Beatrice's career forms only the centre of the story, which has an abundance of plot, counter-plot, and episode, and even a *superabundance* of character. In her delineations of female character, Mrs. Norton has displayed her greatest strength. Her men are shadowy and unreal; but the women are remarkable, in some instances remarkably unpleasant, specimens of their kind. The Marchioness of Updown is a striking piece of testimony, borne by one well fitted to give evidence on such a subject, that a woman may not only be a lady of rank, but also a distinguished leader of fashion, and yet be a very low sort of creature. "Curious, now, ain't it, Brown," observes Mrs. Norton's police-serjeant, "how like females are one to t'other? This one's a real marchioness, with a real sort of marquis, dining with the Queen and all that; and here she's been a-behaving for all the world like Betsy Blane, the fishwoman as I had in the lock-up last night. She's as like her,—as like as one oyster-shell is to another." It is possible that the most powerfully-drawn female characters of 'Lost and Saved' will offend many readers, but no competent judge will question the unpleasant truthfulness of their portraiture. No one but a woman could have created the ladies of the Treherne family; and not one man in twenty will fully appreciate the art which has

put that group of well-contrasted women on canvas. 'Lost and Saved' is a work of such rare excellence, that it would create a stir amongst novel-readers even if it had not Mrs. Norton's name on the title-page.

Journal of a Tour in Italy, with Reflections on the Present Condition and Prospects of Religion in that Country. By Chr. Wordsworth, D.D. 2 vols. (Rivingtons.)

THREE months of observation of Church matters in Italy are here narrated at some length, by one who speaks with authority. Dr. Wordsworth states that "he was disposed to believe, before he set out from England, that the present juncture of Italian affairs may perhaps prove more important to the Church in Italy than any crisis in her history since the days of the Council of Trent in the sixteenth century,"—the above confession making it clear that he went forth with a strong predisposition in his mind to receive impressions of a particular stamp and colour. Like other travellers thus armed, he seems to have found those interlocutors who supplied such answers to his questions as precisely suited them. The record, however, does not thereby gain in interest and authority, but the reverse. Dr. Wordsworth, again, has a habit of illustrating his subject by conjecture and inquiry, which, however favourite as the resource of certain tourists, is neither conclusive nor agreeable. Let us give an instance:—

"We are told (he says) by the *Osservatore Romano* that 37,000 pounds of wax were used on the occasion, to illuminate St. Peter's at mid-day! Might not their value have been better spent, and in a manner more pleasing to the souls of the Martyrs, in dispelling the darkness of heathenism, and diffusing the light of the Gospel? Surely the light which blazed there on Whitsunday had little resemblance to that which came down from Heaven on the Day of Pentecost."

No doubt it would; but a political system is not to be judged from each of its details, taken apart from the rest. We English spend a good deal of money in powder for our royal salutes. Would it be worth while for Cardinal Antonelli to sneer at the noise and stench of our ports of entry, and to suggest the policy of our spending the money on missionaries?

The reader experienced in clerical travels no more needs to be told what manner of information he will find in this book, than he would in a tour among the English Protestant churches by Cardinal Wiseman. Dr. Wordsworth—to his credit be it said, neither bigoted nor bitter in his zeal—is thoroughly intent on the downfall of the Romish Church, and appears to conceive that so goodly a deliverance of the minds of men from the trammels of superstition may not be very far off. Yet some of his facts are not easy to reconcile with this comfortable anticipation. Aware as our clergyman is of the attention which the numerous schisms in the Church of England are exciting among Roman Catholics, he points out with triumph that St. Peter's viceroy does not rule over an united kingdom, and appeals to the thousands of priestly signatures which emphasized Father Passaglia's protest against the Pope retaining temporal power. Yet this very Passaglia was one of the most active upholders of the doctrine of the Immaculate Conception, only the other day added to the infallible articles of faith, to the amazement and concern of Protestant Europe!

We could pursue this line of remark and criticism further, were this the time and place for pronouncing on phenomena so contradictory as the epoch presents. Instead of so doing, however, we will merely call attention to two

of the sights of Florence noted by Dr. Wordsworth:—

"*Sunday, June 1.*—Went to the English church, Via Maglio, at eleven A.M. and half past three P.M. The city was illuminated to-day, being the 'Festa dello Statuto.' The Piazza dell' Indipendenza was the centre of the gaiety. There was little creative invention in the arrangement of the lamps; no devices; not even any mottoes; not much enthusiasm or joy in the look of the people; indeed, this is a time of anxiety and suspense. Tuscany has lost its ancient nationality; and the kingdom of Italy is not yet constituted. It has no capital. It is a body without a head. In this state of uncertainty, commerce and trade suffer. No one can tell what will come next. I went to the Duomo; only a small congregation there, even at ten in the morning. The people are much vexed and annoyed, because the Archbishop, acting under orders from Rome (of May 18, 1861), will not allow the national Anniversary to be celebrated or in any way recognized in the Cathedral. I was therefore surprised to see in the evening that the exterior of the cupola of the Cathedral was illuminated. On inquiring of one of the Canons of the Cathedral the reason of this discrepancy, I was informed by him that the external decorations and the material repairs of the Cathedral are under the management of a separate corporation, distinct from that which has the control of the ritual of that church. Here is a striking specimen of the conflict which is now rending this country in pieces. On this Sunday, June 1st, the festival of the King and the Nation, the interior of this noble Cathedral shows no sign of joy and thankfulness; it is possessed, as it were, with a deaf and dumb spirit; its Archbishop and clergy will listen to no entreaties, and refuse to utter a single syllable of supplication for the monarch and the people. But the exterior of the Cathedral is one blaze of light, and exults in an ecstasy of joy. The greatest church of Tuscany is a house divided against itself—a melancholy specimen and epitome of the state of Italy at this crisis; and an omen, it is to be feared, of coming sorrows. * * *Friday, June 6.*—Grand mass to-day at S. Croce in honour of Cavour, it being the first anniversary of his death. There were banners fringed with crape hung out of the windows in the streets. On the eve, at the Ville de Paris, the men (no women) were engaged in making wreaths and garlands of flowers, lilies, carnations, blue larkspurs and green leaves, to decorate his cenotaph. Over the door of the church was the following inscription:—

A CAMILLO DI CAVOUR,
Mente d'Italia,
Che oggi fa l'anno lo pianse
Rinnovando per voto pubblico
Degne onoranze.
Giuriamo a Dio in questo Santuario
Di avita sapienza e gloria perenne
Compire con fede, senno, amore,
Ond' ebbe cominciamento
L'Unità della Patria.

The scene in the church after the mass was too dramatic and artificial for our taste. The glare and smell of the countless candles, the gaudy style of ornament of the high catafalque, raised in the centre of the church; and, above all, the glorification of the human instrument in the temple of God, were all repugnant to the feelings, in different ways. All that was here displayed began and ended in *man.*"

We fancy that the above remarks and examples will suffice to give an idea of the nature of this book. Its recommendations are special, and do not entitle it, in our judgment, to take an important place in the library of Italian travel.

Ballads and Songs. By Bessie Rayner Parkes. (Bell & Daldy.)

We are afraid that in after-times the poetry of our age will be thought very sombre, and our poets a lot of "sad fellows." The Homeric laughter, deep-chested, with all the heart in it, never rings now-a-days. The simple, perfect morning health of Chaucer no longer vitalizes

English poetry. The high spirits and *bonhomie* of the Elizabethan men reign and rule no more. The cloudiness of our climate has surely culminated in our poetry, or else the nervous system of our poets has worked and fretted its way too near the surface, and requires covering in with an ampler, ruddier *physique*. Mirth and jollity have gone the way of May-dances and May-poles. We shall not find "merrie England" in verse any more than in the prose of present life. Our poets do not come to us by any chance with the mirthful twinkle in the eye and the lurking laughter playing round the corners of the mouth; spring never dances in their blood, and there would seem to be no more "cakes and ale." The strings of their lyre are too damp and lax with tears for it to ring out very cheerily; while the sound of weeping runs through all their music. Our singers are rather like those clocks that cannot strike unless they carry heavy weights. They indulge rather too much in the luxury of grief and wear too often the livery of woe! What light they do receive from above appears to come to them in the old limited Rembrandtish way, chiefly serving to show the surrounding glooms of life. They sing in a voice that is lugubrious and depressing. Their imitators follow suit, and lift up the eyes and turn down the corners of the mouth in a most melancholy fashion. We believe it to be a positive fact that most of our Magazines in the course of a year or two become perfect mausoleums of dead babies. Loss is everything, and the gains go for nothing. They have not the thankful heart and cheerful courage of that Yankee editor, who could sit rocking the cradle and sing "Betsy's got another baby." We wish they had a little more of the merry heart that "goes all the day," and that their success did not lie so much in finding out a few tender places and continually touching these. We wish they would lubricate the drynesses of life with a little humour instead of so many tears, and give us something more of the blithe spirit that comes of the best health and noblest natural conditions. Jean Paul tells us that the tear of sympathy for sorrow is holy and beautiful; but the tear of joy is still more precious and a diamond of the first water.

What we like most in the Ballads of Miss Parkes is the chirping cheeriness of soul that will see the "silver lining" to a dark cloud, and make the most of the common wayside pleasures and chance felicities of life. There is a sunshine in her song that will break through the dullest atmosphere—strike the mournful mist into jewelry drops, and have done with it! Her poetry goes to no great depth, but we are thankful for the absence of whining and whimpering. Here is a very good sample of the cheery heart that leaps lightly into song:—

UP THE RIVER.

'Tis April! 'tis a Holyday! and they shut close yester-even
The golden gates of Sydenham with the clang of iron
bars;
The terraces lie shadowless beneath the smile of Heaven,
And trodden but by chasing clouds and the silent feet of
stars.

'Tis April! 'tis a Holyday! and the Halls of the Museum
Have nothing noisier than the ghosts of Pharaohs on
their floors;
The mastodons and elephants feel very dull to see 'em,
And stare with idle eyeballs at the unresponsive doors.

Bat the River still is open, and its gentle tide comes
flowing
With a thousand tender whispers of the everlasting sea;
And I know that in the woodlands all the early flowers are
blowing,
And breathing their sweet messages to Laurence and
to me.

The sun is mounting towards the noon, and up above the
towers
Of the Abbey and the Parliament the sky's without a
flaw.
A most diabolical thing it were to disobey the flowers,
So, Laurence, get your Sunday-hat, and clear your brains
of law.

I dearly love this London, this royal northern London,
And am up in all its history to Brutus and to Lud;
But I wish that certain Puritan simplicities were undone,
That the houses had more gable-ends, and the river less
of mud.

Yet the River still is beautiful, rejoicing in the quaintest
Old corners for a painter (till the new quays are begun).
See there the line of distant hills, and where the blue is
faintest,

How the brown sails of the barges lie slanting in the sun.
Here's a steamer—now we're in it—one is passing every
minute;

There's the palace of St. Stephen, which they call a
"dream in stone";

But I think, beyond all question, it was in an indigestion
That the architect devised those scrolls whose language is
unknown.

Now we pass the Lollards' Tower as we glide upon our
journey,

And think of Wicliffe's ashes scattered wide across the
sea;

Pass the site of ancient Ranelagh, which (*vide Fanny
Burney*)

Brings up the tales we read at school to Laurence and
to me.

At last we get to Putney, and we rush across the river,
The gentle rural river, flowing softly thro' the grass;
And we walk more fast than ever, for our nerves are in a
quiver,

Till we mount the hill of Wimbledon, and see the
shadows pass

Athwart the budding chestnuts, and clear brown waters
lying,

Filled with the click of insects, among the yellowing
gorse;

Here there is no human creature, and the only living
feature

Of all this glorious common is that idle old white horse.

And he is very happy, cropping herbage fresh and sappy,
Stretching out his tired legs thro' all the lonely day,—
And the lark is upon high, singing madly in the sky,—
And, Laurence, look in yonder hedge—is it—it is—white
May!

Oh! I see the fields of Warwick, and the tower of old
St. Mary's—

The grand grey tower which Wren designed—and the
common melts away;

I am on the lilled Avon, and among the Stratford fairies,
I am on my own dear Avon, a happy child at play,—
I remember—this is Middlesex—sweet vision, wilt not
stay?

Dear Laurence, jump across the stream, and bring that
branch of May.

It is, indeed, a day of days, the sunlight grows more mellow,
As the sun goes softly sloping down towards the woods
of Comb;

The sky is blue, the hills are blue, the budding gorse is
yellow,

And all the air is happy with a mixture of perfume.

Oh, Laurence! when a judge, and wise in all the learned
fudge

Of that book I shut this morning, and on your way to
riches,

When, in ample wig and sleeve, your guineas you receive,
They'll not be half so golden as the primrose in these
ditches!

See, they drop about the ground, and sing without a sound,
Thick clusters of anemones, and primrose-roots by
dozens;

Saucy blooms without a measure blow in wantonness of
pleasure,

And nobody to know it but two wandering London
cousins.

The gracious, golden primroses! the starry white anemones!
Fill up the basket right and left, we're beggars for the
board,

Let's sing a refrain in this wood, "May Ruskin rule his
enemies!"

(I think that we are trespassing—but never mind the
board!)

The sun is sinking in the west, we'll leave the wood
behind us,

Across the road and up the steps, see here is Richmond
Park;

Let's plunge amid the ferny glades, where only deer could
find us—

It wants an hour to sunset, and two before it's dark!

There, now we're on the terrace; see, this regal Thames is
winding

Among its poplared islands with a slow majestic pace;
We should see the towers of Windsor if the sun were not
so blinding.

It casts a glow on all the trees, and a glory on your face.

Golden is the landscape, and the river and the people,
The cedar stems are molten now the sun is going down,—
Let's keep the vision as it is. The clock in yonder steeple
Reminds us it is getting late, and we're miles away from
town.

I just see the towers of London—the far, faint towers of
London:

We'll jump into the second class, beside that satin gown.

See! we run beside the river, on its breast the last rays
quiver:

Oh! what an April holiday! and all for half-a-crown!

The Cockney's "outing" for the day never
had a more musical accompaniment. The breath

of fresh air, glimpse of blue sky and wild
flowers—the sunny warmth of spring and the
dim coolness of wood and water, which may be
had so near to the great city, have here found
a most sprightly setting. We have taken the
liberty of leaving out some lines; also, we have
given a hint to the printers with regard to their
"setting." We wish they would remember that
where poetry has alternate rhymes, the lines
should be "indented" alternately. This gives
a clue to the eye which is quite necessary. It is
like marking the "time" of music with its in-
dicative figures. Yet many writers and printers
pay no attention to this, but huddle all on one
level; or, if an exception be made, it is often
with the wrong rhymes.

'A Midsummer Night's Dream' contains
another pleasant illustration of Miss Parkes's
open-air fancy and lively manner. Oberon, or
any other lover, we suppose, *loquitur*.—

Alas! they have stolen my Fairy Princess,
And where they have hidden her I cannot guess.
I've asked of her Father, I've asked of her Mother,
But they cannot tell, or they will not discover.
And Men, when I question them, laugh me to scorn,
And no one has seen her since yesterday morn!
I went to the wood, and I asked of the Leaves;
But they have a whispering way that deceives;
And the Oak and the Elm, when they will, can entwine
The thickest of screens with the Ivy and Vine.
I went to the Wind, who replied with a scoff,
He had met her, 'twas true; but a longish way off.
And then the wild fellow swept over the hill,
And all in the wake of his bluster was still.
I went to the Water, who promised a vision,
Then suddenly rippled in bursts of derision;
And asked if I thought he was likely to know
Who had looked in his mirror an hour ago!
(But, oh! if one moment she smiled in my eyes,
Within me for ever the memory lies!)

I went to the Flowers; but the secrets she knows
Are tightly curled up in the heart of the Rose;
And nothing that lovers can swear or forget
Is ever betrayed by the dear Mignonne.
The pale Water-lily lies open and bare,
So openly calm that no story is there;
Not one of the Flowers, alas! will confess
Whatever they know of my Fairy Princess.
O wonderful Nature! I know you have hidden
This delicate darling away from my sight;
I dread that you will not restore her unhidden
By spells which my tongue cannot conjure aright!
Ah! moved by my pleading, the merciful Mother
Has spared me the longing that fearfully kills;
And shown me in dreaming my love, and no other.
When she lies fast asleep—in the heart of the hills.

Does not the writer's ear tell her that
"mother" does not rhyme with "discover"?
and that there is one syllable over measure in
the last line? This last is a common error with
many writers, but none the less annoying to
the musical sense. There is deeper thought in
a poem called 'The World of Art,' which shows
a reverent appreciation of the artist's work—a
clear insight into the truest means for attaining
the noblest ends. It also reveals a strong and
earnest desire to be enrolled in the glorious
company of singers. And although the mere
lust of fame is of little worth, yet, as Sir
Thomas More says, they never really love who
have not truly longed. So we seldom attain to
that for which we have not yearned. Let Miss
Parkes work on, longing as much as she likes,
and we can promise that she will win a place yet
at the feet of those into whose faces she looks up
with such admiration and awe. Her gift of song
is genuine, if not great; and reputations have
been made amongst women with far less poetic
faculty and sincerity of nature. We hope and
expect to find her higher up the hill when we
meet her next.

The Rogues of Germany—[*Das Deutsche Gau-
nerthum*, von Avé-Lallemant]. 4 vols. (Leip-
zig.)

FOUR portly volumes by an eminent police
authority, give us the ways and means of all
those dangerous classes that are briefly compre-
hended under the name of Rogues, although
their tricks are scarcely more various than the
subdivisions into which they may be parcelled

out. Enough has been written of late in the
London papers to make us curious to com-
pare the undercurrents of English life with
those of other countries, but it would be
thought by most of us that steady, hard-
working, idyllic Germany could scarcely fur-
nish so large a contribution. Those who are
familiar with the police system of Germany
must be still more surprised to find rogues
flourishing in the midst of passports, certificates
of every kind, permissions to reside and permis-
sions to depart. Dr. Lallemant's volumes are a
sufficient answer to all such thoughts. The labo-
rious diligence he displays in piling up fact upon
fact, the minute details to which he descends,
the knowledge of slang and thieves' cant ele-
vated to a positive science, are worthy of praise,
though we rather miss the direct and practical
results which we should expect from an English
writer. A little too much generalization mars
the telling picture of the German rogues of the
present.

Dr. Lallemant's first volume is devoted to an
historical sketch, tracing the origin and progress
of rogues as it hung on the skirts of all the
great wars of the past, from the Thirty Years'
War to the wars of the Revolution. Luther's
'Book of Vagrants,' of which an English trans-
lation was recently published, affords much
matter for this account, as the vocabulary
given in Luther's Appendix serves for a com-
parison with the two volumes which Dr. Lalle-
mant devotes to the philology of his subject.
The third and fourth volumes are entirely taken
up with the linguistic aspects of rogues, and
in these a most important contribution is made
to the science of language. Dr. Lallemant traces
the *Gauner-sprache*, the thieves' cant of Ger-
many, to the Jew-German, that strange dialect,
the study of which led the young Goethe to
the study of Hebrew. Jew-German, mixed up
with other popular dialects, and modified by
usage or by more skilful disguise, is at the base
of the rogues' jargon, and accordingly, Dr. Lalle-
mant gives a comparative dictionary and
grammar of both Jew-German and the *gauner-
sprache*. From a philological point of view his
discoveries will doubtless seem curious. It may
be a question how far the genesis of the rogues'
language and the modifications introduced may
serve as a commentary on the various theories
of the origin and growth of human language
which have lately been propounded. If this be
too ambitious a flight, at least the comparison
of German *argot* with our own, or with that
belonging to the French capital, as it was shown
in so many dialogues of Victor Hugo's great
romance, will be a matter of interest to less-
distinguished inquirers than Prof. Max Müller.

It is, however, on Dr. Lallemant's second
volume that we propose to linger,—on the pic-
ture of the present of German rogues. If there
is little that is absolutely new in this picture,
it gives us at all events a number of quaint
varieties, and makes the habits of the rogues of
one nation a comment on those of another.
The psychology of a rogue is ably sketched; his
cowardice, his gross superstition, displayed in
the most brutal and cynical ways, his vanity
and arrogance, which often leads him to commit
himself, the contempt with which he looks down
from his own superior wisdom on the stupid
public, his wanton dissipation and profligacy.
The predominance of such failings neutralizes
the skill and energy that the rogues display;
skill and energy worthy of a better cause, but
unable to strive against so depraved a nature.
A rogue who should make use of half the ability
with which he labours to cheat his fellows
to be of service to them might rise to posts
of opulence and distinction; and the study
required to master the preliminaries of a rogue's

education would fit him for almost any profession. But that entire want of balance, that distaste for anything regular and confined to the dull round of orthodox respectability, which makes a certain low class of literary talent Bohemian, can be traced in the habits which turn a man into a rogue; and the revolt against the plodding mechanical life of Germany is even more certain than in England.

Perhaps in translating the word *gauner* by "rogue" we are too much narrowing the sense of the original. Swindler, card-sharper, vagrant, &c., are all included in the meaning, and many half-respectable classes whom it would be defamation to call rogues, belong to the *gauners*. Waiters and chambermaids at hotels are often in league with the tribe, or belong to it; thousands of members are in the garb of workmen or domestic servants, while some even dress up as professors or artists. The women make themselves up as governesses, companions, widows of officers or public employes. They make great use of railways and passports, getting on and off at small stations, but avoiding the terminus, and falsifying passports systematically, so as sometimes to deceive the initiated. A story is told of a German who stole a packet labelled money from the trunk of a Dutch prebendary, and found a collection of picklocks instead. This may perhaps recall to some readers that story of the two Bohemians who met in Italy, and on the examination of whose effects at the Custom House the gentleman's trunk was found full of paving-stones and the lady's full of oranges.

Simulated diseases are the chief weapons of the German rogue, and he can trade on any class of infirmities, from epilepsy downwards. Especially in puzzling passport officials or escaping warrants are these disguises effectual. One woman had six warrants out against her, and in each her *signalement* was differently given. Another, while in prison, counterfeited a shoulder out of joint for seventeen months, so that when once she escaped she was never again to be identified. Others sham pregnancy, and have to be removed to the hospital; others borrow children and cannot nurse them, which is highly perplexing to the authorities, and may lead to a dismissal of the case; others are deaf and dumb when under examination. The secret understandings they have with each other are as skillfully contrived as the diseases. "One rogue," says Dr. Lallemand, "understands in another rogue every motion of the eye or mouth, every shifting of one foot or movement of a finger, every touch of neck, mouth or hair, every hem, or cough, or sneeze, however naturally and without intention every such thing is done." He tells of a finger alphabet that is used by the sham deaf and dumb, especially in cheating at cards, of keeping one eye shut and squinting with the other over the nose, of carrying the stick under one arm, or even stuck through the handles of a bag. Moreover, figures or signs in writing are used, and are made with pencil, or chalk, or charcoal, on the walls of inns, churches, or railway-stations, on mile-stones, or in the cells of prisons. The superstitious peasant, seeing such marks on his road, passes by on the other side, and thus the communications of the rogues are left undisturbed. In this way rendezvous is given, or a successful theft is told. In prison, too, the line of defence is prepared, the friends of the prisoner watch for favourable opportunities, and appear when he is brought up to swear a false *alibi*. False oaths, says Dr. Lallemand, are constantly taken by the Christians of the tribe, but scarcely ever by the Jews. He gives a complete account of prison communications; whistling, singing, coughing, or praying under

the window,—apparently on the plan adopted by the minstrel Blondel when in search of *Cœur-de-Lion*; a string swung from one window to another is the best means of conveying balls of paper; small pieces of paper sent in dishes or clothes; all of which tricks culminate in the system of knocking, by which an electric telegraph is worked as perfect as any of the means of conveying speedy news between the nations of Europe.

We have next an account of the methods adopted by the German thieves, both in their actual vocation and in the circumstances to which it often leads. The man who is to commit a robbery has almost invariably an accomplice at hand—to make a disturbance if any diversion is necessary; to break a window by accident, or to seize hold of the intended victim and embrace him warmly, claiming him as an old friend, while the thief operates on his pockets. Stealing from a shop, the accomplice acts as customer, covering his ally's proceedings, and diverting the attention of the police if they are called in, as well as of the shopman. A dextrous spirting away of the booty also belongs to the accomplice; and it happens sometimes that a man who is robbed of his watch in the theatre never misses it till it is out in the street. Dr. Lallemand gives us a strange idea of the knowledge and patient study of the German thieves. There is no better topographer or statistician, he says, than your rogue. The rogue knows every country, every place where he has stopped, every nook and corner; all the legal forms adopted in each country, the magistrates and their underlings, the prisons and the police. He goes about and makes investigations in the garb of a pedlar, or beggar, or cripple, or blind man—even as commissioner or policeman; takes impressions of locks and keys, prepares poisoned pellets to throw to watch-dogs. He has secret hiding-places everywhere—not a wall or floor but has some hollow place where things can be deposited; and small things, such as files or saws, are hidden on his body, in the beard and hair. The success that formerly attended burglary, and the feeble resistance opposed by locks until Chubb came to the rescue, are detailed by Dr. Lallemand. He sketches with the same fullness an infinite variety of criminals: the rogue who takes up his quarters for the night at an inn, lets in his associates when everybody has retired, and, after they have made a clearance, returns quietly to bed and walks off in the morning,—the rogue who sneaks into the house in the early morning and takes clothes and boots to clean,—the Countesses who turn over jewelry and slip it up their sleeves under the very eye of the unsuspecting shopman,—the drunken peasant who goes into a money-changer's for some other coinage, and gets confused in his reckoning,—the wretched exile, who has only one treasure left in the world, and must part with that for bread,—the sham porters, who get on carriages or into goods-waggons on the railway, and fling out boxes to their accomplices,—the receivers of stolen goods, with their large and flourishing shops, in which the show of articles honestly come by conceals those dishonestly got, and in which the master shows everything of the kind to the police except the one thing they are in search of. "So many worlds, so much to do."

Dr. Lallemand discovers a close connexion between the rogues he has thus described and the establishments at which Mr. Henley so delicately hinted in the debate on taxing clubs. We cannot venture to follow him into the details he gives, but we would recommend them to the attention of the Society for the Protection of Women.

Elements of Comparative Philology. By R. G. Latham, M.A. M.D. (Walton & Maberly.)

THERE are certain prominent points of information with regard to languages which ought to form part of the stock of knowledge of every educated man. As it would be rare to find in society a person who imagined that Switzerland was a land of dykes or Holland a land of mountains, so it ought to be equally rare to hear that Norwegian and Danish are different languages, or that Hungarian is one of the Slavonic family. To know the height of a mountain or the course of a river is not more interesting than to know that Syrians and Egyptians and Algerines and Arabians all speak Arabic, or that the language of the Tartars who conquered Russia—and whose humbled descendants now go to mosque at Kazan to pray for the Tsar—is nearly identical with the language of the Turks who conquered, and in our day still hold, Constantinople.

Conrad Gesner, who took so high a rank both in the bibliography and natural history of the sixteenth century, was apparently the first to systematize the scattered information on the languages of the world. His 'Mithridates,' a small duodecimo of the date of 1555, contains an alphabetical enumeration of the different nations known in that age, with an indication of the languages they spoke, and some account of the languages themselves, including occasional specimens of the Lord's Prayer, &c. The name of Mithridates was again used at the beginning of this century for the title of the great work of Adelung, the most elaborate and complete that has yet appeared on the subject of languages; but which, strange to say, though it is regarded as an indispensable work of reference by all who know it, has never yet been translated into French or English. It is in the pages of Adelung and his continuator, Vater, that the researches of modern philologists were first brought together, compared and analyzed; and thus a vantage-ground was won for the still more extensive researches of the last half-century.

The new work of Dr. Latham aspires to incorporate into a system the vast accumulations of knowledge on the subject which have accrued since the time of Adelung. Two works have preceded it in English which partly cover the same ground; but in each the linguistic element is mixed up with other matter. These are Dr. Prichard's 'Researches on the Physical History of Mankind' and the anonymous 'Bible in Many Lands,' an account of the translations of the Bible into all the languages into which it has been rendered, accompanied with a specimen and an account of each language. 'The Bible in Many Lands,' being illustrated with several linguistic maps, is a most useful volume for philological study, though not always so full or accurate as might be wished; and the 'Researches' has long taken rank as one of the most valuable productions of recent English scholarship; but as neither of these works furnished information on many of the points touched on by Adelung, there was still ample room for a third work on the subject, for the production of which Dr. Latham is well known to combine a variety of qualifications. His works on the English language have run through numerous editions; and the records of the Philological Society and the British Association contain ample proofs that he has followed with an attention very rare in England the progress of discovery with regard to the African and American languages.

Had Dr. Latham adopted the plan of Adelung, and given us an English 'Mithridates,' he would, we think, have produced a more valu-

able work than his 'Elements of Comparative Philology.' In almost every respect in which his plan differs from that of Adelung, the advantage is with the German. In the first place, Dr. Latham's scale is too contracted. A single volume does not afford sufficient space for an adequate description of the languages of the world. The 'Mithridates' occupies four octavos, usually bound in five; and we have no doubt that the 'Elements' would have been a much better work in five volumes than in one. But, being thus restricted as to space, Dr. Latham might have advantageously restricted himself to the more prominent and interesting parts of his subject, on all of which the public stands much in need of being enlightened. Unluckily, there are some excellent zoologists who, in a general view of zoology, would be tempted to give as much space and attach as much importance to the *Ornithorhynchus paradoxus* or a Brazilian beetle as to the horse or the elephant. Dr. Latham's researches have led him so much towards the study of vocabularies of the "languages of the Gaboon," of "Bonny and its dialects," of "the Begharmi," &c., that he appears to overlook that the unwritten dialects of negroes are not quite so important in a general point of view as Greek and Latin or Sanscrit and Chinese. Again, while Adelung occupies himself very considerably in explaining the structure of the different languages he treats of, Dr. Latham hardly gives any attention to this branch of the science, the most interesting portion of philology, in most cases, both to philologists themselves and to the world in general. A terse and lucid account of the grammatical structure of such marvelously contrasted languages as Chinese and Sanscrit could hardly fail to arrest the attention and improve the mind of any one not absolutely destitute of intelligent curiosity or common comprehension. Dr. Latham almost invariably confines his attention to the vocabulary of a language, passing over its grammar, and often presents us with a list of words without any indication as to their peculiarities, their affinities or their origin.

Too often, also, he seems to imagine that the most interesting point in regard to a language is a knowledge of the names by which it is called. In many portions, indeed, the volume is so abundant in ethnological rather than philological information, that the title of "Elements of Ethnology" might be suggested as more appropriate than that which it bears.

Even where Dr. Latham enters at more length into some branches of his all-embracing theme, we fail to find that he has made himself master of points in which he speaks with a tone of confident scepticism. The following are some of his observations on Chinese:—

"Those who believe in the great age of the earliest Chinese literature—*e.g.*, those who not only believe that the works of Confucius (for instance) have come down to us, but that Confucius lived somewhere between the times of Archilochus and Æschylus, reasonably expect that, as the Greek of the days of Solon differs from the Greek of the reign of King Otho, the Chinese shall do the same, not perhaps to the same extent, but still to some extent—to an extent sufficient to enable us to talk about the stages of the language, and to compare the old Chinese with the middle, and the middle with the modern. Something, too, they may reasonably expect illustrative of the history and development of the language; although, from the fact of the present Chinese being in an early stage of development, not very much. Little, however, of all this will they actually find. The difference between the Mandarin of to-day and the oldest classical Chinese is (roughly speaking) the difference of two centuries rather than two millenniums—assuming, of course, anything like an ordinary rate of change. But is there not in China an amount of unchanging immobility in language as in other

matters, which we fail to find elsewhere? To this I answer, that such may be or may not be the case. Let it be proven, and it is an important fact in the history of mankind."

There is much to question in the philosophy of this passage: in which Dr. Latham seems to assume that a certain difference is observable in every language within the space of two centuries, and another within the space of twenty, while, on the contrary, it is generally admitted that no rule whatever can be laid down with safety on the subject. The Greek language changed less in the two thousand years preceding King Otho than the Latin in the two hundred years preceding Cicero; and five hundred years before King Otho the Latin of Cicero had changed into the Italian of Petrarch. The Modern Greek of our contemporaries is, moreover, much closer to the Greek of Solon's time than was the language of a century ago. A page of the *Pandora*, the leading magazine of the real modern Athens, hardly differs in its vocabulary from a page of Plato. To revert, however, to the case in hand—Chinese. Where does Dr. Latham find that the difference between the modern idiom of Pekin and the language of the ancient Chinese classics is so slight as he assumes? Abel Rémusat divides his grammar of Chinese into two parts, one of the old language and the other of the new. Bazin, the eminent lecturer on Chinese at Paris, professed to lecture on the modern language only, as distinguished from the old. In China itself the works of Confucius have been accompanied for centuries by commentaries to explain the obscure passages and the obsolete terms. In short, Dr. Latham will find himself at issue on the facts of the case with every Chinese scholar.

With these drawbacks, the 'Elements of Comparative Philology' is still a valuable work. Scores of vocabularies which have been given to the world in foreign and provincial journals, in Transactions of learned Societies, in isolated narratives of travellers, &c., are for the first time brought together in this volume. The book contains so large an amount of information which is not to be met with in combination elsewhere, and the want which it aims at supplying is so urgently felt, that it must take its place on the shelves of every well-furnished library, to await a new edition, in which the author may, we hope, have more space and take more time to do justice to himself and to the subject. May we suggest to him that in that new edition he should get rid of a few of his favourite phrases which are perpetually recurring, such as "*eo nomine*," "there or thereabouts," &c., and that he should pay more attention to the correction of the press? In a volume comprising such an immense number of foreign words, correctness of printing is especially important; and it can only be attained, under such circumstances, by care on the part of the author. The volume is beautifully printed, and, so far as the English goes, with great correctness.

SCHOOL BOOKS.

