommenced in Herculaneum, where, as you are aware, the most precious works of Art were discovered. An application has been made by the Directory to the Government for the purchase of a large piece of ground under which lies buried the Forum. Such a project existed under the Bourbons, but for various reasons was never carried out. To Victor Emmanuel remains the honour of bringing to light what has been too long hidden. At Pompeii the excavations are carried on with great spirit; and as they are now being made on what is called a rich spot, we may hope for some interesting 'finds.' But why is that odious tax of two francs a head for visitors persisted in?"

The 21st of March, 1863, is the centenary of Jean Paul Richter's birth, and his son-in-law, Dr. Ernest Förster, takes advantage of the expected jubilee to issue three volumes of letters, miscellanies, annotations, &c. from the manuscript remains in his possession. The first volume, already published, contains letters to three of Jean Paul's friends; the second volume is to show the poet in his relations to the other sex; and the third, to introduce us into the author's study, and give us extracts from his note-books. The most interesting letters in the first volume are addressed to Emanuel Osmund, a Jew, living in Bayreuth, to whom Jean Paul was sincerely attached, and in whom some have discovered a family likeness, or a likeness of race, to Lessing's Nathan the Wise. Emanuel was both corporally and spiritually allied to Jean Paul:—corporally, inasmuch as he provided him, during his residence in Thuringia, with beer from Bayreuth, which seems to have been a necessity of the poet's existence, and afterwards took money matters and business matters off his shoulders;—spiritually, as he taught him the sacredness of all prayer—taught him that all men have the same heart and the same God, and that before the Eternal Spirit our little differences are only points of resemblance. "The noble soul," says Emanuel, in one of his letters, "rises above religious ceremonies as well as over civil, and mounts to the pure, free heaven." Jean Paul, in return, gives details of his works, and invites sympathy; says he almost died with ecstasy in creating the best parts of 'Hesperus,' and asks not for his friend's judgment on 'Titan,' but for his feeling, as that alone can appreciate the soul in a work of Art. Some of his opinions are characteristic. He says the greatest enjoyment is a quiet command of oneself, and expects the greatest effects from the action of public life on man: "to make a man good, he needs a life-long education—that is a STATE."

SOCIETY OF PAINTERS IN WATER COLOURS.—WUZ shortly close.—WINTER EXHIBITION OF SKETCHES and STUDIES by the MEMBERS, at their Gallery, 5, Pall Mall East. Open from Nine till Dusk.—Admission, One Shilling. JOSEPH JENKINS, Secretary.

BRITISH INSTITUTION, Pall Mall.—The GALLERY for the EXHIBITION and SALE of the WORKS of BRITISH ARTISTS, is OPEN DAILY, from Ten till Five.—Admission, 1s. Catalogue, 6d. GEORGE NICOL, Sec.

WINTER EXHIBITION, 150, Pall Mall.—The TENTH ANNUAL WINTER EXHIBITION OF CABINET PICTURES by living British Artists, is NOW OPEN, daily, from 9.30 A.M. to 5 P.M.—Admission, 1s. Catalogue, 6d.

ART EXHIBITION for the RELIEF of the LANCASHIRE DISTRESS, 6, Suffolk Street, will close this day.—Open from 10 A.M. until dusk.—Admission, 1s. Catalogue, 6d. F. W. DICKEY, A. L. CHETWODE, } Hon. Secs.

WILL SHORTLY CLOSE.—THE CRUCIFIXION.—This grand Painting, by H. C. SELOUS, Esq., NOW ON VIEW at Messrs. J. & R. Jennings's Gallery, 63, Cheapside.—Ten till Five.—Admission, 6d.

The Celebrated Picture of 'THE RAILWAY STATION,' by W. P. FRITH, Esq., R.A., will be ON VIEW to the Public, at the FINE ART GALLERY, 11, Haymarket, on the 9th of March, from Ten to Five. Three doors above the Haymarket Theatre.—Admission, 1s. A Descriptive Pamphlet of the above Picture, by Tom Taylor, Esq., M.A., 6d. unbound, 1s. bound, may be had at the Gallery.

NOVEL ENTERTAINMENT SCIENTIFIC and ARTISTIC.—SAMUEL HIGHLEY, F.G.S., F.C.S., &c., will exhibit every Evening, at Eight o'clock precisely, his beautiful series of MAGNIFIED and ILLUMINATED PHOTOGRAPHS which were shown with great effect before the Society of Arts and the London Photographic Society in January. Programmes on Application to the Secretary by post (two stamps).—Seats reserved, 3s., 2s., and 1s. Burlington Gallery, 191, Piccadilly, W.

SCIENCE

SOCIETIES.

ROYAL.—Feb. 19.—Dr. W. A. Miller, Treasurer and V.P., in the chair.—The Archbishop of York and the Right Hon. E. P. Bouverie were elected Fellows of the Society.—The following paper was read: 'On Thallium,' by W. Crookes.

GEOGRAPHICAL.—Feb. 23.—Sir Roderick I. Murchison, President, in the chair.—Major F. J. Rickard, A. Anderson, J. P. Brown, A. B. Cator, J. L. Ellerton, R. Gillies, R. Hamilton, L. Holland, J. H. Kerr, R.N., J. E. McConnell, F. Pearson, J. Ritchie, G. M. Robinson, W. A. Ross, H. D. Skrine and J. Thomson, Esqs., were elected Fellows.—'Rupert Land: the Colony and its Limits,' by Capt. M. H. Syngé.—'On the Discharge of Water from the Interior of Greenland, through Springs underneath the Ice,' by Dr. H. Rink.

GEOLOGICAL.—Feb. 18.—Prof. A. C. Ramsay, President, in the chair.—J. R. Capron, Esq., J. Haast, M.D., Hood Hood, Esq., J. Randall, Esq. and S. Wright, Esq. were elected Fellows.—The following communication was read:—'On the Middle and Upper Lias of the Dorsetshire Coast,' by E. C. H. Day, Esq.

Feb. 20.—Annual General Meeting.—Prof. A. C. Ramsay, President, in the chair.—The Secretary read the Reports of the Council, of the Museum and Library Committee, and of the Auditors. The financial position and the increase in the numbers of the Society were stated to be highly satisfactory. The Reports were adopted, and ordered to be printed.—The President announced the award of the Wollaston Gold Medal to Prof. Gustav Bischof, of Bonn, and of the balance of the Wollaston Donation Fund to Prof. Ferdinand Senft, of Eisenach.—The President afterwards read his Anniversary Address.—The ballot for the Council and Officers was taken, and the following were elected for the ensuing year:—President, Prof. A. C. Ramsay; Vice-Presidents, Sir P. De M. G. Egerton, Bart., M.P., Sir C. Lyell, Godwin-Austen and L. Horner; Secretaries, W. J. Hamilton and W. W. Smyth; Foreign Secretary, H. Falconer, M.D.; Treasurer, J. Prestwich; Council, J. J. Bigsby, M.D., G. Busk, R. Chambers, Sir P. De M. G. Egerton, Bart., M.P., J. Evans, Rev. R. Everest, H. Falconer, M.D., R. A. C. Godwin-Austen, W. J. Hamilton, L. Horner, Prof. T. H. Huxley, Sir C. Lyell, R. Mallet, E. Meryon, M.D., J. C. Moore, Prof. J. Morris, R. W. Mylne, J. Prestwich, Prof. A. C. Ramsay, W. W. Smyth, A. Tylor, Rev. T. Wiltshire and S. P. Woodward.

SOCIETY OF ANTIQUARIES.—Feb. 19.—O. Morgan, Esq., V.P., in the chair.—J. Y. Akerman, Esq. exhibited an impression of a brass seal.—J. M. Nichols, Esq. exhibited some quaintly-carved figures, which were stated by the Chairman to be Japanese buttons.—S. Birch, Esq. communicated a

paper illustrative of some later Egyptian inscriptions, referring to the mythology and history of the country at the close of the period of the monarchy.

NUMISMATIC.—Feb. 19.—W. S. W. Vaux, Esq., President, in the chair.—G. Eades and C. H. Wyntham, Esqs. were elected members of the Society.—Mr. J. S. Virtue exhibited a specimen of a dollar-note current among the Federals, being a legal tender for all debts, public and private, except duties on imports and interest on the public debt, and is receivable in payment of all loans made to the United States. The engraving on the back and front is beautifully executed.—Mr. Geo. Virtue exhibited a Hungarian dollar and a Sardinian note for a pound, the latter having the signatures of Mazzini, Giglioli, and Gallenza.—Mr. George Virtue also exhibited two silver Japanese coins.—Mr. Venables exhibited some small brass Roman coins of Constantine, Gratian, &c., found at Wookey Hole, Somersetshire.—Mr. Gordon exhibited an impression of a scatta.—Mr. Madden read a paper, communicated by A. W. Franks, Esq., 'On some Tokens of the Seventeenth Century presented to the British Museum by C. Roach Smith, Esq.'—Mr. Madden read a paper, communicated by A. W. Franks, Esq., 'On a Silver Coin of Antedricus, found in a barrow in Somersetshire with a few Roman coins.'

STATISTICAL.—Feb. 17.—W. Newmarch, Esq. in the chair.—W. F. Fergusson, W. H. Ransford and R. Williamson, Esqs., were elected Fellows.—The Rev. J. E. T. Rogers read a paper 'On the Rationale and Working of the Patent Laws.'

ZOOLOGICAL.—Feb. 24.—E. W. H. Holdsworth, Esq. in the chair.—A communication was read from Mr. R. F. Tomes, describing a new species of bat of the American family Phyllostomatidae, for which he proposed the new generic and specific names *Lonchorhina aurita*.—Mr. Frank Buckland gave some account of the progress of his experiments in hatching and rearing salmon and trout by artificial means in the tanks in the Society's Gardens and elsewhere, and made some remarks on monstrosities observed in the embryo fishes.—Mr. A. Newton exhibited and pointed out the characters of a new bird from Madagascar belonging to the family Cettiidae, for which he proposed the name *Hyperperes coralivestris*.—Dr. P. L. Sclater exhibited a skin of the pheasant named *Diardigallus prelatius* by Bonaparte, which had been transmitted to him by Sir R. Schomburgk from Siam.—Dr. J. E. Gray exhibited a specimen of a singular variety of the domestic fowl, in which the head and foot somewhat resembled those of a parrot.—A letter was read from Miss M. E. Smee, containing remarks on the artificial formation of the tubes of the larvæ of Phryganæ.—Mr. Bartlett exhibited a living hornbill from the Society's Menagerie, stated to be from Madagascar.

INSTITUTION OF CIVIL ENGINEERS.—Feb. 24.—J. Hawkshaw, Esq., President, in the chair. 'American Timber Bridges,' by Mr. J. R. Mosse.—'On the Reconstruction of the Dinting and the Mottram Viaducts,' by Mr. W. Fairbairn.

ROYAL INSTITUTION.—Jan. 23.—Sir H. Holland Bart., V.P., in the chair.—'On Radiation through the Earth's Atmosphere,' by Prof. J. Tyndall.

SOCIETY OF ARTS.—Feb. 18.—J. B. Smith, Esq., M.P., in the chair.—The paper read was, 'On the Best Means for Promoting the Growth and Improving the Quality of Cotton in India,' by Mr. A. N. Shaw.

INSTITUTE OF ACTUARIES.—Feb. 23.—C. Jellicoe, Esq., President, in the chair.—Col. J. T. Smith and W. P. Clirehugh, Esq. were elected Fellows; and Messrs. J. Curror and W. White were elected Associates. Mr. W. S. B. Woolhouse read the first part of a paper 'On Interpolation and the Adjustment of Numerical Tables.'

MEETINGS FOR THE ENSUING WEEK.

- Mon. Asiatic, 3.
- Royal Institution, 2.—General Monthly Meeting.
- Entomological, 7.
- Royal Academy, 8.—Sculpture, Prof. Westmacott.

has seen fit to associate with the former subject, though separated by the distance of several years in history. Perhaps he considers the latter event the natural sequel of the former. At any rate, he is careful to inform the audience that he is no friend to the Dutchman, and shows a decided leaning to the cause of James. Nevertheless, it is evident that it was not for the sake of the subject, but the title only, that the former was selected; in order that he might unite to it "the Gathering of the Clans," which furnishes a magnificent scene for the close of the second act. As a vehicle for opportunities of this sort the piece is to be regarded;—and in this respect, unlike 'The Peep o' Day,' it has been constructed with no other view. The story, therefore, is quite subordinate to the scenic situations, and, as may be imagined, is not very interesting. The opening, however, promised well; and the first act awakened some sympathy for the fate of the hero, who is throughout it exposed to considerable peril, from which we are glad when he is delivered. The author calls it "an episode in Dundee's journey from Edinburgh to Lochaber." The scene presents a roadside pass and the cottage of *Alec Campbell* in Perthshire. In this character Mr. J. Graham had an opportunity of manifesting his Highland blood, and his fidelity to the Campbells. This man and his wife *Janet* (Mrs. Edmund Falconer) are sorely tempted by a party of Covenanters to assist in waylaying *Dundee* as a man of Belial whom it is lawful to slay in any manner; but to the preachings of the fanatic zealots they oppose the moral convictions of their own hearts, and the debate thus maintained gives time for consideration. *Helen Lochiel* (Mrs. D. P. Bowers) is a refugee with this worthy couple, having left her father to avoid a hateful marriage, and has also to be defended from the suspicions of the Covenanters. Ultimately, however, they confide in her too much, and leave their powder-bags in her custody while they go out in search of a place of ambush. Soon after, *Dundee* appears, and is warned by Helen of his danger. Escape at last becomes impossible, when Helen recollects the powder-bags, and, bringing a lighted brand, threatens to cause an explosion unless their owners yield to her entreaties. There is good melo-dramatic situation in all this, and the scenery, painted by Mr. T. Grieve, was admirably set. In the second act, there is but little writing. *Claverhouse* is well received by the Highlanders, and Helen again appears, having wandered beyond the borders of Argyleshire, and is about to be made captive, when *Alaster M'Donald* (Mr. Henry Lorraine), who has followed her, incurs suspicion as a spy, and is brought into personal collision with *M'Ian*, when the witch-wife *Elspat* (Miss Hudson) interferes, and informs the latter that Alaster is really the son of his long-lost brother, but adopted from motives of policy by the Campbells. These feuds among the leaders of the clans give a rough notion of the manners of the times, and are rather skilfully thrown into the picture. The last scene of the act, we have said, presents the gathering of the clans. The scene is painted by Mr. T. Grieve, and exhibits the heath and surrounding hills, with the ascent of the mists after sunrise. National games of various sorts are then gone through, until at length the pibrochs sound. These announce the approach of the clans, which, in their appropriate costumes, descend the heights, and "swell the Grand Gathering of the Gael at Lochaber." Here *Dundee* addresses the picturesque multitude, and the royal standard is unfurled. Mr. Haigh, too, in the character of *Allan*, sings a ballad, with the Highland chorus, "Up wi' the bonnets o' Bonnie Dundee," and the curtain descends upon a feudal demonstration;—equal clamour taking place both before and behind the footlights, for the audience was excited to as much applause as the supernumeraries on the stage itself, who amounted to several hundreds. Three years are supposed to elapse; and Alaster and Helen, now married, are resident in Glencoe. *Glenlyon* (Mr. H. Sinclair) has received his orders for the massacre, but desires to save the faithful couple and their child. Helen takes her measures well, and secures the presence of her husband at the Glen of Weeping. This scene is deliciously painted by Mr.

W. Telbin and his son, and represents a set snow-scene by moonlight. Here we find Alaster M'Donald and his wife, who have to defend themselves on a narrow pass against Glenlyon's soldiers, but they are delivered by the timely arrival of the Cameronians of Lochiel. Other fugitives are now seen climbing the rocky stair, and a superb *tableau* is obtained. Some defects in the groupings excited remark in the pit, and the curtain finally descended accordingly to a mixed demonstration. The dramatic portion, unfortunately, gives little scope for acting to the principal performers; but the accessories are so abundant and beautiful, that the piece, notwithstanding its obvious shortcomings, will very possibly prove attractive.

MUSICAL AND DRAMATIC GOSSIP. — "What music are we to have for the wedding?" is the question now in every one's mouth. Will there be a new Bridal Anthem for St. George's Chapel? Some years ago the English Hymn for the Prince of Wales, to Haydn's "God preserve the Emperor," was published in Mr. Hullah's Part Music. That may possibly come into church and chapel use—on the occasion. As secular demonstrations, some are already before us:—A simple Welsh carol, 'God bless the Prince of Wales,' composed by Mr. Brinley Richards (Cocks & Co.), to words by Mr. G. Linley, for the singing of which our contemporaries have stated that Mr. Sims Reeves has been presented with 100*l.* by the publishers (a somewhat costly precedent). There is also a gay *Alexandra Polka*, by Carl Faust (same publishers), one of the many tributes to come. We hear of a *Wedding Cantata*, in preparation by Mr. Macfarren,—of an Air and Chorus by Miss Gabriel.—There are, of course, to be festivities at the Crystal Palace, and among the musical ones a composition by the excellent conductor, Mr. Manns, and a grand Procession March, by Mr. Arthur Sullivan, which, we venture to assert, will prove not unworthy of the occasion, the place, or the composer. There is to be, also, a torch procession.

The Musical Society of London held its trial of new orchestral compositions on Wednesday last. The list contained Symphonies by Messrs. E. Perry and Silas,—Overtures by Herren Schlässer, Schröder and Oberthür,—and a Violin Concerto by Mr. E. W. Thomas.—At the next concert, we understand that Schumann's music to 'Manfred' will be produced. Be it good, be it bad, we are grateful for an opportunity of coming to some acquaintance with it.

Attention having already been called to the cheap re-issues of Bishop's Glees, in course of publication by Messrs. Boosey & Sons, and Novello, there is no need minutely to return to the subject when noticing the neat and legible edition by the latter house,—beyond saying that with all the faults which they include, both of omission and commission, the body of music made up by them will outlast any subsequent contribution to our stage. Bishop's convivial glees, again, though not exempt from a broad dash of vulgarity here and there, have a manly frankness in them not too frequently attained in these days, when modern German influence has done its part in changing, we may say spoiling, the character of national melody.

A Correspondent from Prussia announces that Middle Lucca, whose favour at Berlin is great, has been engaged by Mr. Gye for the coming season. Unless the lady has re-made herself since September last, when her singing in M. Meyerbeer's 'Camp de Silesie' was mentioned in the *Athenæum*, we cannot think this a wise engagement.

Mr. Dickens, whose readings for charity in Paris have excited the greatest possible enthusiasm there, is going to resume these entertainments, which may be called monodrames, at the Hanover Square Rooms, in March and April.

Herr Brambach, a new German composer, is named in the *Allgemeine Musikalische Zeitung* as having produced a first Symphony at Bonn, with great success.—The same journal reviews at some length a new Pianoforte Concerto, by Herr Reinecke, which appears to be an important work, though the themes cited are not of the freshest.—A new opera, by M. le Comte de Reiset, French

Ambassador at Darmstadt, who writes under the pseudonyme of M. Jesper, has been played there. The title of it is 'The Miller of Marlinac.'

M. von Flotow's sickly 'Stradella' has been at last produced at the Italian Opera of Paris, the *Gazette Musicale* assures the world, with the utmost success. The singers were Mdlle. Battu, M. Naudin, Signori Zaccolini and Delle Sedie,—no very strong cast; and the music, which (for France) is the property of the proprietors of the *Gazette Musicale*, is the weakest of the weak.—M. Calzadò has quitted the management of the Italian Opera. His successor is not yet named.—The *Observer* of Sunday last stated that the treaty between Mr. Mapleson and the "powers that be," as to the occupation of the Neapolitan theatres, though pending, is not yet definitely concluded, as had been announced.

'Les Bavardes,' a two-act operetta, with music by M. Offenbach, has just been successfully produced at Les Bouffes-Parisiens in Paris, with Madame Ugalde as the hero.

The frequenters of the Conservatoire Concerts at Paris, which are now running their course, have been astounded by the directors having had the hardihood to adventure such a novelty as a chorus of nymphs from the 'Psyche' of M. Ambroise Thomas, a comic opera produced not many years ago. The chorus pleased so much that it was found good to repeat it at a second concert. Strange to say, the Society (which has been of late the most conservative of conservatives) has not perished of its temerity.

The newest "sensation" made in the Parisian theatres has been the production, at the *Odéon*, of 'Macbeth,' translated by M. Jules Lacroix. The hero is played by M. Taillade,—the *Lady* by Madame Karoly. The appearance of a young actor, M. Courdier, as *Banquo*, in the banquet scene, is universally dwelt on as something more than ordinarily fearful, even for France, where they "order these things" better than in England.—Our Naples Correspondent tells us Madame Ristori is electrifying Neapolitan audiences in her version of the same tragedy.

By way of keeping alive in the public mind attention to a matter which neither managers nor playgoers should lose sight of, it may be announced that only a few days since, after the imprisonment and suspense of many months, has Mdlle. Emma Livry, whose injuries by fire are not forgotten, was permitted to leave her bed. These terrible and frequent disasters claim a notice which they have not yet received.

The Teatro Aliberto at Rome, lately rebuilt by Prince Torlonia, was, on the last day of the Carnival, destroyed by fire.

The following is from a Correspondent:—"As there has been talk in your columns about the original idea of 'The Merry Widow,' and reference made to Madame de Girardin's admirable 'La Joie fait Peur,'—a writer having perhaps fewer readers than the Italian priest had hearers whom he addressed as 'Pochissimi Signori,' may be allowed to raise his voice and say, that a tale entitled 'Kate's December,' published in 1850 in 'The Lady's Companion,' is nearer to the new play than Madame de Girardin's story turned backwards. There was the blind mother, and the daughter who hid the bad news, and went to balls, in order to spare suspense to her family. The hero of my tale, though, was a brother, not a husband. I may add, that the tale would never have been written, had not such an instance of real heroism occurred within the circle of my own friendships. All the persons, however, were already gone, or far away in 1850, whom allusions then, or disclosures now, could annoy, had their names been told. PAUL BELL."

MISCELLANEA

Sisterhoods in the Church of England.—As you have admitted the letter of a Roman Catholic Correspondent on the subject of Miss Goodman's book, you will not refuse the opportunity of saying a word to one of your readers who belongs to the English Church. First, as to the facts. The principal Sisterhoods in the Church of England are

not, as your reviewer has been led to suppose, "irresponsible to any authority, save the absolute will or whim of the Lady Superior." The Devonport House may be so; the house at Clewer (to take the first name on your reviewer's list) certainly is not. If Miss Sellon departs from the general practice, she only uses, or abuses, that liberty which the non-paternal character of our institutions in Church and State permits. In France they regulate houses of all sorts, the worst as well as the best: we leave both alone, and must be content with certain extravagances as the result of our freedom. I have reason, however, to believe that Miss Sellon stands alone both in the severity and in the "irresponsibility" of her system.—Secondly, as to *principles*. Your reviewer intimates that religious houses are all very well for "Catholics," but not for us. If this were so, all good persons, women especially, who feel themselves called upon to live out of the world, and to spend their time in ministering to the sick and poor and ignorant, would seek the opportunity in the Church of Rome. In short, it would be a confession that the Church of England is incapable of some of the principal offices for which a Christian society exists. *Hoc Ithacus velit*; such an admission would give Rome as forcible an argument as she could wish to urge. There are many of your readers, I think, who would deny her exclusive claim to the patronage of pious and charitable works not less strenuously than

J. F. M.

Cardinal Mezzofanti.—Without questioning or doubting the acquirements of Cardinal Mezzofanti in Chinese, I cannot help thinking that the second-hand story communicated to you by Mr. Edmund Waterton is a pure myth, for the following reasons:—1. It seems highly improbable that Cardinal Mezzofanti would "put" the Bishop of Victoria "through all the dialects," in order to discover what dialect the Bishop was speaking. As there are some tens, if not scores, of dialects in Chinese, it assumes an incredible power in the Cardinal; and it would be like talking to a stranger in every possible dialect, to find out in what particular dialect he was addressing you. It argues ignorance, and not knowledge, and is simply absurd.—2. Assuming the Cardinal to have meant the *Canton* dialect, or the *Häk-kä* dialect, when he spoke of the "dialect of the sea-coast," I am perfectly certain that the Bishop of Victoria did not speak either of these when he arrived in Hong Kong in 1850; for I was then employed by him to speak the *Canton* dialect on occasions when he would undoubtedly have spoken it himself, had he been able to do so. And Bishop Smith did not then speak Mandarin to any extent, though this dialect was his chief study; for, on his expedition to Loochoo in H.M.S. *Reynard*, in 1851, his Lordship employed a Chinese interpreter, who spoke Latin, to communicate with the Loochooan authorities in the *Kwan-hwa* (Mandarin language)—the French of the far East.—3. The Bishop of Victoria did not visit Rome on his way to his diocese after consecration, as he sailed from England by way of the Cape of Good Hope. Your correspondent "B," who denies that *Kwan-hwa* adequately represents the Chinese word for "Mandarin dialect," is in error. The *K* in *Kwan* appears in five or six dialects to my knowledge, and I believe it could not change to *H* in any dialect. *Hwa*, for "language,—dialect," might be written *chwa*, as a German would pronounce this syllable. The *Pün-ti*, or "native dialect" of Canton province, and the *Häk-kä*, are spoken in Hong Kong and the neighbourhood. The *Tiu-chiu* and the *Amoy* dialects prevail a little further north. Then we have the *Fü-kién* dialect about *Fü-cheü-fü*; further north, the *Ningpo* dialect with its varieties; and in *Shanghai* and its neighbourhood a different dialect is in use. All these might be designated "dialects of the sea-coast"; but they are widely different in words and structure, and it is hardly supposable that Cardinal Mezzofanti could speak them all. JAMES SUMMERS.

King's College, London, Feb. 18, 1863.

Eleventh Edition (corrected to December, 1862),

Dates and Facts relating to the History of Mankind from the most authentic and recent records, especially interesting to the Historian, Members of the Learned Professions, Literary Institutes, Merchants and General Readers.

Lately published, in One handsome Library Volume, price 18s. 6d.

A DICTIONARY OF DATES,

RELATING TO ALL AGES and NATIONS,
FOR UNIVERSAL REFERENCE:

Containing Remarkable Occurrences, Ancient and Modern, the Foundation, Laws and Government of Countries—their Progress in Civilization, Industry, Literature, Arts and Science—their Achievements in Arms—and their Civil, Military, and Religious Institutions, and particularly of

THE BRITISH EMPIRE.

By JOSEPH HAYDN.

ELEVENTH EDITION, Revised and greatly Enlarged,
By BENJAMIN VINCENT,
Assistant-Secretary and Keeper of the Library of the Royal Institution of Great Britain.

From NOTES AND QUERIES, Saturday, January 10, 1863.

"He must be a most exacting critic who, with respect to a book like this now before us, containing as it does some thousands of names and dates, and professing to furnish information upon all questions which can arise touching the civil, political, military or religious history, the laws, government, arts and sciences of the world generally—but of the British Empire more particularly—should expect that it would

Spring, like Minerva from the head of Jove,
All perfect and complete.