Theocritus, recensit et Brevi Annotatione instruxit F. A. Paley, M.A. (Bell & Daldy), is the title of an excellent edition of Theocritus, with brief Latin notes, adapted for young students, but not unsuitable for advanced scholars, being critical as well as exegetical. Theocritus, as being one of the most difficult of the Greek poets, needs explanation, and Mr. Paley, though anxious for brevity, has not knowingly passed over any passage likely to give trouble. His present work, like all his editions of the classics, bears the stamp of able editorship and practical utility strongly impressed upon it.—The same is true of *Analecta Græca Minora*, with Introductory Sentences, English

Notes, and a Dictionary, by Rev. P. Frost, M.A. (Bell & Daldy), which is a great improvement in several respects upon previous editions of Dalzel's work. To supersede the use of a *Delectus*, Mr. Frost has prefixed about twenty pages of short sentences; but we think they are hardly sufficient in quantity to qualify a boy of average ability for reading the extracts from Greek authors which form the body of the work. Other improvements upon Dalzel are, the curtailment of the prose extracts from Æsop, the omission of the anecdotes of Scholasticus, the re-arrangement of those from Palsephatus and Plutarch, the diminution of those from Lucian, and the insertion of some easy ones from Xenophon's *Anabasis*, with some portions of the *Fables of Babrius*, from Sir Cornwall Lewis's edition. The notes are numerous and very much to the purpose, containing exactly the kind of information that is wanted, in the right quantity, and expressed with unmistakable distinctness. If Mr. Frost will only double the quantity of introductory matter in a future edition, he will leave nothing more to be desired in his work as a first Greek reading-book.

Dr. Pick, whose lectures on Memory have excited some attention, has published a practical application of his principles, in *A New Method of Studying Foreign Languages* (Trübner), which, though marked by some good features, can hardly be considered very new. It proceeds upon the sound but familiar principle of aiding the memory by turning to account the laws which regulate the association of ideas. The pupil is called upon to connect French words with cognate English or Latin ones, and when there is no natural connexion between words, to confine his attention to only two at a time. Dr. Pick's method of beginning translation without grammatical knowledge we cannot think good; nor are we quite satisfied that his mode of teaching the genders of French nouns is the best. His explanations of the etymology of words are useful, but only just what every good teacher would give.—*A New Practical and Easy Method of Learning the French Language*, by F. Ahn, Ph.D.: *Third Course, Author's Edition, containing a French Reader, with Notes and Vocabulary*, by H. W. Ehrlich (Trübner), is a useful collection of French extracts, with notes and a vocabulary of the words; but what Dr. Ahn has done towards its composition does not appear.—M. Massé, the professor of French in Dulwich College, has prepared *Grammatologie Française; a Series of Fifty Introductory Examination Papers* (D. Nutt), which may be used with advantage by those who are preparing for any of the Military or Civil Service Examinations at which a knowledge of French is required.—M. A. Havet's *Grammar of French Grammars, on an Entirely New Plan, the Complete French Class-book* (Simpkin & Co.), is far too complete to be useful, as will be evident when we inform the reader that it contains "a French reader, with questions and notes, lists of words and phrases in daily use, a grammar exhibiting a comparison between the two languages, French lessons on all the idioms and peculiarities, progressive exercises upon all the rules and remarks, selections from English authors to be translated into French, and a dictionary of 10,000 words and numerous idioms."—There are several improvements in *An Atlas of Modern Geography*, by S. Butler, D.D. edited by the Author's Son (Longman). New maps have been added, the old ones corrected according to the present state of geographical knowledge, and, last not least, the price of the whole has been reduced. The execution of the maps does Mr. Weller great honour; he has combined distinctness with fullness most successfully: the mountains and rivers are remarkably clear.—We do not set a high value upon *Geography Classified: a Systematic Manual of Mathematical, Physical and Political Geography*, by E. Adams, F.R.G.S. (Chapman & Hall). The author says, "School-books on Geography are generally, it is too well known, either too bulky, costly and abstruse to be put into the hands of those for whose use they, as school manuals, are more particularly designed; or, are too crowded with dry details to interest, and, consequently, to make a favourable impression on the memory of the learner." We do not know a geo-

graphy more deserving of such a description than Mr. Adams's work, which is too crowded with tables of names, figures and details to serve any other purpose than a book of occasional reference. A large proportion of the information it contains is more curious than useful, and the tabular arrangement is by no means attractive.

The Standard Arithmetic. Part I. By E. L. Jones. (Manchester, Heywood.)—A collection of questions, price one penny. Those who have it would gladly pay twopence more for a Key, which no doubt they are to get.

The First Book of Practical Examples in Arithmetic. By A. Seaton. (Virtue Brothers.)—Many examples, with a Key.

The Oxford, Cambridge and Dublin Messenger of Mathematics. No. V. Vol. II. (Macmillan & Co.)—Very good, but not very elementary. The title says it is "supported by junior students of mathematics." If this mean that it is bought by junior students, we are happy to hear that the juniors are fit for such reading. But if it mean that the contributors are junior students, we demur. The papers are not at all the work of juniors, and Mr. Cayley and Mr. Blissard, &c., have outgrown the name. Only a small number of the contributions are fit for junior students.

Exercises in Euclid and in Modern Geometry. By J. M'Dowell. (Bell & Daldy.)—This is a good collection of examples of the modern methods, which are coming very much into fashion. Legendre said of the theory of numbers that it becomes an exclusive pursuit and a passion with those who take to it from predilection. The same may be said of poles and polars, anharmonics, involutions, radical arcs, &c. Young students will do well to remember that there are other parts of mathematics. But we recommend Mr. M'Dowell's book in its place and for its subject.

Arithmetical Examples for Military and Civil Service Students: being a complete Treatise of Arithmetic. By W. A. Browne, LL.D. (Mair.)—A large book of arithmetic, with examples taken out of examination-papers.

MEDICAL BOOKS.

A Treatise on the Physiological Anatomy of the Lungs. By James Newton Heale, M.D. (Churchill.)—The author of this work has peculiar views of the functions of the blood and lungs. He says, "Vitality is a galvanic force existing exactly during the time and just so long and in proportion as the animal breathes, and not one instant longer. Its efficacy depends upon an uninterrupted circuit being established through the whole of the living blood; and this is the true import of the mechanical circulation of the blood; the meaning of the words 'living blood' is comprised in this fact." This work is, however, devoted to an examination of the structure of the lungs, which are the organs of breathing, and consequently the most important in the production of the galvanism by which we live. It is much more pleasant to follow Dr. Heale in his attempts to unravel the wonderful structure of the lungs than in his angry ravings about galvanism as the source of life. The work is illustrated with good woodcuts, and is worth the attention of the anatomist.

Familiar Letters on the Diseases of Children. By James Brown Harrison, M.D. (Churchill.)—When a man has been in practice a good many years, he feels that he can rely on his experience, and is anxious to communicate the results to others. Yet, strange as it may appear, such experience has, in nine cases out of ten, no value. The fact is, unless medical experience is thrown into a scientific form it is of no value. Unless you can count cases and symptoms and treatment, and compare one set of cases with another, the experience is nothing more than an opinion,—it may be a sound one,—but in the way in which medical men get their experience, it is generally unsound. Louis, the great French physician, said that nearly every opinion he formed of results without counting was opposed to the real facts, which came out by the latter process. Hence the valuelessness of books like this by Dr. Harrison. It is interesting as recording the experience of an old practitioner, but no contribution to scientific medicine at all.

Life in Nature. By James Hinton. (Smith, Elder & Co.)—Mr. Hinton is essentially of a speculative turn of mind; and for those who take an interest in the higher questions which recent discoveries in the natural sciences lead to will be found an amusing and instructive guide. The great question of all questions—what is life?—is here attacked, and answered with a vigour and completeness which, if they do not obtain assent, at least command admiration. Mr. Hinton is fully alive to the great inquiries started by Edwards, and successfully followed up by Matteucci, Grove, Tyndall, Carpenter and others, by which it has been shown that the forces active in the animal body are correlative with the physical forces of the material world. But whilst recognizing the great fact, that human life is dependent on physical forces, Mr. Hinton sees lying behind all a spiritual substratum, in which he discerns a higher life for man, and endeavours to show that all material and physical force are dependent upon this spiritual existence. Whilst it would be impossible to say that Mr. Hinton has made out his case, or that we agree with him in his conclusion, we do most earnestly recommend his book to thoughtful students. His writings are eminently suggestive; and nothing perhaps is a better corrective of the self-sufficiency engendered by limited views of natural facts than works like the present, which give a glimpse of vast fields of untrodden truth for future observation.

OUR LIBRARY TABLE.

A Lecture on Sculpture, delivered in the Town Hall, Cambridge, before the Cambridge School of Art. By R. Westmacott, R.A. (Cambridge, Deighton & Co.; London, Bell & Daldy.)—We do not remember to have met with a more succinct and sensible sketch of the history of sculpture or a clearer definition of the real nature and purposes of that art than these by Prof. Westmacott. It is noteworthy that the author keeps in view throughout his task the main point, so vital to any intellectual or man-worthy pursuit, that above all things the art is, and always was, valueless unless it had a motive such as would enlist the earnest feelings and full mental powers of one pursuing it. After explaining what is the true character of the ordinary modern sculpture, giving it, to our minds, too high merit of "a great amount of executive power," he justly, but with hardly earnest enough condemnation, pronounces against unintelligent tricks of carvers who have captured popular and ignorant fancies by their imitations of trivial facts,—things unworthy of Art. Prime amongst these, and its publication a circumstance calling for an expression of the deepest regret, as sanctioned by a body professing to have at heart the interest of Art, is a certain example, poor in itself, but more objectionable as executed in direct contempt of the laws of sculpture which are based on common-sense. This is the so-called 'Veiled Vestal,' reproduced in Parian or some such cheap material, by the Crystal Palace Art-Union. Nothing can defeat the hopes or lead to more waste of the efforts of all Art-teachers than the popularizing of this meretricious and unworthy gewgaw. That Mr. Westmacott has given thorough attention to his subject, and made himself competent as a teacher by other claims than those of technical and practical knowledge of his art, may be learnt from the following passage, which conveys information that deserves to be spread on his authority:—"It is a fact worth remarking, how rapidly the character of religious art, and especially sculpture, deteriorated after the revival of classical literature in the sixteenth century, in those countries where, up to this time, it had been making such satisfactory progress. It might reasonably be supposed that, having so much that was sound and valuable in sentiment, it only required an acquaintance with the examples of the best ancient sculpture to enable the artists to reach the highest material and technical perfection. Unfortunately, it was not so. Instead of using the fine monuments of antiquity as guides to elevate the type of form and style of treatment, the sculptors fell into the fashion of the age, and began to imitate or adopt Greek ideas,

to seek their subjects in ancient mythology, and thus mechanically to reproduce what they called, and what is now absurdly called, *classical* sculpture. The touching religious compositions that were indebted for what they had of beauty and effectiveness to the true sentiment that called them forth,—albeit the Art in them was imperfect,—were now superseded by the efforts of the artists to provide these pseudo-classical designs, and, instead of Christian religious representation, the heathen Pantheon, with Mercury, Bacchus, Apollo and other obsolete personages, afforded the subjects in which all interest was centred." It is worthy of note that a Professor of Sculpture to the Royal Academy should utter at a seat of classical study sentiments such as these. Less than twenty years ago he would have been stoned for putting them in this open form undisguised by platitudes and apologies such as would have betrayed their truth, their earnestness and force.

A Glimpse of the World. By the Author of 'Amy Herbert.' (Longman & Co.)—The world of which a glimpse is given in this commendable tale for girls is the world of domestic cares, trials and affections. The interest of the narrative depends less upon plot and incident than on delineation of character. Myra and Rosamond are excellent types of two widely different sorts of girlhood. Dr. Kingsbury's goodness fails to produce a due effect on the reader because it is burdened with physical infirmity and mental decay; but Mrs. Patty is faultless. 'A Glimpse of the World' is a good book for the play-room, but it is far too long.

A Yachting Cruise in the Baltic. By S. R. Graves, Commodore of the Royal Mersey Yacht Club. (Longman & Co.)—This record of a ten weeks' cruise, made during the summer of 1862, would have been a better book had editorial revision cut out certain digressions and condensed the entire narrative; but the volume, though it is far from faultless, will be perused with pleasure by the brother yachtsmen to whom it is dedicated. Some of the engravings with which it is embellished have considerable merit.

Yorkshire Tales and Legends. By "Heather Bell." (Hall & Co.)—"Heather Bell" is a buoyant, cheery fellow, whose benevolent heart and weak head have produced a volume of spasmodic sentimentality for which ridicule may be tempered with kindly feeling. "Oh, what a pleasant life a bird must lead!" he says. "Yet after all it is no use a human spirit wishing itself a bird; only keep within the limits infinite wisdom has marked out for it, then whatever scenes it may have to pass through, earth is full of beauty, life is full of blessing, and its birthright is more valuable than the whole material universe." The birthright thus mentioned is not life's birthright, as a reader strictly observant of grammatical rules might infer, but the birthright of the "human spirit" that has relinquished its foolish-ambition to become a bird. On the virtues and powers of hope, "Heather Bell" in a later chapter, once again displays a yearning to quit dull earth. "Visited by hope," he assures his readers, "the prisoner snaps his gyves and springs from his dungeon into the fresh, free air of heaven,—the down-trodden patriot draws his flashing claymore with the arm of a giant, and leaps from crag to crag in the mountain fastnesses of his dear native land with the determined mien of a conqueror, and crushes the tyrant invader under his iron heel,—the down-borne in life's mighty conflict rises and scales the loftiest hill of difficulties, making the mountain echo with his inspiring cry 'excelsior,' and the afflicted either springs back to life from the very verge of the tomb or boldly confronts death, and following the beckoning form of hope rushes through its gloom and emerges into the serene light, and among the glowing scenes of another and better life." After calm reflection does "Heather Bell" mean all this? Can he mention a single prisoner who was enabled to "snap his gyves and spring from his dungeon like a bird into the fresh, free air of heaven" by the action of hope within his breast? Does hope furnish down-trodden patriots with iron heels for the especial purpose of humiliating tyrant invaders? Has "Heather Bell" ever seen an enthusiastic champion of national liberty "leaping from crag to crag in

the mountain fastnesses of his dear native land" ? How does a distinguished representative of the qualities which made Tall a hero and Blondin a rope-dancer proceed when he performs such astounding feats of agility? Does he use leaping-bar or alpen-stock? Are his shoes spiked? Does he wear spangles on his jacket? Lastly, does he, in simple, sober truth, retain "the determined mien of a conqueror" when he is in the very act of springing over a precipice? If "Heather Bell" should again take pen in hand, he would do well studiously to avoid fine writing. Let him bear in mind his own words, "it is no use a human spirit wishing itself a bird."

The Metric System of Weights and Measures. By Leone Levi, Esq. Reprinted from *The Exchange*.—A tract in advocacy of the Report of the Committee. As soon as the Parliamentary leaders attempt to persuade the House to act upon the Report, we shall take up the subject.

The London University Calendar, 1863. (Taylor & Francis).—This explains itself.

The Law Professorships and the Claims of the School of Law and Modern History. A Letter to the Rev. the Vice Chancellor. By J. P. Tweed, M.A. (J. H. & J. Parker).—The writer of this letter is a member of the Convocation, to whose charge Dr. Viner entrusted the management of the Professorship founded by him, and is troubled in his conscience at the state of inefficiency to which, as he alleges, the Vinerian foundation has fallen. The Vinerian Statutes underwent alterations (or mutilations, according to Mr. Tweed) in the years 1809 and 1853; and it is alleged that, as they now stand, they are not carried out, in spirit at least, by the present Professor. By way of remedy, the writer suggests in the first place, a declaratory statute, which shall secure that the lectures, which are required to be in "full term," shall be delivered when the University is really full, instead of part being delivered after Commemoration. In the next place, he would amalgamate the two professorships of Common and Civil Law. The subject is one of much importance to legal education, and demands the careful consideration of Convocation. This letter involves charges against the present Professor, as to the spirit in which he has undertaken the performance of the duties of his office, and it is not proper to enter upon the further consideration of this subject on a mere *ex parte* statement.

Introductory Text-Book of Physical Geography. By David Page. (Blackwood & Sons).—The success which has attended the Text-Books of Geology has, without doubt, induced Mr. Page to publish the present volume. This text-book is intended to convey in a simple but systematic manner the leading facts of the science to which it relates. Physical Geography is a science of the highest importance, of almost unlimited range, and embracing, as the means for the interpretation of the varied phenomena which it contemplates, nearly every other science. Physical geography can scarcely be said to take the position of an independent science in any of our schools. All that relates to the figure, size and motion of the earth is taught by astronomy. Geology lends its aid in teaching the structure and order observed in the rocky surface of our globe. Meteorology deals with all the phenomena associated with the conditions of climate. Physics generally instructs us on the influences of the forces, heat, electricity, &c., in producing the great phenomena of nature; while chemistry and physiology lend important aid in dealing with the nature, growth and dispersion of plants and animals. Though drawing in this manner from other sciences, it by no means follows that the student of physical geography should be deeply read in astronomy, geology or meteorology. It is, however, important that he should be acquainted with the connexion and interbearings of these sciences, and be capable of appreciating the importance of their deductions so far as they relate to his own immediate study. The author of this 'Introductory Text-Book' has produced a work which cannot fail to be useful to all who are entering on the study of physical geography. We believe, indeed, that many will be induced to enter on this study from a perusal of this little work. The divisions of the subject are so clearly defined, the explanations are so lucid, the

relations of one portion of the subject to another are so satisfactorily shown, and, above all, the bearings of the allied sciences to physical geography are brought out with so much precision, that every reader will feel that difficulties have been removed and the path of study smoothed before him. With those opinions, it is our pleasant duty to recommend this 'Introductory Text-Book of Physical Geography' to all who are in any way interested in the external conditions of the globe which we inhabit.

Our list of Translations includes *The Horses of the Sahara and the Manners of the Desert*, by E. Daumas, translated from the French by James Hutton (Allen & Co.).—*Pictures of German Life in the Eighteenth and Nineteenth Centuries*, by Herr Freytag, translated by Mrs. Malcolm (Chapman & Hall).—*Gudrun: a Story of the North Sea*, from the Mediæval German (Edmonston & Douglas).—*The Odes and Carmen Seculare of Horace*, translated into English verse by John Conington (Bell & Daldy).—*My Escape from Siberia*, by Ruffin Piotrowski, translated by E. S. (Routledge).—and *Commentary on the Merchant of Venice*, by François Victor Hugo, translated by E. L. Samuel (Chapman & Hall).—Among the miscellaneous works on our table, we have Vol. XV. of *De Quincey's Works* (Black).—*The Shilling Guide to the London Charities*, by Herbert Fry (Hardwicke).—*A Handbook to the Modern Provençal Language spoken in the South of France, Piedmont, &c.*, by J. Duncan Craig (J. R. Smith).—*Bibliografia dei Lavori pubblicati in Germania sulla Storia d'Italia*, di Alfredo Reumont (Williams & Norgate).—*On the Historical Antiquity of the People of Egypt, their Vulgar Calendar and Epoch of its Introduction*, by Johannes von Gumpach (Dulau & Co.).—*Half Hours with our Sacred Poets*, edited, with Biographical Sketches, by A. H. Grant (Hogg & Sons).—*Hints on the Formation of Local Museums, &c.*, by the Treasurer of the Wimbledon Museum Committee (Hardwicke).—*Sands's Commercial and General Sydney Directory*.—*Sands and M'Dougall's Melbourne Directory*.—*The Case of the Crown in Re the Wigtown Martyrs proved to be Myths versus Woodrow and Lord Macaulay*.—*Patrick the Pedlar and Principal Tulloch*, by Mark Napier (Hamilton).—*Devonia's Epithalamium; or, the Marriage of the Prince of Wales* (Freeman).—*Everybody's New Guide to the Isle of Man*, by W. F. Peacock (Simpkin).—*Orvina: a Tragedy*, in Three Acts (Auckland, Chapman).—*Anglicania; or, England's Mission to the Celt*, by J. Birmingham (Richardson).—*Philo-Socrates*, Part VI., by W. Ellis (Smith, Elder & Co.).—*The Antiquity of Man*, an Examination of Sir Charles Lyell's Recent Work, by S. R. Pattison (Reeve & Co.).—*Mayer's Australian Builder's Price Book* (Melbourne, Sands & M'Dougall).—No. I. of *Narrative of the Christian Church at Home and Abroad* (Strahan & Co.).—No. I. of *Old Price's Remains*, by J. Price (Virtue & Co.).—*Cragstone Cottage; or, Life in the Country*, (Sealey).—*The Two James's* (Phipps).—*George Harrington*, by David Macrae (Houlston & Wright).—*Bessy's Money: a Tale*, by the Author of 'Mary Powell' (Hall & Co.).—and Vol. I. of *Hedderwick's Miscellany*.

LIST OF NEW BOOKS.

Alexander's Incidents of the Maori War, in 1860-61, post 8vo. 10/6
Andersen's The Improvisatore, or Life in Italy, fc. 8vo. 3/ bds.
Ansted's Great Stone-Book of Nature, fc. 8vo. 8/ cl.
Barnes's Poems of Rural Life, Dorset Dialect, 2nd Coll. 2nd ed. 8/ Bellamy, Brit. & Co. ed. by Edmonds, 5/6
Bible, The Holy, Trans. out of Original Languages, by R. Young, 11/ Book of Common Prayer in the Order in which it is Used, 22mo. 1/ Boyle's Inspiration of the Book of Daniel, 8vo. 14/ cl.
Bruce's Death on the Pale Horse, 2nd ed. fc. 8vo. 3/6 cl.
Bridle's M. Tableau from Geology, Sketches and other Poems, 5/ Clarke's Charlie Thornhill, or the Dupee of the Family, 3 vols. 21/6 Cox's The Institutions of the English Government, 8vo. 24/ cl.
Dove on the Cross, new edit. fc. 8vo. 3/6 cl.
Dumas's Paris Life at Twenty, fc. 8vo. 3/ bds.
Edinburgh University Calendar for the Year 1863-64, 12mo. 2/ swd.
English's Man Considered in respect of Freedom, Dependence, &c. 2/ Evans's (late Rev. J. Harrington) Sermons, edit. by his Widow, 5/ Farn Homesteads of England, Part 1, imp. 4to. 5/ swd.
Feed my Lambs, new edit. 16mo. 3/6 cl.
Ferry Hill, The, a Poem in Three Cantos, fc. 8vo. 2/6 cl.
Fischer's The English Constitution, Trans. by Shee, 8vo. 14/ cl.
Funeral Services on the Death of Rev. W. Crook, or. 8vo. 3/6 Fuller on Diseases of the Heart and Great Vessels, 8vo. 7/6 cl.

THE STATE PAPERS.

THE Twenty-Fourth Annual Report of Mr. Hardy, the Deputy-Keeper of the Public Records, has been presented by Her Majesty to both Houses of Parliament. This Report is unusually long, able and important, especially on the points which concern literature and men of letters. We shall give, in a condensed form, the material facts.

During the year 1862, the literary inquirers who availed themselves of the privilege of using the Records without payment of fees attended 2,448 times, and consulted 11,037 documents, exclusive of Calendars, Indexes, &c. The total number of inquirers in the years 1852 to 1862 has been 1,234, who attended 15,571 times, and consulted 115,783 documents, exclusive of Calendars and Indexes. From a list of the subjects for which the Records have been used in literary inquiries during the year 1862, the following details may be taken, as exhibiting the wide range of our research.—Life of Sir Philip Sidney.—History of the Perrott Family.—Tracings of Ancient Maps of Ireland.—History of Hampton Family.—To inspect Correspondence between England and the Low Countries during the Sixteenth Century.—To collect Materials illustrative of the Memoirs of Jane Dormer, Duchess of Feria, wife of the Spanish Ambassador in London, Henry the Eighth to Elizabeth, and to take Impressions of Seals.—History of Anglesey and Beaumaris.—To inspect the Minutes of Council and Assembly, and the Laws of New York.—History of Willerden.—To inspect Papers of Commissioners for Building Churches, Anne.—History of Families connected with Sussex.—History of Gunpowder and Artillery.—To search for the Decrees and Orders of Speaker Lenthall.—History of the Manners of the Welsh.—Lives of Archbishop Ussher and Bishop Bedell.—Researches respecting the Act of Uniformity, 1662.—History of the Town and Priory of Royston.—History of the Milbourn Family.—To transcribe Papers relating to Hungary.—History of Nugent Family.—To see the Grant of an Almshouse at Laver Marney, Essex, to William Tipper and Robert Dawe, by Letters Patent, 34 Elizabeth.—History of the Parish of Fincham, Norfolk.—Inquiries respecting the Legal History of England.—Lives of the Lord Mayors.—Life of the Bishop of Exeter.—History of the Navy.—History of the Parish of Stow-on-the-Wold, Gloucestershire.—History of Lincolnshire Families.—Illustration of the History of English Cathedrals.—Researches relating to the Rectory of Birmingham and its Vicinity.—Early History of Barbados.—Researches relating to the Flight of the Earls of Tyrone and Tirconnell; and to the Roman Catholic Bishops of Ireland, Elizabeth and James the First.—To take a Pencil Sketch of the Seal attached to the Surrender of Coggeshall Abbey.—History of the City and County of Cork.—Literary Purposes connected with the Parishes of Manchester and Prestwich.—Particulars relating to the River Humber and Places on its Banks.—History of Sidney Young's Family.—Parochial Histories of Wilts.—To collect Materials

for a History of the Baronage,—History of the Militia,—History of Commerce and Navigation at Bordeaux,—Researches relating to Shakespeare, and other Historical Purposes.—New Edition of White's Natural History of Selbourne,—History of the Channel Islands and Dependencies,—History of Crediton and Portion of Devonshire,—History of Northumberland,—History of the Parish of Ash, Kent; and other Historical Purposes,—Life of Sir James Graham,—Researches into Military History,—History of the Baptists,—To examine Letters of Bishop Hall,—History of Birmingham,—History of the Office of Lord Great Chamberlain,—History of the Long Family,—History of the Family of Amburst,—History of Lace,—History of Monmouthshire,—Internal Defence and the Volunteer Force.

On the subject of the Calendars now in progress of publication, the Report speaks at great length:

"As many of the documents in the custody of the Master of the Rolls relate to personal rights and private property, it is most important, for the due administration of justice, that these Records should be made available to all who desire to consult them. It is not less important for the elucidation of history in all its branches; and this can only be done by means of full and complete Calendars. Mere indications or hints as to the nature of a document, concealed under a vague and general description, are not sufficient; an analysis of its contents, in as condensed a form as possible, is required, if the reader is not to be misled. By means of such Calendars a reader is made aware of the existence and nature of the information which bears upon the subject of his inquiry. He sees at a glance the contents of the original documents necessary for him to consult. If they contain nothing to his purpose, he is assured at once of the fact, and is saved the necessity of inspecting the originals. This is an important consideration; for there can be no doubt that a correct and sufficient Calendar, by superseding the necessity of perpetual reference to the original documents, is a great saving of time to the reader and a security to the documents themselves. The more detailed the information given, the less the necessity of consulting the original. This fact is also of importance. It shows that a good Calendar affords the best means for preserving the public muniments. On the other hand, a brief and insufficient description of the documents is less useful for the purpose of the inquirer, entails upon him the necessity of repeated reference to the originals, occupies more of the time of the officers of the establishment, and exposes the documents themselves to frequent and needless handling. By a good Calendar the labour of the inquirer in turning over every bundle of papers, however narrow and trivial the object of his research, is restrained within limited bounds, and the chance of injury to the papers greatly diminished. It cannot be too frequently insisted on that needless reference to papers of such inestimable value (many of which are in a frail and perishing condition) ought, by all means, to be avoided, or they will totally disappear in a few years. * * It must also be borne in mind that Calendars are the most adequate means of preserving valuable papers from being purloined. Had Calendars existed, and been accessible to the public from early times, probably no omissions or defects would be found in the national muniments, which we have now so much reason to deplore.

"It will not, perhaps, be deemed irrelevant to add a few words upon Calendars generally, as some misapprehension seems to exist that those which are now in progress are compiled and published for the benefit of a very limited class of students; I mean for the historian only. It is admitted that the documents which are in the course of being calendared are of the highest historical interest and national importance. They relate to the religious, legal, and political history of Great Britain; but they do not relate to these subjects only. If so, it would have been fair to presume that, instead of Calendars to the public muniments, it might have been better to make a selection with a view to the wishes and wants of the historian. Admitting that the Master of the Rolls in the formation of the Calendars ought to

have restricted himself to so specific a purpose, the question will still arise, what principle of selection ought to be pursued? Any plan would have been subject to the greatest perplexity. All classes of students, even those for whom the selection was made, would naturally conclude that something had been excluded which it would be most important for them to know, and this would have created great public dissatisfaction; not without reason; for documents considered worthless by one set of inquirers are often of the utmost importance to others. Great questions of history and law turn upon points which an inexperienced inquirer, or one not interested in the subject, would condemn as worthless. No individual, no committee of historians, can determine beforehand what ought to be rejected and what retained. The same document which a student at one time considers trivial, at another stage of his inquiry becomes important. The safest, and indeed the only satisfactory, plan is that adopted by direction of the Master of the Rolls, viz., to calendar every document, in proportion to its importance. Mere formal documents, such as letters of pardon, commissions of the peace, &c., can be dismissed in a few words, while a document of not one-tenth the extent of such formal proceedings will often require a more lengthened description. To those who desire to search the documents for special purposes, whether historians or not, the Indexes subjoined to the Calendars effect the same purpose as a classed Calendar, and are more useful. An index can be made more comprehensive, as it admits of many heads of division and subdivision, which if attempted to be carried out in a classed catalogue, would produce confusion. At the same time, it answers all the purposes of selection, by pointing out to the inquirer the documents relating to the particular subject on which he is engaged. It must also be remembered, that for one historical student, there are a hundred others utterly indifferent to such inquiries. In fact, from the diversity of men's pursuits, it would be as impossible as it would be inadvisable to construct Calendars and to select documents for any special set of inquirers. If the wants of the general historian only were regarded, the legal antiquary, the topographer, the genealogist, and the economist would each, with equal justice, demand that his wants should also be considered, and Calendars constructed for his purposes."

Four volumes of Calendars have been published during the year, and have been noticed in these pages.

The under-mentioned volumes are in the press, or in preparation for printing:—a second volume of Mr. Brewer's 'Calendar of Letters and Papers, Foreign and Domestic, of the Reign of Henry the Eighth,'—a second volume of Mr. Lemon's 'Calendar of State Papers, Domestic Series, of the Reign of Elizabeth,'—a sixth of Mr. Bruce's 'Calendar of State Papers, Domestic Series, of the Reign of Charles the First,'—a fourth of Mrs. Green's 'Calendar of State Papers, Domestic Series, of the Reign of Charles the Second,'—a second of Mr. Hamilton's 'Calendar of State Papers relating to Ireland,'—a 'Calendar of State Papers, Foreign Series, of the Reign of Elizabeth,' edited by the Rev. Joseph Stevenson,—a third volume of Mr. Sainsbury's 'Calendar of State Papers, Colonial Series,'—a second of Mr. Bergenroth's 'Calendar of Letters, Despatches, and State Papers, relating to the Negotiations between England and Spain,'—and a 'Calendar of State Papers relating to England, preserved in the Archives of Venice, &c.,' edited by Mr. Rawdon Brown.

Four volumes of the Chronicles and Memorials of Great Britain and Ireland during the Middle Ages have also been published during the year. A dozen volumes are in the press, and will shortly appear.

PRICES OF PICTURES.

HERE follows a contribution to the history of the Art of these days, and in some degree to that of the days themselves, which should be welcome to painters, critics and lovers of Art, by way of list of the original cost of the late Mr. Bicknell's pictures and their recent prices. The magnificent sums obtained for these as compared with their

cost to the collector throw light upon the present position of painters as compared with that erst held by them. The selection of these examples was as perfect in judgment as the result was wise and fortunate; people must not rush into picture-buying in expectation of like results, unless they can bring like qualities to bear upon the task. Some of the prices were exceptional; but those of the Turners, for example, illustrate the progress of public opinion on noble works of Art. The purchasers' names of each item we have before stated; the original price given by Mr. Bicknell appears below in parentheses, followed by the price which they brought in the sale. No picture, and scarcely even a drawing, in the whole collection of nearly 500 works, but obtained a higher price than it cost.

Mr. E. M. Ward, *The Dead Ass*, 1834, (cost 5*l.* 17*s.* 6*d.*), 33*l.* 14*s.*—Mr. J. Stark, *Eton Meadows* (10*l.*), 27*l.* 6*s.*—The eight *Stothards*, Illustrations to *Boccaccio* (100*l.*), 297*l.* 5*s.*—Mr. S. B. Jackson, *Seashore, with Boats and Figures* (50*l.*), 73*l.* 10*s.*—C. Fielding, *Dunstaffnage Castle* (15*l.* 15*s.*), 107*l.* 2*s.*—Sir T. Lawrence, Mrs. Siddons (59*l.* 17*s.*), 147*l.*—Netscher, *Portrait of Defoe* (5*l.*), 27*l.* 6*s.*—Clint, *A Coast Scene* (40*l.*), 136*l.* 10*s.*—P. Nasmyth, *View near Edinburgh* (49*l.* 7*s.*), 173*l.* 5*s.*—*Landscape Scene near Epping* (73*l.* 10*s.*), 204*l.* 15*s.*—Mr. D. Roberts, *Interior of the Church of St. Miguel, Xeres de Frontera, Spain, 1841*, (105*l.*), 598*l.* 10*s.*—Tyre (150*l.*), 367*l.* 10*s.*—Sidon (156*l.*), 378*l.*—*Street in Cairo* (50*l.*), 530*l.* 5*s.*—*Chapel of Ferdinand and Isabella, Grenada, a gift*, 273*l.*—*Melrose Abbey, 1845*, (40*l.*), 273*l.*—*Interior of St.-Gomar, Lierre, 1850*, (300*l.*), 1,438*l.* 10*s.*—*Ruins of Baalbec, 1840*, (250*l.*), 787*l.* 10*s.*

Two capital Vandykes, portraits of the Marquis D'Aytona and the Duchess de Croy, about 47 by 40 inches respectively, both purchased in Spain by Mr. Sothorn, fetched but 19*l.* 1*s.* and 53*l.* 11*s.* In the Louvre (No. 146) is a splendid equestrian portrait of the Marquis, who was Generalissimo of the Spanish Forces in the Netherlands, in full armour. That these prices were even less than Vandyke got for the pictures one may guess from a curious document in the State Paper Office, quoted by Mr. Carpenter, styled 'Mémoire pour Sa Mag^{te} le Roy' (Charles the First), giving the prices the painter put upon his court portraits and those at which the King valued them. From this it is evident that the royal patron of Art restrained his patronage on the wrong side of liberality. For the splendid portraits still in the Royal Collection of '*Le Prince Charles avec le duc de Jarc*' and the Princesses, poor Vandyke had one-half the price he set on it, 200*l.*, knocked off. It is true Charles was about that time closely looked after by the Parliament and on the high-road to "martyrdom," but that will not excuse his casting up the sum total of the schedule with an error of 75*l.* in his own favour, disallowing interest on arrears of the painter's pension, which pension was no favour be it remembered, and ignoring altogether one of the pictures Vandyke left to his apprenticeship.