But every reader of the 'Dictionary of Dates' has a right to expect that, as the patronage of the public calls for new editions, such new editions should be not only professedly but really enlarged and improved. This right on the part of the public has, we are bound to say, been fully recognised and acted upon by Mr. Vincent. Having noted on the fly-leaf of our own copy of the ninth edition articles which we had sought for in vain, but which we considered ought to have been included in a 'Dictionary of Dates,' we have used those articles as tests of Mr. Vincent's improvements and enlargements, and we are bound to say that, with two or three trifling exceptions, those omissions are supplied in this new and greatly improved edition. Not only is the Dictionary itself enlarged, but, which is equally important and valuable, the Index is much more full; and we think Mr. Vincent has in the eleventh edition gone far to realize the object he has proposed to himself—namely, to 'make his book not a mere 'Dictionary of Dates,' but a 'Dated Encyclopædia'—a digested summary of the History of the World, brought down to the very eye of its publication."

London: EDWARD MOXON & CO. 44, Dover-street, W.

Just published, illustrated with a Portrait of the Poet and Humourist. Photographed by J. & C. Watkins, from the Original Painting by Lewis.

A COMPLETE RE-ISSUE OF
THE WORKS OF THOMAS HOOD,

COMIC and SERIOUS, in PROSE and VERSE.

Edited, with Notes, by HIS SON.

Containing all the Writings of the Author of 'The Song of the Shirt' ('Hood's Own' First and Second Series, excepted) that can be discovered by the most careful research and inquiry.

In Seven Volumes, small 8vo. price 2s. 2s. cloth.

Also may be had,

I.
A SECOND SERIES OF HOOD'S
OWN; or, Laughter from Year to Year. Illustrated by
humorous Woodcuts. 8vo. 10s. 6d. cloth.

II.
The FIRST SERIES OF HOOD'S
OWN; or, Laughter from Year to Year. Illustrated by
Woodcuts. 8vo. 10s. 6d. cloth.

III.
HOOD'S POEMS. Fifteenth Edition.
Fcap. 8vo. 7s. cloth.

IV.
HOOD'S POEMS of WIT and
HUMOUR. Twelfth Edition. Fcap. 8vo. 5s. cloth.

LONDON, SATURDAY, MARCH 7, 1863.

LITERATURE

H.M.S. Hannibal at Palermo and Naples, during the Italian Revolution, 1859-1861. With Notices of Garibaldi, Francis II. and Victor Emanuel. By Rear-Admiral Sir Rodney Mundy, K.C.B. (Murray.)

In February, 1859, Admiral Mundy was nominated second in command of the Mediterranean Fleet, and hoisted his flag on board the *Hannibal* at Portsmouth. In May he sailed, and early in June was at Valetta. Thither came, like a burst of thunder, news of a great battle in Italy, of the French Emperor and Italian King triumphing in the streets of Milan, and of Garibaldi hovering and fighting around Como. Solferino had been fought, however, and the Imperial war was over before the Admiral, with six line-of-battle ships, began his cruise—preceded by a visit to Egypt—in the Sicilian waters. The transactions which ensued are partly described in a retrospective narrative, and partly in a journal largely made up of such trivialities as might be pleasant table-talk enough, but scarcely deserve the solemnity bestowed upon them. The Admiral is a pompous writer, and betrays an amusing amount of egotism, recording his own sayings and doings with magnificent complacency, and criticizing, from a lofty point of view, the various personages, more or less of European fame, whom he encountered. At that time, the Neapolitan Government would not allow more than four foreign ships of war to remain at anchor simultaneously in any port of the kingdom of the Two Sicilies, and there were now eight in want of a shelter, which, after the Admiral, "in full uniform," had diplomatized a little, were admitted into the haven of Syracuse, to fill their casks at the Fountain of Arethusa, where Nelson watered the fleet that gained the Battle of the Nile. At Syracuse, the presence of the squadron so excited the butchers that they held a meeting, and forthwith raised the price of meat, which excited the inhabitants in their turn, and led to much austere negotiation. The next anchorage was at Catania, where similar difficulties arose, to be similarly smoothed away, where the people "testified their satisfaction at seeing a British Admiral amongst them by respectfully moving their hats," and where, in the state cabin of the *Hannibal*, the Catanian gentry preferred Allsop's bitter ale to claret or champagne. Next, ten days were passed in the Gulf of Spezzia, where great fortifications are in progress, which the Admiral minutely describes. Spezzia, no doubt, is the naval hope of Italy—a splendid harbour, with the prospect of being gigantically strong as a military position. It was May, 1860, before the real Sicilian cruise began, and with this the diary commences. Palermo was then in a state of siege, deserted by the upper classes, without an inhabitant or a vehicle to be seen in the streets—only guards, patrols and camps; twenty-five thousand men lay in a mass, and a little cloud of skirmishers, coming down from the mountains, scattered them. The first the Admiral saw of the patriots was when three of them—advanced sentinels—stopped his carriage on the high-road, but, upon his name being mentioned, allowed him to pass, whereupon he calls them "ruffians."

"On the outskirts of the city I gained admission into a mansion once occupied by the Moorish governors of Sicily, from the lofty turrets of which I witnessed the burning of several of the country palaces of the nobility who were supposed by the soldiery to be hostile to the Royal cause. In which

ever direction I looked over this vast and richly-cultivated plain, the smoke of ruins and devastation presented itself to my view, whilst the constant report of musketry and the distant sound of cannon showed that armed men were in collision on the slopes of the hills."

We have now a glimpse of Garibaldi as he campaigned, and it is picturesque:—

"Garibaldi was standing in the middle of a large enclosure, amidst a group of fifteen or twenty followers, who were clothed in grey trousers and red flannel shirts, the Chief being himself in a similar costume. His principal companions at the moment were his eldest son, Menotti, a stout and tall youth of nineteen, with his arm in a sling from a recent severe wound; Col. Carini, a Sicilian; Col. Turr, Talecki and Tukuri, Hungarians; and the priest Panteleo, who, cross in hand, had fought bravely at Calatafimi. The soldiers around were mere boys, of fifteen to eighteen years of age, who seemed to look with delight at the English uniforms. Garibaldi, having invited the officers to be seated, and to partake of some strawberries fresh from the bed, alluded to the beautiful effect produced by the royal salutes from all the ships of war in honour of Her Majesty's birthday two days ago, and which he had witnessed from the heights of the Piano dei Greci. He spoke of his affection and respect for the English people as a nation, and of his hope that before long he should make the acquaintance of the English Admiral. He then moved to his tent, which was composed of a worn-out, old blanket, supported on pikes, before which a child, under the name of a sentry, was pacing to keep off the crowd."

There they thronged upon the mountain, these "cheap defences" of liberty, armed with old flint muskets, spears, scythes—very formidable weapons—and rusty cutlasses, with hundreds of Tricolors flying above them, and infinite discord in the shape of trumpets and drums. Not many hours had elapsed before these wild regiments were driving the military out of the town, forts and ships opening fire, and bells bursting into peals all at once. The scene is described by Admiral Mundy as awful, some of the Bourbon broadsides being given with the heaviest ordnance of English manufacture; and it is clear from this narrative that the British influence, represented by the squadron in the roads, was exerted with the strictest impartiality solely to prevent bloodshed. One of his officers who penetrated the city, even while the firing went on, sketched an account of what he saw, and it was enough to put the principle of "non-intervention" to shame. Certainly it was humiliating to the royal troops of Naples that, with their fleet, fortress and army, they were conquered by the insurgent Sicilians:—

"I was much surprised at the inefficiency of the barricades. Not one that I saw yesterday and the day before ought to have stopped any determined body of troops for a moment. In some places the pavement was not even torn up, but only furniture from the houses piled across the streets. In others, especially opposite the Royal Mint, omnibuses, carriages, and logs of wood, constituted the only defence. These did not form any protection from rifle bullets, and as the soldiers fired at random in hopes of hitting people passing, the passage to and fro was by no means agreeable."

It is obvious that the Neapolitans talked of mediation and listened to lectures on humanity while they were preparing reinforcements to resume the horrible bombardment. But even these, powerful though they were, failed to inspire the defenders of the Bourbon cause with courage or resolve, and the Admiral is justified in the contempt he expresses for them all, or nearly all,—soldiers, sailors and statesmen. Garibaldi was now, even in royalist mouths, His Excellency; and when he visited the flag-ship, the Neapolitan officers gave him

precedence—perhaps, it is suggested, to see whether he would be received with military honours. He was so received, and King Ferdinand's generals were insolent accordingly. A vehement discussion ensued in the Admiral's cabin, and it was suggested that Palermo should petition the Crown for a redress of grievances:—

"To this General Garibaldi, in a vehement and loud tone of voice, replied, 'No!' Then, drawing himself up, he added, 'The time for humble petitions, either to the King or to any other person, is past; besides, there is no longer any municipality. *La municipalité c'est moi!* I am the municipality! I refuse my assent. Pass on to the sixth and last proposition.'"

A very choice and memorable bit of history that! Preparations were then made for a renewal of hostilities, but the peacemakers again prevailed. Admiral Mundy, at this juncture, personally inspected the city:—

"A whole district near the Royal Palace, about a thousand yards in length by a hundred yards in width, was a crushed mass of ruins, still smouldering in its ashes. Families had been burnt alive within the buildings, and the atrocities committed by some miscreants of the Royal troops in their retreat from the convents of the Benedictines and Annunziata were frightful. In the Toledo, and other streets adjoining, convents, churches, and palaces of the nobility had been demolished by the falling shells, eleven hundred of which were thrown from the citadel, and two hundred from the ships of war, before I arrested the fire."

There was no more fighting at Palermo. The city was, at the eleventh hour, evacuated, and 15,000 troops marched away from a "rabble":

"It was one of the most humiliating spectacles that could have been witnessed, and I turned from it with disgust. At the entrance of the Toledo, the son of Garibaldi, mounted on a black charger, with a dozen red-shirted youths near him, took up a position in front of the principal barricade. This advanced post was supposed to be the guard of the main defence of the city from the seaward; but doubtless the Dictator placed his firstborn in that marked locality, in order that the vanquished hosts of disciplined men might defile before him, and their degradation if possible be made more apparent."

Such touches of colour are useful in history, and the Admiral supplies a good many of them. Garibaldi again visited the flag-ship:—

"He was now dressed in his own costume, the red shirt, with the flowing coloured silk handkerchief loosely hanging down his back, grey trousers, large curved sabre with steel scabbard, and the Tyrolese hat and black plumes. This dress was certainly more becoming to his figure than the closely-fitting coat and stiff collar of the Sardinian general officer. His narrow waist and broad hips, allowing him to wear the lower garment without braces, gave an elasticity to his movements, and, doubtless, he felt more at home in his every-day apparel than when hampered with the accoutrements of pipe-clay and etiquette."

Returning his visit, Admiral Mundy found him magnificently installed in the King's palace—a change from the "worn-out old blanket, supported on pikes," which was his tent in the field. Afterwards the Dictator wrote to his new friend a florid epistle of thanks from Palermo—Sicily—all Italy; and the reply he received sets forth amusingly the contrast between North and South in the matter of official letter-writing.

From Palermo, the *Hannibal* proceeded to Naples.—

"Whilst at exercise aloft in the evening, shifting top-sail yards, I observed a very portly gentleman, with a flowing red beard, in a very smart-looking boat, pulling round and round the ship, and at three different times he made an effort to mount the accommodation-ladder, and gain the quarter-deck. The effort was each time unsuccessful. The topping up and unrigging the heavy spar directly

over his head seemingly caused so much alarm that his courage failed, and a coil of rope from the top falling straight across the gangway, at last made him give up the attempt in despair. On inquiry, I ascertained that my intended visitor was His Royal Highness the Prince of Syracuse, uncle of the King.

The next glance at Neapolitan regality is less absurd:—

"In a quarter of an hour the King entered, surrounded by his ministers. His Majesty was dressed in a close-fitting military coat, with a single large star, of great brilliancy, on his left breast. He seemed to be a well-knit, rather tall young man, with dark hair, very closely cut, and a bronze olive complexion. The expression of his countenance was that of distrust and despondency, and his manner extremely formal and ceremonious. He left the file of ministers, who were dazzling in a blaze of stars, crosses, and orders, marshalled in line at the door, and advanced by himself to our party, which had been formed in a semicircle in the centre of the vast apartment."

When the landing of Garibaldi at Melito is announced, Admiral Mundy writes, "If the royal troops are staunch, he must be annihilated in a week." In a week, the Bourbons were trembling. Salerno fell—King Ferdinand prepared to shut himself up in a fortress, and Garibaldi entered Naples. There is an animated picture of his triumph drawn, which we pass, to note a ludicrous little incident connected with a visit to Garibaldi. He was lying on a bed, in uniform, but in slippers, when Admiral Mundy arrived.—

"The Dictator remarked that it would not be becoming in him to receive the Admiral without his boots, so he commenced pulling them on, and had just succeeded in dragging the first over his foot when I entered the room. We were both much amused at this little disorder of dress, but immediately holding out his hand he said, 'I am indeed glad to see you. I told you, Admiral, when we parted at Palermo that we should meet again at Naples.' There were no chairs in the room, so we sat down upon the bed."

Among the thousand who landed at Marsala was a child, not thirteen years of age, who, when a medal was fastened to his breast by the Duchess of Verdura, could boast that he had passed unscathed through the fights of Marsala, Calatafimi, Palermo and Melazzo.

Admiral Mundy adds to the many portraits which have been drawn of Garibaldi, his own impression:—

"He stands about five feet seven inches in height, and is well and strongly made. Broad shoulders, an expansive chest, a short and thick neck, and a small waist, with well-formed hands and feet, are the features in his person which are striking to the observer. The brow is lofty; the eyes are small and deeply set, and of a greyish tint; the hair, once a bright auburn, is now of a redder tint, and perfectly straight; the beard and moustache of the same colour, with streaks of grey. The whole expression of his countenance is one of great benevolence and intelligence, without the least approach to fierceness; yet there is not wanting a look of profound astuteness, which would bespeak a more subtle temperament than that which he is generally believed to possess. There is at the same time a simplicity, and even a tenderness, in his manner and address which is most captivating; whilst his general bearing and attitude are marked with dignity and composure. No person of moderate observation could be engaged, even in a short conversation, with this remarkable man, without being struck with the clear, silvery tone of his voice, and with the originality of his style."

He describes, moreover, King Victor Emmanuel at the Opera and at home,—especially at dinner. Thus:—

"During the whole of the dinner, which occupied more than an hour, the King did not even remove the napkin from his plate. He neither

tasted a morsel of food nor took a drop of water to drink, but sat like a statue of marble, with both hands resting on the hilt of his sword, patiently awaiting the termination of a ceremony which must under such rigorous discipline have been in no slight degree irksome."

Parts of the Admiral's volume are tedious; but the narrative contains a good many interesting reminiscences and sketches, gives a fair idea of the Garibaldian war in Sicily and Naples, and abounds in welcome gossip about the great-hearted Dictator himself.

Verner's Pride. By Mrs. Henry Wood. 3 vols. (Bradbury & Evans.)

'Verner's Pride' takes its name from a house built by Mr. Verner, on discovering that he had suddenly become rich from mines lately found on his estate. His eldest son dies in India, leaving three children, of whom the eldest is a boy at Eton, named Lionel; and the old man decides, before dying, to leave his much-cherished house—his "Pride"—his home on which he has lavished so much money and pains, and of which he is proud even to folly, to the younger of his two sons, Stephen, rather than to his unknown grandson. But he saves his conscience for this act of injustice by laying strict injunctions that at Stephen's death the property should revert to Lionel. Thus "Verner's Pride" becomes Stephen's—many think, unjustly, and none more so than Lady Verner, the widow of the elder son, who, on returning from India with her second son and daughter, feels that a deep wrong has been done to her children, and is consequently disappointed and amazed. Stephen at once acknowledges Lionel as his heir, "always provided you merit it," he would say to him in private; and so the boy is universally regarded on the estate as the future master, and after school and college takes up his permanent residence there. Stephen now takes the not unusual step of marrying; and his choice is fixed on a widow lady, named Massingbird, with two nearly grown-up sons, named John and Frederick. These are described as ordinary young men, very tall (like Lionel), and Frederick distinguished by a most disfiguring black mark on his cheek the size of a pigeon's egg. A beautiful maid of Mrs. Verner's, named Rachel Frost, is found drowned one night in the Willow Pond, between the house and the village. Very little light can be discovered as to the author of this foul crime. A boy, called Dan Duff, heard in passing through the wood some cries, and saw a tall man pass up the lane which led to the house at Verner's Pride, and nowhere else. The medical evidence at the inquest proves a cause for Rachel wishing to hide her shame, perhaps by suicide; but the cries that were heard make it evident that she had been got rid of by violent means, probably by some one to whom her presence would prove hereafter a reproach. The "tall man" seen by the boy in the lane pointed a finger of suspicion at one of the three young men resident at Verner's Pride; but it can be fixed on no one in particular; they all strenuously deny it, and are eager to discover the perpetrator. A former rejected lover of Rachel's, called Luke Ray, the son of the bailiff, is the only known admirer she had; but he had left for London some days before the murder, preparatory to emigrating to Australia with John Massingbird, who was to follow him in a few days. At the inquest, Robin Frost, Rachel's brother, registers a dark vow to leave no stone unturned by night or day till he shall have found the murderer, and revenged his sister's blood.

Two years elapse, and we find Stephen Verner

and his nephew Lionel much estranged, without any known cause. Lionel's character is very fine: a youth handsome, brave and chivalrous, with a keen sense of honour—frank and open as the day—to know him was to love him; and his uncle's apparent dislike and distrust of him is inexplicable. Lady Verner, with her daughter Decima and her ward, Lucy Tempest, lives at Denham Court,—her second son, Janus Verner—never called anything but "Jan"—having joined Dr. West, the village medico, as assistant; his character is painted with much cleverness. Though wanting in the personal charms of his brother and sister, his straightforward, honest simplicity makes him a favourite with all except his mother, whose weak mind can never forgive his want of refinement and disregard of all the *bienséances* of society. Lady Verner at last renounces the hope of ever modelling him into a Lord Chesterfield or a Sir Charles Grandison, her model of what a gentleman should be. We next are introduced to Dr. West's family. Sybilla West's ruling passions are vanity and ambition, and, though she likes Fred Massingbird, she thinks it worldly-wise to keep the heir of Verner's Pride her slave as well. At this time news comes of John Massingbird having been killed on his way down from the diggings, and Frederick determines to lose no time in going out to Australia to claim possession of the various nuggets of which John had written home such glowing accounts. He determines not to leave Sybilla to his rival, so proposes that she should marry him. Dr. West gives his consent so gladly to this marriage, that Sybilla feels disturbed; but, on his whispering a few mysterious words in her ear, she colours violently and assents; and now they marry and start on their voyage, leaving Lionel, sore in heart and disappointed, for he has loved this girl with all the intensity of his strong and tender nature, and has nothing now to uphold him but the pride which belongs to all Verners, and he bravely buries this sorrow in the depths of his heart, so that no outward eye could detect the fire that is consuming his heart's core. Mr. Verner now falls ill, and, before dying, tells his executor that he has left all his property to Fred Massingbird, and in reversion to Lionel, hinting darkly that Lionel had forfeited it. After much persuasion, he adds a codicil revoking the will, and making Lionel the heir to all his wealth, and giving him various directions about the estate: this codicil is carefully locked up in the desk kept in the sick man's room, in the presence of Lionel, the doctor and the lawyer. When the time comes to open the will after the funeral, the codicil is nowhere to be found, and, after many fruitless searches, Lionel leaves the home he has so long looked on as his own, and takes up his abode at Denham Court with his mother. Mrs. Wood is not much of a lawyer, and the reader who knows anything about wills and property can only smile at her very romantic machinery. His future life blighted—his prospects, his love, all gone,—the strength and sweetness of Lionel's character now shine forth. Is Lucy Tempest insensible to his charms? She is a girl whose influence sanctifies every home; pure, simple and natural, single-minded and true in all she says or does; of rare beauty, and so unselfish that all who read the story of her struggles must feel the better for her bright example. Lionel turns to her in his misery, and finds so much sympathy that to her alone he pours out all his woes. Lucy would not have been human had she not become deeply attached to him. It is but one short step from comforter to lover; but few could sink their own future

and wreck their happiness in complete forgetfulness of self as she does. Lionel begins to feel how necessary this fair young creature is to him; and, on more than one occasion, betrays his feelings to her, and leads her to hope that she may one day fill Sybilla's place.

Death now becomes busy with the owners of *Verner's Pride*: Fred Massingbird dies of fever three weeks after landing in Australia, and Mrs. Verner falls a victim to apoplexy; so Lionel returns to his old inheritance, to the great joy of every one. He has not been in possession many months, when a carriage draws up one night, containing no less a personage than Mrs. Frederick Massingbird, and "a lovely vision glided in, clothed in deep mourning, with a shower of golden curls shading her damask cheek." Lionel's heart, we are informed, "leaped as if it would burst its bounds"; and well it might, for she arrives fancying Mrs. Verner still alive, and intending to live with her. The knowledge of her death makes no difference to her, and she persists in asking Lionel to give her a home. She will not see the impropriety of it. She declines going to her father's house; and her beauty and her helplessness and her misery completely disarm him. What follows may be guessed. Sybilla is enchanting as ever, and Lionel, in an unguarded moment, swears to love and protect her, and make her his wife. This we cannot but think weak and unnatural. We can forgive Lionel for having had his head turned *once* by so pretty a face, but having seen somewhat of her true nature, and having since had a vision of such true womanhood as Lucy Tempest, we can feel little pity on his thrusting his head again into such a noose. And now a storm bursts. Lady Verner's and Decima's misery and disapproval, his own consciousness about Lucy, and the extravagance and heartlessness of his new wife would have tried the patience of a saint, but not of Lionel Verner, whose forbearance is most exemplary, and we trust will teach a lesson to many a sorely-tried husband who may read this book.

We think '*Verner's Pride*' may be popular: it has many merits, and some faults. It is too long and detailed; and too many vicissitudes occur to the actors in the story, even for this world of change and chance. But the tone and principle are good, and the writing and dialogues easy and unaffected, though some few expressions will rather offend the ear of fastidious readers. Many of the situations are dramatic; and we may congratulate Mrs. Wood on the fact that her fourth novel has not fallen off from the promise of '*East Lynne*.'

A Dialogue on the Best Form of Government.

By Sir G. C. Lewis. (Parker, Son & Bourn.)

MONARCHY, aristocracy, democracy, never end senseless squabble. Make an acrostic from this sentence, and see what you get. Sir G. Lewis would pronounce it a legitimate practical conclusion: but not in so uncivil a way. He is the fourth interlocutor—*loqui non laborat*—and is as polite as *Scævola* in the '*De Oratore*.' His friends Monarchicæ, Aristocraticæ and Democraticæ, keep up the ball; and Crito, their host, sums up. They, the wrangling three, are earnest characters, but quiet; and the arguments put into their mouths are intended to represent those which have real force, and which are only bad so far as those on the other side are better.

It would be to little purpose to describe what three sensible persons say about the three great forms of government. The whole reads very pleasantly in the hands of Sir G. Lewis, but would

be dull in any form of description. There is no attempt at drama: the characters are fac-similes of each other with different opinions. There is but one point on which our readers will expect information. What does the democrat say to the present state of the American republic? He attributes it to the mixture of federal and state elements. All the success has been owing to democracy: the final failure has been owing to federalism. The monarchist of course holds the very reverse.

The summing up, which is the author's own share of the discussion, contains opinions to which a vast number of thinkers will consent. It is impossible to establish any best form of government applicable to all communities. Good principles must be applied in different ways to different materials. The monarchist may rely on experience, and on the frequent failure of democracy; the aristocrat may vaunt the theory of governing by an intelligent and virtuous minority; the democrat may assume fraternity, liberty and equality, and all their consequences. But all three are to remember that their problem is not to establish this or that, but to change this *into* that,—a matter which involves the consideration of all the habits and associations which actually exist.

For ourselves, we do not believe that any theory of government will explain the British constitution, or any other. We not only believe, with Sir G. Lewis, that the good or evil of a change depends on the habits of the people, but we believe that the very government they live under depends more on their own habits than on any forms: we except only the case in which a foreign force is the arm of power.

Our disposition, each one for himself, to mind his own business, except at intervals of relaxation, when every one governs the world, assigns the future of Poland, and decides on the ship canal which is to cut America into two islands: our power of grasping the meaning of liberty, as being something different from the right to keep down the wrong side: our great dislike to mending holes before they are made: our power of making things do, in that most efficacious of all ways, somehow or other:—are these things the causes or the consequences of our system? If causes, how do we know that they would not have enabled us to convert a fierce despotism into the wonder of the world, without any formal checks? If consequences, how is it that no attempt at imitation of our institutions has had any effect in producing the like? If partly one and partly the other, which may be reasonably surmised, who shall explain to us the action and reaction of the process?

The great glory of the British constitution, as it now stands, is that it is a republic to every one who chooses that it shall be so. If any person will let the monarchy and the aristocracy alone, they will let him alone. The tax-gatherer will call: but that, we guess, may happen in a democratic republic. The Queen will occasionally send greeting, to desire our republican's attendance, under penalty, &c., to give evidence in the complaint of, &c.: but this also is an incident of democracy. How do the writers on principles explain all this? Was there ever, in this world, any system except our own, which kept every one, to the extent which ours does, out of the way of feeling the power of others? In the old United States, it is notorious that the "will of the people"—i. e. the neighbourhood—could not be resisted: in England any one who chooses may, without fear of any other person except as an individual restrained by law, snap his fingers at all around him. All our writers on government pass these things over, whether they desire to maintain or to vary. Their system is all Euclid,

and never gets as far as surveying or navigation.

Journals and Correspondence of Thomas Sedgewick Whalley, D.D., of Mendip Lodge, Somerset. Edited, with a Memoir and Illustrative Notes, by the Rev. Hill Wickham, M.A. 2 vols. (Bentley.)

At the close of the last and at the commencement of the present century, Bath was inhabited by families whose members gave a character to and exercised a great influence over the locality. They were all, in their various ways, remarkable. They were saints or sinners, dancers, gamblers, play-goers, rhymers, hard drinkers, or models of propriety; ill-featured or distinguished for personal beauty. There was no middle station in this society. You were Somebody or Nobody; and it was not allowed to you to be Anybody you pleased. To one of the two divisions you perforce belonged.

The Whalleys were emphatically of the Somebody family. They came in with the Conqueror, of course,—their great ancestor carrying his standard at Hastings; and, later, a General and a Judge of that name called cousins with Oliver Cromwell. The family of Whalley in the time of the hero of these volumes were remarkable for their personal beauty, accomplishments and virtues, in honour of which there is perhaps more incense thrown about than the occasion warrants; although Hannah More said, in reference to one of the brothers, that she had known many persons who appeared to live *near* Heaven, but only Mr. Richard Whalley who seemed to live in Heaven.

Thomas Whalley, having been trained to perform the duties of a profession whose office it is to teach the way to that Heaven wherein Richard metaphorically dwelt,—he was in due time presented to a living by the Bishop of Ely. It was a rectory—Hagworthingham, Lincolnshire,—and the Bishop stipulated that the newly-made Rector should never reside in it, as the Lincolnshire fens would kill any gentleman but a native!

To hear was to obey; and the reverend gentleman retained the rectory and its emoluments for half a century, without performing an hour's duty in it. The duty was done by a curate. If he was a native, he held on for awhile; if not, the fens killed him, and the Rector had to send another man to the front, to meet and be subdued by the enemy whom the Bishop would not allow him to encounter himself. Mr. Wickham does not properly fulfil his mission as editor by omitting to inform us who this exemplary bishop was. We will supply the omission by naming this careful keeper, not of the sheep, but of the shepherds. It was Edmund Keene, who had formerly occupied and enjoyed the see of Chester. He was a man who had the talent of "securing the back stairs." He took a living of 700*l.* a year from Sir Robert Walpole as the fee for marrying one of that statesman's natural daughters; but after he was inducted, Mr. Keene would have nothing to do with the lady! To such old-world people and prelates does this book introduce us.

The Lincolnshire rector married a fortune, and set up a rather splendid home in the Crescent, at Bath; travelled largely, wrote an execrable tragedy, penned Della Cruscan poetry; and a macaroni in his younger days, effeminate and affected in his manners, ripened into a hearty, hospitable old English gentleman; his house being open to a host of friends generally, and to Mrs. Siddons in particular.

From the papers of such a man there was sure to be gathered a harvest rich in illustrations

of a past social life. Nevertheless, the volumes carry with them one capital fault. There is too much of them. The "twaddle" is superabundant. Had Mr. Wickham fully comprehended the duties of an editor, he would have rejected all superfluous matter, and would thereby have produced one interesting and amusing volume, instead of two, the light and pleasant materials of which are encumbered by heavy and intolerable nonsense akin to the registering of fools and choricling of small beer.

Among the romances of social history illustrated in these volumes, there is none, perhaps, of more interest than that of Elizabeth Cornwallis, daughter of James Bishop of Lichfield, and subsequently Earl Cornwallis. The mother of this hapless lady was the daughter of Galfridus Mann, the brother of Walpole's friend, Sir Horace Mann. In a letter from Miss Seward to Dr. Whalley, in 1803, we have this notice of her "Clarissa," as Miss Seward called her young friend:—

"You have seen, you have conversed with my Clarissa, the by me much-beloved, the angelic, the persecuted. The instant I heard she was at Bath, I fervently wished that chance might throw you together; assured, as I felt, that the attraction of kindred minds would operate between you. It is necessary to account why I never mentioned to you that I had been honoured by the fervent attachment of a young creature so highly amiable, interesting, and accomplished, and whose mind was so endowed and so noble: why, through the seven years which have elapsed since first I knew the partial fervour of her attachment, I have reserved it the unpartaken and secret treasure of my soul. Before we ever met, I heard that the bishop's only daughter was a girl of pleasing and engaging manners; that her mother, whose violent temper and despicable avarice were talked of everywhere, hated and tormented her; that she had had a youthful and fond friendship for her beautiful neighbour, Miss Turton, since Mrs. Plummer; that this attachment was prohibited at Harlow Place as a crime and disgrace, and the lovely young friends were forcibly kept asunder."

Miss Seward thus narrates her first interview with Clarissa:—

"On the 22nd of July, in the year '96, while I was packing up my clothes to go to Buxton the next day, my maid came to tell me that the bishop and Miss Clarissa were below stairs, waiting to see me. It was a few minutes ere I could go down to them. They were in the large dining-room. On opening the door, I saw the bishop in earnest conversation with the person who has the care of his affairs in this town, and Miss Clarissa, then only seventeen years of age, standing before my picture, with her hands folded, and in her whole light form an air of tender enthusiasm, and interesting grace. She turned towards me on my entrance, with such a look of beaming and endearing kindness—but I know that when you spoke of me with regard you saw the fellow to it. After civilities had passed between the bishop and myself, he resumed his earnest conversation with his agent, and left his charming daughter at liberty to tell me, that my writings had inspired her with the warmest predilection in favour of their author; that it was the first wish of her heart to become my friend, and through life that I should consider her as such. On the bishop turning his attention towards us, her manners instantly changed from the warmth of confidence and friendship to a reserved politeness; and I perfectly understood the reason."

The meetings of the two friends were few and far between; but at one of them, says Miss Seward,—

"I then learnt from dear Clarissa the long and severe maternal tyranny which had blighted all the joys of her youth; every wish studiously thwarted; hourly insulted for those talents, those sentiments, and those pursuits which form all the superiority and glory of her character; her charities, her disinterestedness, her contempt for the pageantries of society, her love of books and literary retirement,

and the added crying sin of esteeming me. Not only Mrs. Cornwallis but my lord has a great dislike to female friendships, and deems them romantic, and, where there is the least inequality of station, highly improper. Always inspecting her letters, regular correspondence between Clarissa and myself was precluded, and sometimes years have passed away without my either seeing or hearing from her."

Miss Seward speaks of Clarissa's desertion by a lover, but not with strict correctness:—

"I solemnly assure you not one of her many sighs arises from disappointed love. The man who deserted her on the eve of her proposed nuptials, never had her affections. Unexceptionable in his person, and of great wealth, his addresses were approved by her parents, when, a few years ago, they were first pressed upon her acceptance. No prior attachment existing in her bosom, by the wretchedness of her domestic life, its utter and severe slavery respecting all her friendships, she was induced to a reluctant acquiescence. She then, as she has since experienced, found it impossible to school her heart into love for that young man—and, as I am informed from others, some libertine indulgences on his part reaching her ear, she clung to them as a refuge, and pleaded them as a reason for retracting her consent. He went abroad for some time, but on his return re-proposed himself. She was then in a terrible state of health. His constancy of heart was pleaded against the youthful infidelity of his senses; and the passionate concern he showed for her illness and danger, watching almost constantly by her couch, made that impression on her gratitude to which her heart was impregnable—her dearest brother and friend for ever lost—the victim of parental opposition to his worthy and unexceptionable choice; her situation at home more and more distressing, as time rolled on, and as ripened womanhood and blameless conduct increased her right to the unrestrained power of choosing her own female friends; yet that right withheld with even augmented rigour! Thus she was again induced to try if a great and important change of situation might not lessen her miseries, though her heart told her it could give her nothing resembling happiness; besides, her spirits, weakened by disease, seemed to lose the power of contending with her destiny. Settlements were drawn, equipages bespoke, and blended armorials engraved on them and on the plate. She continued extremely ill, with occasional fits of delirium. In those situations, her appointed husband often watched alone by her couch. After having done so one day of recurring delirium, the next morning he told my lord that he had discovered it was not for his happiness to be united to Miss Clarissa; and everything was entirely and for ever broken off, to the sincere satisfaction of the fair deserted, since the nearer she had approached the irremediable marriage bourn, the more strongly she felt the apprehended guilt of plighting at the altar those vows of love which her virgin heart refused to sanction, and whose power to fulfil appeared to her more than doubtful; therefore was she contented rather to bear the ills she had, than to fly to others of a new complexion, tinged with self-reproach: a misery yet a stranger to the purest and sincerest heart that ever beat in the human bosom. She suspects that, in her wanderings of reason, she disclosed her deep-felt reluctance to those impending nuptials, and hence her secret heart acquits the deserter of any crime towards her."

Dr. Whalley's own picture of the lady is thus drawn, in 1804:—

"Our enchanting friend's letter would have made, as we found on weighing it, my former 'frank' over-weight, therefore I shall enclose it in another free cover, with my epitaphs; it will irradiate their gloom. I have taken leave, though not (I trust in God!) a last leave, of one of the most charming, noble-minded, and interesting women that ever existed. Our hearts, through her, will be linked together with new strength and ardour. What a fate is hers! To be treated with indifference where she should be cherished as the life-blood that warms the heart; and with obloquy and harshness by a mother, who, if she had any proper feeling or principle, ought to doat on and be proud

of such a daughter. May the Almighty comfort and support her and you!"

There are scattered details of the virulent persecution this beautiful and accomplished girl suffered at home. The father's heart seems, however, to have warmed a little towards her, as friends praised her beauty, her talents or her temper. She died, unmarried, in 1813, on which the lively old Piozzi says, "Elizabeth Cornwallis is dead, the papers tell me, and greatly shocked was I at hearing the news. It was put in so oddly, too, my curiosity is raised almost as much as my concern. What did she die of?" After which the old lady descants on mutton-broth and turnips.

The Cornwallises were not exemplary prelates. He of the elder branch, who after holding Lichfield, succeeded Secker in Canterbury, scandalized all good folk, from Queen Charlotte to Lady Huntingdon, by the "drums" which his wife held at Lambeth Palace on Sundays. His kinsman James, noticed above, was remarkable for looking after his own interests. With the death of Clarissa's brother, the last Earl, in 1852, the title became extinct, and her story is one of a family that has died out.

The many portraits of contemporaries are smartly touched off. Mrs. Piozzi is the reverse of lovely. Hannah More is pleasing; Johnson is truthful, but not attractive. Here is a little sketch of Miss Seward's father:—

"Her father was a minor canon of Lichfield Cathedral, and Mrs. Delany mentions having met him at Ragley, the seat of Lord Hertford, and calls him a 'learned clergyman.' Horace Walpole has an amusing anecdote of the value he put upon his metrical compositions. He was travelling-tutor to Lord Charles Fitzroy, who was taken dangerously ill at Genoa. Through the remedies applied by the physician, the crisis appeared to have passed; and Mr. Seward went to his room, and began a complimentary ode to the Esculapius; but before it was finished, a relapse took place, and the patient died. The tutor, however, was so well pleased with the commencement of his poem that he finished it, despite the failure in the moral of the tale."

Mrs. Siddons's letters form a feature in these volumes. They are interesting, as they mingle something of the freedom of thought and expression of an older time, with the more refined manner which succeeded. Here is a sample of a lady's letter to a gentleman in 1786:—

"All is well over, my dear Mr. Whalley. I have another son, healthy and lovely as an angel, born the 26th of December; so you see I take the earliest opportunity of relieving the anxiety, which I know you and my dear Mrs. Whalley will feel till you hear of me. My sweet boy is so like a person of the Royal Family, that I am rather afraid he'll bring me to disgrace; my sister jokingly tells him she's sure 'my lady, his mother, has played false with the Prince,' and I must own he's more like him than anybody else. I will just hint to you that my father was at one time very like the King, which a little saves my credit. I rejoice that you are well, and have such pleasant society, but I wish to God you would return! I have no news for you, except that the Prince is going to devote himself entirely to a Mrs. Fitzherbert, and the whole world is in an uproar about it. I know very little of her history, more than that it is agreed on all hands that she is a very ambitious and clever woman, and that 'all good seeming by her revolt will be thought put on for villany,' for she was thought an example of propriety. I hear, too, that the Duchess of Devonshire is to take her by the hand, and to give her the first dinner when the preliminaries are settled; for it seems everything goes on with the utmost formality; provision made for children, and so on. Some people rejoice and some mourn at this event. I have not heard what his mother says to it. The Royal Family have been nearly all ill, but are now recovering, and they graciously intend to command me to play in 'The Way to Keep Him,' the first night I perform. They are gracious to me beyond measure on all

occasions, and take all opportunities to show the world that they are so. How good and considerate is this: they know what a sanction their countenance is, and they are amiable beyond description. Since my confinement, I have received the kindest messages from them; they made me of consequence enough to desire I won't think of playing till I feel quite strong, and a thousand more kind things."

There was not a more astute woman living than Sarah, and well did she know how to flatter her patrons, from King George down to Dr. Whalley. Altogether, her letters do not tend to raise the old estimation of her character, but then she often writes verbosely about mere nothings, which were important in her sight as having reference to Dr. Whalley, who, though he stands in the foreground, is not the most important personage in this work. When Mrs. Siddons had something to say, she said it well enough. Witness the account of her first appearance in Ireland, in 1783:—

"We arrived in Dublin the 16th of June, half-past twelve at night. There is not a tavern or a house of any kind in this capital city of a rising kingdom, as they call themselves, that will take a woman in; and do you know I was obliged, after being shut up in the Custom-house officer's room, to have the things examined, which room was more like a dungeon than anything else,—after staying here above an hour and a half, I tell you I was obliged, sick and weary as I was, to wander about the streets on foot (for the coaches and chairs had all gone off the stands) till almost two o'clock in the morning, raining, too, as if heaven and earth were coming together. A pretty beginning! thought I; but these people are a thousand years behind us in every respect. At length Mr. Ererton, whose father had provided a bed for him on his arrival, ventured to say he would insist on having a bed for us at the house where he was to sleep. Well, we got to this place, and the lady of the house vouchsafed, after many times telling us that she never took in ladies, to say we should sleep there that night. I never was so wearied and so disgusted in my life. The city of Dublin is a sink of filthiness; the noisome smells, and the multitudes of shocking and most miserable objects, made me resolve never to stir out but to my business. I like not the people either; they are all ostentation and insincerity, and in their ideas of finery very like the French, but not so cleanly; and they not only speak but think coarsely. This is in confidence; therefore, your fingers on your lips, I pray. They are tenacious of their country to a degree of folly that is very laughable, and would call me the blackest of ingrates were they to know my sentiments of them. I have got a thousand pounds among them this summer. I always acknowledge myself obliged to them, but I cannot love them. I know but one among them that can in any degree atone for the barbarism of the rest, who thinks there are other means of expressing esteem besides forcing people to eat and to drink, the doing which to a most offensive degree they call Irish hospitality."

Although we have spoken of these volumes as being too bulky, the reader will part with them in good humour, for they contribute much that is valuable to the general history,—social, dramatic, political, and religious,—of the last quarter of the past, and the first quarter of the present century.

La Camorra: Notizie Storiche. Raccolte e Documentate per cura di Marco Monnier. (Florence, Barbera.)

THE Camorra of Naples which, like cancer in the human frame, has for years been preying on the social body of the country, and sapping in secret its vital energies, has since the Revolution been disclosed to the world in all its loathsomeness, and never since the Middle Ages has the existence of so terrible an association been brought to light. It is difficult to imagine that in the nineteenth century, in the

midst of the high civilization of modern Europe, robbery and murder should have been reduced to an organized system, and that a secret society should have exercised a power in the Two Sicilies which defied all the ingenuity of the Government to detect or its power to suppress. Yet such has been the case. Every one intimately acquainted with the affairs of Naples knew it, and no one dared to oppose it. One of its mildest phases is exhibited in the following words: "The foreigner, or even the Italian, who until lately landed in Naples, was often surprised, on putting his foot on shore, at seeing a robust-looking man approach the sailor and secretly receive from him one or two grains. If the traveller cared to ask who was this collector, better dressed than the rest of the crowd, generally covered with rings and jewelry, who presented himself like a master, and without a word divided the price of the passage with the poor sailor,—he was answered, it is the Camorrista. The foreigner, on arriving at his hotel, preceded by a *facchino* with his baggage, ordinarily discovered a second collector equally mysterious and taciturn, who received a few grains from the *facchino*. If there were two *facchini*, each deposited a copper in the hand of the imperious unknown. And if the foreigner, after observing this second contribution, persisted in asking who the collector was, he was answered in the same words: it is the Camorrista."

The traveller leaves his hotel and enters a carriage. No sooner has he mounted, than a third individual starts up before the driver, who with deference puts a grain in his hand. Is this man too a Camorrista? asks the traveller, more and more surprised at ever finding at his heels individuals who do nothing for him, and receive a portion of whatever he pays. And the driver answers sadly: it is the Camorrista. And if the stranger is not one of the travellers who believe that they know Naples after having seen the Museum, Vesuvius and Pompeii; if, taking note of men, he endeavours to study them in their daily life, at every step in the poor quarters of the city, at the railway stations, at the gates, in the markets and in the taverns, he will meet the implacable bravo, who, with a ferocious eye and uplifted head, and wearing wide trousers, mixes in all the affairs and pleasures of the poor, especially their vicious pleasures and equivocal transactions. The writer then proceeds to examine what the Camorra is, and what is its organization, and incidentally shows how much the evil was promoted by a bad and negligent Government. The infant beggar unprovided with instruction became the little vagabond, the thief on a small scale, and some fair day awoke in prison. If a coward, he was thrown aside; if courageous, he aspired to and obtained the honour of being associated with the Camorra. Before attaining, however, to the height of his ambition, he had to undergo many trials and pass through several gradations. The Camorra was, therefore, respected and venerated in times when the right of the strongest only was admitted:—

"To become *picciotto di sgarro*, the novice must give proof of devotion and courage; he must show that he can keep a secret and does not fear the knife. * * He offered himself to execute a sanguinary decree of the society, either to cut the face or, if necessary, to kill a man. When he was not ordered either to assassinate or gash the face, the candidate underwent the trial of the *tirata*, which consisted in drawing the knife against a *picciotto* already received and drawn by lot. * * On the first blood spilt, the combatants embraced one another, and the candidate was received as a novice. * * The *picciotto* underwent a novitiate of two, three, and sometimes six and eight years,

during which he bore courageously the labours of the association without sharing in their profits. He generally belonged to a Camorrista who entrusted to him all his affairs, and gave him, for charity, occasionally, a few grains. To the *picciotto* were assigned the enterprises the most dangerous and fatiguing, and he was always preferred for deeds of blood. * * When an assassination was ordered, all the *picciotti* offered to commit it; and when completed, all assumed the responsibility of it and endeavoured to be arrested instead of the guilty one. In order not to create jealousy, it was determined by drawing lots who should have the honour of committing a crime, and who should expiate it. The *picciotto*, favoured by fortune, gained sometimes ten years, sometimes twenty years in irons; but he became a Camorrista."

The prisons were, and, we may add, still are, the principal centres of the Camorra; and here, intermingled with religion in its grossest and most superstitious forms, were often perpetrated the most ferocious acts. Take one as a specimen, which was related by the man himself. It happened one day that a Calabrian priest, having been imprisoned for some affair of gallantry, was approached on his entering the prison by a Camorrista. The priest could not give a grain towards the oil for the lamp of the Madonna because he had no money. The Camorrista then became irritated, and raised his stick. "Ah!" exclaimed the priest, who was a Calabrian, and therefore courageous, "you would not be so fierce if I had arms about me."—"There is no difficulty," replied his companion, touched in his honour, and immediately he went to the next room, where he asked his superior for two knives. It is necessary to say that in all prisons the society had a deposit of arms, so well concealed that the gaolers and superiors never discovered it. This deposit was called the *pianta*, and was always under the custody and the command of the chief. The members applied to him for knives when they had need of them, never carrying them in prison, for fear of being visited and deprived of them. The Camorrista then returned with two knives exactly alike; offered one to the priest, and placed himself in an attitude of defence. We have said that the priest was a Calabrian, and, therefore, he was the more dextrous, and killed his adversary. Then only was he surprised by fear, because he felt himself doubly threatened, by the rigour of justice and the vengeance of the sect, and believed himself to be under a double sentence of death. To his great wonder, however, he escaped both dangers. Not only did the secret power mystify the matter, perhaps not to compromise itself, but the priest on lying down found in his bed a quantity of money; it was his portion of the *barattolo*, which had been distributed to him as a new brother. From that day he received it weekly during the term of his punishment! On the entrance of Garibaldi into Naples this man was liberated, and, having been introduced to some English gentlemen as a liberal priest, told the anecdote.

Such facts were of daily and hourly occurrence only a year since, and though an energetic Government has done much to destroy the evil, it still exists, and must exist until Southern Italy is regenerated, and law is executed and justice believed in. Persons in our own country who are unacquainted with the real difficulties which beset the honest reformer at every step, are too apt to prate about the state of the prisons, and complain of the little which has been done. Let them read the interesting book of Marco Monnier. Victor Emanuel has undertaken a work which the Bourbons never dared, and, perhaps, never cared to undertake. An immoral government often employed the Camorra, but under

the new régime no quarter has been given to it, and efforts have been made to extirpate a sect which has spread its ramifications throughout the whole of Southern Italy, and which renders impossible all social progress. The book describes the internal organization of Camorra—the Camorra in the prison—Homicidal Camorra—the Camorra in the Piazza—Origin of Camorra—Social and political causes of Camorra—its repression. Signor Marco Monnier is the author of 'L'Italie, est-elle la Terre des Morts?' and of 'Notizie Storiche Documentate sul Brigantaggio nelle Provincie Napolitane,'—works which are full of interest and which have gained for the writer a considerable reputation.

Six Lectures on Political Economy, delivered at Cambridge in Michaelmas Term, 1861. By W. Whewell, D.D. (Cambridge, Printed at the University Press.)

INVITED, as Dr. Whewell states, "by one of the wisest and best fathers who ever lived," to deliver a short course of lectures on Political Economy to the Prince of Wales, the Master of Trinity publishes the results with an acknowledgment—we trust something more than a courtly compliment—of the intelligence and punctuality of his royal pupil. Dr. Whewell disclaims all originality in their composition beyond that of selecting the best passages of writers of acknowledged authority, and weighing them against one another. The execution of this plan, however, is somewhat meagre, and the Lectures cannot be regarded as giving even a satisfactory outline of the principles of the science. Dr. Whewell quotes from Adam Smith the celebrated distinction between water which has value in use and none in exchange, and the diamond, which has "scarce any value in use," without any warning of the important error which it is now acknowledged to contain; and, in quoting again from Smith the well-known distinction between a mere desire and an "effectual demand," omits to direct the student's attention to Mr. Mill's exposition of the equation of demand and supply, by which the obscurity in which this portion of the fundamental principles of Political Economy had hitherto been involved was, for the first time, cleared away.

As in his introduction to the "Remains" of the late Prof. Jones, reviewed in the *Athenæum* some years ago, Dr. Whewell again combats the doctrine of rent as developed by Mr. Ricardo, and adopted by most economists of eminence since his time. This, indeed, forms the principal feature in the Lectures. Previously to Ricardo, economical writers had generally concurred in regarding the land as possessed of some attributes for creating wealth peculiar to itself. The French writers of the school of Quesnay treated it as the source of all wealth, regarding every other labour save agricultural as unproductive. Traces of this notion may be found in Adam Smith's observation, that no equal quantity of labour employed in manufactures can ever be so remunerative as that which is employed in agriculture, because the latter industry pays not only the farmer's labour with a return for his capital, but also a surplus in the shape of rent—which he also describes as representing "the work of nature, which remains after deducting or compensating everything which can be regarded as the work of man." On this view, rent was a positive blessing to the human race; and it might reasonably be inferred that it could not be too high for the general welfare. In fact, the higher it was the greater was the measure of that gratuitous service of nature which theorists of this school regarded with so much satisfaction. It

was reserved for Mr. Ricardo, carrying out the hints of some previous writers, to show the fallacy of this view. In the Ricardian theory, rent is simply a sign of the scarcity of the best land, compared with the wants of the population. If the best land were infinitely abundant, rent would not exist. In this case, according to the doctrine of Adam Smith, nature must be regarded as having ceased to labour for man, and the world as impoverished. The Ricardian doctrine, on the contrary, would regard such a case as highly desirable, and as causing no diminution in the services of nature, but only as destroying the landlord's rent, or share in the produce. Hence Mr. Ricardo describes the interest of the landlord as opposed to the interest of the consumer; by which he meant that it is beneficial to the landlord that good land should be scarce and rents high; while it is equally desirable for the consumer that the very contrary should be the case.

The objection to this statement, which Dr. Whewell adopts from Prof. Jones, is simply, that rents may increase "by the improvement of methods of culture, and that the increase of produce and of rents in England has arisen from such improvement much more than from the extension of culture to worse soils." Hence Dr. Whewell asserts that the interest of the landlord is not opposed to that of the consumers of produce. Mr. Ricardo, however, never supposed that a rise of rents might not, for a period more or less considerable, be more than counterbalanced by improvements in agriculture. He merely contended for the truth, that rent is not in itself a desirable thing from the consumer's point of view, because whatever may be the progress of agriculture it indicates that the best land is insufficient for the production of the food required to support the population. The doctrine of Ricardo is not that the necessity for the cultivation of inferior lands, or, what is the same thing, for a further application of capital to the same lands with a diminished return, is the sole cause, but only that it is the immediate cause of rent. Mr. Ricardo's words ('On the Principles of Political Economy,' 2nd edition, p. 517) are "Both the improvement in agriculture and the superior fertility will give to the land a capability of bearing, at some future period, a higher rent, because with the same price of food there will be a great additional quantity; but till the increase of population in the same proportion the additional quantity of food would not be required, and therefore rents would be lowered and not raised."

From this and many other passages in Mr. Ricardo's work it is evident that he was well aware that, although rents may temporarily fall in consequence of an increase in the gross produce caused by improvements in agriculture, that increase may afterwards be shared both by landlords and consumers; nor does Mr. Stuart Mill, the most eminent of the disciples of Ricardo, overlook the important influences of agricultural improvements in retarding the operation of the economical law of rent.

How far the large increase in the gross produce from our agricultural industry is due to improved methods, and how far to costly sacrifices of capital, in the fruits of which landlords cannot be expected to share, Dr. Whewell does not attempt to conjecture; nor, indeed, does he, in comparing the advantages of their position with that of other classes, even distinguish between these two causes of increase, apparently thinking it sufficient for the consolation of consumers that their proportion of the gross produce is greater than it was. But while the increase of rents is certain, it will hardly be contended that agricultural produce is any

cheaper, the only practical question for the consumer,—a fact which would seem to show that the benefits really arising from the progress of agricultural science have fallen entirely to the share of the landlords. These misconceptions of the Ricardian doctrine have been so often answered by previous writers that it is disheartening to find them stamped with an authority so high as that of the author of the 'History of the Inductive Sciences.'

The Constitutional History of England since the Accession of George the Third, 1760-1860. By Thomas Erskine May, C.B. Vol. II. (Longman & Co.)

Mr. May's History commences at the accession of George the Third: not because that period presents any natural boundary in our Constitutional History, but because that is the time at which Mr. Hallam's History terminates. The present work is not, in form at least, a continuation of Hallam's 'Constitutional History.' The arrangement is different; for Mr. May, instead of giving a strictly chronological history, or dividing his narrative according to the reigns in which the events occurred, takes up the subject of each institution separately, and pursues every inquiry through the entire century. Considering the large and complex nature of the subject treated, we think that this arrangement is the most convenient that could be adopted. It certainly conduces to the clearness of the work, and, by riveting the mind on one branch of the inquiry at one time, until the subject is exhausted, enables the reader to follow the historian with greater ease, and to retain a more vivid recollection of the narrative. This arrangement would, in some cases, render the work less easy of consultation as a book of reference; but any difficulty on this point is obviated by a full and carefully-prepared index to each volume, in addition to copious tables of the contents.

The first volume comprised the history of the prerogatives, influence, and revenues of the Crown; and of the constitution, powers, functions and political relations of the two Houses of Parliament. The second volume gives the history of Party—of the press and liberty of opinion—of liberty of the subject—of the Church and religious liberty—of local government—and of Ireland and the British dependencies.