To return to our English school:—Mr. W. E. Frost, *The Evening Star* (15*l.* 15*s.*), 77*l.* 14*s.*—*The Naiad* (26*l.* 5*s.*), 116*l.* 11*s.*—*Musidora* (26*l.* 5*s.*), 110*l.* 5*s.*—*The Sirens* (54*l.*), 294*l.*—*Euphrosyne* (420*l.*), 819*l.*—*Callcott, Rochester Bridge and Castle* (262*l.* 19*s.*), 511*l.* 10*s.*—*View near Southampton* (47*l.* 5*s.*), 105*l.*—*English Landscape, with Cattle, finished by Sir E. Landseer, 1842*, (600*l.*), 3,097*l.* 10*s.* In June, 1842, G. Knott, Esq. paid the artist for this picture 485*l.* 15*s.*—G. Chambers, *Boats and Shipping* (73*l.* 10*s.*), 204*l.* 15*s.*, much cracked.—Miss Mutrie, *Flowers and Fruit on a Table* (47*l.* 5*s.*), 73*l.* 10*s.*—Mr. F. R. Lee, *Scenery on the Borders of Dartmoor* (Art-Union prize for 60*l.*, cost Mr. Bicknell 30*l.* in addition), 173*l.* 5*s.*—C. R. Leslie, *The Minstrel* (65*l.*), 60*l.* 18*s.*, cracked a good deal.—*The Heires* (300*l.*), 1,260*l.*—R. Wilson, *Tomb of the Horatii and Curatii, at Albano* (120*l.* 15*s.*), 111*l.* 6*s.*, the worse for cleaning.—W. Müller, *Scene in Devonshire* (120*l.* 15*s.*), 315*l.*—*The Village of Gillingham* (63*l.*), 409*l.* 10*s.*—Mr. T. S. Cooper, *An Interior, with Cows and Sheep* (126*l.*), 262*l.* 10*s.*—Mr. T. Webster, *The Impenitent* (painted for G. Knott, Esq., who, in 1842, paid 63*l.*, 100*l.*,

367*l.* 10*s.*—"Good Night!" 1845, (262*l.* 10*s.*), 1,207*l.* 10*s.*—The Smile, and the Frown, (the pair cost Mr. Bicknell, at Mr. Knott's sale, 240*l.*), 1,680*l.*—T. Gainsborough, Landscape with Sheep (250*l.*), 399*l.*—Repose, given by the artist as a wedding portion to his daughter (800*l.*), 819*l.*—Mr. C. Stanfield, Shipping, French Coast near St. Malo, 1838, (157*l.* 10*s.*), 1,291*l.* 10*s.*—Lago di Garda, 1838, (157*l.* 10*s.*), 861*l.*—Beilstein, on the Moselle, 1837, (262*l.* 10*s.*), 1,575*l.*—Pic du Midi D'Ossan (735*l.*), 2,677*l.* 10*s.*—W. Collins, Early Morning on the Sussex Coast (336*l.*), 1,008*l.*—Selling Fish (420*l.*), 1,228*l.* 10*s.*—Mr. T. Creswick, The Stepping Stones (73*l.* 10*s.*), 262*l.* 10*s.*—Sir E. Landseer, The Prize Calf, 1859, (420*l.*), 1,890*l.*—Two Dogs, "Looking for the crumbs that fall from the great man's table," 1859, (300*l.*), 2,415*l.*—The Highland Shepherd, 1850, (350*l.*), 2,341*l.* 10*s.*—W. Hilton, Triumph of Amphitrite (315*l.*), 283*l.* 10*s.*—Mr. F. Goodall, Raising the Maypole, sketch for the picture in the Vernon Gallery (295*l.*), 630*l.*—Sir C. Eastlake, Contadina Family returning from a Festa (300*l.*), 619*l.* 10*s.*—J. M. W. Turner, Antwerp, Van Goyen looking for a Subject, 1833, (315*l.*), 2,635*l.* 10*s.*—Helvoetsluys, "The City of Utrecht," 64, going to Sea, 1832, (283*l.* 10*s.*), 1,680*l.*—Ivy Bridge, Devon, (283*l.* 10*s.*), 924*l.*—Wreckers, Coast of Northumberland, 1834, (288*l.* 15*s.*), 1,984*l.* 10*s.*—Calder Bridge, Cumberland (288*l.* 15*s.*), 525*l.*—Venice, The Campo Santo, 1842, (262*l.* 10*s.*), 2,000*l.*—Venice, the Giudecca, Sta. Maria della Salute, &c., 1841, (262*l.*), 1,732*l.* 10*s.*—Ehrenbreitstein (401*l.*), 1,890*l.*—Port Ruysdael (1827), (315*l.*), 1,995*l.*—Palestrina, 1830, (1,050*l.*), 1,995*l.*—The pictures sold for 56,494*l.* 1*s.*

Among the Drawings the following were the most remarkable for quality and realized value:—Mr. W. Hunt, Black and White Grapes, &c. (10*l.* 10*s.*), 52*l.* 10*s.*—Peasant Girl in a Chair (26*l.* 5*s.*), 106*l.* 1*s.*—Greengages and Hips (15*l.* 15*s.*), 63*l.*—The Tambourine Girl (36*l.* 15*s.*), 199*l.* 10*s.*—Bunch of Grapes, two Peaches and Rose Hips (26*l.* 15*s.*), 798*l.*—R. Dadd, Turks (8*l.* 8*s.*), 36*l.* 15*s.*—S. Prout, Amiens (8*l.* 8*s.*), 115*l.* 10*s.*—Basle (6*l.* 6*s.*), 73*l.* 10*s.*—Interior of a Cathedral (6*l.* 6*s.*), 111*l.* 6*s.*—Old Buildings and Bridge (6*l.* 6*s.*), 74*l.* 11*s.*—Porch of Chartres Cathedral (6*l.* 6*s.*), 128*l.*—Old Houses at Amiens (8*l.* 8*s.*), 79*l.* 10*s.*—Nesfield, Kilchurn Castle (13*l.*), 63*l.*—Mr. Stanfield, Honfleur (16*l.* 16*s.*), 103*l.* 19*s.*—C. Fielding, Bridlington Harbour (37*l.* 16*s.*), 556*l.* 10*s.*—Rivaulx Abbey (52*l.* 10*s.*), 483*l.*—Bowhill Downs (37*l.* 16*s.*), 411*l.* 12*s.*—Rivaulx Abbey, evening (44*l.* 2*s.*), 630*l.*—Traeth Mawr, North Wales (26*l.* 5*s.*), 441*l.*—Loch Katrine (13*l.* 13*s.*), 273*l.*—Shakespeare's Cliff (8*l.* 8*s.*), 72*l.* 9*s.*—Langdale Pikes (27*l.* 6*s.*), 367*l.* 10*s.*—Crowborough Hill (26*l.* 15*s.*), 798*l.*—De Wint, River Scene, Canterbury Meadows (60*l.*), 283*l.* 10*s.*—Mr. J. D. Harding, Berncastle (105*l.*), 294*l.*—J. M. W. Turner, Himalaya Mountains, two (36*l.*), 346*l.* 10*s.*—Lighthouse at Havre, moonlight, The Lake of Geneva, from the Jura, and Lighthouse of the Heve, Mouth of the Seine (31*l.* 5*s.*), brought respectively, 110*l.* 5*s.*, 148*l.* 1*s.*, and 108*l.* 3*s.*—The Righi (84*l.*), 310*l.* 16*s.*—The Castle of Elz, Rouen, and Château Gaillard (cost 131*l.* 5*s.*), brought respectively 168*l.*, 210*l.*, and 178*l.* 10*s.*—The Lake of Lucerne (84*l.*), 714*l.*—The Pilkington Drawings, by Turner, of Yorkshire Scenes, Scarborough Castle, Mowbray Lodge, Grouse Shooting, and Woodcock Shooting (cost 600*l.*), brought respectively, 546*l.*, 535*l.* 10*s.*, 451*l.* 10*s.*, and 535*l.* 10*s.*; total, 2,068*l.* 10*s.*—Mr. D. Roberts, Hôtel de Ville, Louvain, Baalbec, Street in Cairo, the three a present, brought 99*l.* 15*s.*, 110*l.* 5*s.*, 80*l.* 17*s.*—The Great Square at Tetuan (21*l.*), 480*l.* 10*s.*—The Seminaries and Cathedral, St. Iago (21*l.*), 262*l.* 10*s.*

REPORT OF THE COMMISSIONERS ON THE FINE ARTS.

THE following is an abstract of the Thirteenth Report of the Commissioners on the Fine Arts, which closes the labours of that body. Feeling it would be difficult, nay, impossible, to supply the place of the late Prince Consort as their chairman, the Commissioners are relieved from the necessity of the attempt, since, in their opinion,

the term of their prescribed duties has arrived. The whole scheme for the decoration of the Parliament House has been considered and decided; and, trusting that the series of works now in progress can be carried on to its completion, the Commission sees no need for its continued superintendence. The Twelfth Report of the Commission having described the work of the body, it is needful now only to specify the pictures and sculptures that have been completed since its issue, and to submit the Commissioners' view of the extent to which other works, now begun, should be continued. With regard to Mr. Maclise's labours in the Royal Gallery, it is considered that although so vast a scheme as is embraced by the entire decoration of that apartment could not be completed in the lifetime of one artist, yet, anticipating the same energy as he has hitherto displayed to be continued, and assuming his willingness to undertake them, it is desirable that further portions than the large compartment to contain the Death of Nelson, now in progress, should be entrusted to Mr. Maclise. With regard to Mr. Dyce's operations in the Queen's Robing-Room, it is stated that he has been, since the last Report, occasionally employed upon the largest of the frescoes representing the Life of King Arthur. The stipulated remuneration for the entire series having been long since received by the artist, the Commissioners express their earnest hope that he will see the importance of prosecuting the work with greater assiduity. As to Mr. Herbert's task in the Peers' Robing-room, it is reported that he has prepared sketches for several of the subjects, intended generally to express the idea of "Justice on Earth, and its development in Law and Judgment," and nearly completed a large picture representing 'Moses bringing down the Tables of the Law.' The delay in Mr. Herbert's progress is to be attributed to his frequent experiments in the stereochrome process of painting, now concluded. Mr. Cope progresses in the Peers' Corridor; he is reported to have completed five out of the eight paintings required, "with equal ability and industry": the designs of the remaining three have been approved of by the Commissioners. Four of the eight pictures commissioned for the Commons' Corridor from Mr. E. M. Ward have been completed, and a sketch for a fifth approved.—In sculpture, the works now in progress consist of statues of British sovereigns in chronological order. Twelve of these statues, to be executed in white marble, from James the First to William the Fourth, are proposed to be placed in the Royal Gallery; commissions have been given for six of them; the completion of the series is regarded as indispensable. Should the series be continued beyond the Royal Gallery, it is recommended that the five statues intended for the Queen's Robing-room should be undertaken next. The remaining statues in the Vestibule and Lower Landing-place, to be in metal, will be less costly. Among future proceedings may possibly be included the re-painting of some of the earlier experimental frescoes in the Upper Waiting Hall. The Committee appointed to inquire into the causes of the deterioration of these frescoes has examined the various artists, &c., but up to this time has not been able to arrive at any satisfactory conclusion. It is not presumed that so much as the annual sum of 4,000*l.* required from Parliament until now for the objects of the Commission will be in future needed: 3,700*l.* is asked this year.

SANTA CROCE.

Florence, May 5, 1863.

THE new Façade of the Church of Santa Croce was uncovered last Sunday, the 3rd of May, with all the dignified ceremonial befitting the completion of a great national work. The day chosen for it was the five hundred and seventieth anniversary of the laying of the foundation-stone of the grand old church, when on as fair a May morning the consecration ceremony took place. "Many bishops and prelates," as Villani relates, "and priests and monks, being present, besides the Podestà and the Captain" (of the people), "and the Priori, and all the good citizens of Florence, both men and women, with great rejoicing and solemnity." On this occasion, too, there was a great gathering,

not only of Florentines but of "strangers and foreigners," though the ceremony took place at the early hour of 8 A.M. The windows and balconies of the historical Piazza before the church were gay with damask hangings and filled with spectators; tall national banners fluttered gaily in the morning breeze; Prince Carignano and his brilliant suite occupied the royal *palco* erected in front of the church steps. A solemn Te Deum was sung within the church, and the band of the National Guard gave the signal in the Piazza, by bursting into the notes of the Royal March, for the huge canvas covering, which had hung before the façade ever since the scaffolding had been removed, to drop down and show the new marble structure sharply defined against the pure sunny sky.

No small degree of excellence, it may well be believed, would have sufficed to satisfy public expectation in the fit clothing with marble of the hitherto barn-like brick front of such a building as Santa Croce, which has been aptly called "the Florentine Westminster Abbey," though I heard a somewhat *positif* and unenthusiastic compatriot indignantly exclaim on the morning of the ceremony, that, for the life of him, he "could see no resemblance whatever between the two churches!" The success, therefore, which has been achieved and the almost universal praise so largely bestowed on the completed work reflect the greatest honour on its designer and architect, Signor Niccolò Matas, who has carried it out with such admirable skill in the short space of six years, and at the almost incredibly small cost of less than 12,000*l.* It would be difficult to persuade any English architect of the possibility of constructing such a work for such a sum, nor would it have been at all feasible even here, but for the most skillful adaptation of means to ends, and the most scrupulous integrity and well-managed economy on the part of the architect. To such an extent was this carried by Signor Matas that, with a view to save unnecessary expense of transport, all the marble required was cut to the exact form and dimensions required at the quarry itself, and arrived at Florence ready to be put at once into its destined place in the fabric. It would require the practical knowledge of one conversant with such works to estimate the amount of labour and skill in calculation needed to produce this result.

For the genius which has conceived the design of the façade,—for the spotless, and, one must needs say, rare integrity, with which it has been carried out,—and for the severe and assiduous labour of superintending its execution,—Signor Matas was rewarded with the magnificent stipend of two thousand six hundred and odd Tuscan *lire* (equal to something less than ninety pounds sterling) per annum during the execution of the work! On the completion of the façade, however, the King has been pleased to mark his satisfaction with the work, and his admiration of the rare self-denial and devotion with which it has been executed, by conferring on Signor Matas the much-coveted Cross of the Order of Savoy, which carries with it a pension of four hundred crowns.

It has been affirmed and contradicted, and re-affirmed, that the first idea of the façade as it now stands was taken by Signor Matas from an ancient pen-and-ink design discovered in the archives of the Convent of Santa Croce, in the year 1844, when the inundation of the Arno had necessitated their removal to another building. The drawing was supposed to be by Simone del Pollaiuolo, from the fact of its measurements coinciding with those of the basement story commenced by him, and which had remained untouched from his time to our own. Be this story of the origin of the design a fact, or only, as some say, "a pious fraud," put forward to give greater authority to the modern architect's idea, it is certain that the façade is in excellent keeping with the interior of the ancient edifice, and is stately, severe, and yet rich in its pure marble raiment, which yet needs stains and shadowings of time to mellow the polished whiteness of its huge panellings into harmony, and so to do away with the cavilling of a few grumblers, who raise the pious objection that it ought not to have been fronted with marble at all. The great white panels are separated by

hands of dark green Prato serpentine, from the estates of Cav. Guglielmo de' Pazzi, and chocolate-red marble, from those of the Count della Gherardesca, both gentlemen having placed their quarries gratuitously at the disposition of the building-committee. The three doorways are exceedingly rich in sculptural adornment, to which all the principal sculptors of Florence—Dupré Cambi, Salvini, &c.—have contributed their quota. The doors themselves are to be a present, and a royal one, from the King. They are to be cast in bronze by Signor Papi, from designs by Prof. Santarelli. The three marble bas-reliefs over the three doors are yet wanting, but their places are temporarily filled by paintings in *chiaroscuro* of the intended subjects.

The form of the new façade is tricuspidal, with lateral pinnacles, similar to that of several of the designs ultimately rejected by the Committee for the projected façade of the Duomo. The tricuspidal form assuredly gives a degree of *svelte* proportion to the outline which it were hard to find in a front of that monocuspidal form, which the Committee has laid down as a *sine quâ non* in designs for the next Concorso. Signor Matas himself, however, some time back produced a very generally admired design for the façade of the Duomo, which is monocuspidal; and public opinion here, as expressed in the Florence papers, is setting strongly in favour of his being entrusted with this second great work without delay, instead of waiting for a second Government Concorso, with all its attendant expenses and consequent jealousies, to end in probable disappointment. All the papers are full of minutely-detailed extracts from the accounts of the Santa Croce building-committee, which, at the conclusion of its labours, has most generously offered to present the Comune of Florence with the whole of the immense and complicated scaffolding just taken down, amounting in value to above 20,000 Tuscan lire (between 4,000*l.* and 5,000*l.*), to be used for the new façade of the Duomo.

The funds for the façade of Santa Croce have been almost entirely raised by private donations. By far the most munificent contributor to the work, as well as one of the most intelligent and efficient members of the building-committee, is Mr. Sloane, an English gentleman of large property long resident in Tuscany. Mr. Sloane's donations to the work have reached the splendid sum of 250,000 Tuscan lire, that is, nearly 9,000*l.* English. Nay, this most generous patron of the noble work just finished empowered the building-committee to draw on him, at any time, for any amount required, rather than that the progress of it should be hindered for a single day. It is rumoured that Mr. Sloane has offered a still more generous donation to the façade of the Duomo, on the very reasonable condition that Signor Matas shall design it and be entrusted with its execution. An anecdote in circulation here connected with the just-completed work which is worth repeating. The King, during his late stay in Florence, paid a long visit to the new façade, examined it in detail with great interest, and, in a subsequent conversation with Signor Matas, after expressing his admiration at the grand effect of the whole fabric and the excellent and solid workmanship of all its parts, especially remarked on the extraordinary economy which had regulated the expenses, and asked the architect by what means he had been able to compass such results. "By doing all that I possibly could *myself*, Sire, and keeping clear of hungry hangers-on" (*mangiapani*), was the significant answer, which might well convey its "word in season" even to the frank and true-hearted ruler who heard it.

THE T.

OUR WEEKLY GOSSIP.

EXTENSIVE preparations are being made at Newcastle for the next meeting of the British Association. The date proposed is August 26; an inconvenient time, we should think, for all the London and University members. It is too early or too late: being just in the middle of the long vacation, when men of science, whether of the Universities or the Inns of Court, are wisely climbing alpine peaks or summering in the Mediterranean. The best meetings of the Association have been those which were held at times most convenient for the University

and London members. Perhaps it is not too late to re-consider this point. We should think the policy for a town like Newcastle would be to catch men on their way to Scotland, in the early days of August, so as to give them time to finish their labours and get up into the moors for the grouse. This date would also catch the men who are going abroad. A large sum of money has been raised;—it would certainly be sad if there should be only a small company to entertain.

The result of the concert given by Madame Lind-Goldschmidt at St. James's Hall last week, for the benefit of the Royal Hospital for Incurables at Putney, is a contribution of 526*l.* to the funds of that charity.

The Pugin Memorial Committee having raised a fund of 1,000*l.*, have resolved to place it at the disposal of the Institute of British Architects, in trust, for the establishment of a Student's Travelling Fund, under certain conditions.

Lord Stanhope presided at a dinner of the Literary Fund Society on Wednesday evening, at which we had rather less than usual about genius and learning in distress. Indeed, the proceedings of the day showed two remarkable innovations. Lord Stanhope omitted all reference to the case of Chateaubriand. Worse still, he actually proposed for the consideration of men of letters and science, the policy of uniting in one great Institute, on the model of the French Academy. We are afraid Lord Stanhope, now President of the Fund, as well as chairman of the day, will be considered by some of the staid and older Members of the Council as a very daring revolutionist. For our own part, we are thankful for one year's silence as to M. de Chateaubriand, and we very warmly indorse the recommendation of an Institute,—the idea of which is very good, if not very new.

The Rev. William Cureton, D.D., Canon of Westminster and Rector of St. Margaret's, has just been named one of the Corresponding Members for the section of Oriental Languages of the Imperial Academy of Sciences of St. Petersburg.

Admiral FitzRoy has been elected a Corresponding Member of the French Institute.

Dr. Pusey and his friends have taken the advice of Lord Burghley—never to go to law unless sure of your cause—and have dropped their menaced persecution of Prof. Jowett. They have probably chosen the safer part. Having taken counsel's opinion as to the course they had proposed to follow, and finding that opinion the reverse of sanguine as to their success, they show, for once, a little serviceable discretion. But even after this signal discomfiture, we can scarcely hope that Prof. Jowett will be left in peace.

Mr. Beresford Hope has offered a prize of 25*l.* for the best design in ceramic work for decorating the front of the Wedgwood Memorial Institute at Burslem. Urged by this example, Mr. J. E. Heathcote, Mr. J. Edge and the Rev. Dr. Armstrong have offered sums of 15*l.*, 10*l.* and 5*l.* as additional prizes for the same purpose. This competition has been resolved upon, not only with the view of enhancing the beauty of the structure itself, but also with the object of creating a systematic interest in ceramic architecture in its artistic and its practical aspects, by directing the attention both of artists and manufacturers to the subject. Messrs. Beresford Hope, M. Digby Wyatt and J. C. Robinson have been appointed judges of the designs sent in. This is a very interesting experiment in street decoration, and we shall be glad to find it successful.

A smart shower somewhat spoiled the flower-show at the Botanic Gardens in Regent's Park on Wednesday; nevertheless, a goodly company assembled in the grounds, and the display of flowers was satisfactory.

M. de Quatrefages, who seems to regard all scientific doubt as to the fossil jawbone found at Moulin-Quignon, near Abbeville, as so much deprecation of the glory of France, continues to fight for the authenticity. It is another Crecy, another Agincourt, and the battle seems likely to have a similar result. M. Quatrefages says his

first convictions have been strengthened by a further examination both of the jawbone and the flint hatchet found near it. He quotes the opinions of M.M. Delesse, Deanyers, Gaudry, de Vibraye and Lyman, who all concur in considering the jawbone perfectly authentic. M. Pictet, after examining it with care, had declared that he had not expected it to offer such conclusive evidence. As to Dr. Falconer's assertion that the tooth which had been found, besides being very white, still contained a large proportion of gelatine, M. Quatrefages contended that the existence of gelatine had occurred ere this in fossil teeth of much greater antiquity than any which could be found in drift. Messrs. Prestwich, Falconer, Burk and Carpenter are in Paris, strong in their convictions, and we hear that many French inquirers are already of their opinion as to the spuriousness of this extraordinary discovery in the drift.

We hear with regret that some serious modifications in Mr. G. G. Scott's design for the Albert Memorial are proposed. Professional etiquette is generally powerful enough to restrain architects from the course indicated; non-professional interference is always to be deprecated and rarely to be allowed, so long as the designer keeps within his estimate. It may be safely said that lay meddling has injured, if not ruined, most of our architectural efforts. Not an architect, nor a sculptor, both of whom may be supposed to understand their own business best, but complains that he has been wronged in this manner. We know what Michael Angelo suffered from this cause, and how he overset its action. Let us hope that Mr. Scott may be allowed to carry out his own design in his own way, so that he alone may be responsible for its failure or honoured for its success.

The question of crinoline, as regards mere beauty of dress, may, says a friend of ours, most aptly be presented to ladies and their advisers at a time of the year when the fashions are about to change—when cloth and satin are about to give way to muslin. It may be considered apart from the opinions of men. Crinoline or no crinoline is simply a question whether ladies dress for the sake of the beauty of drapery or to display the ornamentation that may be borne upon the fabric employed, its pattern, that is to say. The idea of mere clothes, i. e. needful coverings used for warmth, is quite beside the point; indeed, its relative importance to that of dress is about the same as exists between the bulk of a lady's dress-trunks and her mere clothes-boxes, or herself crinolined and uncrinolined. If the sculptural forms of drapery, having that charming flow of line which hides while it indicates the human shape within, be sought, then drapery without crinoline must be voted for. It is noteworthy that some patterns, of the most beautiful forms, are best adapted for display in drapery: these are stripes, placed vertically, especially if of varying widths; out of their extreme monotony and simplicity these patterns get, when following the lines of the form and indicating the movements of the wearer, the most intense variety of curve and flow, and make drapery, *per se*, ever beautiful. Horizontal stripes, from their forming to the eye irregular and broken lines as they follow the flutings and folds of the robe, are objectionable, if worn without crinoline, but less so if by it they are expanded into rings; vertical lines suffer on crinoline, inasmuch as their flow and involute variety of curve are destroyed by expansion. Obliquely-placed bands share the qualities of horizontal or vertical stripes as they approach one or the other in degree of inclination. Of course, in the severest view of the question, self-coloured, or patternless, dresses make the best drapery and suffer least on crinoline. Dresses ornamented with flowers lose some of their qualities when they are left unexpanded. So far as ornamentation goes, flowers and like forms, whether treated conventionally or in commonplace imitation of real objects, are wasted on drapery.—of course, their breaking up by the folding of the material often produces an agreeable and rich variety, which, if meaningless, excites the eye to follow pleasantly the broken forms, but, so placed, they are only broken forms, and might have been disposed any-

how for all that is attained by their symmetrical, or pattern-like, arrangement. As a rule, colour is better displayed by drapery than in expanded dresses. If, then, the wearer's object is to show the pattern of her dress, by all means let her spread it upon crinoline; rich embroideries have mostly been so worn, and led to or followed its introduction. If, however, she desire beauty of form in drapery, without which no drapery exists, crinoline will effectually balk her. Pure drapery, let it be carefully noted, as such, can only be expected from a Greek, Roman or other system of attire, involving few garments; it does not exist in the costume worn now-a-days by women of northern climates. Their numerous garments, placed one above another, mar the beautiful flow of free line, but do not so utterly destroy it as crinoline does. Whether all these garments are really needful to women, and do not ridiculously load their haunches and impede their movements, can be answered negatively at once. It is only since Tudor times began that puffed hips and multitudinous flutings have been in use. Long before that time, and when the English climate must have been colder than it is now, women wore no such heaps of clothes—destructive of drapery and, as doctors say, injurious to health, by overheating and loading the loins. As to the comparative beauty of the ancient and modern styles of dress, that may be decided by looking at the statues in any cathedral; the clumsiness of the female figures erected after the date indicated and the ineffable grace which attends the Edwardian effigies, decide the point. The female figure is eternally beautiful in itself; and the true object of dress as a social art is to hint this beauty to an observer's mind, through the delicate means by which it is apparently executed.

The President and Council of the Pharmaceutical Society have issued cards for a Conversation Party, on Tuesday evening next, in Bloomsbury Square.

A very fine portrait of the painter of 'Hogarth's Studio,' the 'South Sea Bubble,' and 'The Last Sleep of Argyle,' drawn by Mr. Richmond, and engraved by Mr. Holl, is now before us. The pose is characteristic of the man, the likeness is true and yet poetical, the expression admirable. We do not see that Mr. Ward's friends could have a more perfect *souvenir*,—unless, indeed, they should be lucky enough to possess one of his works: in which case they would probably like to have the portrait also.

We hear from Penzance of the death, on the 8th, of Richard Quiller Couch. He was the son of Mr. Jonathan Couch, of Polperro, the ichthyologist and naturalist, who is now publishing 'A History of the Fishes of the British Isles.' R. Q. Couch was born in March, 1817, educated at Plymouth, and subsequently articulated to his father. His researches into the metamorphoses of the Crustacea were appreciated by all naturalists, most of all by Mr. Bell, who quoted him for many facts then new to science. Twenty years ago he wrote the third part of 'The Cornish Fauna,' published by the Royal Institution of Cornwall, his father writing the first and second parts. After passing through Guy's, and gaining in 1837 the medal for the prize essay for Ophthalmic Surgery, to which branch of his profession he continued particularly attached, he settled at Penzance, where he became one of the secretaries and curators of the Natural History and Antiquarian Society, for which he wrote a variety of papers on British fishes, Crustacea, and kindred subjects. He became a Member of the Royal Geological Society of Cornwall, then curator and subsequently secretary and curator, contributing to its *Transactions* many papers, and annually writing a Report of the progress made in examining the geology of Cornwall. The loss of such a man to a provincial town is very great.

French playwrights are a droll race when they deal with English history and manners. London's Lord Mayor, according to them, can transport a rebellious and disorderly man of genius to America! *Lovelace* carouses with his friends "the bucks" over a Britannia-metal teapot. But the transportation and the teapot are outdone in M. Langle's play 'Un Homme de Rien,' founded on the name of Sheridan, and not the real story of his life and

adventures. The author of 'The School for Scandal' begins life as a jockey, wins a diamond pin as the prize, holds a pipe in his mouth, like Aunt Sally, to be shot at, thereby proving his steadiness of nerve. Need we go on? The trash, trashy as it is, however, satisfies the French. "Really," says M. Jules Janin, in his *feuilleton*, "the drama is amusing, full of grace and interest."

M. Léon de Wailly, a modest and conscientious man of letters of the second class, died a few days ago, in Paris. As a novelist, he showed a hankering after English subjects; his principal tales being 'Angelica Kauffmann' and 'Stella and Vanessa,' some years ago translated into English by Lady Duff Gordon. He rendered many of our best books into French gracefully, and, on the whole, correctly; among others, 'Tom Jones,' 'Tristram Shandy,' 'Evelina,' Lingard's 'History of England,' the poems of Burns, and Mr. Thackeray's 'Esmond.'

ROYAL ACADEMY OF ARTS.—THE EXHIBITION of the ROYAL ACADEMY is NOW OPEN.—Admittance (from Eight till Seven), 1s.; Catalogue, 1s.
JOHN PRESCOTT KNIGHT, Esq., R.A., Secretary.

SOCIETY OF PAINTERS IN WATER COLOURS.—THE FIFTY-NINTH ANNUAL EXHIBITION is NOW OPEN, at their Gallery, 5, Pall Mall East (close to the National Gallery), from Nine till Seven.—Admittance, 1s.; Catalogue, 6d.
JOSEPH J. JENKINS, Secretary.

INSTITUTE OF PAINTERS IN WATER COLOURS (founded in 1831 as the New Society of Painters in Water Colours).—THE ANNUAL EXHIBITION is NOW OPEN.—Gallery, 53, Pall Mall, opposite Marlborough House.—Admittance, 1s.; Catalogue, 6d.
JAMES FAHEY, Secretary.

FRENCH GALLERY, 120, Pall Mall.—THE TENTH ANNUAL EXHIBITION OF PICTURES, the contributions of Artists of the French and Flemish Schools, is NOW OPEN.—Admittance 1s.; Catalogue, 6d.

EXHIBITION for the RELIEF of the SICK and WOUNDED POLES.—The only existing and historically known PICTURE of the MARIA HOEDEGEDRIA and the INFANT JESUS, painted by St. Luke the Evangelist, never before exhibited, and now brought before the public by the owner solely in aid of the Polish Relief Fund, to which all proceeds of the Exhibition will be handed. To be seen every successive week-day for the following fortnight, at the International Fine-Art and Photographic Galleries, 230, Regent Street, W. On View from 10 a.m. to 7 p.m.—Entrance, One Shilling.

MR. HENRY NICHOLLS'S RECITALS of the RECENT POETS and HUMORISTS, at the Hanover Square Rooms, on MONDAY EVENING, May 25, at Eight, including Macaulay's 'Horatius'; Tennyson's 'Locksley Hall'; Poe's 'Bells'; Hood's 'Miss Kilmansegge' and 'Desert Born'; Ingoldsby's 'Rupert the Fearless'; and 'Lord of Thoulouse,' &c.—Admission, 3s., 2s., and 1s.—'Macheth' at the Pavilion, Brighton, THIS MORNING, May 16, at Three.—Communications, 16, Howard Street, Strand.

LEVASSOR EN VISITE.—SCENES ET CHANSONS COMIQUES.—Dudley Gallery, Piccadilly.—On Tuesday, Thursday, and Saturday Evenings, during the month of May,—M. LEVASSOR will repeat his highly successful ENTERTAINMENT, with change of Programme, assisted by Mlle. Teissire and M. Rey, Pianoforte, M. Rosenboom.—To commence on each Evening at Half-past Eight.—Seats (Unreserved), 2s.; Stalls (numbered), 7s.; a few Fauteuils, 10s. 6d. each; Mr. Mitchell's Royal Library, 23, Old Bond Street, W.

MRS. FANNY KEMBLE'S READINGS of SHAKSPEARE.—Dudley Gallery, Egyptian Hall, Piccadilly.—On Monday Evening next, May 18, commencing at Half-past Eight, o'clock, Mrs. FANNY KEMBLE will read the Play of 'Julius Cæsar'; Wednesday Evening, May 20, the Tragedy of 'Hamlet'; and on Saturday Morning, May 23 at Three o'clock, the Play of 'The Merchant of Venice'.—Seats (Unreserved), 2s.; Stalls (Numbered), 5s.; a few Fauteuils, 7s. each, which may be obtained at Mr. Mitchell's Royal Library, 23, Old Bond Street, W.

POLYTECHNIC.—Great additions to and new experiments in Professor Pepper's LECTURE on OPTICAL ILLUSIONS. Professor Pepper will (by the kind permission of Mr. Charles Dickens) read and illustrate a portion of the Tale of 'The Haunted Man,' and the Ghost 'still walks on the new platform arranged in the large Theatre, N.B.—The Ghost illusion was invented by H. Dirks, Esq., O.E.S. and has since been improved and patented by Messrs. Dirks and Pepper; and in order to prevent disappointment it will be shown every morning and evening at Half-past One and Eight o'clock.

SCIENCE

SOCIETIES.

ROYAL.—May 7.—General Sabine, President, in the chair.—The names of the fifteen selected candidates and the following papers were read: 'Notes principally on Thermo-Electric Currents of the Ritterian Species,' by Mr. C. K. Akin.—'On the Physiological Properties of Nitro-benzole and Aniline,' by Dr. Letheby.—'On a question of Compound Arrangement, and on a Theorem relating to Polar Umbra,' by Prof. J. J. Sylvester.