It is not necessary here to insist upon the extent or importance of the changes which have been wrought, in almost every one of the institutions which are comprised in this work, during the last century. We have, even in our own day, seen many of those peaceful revolutions which appear to be peculiar to the English constitution, and which have filled the minds of the few remaining politicians of the Eldon school with so much horror. We have seen the country ruined by a Reform Bill, the Parliament unchristianized by the admission of the Jews, and the whole character of the lower classes destroyed by spreading among them that education and intelligence which were intended by Heaven for the upper classes only. Strange to say, these terrible forebodings have not been realized. The House of Commons, though somewhat more independent than of old, still respects the authority of its Speaker, and has laboured in its vocation in a manner which has transformed that which was once characterized as "the pleasantest club in London" into a scene of activity but ill adapted for any but earnest men, of good constitutions and active habits. The Jews have not yet purchased the majority of the seats in the British House of Commons; while the spread

of education and intelligence amongst the working classes has produced a novelty in our history. We have seen a time of almost unexampled distress, affecting principally the most thickly-populated districts, passing over without riot, without clamour, without that increase of crime which, on former occasions of the like nature, has aggravated the distress of the people.

Mr. Krskine May is a man of liberal principles, and is impressed with the conviction that the development of popular liberties during the century which his History embraces, has been safe and beneficial. He tells us in his preface that, had he viewed this development with distrust and despondency, this book would not have been written. It could not indeed have been written with the force and freshness with which it now comes to us, except by one who fully approved of the main course of the events which he narrated. But, while Mr. May does not affect to conceal the liberality of his views, yet is he upon the whole a singularly fair historian. He is fair in his statement of facts, and in relating the arguments on one side and the other by which measures have been supported or opposed. He invariably avoids entering the field of party politics; and where a question is still unsettled—as that of Church-rates—he confines himself so scrupulously to the functions of the historian, that his own opinion as to the best solution of the difficulty does not appear.

The present volume is no less interesting than the first. The history of parties is traced with a copiousness of knowledge and a clearness of statement, which, notwithstanding that the subject has been much canvassed of late years, will be admitted by all candid students of our history to supply much that was before wanting in our information, and to define much that was before indistinct. In his view of the importance of party, Mr. May does not differ from those who have so often discussed it. He regards it as an agency inseparable from Parliamentary Government, exercising for good or for evil the greatest influence upon the political destinies of the country. Indeed, by allowing it a separate place in this History he recognizes it as a part of the constitution. With reference to the conduct of Sir Robert Peel when, in 1829, he passed the Bill for the relief of the Catholics, and when, in 1846, he abandoned the policy of protection, Mr. May has the following remarks, which illustrate his views of the duty of a leader to his party:—

“Men of all parties, whether approving or condemning the measures of 1829 and 1846, agreed that Sir Robert Peel's conduct could not be justified upon any of the conventional principles of party ethics. The relations between a leader and his followers are those of mutual confidence. His talents give them union and force: their numbers invest him with political power. They tender, and he accepts the trust, because he shares and represents their sentiments. Viewing affairs from higher ground, he may persuade them to modify or renounce their opinions, in the interests of the State: but, without their concurrence, he has no right to use for one purpose, that power which they have entrusted to him for another. He has received a limited authority, which he may not exceed without further instructions. If, contrary to the judgment of his party, he believes the public welfare to demand an entire change of policy, it is not for him to carry it out. He cannot, indeed, be called upon to conceal or disavow his own opinions; but he is no longer entitled to lead the forces entrusted to his command,—still less to seek the aid of the enemy. Elected chief of a free republic,—not its dictator,—it becomes his duty, honourably and in good faith, to retire from his position, with as little injury as may be to the cause he

abandons, and to leave to others a task which his own party allegiance forbids him to attempt.”

The author's remarks upon the effect of age upon party opinions have much truth in them, though we certainly know some sturdy old Radicals who, we believe, would belong to that party though they lived to the age of Methuselah:—

“A moral cause has further favoured the interest of the Conservatives. Conservatism is the normal state of most minds after fifty years of age,—resulting not so much from experience and philosophy, as from the natural temperament of age. The results of a life have then been attained. The rich and prosperous man thinks it a very good world that we live in, and fears lest any change should spoil it. The man who has struggled on with less success, begins to weary of further efforts. Having done his best to very little purpose, he calmly leaves the world to take care of itself. And to men of this conservative age belongs the great bulk of the property of the country.”

Having traced political parties through their various phases until, as Mr. May truly states, their differences are rather in their sympathies and wishes than in their policy or professions, the one party being desirous of leading public opinion in the course of liberty and progress, the other unwillingly following this opinion with an occasional sigh for the “good old times,” the author sums up and balances the benefits and disadvantages of Party in this manner:—

“In the history of parties, there is much to deplore and condemn; but more to approve and to commend. We observe the evil passions of our nature aroused,—envy, hatred, malice, and all uncharitableness. We see the foremost of our fellow-countrymen contending with the bitterness of foreign enemies,—reviling each other with cruel words,—misjudging the conduct of eminent statesmen, and pursuing them with vindictive animosity. We see the whole nation stirred with sentiments of anger and hostility. We find factious violence overcoming patriotism; and ambition and self-interest prevailing over the highest obligations to the state. We reflect that party rule excludes one half of our statesmen from the service of their country, and condemns them,—however wise and capable,—to comparative obscurity and neglect. We grieve that the first minds of every age should have been occupied in collision and angry conflict, instead of labouring together for the common weal. But, on the other side, we find that government without party is absolutism,—that rulers, without opposition, may be despots. We acknowledge, with gratitude, that we owe to party most of our rights and liberties. We recognise in the fierce contentions of our ancestors, the conflict of great principles, and the final triumph of freedom. We glory in the eloquence and noble sentiments which the rivalry of contending statesmen has inspired. We admire the courage with which power has been resisted; and the manly resolution and persistence by which popular rights have been established. We observe that, while the undue influence of the crown has been restrained, democracy has been also held in check. We exult in the final success of men who have suffered in a good cause. We admire the generous friendships, fidelity, and self-sacrifice,—akin to loyalty and patriotism,—which the honourable sentiments of party have called forth. We perceive that an opposition may often serve the country far better than a ministry; and that where its principles are right, they will prevail. By argument and discussion truth is discovered, public opinion is expressed, and a free people are trained to self-government. We feel that party is essential to representative institutions. Every interest, principle, opinion, theory and sentiment, find expression. The majority governs; but the minority is never without sympathy, representation and hope. Such being the two opposite aspects of party, who can doubt that good predominates over evil? Who can fail to recognize in party the very life-blood of freedom?”

We have dwelt at some length upon this

history of Parties, because we think that a better idea of the author's style and mode of thought may be imparted by so doing, than by passing shortly and discursively (as we needs must do if at all) over the whole range of subjects comprised in this volume. The chapters which follow are, however, not a whit less interesting than that upon Parties; indeed to very many the History of the Church of England will be the most attractive in the volume, embracing as it does a most important part of the history of the National Church. It is written with great ability, and, strange as it may appear where religion is the subject, with no spite to any party. The year 1760 found the clergy in a cozy slumber; they were rudely awakened by the activity of Wesley, Whitefield, and their followers, but it was some forty or fifty years before they were thoroughly awakened to a sense of their responsibilities. In the mean time the population had increased to an extent which defied, and still defies, the joint energies of the Church and of dissenters. The last forty or fifty years have been years of honest activity. Our legislature has done much by encouragement of church-building, enforcing residence of clergy, and the commutation of tithes. But the principal hope for the future is to be gathered from the increased activity and zeal of the clergy, who, notwithstanding that their usefulness has been occasionally marred by suspicions engendered by the extravagances and eccentricities of some of their body, have worked to good purpose in the mighty work which is before them.

In the History of the Church of Scotland will be found a very careful account of the prolonged struggle which terminated in the secession of the Free Church.

In a short concluding chapter, Mr. Erskine May takes a rapid view of the progress of general legislation during the past century, and of the social condition of the people, in which survey he perceives but one object which is not of an agreeable character, namely, “the formidable and continuous increase of expenditure.”

This History is, in our opinion, worthy of a place beside the great work of Hallam. We recognize in it the same careful and conscientious industry which characterizes the elder historian, and almost the same judicial fairness; while in the matter of style the superiority is, perhaps, with Mr. May.

A Welcome: Original Contributions in Poetry and Prose. (Faithfull.)

Nuptial Ode. By W. E. Aytoun. (Blackwood & Sons.)

As loud a note of preparation has sounded through this land, to greet our latest Danish Conquest, as ever roused the people to make ready when the war-ships of the Norsemen were hovering round our coasts, and the Norse powers were surging in, wave after wave, from sea, to seek an entrance at our water-gates. Amidst all the sound of hammers, and the thunder of cannon, the clangour of a thousand steeples, in full jubilant cry, and the welcoming cheer of all London,—we have the Minstrels making their music in a softer voice, but all alive and merry.

Without being in full force, our singers muster a goodly show, and sing their strains and wear their bridal favours becomingly. We find little in these three hundred pages of “Welcome” that can be called powerful, or much to the purpose; but there is some tender thought; some true and deep feeling; frequently a melodious expression that matches the theme.

Mr. Edwin Arnold drops the first flower in the princely path:—

Princess! weak is one voice in the throng and clamour of
 voices,
 Poor one flower in the rain of the roses that shower thy
 footsteps,
 Faint one prayer in the anthem of litanies uttered to bless
 thee;
 Yet to thy young fair face we make this manifold greeting,
 On thy path to the altar we lay this many-leaved blossom,
 Blossom of humble hopes, of timorous labours the token—
 Unto the God of the altar we lift our blessing together,
 We—of the men whose fathers encountered thy fathers
 with battle,
 We—of the women whose mothers turned pale at the
 galleys of Denmark,
 Heralds of happiness now—sea-birds that bring from the
 Norland
 Unto our Prince his Bride—to England omens of gladness.

Mr. Dobell's poem on maidenhood, called "Love," addressed to a little girl, is full of stray beauties, lurking sprites of fancy, and sweet subtleties. For example:—

Ah, dear and fair,
 Lo the dazzling east, and lo,
 Some one tall against the sky
 Coming, coming, like a god,
 In the rising morn!
 And when the lengthening days whose light we never saw
 Have melted his sweet awe,
 And thy fond fear is like a little hare,
 Large-eyed and passionately afraid,
 That peepeth from the covert of her nest
 Into the narrow glade
 Between two woods, and doth a moment dare
 The sunshine, and leap back; yet forth will fare
 Again, and each time ventures further from the nest,
 Till, having past the midst ere she be ware,
 Bold with fear to be so much confest
 She flees across the sun into the other shade;
 Flees as thou didst so coyly draw
 Near him and nearer, and art trembling there
 Midway twixt giving all and nought,
 In a moment, at a thought,
 Bashful to panic hidest on his breast.

As usual, Mr. Dobell hides a great deal of his poetry so cunningly that only a few will find it. He lets the grass grow too lush and tall about the jewel dews. A rough seeking hand will often dash aside the grass impatiently, and in doing so destroy the little tremulous gem.

To our thinking, the lady contributors bring the choicest gifts, and offer the best poetry. This is appropriate for a book thus printed and published. Miss Rossetti and Miss Isa Craig again head the sisterhood, which here numbers more than nine. We give preference to Miss Craig's poem, not because it is the more beautiful of the two, but because it is briefer and more to the point.—

In all green places where ye blow,
 Tenderest thoughts of God that grow,
 Violets! March violets!
 Hidden hearts that lying low,
 Sweeten all about you so,
 Violets! March violets!

The love of youth is in your breath,
 Love of youth more strong than death,
 Violets! March violets!
 Gathered in the greening glade,
 And on lips of promise laid,
 Violets! March violets!

Other sweetness too ye take,
 Often kept for saddest sake—
 Kept for soft'ning old regrets:
 To hearts throbbing ye are prest,
 Ye are laid on hearts at rest,
 Violets! March violets!

To the bride her foot who sets
 On England with the violets,
 Violets! March violets!
 For her youth and for her love—
 All her royalties above:
 A WELCOME with the violets.

WELCOME! and as, year by year,
 We hail thy time of coming here,
 To England, with the violets;
 May they bring thee no regrets
 Save for joy the heart forgets
 In a deeper, tenderer bliss:
 Waken no regret but this,
 Violets! March violets!

A large portion of the book has but little to do with the main subject. There is a compensation, however, in this. The work is less monotonous. It gains in general interest by what it loses as a special tribute, and is enriched by writers who might not have been ready

enough if bound down to dance in fetters. Mrs. S. C. Hall will raise a smile with her glimpse of Irish character. Mr. A. Trollope is entertaining and attractive, as usual, in his sketch of Miss Ophelia Gledd, an American lady, and his speculation as to whether she will be received in London as a lady. Possibly he may show us in some future pages. Mr. Maurice prints some words which have been spoken to his classes of workers and learners. M. Louis Blanc gives us a pleasant gossip on Gibbon and Hume in Paris, written in excellent English. Frederica Rowan tells a Norse legendary tale, and the manner and matter are worth listening to. Amongst the pieces that do not properly belong to the "Welcome" is a tender and touching little poem called 'The Children's Heaven,' by Mr. MacDonald. Also we find the following brief galloping ballad, by Prof. Kingsley, entitled 'The Knight's Leap,' a legend of Altenahr.

"So the foemen have fired the gate, men of mine;
 And the water is spent and gone?
 Then bring me a cup of the red Ahr-wine—
 I never shall drink but this one.

"And reach me my harness, and saddle my horse,
 And lead him me round to the door:
 He must take such a leap to-night perforce
 As horse never took before.

"I have fought my fight, I have lived my life,
 I have drank my share of wine;
 From Trier to Coln there was never a knight
 Led a merrier life than mine.

"I have lived by the saddle for years two score;
 And if I must die on tree—
 Why the old saddle-tree, which has borne me of yore,
 Is the properest timber for me.

"So now to show bishop, and burgher, and priest,
 How the Altenahr hawk can die:
 If they smoke the old falcon out of his nest,
 He must take to his wings and fly."

He harnessed himself by the clear moonshine,
 And he mounted his horse at the door;
 And he drained such a cup of the red Ahr-wine
 As man never drained before.

He spurred the old horse, and he held him tight,
 And he leapt him out over the wall;
 Out over the cliff, out into the night,
 Three hundred feet of fall.

They found him next morning below in the glen,
 With never a bone in him whole—
 A mass or a prayer now, good gentlemen,
 For such a bold rider's soul.

The "Welcome" is admirably printed, sumptuously appraised, and deserves another welcome in its turn.—We note that the Publishing Office of Miss Faithfull is now in Princes Street, Hanover Square—a sign, we trust, that the Women-Printers are flourishing bravely.

Mr. Aytoun, in one pithy verse, has characterized the other three hundred and ninety-nine lines of his Ode,—

A sorry tribute though the will be good.

There is no pleasure in poetic pains like these! The writer cannot write poetry. He lacks the natural touch of its quickening spirit; the possession of its genuine fire. Here is no stirring life; no lofty music; no airy elegance; no dainty grace. Instead, we find a treatment unspeakably commonplace.

The Land and Freshwater Mollusks indigenous to or naturalized in the British Isles. By Lovell Reeve. (Reeve.)

In our notice of the first volume of Mr. Jeffrey's work on 'British Conchology,' which volume embraces only the land and freshwater forms, we thought it necessary to let the author speak for himself as to his reasons for producing a new work on a subject already so extensively illustrated. We have now before us another book from one of our accomplished malacologists, which although, unlike the former, it purports to be complete in itself, is confined to the same zoological limits as the volume just alluded to; and we must in this case also obtain from the author's own pen the grounds on

which he has considered it necessary to increase the list already so ample:—"The land and freshwater mollusks of the British Isles," he says, "have been ably described by Turton, Gray, Forbes and Hanley, Jeffreys and others, as a Fauna *per se*; and great attention has been lavished on details of form and colour, of local habitation, and of parts of the anatomy. French conchologists, commencing at the opening of the present century with the terse and philosophic Draparnaud and terminating with the accomplished Moquin-Tandon, have done even more for the natural history of our mollusks, while treating of them as members of the Fauna of France, than has been done by British authors." This, by the way, is hardly fair to Mr. Jeffreys. "But neither the conchologists of France or of Britain have worked out the distribution of the European genera and species, and the resulting phenomena, in other parts of the world. It is on this ground that I venture to add another to the already numerous manuals on the subject. . . . The genera of our own latitude are in this work collated with the similar or representative genera of other latitudes." On this comparison, there is no man living so competent to judge as the author; but his investigations have led him to conclusions to which we are not prepared to assent. "The views," he proceeds, "which I had instinctively formed on the origin of species, have gathered strength from the present study. Reasoning from the facts before me, apart from any considerations of geology, if such a mode of reasoning in the present state of science may be allowed to have any weight, the conclusions at which I have ventured to arrive do not accord with the theories of Edward Forbes, or of Darwin, but seem to point to another solution." What that solution is, and the manner in which the theory is supported, appears to require a few remarks.

After much consideration and deep research, the acute but cautious mind of Edward Forbes could come to no other conclusion on the subject of the distribution of the Mollusca, and in particular those inhabiting the land and freshwater, than that they, with other animals as well as plants now indigenous to Great Britain, were either transmitted thither on floating masses of ice, or more generally by emigration, before this country was separated from the now opposite shores of the Continent. Into the reasoning upon which this opinion was founded it is not necessary here to enter; but it was held as correlative with his conviction, that "all the individuals of a species have descended from a single progenitor or pair." As a necessary corollary to this proposition, he states that "species of opposite hemispheres, placed under similar conditions, are representative, and not identical." With this doctrine Mr. Reeve is at issue. "The distribution of species over the globe," he says, "as far as I am able to gather from the land and freshwater mollusks, appears to require that we should take for granted the doctrine of a plurality of progenitors for each species." . . . "The doctrine of more than one point of origin for a species, considered with reference to the typical character and distribution of land and freshwater mollusks, rests mainly on the following propositions:—'1. Land species with greater facilities for migration than freshwater species are less widely and evenly diffused. 2. Land and freshwater species of opposite hemispheres are not always representative, but sometimes identical. 3. The range of land and freshwater species over areas (zoological provinces) indicated by uniformity of type, is not arrested by the intervention of sea.'"

It does not appear to us that these proposi-

tions are at all borne out by Mr. Reeve's own facts. He takes it for granted that "it will be readily conceded that land species have greater facilities of locomotion than freshwater species, particularly species inhabiting stagnant ponds and ditches;" and he contrasts the small number of identical species of helix inhabiting the continental Caucasian provinces and this country, with the much larger proportion of "the sluggish, mud-dwelling *Lymnæacea* of the ponds and ditches of the province," which are found also in these islands. Now, on Edward Forbes's theory nothing would be more easy than the distribution of the freshwater mollusks from place to place, even to considerable distances, by means of aquatic birds, which, either by their periodical migration or by mere change of place in ordinary distribution, would convey, attached to their legs or their bodies, the glutinous masses of ova which are invariably deposited by these animals. All this might have taken place to any imaginable extent before the severance of these islands from the Continent; and it appears to us that the converse of Mr. Reeve's proposition, rather than the proposition itself, is proved by the facts which he adduces in its support.

The second proposition, that "Land and freshwater species of opposite hemispheres are not always representative, but sometimes identical," is attempted to be supported principally by the existence of a few of our British species in North America. But after acknowledging that the greater number of these have been "conveyed thither accidentally in casks and other packages," the author is obliged to limit the species on which he bases his proposition to four, one of which, *Pisidium obtusale*, as observed in America, is considered by a competent naturalist in that country as distinct from the English species. And what are the other three? *Paludina vivipara*, *Helix pulchella* and *Zua lubrica*, species of such easy and probable transmission as not to afford any weighty support to Mr. Reeve's proposition, even supposing them to be identical in the two localities, which may well admit of doubt.

Mr. Reeve's third proposition does not appear to us to rest upon any more conclusive data than the others; but we do not care to enter into a discussion of it, as we wish to make a few observations upon the general character of the work, as a manual or monograph.

The author of the 'Conchologia Iconica' could not fail to produce a work which would be useful and accurate. It is true that we feel a little annoyed at some of the English specific names, which are invariably mere naked translations, and not always accurate ones, of the Latin specific name. This often involves a change from that which has been universally considered as specifically indicative; for, as the author has scrupulously gone back to the specific name originally given, even before any true principles of arrangement and nomenclature were fixed upon, the English name follows the change. This sometimes involves an absurdity. Thus, *Vertigo antivertigo*, originally *Pupa antivertigo*, is called the *unreversed vertigo*, whereas seven species out of nine are what Mr. Reeve calls *unreversed*. Again, *Clausilia perversa*, formerly *Helix perversa*, is termed *reversed clausilia*, whereas every known species of *clausilia* is sinistral, or, in common language, reversed. Then we have such unmeaning names as "like *Bithynia*," "discovered *Helix*," and a thousand others equally inappropriate. The common *succinea* was considered by Linnaeus as a helix, and named by him, from its living in muddy places, *Helix putris*; this is called by our author *filthy succinea*; whilst its congener, neither more elegant nor more refined

in its habits, is the *elegant succinea*. We could multiply similar instances to any extent. We will only further notice the name of *apple snail*, as applied to *Helix pomatia*. Now it is generally allowed that the name is derived from Πῶμα, *operculum*, and not from *potum*, an apple; and certainly the shell bears no special resemblance to that fruit. This species, the well-known Continental edible snail, is recorded by Pliny (quoting Varro) as sometimes so large as to contain "octoginta quadrantes," meaning, of course, the small copper coin of that name. Pennant, mistaking the *quadrans* here for the measure of about half-a-pint, says that these snail-shells would hold "twenty quarts"! The *Helix pomatia* seems fated to be the subject of ludicrous mistakes.

All these are, however, comparatively trivial matters, and do not militate against the true value and merit of the work. The illustrations generally exhibit the highest excellence of wood engraving as applied to natural history. The delineations of the shells by the well-known pencil of Mr. Sowerby are, as might be expected, generally excellent; but we would more particularly refer to the drawings of the animals by Mr. O. Jewett as, without exception, surpassingly life-like and beautiful. The little limaces, &c., are actually gliding over the leaves, and the figure of the common garden snail, *Helix aspersa*, at page 54, is absolutely perfect in the attitude of the animal and the texture of the skin, and in the markings, we may almost say the colouring, and the texture of the shell.

The peculiarity, however, in which this publication differs, and differs favourably, from all others, is the information it contains on the geographical distribution, in other parts of the world, of the species indigenous to this country, and the relation which this distribution bears to climate, soil and other local circumstances. No one could have performed this part of the author's task so well as himself. His investigations in this respect are well known, and they have enabled him to render the present work an authority as regards this particular department of his subject. This alone, independent of its general value and interest, would fully justify its publication.

FRENCH BOOKS. *

The World before the Flood.—[*La Terre avant le Déluge*, par Louis Figuier]. (Paris, Hachette & Co.)—A handsome and well-illustrated volume on geology, having no pretensions to scientific value, and, in fact, a mere arrangement of common material in a pleasing form, and professedly for the instruction of young persons. With this object in view, the volume is descriptive and picturesque, and is issued as the first of a series which is to form a *Tableau de la Nature*. The compiler aims to show how important an educational instrument geology might become, and that, while in one great European country it is forbidden for public instruction as anti-religious, it is in truth confirmatory of religious ideas and of revelation. The most ultramontane bishop could hardly find anything in this volume to justify its insertion in the 'Index Expurgatorius,' unless it be the limitation of the Noachian deluge, and its denomination as Asiatic, instead of universal. A geologist might smile at some of the full-sized plates as a little too imaginative. There is one, for example, of the Liassic period, in which an ichthyosaurus and a plesiosaur are rather absurdly represented as opening their mouths most ominously at one another, without a chance of success on the part of the small-headed plesiosaur. Another plate shows an iguanodon and a megalosaurus in full feed upon each other, or just beginning dinner under difficulties and during fierce dental persecutions. A certain impartiality, indeed, does pervade the picture, nothing in it indicating which animal will have done dinner first. As the mega-

losaur has the largest mouthful he may succeed in devouring his would-be devourer, who, however, has so huge a tail, that, according to the drawing, it can never be disposed of inside the megalosaur. Unluckily for this picture, the iguanodon was a vegetarian. The fossils are excellently shown, and, being all copies, are correct enough. The matter, as already hinted, will hardly bear criticism. In some things the compiler ought to have done better: for instance, he should not have contented himself with quoting from Burat on the production of coals. Writing in 1863, he states our own annual production of coals to be 65,000,000 tons; whereas well-known statistics show it to be 83,635,214 tons. In similar matters the book is behind its date, though its general design and appearance are commendable.

Matters of To-day.—[*Les Choix du Temps Présent*, par Édouard Texier]. (Paris, Jung-Treuttel).—A series of *feuilletons* upon social matters, written with an affectation of ease and wit. The pictures of social life are cynical in their composed recognition of demoralization, which Englishmen would be slow to put into words, much less into print. It is an insult to a whole nation to accuse the married women of the land of taking lovers for the sake of obtaining lace, jewelry and Cachemire shawls, when beyond the means of their husbands; but this is broadly asserted of all the women, who are said to dress beyond their husbands' social position or their husbands' means; and the husbands are represented as entirely blind to the fact, and unconscious of anything their wives may wear, whether it be silk or sackcloth. For the rest, the observations on social philosophy are not very profound; nor is the mirror that is held to nature very bright: the book partakes of the general spirit of dullness which broods over French literature of the present day.

Acts and Gestes of Garin de Loherain.—[*Garin de Loherain: Chanson de Geste, composée au 12^{me} Siècle*, par Jean de Flagey. Mis en Nouveau Langage, par A. P. Paris]. (Paris, Jung-Treuttel).—This work is a translation of an old romance or history. It throws curious light upon the history of France at the period; the incidental pictures of manners, customs and costume are like the illuminations of an old missal put into action. The "new language" is pleasant and appropriate, and less heavy, if less vigorously true, than the original diction. M. Paris gives the modern garb with a pleasant quaintness that will content general readers, and black-letter scholars may go to the original. The story is the history of the old feudal war between Lorraine and Bordeaux—the great vassals of the north of France against the great vassals of the south, begun in the time of Charles Martel, and continued for several generations. The chief actors are Hervis of Lorraine, Duke of Metz, and Hardré of Bordeaux, Count of Artois. The King himself inclines to both sides, according to the feeling or influence of the moment. Of course, there are women on the scene. Blancheffeur, the queen, wife of King Pepin, is a leading character; and Helius, the daughter of the Duke Hardré of Bordeaux, is her enemy. There is a scene in King Pepin's palace which gives a vivid notion of the stormy quarrels which arose at a moment's notice, and which the Royal presence could not avert. Two messengers from the opposing barons come to beg assistance from the King: the Queen hates one, and the fair Helius hates the other. The Queen abuses her enemy's protégé in terms as energetic as if she were a born fishwife. The whole book would be wearisome to read through, with its interminable combats, sieges and changes of fortune, which lead to no result; but, as a lively picture of the times when the state of war was the normal condition of society, it is both curious and interesting. It was a state of social development in which the weak went to the wall, and only a few of the strongest survived.

The Pirate of St. Laurent.—[*Le Pirate de Saint-Laurent*, par H. Émile Chevalier]. (Paris, Jung-Treuttel).—For English readers who have read Cooper, Marryat, Mayne Reid, and others who have dealt with pirates, sailors and wild adventures by sea and land, this *Pirate* will be dull indeed. It is garnished here and there with English words,

as we garnish our language with French ones; and, judging by analogy, the effect in both must be respectively dull.

OUR LIBRARY TABLE.

The Ionian Islands during the present Century. By Captain Whyte Jervis, M.P. (Chapman & Hall.)—Those who wish to survey the history of the Ionian Islands during the past seventy years through the glasses of a politician who is strongly opposed to the contemplated cession of the Septinsular State to Greece, cannot do better than read this concise and spirited sketch, which sets forth, attractively rather than dispassionately, the events which led to the establishment of the British Protectorate, and the political action of the statesmen who have successively filled the post of Lord High Commissioner. Drawing attention to the value of our connexion with the Islands, Captain Whyte Jervis says, "It was their proximity to the Morea and Albania, and consequently the manner in which they might be made use of against the security and tranquillity of Turkey, that had induced Russia, in 1800, to accede to their being subject to the Porte. It was the advantage they gave a belligerent power against Austria, Italy or Turkey, that had induced Napoleon to occupy them in 1798, and get them ceded to him by the Treaty of Tilsit in 1807. It was the advantage which Napoleon had derived from their occupation which necessitated their capture by the British forces. In 1815 Austria objected to their being given to an Italian sovereign, as it would give him a command of both sides of the entrances to the Adriatic. To Russia or Austria it would have been the key for aggressive operations against Turkey. To create a perfectly independent State of them was impossible, as they would have been utterly unable to maintain it. England alone could occupy such a post without being led into quarrels arising from neighbouring territorial disputes or religious hatred, and to England it was confided by the unanimous voice of the Allied Powers." Speaking of the proposed cession of the Islands to Greece, the author maintains that to carry it out would be to take "the first step in annihilating Turkish rule," and asks, "Has the time come for Turkey to cease being one of the kingdoms of this world? Is the Greece of 1862 so improved on that of 1858, that we can now trust to her charge a people we could not then? Was the Crimean war a blunder? and were the tens of thousands who perished in it uselessly slaughtered?" At the same time, the writer acknowledges that as he is in ignorance of the particular circumstances which induced the Cabinet to make their proposal, he is not qualified to criticize its policy from every point of view. Adverting to the extraction of the modern Ionians, Captain Whyte Jervis observes, "As to the Ionian Islands, for hundreds of years they have had no connexion with Greece. The Volterras and Solomos of Zante; the Loverdos, Metaxas, Tibaldos and Voccas of Cephalonia; the Zambelli and Valacriti of Santa Maura; the Bulgari, Dandolos, &c. of Corfu, were all of Italian origin. But, like the Anglo-Irish, who became more Irish than the natives, these Ionian Italians are loudest in calling out for a union with a country with which their forefathers had nothing in common." We refrain from discussing the political questions raised by Captain Whyte Jervis, but do not hesitate to recommend his sketch as entertaining and serviceable. He writes with the warmth of a partisan, but he also displays the knowledge of a student accustomed to consider public affairs.

Our Untitled Nobility. By John Tillotson. With Illustrations by Charles Green. (Hegg & Sons.)—Under the above ill-chosen title Mr. Tillotson, in a series of brief and badly-written memoirs, endeavours to rouse in the minds of children an interest for the labours and achievements of William Smith the geologist, Thomas Waghorn, Robert Baikes, David Nasmyth, Captain Coram, Henry Martyn, William Scoresby, the two Brunels, Marshall Hall, Thomas Dick, Henry Cort, and George Wilson. "The lessons of these men's lives," Mr. Tillotson observes, "are plain and practical. They teach us that it is the bravest and

best thing in the world to be unselfish—that the men who would do good must look for no earthly reward; but that in the very doing of the good there is a higher enjoyment and a nobler satisfaction than wealth or honour can bring them. If we had to design a coat of arms for those men, it should be—stars argent in a field azure, the crest a cross, the motto 'Go thou and do likewise.'" Surely Mr. Tillotson must wish to raise a laugh at the expense of the Brunels and Dr. Marshall Hall when he speaks of them as conspicuous for Christian forgetfulness of self. Though Henry Cort's great services failed to meet with due compensation in this world, we certainly never yet regarded him as a labourer working for a heavenly reward. Moreover, what does Mr. Tillotson mean by placing Sir Isambard Brunel amongst the untitled of the earth?

Lawrence Struilly; or, Observations and Experiences during Twenty-five Years of Bush Life in Australia. Edited by the Rev. John Graham. (Longman & Co.)—Lawrence Struilly's adventures might give a few useful hints to a writer attempting to describe Australian life without the guidance of personal experience of an emigrant's trials; but while they present no useful information to those who are about to quit England for the Colonies, the mode in which they are set forth will fail to rouse the interest of the general reader. That the memoirs are authentic and truthful, we do not question; but these qualities are not sufficient to secure public favour for a work which aims only at describing the commonplace.

Bypaths of Biography. By C. L. Brightwell. (Nelson & Sons.)—The biographer of Mrs. Opie has here gathered from various sources an entertaining collection of anecdotes about certain men and women who, though they were at one time celebrities on the lips of all men, and still remain the familiar companions of students, may be fairly said to have disappeared from the grand high roads of fame, and to have found refuge in the quiet by-paths of personal history. Miss Brightwell's first chapter tells of Godefroi Mind, the captain, whom Madame Lebrun christened "Le Raphael des chats," and who never completely recovered from the shock of anguish which he experienced, in the year 1809, at the massacre of eight hundred cats by the authorities of Berne. This stern measure was occasioned by an epidemic which raged amongst the cats of the locality, and rendered them dangerous pets. Bears, scarcely less than cats, were dear to the affections of Godefroi Mind, under whose portrait a pleasant parodist wrote—

Lugete feles, ursique lugete,
Mortuus est vobis amicus.

Next follows a memoir of Jean Petitot, the painter in enamel, who, after enjoying the friendship of Sir Theodor Mayerne, and the patronage of Charles the First of England and Louis the Fourteenth of France, died at Vevey, in his eighty-fifth year. Of Michael Schuppach, the Physician of the Mountain, an excellent story is told, illustrative of the power of imagination as a remedial agent. A wealthy and hypochondriacal farmer, who believed himself to be possessed by seven devils, applied to the Swiss doctor to rout the demoniac occupants of his distressed mind. "Friend," said Schuppach gravely, "you believe there are but seven devils in you; in reality there are eight, and the eighth is the captain of the band." To expel the eight unclean spirits the physician had recourse to an electrical apparatus, with which contrivance the farmer was of course utterly ignorant. For eight successive days the patient visited the doctor and underwent an electrical shock. At each of the first seven shocks the operator said, "There goes one of your devils." On the eighth day Schuppach said, "Now, we must relieve you of the chief of the evil spirits—it'll be a tough job!" As these words were uttered, a violent shock sent the patient fairly to the floor. "And now," cried the benevolent impostor, "you are free of your devils,—that last stroke was a settler!" The cure was complete. More than one good story does Miss Brightwell tell of Prince Talleyrand's cook, Marie-Antoine Carême, who, contrasting the good and evil features of his vocation, exclaimed enthusias-

tically, "The charcoal kills us; but n'importe,—our years are few in number, but full of glory." Here, too, is a capital anecdote of Étienne Falconet, the sculptor: "Falconet had so exalted an idea of the resources of his art, that he was accustomed to say it was capable, under all circumstances, of effecting as much, in the way of illusion, as painting. 'That being the case,' said his friend and fellow-Academician, Dupont the painter, 'have the goodness to produce me a moonlight with your chisel.'" Not less delightful is the story of Marcel, Louis the Fourteenth's dancing-master, who, after having in vain attempted to make Malesherbes as graceful as he was good, said, in a voice of earnest entreaty, "Permit me, M. de Malesherbes, to implore a favour of you. It is, that you never will inform any one that I was your dancing-master." Marcel's fear for his reputation reminds us of a distinguished lady-professor of the art of dancing, whom we once heard exclaim with regard to an eminent living statesman, "That man was one of my pupils, and he was the awkwardest pupil I ever had. Oh, he is so awkward, I should not like it to be generally known that years since I tried to make him walk across a room like a gentleman."

The Painter of Athens: a Tragedy, in Five Acts. By Andrew Macnair. (Glasgow, Richardson.)—We should like to know how much of this tragedy has been written by its alleged author. The hero of the story is Parrhasius, the Athenian painter. Some of our readers may recollect a poem, written many years since—we believe by Mr. N. P. Willis—in which a slave is racked, by order of the same Parrhasius, that he may transfer the precise expression of agony to his canvas. This poem Mr. Macnair has thought fit to incorporate with his tragedy; and he has done so without a word of comment or acknowledgment. The tragedy is worthless, if we except the passages appropriated; and it will be well for Mr. Macnair if the imposition which he has attempted can be forgotten as easily as the work in which it occurs.

London Lyrics. By Frederick Locker. (Pickering.)—Mr. Locker now and then writes earnestly and affectingly; but we are often at a loss to know whether his pathos is serious, or whether he is laughing at us in his sleeve. He is fond of surrounding an idea, in itself poetical, with all the prosaic accidents of daily life. Brick and mortar have more charms for him than the solitudes of nature; and however mournful be his theme, he delights to ponder it, not in groves or by streams, but on the shady side of Piccadilly or in the parlour of a tavern. In the latter scene he recalls a lost illusion, as follows:—

O TEMPORA MUTANTUR!

Yes, here, once more, a traveller,
I find the Angel Inn,
Where landlord, maids, and serving-men
Receive me with a grin:
They surely can't remember me,
My hair is grey and scantly;
I'm changed, so changed since I was here—
"O tempora mutantur!"

The Angel's not much alter'd since
That sunny month of June,
Which brought me here with Pamela
To spend our honeymoon!
I recollect it down to 'en
The shape of this decanter,
—We've since been both much put about—
"O tempora mutantur!"

Ay, there's the clock, and looking-glass
Reflecting me again;
She wou'd her love was very fair—
I see I'm very plain.
And there's that dab of Prince Lebooc:
'Twas Pamela's fond banter
To fancy it resembled me—
"O tempora mutantur!"

The curtains have been dyed; but there,
Unbroken, is the same,
The very same crack'd pane of glass
On which I scratch'd her name.
Yes, there's her tiny flourish still,
It used to so enchant her
To link two happy names in one—
"O tempora mutantur!"

What brought this wanderer here, and why
Was Pamela away?
It might be she had found her grave,
Or he had found her gay.

The fairest fade; the best of men
 May meet with a supplanter;—
 I wish the times would change their cry
 Of "tempora mutantur."

We do not deny that poetic feeling may sometimes co-exist with a picture as literal and uninviting as this. No quality is less fastidious than real imagination. It can tolerate even long waistcoats, powdered hair and patches, because they recall beings who have shared our nature and figured in life's brief scene as we do now. Details, otherwise mean, may be allowable when they bring home to us some trait of character or manners; but we have no great respect for the cleverness which employs them for their own sake and makes some pathetic incident the mere excuse for a grotesque illustration. Mr. Locker is evidently a disciple of the real school; one verse from an elegy will show where such "realism" would lead us:—

O cough! O cruel cough! O gasping breath!
 These arms were round my darling at the latest:
 All scenes of death are woe—but painful death
 In those we dearly love is surely greatest!

The "cruel cough" is just one of those touches of reality which taste instinctively condemns. In the sphere of imagination bodily pain is inadmissible, save as a means to exhibit the mind. No such end is served here; the fact obtruded is one for the physician—not for the poet.

Illustrations of the Beauties of Tropical Scenery, and Sketches of Objects of Interest; with Notes, Historical and Explanatory. By the Author of 'The Nuptials of Barcelona.' (Hardwicke.)—The principal poems of this collection are in Spenserian measure, and the author giving his reasons for employing that verse says, "I chose the former, as being the easier; for, as the greatest master of the art of this century has remarked, 'In the Spenserian stanza the last line must always be good, but in blank verse every line.' I presume not to have achieved, in every instance, what is thus pronounced indispensable in a good Spenserian stanza; but I have at all events incurred less risk of failure than if I had attempted blank verse, which imposes such infinitely more arduous conditions." Since he adopts this critical view of the stanza, it must be allowed that the author of 'The Nuptials of Barcelona' displays modesty and discretion in his choice. He may also be credited with possessing some facility in arranging words harmoniously; but though he has a certain mechanical command over the metre, he has none whatever over the thoughts which it would appropriately clothe. Three pages of simple honest prose would describe the beauties of tropical scenery more effectively than all his verses. Amongst the minor pieces is one entitled 'The Sugar Cane, in which the poet apostrophizing the "mellifluous reed" sings of sugar-bags, toffee and elecampane in the following sweet strain:—

Beloved of Nature! when the infant's lip
 Lips in first accents the maternal name,
 Its soft petition is of thee to sip,
 Thou canst alone its cherub praises claim.
 Though Manhood with convivial rapture glows,
 As the red life-stream of the grape he drains,
 Palmal Innocence no banquet knows
 Like that which mellow in thy saffron veins.
 And often, when some King state-care allays
 With costly goblets, quaff'd in favored haste,
 He sighs in secret for those artless days,
 When thy pure offerings soothed his simple taste.

—A note to these lines quotes Dr. Rush as authority for the statement that children like sweetmeats. "Nature," says Dr. Rush, "seems to have implanted a love of this aliment in all children." Nothing more droll than this is to be found in Dr. Grainger's poem on the same subject, which on a memorable occasion caused merriment to a party of Sir Joshua's friends.

The Books of David Lindsey and Son. By N. Dickson. (Longman & Co.)—A system of book-keeping by single entry, short and intelligible. For ourselves, we do not believe in single entry, except in cases to be selected, and in modes to be arranged, by each one for himself, upon a sound knowledge of double entry to begin with.

Land-Surveying and Levelling. By R. Thornton. (Longman & Co.)—A neat book, of commendable brevity. Small elementary treatises are springing up in numbers, which, we hope, indicate that the

learners are increasing as rapidly: but we are not sure.

The new translations on our table include *The History of Girolamo Savonarola and his Times*, by Pasquale Villari, translated from the Italian by Leonard Horner (Longman), a work of high repute, with which our readers are familiar in the original, — *The Sharper Detected and Expused*, by Robert Houdin (Chapman & Hall), a work which we have already reviewed in the French edition, — *Stories for Young Children*, by Henriette Leidesdorf, translated from the German by Madame de Châtelain (Myers & Co.), *The Handbook of Family Devotion*, translated from the German of Heinrich Zschokke (Simpkin), — and *A Literal Translation of the Latin Text and an English Translation of Domesday Book in relation to the County of Surrey* (Vacher & Sons). — Under the head of New Editions we have *The Israel of the Alps: a History of the Waldenses from their Origin to the Present Time* (Griffin, Bohn & Co.), — and Messrs. Bell & Daldy have added to their "Pocket Volumes" *Washington Irving's Sketch-Book*. — The following reprints may be enumerated: — *Miscellaneous Essays, Critical and Theological*, by the Rev. W. Kirkus (Longman), — *Letters by Historians on some Questions of International Law* (Macmillan & Co.), — *Poems from the Dawn of British Literature in the Year 1699* (Edinburgh, Maclaren), — *Historical Sketch of Popular Literature and its Influence on Society*, by W. Chambers, — *Dr. Dobell On the Prevention of Disease and the Diminution of its Fatality by Periodical Examination* (Wertheimer & Co.), — *Parts I. and II. of The Life and Death of the Irish Parliament, a Lecture*, by the Right Hon. J. Whiteside (Hodges, Smith & Co.), — *College Essays, delivered in Trinity College, Cambridge*, by W. Everett (Bell & Daldy), — and *Rome, England, and India: a Lecture*, by Sir A. Grant (Parker). — Our Second Editions include *The Slave Power: its Character, Career and Probable Designs*, by J. E. Cairnes (Macmillan & Co.), — *The Post Office London Suburban Directory* (Kelly & Co.), — *The Foggy Night at Offord: a Christmas Gift for the Lancashire Fund*, by Mrs. Henry Wood (Nisbet), — *Nice et son Climat*, par Edwin Lee (Baillière), — *Memoirs of Joshua Watson*, edited by the Archdeacon of Cleveland (J. H. & J. Parker), — *India: a Lecture*, by P. B. Smollett (Glasgow, Heddervick & Son), — *Poems*, by T. W. James (Jewell), — and Mr. Torbronn's *Treatise on the Culture of the Pine-Apple* (Allen). — Third editions: *The Pressing Necessity for increased Docks and Basins at Portsmouth; with some Observations on Mr. Cobden's "Three Panics," a Letter to Lord Palmerston*, by Rear-Admiral the Hon. J. Denman (Ridgway), — *Guide to the Church Services in London and its Suburbs* (J. H. & J. Parker), — *The Civil War and Slavery in the United States: a Lecture* (Bennett), — and *The Maintenance of the Aged and Necessitous Poor a National Tax, and not a Local Poor Rate, a Subject for the Consideration of all Ratepayers*, by H. Pownall (Shaw). — Fourth editions: *The Poetical Works of Thomas Aird* (Blackwood & Sons), — and *The Spirit of the World, and the Spirit which is of God*, a Sermon by the Lord Bishop of Lincoln (Skeffington), — and we have fifth editions of *A Advice to a Wife on the Management of her own Health*, by P. H. Chavasse (Churchill & Sons), — and *Stammering and Stuttering, their Nature and Treatment*, by Dr. Hunt (Longman), — and an eighth edition of *Soirées Dansantes, Etiquette of the Ball-Room*, by Mrs. Nicholas Henderson (Blake). We may conclude with the second annual publication of *Thom's British Directory and Official Handbook for 1863* (Simpkin). — *A Song of Joy in Anticipation of the Marriage of Albert Edward, Prince of Wales, with the Princess Alexandra of Denmark*, by F. Piercy (Weymouth, Sherren), — and *A Marriage Ode, written on the Occasion of the Marriage of the Prince of Wales with the Princess Alexandra of Denmark*, by J. L. Moore (Hamilton).

LIST OF NEW BOOKS.

Allan's Nobly False, 2 vols. post 8vo. 21/6 cl.
 Andrews' Right Rev. L., D. D., Life & Works of, by Russell. 19/6 cl.
 Atkinson's Recollections of Tartar Steppes, &c. post 8vo. 18/6 cl.
 Ayton's Ode on the Marriage of Prince of Wales, 8vo. 1/6 swd.
 Bayle's Christ on Earth, &c. 8vo. 2/6 cl.
 Bulew's Shakespeare's Home at New Place, Stratford, post 8vo. 15/6
 Birk's The Exodus of Israel, its Difficulties Examined, 8vo. 7/6 cl.

Blanch's Volunteer's Book of Facts, 8vo. 2/6 swd.
 Bollingbroke Henry St. John Viscount, by Macknight, 8vo. 18/6 cl.
 Browning's E. H. Greek Christian Poets, King, Poets, &c. 8vo. 8/6
 Carter's Passion & Temptation of Our Lord, Lect. Lectures, 8vo. 2/6
 Cherville's First Step to French, new edit. 12mo. 2/6 cl.
 Choise's Psalter, Noted and Pointed, cr. 8vo. 3/6 cl.
 Dale's Annals of Coggeshall, otherwise Sunnedon, post 8vo. 7/6 cl.
 D'Aubign's Hist. of Reformation in Europe, V. 1 & 2, 8vo. 28/6 cl.
 D'Orsey's Spelling by Dictation, new edit. 18mo. 1/6 cl.
 Ede's Management of Steel, including Forging, Hardening, &c. 1/6
 Ellis's Madagascar, its Social and Religious Progress, cr. 8vo. 3/6
 God is Love, 7th edit. 8vo. 5/6 cl.
 Groot's Index to Familiar Quotations, 8vo. 5/6 hf. bd.

 Wagner's (the late Rev. G.) Lectures for Lent, cr. 8vo. 6/6 cl.

THE BRAIN IN MAN AND IN THE APE.

58, Harley Street, Feb. 26, 1863.
 I have read Prof. Owen's letter, inserted in your last number (Athen. February 21, 1863, p. 262), with every desire to retract any exaggerated statement which I may have made.

I find one mistake only, which Prof. Owen himself says "is so obvious that he believes it to have been made unintentionally." I said that in his 'Reade's Lecture' the only illustration given of the ape's brain was a reproduction of Vrolik's defective figure. This error does not affect the general faithfulness of my account of the controversy; but I regret that it should have occurred, and shall take care to remove it should a new edition of my work be called for.

At the same time, I may remark, that the figures of the marmoset's brain given in two of Prof. Owen's papers and omitted in the third, or that in the *Annals of Natural History*, in 1861, could not serve as a corrective of the erroneous impression which Vrolik's figure was calculated to make; because in describing the brain of the marmoset (*Midas rufimanus*) Prof. Owen said, both in 1837 (*Phil. Trans.* p. 93) and in 1857 (*Linn. Soc. Proceedings*, p. 18, note), that the cerebral hemispheres "extend, as in most of the Quadrumana, over the greater part (not the whole) of the cerebellum."

In the *Athenæum* (February 21, 1863, p. 262, col. 2), Prof. Owen affirms that "in his paper published in the *Annals and Magazine of Natural History*, Vol. VII, p. 456, June, 1861, not one word is said about the relative positions of the cerebrum and cerebellum, or the degree in which the former overlaps the latter in the ape and negro." When he wrote this passage, he must surely have forgotten his own words in the memoir alluded to, which are as follows:—"Figures 1 and 2, plate xix., show the brains of the negro and the chimpanzee of the natural size, and the relative size of the cerebrum to the cerebellum as observed by Schroeder van der Kolk and Vrolik in the chimpanzee (*Trogloodytes niger*). Figures 1 and 2, in plate xx., show the extent to which the cerebellum is overlapped by the cerebrum by means of a vertical section of the brain of the negro, and by a like section of the brain of the chimpanzee."

If the reader will refer to this passage in the *Annals* and to the whole of the brief memoir of which it forms a part, he will see how unfounded is the charge of misrepresentation preferred against me by Prof. Owen.

CHARLES LYELL.

March 3, 1863.

Since writing to you on the 26th of last month, I have received a letter from Mr. Flower, Conservator of the Museum of the College of Surgeons, well known as the author of several valuable papers, printed in the *Transactions* of the Royal and other Societies, on the structure of the brain of the Quadrumana. As he treats anatomically of

† We received Sir Charles Lyell's letter of February 26 at six o'clock in the afternoon of that day, at the moment of going to press, just too late for our impression of last week.

a question alluded to by Prof. Owen in his letter of February 21st, which was not noticed by Dr. Rolleston in his excellent observations which appeared in your last number, I have obtained his leave to send to you, for publication, the subjoined extract.

CHARLES LYELL.

Mr. Flower to Sir C. Lyell.

March 2, 1863.

"The principal complaint advanced by Prof. Owen against what seems to me the extremely fair and temperate summary of this controversy given in your work, appears to be your statement that he has on several occasions put before the public an inaccurate representation of the brain of a chimpanzee. He now admits that in this brain 'the cerebral hemispheres have glided forward and apart behind so as to expose a portion of the cerebellum,' although the same figure had previously been referred to by him, 'for the true proportion in which the cerebrum covers the cerebellum in the highest apes' (*Athen.* March 30, 1861). To say that it is not 'distorted,' &c. and that 'the true dimensions of each cerebral hemisphere are given,' is perfectly irreconcilable to the fact that one of the hemispheres is actually a quarter of an inch longer than the other, whereas we know that in their natural state their length was precisely the same. The only reason then for the selection of the figure given by Schroeder van der Kolk and Vrolik in preference to the more accurate one given by Gratiolet, with which Prof. Owen implies that he was acquainted in 1857, is the one now for the first time advanced, viz., that the brain figured by the Dutch anatomists, was 'from a larger and older chimpanzee.' But after a careful examination and measurement of the two figures, I do not see the grounds on which this assumption rests. The trifling and very uneven expansion seen in the upper surface is owing evidently to the flattening out of the brain when soft; for, on comparing the side views, Vrolik's brain appears not only no longer than Gratiolet's, but wants fully half an inch in height; and nothing is said in Gratiolet's work, of the age of the specimen from which his figure is taken."

March 3, 1863.

THE close correspondence between the described mental constitution of the Hottentot Venus with that manifested by the microcephalous children exhibited as "Astecs," led me, in observing the latter, to infer, and still strongly impresses me with the relation of such mental constitution with the arrested development of the brain in both cases.

In reference to the statement quoted by Dr. Rolleston, as to the convolution, of which it is affirmed: "Il est plus évident encore dans les singes que dans l'homme." I think the adverse evidence of the Dutch anatomists worthy also of consideration. V. der Kolk and Vrolik, in their 'Note on the Orang's Brain,' of 1861, affirm of that convolution, that it is an "éminence que nous croyons avoir le droit de nommer indice de pes hippocampi minor" (p. 7).

Now, the affirmation that the part so called, by reason of the resemblance it suggested in its fully-developed state in man, is peculiar to and characteristic of the human brain, is not affected by the existence in the ape's brain of that which leads the observer of it to "believe himself entitled to call it 'an indication' of such structure." As to the cavity containing that structure, figures of the full size of the parts, in the brains compared, human and simial, are needed for an unbiassed appreciation of the differences in question. In regard to the "posterior horn," I have done this in the negro's brain (*Annals and Mag. of Nat. Hist.* s. 3, vol. 7, pl. 21), and in the chimpanzee's brain (*ibid.* pl. 20, fig. 3), taking the latter from V. der Kolk and Vrolik's drawing of 1849, respecting which these estimable anatomists in their later "Note" state:—"Nous avons revu nos dessins et nos préparations de l'année 1849. Nous reconnaissons, avec M. Owen, que les dessins sont exacts" (p. 6). A comparison of those figures may justify my doubt whether a term expressive of the demonstrated difference will be "discarded for ever" from a precise comparative anatomy. And I restate the facts which oppose some present tenden-

cies, viz., that the "foot" by which we stand and walk erect, the "hand" which, so liberated, can apply its matchless structure to the biddings of a high intelligence, and the organ itself of that intelligence, are severally structures peculiar to and characteristic of the human kind. Among the parts which give its peculiarity to the brain, is the much convoluted mass, rising high above and stretching beyond the cerebellum, with its contained structures, which under their peculiar forms, proportions and directions, suggested the resemblances expressed by the quaint terms of the old anatomists.

On the assumption that such propositions imply a negation of the existence of homologous parts or indications of parts in a few of the highest members of the Gyrencephala, is based the contradictory statements.

RICHARD OWEN.

SCULPTURE AT THE ROYAL HORTICULTURAL GARDENS.

THE late Prince Consort suggested throwing open the Garden at South Kensington for the reception and exhibition of Works of Sculpture, in the belief that while these works would contribute to the decoration of the garden, the exhibition would give an impetus to this branch of Art. The Prince's idea has been taken up.

The Council have made arrangements for holding an Exhibition of British and Foreign works of Sculpture in the Garden, during the months of May, June and July in the present year; inviting the Sculptors' Institute to take charge of the Exhibition, with full power to decide upon the reception or rejection of the works which may be offered, the placing of accepted works, and all other details. The Institute have accepted this duty, and appointed the following sculptors a committee for the purpose, viz.—H. Calder Marshall, R.A., H. Weekes, R.A., T. H. Foley, R.A., W. F. Woodington, and Edward B. Stephens.