GEOGRAPHICAL.—May 11.—Sir R. I. Murchison, President, in the chair.—Rear-Admiral H. T. Austin, C.B., A. Baring, J. N. Dick, W. J. Farrer, P. D. Hadow, J. H. Mackenzie, W. Simpson, J. A. Wright, and Lieut. I. Sale, were elected Fellows.—Dr. Shaw read despatches from Governors Sir H. Barkly and Sir G. Bowen, 'On Landsborough's Traverse of Australia.'—Mr. Landsborough stated

that there was a very fine country in the neighbourhood of the Gulf of Carpentaria, and, from his experience of sheep-rearing, Queensland was eminently adapted for the growth of wool. He also thought the climate suitable for European constitutions, for he had heard no complaint of unhealthiness on the part of the people whom he met there. He found the "Plains of Promise," near the head of the Gulf, quite equal to the description given of them by Capt. Stokes, when he discovered that region; they formed as fine a pastoral country as he had ever seen.—Mr. Middleton, the second in command in the M'Kinlay Expedition, described the perils which this party of explorers encountered on the occasion of a sudden flood, and gave a variety of interesting details respecting the journey. He stated that the thermometer sometimes stood at 166° in the sun, and he spoke in the highest terms of the ability, judgment and energy of Mr. M'Kinlay, the leader of the Expedition.

GEOLOGICAL.—May 6.—L. Horner, Esq., V.P., in the chair.—W. W. Collins, C. C. Blake, and J. Martin, Esqs. were elected Fellows.—M. F. J. Pictet, Signor G. Seila, Herr Credner, Dr. J. J. Kaup, Signor G. Meneghini, Signor B. Gastaldi, and M. A. Morlot were elected Foreign Correspondents.—The following communications were read: 'On the Brick-pit at Lexden, near Colchester,' by the Rev. Osmond Fisher, M.A.; with a Note on the Coleoptera, by T. V. Wollaston, Esq.—'On the Original Nature and Subsequent Alteration of Mica-schist,' by H. C. Sorby, Esq.—'On the Fossil Corals of the West Indies, Part I,' by P. Martin Duncan, M.B. Lond.

SOCIETY OF ANTIQUARIES.—May 7.—Earl Stanhope, President, in the chair.—Notice was given that on the following Thursday the vote of the meeting would be taken on a proposal made by the Council to alter the hour of meeting on *ballot nights* from eight to half-past eight P.M.—The Prior of San Clemente (the Rev. J. Mullooley) presented two photographs of frescoes recently discovered in the under-basilica of San Clemente.—Beriah Botfield, Esq. exhibited and presented to the Society an extremely fine Saxon cruciform fibula, two other fibulae, a spindle-whorl and two iron keys, found in Watling Street, where it passes through Norton.—C. Warne, Esq. exhibited a stone hammer (the only one he had ever found in a Dorsetshire tumulus), and a ball of flint, used for fashioning implements.—L. L. Dillwyn, Esq. exhibited, through Mr. Morgan, a beautiful medallion of Oliver Cromwell.—Count d'Albanie exhibited a glans, or sling bullet, found in Grenada, and bearing on one side a thunderbolt and on the other some letters, which appeared to be ACIPE written backwards, i. e., accipe, "take that." Inscriptions of the same meaning,—a word and a blow—are not unfrequently found on Greek bullets.—Octavius Morgan, Esq. exhibited two very beautiful steel locks of Nuremberg work. They appeared to be what is technically known as "masterpieces." The exhibition was accompanied by some remarks, which, coming as they did from Mr. Morgan, could not but be highly valuable, especially as pointing out the germs of watch-making in the art of the locksmith.—K. Mackenzie, Esq. laid before the Society an elaborate account of the Hornbook, illustrated by numerous specimens from his own collection, and by woodcuts and photographs of specimens from other collections.

INSTITUTE OF BRITISH ARCHITECTS.—May 4.—Annual General Meeting.—W. Tite, M.P., President, in the chair.—The following were elected office-bearers for the ensuing year: President, T. L. Donaldson; Vice-Presidents, Messrs. A. Ashpitel, O. Jones, and Ewan Christian; Honorary Secretary for Foreign Correspondence, Mr. C. C. Nelson; Ordinary Members of Council, Messrs. W. Burges, G. Somers Clarke, B. Ferrey, I. H. Hakewill, O. Hansard, H. Jones, G. J. J. Mair, Wyatt Papworth, and J. L. Pearson; Treasurer, Sir W. R. Farquhar, Bart.; Honorary Solicitor, Mr. F. Ouvry; Auditors, Mr. C. Fowler, jun., and Mr. R. N. Shaw.—Mr. J. P. Seddon and Mr. C. K. Hayward were re-elected Honorary Secretaries.—

The Report and Balance-sheet were read and adopted.

ENTOMOLOGICAL.—May 4.—F. Smith, Esq., President, in the chair.—Mr. S. Stevens exhibited a number of insects from South Africa, collected by Mr. Trimen; a collection from Madagascar, sent home by Mr. Plant, containing a few Coleoptera and some fine Lepidoptera, conspicuous amongst which was a new Diadema; a collection from the Feejee Islands, principally of Coleoptera, and comprising many new species; some spiders from Bogotâ, of enormous size; and a specimen from Australia, which was apparently undistinguishable from the British *Sinodendron cylindricum*.—Mr. M'Lachlan exhibited the case of a caddis-worm (*Limnephilus*) which was entirely composed of small shells (of a Planorbis) from 250 to 300 in number, arranged with the utmost regularity, so as to resemble a piece of mosaic.—Mr. Edwin Shepherd exhibited specimens of *Biston betularius*, which had been reared from eggs sent to him from Lancashire. Mr. Edelman had last year found a pair of this species in copula, one being the normal form of the insect, and the other the black variety sometimes found in the north of England; the eggs sent to Mr. Shepherd were the fruit of that union, and from them twelve specimens of the perfect moth had emerged, of which eight were of the ordinary colour, whilst four were of the negro variety; of the twelve, ten were females, and of the two males, one was a negro; the whole of the larvæ had been fed on the same food, principally on lime-leaves. It was remarkable that the black variety had never been captured in the South, and that no intermediate forms had ever been bred, to connect and link together the light-grey type and the sooty-black variety.—Mr. Waterhouse exhibited *Oxyptoda lentula* and *O. miscella*, both hitherto unrecorded as British species; also a British specimen of *Trechus*, which he considered to be identical with the insect sent to him by Dr. Schaum as *T. obtusus*; and specimens of *Philochthus Mannerheimii* taken at Darenth Wood.—Mr. Waring exhibited some dead pupæ of drones which he had found near the entrance of one of his bee-hives; they were not quite fully matured, and it would seem that the bees must have cut off the caps of the cells, and cast out the dead pupæ; but he was unable to throw any light upon the cause of their death.—Mr. T. W. Wood made some remarks on the colouration and mimicry of nature visible on the under-side of the wings of *Anthocharis Cardamines* when at rest, and on the utility of this colouring in the preservation of the insect. The butterfly might, during the present month, be found towards evening or in cloudy weather at rest in very exposed situations, on the tops of grasses and flowers, and more particularly on those of *Anthriscus sylvestris*: the chequered white and green of the wings exactly resembled the small white flowers of the Anthriscus, as seen against the green background of the hedge-row behind, and thus preserved the insect from observation; it was to be remarked, too, that, except as a secure resting-place, the butterfly did not appear to be partial to the Anthriscus, but preferred to hover over and suck the juices of the wild geranium and other plants.—A letter was read from Dr. Hagen, of Königsberg, the author of the recently-published 'Bibliotheca Entomologica,' requesting British entomologists to communicate to this Society any errors or omissions which might be found in that work, and of additions to be made thereto, in order that by such assistance and co-operation the work might hereafter be made perfect and maintained complete.

SOCIETY OF ARTS.—May 6.—J. Dillon, Esq., V.P., in the chair.—The paper read was, 'Natal and South-East Africa,' by Mr. Robinson.

MEETINGS FOR THE ENSUING WEEK.

- Mon.** Asiatic, 8.—Anniversary.
- Tue.** Architects, 8.
- Ethnological,** 4.—Anniversary.
- Royal Institution,** 3.—'Sound,' Prof. Tyndall.
- Statistical,** 8.—'Pay of the Soldier compared with Wages of the Labourer,' Major-General Tullock.
- Engineers,** 8.—'Communication between London and Dublin,' Mr. Watson; 'Manufacture of Duplicate Machines,' Mr. Fernald.
- Wed.** Horticultural, 4.—Promenade.
- Society of Literature,** 4.

- Society of Arts,** 8.—'Destructive Distillation,' Dr. Paul.
- Geological,** 3.—'Devonian Plants of Maine, Gaspar, &c.'
- New Species of Dendropteron, &c.,** Dr. Dawson.
- 'Upper Old Red Sandstone Rocks,'** Mr. Salter; 'Relations of Sandstone of Cromarty with Reptilian Foot-prints,' Dr. Gordon and Rev. J. Joass.
- THURS.** Numismatic, 7.
- Chemical,** 8.—'Effect of Intense Heat on Fluid,' Mr. Grove.
- Antiquaries,** 8.—Election of Fellows.
- Royal Institution,** 3.—'Geology,' Prof. Ansted.
- Royal Soc.,** 8.—'Sun's Magnetic Action on the Earth,' Dr. Chambers; 'Numerical Elements of Indian Meteorology,' Mr. Hermann de Schlagintweit; 'Structure of the so-called apolar, unipolar, and bipolar Nerve-Cells of the Frog,' Dr. Beale.
- FRI.** Royal Institution, 8.—'Sun's Chemical Action,' Prof. Roscoe.
- SAT.** Horticultural, 3.—Election of Fellows.—4. Promenade.
- Royal Institution,** 2.—'Language,' Prof. Max Müller.

FINE ARTS

ROYAL ACADEMY.

"They do these things better in France" has not had an apter illustration than is afforded by a notice in the *Moniteur* of a few days since, which states "that the numerous complaints (*réclamations*) which have reached the Emperor upon the subject of the refusal of works of Art by the jury of the Exposition have led him to decide that the public shall have an opportunity of determining the justice of those complaints by seeing the rejected works in the same building (Palais de l'Industrie) in which those accepted are hung. The Director-General of the Imperial Musées has, therefore, the honour to inform M.M. the artists whose works have not been accepted, that an exhibition of such as are not withdrawn before the 7th instant will open in the Palais, *le 15 Mai prochain*"—i. e., yesterday (Friday). The history of this to our insular notions amazing affair is, that the Emperor, moved by the indignation of many luckless artists whose works had been treated somewhat like those our Royal Academy Council has rejected,—went to the Palais, and, to the disgust of the officials, demanded a sight of the victimized pictures. Produced, they turned out to comprise works by men to whom medals, honourable mentions, and other public distinctions had been awarded. In justice to all concerned, the above Ukase appeared in the *Moniteur*. Deep is the wrath of the jury, great the glee of the re-prieved painters, and expansive the delight of the freedom-loving citizens of Paris. To fit this last with an expression, out comes a little *vaudeville* at the Variétés, styled 'Le Club des Refusés,' which hits the flying humour with an extra sting to the chopfallen jury of the Exposition.

Conceive the looks of the Royal Academy Council and hangers—whose doings have raised the present storm among the painters—if some incarnate Public Opinion walked into the national premises in Trafalgar Square, questioned the authorities' decisions in this effectual manner, and set up face to face with the accepted the rejected works. Conceive the Adelphi crammed to see the translated *vaudeville*, and we have the situation! It is not improbable that the rejected English works may be shown by way of public appeal on the proper motion of the victims whose reputations and very livelihoods are threatened; for, as was stated in our last week's Gossip, the discontent that usually follows the opening of the Academy has this year risen higher than ever, and the artists seem determined to have it clearly understood whether the jury and hangers have or not dealt fairly with them. The luckless painters and their friends are naturally indignant that works, the merits of which are unchallengeable, and by men whom the public has recognized as able, have not received the attention to which they are entitled. Undeniably, very many of these are among the rejected, or so hung that their predicament is even worse than if they were so. Mr. J. Brett's case is not a solitary one, in which the authorities have forgotten that they are not in office merely to choose works which fall in with their own ideas of Art, but rather that they may select such as represent all that is valuable and interesting. We do not estimate the labours of Mr. J. Brett as having a high artistic importance, but believe them rather exquisitely mechanical in execution than possessed of intellectual interest. They have, nevertheless, great value, and ought not to have been denied places awarded to earlier productions of the same

gentleman; they are not only his best pictures, but probably not to be surpassed in their way. Far more valuable in Art is a picture entitled 'La Belle Dame sans Merci,' by Mr. A. Hughes, which has obtained the highest praise from artists, but no place at the Academy. Mr. Holiday, a painter of singular promise, whose pictures have been on the line ere now, is equally unfortunate with Mr. J. Brett. Of Mr. Stirling's pictures the larger and better one was rejected by the Council. Mr. Mason, a landscape artist, for whose works we have had occasion to express high admiration, has had the best two of three pictures rejected, while the third is hung where crinolines scrape it and hide it.

One of the most pathetic pictures in the Exhibition is by Mr. F. Walker, widely known as a designer. This represents a woman bearing her child through a snow-storm, and is named *The Lost Path* (No. 712). Here is a work affecting, admirably wrought, and by no unknown man, yet it hangs where none can see its value.—Near it is a highly-poetical head of *Vivian* (707), by Mr. F. Sandys, put so that its irrepressible brilliancy alone can be seen.—Why should an artist like Mr. Anthony be found by his work above the line at all, much more so placed in the *limbo* of the North Room, and where the sun shines upon his picture—a masterful landscape, 'A Relic of the Old Feudal Time' (645)? Such rich execution and original feeling as this work has may not suit the palates of the hangers, but its Art-value is beyond denial, and it is most unfairly displayed.

As no principle can guide decisions so diverse, so no result but mortification to all concerned can arise from the injustice stated. Messrs. Armitage, Leighton, Anthony, Brett, Stirling, Hughes and Sandys are not tyros; Messrs. Holiday and Mason have shown themselves worthy; the ability of Mr. F. Walker is beyond question. The Academy, professedly a school of Art as it is, should not disregard the works of young men; yet among the excellent pictures by such that have been inconsiderately treated are Mr. W. Ridley's *Two Strings to the Bow* (282), hung in a place fitter for many of the rudely executed and dull portraits that fill the ranks upon and above the line; also Mr. E. Edwards's *Lynnmouth Harbour* (644).—How an able foreigner has been received, let the elevated positions of M. Mignot's two beautiful landscapes—anti-ethical in theme as they are, and so proving that the mannerism of men whose works fill the line year by year is not in them,—attest. These are the *Lagoon of Guayaquil* (595), a superbly painted and original sunset; and a charming snow-piece, *A Winter Morning* (677). That every one of these pictures is faulty is no more than can be said of every picture on the line, but none of them is devoid of high merit, which is more than can be averred of all the "line."

Examples such as these might be needlessly multiplied by a longer examination than we have given to the circumstances. We have to point out but one more, and that a crowning absurdity. The high artistic importance of etchings, direct from the painter's hand as they come, has been overlooked by the hangers of this season, in order to accommodate the comparatively mechanical works of the engraver. Thus, in the dismal Octagon Room are placed some of the exquisite dry-point productions of Mr. Whistler, whose fame the Royal Academy ignores by placing the marvellous plates that measure five inches by eight or so, at the top of the room, one (941) where the sun comes to ruin its delicacy, even if it could be seen at all,—another (1003) is in the shade, equally high,—a third (990), broad as a Rembrandt, is down on the floor. Like the last are placed Mr. H. Dean's dry-points, which are only inferior to Mr. Whistler's works. If anything can match the injustice and absurdity of this it would be for the Royal Academy to ignore etching altogether. "They do these things better in France," as was said above; what constitutes Art is better understood there than in Trafalgar Square; so we find, without surprise, that these very etchings the R.A.'s have so contumeliously treated have in the Exposition noble places on the line above the *appui* or velvet elbow-rest that enables men to study fine works at ease.

Such heart-burnings as now prevail will be felt until the Academy has imported into its Council and Hanging Committee some representative of the "outsiders," whose works form so large a portion of the Exhibition in Trafalgar Square. The members of the Academy have, year by year, failed to fill the space reserved for them upon its walls. Of the 1,205 works of Art now exhibited only 139 are by R.A.s, Associates and Engravers, who are 63 in number,—or a fraction over two works per man,—including the most trivial sketches, with miniatures, architectural drawings, portraits, &c. Of the 139, only five are sculptures, produced by the united energies of two R.A.s and an Associate. Spaces upon the line that Turner, Etty and Leslie used to fill, are yielded, perforce, to outsiders; yet while such is the case, the selecting body remains of the same unmixed character, and does not seem, to judge by recent events, likely to refresh itself with the best new blood that might be had. Of the 63 members eleven do not exhibit this year. Of the 38 R.A.s, in whose hands power resides, from among whom the selectors come, only four, Messrs. Stanfield, Hook, Ward and Elmore, fairly fill their places, and that with only eight noteworthy pictures! Upon these eight pictures the Royal Academy bases itself! Nor is the academical part of this body's duties in a more flourishing condition; its Professorships of Anatomy and Painting are vacant; its teacher of Perspective, contrary to the fundamental law, is an "outsider," and it has been obliged to resort to the desperate expedient of electing its teacher of Painting as Associate, in order that the office may seem yet in its own hands and supplied by its own body.

Mr. G. H. Boughton's two pictures mark, by their softness and breadth of tone and colour, a French system of working that is estimable in its completeness. These are No. 48, *Through the Fields*, children walking, and *Hop-pickers Returning—Twilight* (506), such a party trudging homewards at evening: the father and mother go wearily along, a boy bears a big umbrella; the natives of the district stare at them. In the last are much character and fine execution.—Mr. Erwood improves in colouring. His well-painted interior, containing a servant-girl having her fortune told by a gipsy, in whose basket lies a silver ladle, justifies its title, *Minding the House* (55), by the silly look of the girl and the knavish one of the woman. Every one who admires Mr. E. Nicol's powers of humour, must be glad to see that he has avoided the too painful themes in which he used to show them. Still illustrating Irish character, he is happy in *Insolvent* (66), a stalwart fellow who, going into a dram-shop, takes a noggin of whiskey and then examines his pockets with an irresistibly comic air of impudent deprecation at finding them empty. Not less capital is the showman's hard-hearted look of dismay at being "done," her upthrust lips and clenched fingers. *Waiting an Answer* (101), a peasant going with a letter to his landlord, a stumpy, scrubby-headed individual who reads it by the window. *The Hope of the Family* (242), an Irish cottier regarding his ill-looking cub of a son with satisfaction; and *Renewal of the Lease Refused* (397), are all amusing studies of character.

Alone (165), by Mr. T. Webster, is a dismal picture, representing an old labourer mourning for his wife; it has feeling and character.—Mr. H. Le Jeune's work, *The Thorn* (269), shows in a weakly pretty manner a girl extracting a thorn from the foot of a younger sister.—Mr. A. Johnston's *Land o' the Leal* (277), an aged Scottish couple consoling each other with the Bible, is too sentimental to be earnest, and but showily painted.—Mr. W. H. Fisk's *Robespierre receives Letters from Friends of his Victims, threatening him with Assassination* (353) is grim and absurd. If Mr. Fisk will paint the incorruptible, let him first take a peep at a genuine likeness. There is a very good one in the great Gallery of Versailles.—Mrs. H. Ward's *Mary Queen of Scots intrusting her Son to the Earl of Mar* (386), marks a great improvement in the artist's execution, which is solid and careful, and his power of composition. The baby, the cradle and its coverings are capably painted; the Queen's figure is good,—the Earl's figure is weak.—Mr. W. M. Egly's *Shakespeare's Hermione*,

as the statue (402), supports the theme by its rather stony treatment; renders contrasted day and lamp lights well; is solid, but over-smooth. The face is too peevish and frosty to be beautiful.

No young painter has improved more of late than Mr. V. Prinsep in every quality of execution and art. Would that he would unite his feeling for colour, his power of solid handling and dramatic conception, in the treatment of physical beauty. His *Il Barbagianni* (391), a girl caressing an owl, has hardly a superior in the rooms in the qualities we have named. Rare as these are, what a pity it is to find them employed upon an ill-featured model! The same artist's "*Whispering Tongues can poison Truth*" (423) shows the same faculties in a higher degree. A queen of the ancient time has heard evil things of her chosen knight. Meeting him on the palace-stairs, she passes the astonished man without regard. Behind, on the landing above, are courtiers whispering and laughing. The lady's action as she swerves to the side of the stair, her nervous hand upon the rail, her set, regretful, angry face, are admirable in design. The knight's action, although apt, is rather awkwardly expressed; his figure does not compose well, and he might have been handsomer than he is, without being less manly.—Mr. H. O'Neil never succeeded so well with expression as, and never painted better than, in *The Power of Music* (398),—Stradella and his wife escaping assassination through the sweetness of his singing. Mr. O'Neil has wisely thought out the effect of candle-light upon flesh, but not been able to render it without much crudity of colour.

An admirable design is that of Mr. J. Pettie's rather thinly painted and sparkling picture, *The Trio* (452). Three mediæval musicians are seen performing in an ancient street; one, a luteist, has employed his interval in obsequiously saluting, hat in hand, some girls seated at a window; his swaggering, begging air is most expressive. Right in front, the second, a hautboy-player, with a capably-rendered face of absorption, continues his performance, and strides with widely parted feet. The third, a lean fellow with a viol, goes on with his chant and fingers, looking to an upper window all the while. Eyes hardened by conventionality must get over the ultra-quaintness and staring, sketchy look of this picture ere they can appreciate its true spirit.—An *Old English Song* (185), a girl gaily singing at a harpsichord, by Mr. W. E. Orchardson, is happy in its pleasant, lively face, its cleverly-painted dress of brocade, natural action and brightness. This charming picture is inconsiderately hung on the lowest, or "crinoline line," and will be probably scraped to the canvas. The same artist's remarkable group of *Portraits* (652), despite some stiffness of composition, is beautifully painted—solid, bright, natural and broad. With such qualities, and being life-size, we look for much from the painter.

It would be difficult to conceive styles more opposed than that of Mr. Pettie's picture and the bedimmed, heavy, but powerful and solid manner of Mr. R. Lehmann's *Roman Beggars* (454), who compose themselves so artistically at a church-porch, and show their eyes and their rags with art as artificial as the manner of the painter. A studio style this is, and, with all its technical merits, really marvellous to those who look for nature in Art.—Mr. Rankley never painted so good a picture as *A Sower went forth to sow* (504) is,—a missionary lady seated at the door of an Indian's tent, and reading the Bible to the family gathered, in various attitudes, about her. The lady's face is weak in character, but withal pure and good in expression; that it is weak is rather the picture's default than an error in rendering character by Mr. Rankley. A little painty and spotty in treatment, there is yet much solidity and faithful painting here. The Indians' faces are capably given.—Mr. J. Dearle's *The Bird Minder* (507), a boy seated on a style, is very spiritedly and cleverly painted: the landscape portion bright and clear, though rather thin. Some docks in front are very good.

Mr. S. Solomon sends two pictures, both excellent, but not equal in aim to those we have before had from him. His *Juliette* (508), a young lady, in mourning, seated at a table with a bouquet

before her, is a study in the style of M. Stevens, very artistically painted, with good colour and feeling for expression. *The Betrothal of Isaac and Rebecca* (567), by the same, the point of salutation, has much tenderness of action in the figures, real expression in their faces, but seems, here at least, a little weak in painting. The colouring is gravely harmonious. It will be well to contrast the gravity, strength and simplicity of the last work by this young painter, with the affectation, studied unnaturalness and falsity of execution no less than of feeling to be seen in Mr. R. J. Herbert's *Judith* (509). Is this putty-coloured woman, with the absurd pendent end to her nose, the widow of Bethulia with the "goodly countenance and very beautiful to behold"? Are those narrow, peevish eyes the eyes of the deliverer of Israel who went forth in the darkness? Is that pinched nostril, rising ridiculously as it does without lifting the lip, expressive of her resolution? Do those flaccid, girlish cheeks, that feeble chin, suggest the face of one who dared such a deed? Beyond all, is this minikin mouth, that could not open, and is curled like that of a bad actress,—the mouth that cried "I pray thee, I pray thee, O God of my father, and God of the inheritance of Israel, smite by the deceit of my lips the servant with the prince; * * break down their stateliness by the hand of a woman?" Judith's "countenance was altered," but not in this way, when they wondered at her beauty; she had not such a lean, petty body when the men of the city looked after her "until she was gone down the mountain, and till she had passed the valley, and could see her no more." Frivolous mockery of Art as this thing is in execution, its conception is yet more wilfully weak.

Mr. J. E. Hodgson's *First Sight of the Armada* (569), notwithstanding the quaintness and want of manly drawing in the figures, is a very vigorous and effective picture, that tells its tale with power. We are placed upon a high headland of the Southern coast, and look over the sea that seems to creep, in its million waves, far below our feet: it is purple, silver-hued, with a dash of light here and there, and grey, with reflection of the east behind us. Low down in the west the sun's fiery haze of setting fills the distance, his light burning upon the waiting clouds above almost to the zenith, and all along the sea-line below. Right upon this sea-line are hundreds of tall ships slowly coming towards the land over the path the sun has gilded with blood-red coloured gold. The poetical expressiveness of this landscape is such that the figures shown lighting a beacon ought to have been wholly omitted, or well enough done to honour the thought.—Mr. M. J. Lawless's picture, *A Sick Call* (589), has intense pathos of expression, and is an example of surprising improvement in painting. Mr. Lawless has almost entirely got rid of his ivory-like and rigid manner that was repulsive to artists. A little dry and not full of colour, his manner is solid and painter-like. This picture represents the priest of some Swiss village going with the Host to a dying person. He is seated, with the staff beside him, in the stern of a boat, with his acolytes and a weeping relative of the sick. The design, from the figure of the rower, who works with a steady pull, to that of the priest himself, is excellent; the execution's dryness gives to the work something of the look of an illumination, but we must not, on that account, reject the pathos and spirit of the whole.

Mr. Armitage has deservedly such a name that his work, even if large, would claim a good place by right. Why then do we find his excellent picture, moderate in size, put on the third row above the line in the North Room? The Hanging Committee will not venture to say that, whether they like its style or not, this is not a good picture. Nothing but unpardonable prejudice or inexcusable carelessness can have placed it where it is, on a line with the equally wronged landscape by Mr. Anthony (645), Mr. Mignot's two landscapes (595, 677), and the head of *Vivien*, by Mr. F. Sandys (707). Nothing can be more opposed than are the styles of these brilliant works to that of Mr. Armitage's *Burial of a Christian Martyr in the Time of Nero* (622), which is dry, severe, fresco-like, low-toned in colour and classical in composition. The body is

lowered with ropes into a catacomb, and there received by friends who have made preparation for its washing and interment in the shelf-like grave hewn in the stone of the pit. The deceased's father receives the corpse; his mother holds the head; his weeping sister kneels; his mistress, with a vase of ointment and a wreath of bay, waits on the bath of the dead that an old servant prepares on the rocky floor. Behind, the sculptors have wrought out the tomb and placed the Christian emblems we now find in such places above its entrance. The severity of manner in which all this is treated makes it gravely impressive without morbidity, sober without prosing, and thereby shows the artist's art.

If with Mr. Hayllor's *Life or Death* (628), that is on the line, Mr. Armitage's picture could change places it would be well for both of them. Mr. Hayllor would gain by the removal of his merely dashing execution, commonplace subordinate figures and over-tinted colour to a distance from the eye, while the dramatic qualities of his design would then come out with force. The subject is a lottery of death, drawn by a child, to one of three captured Royalist officers,—the well-known story of Col. Poyer's death. The child who delivers the fatal lot is admirably designed, pathetic in his grace, and, so far as we know, quite original. Does the Hanging Committee believe the public cannot understand the Art-value of such a picture as Mr. Armitage's compared with the puny sentimentality of Mr. T. Brooks's badly-painted deathbed clap-net, styled *Resignation* (660), which is on the line?—Our progress brings us now to Mr. F. Sandys's splendid head, life-size, of *Vivien* (707), the alluring witcher of Merlin, entrancing in haughty beauty and crowned with gold-lighted hair; behind her a screen of eyes from a peacock's tail, her apt cognizance.

Mr. J. W. Oakes's *River in Flood* (5), a moorland stream, peat-stained and foaming, coming down a rapid, has great spirit in treatment. The glimpse over, or rather along, the levels of the land, above the stream's high banks, is excellently given. The sky, rainy and bright, with blue spaces, is remarkable for aerial truth and variety of tone.—Mr. T. Crewick deals with themes contrasted with those that please Mr. Oakes, but he is not less faithful to one style. His works have gained a little of colour this year, though still grievously lacking more, and are perhaps somewhat more solid than of yore. *Crossing the Stream* (86) is a woodland ford, with bright, still water, rocks, grey as usual, and trees, treated in the pleasant but very mechanical manner of the artist. The effect is bright, but sunless, because it looks so cold. *The Old Ferry-Boat* (107) is warmer in colour than the last, has much the same manner, but somewhat richer treatment, due rather to the effect chosen than to the execution, it appears to us. Could not this artist vary these somewhat too familiar themes, the smooth mirror of the water, the grey boulders, the pale, thinly-painted trees, and cold, bright sky? Many of his works we know of old to be charming; but, surely, an artist cannot be too various in his themes. These seem mechanically pitched upon. There is smooth water and pale trees again in *The Tees, at Wycliffe* (205). *Pleasant Paths* (647), by the same, is warmer, and, therefore, pleasanter, but has the same manner as before.

Mr. F. R. Lee sends us no such works as the well-esteemed pictures of Gibraltar. He has gone to the Devonshire streams for his *Where the Trout Lie* (195). This landscape has not only more colour in it, but, probably, in consequence, is less merely painty than works we have had of late from the artist. A stream is shown, shaded by huge trees, one of which, an oak, is painted with great force, bulkiness of look, and power of dealing with masses of foliage. In all respects this picture is better than *Across the Ferry and over the Meadows* (15), which exemplifies Mr. Lee's worst method of painting, cold, opaque, and flat. The lake-island, with ruins, styled *A Deserted Island* (208), is remarkable for its want of colour, and enough to make one think the artist cannot see that quality in nature. *The Aqueduct at Nîmes* (322) serves also to confirm such a presumption; there is really no difference in the colouring of rocks, vegetation and sky in

this removed part of the world from that of the English lake.

Mr. Redgrave has gone upon an entirely different system from that Mr. Lee adopts. His *Sunshine* (311), a view over Wootton Woods, near Dorking, is softly bright with day, and while, it may be, a little too grey in colour, has been heedfully studied from nature. The scene—a high, rich meadow, looking over downs in whose hollows deep-planted woods gather,—shows, beyond them, bright lands to the horizon. The shadows of the flesh in the same artist's figures in *Strayed Lambs* (220) err in purple colour; the features are rather portrait-like. The landscape, a bank of high ferns, backed by multitudinous fir-stems and their plummy heads, is very beautiful.—Mr. H. L. Roberts's *The Word of God, a Parable, Luke viii. 15* (244—247), an allegory in four lancet-shaped bits of landscape—a ploughed field with rocks, the stony furrows, the wheat smothered with tares, and the pure wheat—is well and boldly painted, but no picture.—Mr. T. S. Cooper's *Cooling the Hoof* (265), cows in the water, has the usual qualities of his works. In an attempt to introduce finish the artist has made the execution rather hard.—*An Autumnal Evening, North Wales* (278), by Mr. R. Harwood, is very feelingly painted, and, without pretension, effective. A calm lake seen to go among the involutions of the mountains; water and land treated with skill.—One of the most brilliant and successful little pictures in the Exhibition is the landscape styled *Ambleteuse* (373), by Mr. C. J. Lewis,—a study of the bay with its sands bare, lying bright under a sunny day. The sky gives a charm to this picture by its purely white *Joculis* of clouds, broken here and there to show the brilliant blue of the firmament. In the foreground is a graveyard, with decorated crosses: therein stands a nun robed in black,—very cleverly introduced to give a subject and a powerful contrast in the picture.

On the French Coast (120), by Mr. H. W. B. Davis, is, compared with the last, prosaic. The artist has so often attempted the theme of bright, misty, summer sunlight, just before autumn, upon the coast, with sheep in a rough pasture, that we are glad to see a rainbow for a change. This example is better painted than its predecessors, but tends to paintiness. It is just to say that no theme can be more difficult than this one, and that few men could succeed in it so well as Mr. Davis. His success is much greater in *Ambleteuse Bay* (279), a road with cows going home at early evening: a work exceedingly fine in tone and colour,—see the treatment of the shadow in the hollow to the proper left, and those in the road near the front.—Mr. M. W. Ridley's *Two Strings to the Bow* (282), a coast picture, finely, but rather flatly treated, shows two little girls flirting with a young sailor-boy. The breadth, fidelity, and spirit of this work claim for it a better place than it has on high. Next the floor is an extremely effective little picture, by the same, *The Old Pond* (289),—a large, green-mantled pool, studded with clumps of alders—black, and a mirror, when the mantle is off—more beautiful than an emerald when covered with weed. A charmingly true painting, stereoscopic in effect, so strong is it.—Mr. W. Davis's *Spring* (283) is another of the unfortunates that deserves a good place, if happy dexterity, without flimsiness, fidelity and knowledge of nature are qualities of good Art in landscape.