The Horticultural Society have devoted a sum of 500*l.* for the purchase of one or more approved works of High Art, which may be shown at the proposed Exhibition; but the Council will not feel bound to expend that sum if no work or works of sufficient merit be sent in. A like sum is intended to be devoted by the Society for the same purpose in each of the two following years.

The Institute of Sculptors have framed the following rules:—

1. All works intended for exhibition must be sent to the Gardens from the 13th to the 18th of April, and be accompanied with a letter, addressed to the Council of the Sculptors' Institute, describing them—but without advertisement, unnecessary quotation, or narrative.
2. All works must be sent to and removed from the Royal Horticultural Gardens at the cost of the Exhibitors.
3. Attached to each work must be the name of the Sculptor, and the number (if there be more than one), to which it refers in his letter.
4. All works sent to the Royal Horticultural Gardens for exhibition are submitted to the approval of the Council of the Sculptors' Institute, whose decision is final.
5. Works not selected must be removed prior to the opening of the Exhibition, of which the sculptor will be duly informed by letter.
6. Suitable stands will be provided by the Society. Every possible care will be taken of the works sent for exhibition; but the Royal Horticultural Society, and the Sculptors' Institute, will not hold themselves accountable in any case of injury or loss, nor can they undertake to pay the carriage of any package which may be presented by carriers.
7. The price of works to be disposed of may be communicated to Mr. A. Murray, the Assistant Secretary, and will be inserted in a book for reference at the Royal Horticultural Society's Gardens.

PHOTOGRAPHS OF THE MOON.

110, Bunhill Row, March 4, 1863.

IN reference to Dr. D'Orsan's letter inserted in your impression of last week, it is hardly necessary to say that the general statements it embodies are no answer to the charge which has been brought

against him, and that until he chooses to state publicly the dates of his lunar photographs, the locality where they were obtained, and the instruments used in their production, he will have done nothing towards clearing himself from the imputation under which he at present rests. As regards his assertion that a slip was inserted in Part I. of his work notifying that the dates of the photographs accompanying that number would be given in Part II., a simple inspection of the slip in question (a copy of which I inclose) will show that this is not the fact. I may add, on the authority of Mr. Bennett, that a gentleman of high scientific attainments, who has applied more than once for these dates, for purposes quite unconnected with the genuineness of the work, has not been favoured with a reply.

WARREN DE LA RUE.

SHAKESPEARE AND THE 'YORKSHIRE TRAGEDY.'

Maldenhead, March 5, 1863.

A discovery I have recently made regarding Shakespeare and his Works, though not important, is interesting. It relates to the 'Yorkshire Tragedy,' usually included in the list of spurious plays, or plays falsely imputed to him; but which I, with many others, feel convinced was, in the main, written by his pen. It was founded, as is well known, upon a domestic event which had attracted a great deal of popular attention, and which happened on the 23rd of April, 1605—not 1604, as the date is given in Stow's 'Chronicle': the publication of the 'Yorkshire Tragedy' did not take place until 1608, and copies with two different title-pages are in existence. As it has, I think, never been quoted with the correct imprint, I subjoin it:—

"A Yorkshire Tragedy. Not so New as Lamentable and true. Acted by his Majesties Players at the Globe. Written by W. Shakspeare.—At London Printed by R. B. for Thomas Pavier, and are to be sold at his shop on Cornhill, neere the Exchange. 1608." 4to.

It was one out of four short dramas performed on the same night at the same theatre, and the title, of one copy at least, so expresses it,—viz.: "All's One, or one of the foure plaies in one, called a Yorkshire Tragedy, as it was plaied by the King's Majesties Plaiers. 1608." 4to.—What were the other three pieces we have no information, the 'Yorkshire Tragedy' being the only one that has come down to us.

There is no doubt that it was composed on the spur of the moment, while the shocking catastrophe was fresh in people's minds; and the circumstance that no names are assigned to any of the principal characters may have been owing either to an unwillingness to cause additional pain, or to the interference of the Master of the Revels, who forbade that further publicity should thus be given to a family calamity. More than one dramatist was certainly engaged in the instant preparation of the piece; and while I feel sure that Shakespeare was chiefly concerned with the tragic portion, the introductory comic scene was, I think, from another hand. This will in part account for the incongruity of the dialogue between Oliver, Ralph and Sam in several places; and I am satisfied also that this particular scene has been rendered more obscure by abbreviations of it, found necessary when the comic and tragic portions were put together for rehearsal. That rehearsal must have been almost instantaneous, because, although the printed copy did not come out until 1608 (owing to the usual difficulty with publishers to obtain theatrical MSS.), we need not hesitate in believing that the 'Yorkshire Tragedy' was represented on the stage a very few days after it had been acted in reality near Wakefield: hence, in a great degree, the incomplete and "rough-hewn" form which the short drama bears.

It is not my intention here to enter into the question of the authenticity of the piece as a production by Shakespeare: various opinions have been expressed by various critics more or less competent. I only ask that it should be read with due allowance for the circumstances under which it must have been written and printed; and then I think that the only conclusion we can arrive at is, that our great dramatist "had a main finger in it." If the

introductory scene by his fellow-dramatist had to be abridged in order that the representation might be brought within the proper limits, it is not unlikely that some portion, even of the tragic scenes by Shakespeare, was unavoidably omitted. I have always felt so strongly on the question of the authenticity of the 'Yorkshire Tragedy' as a work of Shakespeare that I reluctantly left it out in the three or four editions I have superintended; and were I again called upon to go through the same undertaking, under my strong convictions I should not consider it complete if I did not include it, as at least entitled to rank with 'Pericles' and 'The Two Noble Kinsmen.'

I therefore look upon myself as fortunate in having very lately discovered a copy of the original pamphlet on which, it may be asserted, the 'Yorkshire Tragedy' was founded. It has been long known that such a tract was registered at Stationers' Hall very soon after the sad events had occurred, but it has never till now turned up, and I have it before me under the following title:—

"Two most unnatural and bloodie Murthers: the one by Maister Caverley, a Yorkshire Gentleman, practised upon his wife, and committed upon his two Children, the three and twentie of April 1605.—The other by Mistris Browne and her servant Peter, upon her Husband, who were executed in Lent last past at Bury in Suffolke. 1605.—Printed at London by V. S. for Nathaniel Butter, dwelling in Paules churchyard neare Saint Austens gate. 1605." 4to.

The true name of the perpetrator of the first of these murders appears to have been Calverley, and not Caverley or Coverly, as it has been sometimes spelt; but, as I have stated, no name is given in the drama, the hero being called "Husband," the heroine (as far as she is to be so deemed) "Wife," and the Magistrate "A Knight": in the narrative they are respectively called Master Caverley, Mrs. Caverley, and Sir John Saville, which connects the well-known Yorkshire family with the transaction: the "Master of the College" is so spoken of and to in both; and, as in the drama, he interposes on behalf of Calverley's younger brother, then at the University, who had been imprisoned on a bond into which he had entered on behalf of the reckless and extravagant hero. The first point that strikes us is the solution of the difficulty respecting a wife Calverley had taken before he was married to the heroine, and which is mentioned by the servant Sam to his fellows, Oliver and Ralph—"Why he is married to another long ago." The fact appears to be, that Calverley deserted the wife he had married in Yorkshire for one whom he married in London, so that he was guilty of bigamy as well as of murder. His first wife, and the consumption into which she had fallen in consequence of cruelty and desertion, are very interestingly described in the tract, and perhaps were touched upon in the drama as originally written:—"This gentlewoman, Maister Caverley's wife, took with an inward consideration so to heart this unjust wrong, that exercising her howres onely in continual sorrow, she brought herself to a consumption"; and it is to be presumed that she had died before Calverley committed the murder upon his second wife and two of the children that he had by her.

After thus dismissing the first wife, the daughter of a country gentleman, we are told of Calverley's brutal treatment of his second wife, of his boundless extravagance, of his gaming, and of all his other vices. He sends her to London to her guardians, in order that she may raise money by selling her dower; and she returns, not with money, but exactly as in the drama, with the promise of a good place for her husband at Court. He rejects it indignantly, strikes her, and fights with and is overcome and wounded by a gentleman who takes the wife's part. This adds to Calverley's exasperation, and his fury is at the highest, when the Master of his brother's College arrives, and enforces the young man's misery and disgrace in prison on account of the bond. Calverley promises to give the Master the money, although he knows that he has not a farthing; and while the Master is walking in the grounds waiting for payment, Calverley's eldest boy, who is

"scourging a top," as in the play, comes to his distracted and maddened father, who strikes the child with his dagger, and wounds him mortally. With the bleeding body in his arms, he rushes to his wife's room, wounds her to death, inflicts several gashes on his second son, ("the third," in the words of the pamphlet, is "at nurse abroad,") and flings the maid-servant headlong down stairs. All the particulars, many of them not adapted to the stage, are entered into with great minuteness; and after a brief and distracted interview with the Master of the College, Calverley mounts a gelding, which he found ready saddled, and gallops off to destroy his third child, which was at a considerable distance. We are informed in the tract that "his hart had made sharp the knife that was to cut his infant's own throte;" but his horse falling just before he reached the place, he was captured by the Master of the College, and some others who had closely followed him. He was carried before Sir John Saville, and, "like a strumpet made impudent by her continuance in sinne," avowed and boasted of what he had done, only regretting that one of his offspring remained alive to inherit nothing but the beggary of its father. He was by Sir John Saville committed "to one Maister Key's house, a Gaile but lately built in Wakefield."

The narrative proceeds no farther, because, like the drama, it was written on the spur of the moment, before Calverley had been brought to trial. We know that he then refused to plead, and was therefore, as the law stood at the time, pressed to death. This cruel suffering he endured in his repentance, and in order to save the wreck of his property for his surviving infant.

There are various new points in the narrative before me; but I content myself with the merest sketch of it, because I am about to reproduce it for the benefit and information of the fifty members of my new Reprinting Club. It is a curious illustration of our early popular literature, and of additional value in consequence of its relation to a drama to which good judges have been of opinion Shakespeare (whose name stands at full length upon the title-page) very importantly contributed. I rely, of course, more upon internal than upon external evidence. J. PAYNE COLLIER.

THE CASE OF LITERARY LARCENY.

47, City Road, March 3, 1863.

IN justice alike to me and to the public who have purchased, within fourteen months, nearly three editions of my volume on 'Australia, with Notes by the Way,' I am sure you will give me space to reply to a communication which appeared in your columns of February 21, but which I did not see until nearly the end of last week.

As to any quarrel which your Correspondent has had with my friends on the other side of the globe, I know nothing at all. Up to the time when his letter was given in the *Athenæum*, I had not heard of his 'Southern Lights and Shadows'; and as he states that the book is out of print, I cannot hope to examine it, else I should be curious to learn how his "little book" on New South Wales only, could supply the "leading paragraphs" "from the opening to the close" of my post-octavo volume of nearly three hundred pages, and which treats, not only of all the Australasian Colonies, but also of all the principal countries in the way to them. I might also try to ascertain whether he has broken up his own paragraphs, after the fashion of his dealing with mine. Every one knows how easy it is, by such a process, to make things look alike, which are in their own setting and original connexion, sufficiently different. Not that I am about to charge this writer with intentional misrepresentation: an attempt at brevity may be a great part of the explanation.

The fact is, that in my travels I did as everybody else does: that is, I read whatever came in my way bearing on the countries through which I was passing; but I took care to note down my own observations and impressions; and if, in doing so, some terms, perfectly true to my own views, though, possibly, they had been employed by others, adhered to my memory, and found their way into my manuscript, no reader of books of travel could

feel surprise. In the several colonies of Australia, as in other parts of the world (as often as I could do so), I availed myself of the judgment of intelligent friends, who had the advantage of longer residence, with a view to secure accuracy in the statement of facts, &c. In this instance, there are peculiar circumstances which, for explanation and proof, rest upon minute examination, not only of my own manuscript notes, but also of the written suggestions of others. And had the complainant communicated with me, through my publisher, or otherwise, there would have been supplied to him evidence fully to account for the apparent resemblances in subjects and terms to which he has referred. He has not done so; and as I do not choose to leave the case, as it really is, to depend upon my own single assertion, I have submitted it, with all the papers in question, to gentlemen whose public character and intellectual competency are above suspicion. They all have authorized the appending of their names to the following declaration by themselves; but as it is not necessary to give all their signatures, I content myself with two: the one by a gentleman of Cornwall, well known by his numerous writings; and the other by a minister of high standing in the metropolis. FREDERICK J. JOBSON.

"At Dr. Jobson's request, we have examined the manuscripts and proofs, to which reference is made above; and are fully satisfied of the correctness of his statement; and that there is no just cause, literary or otherwise, for the unfavourable reflections which have been cast upon him.

"GEORGE SMITH, LL.D., F.S.A.

"WILLIAM W. STAMP."

MADAME CINTI-DAMOREAU.

Madame Cinti-Damoreau is dead; aged, say the journals, sixty-three. Her maiden name was Laura Cinthie Montalant. From 1808 to 1814 she was a pupil in the Conservatoire at Paris; first as a student for the piano, later as a singer,—a voice having, even then, revealed itself in her of rare and delicate beauty. In 1819, she was selected as one of the "four or five dolls" whom M. Valsebègue engaged to fill up the operas which his imperial wife, Madame Catalani, was virtually to *be*. In 1821, she ventured on the stage as "first woman"; but the French public had been used to a trumpet in the Italian *prima donna*, and the exquisite promise of one who had a gentler voice, and who, besides, was born and trained at home, passed disregarded. In 1825, when the Grand Opéra fell into the hands of Signor Rossini, he had intelligence enough to discern the fascinating qualities and accomplishments of the young Frenchwoman, and to attach her to his company as a singer immeasurably superior to all who had gone before her. But though fair to see, Mlle. Cinti was no actress. The tale, however, of her excellence is told in the fact that she was the heroine in his 'Moïse,' in his 'Siège de Corinthe,' in his 'Count Ory,' in his 'Guillaume Tell,'—in M. Auber's 'La Muette' and 'Le Serment,' and was the *Princess* in M. Meyerbeer's 'Robert,' which she introduced to England. Those were the golden days of the Grand Opéra. During this brilliant period Mlle. Cinti made an unhappy marriage with M. Damoreau,—"fell out" with the managers of her old theatre (perhaps being found difficult to provide for there, owing to the absence of dramatic force), and passed to the Opéra Comique. There, she was even more popular than she had been in her former grander sphere. M. Auber wrote for her his 'Actéon,' his 'Ambasadrice' (in which Scribe turned Sontag's stately marriage to stage account), his 'Domino Noir' (that imperishable genteel comedy in music), his 'Zanetta'; and frequenters of the Salle Favart cannot forget an operetta, 'Le Mauvais Œil,' by Mlle. Lœisa Puget, in which Madame Cinti-Damoreau's singing was a marvel of bright and elegant execution. After 'Zanetta' (not one of M. Auber's successes) had failed to please, the *prima donna* ceased to agree with the Opéra Comique. Her voice had already begun to wane and to become weaker. She left her theatre, and entered on that migratory career which is habitual to declining singers; came to

London and went to America, under circumstances of mistake and mischance. For many years before her death she had become unable to appear in public, and has died after much suffering, and, we fear, not rich. She was buried with musical honours.

Of all the brilliant singers who have been heard during the last thirty years, Madame Cinti-Damoreau was the best: being without a fault. Her voice, though small, was deliciously sweet, yet not luscious; easily, and yet not frivolously, delivered. Her facility was without limits, so was her perfect measurement of time, and her expression, if not invention, of grace. There was not the slightest appearance of effort and preparation in anything she did; yet her ornaments were models, and her feeling for sentiment, if not for emotion, was true and most attractive. In her own style and in her own world we remember her as first of the list, in which artists no less excellent than Sontag, Bosio, Madame Persiani, and Madame Dorus-Gras figure. Two of these (it is true) had qualities in addition to those of her peculiar sisterhood: Sontag greater classical skill and variety, Madame Persiani more intense vocal expression; but, considered merely as a brilliant singer, Madame Cinti-Damoreau was (we repeat) the most faultless and fascinating of all.

OUR WEEKLY GOSSIP.

General Sabine, President of the Royal Society, has issued cards for Evening Receptions, on Saturday, March 28 and May 2.

Mr. Weekes, sculptor, and Mr. Boxall, portrait painter, have been elected Royal Academicians. The honours of the Associateship have been given to Mr. Le Jeune.

In answer to our question: "What music are we to have for the wedding?" we have the following reply, as regards one of the most attractive places in London—the Temple Church:—

"Goldsmith Building, Temple, March 3, 1863.

"There will be a new 'Bridal Anthem,' for the Temple Church, to be used at Morning Service, on Sunday the 15th inst. Besides the opening Semi-quartet, and the concluding Chorus, it will comprise a Solo, Recitative and Air, for Mr. Thomas, the bass, and a Solo for Mr. Wilbye Cooper, the tenor. The composer is Mr. E. J. Hopkins, Organist and Master of the Choristers for the Temple Church. I have seen part of the score, and heard one of the solos, and there is no reason to doubt that the composition will be worthy of the high character of Mr. Hopkins's other works, especially his five Services in A and in F. The words are a selection from the 21st Psalm, where the use of the future tense meets the present occasion with felicitous propriety. Such a proceeding as this is peculiarly appropriate to the Temple, considering the relation of the Prince to us as a Master of the Bench of one of the Societies. It is a satisfaction to myself to have suggested this three months ago, and that my suggestion was immediately welcomed and adopted.

"DAVID MACLACHLAN."

The British Museum will be closed this day and on Tuesday, the 10th instant,—the reception day and the marriage day of the Princess Alexandra.

Who cut off the head of Charles the First?—like the contemporary questions, Who wrote the Icen Basilike? and Where was Cromwell buried?—has puzzled writers and partisans for two hundred years. Mr. Robert Reece, while reading in the Colonial Papers at the Record Office, has fallen upon a document which some persons will think sets the matter at rest. It is a letter dated St. Michael's Town, in Barbadoes, September 30, written by Jo. Nevington, and addressed to Mr. James Drawater, Merchant, at Mr. Jo. Lindupp's at the Bunch of Grapes, in Ship's Yard, by Temple Bar. The important paragraph stands thus:—"All the matters I can write from hence is of one Hugh Peachell who hath been in this Island almost twenty years and lived with many persons of good Esteem and now last with Coll. Barwick. It was observed that he gained much money, yet none thrived less than hee and falling sick about 3 weeks past was much troubled in his conscience but

would not utter himself to any but a minister who being sent for He did acknowledge himself y^e person y^e cut off y^e head of King Charles for which he had £100 and with much seeming penitence and receiving much comfort as y^e Divine one parson Lashley an eminent man here could afford him he dyed in a quarter of an hour afterwards. This you may report for reall truth although you should not have it from any other hand. He had £100 for y^e doing of itt. There is one Wm. Hewel condemned for the same I think now in Newgate. He will be glad you acquaint him of this if he know it not already."

The House of Commons will be asked this year to vote 3,000*l.* for the publication of documents connected with the history of England, 550*l.* for editing documents from the archives of Simancas, and 400*l.* for editing documents from the archives of Venice. This will be exclusive of the usual 1,500*l.* devoted to the abstracts of State Papers. The total charge of the consolidated department of the Record Office for the year 1863-64 will be 20,234*l.*

One of the parliamentary papers issued this week possesses some interest for the historians of the Indian Mutiny. It is a return of the regiments in the Native Bengal Army, both Regular and Irregular, that remained faithful to the Government during the late mutiny, and that retained their arms during the whole time, and were actively employed in the suppression of the mutiny: distinguishing their respective services; together with a statement of the thanks or rewards that have been given to the officers and men.

The total cost this year of the manufacture of postage labels and envelopes for the Post-office will be nearly 30,000*l.* Of this sum, 19,000*l.* will be expended on the paper for labels, and the printing, gumming and folding. About 5,000*l.* will be appropriated to the salaries of the various officials, including the supervisor (500*l.*) and the superintendent of the perforating department (100*l.*). The poundage to distributors is estimated at 4,600*l.*

Lieut. Lefroy, commanding her Majesty's ship Investigator, in his ascent of the River Niger, an enterprise undertaken with a view to communicate with Dr. Baikie, has succeeded in reaching a higher point of that river than had hitherto been attained by a ship of war. On the 2nd of September he commenced the ascent. The current was strong; and some of the inhabitants of the banks were unfriendly, but the progress made was considerable, being about fifty miles a day. On the seventh day the expedition passed the large town of Iddah, supposed to contain upwards of 10,000 inhabitants, situated on a pretty hill 127 feet in height. There is a large plain on the south side. The houses are round, and the natives dressed in the blue cloth of the country. This place, in the opinion of Mr. Lefroy, might be made the key of the Niger, as the deep-water channel is very narrow, so that the town entirely commands it. Igara is the name of the country, and the King of Iddah's territory reaches as far as the confluence. The scenery about Shooter's Sound is of a fine picturesque description; hills, thickly-wooded valleys, and mountains steep and rocky. "The country," says Mr. Lefroy, "might be turned to good account, and from what I have heard the natives would be glad to work the ground, only they are prevented by fear of King Massaba, who sends down his horsemen in the dry season and takes them for slaves. The land opposite Beauford Sound grows Guinea corn, and the island itself has several farms on it." On the eleventh day they came to the last of Lieut. Glover's charts that are printed; but still pushed forward. Fourteen days later, Mr. Lefroy arrived at the camp called Eddo, where he was to see the King Massaba. There, "Mr. Southwick and myself, accompanied by a guard of five kroomen, together with the head chief and others the King had sent to escort me to his presence, proceeded to the King's house, where we found him sitting on a mat, and another spread with cushions for Mr. Southwick and myself. He is a fine-looking man, and, from the great name he bears, just the man I

expected to see. We had a little palaver and exchange of compliments, after which I presented him with the presents I brought. He seemed much pleased with the coat of mail, and said it showed him he was not forgotten in England. He then requested me to go and see his sons, whom I found in great numbers with the second King, ready to receive me. Some of them were remarkably fine men. I was then presented with some cola-nuts, in accordance with the custom of the country, which broke up the palaver, and I returned to King Massaba, with whom I had a long palaver about Dr. Baikie. He informed me that he had gone to Kano after the papers and effects of a Dr. Vogel, who had been murdered there, and that he had recovered the papers; the King had given him horses and men, but did not seem pleased at his going. The camp here is on a very large scale, and I have been informed he has upwards of 5,000 horsemen. His reason for being encamped is on account of an order from the Sultan of Socatoo to open the road between Bida and Socatoo, as the messengers were frequently robbed and murdered passing between those places; so that Massaba has taken the whole country, dethroning the Kings and placing guards of his own men in their towns. The King spoke a good deal about Dr. Baikie, and again expressed his dissatisfaction at his going away, and not returning in time for the ship, as he had promised. Called on the King in the afternoon, and he told me he felt sure I would neither hear nor see Dr. Baikie this year, but promised to send his letters to Lagos whenever he received an answer." Mr. Lefroy returned by the road he had come. When he had proceeded some way a messenger from King Massaba arrived, informing him that the King had heard from Dr. Baikie, and that he was on his way back to the camp, and requested Mr. Lefroy to wait a few days longer; but Mr. Lefroy resolved not to wait, and dropped down the river: leaving us still in doubt as to Dr. Baikie's safety.

The Alpine Club now takes rank among the publishing Societies of London. The first number of a quarterly journal was issued on the 1st of this month to the members. It contains interesting papers on Mountain Ascents, and a department for Notes and Queries relating to Mountaineering, Guides, and the various incidents of Alpine travel. As a medium of communication between Alpine explorers in various parts of the world, this journal, if efficiently conducted, will be of use.

Mr. Burford's Panorama of Rome was exhibited on Saturday. It is the intention of the proprietors to produce in succession all the panoramas of the late Mr. Burford, who for seventy years annually exhibited pictorial representations of remarkable places in Europe, Asia and America. The present season is the last of this exhibition, and the public will do well to take advantage of the opportunity.

The time when St. Thomas's Hospital is going to more wholesome quarters than its own stifling nook, is also to be marked by the removal of its ancient brother in Paris, the Hôtel Dieu, to a less unhealthy site. No such intense conservatism exists, or has ever existed in the French capital as in our own, hence the Hôtel Dieu has been once before removed. Its new site is not yet fully decided upon.

The Senate of Glasgow University have conferred the degree of Doctor of Laws on John Westland Marston, author of 'The Patrician's Daughter.'

Mr. Nightingale's small cabinet of medals has just been disposed of by Messrs. Sotheby & Wilkinson, the different specimens, which were generally speaking very fine, producing high prices. The following may be cited:—The celebrated medallion of Henry the Eighth, as Supreme Head of the Church, 6*l.*—Coronation medal of Edward the Sixth, 5*l.*—Pope Julius the Third, rev. Anglia Resurgens, 6*l.*—chased medal of Mary the First, 3*l.* 10*s.*—Medal of Elizabeth, 3*l.* 10*s.*—Lord Chancellor Bacon, 5*l.* 5*s.*—Charles the First on the dispute with the Dutch as to the right of the Fisheries, 3*l.*—Lord Kimbolton, 4*l.*—Commonwealth Honorary Medal, rev. Naval Engagement

between Blake and Van Tromp, in gold, by Simon, 23*l.* 15*s.*—the same struck in silver, 6*l.* 5*s.*—James, Duke of York, rev. Battle with De Ruyter, 5*l.*—Gold medal of Charles the Second, by Rawlins, 25*l.*—James, Duke of Monmouth, 4*l.*—Archbishop Sancroft, rev. Seven Bishops, 2*l.* 16*s.*—William the Third, 6*l.*—another, with flowing hair, 3*l.*—William and Mary, 3*l.* 1*s.*—Duke of Marlborough and Prince Eugene, 4*l.* 15*s.*—Mary Magdalen, wife of Cosmo de' Medici, 3*l.* 1*s.*—Eckhel, the Numismatist, 2*l.* 18*s.*—Van Loon, 2*l.* 2*s.* This small collection produced 625*l.* 4*s.* 6*d.*

In a previous sale by the same auctioneers, there occurred some remarkable coins of Amphipolis, which brought 53*l.*, 41*l.*, 27*l.* 10*s.*, and 24*l.* respectively.

Prussian Government engineers have been engaged in making surveys with a view towards forming a canal to unite the Rhine, Weser and Elbe rivers; it is understood that the needful works do not present any very formidable engineering obstacles.

The Russian Government has purchased, for the sum of 100,000 silver roubles, the celebrated collection of Caraitic manuscripts of the learned collector, Abraham Firkowitch. After the collection had been duly examined by different savants, and pronounced to be highly important for the criticism of the text of the Holy Scriptures, for palæography and chronology in general, and for the history of Southern Russia in particular, it was delivered as property to the public Imperial Library. The Caraitic scholar, Abraham Firkowitch, has devoted, we hear, thirty years of his life to the acquisition of these rare manuscripts. As early as 1830, during his stay in Constantinople, he succeeded in finding some valuable Hebrew codices. This seems to have given him the impulse for his untiring exertions in this field. He sacrificed his fortune in the search for rare and old manuscripts; bore without murmuring long separations from his family; subjected himself to all sorts of privations, and often endangered his life. Mr. Firkowitch has travelled through, and explored, the Crimea and the Caucasus in all directions; he has lived for months in churchyards and burial-places to study and copy old inscriptions; he has penetrated into synagogues and other likely places, where the Jews used to hide books on sudden attacks or invasions from the enemy; he never wearied of the struggle with fanaticism and barbarity. Thus he succeeded in collecting 124 Hebrew original copies of the Old Testament, which are older than all other Hebrew codices in any of the libraries of Europe. Twenty-five of the manuscripts in Mr. Firkowitch's collection were written before the ninth, and twenty before the tenth century. Five of the manuscripts on leather are maintained to be the oldest of all documents on the Scriptures hitherto discovered. The whole collection consists of 47 rolls of the Pentateuch, on leather and parchment; 77 codices of the Holy Scriptures; 33 translations in different languages; 272 works of Caraitic authors; 528 works of Rabbinit authors; 250 miscellaneous letters and articles; 722 inscriptions; 300 documents regarding the history of the Caraim in Western Russia, and 300 old plans of different Russian towns.

SOCIETY OF PAINTERS IN WATER COLOURS.—Will shortly close.—WINTER EXHIBITION OF SKETCHES and STUDIES by the MEMBERS, at their Gallery, 5, Pall Mall East. Open from Nine till Dusk.—Admission, One Shilling. JOS. J. JENKINS, Secretary.

'THE RAILWAY STATION.'—This Celebrated Picture, by Mr. FRITH, Esq., R.A., will be ON VIEW to the Public on MONDAY, March 9, at the FINE-ART GALLERY, 11, Haymarket.—Admission, 1*l.* Open from Ten to Five. A Descriptive Pamphlet, by Mr. Tom Taylor, M.A., price 6*d.*

Mr. EDMUND YATES'S INVITATIONS to EVENING PARTIES and the SEASIDE will be issued at the EGYPTIAN HALL, EVERY EVENING (except Saturday), at Eight o'clock. Mr. HAROLD POWER will be one of the party. A Morning Performance on Saturday, at Three o'clock (this day excepted).—Stalls, 3*s.*; Area, 2*s.*; Gallery, 1*l.* The Box-Office is open daily, from 11 till 6 o'clock.

NOVEL ENTERTAINMENT, SCIENTIFIC and ARTISTIC.—SAMUEL HIGLEY, F.G.S., F.C.S., &c., will exhibit every Evening, at Eight o'clock precisely, his beautiful series of MAGNIFIED and ILLUMINATED PHOTOGRAPHS which were shown with great *éclat* before the Society of Arts and the London Photographic Society in January. Programmes on application to the Secretary, by post two stamps.—Seats reserved, 3*s.*, 2*s.*, and 1*s.* Burlington Gallery, 191, Piccadilly, W.

BRITISH INSTITUTION, Pall Mall.—The GALLERY, for the EXHIBITION and SALE of the WORKS of BRITISH ARTISTS, is OPEN DAILY, from Ten till Five.—Admission, 1*l.*; Catalogue, 6*d.* GEORGE NICOL, Sec.

HENRI DRAYTON.—POLYGRAPHIC HALL (King William Street, Strand).—Henri Drayton has the honour to announce his Pictorial and Musical Entertainment, entitled 'FEDERALS and CONFEDERATES,' at the above Hall, commencing on WEDNESDAY EVENING NEXT, at Eight.—Tickets may be had at Messrs. Cramer, Beale & Wood's, Regent Street; at Messrs. Chappell's, New Bond Street; and at the Hall.

SCIENCE
—
SOCIETIES.

ROYAL.—Feb. 26.—General Sabine, President, in the chair.—The following papers were read: 'The Effect of Temperature on the Secretion of Urea,' by Dr. E. Becher.—'On Climant Geometry,' by A. J. Ellis, Esq.—'Note on the Lines in the Spectra of some of the Fixed Stars,' by W. Huggins, Esq. and Dr. W. A. Miller.

ASIATIC.—March 2.—The Right Hon. Lord Strangford, President, in the chair.—The Rev. Dr. E. Spooner was elected a Resident, and Lieut. S. B. Miles and W. Dickson, Esq. Non-Resident Members.—A paper was read, 'On the Botany and Geology of the Country between Tamatave and Antananarivo, in Madagascar,' by C. Meller, Esq.

SOCIETY OF ANTIQUARIES.—Feb. 26.—The President, Earl Stanhope, in the chair.—The chairman put to the vote the proposal of the Council to grant the sum of 150*l.* towards completing the collection of County Histories in the Society's library, which was carried unanimously.—J. Y. Akerman, Esq. communicated a drawing of a spear-head found at Drayton, Oxon, together with some remarks from Mr. Clutterbuck, on excavations going on at that place.—The Rev. W. Blackmore exhibited an impression of the seal of the King of Georgia.—The Rev. G. H. Dashwood exhibited two deeds: one relating to military stores in the time of Edward the Third, the other to a marriage between the Bardolph and Essex families during the same reign.—A. W. Franks, Esq., Director, exhibited a watch in the shape of the fritillary flower.—W. M. Wylie, Esq. communicated some remarks on the discovery of a copper image of Buddha, at a place called Sultangouge.—W. H. Hart, Esq. communicated remarks 'On Complaints against the Saltpetre Men in the Execution of their Office, temp. Car. I.'

BRITISH ARCHÆOLOGICAL ASSOCIATION.—Feb. 25.—J. Lee, LL.D., President, in the chair.—Mr. W. H. Forman exhibited a beautiful bronze mask of a Satyr, with eyes and teeth of silver.—Mr. Cuming laid before the Association a pressed bronze Head of Bacchus, from Cuma, also with silver eyes, and another example from the same collection. Notices were read of this peculiar work, esteemed as the parent of the *Damaaboen* of the middle ages.—Mr. H. Durden exhibited a bronze Handle, of fine execution, belonging to the first century of the Christian era.—The Rev. E. Kell communicated the particulars of a discovery of an Urn and two Skeletons on Bembridge Downs, Isle of Wight.—Mr. Syer Cuming read a paper 'On Ancient Nielli,' tracing its history, and exhibiting specimens belonging to different periods.

INSTITUTE OF BRITISH ARCHITECTS.—Feb. 23.—A. Ashpitel, Esq., V.P., in the chair.—A paper was read 'On Artificial Stone,' by R. Kerr, Esq.

ENTOMOLOGICAL.—March 2.—F. Smith, Esq., President, in the chair.—E. Parfitt, Esq. was elected. Mr. Waterhouse exhibited various Coleoptera of the genera *Mycetopus* and *Homalota*, and read some notes thereupon.—Mr. Bond exhibited a specimen of *Lycena Dorylas*, which had been sent to him as a variety of *L. Adonis*, together with other insects taken in the West of England in 1862; the species was formerly considered as an inhabitant of this country, and is figured by Lewin, but no authentic record exists of its capture in England, and it has for many years been excluded from the lists of indigenous Lepidoptera.—Prof. Westwood read a paper containing descriptions of two new Australian Lucanide, to which he gave the names of

Lucanus Carbonarius and *L. Howittanus*. The President read a paper, entitled 'Descriptions of Brazilian Honey Bees, belonging to the genera *Melipona* and *Trigona*, which were exhibited, together with samples of their Honey and Wax, in the Brazilian Court of the International Exhibition of 1862, in which eleven new species of *Trigona* and two of *Melipona* were characterized.

INSTITUTION OF CIVIL ENGINEERS.—March 3.—C. H. Gregory, Esq., V.P., in the chair.—The paper read was 'On the Perennial and Flood Waters of the Upper Thames,' by the Rev. J. C. Clutterbuck.—At the Monthly Ballot the following candidates were balloted for and duly elected:—Messrs. A. Bryce, I. Fraser, E. Harris, F. C. Mierns, G. Paddison, and G. K. Radford, as Members; Col. G. C. Collyer, R.M.E., and Messrs. G. O. Budd, J. M. Farfan, I. B. Fell, W. Parsey, H. Prince, S. Rendel, M.A., D. S. Sutherland and W. M. Warden, as Associates.

ROYAL INSTITUTION.—March 2.—W. Pole, Esq., Treas. and V.P., in the chair.—Messrs. E. Atkinson, The Rev. H. Blunt, Col. C. H. Dickens, F. W. Gingell, E. Hart, W. Hartree, J. Hogg, W. W. Humphry, W. E. Kilburn, H. Lainson, T. Leckie, J. Lees, W. M'Keand, A. Pope, J. Rivington, J. R. Russell, J. B. Smith, M.P. and G. S. Trower, were elected Members.

SOCIETY OF ARTS.—Feb. 25.—T. Bazley, Esq., V.P., in the chair.—The paper read was 'On the Present Position and Future Prospects of the Supply of Cotton,' by Mr. J. Cheetham.

- MEETINGS FOR THE ENSUING WEEK.**
- Mon. Royal Academy, 8.—'Sculpture,' Prof. Westmacott.
 - Architects, 8.
 - Geographical, 8*1/2*.—'Recent Explorations, Australia.'
 - Tues. Royal Institution, 8.—'Animal Mechanics,' Prof. Marshall.
 - Actuaries, 4*1/2*.—Council.
 - Byro-Egyptian, 7*1/2*.—'Egyptian Objects, Museum, Alnwick.'
 - Mr. Sonomi; 'Waterbed of Nile,' Mr. Ainsworth.
 - Zoological, 9.
 - Wed. Graphic, 8.
 - Society of Arts, 8.—'International Transit Route through Nicaragua,' Commander Pim.
 - Microscopical, 8.
 - Society of Literature, 8*1/2*.—'Annals of Beahrdod,' Mr. Fox Talbot; 'Campaign of Thothmas III. in Palestine,' Mr. Poole.
 - Archæological Association, 8*1/2*.—'Bracteate Coins,' Mr. Cuming.
 - Thurs. Royal Academy, 8.—'Painting,' Prof. Hart.
 - Royal Institution, 8*1/2*.—'Chemical Affinity,' Dr. Frankland.
 - Royal, 8*1/2*.
 - Antiquaries, 8*1/2*.
 - Fri. Astronomical, 8.
 - Royal Institution, 8.—'Fogs and Fog Signals,' Dr. Gladstone.
 - Sat. Royal Institution, 8.—'Language,' Prof. Max Müller.

FINE ARTS

MR. MACLISE'S 'DEATH OF NELSON.'
THE painter of 'Wellington and Blucher's Interview after Waterloo' has now so far advanced in executing the oil version of its companion picture of 'The Death of Nelson,' destined to occupy the wall-division opposed to it in the Royal Gallery of the Houses of Parliament, that we may describe the newer and equally important work as readily as would be possible from the finished painting in water-glass or stereochrome. Mr. MacLise is so thoroughly satisfied with the success of his large experiment in that method of production, to make which he sacrificed much primarily executed work in fresco, as to proceed with this second great task on the same system. Our readers will remember the artist spent nearly two years upon a cartoon for the first picture; this was exhibited, and, at the time, noticed in the *Athenæum*. The water-glass painting which superseded the fresco we examined sixteen months ago (*Athenæum*, No. 1775). We have no cartoon now, but an oil picture. Water-glass, requiring no cartoon, delivers the artist from much labour. This, with other inestimable facilities, constitute some of the advantages attending that process. Equal permanency being predicated for stereochromic work, no wonder it is preferred to fresco, especially as after each day's task is done all retouching is, in the last, unsafe and fallacious, as well as surrendering characteristic advantages that are hardly enough obtained. Work in stereochrome may be retouched as often as desired.

The work to be examined is technically styled "a sketch"; but being nine feet long and three

feet high, containing all the figures and details of the future picture, and minutely executed, it is an important production rather than a mere memorandum of colour and composition; from it the great painting will be enlarged by "squaring." Mr. Maclise does not contemplate any noteworthy alterations in carrying out the same; more especially as he has received the highest expressions of satisfaction in the present state of his labour from the Fine Art Commissioners. These gentlemen may well be satisfied, for, excepting the artist's first work in the same locality, no national commission approaches it in epic quality or art value. Mr. Maclise has cast himself as wholly and heartily into his naval task as he did into that with a military theme. The scale of both, life-size, on a space forty-five feet long by twelve feet high, is the same; they form the largest single portions of the wall-pictures to be produced by him in the Royal Gallery—a hall set apart for his hands alone to decorate. Anxious as before to produce a permanent and eminently characteristic record of the scenes, the painter has not only availed himself of existing portraits of men engaged in the battles, but studied and portrayed every detail of manners, costume and arms of the period in question. So happily has he done this, and so vigorous are the pictures, that their subjects and motives impress the spectator before he learns that such and such were the buttons, plumes and head-dresses of the one, or the guns, rigging, pig-tails and cutlasses of the other. An artist recognizes in both that admirable generalization which is consistent with the utmost elaboration of detail; and while it renders the number on a soldier's button, gives the texture, lustre and minutest character of the thing, even to those on its stamped ornamentation, yet does not make the same distinct in the picture. To deal with the masses of blue supplied by the sailors' dresses in the new subject has been a difficulty far beyond that of the red coats in the former one. Mr. Maclise has hardly been recognized as a colourist; indeed, excepting some phases in the 'Hamlet,' he has seldom aimed at that quality. In 'The Death of Nelson,' the very difficulty referred to has stimulated him to an unwonted success; and, considering the whole nature of the task, no one will deny its value therein.

Mindful of the architectonic character of his task, the artist has placed his principal incident in the centre of his picture, and ably led the eye to that point by its colour, giving a strong note of white in the lower part of Nelson's dress, in contrast with his deep blue coat. Not less guiding the eye to the same point is the concentration of the action of the principal group upon the wounded hero, who, half-raised from the deck, and supported in the lap and arms of Capt. Hardy, lies back, with an expression of subdued suffering; while the surgeon, Dr. Beattie, heedfully raises the right arm of his patient, for it was on that side he was wounded, and, with his own disengaged hand, approaches the hole the ball has made in the upper part of the coat-breast. The lower limbs of Nelson are drawn up on the deck, his empty coat-sleeve buttoned up in the usual way. Between the surgeon's and Nelson's faces appears the handsome countenance of a Lieutenant of marines, named Ram, who was present on the occasion, and seems here full of anxious grief.

Nelson, just before dying, asked "How many flags have we taken, Hardy?" Mr. Maclise has followed the suggestion thus given, and placed a sailor in the fore part of this group, supposed to have come towards the Admiral at the moment before he fell, bearing the ensign of a captured ship. This man kneels, his glorious charge forgotten in view of the stricken commander's danger; his face, no less than those before mentioned, is admirably wrought. Around the group thus described, a host of minor incidents appear. The bustle and uproar of a battle, at sea, even more than on land, cause some occurrences within arm's reach to be beyond notice, while others, more distant, to which attention is driven, are potent to interest. News at such a time does not always travel swiftly; at Trafalgar it was not until the end of the action that Nelson's fall was known through the ship; he himself, when carried

below, spread his handkerchief over the orders on his coat, hiding them so far as possible to conceal the fact. Availing himself of this slow spread of news, the artist has shown us, in the double-ranked men forming a gun's crew in the background, one who has seen the event heedfully speaking behind his hand to his next comrade, and telling the secret the officers strove to hide: the next, or third, of this rank, a stolid fellow, has seen nothing, and thinks of nothing, but waits, with folded arms, for the word of command to haul the cannon inboard, after its discharge. The captain of the piece sights along its tube, taking aim, and, with stooping back, notes his mark in the near side of the Redoutable, the Victory's antagonist.

Nelson fell on that spot of the Victory's deck which is now marked with a brass plate. Mr. Maclise proved that, by an odd coincidence, his finished pictures and the actual deck so marked are identical in size. Thus, six feet from the marked spot is the ship's companion-way or ladder leading below: such will be the distance in the picture from the same opening, down which two sailors, naked to the waist, and full of earnest care for a younger wounded comrade, are carrying him. The elder man's face, showing him old enough to be father to the poor fellow, is a perfect study of expression, very moving to the spectator in its honest sorrow that does not weep. This incident occurs a little to the spectator's left, and, consequently, nearer the bow of the ship than the place of Nelson's fall. Immediately behind it stand the crew of a gun at their quarters, three on each side, its captain on the left: thus near, these men have seen the Admiral wounded; but, true in discipline, they keep their posts, with diverse expressions of emotion. Nothing can exceed the variety in this quality the picture shows. The artist is a master of expression, and so felicitous in dealing with it that nowhere do we get the slightest stain of melo-drama or attitudinizing, although the circumstances might well lead ordinary designers into those follies. It is impossible to look at the crews of the above-mentioned guns, still less at that which appears still further on our right, and fail to admire the power shown in rendering many personalities and varieties of human expressions among individuals of one common class engaged in a common office.

Between the two guns spoken of is seen a naked negro pointing out to a marine the man of the Redoutable who shot the Admiral; the soldier takes aim with his musket at him. Next to these, going forwards, come two marine officers looking through telescopes for signals from some other ship of the English fleet. Returning aft now, we come upon the steps that lead to the poop, ascending and descending which are marines and soldiers, some bearing wounded men. Upon the poop-deck itself is, with others, the young midshipman who shot the Admiral's slayer; the last being a mizen-top man of the Redoutable. It is related that the English sharpshooters during the rest of the fight kept their eyes so effectually upon this part of the enemy's rigging that none came down alive, and of those that did not attempt to descend the whole were slain; some of their bodies hung, arms and head downwards, over the sides of their little stronghold. The midshipman with eager face watches among the knot of French sailors for his man.

Seen under this poop as a gallery is the covered part of the quarter-deck, and just beneath the last-named group is a third gun and its crew, the captain of which pulls the lanyard or string of its flint-lock, with the true professional upward jerk of his fist. An incident so apparently barren of interest as this of a gun's discharge, has been rendered peculiarly effective by the genius, skill and care of the artist. The men keep their ranks, some quite at home and indifferent, some interested but steady; one, a stalwart fair-faced youth in his first battle, leans a little forward to watch through the port-hole the effect of the shot. Mindful of what we said respecting the artist's heedful study of costume, let us here exemplify its working. It was thought that the carronades of Nelson's time had long ago been melted into new fashions, but after much search one was dis-

covered in some half-forgotten corner of the dock-yard, refurbished up, re-fitted with its proper breaching or rope tackle, its appropriate flint-lock and carriage; this Mr. Maclise has painted most heedfully, and the thing is a record for all time of singular interest. Many things have become quite obsolete since the great Admiral's day; before the use of percussion caps flint-locks for cannon vanished, with them the horn of priming-powder the captain of each gun wore, slung by a belt across his body. Flint-locks were very fallible, and in the hurry of action not easily got to rights; on such failures, a common fuse was employed, for safety in using which each gun was furnished with a bucket, full of water, and fitted with a perforated cover, into which the burning end of the fuse could be placed after use in discharging the piece. With powder and cartridges about, and magazines open, such precautions were essential. Such a bucket stands here at the breech of this gun. Round about are many old-fashioned weapons, chain-shot, shot neatly bound up with rope to form the fearful grape, ramrods, sponges, screws, handspikes, &c. Facing us, and as if drawn inboard from the port-side of the ship, on which we stand, is a gun being sponged out by its crew; the captain, a weather-beaten fellow, strong and rough as a north-easter, stands with his thumb on the vent; a rosy, but powder-smirched boy, all heedless of death, runs along with a cartridge for this piece in his arms.

Proceeding now to the other end of the picture, passing the wounded Nelson and his friends, we come upon various excellently portrayed groups. A man, shot in the chest, is tended by comrades; one staunches the blood,—another, an old negro with a red handkerchief round his head, brings brandy in a glass. More to the right of these (forward), are three sailors mightily pulling on the main-top-sail halyard, with the purpose of clearing the rigging of fallen spars or ropes. Across the deck and on the bulwarks are the hammock-nettings, forming a sort of fortress of ropes and iron stanchions lined with the men's bedding, within which much of the work of a ship in action, and all the scene before us, take place. Here are more men, living, wounded, and dead. Thus far we have described the human element of this noble picture. Alongside of Nelson's ship are visible the three masts of the Redoutable. Showing beyond the rigging of both ships, entangled with, and borne aloft by that of the Victory, is an upper yard, with its sail attached, of her antagonist. Shot away, and thundering down upon her deck, is one of the Frenchman's masts, its head and top.

FINE-ART GOSSIP.—Mr. Gibson is reported to be engaged upon a statue of Hebe. Mr. Munro has executed a statue of a Naiad, larger than life; this is to be cast in bronze, and added to the Ingram Monument at Boston: also a Nymph with a vase, for a drinking fountain, commissioned by the late Lord Lansdowne; also a marble figure of Dante, for Lord Ashburton. Mr. Thornycroft is working on a statue of the Prince Consort to be erected at Wolverhampton. Mr. Durham will execute the Memorial to the late Bishop of Madras.

The dinner in aid of the Artists' General Benevolent Fund will take place this year, the forty-eighth, on the 28th inst., at the Freemasons' Tavern: Lord Carnarvon in the chair.

The design by M. de Triqueti, representing the Transfiguration, for decorating the apse of St. Paul's, has been selected for execution. As we understand the matter, it is not decided whether this work shall be in fresco, mosaic or the water-glass process. Unless M. de Triqueti has unusual skill in fresco-painting we should advise against that system. Considering the almost universal failure of the same in this country although attempted by many hands, some of which have had success elsewhere, we believe the public voice will go with us in this point. Mosaic is even less, if at all, a tried method with us; it offers the potent objection of being singularly unsuitable to the style of Wren's edifice. Admirably fitted to fill large surfaces in Byzantine or Romanesque architecture, as in St. Vitale, Ravenna, or Sta. M. Maggiore, Rome, the hardness and inflexibility of

its decorative character unfit it for the ornate and rather heavy grandeur of our own Cathedral. It is not desirable to resort to the manner of the later schools of Art in mosaic, exemplified by the "Navicella," in the vestibule of St. Peter's, Rome, after Giotto, for the reason given. Nor should we be inclined to reproduce that fashion of more recent date seen in mosaics at St. Mark's, Venice, and elsewhere, which, however admirable in its results, would be equally out of keeping with the style of St. Paul's. Mosaic departs from its appropriate feeling in rivalling the character of fresco, and has no advantages over the same. Water-glass, being freer in working, and consequently in style, than mosaic, is suited to the building proposed for decoration; it is proved practicable by the experience of German artists, and, in this country, by Mr. MacIise, and has facilities in execution that will render it far preferable to fresco; it is moreover much less costly and tedious in production.

The Hawick Archæological Society's Museum presents a feature which might be well imitated by similar associations. This is a series of oil-paintings and water-colour drawings, by a Hawick artist, of local noteworthy personages. Many such collections would be invaluable at some future date, and interesting now. Portraits of the mere churchwardens and local authorities, unless otherwise remarkable, might have but temporary importance, yet these would be better than none. The old soldier that is known to all the town, the man who won the Victoria Cross, the valiant doctor, parson and priest, who watched out fever or cholera, the sanitary reformer, the earnest teacher, the charity founder,—in fact, the Horatius, Lartius and Herminius of each generation, these are the men for commemoration; all those to whom the little town owes gratitude, being precisely the men who are least likely to erect monuments to themselves.

A curious example of the working of the copyright law relating to sculptures occurred at Liverpool recently. Mr. Smith, sculptor, of Liverpool, stated in the police court of that town that he had last year executed a bust of Mr. Tom Sayers, registered his copyright in the same and sold many casts. One of these casts was obtained by a person named Reynolds, a proprietor of wax-works, who appears to have moulded it and sold casts out of the mould, to the plaintiff's injury. The Act provides that any person infringing the copyright of another shall be liable to a penalty of not less than 5*l.*, and not more than 30*l.*, the penalty to go as damages to the plaintiff. A penalty of 20*l.* was inflicted.

The Water-Colour Society's Winter Exhibition of Studies and Sketches will close on Saturday, the 21st inst.—The Winter Exhibition at the French Gallery will close on Saturday, the 14th inst., to make way for the French Exhibition, as that of the Water-Colour Society will give place to its ordinary annual display.

The Emperor of the French has directed that portraits of the three painters of the Vernet family shall be deposited at Versailles.

A sale of pictures which took place in Paris last week showed, by the prices obtained, that the usual high rates for first-class works still rule. It must be remembered that of the following items many of their painters are dead. The Monkey Cooking, by Decamps, 26,000 francs.—the Orange Seller, same, 12,000*l.*—a Landscape, same, 5,000*l.*—a Festival, by M. Leys, 13,700*l.*—its companion, same, 19,000*l.*—The Duke of Alba in Holland, by M. Gallait, 15,500*l.*—The Fall of the Leaves, same, 16,050*l.*—a Bashi Bazouk, by H. Vernet, 12,400*l.*—Deer in the Underwood, by Mdle. R. Bonheur, 7,720*l.*—Léonora, by Ary Scheffer, 5,500*l.*—Martha and Margaret, same, 4,000*l.*—The Old Goatherd and his Son, by Leopold Robert, 2,450*l.*

MUSIC AND THE DRAMA

CRYSTAL PALACE CONCERTS.—Beethoven's 'Egmont' Music.—It would be hard to exaggerate the amount of pleasure given to all true musicians, this day week, at the Crystal Palace Concert. It is hard to understand how, since 1834 at least, one

of Beethoven's most glorious works, belonging to the very best period of his genius, should be as good as unknown in London. A Contemporary reminds us that it was some years ago performed by Mr. Wilson, with Mr. Willy's concert-band, at the music-hall in Store Street: but the performance did not excite any attention. And yet we were "first in the field," beyond the pale of Germany, in paying allegiance to the master. In their takings and leavings, the English are assuredly a peculiar people. Though, of course, incidental music written for a play should be performed with the play, if it is to produce its full effect. Beethoven's decorations to Goethe's tragedy, principally in the forms of symphonic "arguments" or *programmes*, are so largely developed, so wonderful in their intrinsic beauty and variety, apart from their scenic pertinence—that, considered as a set of pieces merely, they outvie the most elaborate and formal work produced by any other instrumental composer. He was, with some few happy exceptions, liable to be ill at ease and antagonistic when writing for the voice. 'Fidelio' is not without reproach in this respect; hence in classifying his music for the stage, we should rate these settings to 'Egmont' as higher in their beauty and their completeness than his one opera. 'Egmont' preceded 'Fidelio' by a brief space of time. The overture (the noblest orchestral piece extant in the sombre key of F minor), all know by heart. In *Clärchen's* first song, the rhythm, as a vocal rhythm, is not one of those we like the best. A moment's thought, however, establishes its propriety, when the "quick step" of the words is adverted to. Then comes the First *entracte*—an *andante* of the finest expression, followed by a brave and stirring *allegro*, wrought up with the uttermost brilliancy, and its close suspended by one of those happy strokes of entire freedom consistent with perfect form, of which Beethoven alone had the secret. The Second *entracte*, a *larghetto* in E flat, for rich beauty of thought and sound, and a certain majestic sweetness of expression, may pair off with the slow movement to the Symphony in B flat. Then comes *Clärchen's* gayer song, the theme of which is wrought up with such incomparable grace and fancy, in the *allegretto* which opens the Third *entracte*: it leads into Beethoven's happiest march—not excluding from the competition the choral march in his 'Ruins of Athens.' No more warlike tune, not forgetting Handel's march at the Leaguer of Jericho, in 'Joshua,' exists. The brevity of the two-bar phrases with which it opens, aids the effect; and how admirably are these combined and varied in the minor episode! The Fourth *entracte*, with its *andante agitato*, is perhaps the loveliest number in the work. Yearning and anxious tenderness cannot be more fully expressed. The movement is surcharged with beauty; yet it is no more sickly than one of Shakspeare's love soliloquies. What a lesson for those of a younger generation, who seem unable to conceive emotion in Art as dissociated from what is uncouth and hideous! This instrumental *andante* moves the soul to its depths as potently as the vocal lament "In sweetest harmony," in Handel's 'Saul,' although in neither is there an ugly chord, and though both are written in the major key, which painters of "the anguish of the present" avoid as though it must needs be frivolous, and not capable of the deepest melancholy. What is richer than a sunset on the Southern sea? but the glory intensifies the sadness. We must not loiter over the music to *Clärchen's* death, nor to that of *Egmont's* last scene, which again rises to a point where praise can hardly follow it without seeming bombast. This music should be heard again and again and again;—it will no more grow old in the hearing than the c minor Symphony, nor be heard without some new point of beauty developing itself on each repetition. The orchestral part was capitally given. Miss Armytage sang the songs: she is clever, but will do well to beware of recklessness, as a different thing from earnest, real enthusiasm. Mr. Arthur Mathison read the connecting text very well; a little more practice and polish alone being wanting to him;—and the English verses, by Mr. Bartholomew, are not easy to read, containing as they do too many "wise saws" and commonplace

pathetics such as *Dr. Dilworth* or the author of 'Proverbial Philosophy' might have serenely signed. Are they a translation of the text arranged for a similar purpose by Grillparzer? The work was most warmly received. The rest of the concert may be briefly dismissed. Mr. G. Perren sang a ballad by Kücken very well,—also one of his own composition. The Concert closed with the 'Corsaire' overture of M. Berlioz, the most delirious production, by its strange writer, that we know up to the time present. The daring is equal to the delirium, but (to play on words over a serious piece of business) there is no piracy in it;—though it contains an enormous amount of original noise, there are no themes, and the heaps of notes which stand for such would be claimed by no right-minded musical parent.—The next Concert, on the 14th, it was said, will be largely (as is graceful at the time) devoted to Danish music.