FINE-ART GOSSIP.—Since the opening of the French Exhibition, in Pall Mall, a considerable number of bronze statues of animals has been added to it. These are by M. Hæhnel, of Dresden, and display surpassing ability and delicacy in execution, as well as knowledge of the forms, habits and characters of the creatures. Alone, they would form an exhibition every artist and lover of Art ought to see. We shall best commend them by describing a few. No. 144, *A Lion*, the massing of whose mane is admirable; he raises himself to the utmost on his fore feet, looking out and snuffing, with an eager, inquisitive air, at some near danger, an action finely expressed by his wide nostrils, slightly parted jaws, and open eyes. Every muscle is full of life; as he draws breath those of

the dorsal and lumbar regions, slightly raising his spine into an arch, are accompanied in sympathetic action by those that wave the tail in a slow curling movement. No. 139, *A Giraffe*, has the lean elegance of the beast rendered with subtlety and exquisite finish. No. 140 is a *Lion Proving*, a superb animal, that moves shouldering along; his heavy feet slowly pad, so to say, the floor; his head is down; its jaws, half apart, seem to emit a hoarse undertoned growl. In 141, *A Lion, Sleeping*, rests his huge head upon his paws; his mane is tangled, rich masses. In 142, *A Lion, Roaring*, lifts his mouth, and querulously seems to signal a companion. This is a very remarkable work; see the treatment of the face, with its pendulous lips of the upper jaw, fierce fretfulness of the eyes, grand and characteristic mane. M. Hæhnel's closeness of study may be discerned on comparing the manner in which he has rendered the textures of the hides of these creatures: where the skin lies over bone it is firmly marked and shown pressed outwards, it binds the muscles and hangs slack when the action does not call forth the powers of the limbs inclosed. In exquisite rendering of the free plumage, or close-fitting feathers, of the *Ostrich*, the seemingly hard and sheeny surface of the feathers in the *Cock and Hen*, or panoply of the *Eagles*, the tough bronze has yielded to the artist's skill, as it has in the bulky crine of the lions' manes, their rigid hair of the body, the pachydermatous shields of the *Elephants*, or Hippopotami, the softer skins of the *Giraffes*, or the bunchy, stiff wool of the *Camel*. The *Stag* is magnificent.

Mr. Cope has just completed the fifth of his series of pictures in the Peers' Corridor, Houses of Parliament. The whole is intended to illustrate the history of the Civil War, thus:—1. Charles the First erecting the Standard at Nottingham; 2. Basing House defended by the Cavaliers against the Commonwealth Troops; 3. Expulsion of the Fellows of a College at Oxford for refusing to sign the Covenant; 4. Burial of Charles the First; 5. The Speaker Lenthall asserting the privileges of the Commons against Charles's attempt to seize the Five Members; 6. The setting out of the London Train Bands to raise the Siege of Gloucester; 7. Embarkation of a Puritan Family for New England; 8. Parting of Lord and Lady Russell. Of these Nos. 1, 4, 7 and 8 have been for some time completed. No. 2 is that just finished. By far the best work of those yet produced is the seventh in our list,—the least satisfactory is the first; the last, now in question, comes between the two extremes. It has more spirit of design than No. 1, withal better drawing, but in colour and aerial tone it is a long way behind No. 7. We have a side flight of steps leading up to the entrance-terrace before the gates of the lordly house of Basing. At the foot of the steps a struggle has ended in the overthrow of a Royalist chief, the Marquis of Winchester probably, by a stalwart Puritan champion in a buff coat, who may be Lieutenant-General Oliver Cromwell; for it was that English *Polioretes* who took the place. A young man, a standard-bearer, is also cast down, struggling to retain his charge from the hands of the victor. The old noble is raised from the stones by a priest; others of the household are preparing to shoot the assailant. In the background skirmishing goes on. If this work cannot be considered wholly satisfactory or worthy of its place, it is clear and bright in effect of light. There is a good deal of energy, not, however, of the best sort in Art, in the main groups. The drawing shows some commendable care, and the expressions are only occasionally tainted with theatrical feeling. As representing an ordinary attack and defeat there is little to challenge in this picture. What we miss, indeed, is distinct personification in the chief figure; we cannot say at once that it represents the Protector himself. Mr. Cope has used the stereochrome process of painting for this work, and intends to do so with those that remain to be done. Mr. E. M. Ward will very shortly commence another subject, the Landing of Charles the Second at Dover, in the corresponding series allotted to him in the Commons' Corridor; also in water-glass.

MUSIC AND THE DRAMA

MUSICAL UNION.—EXTRA MATINÉE.—TUESDAY, May 19, Half-past Three.—Quintet in A, Clarinet, &c. Mozart. Lazarus, Carrouis, Webb, &c.; Trio Concerto in E, Op. 55, Hummel, Miss Madeline Schiller, &c.; Rites and Piatt's Solo Violoncello, Piatt's (first time); Solo Pianoforte, Chopin. M. Jules Lefort will sing new compositions.—Accompanist, Engel.—Visitors are admitted on payment of Five Shillings, and Members Half-a-Crown each, at the Hall.—Tickets, Five Shillings each, to be had at the usual places. J. ELLA, Director.

MR. HENRY LESLIE'S CHOIR, THURSDAY, May 21.—ST. JAMES'S HALL.—Mr. Sims Reeves, Mdle. Parepa, and Madame Arabella Goddard.—The Programme will include Mendelssohn's 'Ave Maria,' the solo by Mr. Sims Reeves; Mendelssohn's 'Hear my Prayer,' the solo by Mdle. Parepa; Madame Arabella Goddard will play Prelude and Fugue by Bach, Handel's 'Harmonious Blacksmith,' suite de pièces, and will accompany Mr. Sims Reeves in Beethoven's 'Adelaide.' The choir will sing the celebrated Madrigals 'Sweet Honey-Sucking Bee,' and 'Fire, Fire, Stalls, &c.; Family Tickets, to admit Four, 2s.; Balcony, 1s.; Admission, 1s.; at all Musicellers'. Family Tickets to be had only at Addison's, 210, Regent Street, and Austin's, 28, Piccadilly.

MR. DEACON'S SECOND SÉANCE OF CLASSICAL INSTRUMENTAL MUSIC will take place on THURSDAY, May 21, at 16, Grosvenor Street by permission of Messrs. Colliard, commencing at Three o'clock. Programme: Quintet in B flat; Onslow's Sonata in C minor, Pianoforte, Mozart; Variations in D, Violoncello and Pianoforte, Mendelssohn; Sonata in minor, Op. 22, Violin and Pianoforte, Beethoven; Pianoforte Solo, S. Heller; Pianoforte Quartet, in B minor, Mendelssohn. Executants: M.M. Sainton, Pollitzer, Webb, Pezse, Severn and Deacon.—Family Tickets, to admit Three, One Guinea; Single Tickets, Half-a-Guinea; to be had of Mr. R. W. Olliver, 19, Old Bond Street; or of Mr. Deacon, 72, Welbeck Street, Cavendish Square, W.

MIS EMMAS BUSBY'S MORNING CONCERT, HANOVER SQUARE ROOMS, THURSDAY, May 21, at Three o'clock precisely.—Artists: Mdle. Florence Lancia, Mdle. Elvira Behrens, Signor Lorenzo Severini, Mr. Carrouis, Signor Piatt and Miss Emma Busby. Programme: Mendelssohn's 'Rites and Piatt's'; Family Tickets (to admit Three), One Guinea; at the Musicellers', the Rooms, and at Miss E. Busby's residence, 16, Howley Place, Maida Hill West.

MR. CUSINS'S GRAND EVENING CONCERT at ST. JAMES'S HALL, FRIDAY, June 5, at Eight o'clock.—Artists: Parepa, Sims Reeves, Messent, and Santley, the Orpheus Glee Union, Piatt, Bustau, Baldr Chatterton, John Thomas, Harold Thomas, and Cusins. Full Orchestra and Chorus. Conductors, Prof. Sterndale Bennett and Mr. Cusins.—Tickets, 10s. 6d., 5s., 2s., and 1s. at Auditor's, No. 28, Piccadilly; all Musicellers'; and at 23, Nottingham Place, W.

MR. WALTER MACFARREN'S MORNING CONCERT OF PIANOFORTE MUSIC, Hanover Square Rooms, June 6.—Artists: Miss Robertine Henderson, Madame Sainton-Dolby, M. Sainton, Signor Pio, Mendelssohn, &c. Programme: Reserved Seats, 10s. 6d.—1, Onslow Street, N.W.

WELSH NATIONAL MUSIC.—United Choirs.—Band of Harps.—A MORNING CONCERT, to be given by Mr. JOHN THOMAS (Benedict Gwalin), at the HANOVER SQUARE ROOMS on SATURDAY, June 13, at Three o'clock.—Vocalists: Miss Edith Wynne (Eos Cymru); Mr. Lewis Thomas, &c. Harpists: Mr. J. Baldr Chatterton (Harpist to the Queen), Mr. T. H. Wright, Mr. John Thomas. Further particulars will be duly announced.—Stalls, 15s.; Tickets, Half-a-Guinea; to be had of all Musicellers'; and of Mr. John Thomas, 109, Great Portland Street, W.

GIUGLINI, GARDONI and SIMS REEVES will appear at Mr. BENEDICT'S GRAND AND MORNING CONCERT, on MONDAY, June 22, at ST. JAMES'S HALL, in addition to the available artists then in London. The full Programme will be published on June 1.—Immediate application for the few remaining Stalls (one guinea each) is respectfully solicited.—Reserved Seats, 10s. 6d.; at the principal Musicellers'; and of Mr. Benedict, 2, Manchester Square, W.

HER MAJESTY'S THEATRE.—Nicolo de' Lapi.—A new Italian opera, born on this side of the Alps, is an event of itself pleasant, because of its rarity. During late years we can only call to mind, as similar attempts, those by Mr. Balfe, Signori Alary and Campana—Signor Biletta having only written for England and France, in English and French. Signor Schira had already tried his hand at composition, under the management of Mr. Maddox, but not in Italian; and then the chances against his success were as twenty to one. Thus, his was a "first night" on Thursday week, in the strictest sense of the words,—an appearance to be judged gently by all who believe that writing for the stage is only to be learnt by witnessing the effect of what has been written.

Signor Schira has shown himself more than usually inexperienced in the choice of his drama. The value of Count Massimo d'Azeglio's contribution to literature cannot be questioned; but here it is represented in a series of scenes entirely devoid of interest. The combinations are the oldest of the old; the situations few and far between, and, when they arrive, forced and monstrous. The action, when it ought to move, is suspended as courageously as in the commonest ballad-opera, written to make *Punch* laugh. Something beyond such local names as the *Palleschi* and *Piagnoni* and the "thirteen of Barletta" is required to make an historical Italian Opera attractive, here at least. We may transcribe the list of characters: these are, *Nicolo de' Lapi*, chief of the Republicans (Mr. Santley); *Laudomia*, his daughter (Mdle. Trebelli), betrothed to *Lamberto*, a Republican warrior (Signor Giuglini); *Selvaggia*, an Amazo-

nian woman belonging to the opposite side, also in love with *Lamberto*, and on that plea behaving most incomprehensibly (Mdle. Titiens); *Troilo*, a traitor (Signor Gassier); *Fanfulla*, an old warrior (Signor Bettini). There are duets of love, duets of hate, duets of forgiveness,—a siege talked of,—the Judas of the tale murdered and thrown into a convenient well, in a drawing-room, concealed by drapery!—and, lastly, the veteran *Nicolo* is executed. This is all that can be easily made out concerning the story, save that its epoch is A.D. 1530.

Signor Rossini himself, magical in disguising insipidity and in draping deformity, could not carry off such a collection of platitudes as are here set. Not even his exquisite music could save 'Zelmira,' though, in point of writing, that opera pairs off with 'Semiramide.' What chance then, was there for Signor Schira to write in comfort, and under inspiration,—with no characters to paint worth painting, with no scenes to follow worth following? None. Accordingly, his work is not so much like an opera, as a series of musical pieces tacked together with a view to the exhibition of the singers, single and concerted. No one part of it seems to belong to another. There is a "Rataplan" chorus—a thing dangerous to attempt while M. Meyerbeer is living,—a sprightly romance for the *contralto*,—sentimental love-matter for the tenor,—expressive and elevated music for the baritone, whose part ends with that prophecy of Italy's future glories which is becoming somewhat wearisome in poetry and music. The *prima donna* has been fitted with rude and audacious music recalling, in its style, that belonging to *Abigaille* (another termagant woman in warrior's armour) of Signor Verdi's 'Nabucco.' Good indications, both of melody and harmony, are to be found in many parts of the opera; but, as a whole, the impressions left on us are those of inconsistency,—evasion of the wholesome art of construction,—and crude orchestral noise. In this last characteristic, however, Signor Schira is of his country and his time. Signor Verdi led the way;—and ears, which are not ears of brass or Sax-metal, must suffer the consequences, under the hands of his imitators,—Signori Petrella, Pedrotti, Ferrari, and a score of boisterous gentlemen besides, who, not being able to write as their forefathers did, make a noise with trombones and other blatant instruments by way of concealing their infirmity. We may have more to say of the music when it is published. On Thursday week, it appeared to produce the effect aimed at.

Mr. Santley's share in the execution of the work, both musical and dramatic, was by many degrees the best feature of the performance. He could hardly have sung better than he did, or have more completely wrought out intention, where there was any,—or have more judiciously made amends for its absence, where none was marked by the composer. He was admirably dressed, too;—he acts better and better month by month. Mdle. Titiens does not improve. She cannot rid herself of her old German habit of offering the show for the substance of execution,—dashing here, there, and everywhere,—reaching and holding fast nothing firmly; as much applauded, nevertheless, as though she were a Catalani *rediviva*.—and therefore with small temptation to improve her defects by study. Mdle. Trebelli, also, pleases her public. Her voice is agreeable, though toneless when she sings *piano*, and not always in tune. The feat, in her case, is done by a certain elegance and piquancy of appearance and manner. Signor Giuglini seemed to us not well placed in this opera, or else not content with his occupation. The chorus and orchestra did their best; and the closing scene, a prison interior with a staircase, down which monks, penitents, soldiers, and executioners descend, is picturesque, and its groupings are good. Mr. Mapleson has obviously brought his best resources to bear, so as to ensure the success of Signor Schira's opera.

ROYAL ITALIAN OPERA.—Signor Mario appeared on Saturday last in 'Il Barbiere,' with Mdle. Adelina Patti as *Rosina*. For the moment suffice it to say that the lady has come back with more than her former power, and was enthusiastically welcomed by her subjects—none the less for her triumphs in Paris and Vienna,—and that Signor

Mario retains his popularity; for that in no small measure depends on graces over which Time has only a partial influence. The first performance of 'Don Giovanni' was given on Thursday.—Tonight 'Martha' is announced, for the *début* of Mdle. Demi and the re-appearance of Signor Graziani.

CONCERTS OF THE WEEK.—The *Crystal Palace* gave the first of what may be called its eight "Star Concerts," this day week. Mdle. Carlotta Patti was the curiosity of the morning. She does not gain on acquaintance: a certain incompleteness of execution, which it was only considerate at the outset to ascribe to nervousness, being, apparently, a part of her usual style. This is inadmissible in such music as she is addicted to. Herr Jaell played Mendelssohn's first *Concerto*, not well. He has a light and fluent finger; but either he could not enter into the spirit of the composition (which contains no unfathomable depths), or did not care to take pains with it, playing without significance or clearness. The introductory slow movement of a new *Fantasia* and *Rondo* by M. Vieuxtemps, which he performed, is the best and least affected *solo* music by that gentleman that we recollect. Madame Lemmens-Sherrington seemed determined to challenge Mdle. Carlotta Patti, by singing the silly variations (for as concert music they are silly) from 'The Crown-Diamonds,' with metallic exactness and finish.—To-day the music will be furnished by Messames Alboni, De Ruda, Mr. Wilbye Cooper, Signor Rovere and Mr. Halle.

Herr Pauer's Historical Performances.—The fourth of these had a miscellaneous programme, which opened with specimens of the works of the two rare old Frenchmen, Couperin and Rameau. Time was (and that not so long since) that to English ideas the latter represented all that was dry, harsh, scientific and angular; and his beauties as a genial and elegant melodist were overlooked, because unknown. He was laughed, or rather yawned, off the throne he had so long occupied, in the times of the Gluck and Piccini contests,—but the day of even his vocal music finding favour may return; his instrumental compositions are delightful, apart, and national—things to group with similar specimens by Scarlatti and Bach.—A fine *fugue* by Eberlin (long attributed to Bach) was very welcome; so, in its widely different way, was Dusek's 'Élégie Harmonique sur le Mort de Louis-Ferdinand.'—Steibelt might have been better represented.—There were also specimens by Weber; Chopin's *Grand Andante* and *Polonoise*, op. 22; two of Schumann's 'Kreisleriana'; two of Heller's "Wood Scenes"; and a duet for two pianofortes on a theme, or rather passage, from Schumann's 'Manfred,' by Herr Reinecke. This piece is very ingeniously combined, and is rational (which is saying much for new German music), delicate and effective. Every possible justice was done to it by Mr. Danreuther and the concert-giver.

In his programmes Herr Pauer aspires to be pioneer and teacher. What he says, in this capacity, no less than what he plays, is worth attention. Monday's concert-book contained his apology for, and panegyric on, Schumann, who has been again and again, of late, put on his trial in England, and whom Herr Pauer considers as the most interesting composer that has appeared since Beethoven and Schubert—"greater, however, as a thinker than as a practical musician." We are subsequently instructed that, "the inevitable laws which regulate the form of a movement he too often despised as cold, dead rules which might be disregarded with impunity. The consequence is a want of that concentration and symmetry which make a composition interesting and attractive to the ordinary listener." "Another defect," Herr Pauer admits, "is his want of sustained melody. Of melodious phrases there is no lack; but they are too short and too often unassisted by rhythmical structure, and thus the music has a hectic, restless character, which is anything but satisfactory." After this, nevertheless, we are bidden to admire Schumann's originality and power as a thinker. His want of sustained melody we, too, have commented on: the existence of melody without rhythm, we find it hard to comprehend. Now, as to power

and individuality of thought, Schumann's originality, to our judgment, virtually resolves itself into his having made use of material rejected by those bound by "inevitable laws" and "cold, dead rules," and having been resolutely disagreeable with the view of seeming profound and new. Herr Pauer does not make out a case which justifies his ranging himself among the fickle pedants of Germany, who endure Mendelssohn as respectable, yet who swoon with ecstasy when the 'Manfred' and 'Genoveva' overtures (dreary pieces of obscurity) are played.

The attempt to gain a footing for Schumann's music in this country was continued on Tuesday by the presentation of his Pianoforte Quintett in E flat, with M. Jaell at the piano, at the *Musical Union*. It was well received.

Madame Arabella Goddard was the pianist at *Monday's Popular Concert*.—A new violinist, Herr Japha, is to appear there on Monday next—M. Vieuxtemps having left England. It will be a "Mendelssohn night."

Of *Mr. Halle's first Matinée*, held yesterday, we shall speak a week hence.—*Herr Schlösser* gave his benefit concert on Thursday, and played a new Pianoforte Trio of his own composition.

MUSICAL AND DRAMATIC GOSSIP.—The Gresham Committee has a heavy task before it, no fewer than a quarter of a hundred candidates having offered themselves to fill the Professor of Music's vacant chair. The most suitable seven, it is said, will be picked out, and each candidate invited to deliver a lecture, the best lecturer to carry away the prize. This, at first sight, seems, as doubtless it is meant to be, the most impartial mode of settling a delicate question. Second thoughts, however, bring with them suggestions less favourable to the mode of selection projected. Are the seven lecturers to speak to the same theme? If not, how will their respective musical values be appraised? Supposing A is showy in treating of organs at home and abroad, whereas B is solid over a question of counterpoint, how are the intrinsic merit and utility of the two teachers to be placed in the balances of comparison? And supposing this difficulty overcome, who are to be the umpires? Their important service requires a preparation and experience which it would be Utopian to expect from the members of the Gresham Committee. Out of the twenty-five names on the list only seven or eight belong to gentlemen who are known as lecturers.

The benefit performances to be given for Mr. Lumley are to be at Drury Lane, and not Her Majesty's Theatre. The first is fixed for the 25th.

Last evening the *Sacred Harmonic Society* gave a concert, consisting of the 'Athalie' and the 'Dettingen Te Deum.'

Mdlle. Artot has arrived in London, and is announced to appear at Her Majesty's Theatre in the course of next week.—Fräulein Liebhardt, from Vienna, is also here again.

Mr. Blagrove is engaged as *solo* violinist for the Lower Rhine Whitsuntide Musical Festival, forthwith to be held at Düsseldorf.

Dr. Bennett's overture, 'Paradise and the Peri,' composed for last year's Jubilee Concert of the Philharmonic Society, is to be repeated at the concert of Monday next.

Among the other musicians drawn to this overgrown city of ours, in the hope of fame and fortune, must be named Signor Padovani, who brings us a new stringed instrument, the *Ottaviano*, or *Violon Céleste*. This may possibly have been shadowed forth in the *Viol d'amour*,—a lost violin known to our forefathers; but not being luthiers, we can only throw out the conjecture for what it is worth. Rather than by any account such as we can give, the reader will be more edified by the following precise description and praise addressed to Signor Padovani, by no less an authority than M. de Beriot, and published in *La Presse Théâtrale*:—"This instrument," writes M. de Beriot, "which is easily to be played on by every skilled violinist, is of dimensions between those of a violin and an *alto*, partaking of the brilliancy of the one and the suavity of the other. It is strung with six strings, grouped in pairs and tuned in octaves, which gives it a character altogether original, and adds an

attraction to difficult passages. But its peculiar individuality is displayed in long and melancholy chants; there, in quality of tone, it approaches the human voice, and assumes a poetical colour which touches the heart."

Mendelssohn's 'Midsummer Night's Dream' music has been performed at Moscow with the greatest success.

In addition to the promises made for Baden-Baden last week may be announced, as to come, three new operas by MM. Litoff, Rosenhain, and Membree.

Two hundred and fifty Orphéonists have been singing at a concert at Lerida, in Spain.

There is not much news from Paris, the season there having, to all great intents and purposes, come to its close.—The *Gazette Musicale* announces the revival of Adam's charming ballet 'Giselle,' at the Grand Opéra, with Mdlle. Mourawief in the part "created" by Mdlle. Carlotta Grisi, and improved, if that could be, by that wonderful pantomimist Mdlle. Fanny Elsler.—Favourable mention is made of Music to 'Hamlet' composed by M. Victorin Joncières, a young, but not unskilled, beginner.—'Oberon,' with Madame Ugalde as *Reiza* and M. Monjaize as *Huon*, has been revived at the Théâtre Lyrique. M. Auber's 'Haydée,' at the Opéra Comique, for M. Léon Achard, for whom the part is said to be too weighty.—M. Pougny vouches for the real merit of some Symphonic music by Signor Borelli, honorary chapelmaster to H.M. the King of Italy.

MISCELLANEA

The Marble Lions.—Under the shed into which the British Museum authorities have utilized their costly portico, at the same time when they boarded up its dignity, has recently been set up the casts from portions of the famous Lion of Chæronea. These have been put together by Mr. Newton, and result in showing the mask and fore part of the head of the vast memorial statue, also its lower belly and haunches. This statue, our readers will remember, was erected on the sepulchre of the Boeotians who fell in the Battle of Chæronea, B.C. 338; a mound was raised, and a gigantic lion set up on its summit. Not many years ago the mound was excavated, and many fragments found, proving the work to be in a fine, almost the finest, style of Greek art; indeed, nothing can be finer than the face now again put before men. Its large and fleshy realism is wrought to what true realism aspires in style,—fidelity with grandeur. The eyes are solid; the pupils cunningly carved, as with the drill, into rings; so that the light falling into them gives a glow that is effective in the highest degree. The bold and characteristic treatment of the mane is a perfect study; so is the mouth, and so are its lips; the whole quite different from the semi-human leonine caricatures of later and modern sculptural Art. So far as we can determine from the fragments, the attitude of the figure has been that known to heralds as *sejant rampant*, i. e. seated on its haunches; the fore-feet planted together, the head grandly raised and out-looking. The *sejant* Lion of Cnidus, placed now close by that of Chæronea, affords an excellent contrast of styles. The first is far inferior in style and design to the second; but has much grandeur of its own. There is a lumpiness in the flesh, shortness of line, and some violence in the junctures of the muscles,—a certain stringiness in the mane and featural bluntness which may characterize the work of a provincial sculptor, or of an earlier date than that of the Chæronean. Its eyes are hollowed out, probably to be filled with metal or glass,—not, as some think, left for the effect of the cavity in giving shadow. We do not recognize much similarity between the workmanship of the Lions of Budrüm, imported by Mr. Newton, and that seen in the one from Cnidus; some there may be, but all are unworthy of comparison with the Boeotian monument. This seems to have been a national work, for Strabo says that at Chæronea might be seen the memorials (or sepulchres) erected at public charge of the persons slain in the battle.

TO CORRESPONDENTS.—T. B. L.—J. H. P.—J. R. W.—T. B.—J. C.—R. Y.—J. M. M.—received.

**MACMILLAN & CO.'S
NEW LIST.**

This day, fcap. 8vo. with Illustrations, 8s.
The GREAT STONE-BOOK. By D. T. ANSTED, M.A. F.R.S., late Fellow of Jesus College, Cambridge.

This day, crown 8vo. price 1s.
The CORRELATION of the NATURAL HISTORY SCIENCES. The Rede Lecture delivered in the Senate House before the University of Cambridge, on Tuesday, May 12, 1863. By D. T. ANSTED, M.A. F.R.S.

This day, crown 8vo. cloth, 4s. 6d.
The CLAIMS of the BIBLE and SCIENCE. A Correspondence between a Layman and the Rev. F. D. Maurice, on some Questions arising out of 'The Examination of the Pentateuch by the Bishop of Natal.' By FREDERICK DENISON MAURICE, M.A., Incumbent of St. Peter's, St. Marylebone.

This day, handsomely printed in 4to. with Two Illustrations by J. Nour Paton, R.S.A.
The WATER BABIES: a Fairy Tale for a Land Baby. By CHARLES KINGSLEY, M.A., Chaplain in Ordinary to the Queen and the Prince of Wales.

This day,
The FAIRY BOOK: the best Popular Fairy Stories. Selected and rendered anew by the Author of 'John Halifax, Gentleman.' This forms one of "The Golden Treasury" Series. With Vignette by J. Noel Paton. 4s. 6d.

Nearly ready, 2 vols. crown 8vo.
AUSTIN ELLIOT: a New Novel. By HENRY KINGSLEY, Author of 'Ravenshoe,' &c.

This day, in fcap. 8vo. cloth, 8s.
The SUBJECTION of the CREATURE to VANITY: THREE SERMONS Preached before the University of Cambridge in Lent 1863: To which are added, TWO SERMONS PREACHED at CAMBRIDGE on SPECIAL OCCASIONS. By RICHARD CHENEVIX TRENCH, D.D., Dean of Westminster.

This day, in 2 vols. crown 8vo. 12s.
SIX MONTHS in the FEDERAL STATES. By EDWARD DICEY, Author of 'Memoir of Cavoux,' &c.

This day, 2 vols. fcap. 8vo. cloth, 12s.
The ANGEL in the HOUSE. By Coventry PATMORE. Book I. The Betrothal.—Book II. The Engagement.—Book III. Faithful for Ever.—Book IV. The Victories of Love—with Tamerton Church Towers.

Also sold separately, 1 vol. fcap. 8vo. cloth, 4s. 6d.
The VICTORIES of LOVE.

This day, crown 8vo. cloth, 12s.
MANUAL of POLITICAL ECONOMY. By HENRY FAWCETT, M.A., Fellow of Trinity Hall, Cambridge.

This day, crown 8vo. 10s. 6d.
The MISSIONARY HISTORY of the MIDDLE AGES. By GEORGE FREDERICK MACLEAR, M.A., Classical Master in King's College, London; late Scholar of Trinity College, Cambridge.

This day, crown 8vo. cloth, 8s.
VILLAGE SERMONS. By G. F. de TEISSIER, B.D., Rector of Church Brampton, Northampton.

This day, crown 8vo. with Map, 7s. 6d.
The NEGER, or SOUTH COUNTRY of SCRIPTURE. Traced and described by EDWARD WILTON, M.A., Incumbent of Srofton, Nottingham.

Next week, Third Edition, 8vo.
JUSTIFICATION by FAITH: Ten Sermons on the Nature and the Effects of Faith; with Notes. By J. T. O'BRIEN, D.D., Lord Bishop of Ossory, Ferns and Leighlin.

Next week, in 2 vols. crown 8vo.
EXPOSITORY LECTURES on the REVELATION of ST. JOHN, THE DIVINE. By G. J. VAUGHAN, D.D., Vicar of Doncaster, Chaplain in Ordinary to the Queen and Chancellor of York.

Preparing for publication,
LESSONS in ELEMENTARY PHYSIOLOGY, with numerous Illustrations. By T. H. HUXLEY, F.R.S., Professor of Natural History in the Government School of Mines.

Now ready, Tenth Edition, crown 8vo. cloth, 7s. 6d.
PLANE and SPHERICAL TRIGONOMETRY, with the Construction and Use of Tables of Logarithms. By J. C. SNOWBALL, M.A., late Fellow of St. John's College, Cambridge.

Now ready, Fourth Edition, crown 8vo. cloth, 6s.
HYPATIA; or, New Foes with an Old Face. By CHARLES KINGSLEY, M.A., Rector of Eversley. Uniform with 'Two Years Ago,' 'Westward Ho!' and 'Alton Locke.'

28, Henrietta-street, Covent-garden, London; and Cambridge.

Next week,
A NEW NOVEL BY THE REV. J. PYCROFT,
 Author of 'Twenty Years in the Church,'
DRAGON'S TEE T H.
 2 vols. post 8vo.
 L. Booth, 307, Regent-street, W.

Illustrated by Six Chromo-Lithographic Drawings,
FOUR MONTHS in a DAHABEEH; or,
 Narrative of a Winter's Cruise on the Nile.
 By M. L. M. CAREY.
 1 vol. demy 8vo.
 L. Booth, 307, Regent-street, W.

Second Edition,
JESSE'S LECTURES ON NATURAL HIS-
TORY, delivered at Brighton.
 1 vol. fcap. 8vo.
 L. Booth, 307, Regent-street, W.

Just published, in crown 8vo. price 4s. 6d.
FIVE HUNDRED PLANS OF SERMONS.
 By the Rev. GEORGE BROOKS.
 Edinburgh: William Oliphant & Co.; London: Hamilton & Co.

In 8vo. price 5s. Second Edition,
FIRST LESSONS in SANSKRIT GRAM-
MAR: together with an Introduction to the Hitopadesa.
 By JAMES B. BALLANTYNE, LL.D.

In 8vo. price 5s. 6d.
CHRISTIANITY CONTRASTED with
HINDU PHILOSOPHY: an Essay, in Five Books. With
 Practical Suggestions tendered to the Missionary among the
 Hindus. By JAMES B. BALLANTYNE, LL.D.
 16 Plates, 8vo. cloth, price 5s.

TROPICAL FIBRES: their Production and
 Economic Extraction, by E. G. SQUIER.
 London: James Madden, 3, Leadenhall-street.

French Condensed.—Sixth Edition, 1s.
FRENCH PRONOUNCED:
 Self-Tuition. By A. ALBITES, LL.B., Paris, Edgbaston
 School.—"A very valuable and efficient help."—*Arist.*
 2. HOW TO SPEAK FRENCH. 5s. 6d.—"Perfect."—*Era.*
 3. FRENCH GENDERS CONQUERED. 1s. "Golden Rule."
 4. PHASES de l'HISTOIRE de FRANCE. 1s.—Longmans.

Just published, 12mo. price 1s.
THE NEMESIS OF DRINK: Passages in an
 AUTOBIOGRAPHY. With a Preface by the DEAN of
 CARLISLE.
 London: Hatchard & Co. 187, Piccadilly.

Of whom may be had,
 The FOOTSTEPS OF ERROR traced through
 a Period of Twenty-five Years; or, Superstition the Parent of
 Modern Doubt. By FRANCIS CLOSE, D.D., Dean of Carlisle.
 This day, in imperial 4to. with Illustrations, Part I. price 5s., to be
 completed in Twelve Monthly Parts.

THE FARM HOMESTEADS OF ENGLAND.
 A Collection of Plans of English Homesteads existing in
 different Districts of the Country, carefully selected from the
 most approved Specimens of Farm Architecture, designed by
 different Architects, to illustrate the accommodation required
 under various modes of Husbandry; with a Digest of the Leading
 Principles recognized in the Construction and Arrangement of
 the Buildings. Edited by J. BAILEY DENTON, M. Inst. C.E.
 F.G.S., Engineer to the General Land Drainage and Improvement
 Company, 52, Parliament-street, Westminster, S.W.
 Chapman & Hall, 158, Piccadilly, London.

Third Edition, in 1 vol. 12mo. cloth, gilt edges, price 3s. 6d.
ORACLES from the BRITISH POETS: a
 Drawing-room-table Book, and Pleasant Companion for a
 Round Party. By JAMES SMITH.
 Virtue Brothers & Co. 1, Amen-corner.

Now ready, in 8vo. cloth, with Wood Engravings, price 5s.
ON HUMAN ENTOZOA: comprising the
 Description, Pathology, and Treatment of the INTESTI-
 NAL, HYDATID, and other Species of WORMS found in MAN.
 By W. ABBOTS SMITH, M.D. M.R.C.P., London, Senior
 Assistant Physician, Metropolitan Free Hospital; late Senior
 Physician, City Dispensary, &c.
 By the same Author, Second Edition, 1s. 6d. cloth, post free,
ON ENURESIS (Incontinence of Urine) in
 CHILDREN and in ADULTS: its Nature, Causes, and Treat-
 ment, with Remarks on Diabetes, &c.
 "We can recommend this little book to our readers."
Medical Circular.
 London: H. K. Lewis, 15, Gower-street North, W.C.

Just published, price 1s.
A DEFENCE OF THE QUEEN'S ENGLISH,
 by G. W. MOON, F.R.S.L.,
 In Reply to
 'A PLEA FOR THE QUEEN'S ENGLISH,'
 by the Dean of Canterbury.
 "Dean Alford censures the alphephs. Mr. Moon accuses Dean
 Alford of being one of the alphephs himself; he takes him from
 the witness-box and puts him into the dock."—*Reader.*
 "Mr. Moon clearly shows that the Dean in his essay, while com-
 menting on the faults of newspaper editors, used bad grammar,
 and fell into errors as glaring as those he ridiculed."
Public Opinion.
 "Terrible reproof. We commend the pamphlet; it is written
 with a power of sarcasm and criticism rarely excelled. Mr. Moon
 shows himself a master orator, so far as 'The Queen's English' is
 concerned."—*Cambridge Independent Press.*
 Hatchard & Co. 187, Piccadilly.