CONCERTS.—Press of matter makes it more than usually necessary to be brief regarding all the concerts, save one, which have been given since we wrote last.

'Israel' was given, as announced, by the *Sacred Harmonic Society* yesterday week. The tenor was Mr. Montem Smith: in his own walk and work a conscientious and thorough musician, of far greater value than many more showy and protesting men,—but in 'Israel' called on to bear a burthen above his strength.—Mr. John Thomas held his *Welsh Concert*, as announced, on St. David's Eve; a faery part-song by himself was among the music performed, which is pleasing, though hardly in the real Welsh style.—Miss Edith Wynne was foremost among his singers.

At Monday's *Popular Concert* the greatest novelty was Weber's *Pianoforte Sonata* in E minor, which we only recollect having heard once in public, many years ago. Though, perhaps, the least interesting of the four (that in a flat being the most so), it is still welcome, and picturesque in no common degree: the four, collectively, showing the composer in his best light as a constructor. Madame Arabella Goddard was the pianist. The singers were Madame Corbari and Mr. Wilbye Cooper, who sang for Mr. Sims Reeves, and who gave no less arduous a scene than "Deeper and deeper still" with very great success. There is to be a Beethoven Night on Monday next.

Mr. Ransford's Benefit Concert on Tuesday furnished a most liberal entertainment for all his friends,—among other artists Madame Sainton-Dolby and Miss Parepa, who sang, with extraordinary effect, a brilliant concert *scena*, composed by Mr. Benedict, with a view of showing her versatility of style. Her execution can now be hardly exceeded by any *soprano* who is singing at the time present. There was a new wedding glee by Mr. Linley,—not to speak of a version of 'God save the Queen,' with two new verses added, to suit the joyous time, by Mr. Edwin Ransford. The concert, of its miscellaneous kind, was, we repeat, liberal and lively.

Our English concert-goers, however, must not waste their speciality without being warned. We spoke the other day, in whimsical suggestion, of 'The Messiah' being given with a band of harps! Really, possible fulfilment of such a thing does not seem far off. We cannot but ask so sound a musician and so real an artist as Mr. Henry Leslie whether it was discreet, in his "national and patriotic concert" of Wednesday last, to add the band of the Scots Fusilier Guards to the choir of harpists joined to his chorus of singers? The last, we had imagined, was assembled with the view of executing unaccompanied choral music of the highest class, to compete with such a body as the *Dom Chor* of Berlin. It was not called on to do service at variance with such pretensions when assisting in a national harpers' concert—such as one of the Welsh meetings of Mr. John Thomas,—because these have a genuine and original character: the first, the best—we will add, the only good ones—of their kind. But we should be sorry to see such change of purpose becoming the rule, not the exception. Are we to be handed over to all and sundry melodies—"black, white, and grey"—accompanied anyhow? The minstrelsy—

not of the Scottish Border, but of Christy's — is as artistic as the mixture of a military band and harps however adroitly handled, to accompany so excellent and delicate a choir, in modern part-songs. Let all who make such concessions — be the argument what it will — recollect that "the fashion of the time passeth away" — but also, that

All the King's horses and all the King's men cannot restore a choice reputation to that which has once been made common.

ST. JAMES'S. — Miss Braddon's success as a novelist has gained for her works an introduction to the stage. On Saturday, a drama, by Mr. George Roberts, entitled 'Lady Audley's Secret,' was with the authoress's consent performed at this theatre. The audience was numerous as well as fashionable, and the piece was enthusiastically received. The story is well calculated for dramatic purposes, and the heroine brings out the qualities of Miss Herbert as an actress with more force than any other part in which she has appeared. It is not necessary to enter into the full details of the story. A bold, fascinating woman, with a fatal secret forming a motive strong enough for the commission of murder, and pursuing her purposes as long as reason remained to her to direct her proceedings, is a character full of opportunity for a competent actress. The playwright has managed to compress this argument into two acts without impairing its effect. The groundwork of the plot is well enough explained in the first scene, in a conversation between *Robert Audley* and *George Talboys*, the latter of whom relates the circumstances of his marriage, and how, having been driven by his father's austerities to the Australian gold-fields, he had never since heard of his wife. In the obituary of a morning paper he reads the announcement of her death at Ventnor, and is overwhelmed with grief, to the surprise and consternation of his friend. The story is then further developed in a conversation between *Phoebe* and *Luke Marks* at Audley Court, and the discovery of *Lady Audley's* reticence with the baby's sock and a tress of hair serve well to identify the wife of *Sir Michael Audley* with *Helen Talboys*. And now the visit of *Talboys* and *Robert Audley* to Audley Court takes place, where, in the library, an unveiled portrait discloses to the former that his wife had contracted a second marriage. An interview, of course, succeeds, and the murder is at once projected and carried out. *Lady Audley* persuades *George* to accompany her to the Lime Tree Walk, and causes him to drop into a well. The assassination is witnessed by *Luke Marks*, who has secreted himself under a tree by the window. The part of *George Talboys* was acted by Mr. Gaston Murray, with a power and discrimination which occasioned his recall before the curtain. Twelve months elapse between the acts. *Robert Audley*, stirred to action by the mysterious disappearance of his friend, has begun to suspect *Lady Audley* of the murder, and in an interview with her becomes more convinced, by her conduct, of the fact. He is, however, compelled by the baronet to retire from the field, and takes refuge in the village inn, now kept by *Luke Marks*, who has married *Phoebe*. *Lady Audley* sets fire to the inn, with the purpose of destroying *Robert* while sleeping there; but the youth escapes and confronts the guilty lady. The last scene, painted by Mr. William Beverley, represents the Lime Tree Walk and ancient well of Audley Court by moonlight, and was received with immense applause. Here the heroine momentarily triumphs, while her cheeks glow with the ruddy reflexion of the distant fire. Moreover, the turret-bell tolls for the death of the baronet, and all seems favourable for her interests. But *Luke Marks*, having become intoxicated, was unable to escape the fire; and, being now brought in on a litter, testifies to *Lady Audley's* guilt. For further corroboration, *George Talboys* himself is produced. Of course, he was rescued by *Marks* from the well, and went abroad. But he has now returned, with the intention of relieving the conscience of his wife from the guilt that she had intended. His presence at such a crisis at once develops the hereditary insanity which is supposed to have

prompted the lady's crimes; and the guilty woman, with a wild shriek, falls — not lifeless, but deprived of reason for a while. The last situation was powerfully interpreted by Miss Herbert, whose performance of the part altogether was of such merit that her reputation will be much increased by her fortunate assumption of the character.

MUSICAL AND DRAMATIC GOSSIP. — We understand that, among other Wedding Music, we may look for a *Serenata* from Mr. W. C. Cusina, to words by Mr. Oxenford, and that this will probably be performed, on the opening night of the season, at Her Majesty's Theatre. — We may here state, in reference to the loyal preparations on foot for Tuesday, that the *Carol* by Mr. Brinley Richards, mentioned last week, will be sung on the Prince's Wedding-day by six thousand children at Swansea.

Every good musician present at the trial-party held by the *Musical Society*, announced last week, is unanimous in speaking highly of the Symphony by M. Silas, brought to hearing there. Thus its performance, as sequel to a success so highly commended may be fairly urged on the Society as a pleasant duty for them — even by those who do not conceive that experiments are matters for report, or that any competitor should be discouraged by the preference of one name. M. Silas has not till now enjoyed all the chances which his real and solid merits deserve: and a good new Symphony, of any school, or from any man, is, indeed, a desideratum. It is indispensable for any composer, who aspires really to compose, to test himself, not by his dreams, not by his sciences — (least of all by his flatterers) — but by the public. We hope to hear this Symphony by M. Silas — thus really tested — having small doubt of the result, because we know his great worth as a musician.

On Wednesday last Miss Parepa appeared as *Amina*, in 'La Sonnambula,' at the Royal English Opera.

The Philharmonic Concerts commence on Monday. The programme of the first contains an Overture by Herr Gade — a timely selection on the wedding- eve — but no other novelty. The *Concerto* is to be Beethoven's in *F* flat, played by Mr. John Francis Barnett.

Herr Sigismund Blumner announces three Pianoforte *Soirées*, the first of which will be held on the 21st of this month. — Herr Pauer's Historical Concerts will begin on the 20th of April.

An important musical sale, both of publications and of instruments, took place at the rooms of Messrs. Puttick & Simpson on Wednesday and Thursday.

The late novelties at the Opéra Comique of Paris seem to be only so many mild failures. The latest has been 'La Déesse et le Berger,' by M. Duprato. — 'Le Caid' of M. Ambroise Thomas has been sung in Italian at Milan with great success. — M. von Flotow's 'Martha' seems to have possessed itself of Italy. — Herr Wagner's 'Lohengrin' has been given at Rotterdam. — It is said that the Italian Opera in St. Petersburg will be renounced by the Government; from which it would seem as if the dearth of singers and composers was beginning to tell its tale in Russia, as elsewhere. — "Tell me with whom thou goest," &c., is a proverb which applies to the subjects chosen by composers for music, and their results. On the authority of foreign journals, Signor Verdi is said to intend musically to illustrate M. Flaubert's hideous novel of 'Salambo,' (which, by the way, has furnished more than one lady with her costume at the late Court-balls in Paris). As fit for music is 'The Veiled Prophet' — fitter far 'Frankenstein.' — What is to become of the catastrophe? — The *Allgemeine Musikalische Zeitung* announces, among new German operas, 'Der Fürst von Hildburghausen,' by Herr Dorn, 'Die Brant von Messina,' by Herr Bonewitz, and 'Feramorz,' by Herr Rubinstein, which last is to come to a hearing at Dresden forthwith.

We have the following from Naples: — Signor Tiberini has been engaged at the San Carlo Theatre, and 'Il Ballo in Maschera' and 'Roberto il Diavolo' are in course of active preparation. Meadames Titiens and Steffanone will thus stand a fairer chance of being appreciated as they deserve

to be than they have hitherto enjoyed. There is some idea of substituting the ballet of 'Maaniello' for what are here called the "detestable" ballets of 'I Bianchi e Neri' and 'Isola degli Amori.'

MISCELLANEA

The Hall of Rufus. — For many years past, after levees or drawing-rooms have been held, the publication in the newspapers of bitter complaints of the way in which they are managed has become a thing of custom. The crowded condition of the rooms, and the limited facilities for ingress and egress lead necessarily to scenes which ought not to occur at the gallery-door of a theatre, much less in the palace of a Sovereign. Making all allowance for what might possibly be done by improved regulations, it cannot, I presume, be disputed that for the requirements of the present age the state apartments at St. James's are really insufficient in size for the reception of more than half the number of those who expect, and are expected, to attend. It is probable, therefore, that ere long the reiteration of grumbling will induce a cry from those who go to Court in favour of an enlargement of the building, and a counter-cry from many, if not all, who *don't* go, against such a measure. It is also most probable that "the eyes will have it," and that a sum of money ranging from 50,000*l.* to half a million will be handed over to the architects and builders for the purpose referred to. This is not, in my opinion, "a consummation devoutly to be wished"; inasmuch as the nation possesses already at Westminster, in its unmatched and unmatchable Hall, the means of eclipsing every Court in Europe in the impressive grandeur which Royal pageants ought to exhibit, and which could there be displayed in a manner worthy of this country, and of the Sovereign who presides over it. Westminster Hall could, for a trifle compared with what would be the cost of remodelling St. James's, be rendered available for purposes of State, even without interfering with its ordinary use as the central chamber of communication with the Courts of Law and the Houses of Parliament, which have the command of exits and entrances quite distinct from and independent of it. H. L.

New Barometrical Observations. — We read the following passage in the *Comercio de Lima* of January 8, 1863: — "Lately a large barometer has been erected in the National Astronomical Observatory of Santiago de Chile. By this instrument has been observed a singular phenomenon new to science. We know, particularly through the observations of Humboldt, that the barometer rises and falls during the day in a peculiar manner, being at its maximum height at 10 A.M. and at 10 P.M., whilst the lowest readings are between 4 P.M. and 4 A.M. The regularity of this periodical movement within the tropics is such during the year, that Humboldt could tell the time within fifteen minutes. This movement has been observed with much regularity in Santiago de Chile during the winter and summer months; but in the month of February the movement entirely ceases, showing then only the ordinary maximum and minimum heights in the twenty-four hours. Señor Moesta has tried to explain this occurrence, and has demonstrated mathematically that the oscillatory movement of the barometer is produced by the sun's power, analogous to that of gravitation, and that the said movement ought to disappear in the month of February in consequence of the great variation of temperature during the course of the day. Thus the interesting result has been arrived at, that by virtue of the sun's power a movement is manifested in the atmosphere analogous to the action of the tides; and it is this that causes the rise and fall of the barometrical column in Santiago, about '1/3 of a millimètre.' This force exercised by the sun cannot be what is generally known as that of attraction; but it is the same electric force which causes the diurnal variations of the magnetic compass, and the same that produces such visible changes in the forms of comets whenever they approach the vicinity of the sun."

LITERATURE.

Incidents in my Life. By D. D. Home. (Longman & Co.)

THIS impudent and foolish book criticizes itself. An introduction, professing to be "written by a friend," presents Mr. Home as "delicate in health, extremely sensitive in spirit, coming forward with his narration for no conceivable end but to propagate a knowledge of what he regards as important truths; . . . a man of a religious turn of mind, pure-hearted and unworldly"—in fact, as a person who is no fit object for the jests of railing Rabshakehs! Mr. Home throughout his book indorses this sweet and saintly character of himself and of his proceedings very much after the fashion of Wandering Willie in Scott's 'Redgauntlet,' who modestly capped the panegyrics of the notorious little knave Benjie by adding, "All is true that the little boy says"! But we do not know the name of the mystic's "little boy." He is only Mr. Home's friend. Mr. Home answers for him, and he answers for Mr. Home: that is all we learn.

Then comes the table-turner's own part of the tale. His mother, he tells us, was a seer of Scotch extraction, and gifted with second sight. He began to prove himself her worthy son so early as the age of thirteen, the gift having come upon him after hearing the well-known story of the Beresford Ghost with the black ribbon round her wrist (so admirably used by Crabbe in his 'Lady Barbara'). The boy-comrade who read it to him died; and, Mr. Home assures us, appeared to him as the two had previously agreed on. This settled the profession of the youth; and confirmation of the same was administered by his mother, who prophesied her own decease and all its circumstances, some of which, we are assured, were very remarkable. A few months after she died, Mr. Home "heard three loud blows on the head of his bed, as if struck by a hammer." He was much surprised, not knowing precisely what to make of them, till an impression came on him "that they were something not of earth." He had heard ere this of "the Rochester knockings," but had paid little attention to them—puny sounds as compared with those of his spirit hammer. His aunt disapproved of the noise, and being a staunch Wesleyan convertite (Mr. Home himself having joined the Congregationalists) rated him for bringing the Devil into her house; threw a chair at him;—an idle token of disapproval, as it proved,—since, shortly afterwards, the chairs in her gifted nephew's room began to amble about of their own accord and accost him civilly, thus setting a seal on his mission as Medium. When, by way of final exorcism, the aunt placed the family Bible on the table and sate upon it, the table, "as if pleased to bear such a burden," the Bible and the aunt atop were lifted from the floor! The woman could not bear such insubordination in her furniture, however holy the pretext, and signified to Mr. Home that he had better leave her house. Sweet are the uses of persecution. Lord Byron was "cradled into poetry" by the wrong of a review; Mr. Home was strengthened in the line he declares himself to have been inspired to take by this misunderstanding; and, from that moment, shot a head of all predecessors and competitors. Friends were raised up for him. Articles in the papers narrated how, when he was aged eighteen, "the medium turned over a table into *our* (the writer's) lap." The American editor's lap must have been a large one; or the table must have been the smallest

table of a "hen and chickens" brood. This table in a journalist's lap brought Mr. Home forward at once; and his life, from that time to the time present, has been one of stupendous wonders; of attentions paid to him with unquestioning subscription by all who met him prepared to believe; favours from great personages, only too thankful to have their wearily splendid lives entertained by a new sensation which was very awful and a little irreligious; miracles and communications with the other world. That Mr. Home could not prevent all or any part of this excitement he assures us on his honour. Of course not. Then, he tells us that his power has left him at one or two critical junctures of his life. He does not pretend to account for his superiority to common mortals, neither to apologize for it; he does not offer one solitary proof of its reality which would stand examination. The presence of an element of scepticism has always a cramping effect on his manifestations; sometimes they will not appear. When the medium is about to fly or to float to the ceiling in a darkened room (the "dear spirits" will not permit such blessed marvels to be distinctly seen) he is not to be talked to or touched. Devils, too, mingle in the dance. Further, there are impostors abroad, false mediums, who, we believe, have exhibited Mr. Home's phenomena. What matter? The world is enjoined to take everything that he pleases to tell without a grain of salt. There is a good deal of mystery—not explained—about some parts of his career. His life in Florence, for example, is very briefly dismissed.

Three points may be stated as necessary to be taken in conjunction, even by those disposed to admit the existence of a class of supernatural mediators, and who may wish to judge how far Mr. Home is a sincere and self-deluded member of such priesthood, how far the reverse. First, it has been again and again urged that persons who trafficked in awful mysteries like these, being commissioned from on high, were at once vulgarized, deteriorated, handed over to the counsels of evil spirits, if they spoke with the dead, or made the dead speak, or called them or any part of them into visible presence for lucre. When one wretched charlatan after another has been unmasked, the pure have stood sorrowfully aloof, and repudiated all fellowship with one who tampered with his birthright for a mess of pottage. "Medium" after "medium," detected in imposture, has been anathematized or excused as having handed himself over to the devil by the base act of sale and barter of his gift. Now Mr. Home, as Mr. Howitt, indeed, has already told us, has gained a competence by his ghastly shows. Rings, purses (not empty), other presents more solid than praise have been showered on him as thickly as the slippers with which devout ladies glorify their dear favourite clergyman. Secondly, the Romish Church has always held practices such as those by which Mr. Home has thriven to be sinful, heretical, and tending to damnation. Those who remember this canon are invited to consider how Mr. Home, after being converted from Congregationalism to Roman Catholicism, quarrelled with the sincere and stern *Père Ravignani*, who insisted on his desisting from such unauthorized practices; also how he gave up his next confessor, who, it was hoped, might be more lenient to one who was driving so brisk and profitable a trade, and amusing so many great people and crowned heads. So that Mr. Home floats strangely, not in the air alone, but between the two stools of authority and private judgment. Thirdly, the wittnesses brought by him into the box who answer

to their names are few. A great person has testified to his marvellous power and unimpeachable integrity; a sovereign has been as much impressed for his soul's good as the Emperor of Russia was by William Allen the Quaker; but we do not learn who the great person and the sovereign were. The godfathers and godmothers who appear in these pages to accredit his proceedings are Mr. Wilkinson (a spiritualist before he saw Mr. Home), Mr. J. G. Crawford, "a gentleman who had for years resisted all belief in such phenomena," Mr. T. A. Trollope, Mr. James Wason, solicitor; Dr. Gully of Malvern, Mr. John Jones of Basinghall Street, Mr. James Hutchinson of the Stock Exchange, Mr. Cox of the hotel in Jernynr Street, Mr. Coleman of Bayswater, Mr. and Mrs. Howitt and Mrs. S. C. Hall—which last witness deposes to having received the present of a lace cap from the deceased Mrs. Home, laid by supernatural hands on her knee!

The above considerations having been purposely grouped together not to interrupt the narrative, Mr. Home's book shall, from this point, speak for itself.

The American contributions to this work are, as Mr. Howitt had prepared us to expect, more highly spiced with what is terrible and revolting than those from this side of the Atlantic. When the following dip into Pandemonium was made by the oracle, he could not have been eighteen:—

"Last winter while spending a few days at the house of Mr. Rufus Elmer, Springfield, I became acquainted with Mr. Home. One evening, Mr. Home, Mr. and Mrs. Elmer, and I were engaged in general conversation, when suddenly, and most unexpectedly to us all, Mr. Home was deeply entranced. A momentary silence ensued, when the medium said 'Hannah Brittan is here!' I was surprised at the announcement, for I had not ever thought of the person indicated for many days, or perhaps months, and we parted for all time when I was but a little child. I remained silent, but mentally inquired how I might be assured of her actual presence. Immediately Mr. Home began to exhibit signs of the deepest anguish. Rising from his seat, he walked to and fro in the apartment, wringing his hands, and exhibiting a wild and frantic manner and expression. He groaned in spirit, and audibly, and often smote his forehead and uttered incoherent words of prayer: He addressed me in terms of tenderness, and sighed and uttered bitter lamentations. Ever and anon, he gave utterance to expressions like the following:—'Oh, how dark! What diabolical clouds! What a frightful chasm! Deep—down—far down! I see the fiery flood! Hold! Stay!—Save me from the pit! I'm in a terrible labyrinth! I see no way out! There's no light! How wild!—gloomy! The clouds roll in upon me! The darkness deepens! My head is whirling! Where am I!—' During this exciting scene, which lasted perhaps half an hour, I remained a silent spectator, the medium was unconscious, and the whole was inexplicable to Mr. and Mrs. Elmer. The circumstances occurred some twelve years before the birth of Mr. Home. No person in all that region knew aught of the history of Hannah Brittan, or that such a person ever existed. But to me the scene was one of peculiar and painful significance. She was highly gifted by nature, and endowed with the tenderest sensibilities. She became insane from believing in the doctrine of endless punishment, and when I last saw her, the terrible reality, so graphically depicted in the scenes I have attempted to describe, was present, in all its mournful details, before me!"

There was some thought, Mr. Home tells us, of his studying medicine as a profession, but the "dear spirits" would not allow it. These Spirits became very imperious and sprightly. They dragged his bed up and down the room; even when Mr. F. C. Andrae was in it as well as himself; and they could only by the most urgent

entreaty be prevailed on to stop. In America, however, there were many "mediums"; whereas Europe wanted a missionary. Accordingly, in 1855, Mr. Home came over the sea. Immediately on his arrival in London, he found himself in a congenial circle. Mr. Cox, of the hotel in Jermyn Street, (who, by the way, among other curious sights for which he was indebted to Mr. Home, testifies to having seen two decanters for one,) "welcomed him like a father." He went thence to Ealing, and there called up for the gratification of a distinguished novelist "the spirit who had influenced him to write 'Zanoni.'" Other sittings at Ealing, where matters went on less smoothly, are unreported. Why should a chronicler, who is all for truth and transparency, evade an account of his failures? Mr. Wilkinson is prolix in his details of what passed on these occasions. The "spirit hands," of which so much has been said, greeted Mr. Wilkinson, very heartily, in the dusk—slapped his knee "affirmatively," whenever he made a lucky guess as to which deceased friend he had the pleasure of chatting with, and "danced down his leg with the liveliest affirming finger tips." One hand belonged to an arm in a "cambric sleeve, which showed like biscuit porcelain in the moonlight, and terminated apparently in a graceful cascade of drapery." We are comforted, elsewhere, by learning that Superstition has a black, withered hand, by way of emblem.

When the Ealing harvest was fairly gathered in, Mr. Home went abroad, first to Florence with a friend.—

"I met there (says he) many distinguished men and women, and a Prince of one of the Royal Houses became deeply interested in what he witnessed. The manifestations while I was at Florence were very strong. I remember on one occasion while the Countess O—— was seated at one of Erard's grand action pianos, it rose and balanced itself in the air during the whole time she was playing."

Did Countess O—— rise to the occasion? and balance herself in the air as well as the "Patent Grand"? Our seer and his friends lay great stress on the musical feats of the spirits, without apparently knowing much of the art, its terms, or its celebrities. Mrs. Howitt, for instance, speaks of "M. Magnus the celebrated composer at Paris," as being a witness of some wonderful performances. We are indifferently well acquainted with the Parisian musical world, but do not know the great man appealed to. The accordion, in the hands of Mr. Home's familiars, does odd things; sometimes filling the room "with a volume of sounds like a pealing organ, and still no false note," sometimes indulging in a *fantasia* descriptive of this world and the next; after the fashion, so far as we can make out, of Mr. German Reed's composer in his clever entertainment. This world is expressed by the musical spirits in discords crude enough to set the teeth on edge; the next in celestial melodies. Oftentimes (and this shows how the spirits can be *débonnaire* and appropriate on occasions) the accordion concert concludes with the performance of "Home, sweet Home!"

In the course of his foreign wanderings, Mr. Home fell in with the sister of Count Gregoire Koucheleff Besborodko. The lady was an ardent spiritualist and medium, like himself. They were married,—the author of 'Monte Christo' being "best man" on the occasion, and undertaking a journey to do honour to the young couple, which journey also could be wrought up in a book. Never was marriage more complete. Shakspeare's *Beatrice* remembered to have heard that "a star danced when she was born," but this was a trifle as compared

with what befell the Homes, during their brief wedded life.