MR. HARVEY ON DEAFNESS.
 Just published, Third Edition, price 2s. 6d., post free, 3s stamps,
THE EAR in HEALTH and DISEASE, and
 on the PREVENTION OF DEAFNESS. By WM. HAR-
 VEY, F.R.C.S., Surgeon to the Royal Dispensary for Diseases of
 the Ear, Soho-square.
 Just published, Third Edition, price 1s., post free, 12 stamps,
 On DEAFNESS and NOISES in the EAR,
 arising from Rheumatism, Gout, and Neuralgia Headache.
 Remshaw, 356, Strand, W.C.

DR. CUMMING'S ANSWER TO BISHOP COLENSO.
MOSES RIGHT and BISHOP COLENSO
 WRONG: being Popular Lectures in Reply to Parts I.
 and II. of 'Bishop Colenso on the Pentateuch.' By the Rev.
 JOHN CUMMING, D.D. Complete in 1 vol. 3s. 6d. cloth.
 John F. Shaw & Co. Paternoster-row, and Southampton-row.

IRISH CRIME. A Letter to ALEXANDER
BEESEFORD HOPE, Esq., a Proprietor of the Saturday
Review, from the Hon. SPRING RICE. Price 3d.
 Dublin: M'Glashan & Gill; and all Booksellers.

CYCLOPÆDIA BIBLIOGRAPHICA,
 SUBJECTS: a Guide to Books on the Books, Chapters, and
 Verses of Holy Scripture. Super-royal 8vo. cloth lettered, 1l. 10s.

LONDON, SATURDAY, MAY 23, 1863.

LITERATURE

Mr. Kinglake. By Sir Francis B. Head, Bart. (Murray.)

"I never heard a pony make such a row!" was the first notice taken by Lord Raglan of the historian of the Crimean War, as, on the morning of the battle of the Alma, he sat, surrounded by his staff, on his hunter Shadrach, waiting for the troops to form. Col. Calthorpe, the gentleman who is about to fight over again the Balaclava charge against Lord Cardigan in a court of law, tells us the anecdote. Lord Raglan added, as he watched the capering and heard the noise of the pony, "Does any one know who the gentleman is?"—"It is Mr. Kinglake, the author of 'Eöthen,'" said the Colonel, who knew the barrister by sight.—"Oh," said my Lord, who had also met and forgotten the literary lion of a season long passed away, "a most charming man!" Col. Calthorpe, in the spirit of drollery which led him to laugh at Lord Cardigan's achievements in another battle, told us how the pony ran away, how the rider was thrown from his back, and afterwards how he got invited to dinner in the commander's tent, and proved himself an uncommonly pleasant fellow over the wine. Now the world which read Col. Calthorpe's book may have had its little laugh over this joke. Most people, we dare say, thought it an imaginary scene, like one of Mr. Leech's, in which real people are thrown into fancy sketches for the comic effect; even those persons who supposed that some sort of incident had occurred as basis for the tale, must have fancied it had been set down with the full spice of devilry which is expected in a smart young officer who is writing his first book, and to whom everything in the world, even war itself, is but a sort of lark. Everybody understands that kind of fun. We live in an age of quiz and caricature. Calthorpe was a reader of 'Eöthen,' and, doubtless, an admirer of John Leech. He had read in Macaulay that a touch of caricature is essential to success in writing history; and in the grim details which he had to paint of the Alma, it was imagined he had been eager to get a Don Quixote on his canvas. The curious thing is to find that a public man can be annoyed by such harmless fun. The best of us must submit to be satirized; we must, indeed, expect to be so when we make ourselves prominent in the world. Of all men alive Mr. Kinglake should be above annoyance from such a cause. Yet, it would appear that the master of subtle and ingenious representation—some call it misrepresentation—cannot bear in his own person the disfigurement he so plentifully awards to his friends and foes. Shrinking from the ludicrous image of a civilian thrown into the mud by a restless pony, as presented in the sketch by Col. Calthorpe, he gets a friendly paper to explain for him that he came to grief on the slope of the Alma, not because he cannot ride, but on account of the saddle being too large for his Rosinante. By this explanation, Mr. Kinglake certifies the facts of the pony, the running away, and the fall; while he adds to the joke the more ludicrous ingredient of the saddle and rider slipping over the animal's head together. It is the sort of comic touch by which Cowper might have heightened the humours of John Gilpin's ride.

This touchy side of Mr. Kinglake's mind has not escaped the many enemies whom his 'History of the Crimean War' has roused up for him on every hand. Had he been silent, they would scarcely have known where to hit

him. On the whole, his book is a great book; and has only so much mischief in it as all true speaking has, when the truth is shouted in a strong voice, with little or no consideration for times and seasons, for men and things. We do not say that the book is, in some of its weak points, impregnable to assault. It has, doubtless, many errors in it, as to facts and judgment; we only say that Mr. Kinglake, by his sensitive shrinking from sarcasm and caricature, has shown his enemies that the man is more open to assailants than his book. On looking to his third edition, the reader may see at a glance, by the notes, how many mistakes have been made and corrected in the course of 1,000 pages of type. They are few in number, and slight in quality. The strange story of the Richmond dinner has not been swept away. The fact of the buoy off Old Fort has been admitted by Capt. Mends, though Mr. Kinglake's inference from it, of malice on the side of the French, is stoutly denied. The name of an inferior officer, here and there, had been misplaced on the great canvas of the fight, Smith for Jones, and Brown for Robinson. The corrections in no way affect the general accuracy of the narrative. Of the errors of judgment it is more difficult to speak. Mr. Kinglake has his favourites and his aversions. Airey, whom men have so much abused, is one of his heroes. Lacy Yea, of whom nobody out of Somersetshire ever heard until he loomed up gloriously in Mr. Kinglake's narrative, is another. Napoleon the Third is his chief aversion, Marshal St.-Arnaud his next in hate. Whether he is right in his dark and scornful portraiture of these two men history will have to say. It is not for those now living to judge the greater of the two men finally. The ancients warned us against judging any one till he was dead. The accuser may be wrong: the offender may repent. In the worst of cases there is room for amendment and redemption. A scribe who condemned the penitent thief the day before his death would have made a great mistake. But it is strange, perhaps, to add, that those who now blame Mr. Kinglake for his mordant etching of the Emperor are the men who, when he was Prince President on his way to the purple, excelled all their countrymen in blackening his name and his acts.

Having probed Mr. Kinglake to the quick, and found him sensitive on the point of his personal dignity and character, the historian's enemies are goading him, as the *banderilleros*, in a Spanish Plaza de Toros, prick the bull into frenzy. They have found his weak side. Had he only laughed at the story of the pony and the tumble, and the merriment which he caused to a group of aides-de-camp! But then, as we feel he would argue the point, the English are a nation of horsemen—every English gentleman is at home in the saddle—and a hint that a man cannot ride is an imputation on his gentility. It was a question of honour. The quiz was more than he could bear; and he caused it to be explained away in a fashion which suggested that the explanation must have come from himself. The tormentors, therefore, have found him out, and are closing round him. At the front of these *banderilleros* comes Sir Francis B. Head, with his motto from Terence—*Suo sibi gladio hunc jugulo*. He leaps into the ring proclaiming war to the knife. In so many words he denounces Mr. Kinglake as a man with whom no one's "honour" is safe. In the Preface to his volume Mr. Kinglake intimates to the surviving officers of the British, French and Russian armies, that his knowledge respecting the battles of Balaclava and Inkerman is still incomplete, and that he will therefore welcome

any information respecting these conflicts which men may be pleased to entrust to him. It is on this text that Sir Francis Head chooses to speak. "I deem it," he says without flinching, "due to the highest English and French authorities to whom I shall have occasion to refer, not vaguely and anonymously to assert, but openly and deliberately to demonstrate to all men who have not read Mr. Kinglake's volumes, that not only will their honour and the honour of the army to which they belong be unsafe in his keeping, but that, with the skill and dexterity of a lawyer, who with ease can twist words and meaning as he may please, he will damage their characters exactly in proportion to the amount of confidence they bestow upon him."

These are very strong words, my masters! Then comes Sir Francis's assertion, that Mr. Kinglake, when he sat down to write, "determined, without favour or partiality, in high-flown language of a very low caste, to insult all parties, almost in proportion to their rank." The proofs of this singular proposition are to be found, it is said, in the two published volumes; and they are most elaborately arrayed and exhibited by Sir Francis. We may begin with the most august, and see what is in it. We quote:—

"*Her Majesty Queen Victoria.*—In his Preface, Mr. Kinglake establishes the propriety of his making public the documents entrusted to him, by explaining that he had communicated with those in Her Majesty's confidence 'who ought to be consulted before any State paper or private letter hitherto kept secret is sent abroad into the world.' In return for the high support thus given to him, Mr. Kinglake, in a 'history' illuminated, as he boasts, by 'official and private correspondence with Sovereigns and their Ambassadors,' and especially addressed by him to the armies and public of Europe, quotes the speech addressed by his Queen to her Parliament in 1854, in which (repeating the desire which, in 1853, she had expressed to maintain friendly relations with France) she was pleased to say,—'I have continued to act in cordial co-operation with the Emperor of the French,' for the deliberate purpose of characterizing these Royal and loyal words as 'a mark set upon England with the same branding-iron.' In further vituperation of Her Majesty, he adds,—'In principle she was marching along with all the rest of the four Powers, and yet all the while she was engaged with the French Emperor in a separate course of action.'"

The vituperation is not very apparent: indeed, for the fact that it exists at all many readers, after giving the quotations their best attention, will probably think they have no more than Sir Francis's word. In his next batch of illustrations we think the censor makes out his case. Louis Napoleon and the French Marshals get little quarter from the historian. To what extent Mr. Kinglake's animosity proceeds in this case from his ingratitude we do not know. We fancy that Sir Francis is in error in assuming that the French Emperor placed any papers of value in Mr. Kinglake's hands, and by that act laid him under literary and pecuniary obligations. The papers of Napoleon in his possession are those written to other people, mostly to Lord Raglan. An energetic dislike of Napoleon the Third is visible in every page of the History of the Crimean War; but this hatred seems to resemble that which Tacitus bore to Nero, not that which Jeremy Diddler felt towards those who had been fools enough to oblige him with tenpence.

The reader can afford to throw in the historian's estimate of Prince Napoleon's courage, especially as Sir Francis does not show, according to his programme, that Prince Napoleon loaded the unhappy rider on the big saddle

and the small pony with literary and pecuniary favour. We come to the main case of ingratitude:—

"*Lord Raglan*.—Mr. Kinglake, throughout his two volumes, demonstrates rather than acknowledges the debt of gratitude he owes to Lord Raglan. Indeed, so inflated did he become by the confidence reposed in him, and by appearing on his pony before the Allied Armies in the distinguished position of the guest of the British Commander-in-Chief, that just as if, by his admission into Head-Quarters, they had become his play-mates, he writes with schoolboyish familiarity of 'Airey,' 'Brown,' 'Codrington,' 'Buller,' 'Cathcart,' 'Pennefather,' 'Evans,' 'Conolly,' 'Lacy Yea,' 'Norcott,' and of no less than fifty-six other gallant officers whose respective ranks he deems it immaterial, or, in the language of the 'certain Lord' described by Hotspur, 'unmannerly' to distinguish. Mr. Kinglake's path was plain and straight. As the historian of the Crimean War, and especially of that portion of it of which he himself had been permitted to be a spectator, it was, of course, his first and foremost duty to write the truth; but—

Tarry a little, there is something yet!

The Duke of Wellington, by the heroism of the Allied Army, gained the victory of Waterloo; and yet, in his simple, plain, truthful description of that battle—as of many others—he not only deemed it unnecessary to expose the common average instances of cowardice that occurred in each, but, when they were officially brought before his notice, he deemed it advantageous to the public service to disregard them. This sensible course was that which Mr. Kinglake had to pursue. Whatever might have been his obligations to his departed patron, and however desirous he might be to gratify the expectations of his widow, yet his paramount duty was to delineate, in becoming language, a faithful picture of the principal events of the Crimean War, victorious or disastrous, as they occurred. All, therefore, that he could do—and which, in common gratitude, as well as for the public reasons that actuated the Duke of Wellington, he was bound to do—was, in his description of Lord Raglan's generalship,—

To be to his virtues very kind,
And to his faults a little blind.

Instead, however, of pursuing this course, Mr. Kinglake, impelled by his inveterate propensity to injure whoever has assisted him, and to destroy character precisely in proportion to its rank, determined not only with indefatigable ingenuity to collect and produce against Lord Raglan evidence altogether beyond the limits of the Crimean War, but to divulge against his benefactor criminatory circumstances and words which, under the generous confidence that had been reposed in him, he had been permitted to see or hear, in order to demonstrate to mankind in general, and to the armies of Europe in particular,—1st, That the education of his patron the late Lord Raglan, for half a century, had peculiarly unfitted him for commanding an army. 2nd, That shortly after his arrival in the Crimea he proved to be not only afraid to enforce upon Her Majesty's Government his opinion of the imprudence of the Allied Army landing in the Crimea; but both incompetent and unwilling to pre-arrange with the French Commander-in-Chief on any combined plan of attack. 3rd, That in the battle of the Alma he proved to be utterly incompetent to command an army in the field. 4th, That after the battle, he proved to be incompetent to follow up the victory gained in his absence by the army he had only nominally commanded. Now, leaving poor Lord Raglan's memory, together with the feelings of Lady Raglan, the Duke of Cambridge, Sir George Brown, the Emperor Napoleon, the memory of Marshal St. Arnaud, and the French Generals entirely out of the question, would not the Duke of Wellington, if he could have been consulted, have bluntly said,—'I'll tell you what, Mr. Kinglake, if this is what you propose to publish against the Allied Army, go and chuck your papers into your kitchen fire!'

From this enumeration of what Mr. Kinglake might have done, and ought to have done,

it results that our literary baronet has a very extraordinary theory of an historian's duties. Obligations to a departed patron—advantage to the public service—kind to his virtues, blind to his faults—what has an historian to do with such things? His duty is to tell the truth. Sir Francis seems to think the functions of an after-dinner speaker, of a Secretary of State in the House of Commons, and of an historian of the War much the same. They have only to make things pleasant, and get through the day without trouble. This is not our theory of an historian's business. Does Thucydides never tell the Athenians unpleasant truths? Is Tacitus always careful for the glory of Rome and her emperors?

Next we have Mr. Kinglake arraigned for his ingratitude to Lady Raglan, in a paragraph which has some extremely comical features: particularly the hint that Lady Raglan, in giving Mr. Kinglake her husband's papers, gave him so much money; the assertion that he was a mere advocate, hired and paid to do Lady Raglan's bidding; and the appeal, thereupon founded, to the English Bar, of which Mr. Kinglake is a member, to rise up, and with "unmistakeable firmness" dismiss the unworthy brother from their honourable ranks:—

"*Lady Raglan*.—Now, how has Mr. Kinglake treated the benefactress whose 'generous and resolute trustfulness' in him, with its results, he has acknowledged? Alas! he himself answers this plain question by demonstrating, throughout his two volumes, that although the moral character of the veteran whose memory still lives in the hearts of all who knew him, has, like a lump of virgin gold, come out of his crucible unalloyed and uninjured, yet that Mr. Kinglake has succeeded in undecorating the late Lord Raglan of his Crimean military renown, so effectually, that it is now beyond the power of ink and pens to prevail upon History to restore it! Indeed it would be utterly useless for Lord Raglan's nearest and best friends to attempt so hopeless a task. It will be difficult for Mr. Kinglake to vindicate, or even endeavour to explain, the course he has pursued. An ordinary scribe, provided he keeps within the limits of the law, may, if he thinks fit, write evil of any one. But Mr. Kinglake has the honour to be a member of the English Bar, 'the integrity' of which, by Erskine, and by other still higher authorities, has been defined, '*The Fidelity—*ruat calum—of a counsel to his client, however guilty or however poor.*' On studying the brief, therefore, which he received from Lady Raglan, retaining him by a large literary and pecuniary profit for the affectionate object she naturally had in view, will not the English bar, to a man, rise up, and with unmistakable firmness declare to Mr. Kinglake: 1st, That before he came into court he ought to have admonished his client that the mass of evidence she had given him would elicit an unfavourable verdict. And 2ndly, That on his determining to conceal from her this danger, he acted diametrically against the principles of his profession, in travelling beyond the limits of his case to collect evidence; and most especially in coming forward *himself* as an eye and ear witness, to gain—as by eloquence and ingenuity he has gained—sentence against the object of his client?"*

That no one may mistake his meaning in this appeal to the Bar against a peccant member, Sir Francis adds in a note, by way of hint, "The Bar Mess of each circuit takes cognizance of every kind of delinquency, moral, legal, social, or professional. On complaint against any barrister, a committee is appointed to inquire and report; and the mess then either acquit, or reprove, fine or expel, as their judgment may decide." Exclusion from the honour of the Bar is, however, but a portion of the punishment proposed by Sir Francis for the historian. A further appeal is made to Lady Raglan and to Her Majesty's Government:—

"The main object of these few pages shall now

be briefly expressed. For the consideration of the public,—or rather of that infinitesimal fragment of it that ever condescends to read a pamphlet,—I very respectfully submit the following question. As the prevention of the calamities of war is infinitely easier than their cure, ought not Mr. Kinglake—before he publishes other volumes of his history, of which no man can predict the political results—to be requested, without a syllable of reproof,—on public grounds by Her Majesty's Government, and for family reasons by the present Lord Raglan,—to be so good as to return, with as little delay as may be convenient to him, to Lady Raglan, to be deposited in the public offices to which they respectively belong, the 'State Papers,' together with 'All the Military Reports' (see his Preface) 'which were from time to time addressed to the Commander of the English army by the generals and other officers serving under him, including their holograph narratives of the part they had been taking in the battles. Also Lord Raglan's official and private correspondence with sovereigns and their ambassadors; with ministers, generals and admirals; with the French, with the Turks, with the Sardinians; with public men and official functionaries of all sorts of conditions?' At a moment when even a Transatlantic war is, more or less, desolating the commercial interests of the whole of this world, surely every possible precaution should be taken by our guardian statesmen,

That the contending kingdoms
Of France and England, whose very shores look pale
With envy of each other's happiness,
May cease their hatred; and this dear conjunction
Plant neighbourhood and Christian-like accord
In their sweet booms, that never War advance
His bleeding sword 'twixt England and fair France."

It requires some sedateness of spirit to resist laughing outright on such a proposal being made, in such pompous and magisterial terms. Prohibit Mr. Kinglake from writing more books, in order to prevent the calamities of war! Cannot Sir Francis and his friends perceive that they are practically contradicting themselves when they assert, on one side, that Mr. Kinglake's book is worthless trash, and on the other, demand that he shall be prevented from continuing it, lest the country should be involved in war?

Memoir of the Rev. James Sherman: including an Unfinished Autobiography. By Henry Allon. (Nisbet & Co.)

THE good man whose career is here traced held a conspicuous position during many years in the world of Nonconformist preachers; and the Memoir of him by Mr. Allon must be acceptable to others besides those who belonged to his congregation—to all who respect and study the lives of all such influential men as are single-hearted and sincere. This we believe Mr. Sherman to have been—and to have been, accordingly, valuable in his generation; though we cannot, in the record of his worthy doings and zealous services, overlook certain peculiarities, inseparable from "Nonconformity" as associated with "the voluntary system" of ministry. It is evident that if the preacher cannot excite his audience, or else preach down to the level of his congregation's spiritual desires and theological knowledge, he is no longer a teacher for them, but is judged and dismissed as a failure. It is evident that severance from all established synods, dignitaries, ranks and divisions in ministerial service, does not imply emancipation from despotism so much as exchange of thralldom for thralldom. Mr. Allon's readers, beyond the pale of his sect, will find curious confirmation of this remark in his allusions to the saintly Countess of Huntingdon,—to the stir which she raised in Methodism,—and to the austerity with which she ruled and rebuffed her preachers. She was a good woman—good in her desire to be of use to others in need of spiritual instruc-

tion. She attested her goodness by devoting her life, fortune, influence to the cause; only she would also be High-Priestess, and dispose of others, perhaps as well able to judge of spiritual things as herself, according to her own conscience and conceit. Whether the preacher placed by her in one of her chapels was an ex-butler of hers, who had been filled with prophetic fire by attending as an acolyte on Mr. Whitefield's drawing-room revivals,—whether he was some poor curate who had struggled forth from the stagnant waters of the Church of England in search of a *terra firma* more congenial to his desires to be of use,—Lady Huntingdon directed, and scolded him if he excited her displeasure by exhibiting more independence than this godmother of Nonconformity admitted into the set-pattern of her wishes and benevolent purposes. When such is the atmosphere in which the pastor must live and breathe and act, great is the honour due to all so circumstanced who assert their own individuality. Mr. Sherman appears to have been one among these honourable men. He was the son of sincere people in humble life, who before his birth had become strictly attached to Dissent as to their saving faith, and thus, who were made anxious rather than afraid, when their boy, apprenticed to an ivory-turner, and of no great value, though notidle as an apprentice, sickened and pined because his day and night dreams were those of one "called" to be a preacher. Persons on the outside of their world cannot hear and read of such doubts and impulses without asking how far that poor human attribute, personal vanity, may or may not enter into the scheme thereof. To teach is not to talk, but to know; and after that to know *how* to teach. Sherman could not turn billiard-balls and chessmen, but would gather and convert thousands,—as Whitefield, and Hill, and Father Mathew (since) have done. His parents hesitated to confirm him in his vocation till the moment arrived which those of his religious opinions consider as decisive. He began to preach at an early age; for a time rejected by timid persons on the score of his youth; gathering large congregations wherever he appeared. His training, which Mr. Allon confesses to have been slender, was acquired principally in Cheshunt College: later, he endeavoured for awhile to make up for his deficient education by private study; an effort which proved hardly compatible with the exhausting labours of ministerial life. For many years Mr. Sherman was settled at Reading as a married man, and himself and his family were objects of caressing care to one of his congregation—a devotee, who, with the hope of retaining her favourite pastor close to her, made liberal bequests to him and to them in the truest spirit of superstitious selfishness, as was to be seen when the elders of Surrey Chapel invited her favourite to come to London. After trying to bribe and to bargain with the preacher, the imperious woman altered her will, with every expression of vindictive resentment, and never saw him more. Mr. Sherman's popularity was at its height during the years when he was "serving" Surrey Chapel. He took a large and zealous share in all the benevolent enterprises of the day; he was held to be most successful in conversion and collection. After a time, however, Nature was worn out, and it became necessary for him to withdraw within narrower limits of exertion. He drew together a third congregation at Blackheath. His latter days were perplexed by worldly difficulties, arising from incautious speculations, into which he had been tempted. He had survived his second wife—a kind and faithful woman, whose repute in the religious world

was real and well merited. He was popular alike with those who believed implicitly in the efficacy of his teaching and with those not bound up with him in sectarian sympathies;—and not the most characteristic pages of the record are those in which his introduction to the late King of Prussia is described, and in which the innocent vanity with which he enjoyed the notice of Royalty, and credited the latter with high spiritual attainments, are set forth. Throughout this biography, however, we get near glimpses at human nature in its original no less than in its regenerated state: The former, however, will not be appreciated by the enthusiasts who regard their pastor elect as a saint. Such will receive the story of his days and deeds in another spirit from ours. No matter; it is well worth studying by those who have not, as well as by those who have, sittings at Surrey Chapel.

Narrative of the late War in New Zealand.
By Lieut.-Col. Carey, C.B. (Bentley.)

Incidents of the Maori War, New Zealand, in 1860-61. By Col. Sir James E. Alexander, Knt. (Bentley.)

THE seed of the late war in New Zealand was sown years before that fine country became a British colony. On our first coming in contact with the native inhabitants, or Maories, as they call themselves, they were as fine a race of men as can well be found anywhere, but, at the same time, amongst the most warlike and ferocious fellows of the whole Pacific Ocean. At first, none but a few runaway sailors, or convicts flying for their life, were bold enough to take up their abode amongst them. Gradually a more respectable body of settlers, attracted by the beauty and undoubted capabilities of the country for colonization, followed in their wake. Missionaries also made their appearance, and the work of civilization and Christianization fairly commenced. The natives made rapid progress in both, laid aside their cannibal habits, and quickly acquired a taste for European manufactures. The new settlers were quite ready to supply their demands; but as the Maories had no exports of any value, they could only pay by ceding portions of their land—a system entirely unknown amongst themselves. When, afterwards, New Zealand became a British colony, it was found that great tracts of land had already passed into the hands of the new colonists, and that some of our countrymen, missionaries not excepted, had become the proprietors of thousands of acres. A great outcry followed against these bargains, and a government Commission was appointed to investigate the matter. It was alleged that the most unfair equivalents had been given for the land, and that justice demanded the surrender of the acquired tracts. The Australian colonies, where fancy prices had been put on land, were the loudest in denouncing the impropriety of these transactions. We believe the Land Commissioners tried to do their best, under the heavy pressure brought to bear upon them, by cancelling all purchases where any direct fraud could be proved; but they also ventured upon the doubtful course of letting colonists retain part of blocks of land where, in their opinion, insufficient payment had been tendered for the whole of such blocks. In all commercial transactions it is regarded a fair bargain when both parties, at the time they conclude it, express themselves satisfied. The actual price given is quite a secondary affair as far as the legality of the transaction is concerned—a thing, commercially speaking, being not worth more than it will fetch. We may rest assured that the Maories would never have parted with their

lands if they had seen a chance of obtaining a higher price at the time they sold them. These principles should have been kept steadfastly in view in dealing with the land question, and in introducing the natives to our mode of acquiring and disposing of property—theirs had hitherto been those of conquest and plunder. The Maories were sharp-witted enough to see the flaw in the application of our principles, and henceforward one of their chief aims was to get back the whole or portions of what had already been disposed of, converted, as it had been, from virgin forests and fern-clad plains into smiling fields and rich pasture-grounds.

Whilst these causes were working, another element was agitating the native mind. It appears that the intercourse between the Maories and Europeans had kindled in the breast of the natives the flame of nationality. They longed to be an independent nation, and this object they endeavoured to effect by electing Te Whero Whero their king and hoisting their own flag. What share Europeans intermarried with natives may have had in this movement is difficult to trace, but there are good reasons for believing that not only they, but also men who ought to have known better encouraged and abetted this rebellion against the Queen's Government. We could have afforded to laugh at and ignore the fact of a few tribes of semi-barbarians raising a piece of bunting in the depths of the forest, and having a few European sympathizers, if it had been unaccompanied by acts of aggression. But when in these days of free trade a league was entered into, the avowed object of which was to prevent the sale of any more land to the white settlers even if the native owners were perfectly willing to sell, and when the construction of roads and the transmission of the royal mails were openly opposed, our Government had no choice but to reduce its rebellious subjects to submission. Those of our countrymen who glory in the name of "aborigines protectionists," did their Maori friends a bad turn by encouraging them in such folly, because it was sure to lead to war, in which the natives must be defeated. The Maories would never have gone so far if it had not been for the prejudicial effect of the divided opinion known to reign amongst the European community. "How can you expect us to give up our King movement," said an intelligent native, "when half of your own Council are for us?" The Maories fully expected that the pressure their friends would bring to bear upon the Governor would oblige him to yield all the points under dispute, and this greatly tended to foster their growing disaffection.

The present province of Taranaki, the theatre of the late war, is situated on the west side of the Northern Island of New Zealand, an island containing about 21,000 Maori males above the age of fourteen years, 13,000 European males above the age of sixteen; whilst in the so-called Middle Island there are only about 1,000 Maori males above the age of fifteen, but 26,000 European males. Throughout the whole of Taranaki, containing 60,000 more acres than four English counties, Kent, Surrey, Middlesex and Hertford, there were in 1840, when the New Zealand Company determined upon forming there the settlement of New Plymouth, no more than fifty or sixty natives.—

"These few natives," says Sir James, "Ngatiawas, were existing close to the Sugar Loaf Islands, they were indifferently clad, had neither gardens nor plantations, and subsisted on fern-root and fish; their life was a constant scene of alarm (the general case for years in New Zealand formerly), through the dread of an implacable foe, and if the country had not been settled by Europeans, the insurgent Ngatiawas could not have returned to it. When

these Ngatiawas understood the object Mr. Carrington had in view in visiting the country, they asked him to bring white people to dwell among them, as a protection against the dreaded Waikatos, who in 1832 under the chief Te Whero Whero, or King Potatau, had conquered, slaughtered and dispersed or carried away captive nearly the whole of the inhabitants of this part of the country. The refined tortures and cannibal scenes of these days could not fail to induce this remnant at the Sugar Loaf Islands to desire European protection. About October, 1834, Col. William Wakefield, the chief agent of the New Zealand Company, purchased from certain chiefs and natives (who, driven from the Taranaki, were living in Queen Charlotte's Sound) all their possessions, rights, and claims in the Waitara and Taranaki land generally. In November, 1839, agents of the New Zealand Company landed at the Sugar Loaves to treat with the people about land, and had conveyed to them by purchase a continuous block of land along the coast, and which block contained the whole of the Waitara and Taranaki land. The brig Guide brought the payment, and it was shared by all the resident natives. I may mention here that the Waitara block, the disputed square mile the origin of the late war, is believed by some of the Maories to be one of the sacred spots where one of the canoes which brought their ancestors to the island came to land, and is or ought to be *tapued* and not parted with on any consideration. * * * A few months after the arrival of the pioneer expedition at the Taranaki, Te Whero Whero sent a leading chief and 200 followers to the Taranaki; they danced their war-dance and said they were the owners of the country by conquest, and the people who must be paid, if the white people remained. The other natives saw and heard the statement, and cowed and subdued sat silent at the conference. Soon after this, and the Governor being informed of what had occurred, a deed was executed by the Waikatos conveying to the Queen the land they claimed, and which included the whole of the Waitara and Taranaki country. Mr. Commissioner Spain now arrived at the Taranaki to investigate claims, and awarded to the New Zealand Company the Waitara land and where New Plymouth now is. But, afterwards, Governor Fitzroy, through some advice he had got, repudiated Mr. Spain's award and directed the land to be given back to the Taranaki natives that he might re-purchase it from them, and which was considered a fatal mistake. If Mr. Spain's award had not been set aside, the claim of the Waikato chief or King Te Whero Whero would never have been heard of. After the Sugar Loaf Maories were aware that the Waikatos were paid for the land, they talked about their 'manua' or authority over the land, and joined the land league to prevent a further sale of land by the Ngatiawas."

Things came to a crisis in January, 1860, when the Government purchased a piece of land from one Te Teira, a chief of the Ngatiawas, contrary to the wish of Wirimu Kingi, of the same tribe, who in the most insulting manner forbade its sale, claimed sovereignty over it, and caused the survey to be interrupted. Wirimu Kingi was informed that his interruption was an overt act of rebellion, warned against the consequences of persisting in this course, and given till the 22nd of February to reflect on the matter. But he returned no satisfactory reply, and martial law was formally proclaimed by Colonel Murray. At a later period, Wirimu Kingi placed this piece of land at the disposal of the native sovereign, and thus intimately connected this local quarrel with the general Maori-king movement. To us, this had the advantage of localizing the war, and enabling us to withdraw our troops from the other New Zealand settlements, whilst to the natives it proved so far advantageous that they had chosen their own fighting-ground, away from their houses and families, and had nothing save their lives to lose. When things had come to this pass,

occasion to spill the first blood soon occurred, and the natives began to fortify themselves in their paha, stockades admirably adapted to the guerilla warfare they had made up their minds to carry on. "Their sites are but barely indicated by a narrow line of newly-moved earth, carefully spread, not exceeding six inches above the general surface of the ground, whilst, for the most part, they, as well as their defenders, are invisible, a head only occasionally being raised above the level of the ground to reconnoitre, though the line may be thickly occupied." It was the reduction of these paha that all the available force of the Australasian colonies was called upon to effect. The enemy was far too wise to risk any open battle, in which he would have been worsted. But he hoped to tire us out by throwing up paha after paha, and slinking with little loss into the bush, when the position became untenable. In a country without roads, heavily timbered, or overgrown with tall ferns, capitally adapted for concealing the attacked party, it was most difficult to catch the enemy, and if Major-Gen. Pratt and the limited forces at his disposal ultimately succeeded in compelling the Maori to sue for peace, their gallantry is entitled to every credit. On the 26th of September, his Excellency, Sir George Grey, arrived to resume the government of New Zealand:—

"Instead of a war policy, Sir George Grey offered to the Maories a system of civil institutions, similar to that which he introduced at the Cape of Good Hope, and which led to the settlement of difficulties of far greater magnitude than any which existed in New Zealand. He proposed to divide the colony into districts, over each of which was to be placed an European Commissioner, resident magistrate, or other officers; who were to be assisted by a district council of leading chiefs, and a subordinate council or runanga. To each runanga was to be attached a chief policeman and a certain number of native constables; the members of the district councils to receive pay as well as other office bearers, differing in amount. Judicial powers to be conferred on the members of council with certain limits, also power of local taxation and the construction of public works. Europeans to be allowed to settle within native districts on certain terms, and with the consent of the native authorities. This system has had a trial at the Cape of seven years, is somewhat costly at first, but pays its own expenses in the end, and has been eminently successful. In New Zealand, 'so mote it be!'"

The two works at the head of our notice may be termed rather materials for a history of the New Zealand war than a history. Of the two, that of Lieut.-Col. Carey is the better book; Sir James E. Alexander's volume is rather disjointed, and both are evidently written under considerable restraint. They relate almost exclusively to the military part of the campaign, and carefully avoid the political side of a conflict of which we may not yet have seen the last, unless great prudence and firmness are exercised. The New Zealand press is roundly charged with misrepresenting the whole question to the English public, and the colonists are supposed to derive so much advantage from the large expenditure defrayed by the home Government, that peace is thought not secure till the settlers shall be made to pay the whole expenses of the war that may break out; but we doubt whether such an assertion could be made good.

The Maories are spoken of in high terms by both authors, and many interesting anecdotes are given of their courage and coolness in danger. They are supposed to have lost 800 men, whilst we had 238 killed and wounded. At first they could not be induced to spare the lives of the women, children, wounded and prisoners; but Mr. Wilson, a worthy missionary,

ultimately succeeded in persuading them to adopt this humane conduct. By the last advice we learn that fifteen of their chiefs have left on a visit to this country, to see with their own eyes whether England is really as great a power as the Maories might be if united. The visit of so intelligent a body of men to our shores must ultimately produce a beneficial effect on the permanent peace and prosperity of New Zealand, which, now that rich gold and coal mines have been discovered, must speedily become what Nature seems to have designed it, the England of the South Seas.

Who to Consult? or, a Book of Reference for Invalids, in Disordered Health, Difficult Cases, or Long-standing Disease. Including a Simple Nosological Arrangement of the Medical and Surgical Forms of Disease. (Suited for Easy Reference.) Together with a List of the most Distinguished Physicians and Surgeons of the Day; an Explanatory Glossary of Pathological Terms, &c. A Corrected and Revised Edition will be published Annually. (Aylott & Son.)

WERE it not that silence might be injurious to the medical profession, by leaving a system of subtle puffery without exposure, we should take no notice of this impudent and scandalous publication. The book proceeds from an anonymous writer; but the publishers give their testimony that the author is "a highly distinguished member of the medical profession." Messrs. Aylott & Son might have extended their eulogy, and paid a compliment to the modesty of their author, who, while he makes the reputation of others, is content to remain unknown, and would rather pass to the grave without a fee than incur a charge of writing a book for the purpose of advertising his own claims to public confidence. "To prevent," says this man of lofty purpose at the conclusion of his Preface, "any misconception as to the true intent and purport of these pages, as well as to avoid any imputation commonly laid to the charge of medical writers, viz., 'The book being the means of making their name known, and thereby multiplying the number of their patients,'—I here beg to leave mine out, and therefore simply sign myself—The Author." What noble abnegation of self! But, then, as the book contains a good deal of puffery, what assurance have we that he does not puff himself? Of course such suspicion would be uncharitable "misconception"; but it is a "misconception" which the writer provokes rather than "prevents" by the course which he has adopted.

Clothed with the authority of his publishers' recommendation, this unknown and self-elected judge of the attainments and capabilities of his professional brethren descants in the following strain on his especial fitness for the task which he has undertaken:—

"Times out of number has the author of this manual been the medium of pointing out the source from whence the greatest amount of skill or judgment might be reasonably expected. Indeed, so convinced is he that, in many cases of serious or dangerous illness, protracted or special disease, this is the surest mode of obtaining the best advice, that he has more than once thought of making it a *specialité*. There can be no question that a Physician well acquainted with the claims of his professional brethren, and competent to judge of their skill in particular forms of disease, could command one of the largest consulting practices in London by adopting the following plan, namely, by leaving the patient alone himself, otherwise than simply, after forming a correct *diagnosis* of the case, advising him or her who to consult under the circumstances. Such a line of practice might be novel, it is true; but nevertheless useful. It would amount

to much the same thing as taking 'Counsel's opinion' as to the proper course to pursue in a legal difficulty; and probably prove quite as wise a step, in many medical cases, and certainly the cheapest in the end."

We can neither admit the existence of the difficulty which, in the author's opinion, keeps invalids from the physicians best qualified to treat their maladies, nor recognize the analogy which he draws between his office and that of a counsel advising on a case. While people are in good health they, of course, do not trouble themselves to inquire about the special qualifications of medical practitioners; but as soon as they fall ill they do not remain in ignorance for a single day as to the "opinion" they should have recourse to. The sick man who wishes for the "best advice" makes known his desire to his ordinary medical attendant, the general practitioner employed in his household or by his family connexion, and that familiar adviser, thoroughly acquainted, as a matter of course, with the particular endowments of his professional superiors, and himself interested in having the best guidance and support, brings to his patient the physician or surgeon best able to combat the existing disease. Such is the system of the medical profession; and it is a system which works well, and is exactly analogous to the course of procedure by which litigants obtain the aid of advocates peculiarly fitted to conduct their causes. Our "distinguished member of the medical profession" labours under the strangely erroneous impression, that a "counsel's opinion" is nothing more than written advice to his client to consult another barrister.

The style of the book throughout accords with its purpose. The mistakes in the spelling of nosological terms show that the "distinguished member of the medical profession" is signally deficient in that culture which is generally presumed to be the basis of education for a liberal profession. In great staring capitals "Delirium Tremens" does duty for Delirium Tremens, and "Diphtheria" for Diphtheria. Similar blunders appear in every part of the treatise. Under some headings the names of the most eminent authorities on the maladies referred to are looked for in vain; under other headings the author recommends physicians and surgeons who have no better claims to such notice than such as are enjoyed by every qualified practitioner. Amongst the lithotritists, the name of Mr. Henry Thompson—who has just been sent for, the papers tell us, by King Leopold—is not mentioned; and in two other places where he is alluded to his name is mis-spelt. In the author's opinion, Mr. Yearsley and Mr. Hinton ought not to be consulted on deafness, Mr. Hancock has done nothing to mitigate the awful torture of sciatica, Mr. Adams should not be called in where cases of spinal curvature or club-foot have to be treated, and Mr. Ashton has no place amongst those who have directed their attention to the distressing malady on which he is a "first opinion." Such is the scandalous book the author of which says he is prepared to take "immediate proceedings in Chancery against all infringements (!) of its copyright."

Poems and Essays. By Janet Hamilton. (Hall & Co.)

READERS of Dean Ramsay's 'Reminiscences' have been made acquainted with a form of Scottish character as revealed by those wonderful old ladies who were born before "nerves" were invented, and who are fast passing away, to leave us no living likeness,—women whose angles were not rubbed down to smooth mediocrity, but who were

robustly natural, and not afraid to show it,—women of great strength of feeling, who would boldly put into words what others might only timidly think, and that with the quaintest, queerest and most piquant of humours: unmitigable Scottish thistles if touched roughly, but full of honey at heart, and possessing a wild fragrance, that cannot be retained with our culture; exceedingly delightful old faces, having many a wrinkle of wisdom and twinkle of mirth, the youthful spirit looking out of every furrow in immortal freshness!—sprightly with their seventy years as though the gayest sparkle of French vivacity had got into the *dour* Scottish blood and set it dancing! This kind of character was not limited, however, to the class from which Dean Ramsay has chiefly drawn. Specimens might be found here and there in the cottages of the poor—real ladies by nature, who could bear the burthen of poverty with great dignity, and whose talk was often far better than books. We have one in our mind's eye now: as blithe of heart as a bird, and as cheery of tongue as though there were no such thing as sorrow. She had her own heavy troubles, but never made the burthen weightier by stooping to it; so strong and upright in soul, that age seemed unable to bow the body; a face of the noblest Norse type, and eyes that glowed like live coals from under the tall white *mutch*; a woman with nature enough to have been the mother of Robert Burns. Something like this we imagine Janet Hamilton to be: as fine a sample, we are told, as can be found of the *braw* and *buirdly* woman we have etched in a line or two—a genuine antique of the strong-headed, warm-hearted, quick-witted *auld* Scottish wife. If there be any doubt about this, let the book decide. We consider it one of the most remarkable that has fallen into our hands for a long time past. It will not bring much added wealth, perhaps, to English literature, but it is a book that enriches life and ennobles our common humanity. We have had many working men poets, but this is by a working woman of threescore years and ten. Most of the poems are lately written; for it appears that she reared her family and sent them forth into the world to live their life, and then, in the consciousness of having done her best, and in the silence of the empty home, she sat down and sang her songs. And right cheery and victorious they are—worthy of instant welcome from all who can appreciate such an exquisite illustration of the common saying, "Business first, and pleasure afterwards."

Janet Hamilton is the daughter of a shoemaker, and she became the wife of a shoemaker. She never went to school, but her mother taught her to read the Bible. Through this doorway she entered the vast library of English literature. But what range of reading she had we are not told. She writes English verse with ease and elegance. But the genuine nature of the old lady gets fullest and fittest expression in the racy Doric which she writes. Here we find the shrewd *keeking* observation, the quaint pawky humour, and the sly Scotch wisdom in full force. The true flavour of the book is Scottish, while the facts of the life are universally enjoyable.

First, let us show the environment of the author, who is living in Langloan, near Coat-bridge. It is a lively description, called 'Oor Location':—

A hunner funnels bleezin', reekin',
Coal an' ironstane charrin', smeeikin';
Navvies, miners, keepers, fillers,
Puddlers, rollers, iron millers;
Reestit, reekit, raggit laddies,
Firemen, enginemen an' paddies;
Boatmen, bankamen, rough an' rattlin',
Bout the wecht wi' colliers battlin',
Sweatin', swearin', fechtin', drinkin';

Change-house bells an' gill-stoups clinkin';
Police—ready men and willin'—
Aye at han' whan stoups are fillin',
Clerks, an' counter-loupers plenty,
Wi' trim moustache and whiskers dainty—
Chaps that winna staua at trifles,
Min' ye they can han' le rifles.
'Bout the wives in oor location,
An' the lassies' botheration,
Some are decent, some are dandies,
An' a gey wheen drucken randies,
Aye tae neebors' hooses sailin',
Greetin' bairns ahint them trailin',
Gaua for nouthar bread nor butter,
Just tae drink an' rin the cutter.

In such a location we may expect more humour than pathetic sentiment. Much of the old wife's humour is very smart. She can send a keen, merry glance right to the heart of many matters.

She has a ready laugh for the "mony plaisters" that are to cure the working man's "disasters." Also,—

Hae ye no heard in Glasco College
They've plantit a new tree o' knowledge?
The frute's fu' bonny tae the e'e,
An' woman's no forbid tae pree:
Sae she may cum without presumption,
An' pu' an' eat an' gather gumption,
An' sic lang-wint, lang-nebbit cracks,
'Bout social rights, an' wrangs, an' facts,
Frae chiefta wi' tongues sae glib an' snell,
They tinglit thro' ye like a bell.
There's mony a phase o' speech an' thoct
Leuka gran', but whan it's tae be wroct,
An' practice, 'stead o' speech, begins,
There's stumilin'-blocks tae break oor shins.

The old lady is hard on the Social Science Association and "speechifying" women. She describes "Bull Run" as the

— field inglorious,
Whence legs, not arms, returned victorious.

And this is *auld Janet's* answer to her countryman of the *New York Herald*:—

What's a' the din' is Jonathan game gyte?
What ails the fellow, that he'll growl an' flyte,
An' shake his naive across the wide Atlantic,
Wi' giunchin' broo, an' mony a senseless antic?
Ne'er fash your thoom wi' us, my Yankee billy—
Thae blusterin' havers mak' ye unco silly:
Tak' tent, my laddie, ye're needin' o' a keelipin',
For, gudeness kens, ye're never o'er the yelpin'.
Steek up your gab, ye wild, camstrair laddie,
Nae mair yaff yaffin' at your British daddie;
I think ye might hae ither tow tae tease,
Whan baith the North and South are in a breeze.
A fiesome sight, atweel, tae a' the war!
Wi' friens that wish ye weel ye souna quarrel—
For Britain, frae her cozie islan' dwellin',
Will naither mak' nor meddle wi' ye, callan.
Ye're no that unco steive in limb an' lith;
Ye're scrimpit baith in courage, sense an' pith;
Langyne ye gat yer legs out o'er the harrows,
Sin' ayme ye think ye hae nae mony marrows.
But len' yer lugs, and dinna bounce and bark—
Ye needna tear your hair nor rive your sark—
Your sangs o' liberty are bosh an' tee-dum;
It wad be better baith for you an' freedom
If ye had ne'er cut up the auld connection,
Nor snoot' tae democratic mob direction.
Ye'll ne'er hae peace until ye get a king—
A coup-d'etat for you's the vera thing;
There's a Nap, the Third, wha whameel' bluidy France,
An' hands her doon—had aye like him the chance,
He'd grip the reins, wi' bit an' bridle band ye,
An' should ye rear or kick, he'd whip an' daud ye.
An' gif ye maun be sodgers, he will learn ye;
But ye'll needa dae his biddin', min' I warn ye;
For lock that canna guide nor rule themsel'
Should hae a ruler strong, an' stern, an' snell.

Here is a laughable picture of Crinoline as it appears to our author in her neighbourhood, where the lassies, though they may be bar-footed and barefaced, are still devout followers of the fashion. The concluding suggestion is rather startling, we fear:—

CRINOLINE.

Auld Scotlan' gangs yirrin an' chanerin' alane;
She winners whaur a' her trig lassocks ha'e gane;
She's trampit the kintra, an' socht thro' the toons,
An' fan' the fule hizies—blawn out like balloons!

Can they be my lassocks—ance coole an' coah,
Weel shapit, weel happit—sae stoon, ye may toah?
Twa coats an' a toun, or a gump, ye may wean,
Were boukie aneuch, wi' what nature had g'ien.

They're aye i' my e'e, an' they're aye i' my gate—
At the kirk i' an' chirtit maist oot o' my seat;
Whan caul', tae the ingle i' needna gae ben,
If Kate an' her crinoline's on the fire-en'.

Whan a lad wi' a lassie forgethers yemoo,
It's no her bright een, or her rosie wee mou,
Her snod cockerony, waist jimp an' fine,
That first tak' his e'e—it's the big crinoline!

The sae that he likes it would jst be a lee—
 But ye ken that the big thing attracts aye the wee—
 An' the lass that cares nocht 'bout her heart an' her held,
 Tak's care that her crinoline's weel spread abroad.

An' say, if dame Nature wad gie' a' her birth,
 Tae ilka wee lassie that's born on the yirth,
 A bouk o' her ain, that grew bigger ilk year,
 Ye'd no be sae proud o' the gittie I fear.

In various ways Janet tries to do her countrymen and countrywomen good. Living where she does, she has, no doubt, seen much of the evils and horrors of drunkenness, and she is strong on teetotalism. Here her verses are so far above the customary temperance effusions (of water on the brain), that the teetotal world ought to drink her health and prosperity in the strongest tippale that circumstances will permit. There are several prose essays in the volume, all sensibly written; but we prefer her as the local humourist to the "popular educator." The individuality of the one is worth more than all the cosmopolitanism of the other, for it is of that perennially interesting kind in which national character reaches its ripeness.

The Great Stone Book of Nature. By David Thomas Ansted, M.A. (Macmillan & Co.)

UNDER this title the author brings before us an elementary volume on geology and mineralogy. The facts of geology are regarded as the records of the stone book, and the opening of it signifies "the earliest studies of our earth with a view to make out its history, and these studies teach how Nature speaks rather than what she means." Having chosen this metaphorical title, the author is compelled to adapt his pages to it, though with some difficulty and frequent violations of metaphor.

"The Great Stone Library" might have proved a more suitable title, for so diversified are the records of geology, so widely scattered are its facts, so variously typical are its organic remains, so geographically distant are its evidences, and so comprehensive are its conclusions, that the idea of a vast terrestrial library presents itself as more aptly metaphorical than that of a single volume. Successive ranges of shelving might be held to represent successive strata, and the several volumes on each shelf to show their characteristic fossils and their lithological distinctions. Passing, for the sake of example, from the Library of the British Museum to its Geological Galleries, we seem to pass only from the artificially-printed to the nature-printed volumes. Were a stratigraphical arrangement of fossils adopted in the Museum, the analogy would be more striking. We should then pass from histories in type to histories in stone. Chronology, though on vastly different scales, would rule the classification in both departments. The one would form a history of the human mind, the other a history of the divine mind. In the one we should peruse the roll of heroic deeds, in the other the ceaseless roll of terrestrial changes. In the one the mutations of empires, sovereigns and peoples, in the other the mutations of animal dynasties, of fishes, crustaceans and saurians. The characters would be equally legible in each. There would be the several languages and their several derivatives, but all could be interpreted, and translations and commentaries would be the work of qualified students, who should give themselves each to his particular tongue, while all should labour to present the facts and the consequential theories to the popular mind in one universally understood tongue. In these and many similar aspects the two great departments in our Museum might be appropriately compared—the literary and the lithological likened to each other.

If, however, we must limit ourselves to a single metaphorical volume, then 'The Great Stone Book' must be dealt with in a narrower

range of illustration. If it be one volume, then all who run may read it; all, wherever they dwell, may have some one of its pages open for their perusal; it is a sealed book to no man who cares to qualify himself for understanding it; and though it has many pages which demand diligent study, and many which even close students have hitherto failed to interpret satisfactorily, yet there are very many which are simple and universally intelligible, which require nothing more than continued attention, and which are replete with unflinching interest and instruction. These simple pages of the stone book are everywhere unrolled,—everywhere, beneath, around and above us. The common flag-stones of our streets are some of its leaves; the common stone buildings of our cities are others; cathedrals, churches, halls and mansions, all speak of quarried stone, and even the funeral slabs which stand erect at the heads of so many prostrate thousands who now lie in our cemeteries are significant of times and existences long preceding the races of mankind. The human names and eulogies inscribed upon them refer to the beings of yesterday; while in the layers beneath those very inscriptions may, perhaps, be found fossil shells which once floated in the waters of an immensely ancient sea. Thus the stony sepulchres of one race of organized beings are strangely erected as the monumental marks of another, and every tombstone in a cemetery thus becomes a doubly-charactered page in 'The Great Stone Book of Nature.'

In Mr. Ansted's edition of this Stone Book everything geological forms a page, whether apt or inapt. Sun, Wind, Rain and Frost compose one page; Clay, Chalk, Limestone and Marble, Sand and Sandstone, the Brick-field and the Gravel-pit, compose other pages; and so on to the end of the volume. There is in it more of Physical Geology than Palæontology, and therefore very little that requires preliminary information. The reader may take it up without fear of being repelled by technicalities, and may regard it as one of the simplest and most unpretending of introductions to the physical aspects of the science. One would conceive it to be a collection of introductory lectures delivered to young persons of intelligence but of no previous geological knowledge; and all such readers, if only they can dispense with highly-wrought descriptions, picturesque verbiage, and fanciful illustrations, will find it useful to them as beginners. The great majority, however, of such readers require to be allured to geology—we had almost said, deluded into it—by factitious attractiveness. They are not disposed to look at the pages of 'The Great Stone Book,' if those pages are merely stony. They ask that flowers shall be strewn over the stones, and that the wand of the verbal enchanter shall wave over the rigid and naturally unadorned truths. Hence elementary books inferior in accuracy to the one before us would, perhaps, surpass it in acceptableness; and it is mortifying to a sound geologist to see how a little tinsel of fancy, a glittering array of facts, pomp of verbiage, and a dash of humour will always be found to lighten the natural heaviness of 'The Great Stone Book.' Had Hugh Miller been content to write about the Old Red Sandstone page of this book as a mere recording geologist, his name would never have been known beyond the rooms of the Geological Society. In no two volumes treating of the same science, and for much the same class of readers, could there be a more marked contrast than exists between Miller's 'Sketch-book of Popular Geology' and Ansted's 'The Great Stone Book of Nature.' The one is Geology exhibited under the prismatic hues of an exuberant imagination; the other is simply an opening and shutting of 'The

Great Stone Book.' One sentence of Miller's book appropriately describes this bare and unillustrated style of geological teaching:—"I might stand in front of its curved precipices, red, yellow or grey, and might mark their water-rolled boulders of all kinds and sizes stretching out in bold relief from the surface, like the protuberances that roughen the rustic basements of the architect; but I had no 'Open Sesame' to form vistas through them into the recesses of the past." Such glimpses through magic vistas of the past are precisely what the book now before us lacks. It is vain to present mere facts to beginners, who are reluctant to take the trouble to recollect them. Perspective, not Chinese flat truthfulness, is the obvious requisite. We all abuse crinoline, yet Geology without crinoline will not readily become presentable amongst the unscientific. No doubt crinoline is unnatural, and everywhere laughed at by sober people; nevertheless, geological crinoline is the most pardonable of all. It hides rigidity, angularity, and all faults. Denudation is true in geological theory, but untrue in geological teaching.

Almost any page of Mr. Ansted's book will illustrate our meaning. Take, for instance, his notice of gravel flints:—

"Pick out a few of the pebbles and look at them. Here is a well-rounded black pebble, about the size of an egg, very smooth and almost polished, but the surface is scratched all over with fine marks, showing clearly how the stone became round and smooth. Next to it is a broken fragment, the edges rounded and worn and a clean broken face presented. Both are flints, and both exactly resemble other flints, whether in the gravel, on the sea-beach, or in the chalk cliff. It takes a long while to roll so hard a stone as a flint into the shape of an egg, and carry it with others into a great heap far away from the sea. It takes considerable force to break a flint pebble in half. We have next to see what a flint is, and where it comes from, in order to know what is the relation of this gravel-pit with the various rocks in its neighbourhood. Let us break it in half with a hammer, and try if anything is to be learnt by looking at the inside. It is not unlikely that when broken there will be a small empty space in the middle, partly occupied with little crystals. Perhaps there is no empty space, but a distinct shape resembling some more or less known part of an animal, as if the flint had once been pasty and had entangled a sponge, a shell, or sea-anemone, just as in jellies the cook will enclose fresh strawberries or cherries, or as flies are caught in resin. At any rate, we are almost sure to find, if we look closely enough, using that wonderful contrivance the microscope, that little white or grey spots in the clear flint once belonged either to sponges, or to shells, or to some other creature formerly inhabiting the sea. The flints generally found in gravel are very different from most other stones we meet with. The former all seem similar, and though mixed with other very different stones, they, no doubt, have all come from the chalk. The only places where such material is at all abundant are the various chalk-hills, many of them at considerable distance. Beds of flint, unbroken and undisturbed, often alternate with the beds of chalk, and it is supposed that the pebbles once formed part of other chalk hills now washed away."

This and another paragraph or two comprise all that is said of flints. Every tolerable geologist knows how much more might have been said, and how much more graphically. How interesting to the beginner would have been notices of the numerous microscopic bodies in flints, the spiniferites and the animalcules, seen by transmitted light; the crowds of odd things popularly explained by Mr. Eley, in his 'Geology in the Garden,' and particularly the several theories of the production of chalk flints, including that of Dr. Bowerbank, to the effect that every kind of flint nodule and

vein in the chalk, owes its origin to a sponge of some species as a nucleus. Then, we might have had some description of those strange but striking, huge, cup-like flints, found near Norwich, and foolishly called Paramoudra. So, likewise, numerous other subjects might have been expanded which pass before us in colourless review in these pages.

To make room for such additions, the fifteenth and sixteenth chapters might well have been omitted, which give so little information upon minerals that their loss would not have been felt. Moreover, a dull and unpolished style is no aid to an elementary book, which should be captivating as well as clear. One advantage these pages certainly have, namely, that they are geologically correct, and are an echo of the most approved opinions of original inquirers.

A few illustrations accompany the volume, and these are all pleasing, excepting one entitled "The Stones of the Great Stone Book," in which a huge egg and a penny roll at its side seem meant for a couple of boulders. If boulders, they have both been well boiled.

Memoirs of the Court of Spain, under the Reign of Charles the Second, 1679-1682. By the Marquis de Villars—[*Mémoires de la Cour d'Espagne, &c.*]: being a Collation of the various Editions and Manuscripts of these Memoirs now known to exist, with some Inquiry as to their alleged Author. By Denis Florence MacCarthy. (Dublin.)

Que les gens d'esprit sont bêtes! These words of Figaro, one of the smartest of commentators, may serve for a text for many a discourse which is pronounced by way of illustrating the blind processes of sharp-sighted people.

A few years ago Mr. William Stirling purchased for a few shillings, at Sotheby's, a manuscript historical work, the '*Mémoires de Villars*,' about which he, confessedly, knew nothing, but which he took to be "copy" destined for the press. He, of course, did not do with it as Aretino did with the MS. of a work on the Gothic War, by Procopius—translate and publish it as his own; nor did he imitate the conduct of Machiavelli, who, turning up the lost MS. of the Apophthegms of Plutarch, turned them also to account by taking of the best and clapping them into the mouth of his hero, Castrucio Castruciani. Mr. Stirling put the written roll on his shelves, and supposed that some day he would find the volume which was printed from it.

To all "the obvious sources of information," he addressed himself—to Brunet, Querard, the various biographies, and so forth,—but only to acquire an opinion that his manuscript was an *integra virgo*, or rather an *acerba quælla*, which had never become ripe enough for the press. All the wisdom of the Philobiblon Society, in whose collection it is now printed as a novelty, helped him to that conclusion. Sir F. Madden examined the manuscript carefully, amid the multitude of references crowding round him in the British Museum, and after due research, recorded his opinion that it had never been printed. The Duc d'Aumale ransacked his own remarkable library, failing to discover any account of such memoirs, and finding himself without grounds to believe that the written memoir had ever passed through the press.

Mr. Stirling himself made researches in vain among the MSS. of the British Museum. Mr. Ford, the author of the '*Hand-Book of Spain*,' counselled him to try the learned pundits of *Notes and Queries*; but the oracle there gave no sound. Mr. Stirling and Mr. Ford discussed the question together many

times, looked at the manuscript, lent one another books, and could come to no other conclusion. Mr. Ford died, and Mr. Stirling bought such volumes from the library of the former as he knew were wanting in his own, but made no new discovery. At the same sale, Mr. MacCarthy purchased an anonymous work, printed in 1733, which he at once identified with Mr. Stirling's MS. *Mémoires de Villars*. To render this singular story more singular still, it is only necessary to add that, in a fly-leaf of the volume which had, for a score of years, belonged to Mr. Ford, that gentleman had himself made this record:—"It is possible that the author may have had access to the MS. letters of the Marquise de Villars, ambassador in Spain, at the time of the marriage of Charles the Second, which were printed at Amsterdam, in 12mo. 1760." But there is a superlative "most singular" in the fact that Mr. Stirling himself, in his '*Annals of the Artists of Spain*,' published in 1848, refers to the great resemblance which exists between a work by Madame D'Aulnoy, '*Mémoires de la Cour d'Espagne*,' and the work possessed by Mr. Ford, and purchased by Mr. MacCarthy, '*Mémoires de la Cour d'Espagne, depuis 1679 jusq'uen 1681*,' and published in Paris in 1733, the work, in fact, which Mr. MacCarthy identifies with the supposed unprinted manuscript bought by Mr. Stirling at Sotheby's auction-rooms!

The anonymous copyist of Mr. Stirling's manuscript had chosen to ascribe it to the Marquis de Villars; and this name being on the mind of all the eager examiners, they went off on a false scent. Had any one of them consulted the '*Dictionnaire des Ouvrages Anonymes et Pseudonymes*,' by Barbier, they would have been put, partially at least, on the right track. Mr. MacCarthy one day found himself almost at the source of truth on this matter when, seated in the famous Library of the King's Inn, Dublin, he opened De Flissan's '*Histoire Générale et Raisonnée de la Diplomatie Française*' (1811). Therein he found notices of Court incidents during the embassy of Villars in Spain, which were identical with those in D'Aulnoy, the anonymous volume of 1733, and Mr. Stirling's manuscript; but De Flissan cited an earlier authority than either the anonymous volume of 1733 or the earlier work of the romancing D'Aulnoy—namely, a manuscript on the state of Spain, in the Library of the Arsenal in Paris. Thither, opportunity aiding, went the indefatigable Mr. MacCarthy, obtained access to this manuscript, and carefully collated it with D'Aulnoy, the volume of 1733, and Mr. Stirling's edition printed in the Philobiblon collection. He finds them identical, with a certain significant difference. In the Arsenal manuscript, French persons of the highest distinction are spoken of in a tone that no French ambassador would ever dream of employing. Into proofs, resting on this basis, Mr. MacCarthy enters very largely; but we do enough by describing what he does, rather than following him through what he has done. We are chiefly concerned with the curious history of Mr. Stirling's manuscript, which can no longer be ascribed to Villars, the French Ambassador in Spain. The author of the Arsenal manuscript, from which later writers have taken what best suited them, and prudently altered much of what they had taken, remains unknown. The research which led up to it forms a remarkable addition to the Curiosities of Literature; and, setting aside the patient and successful Mr. MacCarthy, when we think of the number of expert and clever people who, well qualified for the task, yet failed in achieving it completely, we think of Peter

Heylin, who described the world physically, geographically and topographically, and yet lost his way in a wood close to his own hall-door!

The Life and Typography of William Caxton, England's First Printer; with Evidence of his Typographical Connexion with Colard Mansion, the Printer at Bruges. Compiled from Original Sources by William Blades. Vol. II. (Lilley.)

We have examined the concluding volume of Mr. Blades's work on Caxton, and are happy to report of it that it forms in every respect a fitting complement to its predecessor. In that, as our readers may recollect, Mr. Blades not only laid before us some new and interesting facts in Caxton's biography, but propounded a new theory as to the school of typography in which our first English printer graduated before establishing a press on his own account in the Almonry at Westminster. That school he showed to have been the Dutch or Belgian school of printing, as distinguished from the Mentz school, founded by Gutenberg; also, that Colard Mansion, of Bruges, was Caxton's immediate instructor, in concert with whom Caxton's earliest works, The '*Recuyell*' and '*The Chess Book*,' were printed abroad; and, finally, that Caxton's first work, with a date, printed on English soil was the '*Dictes or Sayengis of the Philosophres*,' produced at Westminster in 1477. The French '*Recueil*,' the '*Fais du Jason*,' and the '*Meditacions*,' Mr. Blades considers were printed by Mansion alone, although in the same type as the English '*Recuyell*' and '*The Chess Book*.' This was the only point almost on which we felt ourselves bound to express a different opinion from that of our author, being unwilling on any but the most substantial ground to deny to Caxton the credit of having had some share in their production. And this opinion we adhere to. The mere fact of those works being in French, a language in which Caxton never subsequently printed, does not weigh with us; for, once that he had arrived on English ground, it was not likely, with such a keen eye as he had for business, that he would fritter himself away upon works for which there was no sufficient market. Neither are we disposed to give up our Caxton as the printer of the '*Proposicio Johannis Russell*,' a speech made by John Russell, ambassador to the Duke of Burgundy, on the occasion of investing that sovereign with the Order of the Garter. Who so likely as Caxton to have printed this, either alone or in partnership with Mansion? And if so, then is it also exceedingly probable that he likewise printed '*Les Quatre Derrenieres Choses*,'—a work which is in the same type as the '*Proposicio*,' distinguished by Mr. Blades as "type No. 2." This was, in fact, the identical fount of types which Caxton brought with him to England, and from which he made his first essay at Westminster by printing the '*Dictes or Sayengis of the Philosophres*.'

Mr. Blades has taken great pains to distinguish the several kinds of type used in the Caxton books. There were in all six different sorts, besides modifications of two of them; namely, those numbered as "type No. 2," and "type No. 4." Beautiful fac-similes are given of all these, as also an alphabet of each, "including all the single, double and triple letters, signs, contractions, &c.,"—so that in any part of the world it is now possible for a reader, having access to a copy of the volume before us, to assure himself whether some rare book supposed to be "a Caxton" was in reality printed by our prototypographer.

This, however, is but one merit, although a conspicuous one, of Mr. Blades's Second Volume, which consists of two principal parts, the first being a dissertation on printing as practised by Caxton, founded upon a critical examination of his workmanship; and the second, a bibliographical and literary account of every production of his press at present known to exist. In his commencing dissertation Mr. Blades introduces the "Master Printer" himself to us in the following terms:—

"We will now ask the reader to imagine fourteen years passed since Caxton first began working at this new art. It is not difficult to picture the wooden structures in the Almonry occupied by his sedate but busy workmen. We can look in at yonder window and see the venerable master printer himself 'sittyng in his studye where as lay many and dyurse paunftlettis and bookys.' The great towers of Westminster Abbey cast their shadow over the room, for he is an early riser, and already at work upon his translation of the new French romance called 'Eneydos.' The 'fayre and ornate termes' of his author give him 'grete playr,' and he labours, almost without intermission, till the low sun, blazing from the western windows, warns him of the day's decline. Again, we watch him passing with observant eye through the rooms where his servants are at work; we can see the movements of the compositors who, close to the narrow windows, ply their rapid fingers; we can hear the thud-thud of the wooden presses as the workmen 'pull to' and 'send home' the bar, discussing, meanwhile, the latest news; and we sympathize with the binder who, hammering away at the volume between his knees, looks in despair at the ever-increasing progeny of his master's art. Piles of books and printed 'quayers' rise on all sides, and many a wise head is ominously shaken at the foolishness of supposing that so many books can ever find purchasers. But Caxton pursues still his busy course, with mind and body ever at work, preparing copy for the press, and guiding and instructing his workmen in that art which he had learned at Bruges, at 'grete charge and dispense,' and the practices of which are to be explained in the following chapters."

After this we are inducted into the several processes carried on by Caxton in his house at the "Red Pale," in the Almonry at Westminster. The types were not cast in the establishment, neither was the paper made there; but, with these exceptions, almost all the other operations connected with the production of books were done under the same roof. And here the reader, who is so disposed, may learn all the mysteries of spacing, even and uneven, of chases, quadrats and reglets, of tympan and frisket, of bites and point-holes, and all the other operations of the early compositors and pressmen; while, in the matter of book-binding, he is informed with respect to the folding and collation of sheets, whether ternions, quaternions or quinternions, the signatures, the use of waste sheets in binding, the parchment slips at the back, and so forth; and finally, with respect to the duties of the illuminator, the rubricker and the wood-engraver.

Leave we all this, however, as too technical for the majority of readers, while we direct attention, rather, to the number of distinct publications printed in the Caxton types, whether at Bruges or at Westminster, between the year 1474, the presumed date of the 'Recuyell,' and 1491, the year of Caxton's death. The entire number of these is given by Mr. Blades as ninety-one; including, of course, different editions of certain works, but not including doubtful or apocryphal publications sometimes attributed to Caxton. All these Mr. Blades has enumerated *seriatim*, in the order of the several sorts of types used in their production. This list of "Caxtons," all undoubtedly genuine, is by far the largest hitherto

published—Ames giving only 48, Herbert 50, and Dibdin 57. To each work, as it occurs in order, Mr. Blades has appended a minute bibliographical description and collation, specifying its typographical peculiarities, its commencing and concluding lines, when such could be ascertained from an inspection or trustworthy account of existing perfect copies; a brief account of the nature of the work, and of its author, when ascertainable; if a translation, mentioning by whom it was done; also, if printed from any known manuscript, stating where such manuscript or copies of it still exist; then further particulars, chiefly of literary interest, included under the head of "Remarks," the whole concluding with a list of all the known copies of such printed work, whether in public or private libraries; mentioning the condition and size of each copy, whether perfect or imperfect, and in what way and what year it was acquired by its present owner. This last, while it is a most interesting feature in Mr. Blades's work, must have cost the author infinite labour, as may be judged from his statement that out of the 556 volumes of Caxton's printing thus catalogued by him, full 500 passed through his own hands for collation. Thus, of 'The Game and Play of the Chess Moralised,' he enumerates nine different copies at present existing. Similarly, of the 'Boethius,' he enumerates as many as fifteen copies, all collated by his own hands; while, of 'The Book of Tully of Old Age,' he has catalogued and collated full twenty copies. But, besides all this, Mr. Blades has subjoined to his account of each individual "Caxton" a list of the sale prices at which copies have been purchased at different times, specifying in each instance (where possible) the name, both of the original possessor and the purchaser, with the date of the year when sold, and number of the lot in the sale catalogue. "This commercial table of 'Sale Prices,'" he justly remarks, "is not without its interest in enabling the reader to trace a volume from library to library, and presents, in the fluctuating amount paid for the same book, an interesting aspect of that curious disease—Bibliomania." As an example of this list of sale prices, take the following as it occurs at the end of our author's account of the 'Recuyell of the Histories of Troy,' Caxton's first printed work:—

| Year. | Lot. | Sale. | Amount. | Purchaser. |
|-------|------|----------------|------------|------------------|
| 1698 | 119 | Dr. Bernard | £0 3 0 | |
| 1743 | 2783 | Earl of Oxford | | Osborne |
| 1756 | 2026 | Bryan Fairfax | 8 8 0 | Fras. Child |
| 1773 | 4090 | J. West | 32 11 0 | George the Third |
| 1776 | 1667 | J. Ratcliffe | 4 18 0 | Dr. Hunter |
| 1786 | 487 | M. C. Tutet | 21 0 0 | H. E. Austen |
| 1800 | 1150 | G. Steevens | 14 3 6 | J. Edwards |
| 1812 | 6350 | D. of Roxburgh | 1,000 10 0 | D. of Devonshire |
| 1815 | 164 | J. Edwards | 43 1 0 | De Bure |
| 1816 | 1409 | J. Lloyd | 126 0 0 | G. Hibbert |
| 1826 | 1220 | J. Inglis | 15 0 0 | Imp. Lib. Paris |
| 1829 | 6925 | G. Hibbert | 157 10 0 | J. Wilks |
| 1847 | 2101 | J. Wilks | 165 0 0 | Utterson |
| 1852 | 482 | Utterson | 155 0 0 | E. Ashburnham. |

Of the copies thus sold the majority can be still identified; and it is singular that the only copy mentioned in the list as perfect is that which sold for the least money, namely, Dr. Bernard's, which fetched the ridiculous sum of 3s. ! But this, gentle reader, was in the year 1698, when as yet Bibliomania was not. This Dr. Bernard, who was chief physician to James the Second, must have been an enthusiastic collector of "Caxtons," as his name occurs no less than a dozen times in these price lists, though, alas for his heirs, creditors, or others interested in the sale of his library, the highest price paid for any of the "Caxton" lots was exactly 5s. 4d. This was for a copy of 'The Dictes or Sayengis of the Philosophers.'

The next largest collector of "Caxtons" was

Robert Harley, Earl of Oxford, who died in 1724:—

"He began (says Mr. Blades) the celebrated collection of Books and manuscripts so well known as the Harleian. His son Robert, Earl of Oxford, devoted nearly his whole life to its increase. On his death the library descended to his daughter Margaret, Duchess of Portland, and by her and her mother was offered for sale. The manuscripts were purchased for the nation at 10,000*l.*, but the printed books were sold to T. Osborne, bookseller, for 13,000*l.*, being 5,000*l.* less than the bindings had cost. Osborne employed Dr. Johnson and Oldys to superintend his 'Catalogus Bibliothecæ Harleianæ,' and in the course of a few years this magnificent collection became scattered over all the countries of Europe. The list of Caxtons includes 56 volumes, being the largest number ever collected in one library. For many years these appeared scattered through the catalogues issued by Osborne, at the general price of 1*l.* 1*s.* for the folios and 15*s.* for the quartos!"

Even so late as 1760, when Ames's library was sold, only seven shillings were paid for a copy of the 'Polychronicon,' and two guineas and a half for the 'Recueil'; while, again, in 1774, at the sale of Mr. Recorder Flete-woode, five Caxtons were sold for 26*l.* 13*s.* 6*d.*, one of which, an imperfect copy of 'The Golden Legend,' selling at 7*s.* ! But even so late as 1800 things had not much improved; for at the sale of Lord Spencer's duplicates in that year we find one copy of 'Tully of Old Age' selling at 3*l.* 4*s.*, and another at 4*l.* 16*s.* Contrast with these prices the sums paid at the ever-memorable sale of the Duke of Roxburgh in 1813. At this sale, fourteen Caxtons were disposed of for as much as 3,002*l.* 1*s.* Two of them fetched 336*l.* each, a third 351*l.* 15*s.*, and a fourth the enormous sum of 1,060*l.* 10*s.*, being the largest amount ever paid for a copy of Caxton, or, indeed, for any printed book, with the exception of the Valdarfer-Boccaccio, disposed of at the same sale for the almost fabulous sum of 2,260*l.* This Caxton of Caxtons was purchased by the Duke of Devonshire, and is "particularly interesting from having belonged to Elizabeth Grey, Queen of Edward the Fourth, and sister to Anthony Earl Rivers, the poet, and patron of Caxton's Press. This appears from a manuscript inscription on the paper lining of the original vellum covering of the book, which has been carefully bound up at the end of the volume. The writing of the fifteenth century is as follows:—"This boke is mine quene elizabet late-wiffe unto the moste noble kinge edwarde the-forthe off whos bothe sooles y beseche almyghty Gode Take to his onfynyght mercy above. Ames. Per me thomā Shukburgh juniorem." The late Duke (of Devonshire) bought this interesting volume at the Roxburgh sale for 1,060*l.* 10*s.* It had been purchased by the Duke of Roxburgh for 50*l.* from Mr. Laing, who had received it in exchange from Major Swinton."

Further information of a curious kind as to the auction prices given for Caxtons at different times will be found in Mr. Blades's "Catalogue-List of Caxtons, sometime in various private and public libraries, but now sold or dispersed." There also it will be seen that, within nine years of Caxton's death, the churchwardens of St. Margaret's, who had come into possession of fifteen copies of his 'Golden Legend,' disposed of them at an average price of 6*s.* 8*d.* a copy, or about 2*l.* 13*s.* 4*d.* of our present coinage, "a sum by no means too great for a large illustrated work." We are also told of a certain R. Johnson, M.D., who, so far back as the year 1510, made a purchase of five "Caxtons" for the following sums, respectively:—"Godefroy of Boloyne," 2*s.*; "Eneydos," 12*d.*; "Fayts of Arms," 2*sh.* 8*d.*; "Chastising of God's Children,"

8d.; and 'Book of Fame,' 4d. These prices cannot have been far different from those charged by Caxton himself.

Of the ninety-one "Caxtons" described in this volume, Mr. Blades was fortunate enough to discover five, namely, the 'Directorium,' first edition; 'Reynart,' second edition; 'Hors,' second edition; 'Death Prayers,' a single sheet; and the 'Indulgence of Sixtus IV.' Three of these were found by him in the covers of Chaucer's translation of 'Boethius de Consolatione Philosophiæ,' printed by Caxton, and discovered by our author in the old library of the Grammar School attached to the Abbey of St. Albans. How long this volume had lain unnoticed, and rotting away in the damp deal cupboard from which Mr. Blades rescued it, it is impossible to say. Mr. Blades, however, immediately recognized it as an uncut "Caxton," and in the original binding as issued from Caxton's workshop. And not only so, but from the damp state of the covers he was able to perceive that they were actually composed of successive layers of Caxton-printed waste sheets. "After vexatious opposition," he says, "and repeated delays the acting trustees of the school were induced to allow the book, which they now prized highly, to be deposited in the care of Mr. J. Winter Jones, of the British Museum, for the purpose of re-binding," when, on dissecting it, "the two covers yielded no less than fifty-six half-sheets of printed paper, proving the existence of three works from Caxton's press quite unknown before." Altogether it contained fragments of thirteen distinct works printed by Caxton.

The Last Decade of a Glorious Reign. Part III. of the History of the Reign of Henry IV., King of France and of Navarre. From numerous Unpublished Sources; including MS. Documents in the Bibliothèque Impériale and the Archives du Royaume de France. By Martha Walker Freer. 2 vols. (Hurst & Blackett.)

Henri Quatre has been an uncommonly lucky person,—in his times, his opportunities, his enemies and his chroniclers. When the love-sick Dominican, Jacques Clement, received from the hand of Madame de Montpensier the knife which, for the sake of her fine eyes, he drove into the bowels of Henri the Third, the last of the Valois, the murderer cleared the way for the heroism, such as it was, of the first of the Bourbons.

The dead king had been an unclean, frivolous, heartless, debauched and eminently pious personage, of whom every faction was sick and the universal people weary. Henri of Navarre, the aspirant to his place, was a prince endowed with sense, addicted less to terrible vices than to a rather ruinous gallantry; frank, the expectancy of the above-mentioned weary people, and so little bigoted that rather than lose the French Crown he would, we verily believe, have embraced Islam—or any other—ism. True to no woman, he was not likely to be seriously attached to any form of faith.

Henri was fortunate in his opportunities,—but it must be allowed that he had one quality of heroism in not only discerning them, but profiting by them at any cost to his own ease or any peril to his own life. His great opponents were the Guises, but the last formidable Duke of that formidable family had been long quiet in his bloody grave; and the fourth Duke, Charles, who would have been well pleased to be King of France, with an Infanta for his queen, and Rome for his patron, was a weak lad, who inspired no fears except in his friends.

Charles's uncle, Mayenne, was as heavy as

Charles was light. He was like an elephant at the head of the fiery League. Henri was like a feathered Mercury, always mockingly in sight, and never to be caught. At Ivry, where an English contingent followed the white *panache*, this Mercury smote his enemies with Jove's thunderbolts; and, finally, when he entered the capital in triumph, the very Guise whose assumed airs of royalty had excited the ridicule of his own family, was the first to recognize his authority. Then, however, arose the opposition which he found less surmountable than that of the Guise. The priesthood was too strong for him. Henri had points of faith disputed in his hearing, and he decided, on conviction, for that which gave him a kingdom of this earth. He was not going to lose Paris, he said, for the sake of a mass.

Spain made peace with him, and Heaven gave him for guide, councillor and friend the Rosny who is better known to us as Duc de Sully. To our thinking, nearly all the profit which France derived from this reign was owing to the quieter hero of the two. The more restless and impatient hero was subdued by him. The wounded country reposed; it grew strong, refined and prosperous; peace was combined with plenty; the finances were put in order, something like liberty was allowed, and the dignity of the Crown elevated. The popular condition was raised with it, and the "people" were better pleased than the nobility.

In his last "Decade" he projected the humiliation of the House of Austria—perhaps not unmindful of that very patriotic theory of the Guises, that the natural boundary of France on the German side was the Danube! The knife of Ravallac checked the project by killing the King; and then chroniclers, contrasting him with the last three of the Valois kings—three brothers, by which rare conjunction all royal lines in France come to grief,—give him credit for bravery, sincerity, and a desire that France should flourish, though all the world beside should perish. Here was a combination by which a king must necessarily be a favourite; but to Sully is chiefly owing the good fortune of the kingdom, in which the most immoral man was the King himself; but then he never said an uncivil thing to his wife!

There is a certain piquancy in this narrative of the meeting of Henri's divorced wife Marguerite with his second consort, Marie de Medici, the husband of the two women acting as mutual friend and master of the ceremonies combined, after sending an old lover of his first wife to escort her to the meeting with his second:—

"The Court and Paris were absorbed by speculations on the return of Queen Marguerite to the capital, from whence she had been an exile for more than twenty-five years. Her expulsion, therefore, during the reign of Henri the Third, had been outrageous and disgraceful; her return under the generous *régime* of Henry Quatre was honourable, and becoming the dignity of a great princess, the last descendant of a mighty line of kings. Henry sent the Marshal de Roquelaure to compliment the Queen at Estampes; and to announce that the young Duke de Vendôme would receive her on her arrival at the Château de Madrid, in the Bois de Boulogne, which was then half a league from Paris. The château, meantime, had been magnificently fitted for the reception of its long-absent mistress. Marguerite arrived on the 19th of July, 1605, and the following day indited a rapturous letter to the king on the perfections of his son. 'I believe, monseigneur, that God has given him to your majesty for special service. Never have I experienced a more transporting surprise than my admiration of this marvel of a child, and of his wise and apt speech. He is a royal prodigy truly worthy of your majesty, who excels in all things, as the stately edifices which now adorn the

banks of the river testify.' The Queen adds a postscript to this production thus: 'I took extreme precaution that the journey taken (from St.-Germain) by this delicate little angel of yours, should do him no harm; and I exhorted him very zealously not to pass through Paris. Your Majesty will pardon me, if I presume to say that you are not careful enough about his health.' This letter the Queen sent by M. de Chanvalon, whom Henry, with great want of discernment, had despatched to welcome Marguerite to her château; Queen Marie likewise sent M. de Châteauevieux with compliments of welcome. The King visited Marguerite at Madrid on the 26th of July, until which period the Queen received no person. Henry arrived from Monceaux about seven in the evening, and remained with Marguerite until ten o'clock. The interview was cordial, satisfactory, and enlivened by reminiscences of the brilliant Court of the deceased kings her brothers. Henry assured Marguerite of his fraternal protection; and promised her consideration and honour from the Queen.—'There are two things,' said Henry to Marguerite, 'which I must request Your Majesty to concede at my prayer: the first is, that, for the sake of your health, you will refrain from turning night into day, and day into night; my second request is, that, for the prosperity of your pecuniary affairs, you will be less profuse in your expenditure.'—'Sire, I will strive to please you; but your first request will be difficult to comply with, for such has been the habit of my life from childhood: as to my profusion, I fear to make promise—prodigality and perhaps heedless munificence have been the failings of the races of Valois and Medici!' responded Marguerite. The day but one following this interview, Marguerite had public audience at the Louvre with Queen Marie. The interest of the occasion caused the whole court to assemble at the Louvre. It was a painful and humiliating ordeal; but the tact and *savoir faire* of Marguerite were equal to the emergency. Though five-and-twenty years of dreary seclusion had impaired the charms which once conquered all hearts, yet the spectators pronounced that Marie de Medici, as she that day appeared, fresh, majestic, and blazing with crown jewels, wanted the indescribable graces of manner and *tourneure* conspicuous in Marguerite. That her old spirit of coquetry was not yet extinct, the attire of Marguerite on that day evinced. Like Madame de Verneuil, Marguerite wore her hair sprinkled with powder, and drawn up from her forehead to an enormous height. Her dress was studded with jewels, and adorned by innumerable flounces of lace, set out by an enormous hoop; a fashion in favour at the court of Queen Catherine, but which Marie had discarded for more flowing drapery. Marguerite, however, moved with such perfect grace in her advance towards the dais, under which sat the queen, that the empire of hoops was at once again established; and though some little time elapsed before they were universally adopted, Marie de Medici herself was at length compelled to conform to the prevailing taste. Henry presented Marguerite to Queen Marie, who graciously embraced, and invited her to sit under the canopy, whereupon a conversation ensued for several minutes between their majesties alone. The king, however, is said to have subsequently chided his consort, for not having advanced to meet Queen Marguerite, instead of receiving her at the dais; adding some reflections on their comparative descents, peculiarly mortifying to the queen. Marguerite became the guest of the king and queen at St.-Germain on the 4th of August. When she was first introduced to the young Dauphin by his governors, her exclamations of admiration were flattering enough to satisfy the maternal pride even of the queen. 'Ah, how beautiful he is! what a handsome boy! Happy is the Chiron who instructs this future Achilles!' exclaimed her majesty, with the affected pedantry then in vogue. Marguerite seems to have thoroughly enjoyed her sojourn at court; without feeling the least embarrassment, or testifying regret at the pre-eminence enjoyed by Marie. She jested with the king; and renewed her old *liaison* with Roquelaure, Bellegarde, and other of that witty throng—the courtiers of the late reigns. She visited the monasteries

and convents of the vicinity, leaving everywhere substantial marks of munificence. The *savoir vivre* and regal birth of Marguerite enabled her to treat the royal mistress and *parvenue* ladies of the court—so sharp a thorn in Marie's crown—with a condescension and hauteur which the queen vainly envied."

Marguerite, who had consented to the dissolution of her childless union with Henri, kept, after her return to Paris, a joyous house in the Rue de Seine. Mézeray describes her as a true Valois, who never made a present without apologizing for its being so small. That she spoke and wrote better than other women of her time, was laid to the account of her always having literary men at her table—a very laudable practice. Lazy and luxuriously pious, she passed much of the day in bed, while handsome choristers sang anthems to her, and magistrates paid her ceremonial visits. Setting aside some gay matters for which she was too famous, Marguerite was most renowned for her dancing, to witness which *incognito*, Cardinal Don John of Austria once rode post from Brussels to Paris, and then returned in an ecstasy. Such was the lady in the above gallery-picture—one, indeed, which occupies so much space that we are unable to exhibit the portraits and sketches furnished by these volumes, which are creditable to the judgment, as they are to the zeal and industry of the author.

NEW NOVELS.

Up and Down in the World. By Blanchard Jerrold. 3 vols. (Skeet).—'Up and Down in the World' is a picture of life as led by young men in chambers; it is redolent of cavendish, bitter beer and jokes. The sketches of young men are drawn from nature apparently; and young ladies will be rather startled at the difference between what they are in their private hours, removed from parents and guardians, and the same young men idealized in valentines and evening parties. Certainly, the picture of discomfort of chambers in the Temple may move female hearts "to the milder grief of pity"; but we doubt they will be not a little scandalized for all that. The separate world in which the young men live, their occasional emergence into the respectable family circle, and the candid views the youths sometimes take of parental government, are edifying; and we are glad to accept the author's assurance that these youths will eventually settle down into as sedate and respectable middle age as their fathers, quite as much at a loss how to teach their sons steadiness and economy. The pictures of the young ladies are not so natural; but they are painted as they look, seen in the domestic bosom, to the wild, young Ishmaels living at the mercy of their landladies and landlady. The prim young lady who wins Faversham's heart, and wiles him to attend chapel, is not natural as a specimen of female human nature, but as a testimony to the influence of a good, pure, high-principled girl upon men, who, though they may not care for her schools and missionary meetings, can feel the beauty of her better nature, it is true, with a higher truth than that of mere individual portraiture. It is a word spoken in season that is not uncalled for in these days of "fast" young women, who play with pitch without knowing its blackness or realizing (God forbid they should!) all that lies in the topics they handle with such jaunty daring. Clara, the coquette and fast young woman of the book, is very disagreeable; but the author knows the outward presentment of the class. As to the story, it is rambling, confused and disconnected; indeed, there is only a blotted outline of a story. With much scattered cleverness and life-like portraiture of individual incidents and characters, there is a want of nature and probability in the work as a whole. There are some dissertations that are admirable as essays—the one on "Old Bogie" is especially good, but it is a bright, self-contained essay, that might just as well be placed anywhere else. For these occasional pages the book will be read by those who care nothing for mere stories.

Skirmishing. By the Author of 'Cousin Stella.' (Smith, Elder & Co.)—"Skirmishing" is not a very attractive title; but it serves as the portal to a very charming story. The incidents are slight, indicated rather than detailed. The scene is only a secluded village in the depth of the country, without even a market-town or a railway in the neighbourhood; but the characters are all human beings; their sayings and doings are spirited and characteristic; and the whole story rouses the reader's thorough sympathy. There is a rector, an excellent, sensible, kind-hearted man, well to do in the world,—his wife, a handsome, bright, prosperous woman, French by her mother's side, but with a thorough English sense of respectability, and a horror of doing anything likely to incur blame or ridicule. She is not unmerciful nor unwilling to help people in trouble or suffering, "but she had always a private belief that it was, on the whole, people's own doing." Her mother, Madame Lescririère, is the perfection of an old lady. She is charming; she, too, is half-French; but her nature is quite different from her daughter's; she has a breadth and depth of sympathy, a pity and forgiveness, which it were heartily to be wished were more common—"the misery and the anguish always hid from her the fault, if fault there were." She is witty, graceful, gracious, and *wilful* to a degree that must captivate the reader, though, no doubt, it occasionally drove her daughter to distraction. Then there is her grand-daughter, Maud, a charming English girl, engaged to her father's curate, who, as he has won her affection, must, we are willing to believe, have had some good qualities; but so far as his appearance in this story is concerned, he is entirely detestable. It is wonderful how seldom young curates (in stories, at least) are anything else. He cannot understand Madame Lescririère at all; he feels her "a trial," and "a trial for which he was not at all thankful; there was something about her which he qualified to himself as 'disorder': she hated routine—never would receive any notion on authority, and would insist on discussing its reasonableness and credibility." A certain Mrs. Brown takes an old house, long untenanted, her whole household consisting only of a son and an old German servant. To the horror, the scandal, and the disappointed curiosity of the whole village, she does not appear at church! Madame Lescririère boldly stands up for her, and insists upon her being received within the pale. Here is her mode of "skirmishing":—"Oh, my dear curate," she said, waving her hand, 'I know what you are going to say perfectly well. I don't deny your reasons,—only allow that I am reasonable also when I beg you to remember that there were Christians—excellent, the best of Christians—before they had any church to go to. Ah! you don't forget, I am sure, that the Jews and Pagans persecuted and despised them for not going to their temples. Now, don't all of you look as though I deserved to be packed up between two faggots, but listen to a story!' The dear old lady's motto, up to which she always acted, was, "Never repent of a kind action, however it turns out for yourself." The Browns are visited by the rector and his wife. We shall not forestall the reader's interest in this charming story by unveiling the sad mystery which overclouds Mrs. Brown, and that has obliged her to try and hide herself from the world. Her story is well indicated; but the tale turns rather on the complication of village politics than on Mrs. Brown's antecedents, although Madame Lescririère seems, at one time, to have got the respected rectory family into a scrape; she is, in the end, triumphantly vindicated. The little cloud of misunderstanding and gentle scandal in which the stiff and reserved young curate finds himself innocently involved teaches him a lesson of charity towards others, of which he stood greatly in need. Mrs. Brown herself and "poor Georgy" give substance to the interest of the story, and form the centre round which all revolves. The story is graceful and charming, for the skill with which the slight incidents are narrated, as well as the sweet, broad, loving charity of heart that is inculcated.

The Poachers: a Tale. By the Rev. E. H. Mac-lachlan, M.A. (Parker).—This is a slight little story intended for village reading; it points out the danger of bad company and the evils of poach-

ing in an earnest and sensible manner. For districts where poaching is a prevailing misdemeanor, this small book will be useful.

Willie Heath and the House-Rent. By the Rev. Dr. Leask. (Partridge).—There is an odd mixture of cleverness and stupidity in this story: the author has not the knack of writing village stories, or tales for young people. There is, in the present little book, too much effort after smartness,—a palpable imitation of Dickens, and an entire absence of that simplicity of style which is essential for a village story. In spite of the lapse of time and changes of thought and manners, the Repository Tracts of Hannah More remain models of this kind of writing. 'Black Giles the Poacher,' 'The Two Wealthy Farmers,' 'Hester Wilnot' (all in the Repository Tracts), are tales, not only admirably adapted for the readers to whom they were addressed, but they are tales to be read with pleasure by any public, gentle or simple.

New Scenes of Russian Life—[Nouvelles Scènes de la Vie Russe.—Elena: un Premier Amour, par Ivan Tourguenef.] Translated by H. Delaveau. (Paris, Dentu; London, Jeffs).—

The pale, unripened beauties of the North is a line which recurs to us as often as we turn to a tale of this family; yet the quotation must be taken "with a difference" when it is applied to a novel by M. Tourguenef,—if "unripened" and "passionless" are to be read as synonyms. Histories are mournful in no common degree, and wear in their physiognomy somewhat of the paleness prefiguring, if not expressing, death; but they are not cold. It seems as if an element of struggle, of "yearning vain," of disappointment, trenching at times on the verge of despair, must, as a matter of course, pervade them. This may make them all the more faithful to national life and character; but it does not make them more cheerful. Many years ago, Mrs. Jameson, in her 'Winter Studies,' remarked on the unusual preponderance of melancholy and dissatisfied women (such as Mrs. Gore satirized so keenly in 'Cecil') in America. A dispassionate anatomy of German society might, we fancy, yield analogous phenomena. Of late years, too, the sensation excited by the English productions of those strange women, the Brontë sisters, has encouraged a crowd of maids and matrons to rend their hair and adorn themselves with sackcloth and ashes in the highways; bewailing, on the housetops, the monotony of woman's life, and courting storm, vicissitude—no matter what, no matter where—as more endurable than a placid existence led within narrow limits;—a phenomenon curious, if it be set against the counter-revival of monastic quietism which these later years have also witnessed! But neither American wives nor German girls, regarding their poor countrywomen, Charlotte Stieglitz, as an enviable heroine,—nor the demonstrative Yorkshire maidens who figure in 'Wuthering Heights' and 'Shirley,' and who have become mothers and aunts to a long line of "ladies most dejected and wretched,"—out-do the blank, wan unhappiness of good and gifted Russian girls as depicted by this excellent but not cheerful Russian novelist. M. Tourguenef's elder women are either eccentric, ignorant old maids, with cares of the kitchen and the linen-chest heavy at their hearts;—or else silly mothers, with a smattering of French affectation, who would really like, rather than the reverse, to be unfaithful to their lords and masters, if only some pianoforte-playing official or some half-crazy ex-professor of the unintelligible sciences would do them the favour of tempting them. His men too often appear to our English vision to be no less awry; but English ideas, we know, are sneered at, all the transcendental Continent over, as mercenary and stupid. An amount of snug and secret profligacy is indicated which adds to the pain of the picture. We are not writing from this book alone, so much as on the series in which it forms an item. The present volume is well worth considering, whether it be seen through our spectacles, or treated merely as a novel, to be read among other novels. Elena, the heroine of the first and most important "scene," is one of those misunderstood Muscovite damsels whose life is made uneasy between a libertine father and a foolish mother. A University professor is in love with

her, so is a random artist; but she picks out as the man of her heart a Bulgarian refugee,—makes both her suitors assist in breaking down the barriers which family ordinance has set betwixt him and her,—in part compromises herself, so as to render further opposition impossible (your high-minded heroine now-a-days must compromise herself, seemingly, if she would win the diamonds to her crown of glory),—gains her point,—marries a man stricken to death,—and, on the catastrophe striking her down in a strange country, attaches herself to his corpse, his cause and his memory;—the author leaving us to choose whether she perished in a storm at sea, by the side of his coffin, or whether she wandered about, as a somewhat profitless spectre, in his country. If such a tale be typical, it is a doubly sad one. We owe M. Tourguenef too much pleasure—we value him far too highly as an artist—to spare him one single word of earnest reckoning such as the above. Whether as a remonstrance or as the record of impressions derived from pictures, without reference to their meaning, it is a tribute to his power. 'A First Love,' his second and shorter story, is still less agreeable, placing, as it does, a father and son in positions respectively intolerable. The character of its teller, a generous, credulous boy, is excellently traced, but at a terrible (and, we think and hope, a gratuitous) expense of contrast. "Something," as one of the characters quotes, is "rotten" in the state of a country where intrigues like the one told can flourish, and more rotten, we must as sincere persons add, when a man of genius devotes his literary life to telling them.

OUR LIBRARY TABLE.

The House of Scindea: a Sketch. By John Hope. (Longman & Co.)—Anglo-Indians and all who take an interest in the current politics and past history of our Eastern possessions, will read with interest this sketch of the House of Scindea, written by one who wields a vigorous pen, and acquired his knowledge of his subject whilst acting as surgeon of Scindea's Contingent, and as surgeon to the Court of Gwalior. Lord Ellenborough's Indian policy is attacked with bitterness by the author, who at the conclusion of his narrative, says, "Perhaps even yet a generous consideration may induce the Queen's Government to inquire into all the proceedings of Lord Ellenborough, and to ascertain 'the reason why' the independence of this State was forfeited on such a wretched pretext as that which was advanced,—to avoid removing the scene of a contest altogether inevitable from Gwalior to Allahabad, there to be carried on with diminished force, a disheartened army, and a disaffected people." In his account of the battle of Maharajpore, Mr. Hope records an incident which should be borne in mind by severe censors of French atrocities in Algeria. "One atrocity," observes Mr. Hope, "which was very horrible, was done by a small party of our soldiers. Some Maharratta sepoy, twenty or thirty in number, having discharged their last cartridge, were fleeing from the field, but, finding themselves surrounded by our troops, they rushed into a native's house, the family having fortunately abandoned it, and barricaded the doors. Some of our men, in a state of temporary frenzy let us hope, set fire to the thatched roof, and these miserable sepoys were burnt to ashes. As long as a month afterwards the walls of the houses and the charred remains of the men could be seen by any traveller just as they had been left on the day of battle, deliberately allowed to remain by an angry people with a view to cause a feeling of deeper hatred than ever against our race. At the intercession of an European officer, a personal friend of Ram Rao Phalkea the minister, the walls were taken down, the remains removed, and the soil ploughed for cultivation, to prevent the spot from being visited as the place of martyrs."

The Boy's Handy Book of Sports, Pastimes, Games and Amusements. (Ward & Lock.)—Every subject in which boys find amusement meets with due consideration in this "Book of Sports," which not only sets forth the rules of playground games and gives judicious directions for the efficient performance of athletic exercises, but treats also

of horticulture, yachting, fishing, management of the poultry, pigeons, rabbits and other pets, chess, botany, and natural philosophy. There is a chapter on "The Sea-water and Freshwater Aquarium" and another on "Evening Games." Nearly every page has an illustration, and frequently as many as four well-executed engravings appear on the same side of a leaf. A better book of the kind we have not seen for many a day.

A Manual of Animal Physiology, for the Use of Non-Medical Students. With an Appendix of Questions from various Examination Papers, including those for the B.A. London for the last Ten Years. By John Shea, M.D. (Churchill.)—Dr. Shea says that in compiling the present manual from the works of the greatest writers on physiology, he has endeavoured to supply "non-medical students with a book, by means of which the acquirement of some knowledge of physiology may be rendered comparatively easy, and to economize the time and labour of those who are compelled to prepare themselves for examination on the subject, by collecting into one volume the information they would otherwise have to obtain from various sources." Regarded as a "cram-book," the 'Manual of Animal Physiology' is by no means free from deficiencies; but as an introductory treatise for the use of non-medical readers it deserves a word of commendation. Dr. Shea clearly understands what he writes about; and besides avoiding needless technicalities, he is careful to address his readers as mere learners of the scientific alphabet. His book would do good service in the hands of instructors of children.

An Introduction to the Study of German Authors. By Dr. A. Heimann, Professor of the German Language and Literature in University College. (Nutt.)—This is a reading-book for junior classes, composed of extracts from standard authors, in prose and verse, some of them very modern, and copiously furnished with notes of an etymological character. "The notes," says Dr. Heimann in his Preface, "are to explain those idiomatic expressions which escape the dictionary and grammar, and all difficulties which may impede the progress of the beginner. To these belong the signification of particles, of prefixes and suffixes, which, when explained at the very threshold of the study of the German language, will greatly facilitate the learner's exertions. But special care has been taken to develop the meaning of words, so that it may be clearly seen why a word has that particular signification which we connect with it. This feature—the etymological explanation of nearly every word—will give the little book its chief character. It has been pointed out in the first place, whether a word is derived from Latin, Greek, or any other foreign language; in the second place, when it is purely German, what was its original root and meaning; and in the third place, what changes have taken place both in the vowels and consonants in that large class of German words which form two-thirds of the whole stock of the English language." An index to the notes renders easily accessible a real thesaurus of grammatical information.

The Exodus of Israel. By the Rev. T. R. Birks. (Religious Tract Society.)—Those who value the true method of settling controversy will be obliged both to Mr. Birks and the Tract Society for showing higher powers the proper way of proceeding. This book is entirely directed at Dr. Colenso's first volume, and those who enter into the actual dispute will find it interesting. For ourselves, we have not detailed the Bishop, and we shall not detail Mr. Birks. He is very confident that he has upset his object of assault, in which many will agree with him, and many will dissent. At present, both are on our side: the question is between discussion and repression; and all who write argument without calling out for pains and penalties are our comrades, whether they know it or not. When the time shall come at which punishment shall no longer be heard of, the victors will, as is usual, form two separate camps and proceed to wage new war. Those whom we shall then join will strive against that method of writing in which the disputant saves his reader the decision, by pointing out in every page what it ought to be. Infallible writers will be attacked with the weapons which have dethroned infallible

Popes and are to cashier Courts of Arches, which are infallible against all but the Judicial Committee of the Privy Council. Disputants who commit the indecency of *praying* for their opponents will be made to feel that fallible beings, who are so certain of their conclusions that they ask the Almighty to enlighten the other side, are—in a milder form—of the same spirit which actuated the denunciator who wrote what is called the Athanasian Creed. Should Mr. Birks arrive at a second edition he will do well, in point of logic, to allow his reader to supply all the wonder that Dr. Colenso should, &c. &c., and to content himself with trying to be so strong in argument that the wonder shall naturally arise. And he will also do well, in point of Christian humility, to allow his concluding prayers to include himself, in case he should happen to be the one who is wrong.

The Cassiterides: an Inquiry into the Commercial Operations of the Phœnicians in Western Europe, with particular Reference to the British Tin Trade. By George Smith, LL.D. (Longman & Co.)—With learning and temper which are alike creditable, Dr. George Smith opposes the writers who have thrown doubt on the tradition that the ancient nations of the East procured their tin from Britain through the agency of Phœnician merchants. Sir G. C. Lewis is amongst the scholars who have strengthened the current of opinion which has set in against the probability of the Phœnicians having maintained a direct trade with Cornwall; but it is against Mr. Cooley, as the chief promoter of the heresy, that Dr. Smith directs his criticisms. In his 'History of Maritime and Inland Discovery,' Mr. Cooley remarks, "There can be no difficulty in determining the country from which tin first arrived in Egypt. That metal has been in all ages a principal export of India; it is enumerated as such by Arrian, who found it abundant in the ports of Arabia, at a time when the supplies from Rome flowed chiefly through that channel. The tin mines of Banca are, probably, the richest in the world. But tin was unquestionably brought from the West at a later period." Since Mr. Cooley thus uses the authority of Arrian of Alexandria, whose 'Periplus of the Erythraean Sea' is attributed by Dean Vincent to the tenth year of Nero, or A.D. 64, Dr. Smith observes with justice, that the historian of 'Maritime and Inland Discovery' ought to have mentioned "the fact that the work on which he relied as an authority was written above sixteen hundred years after the introduction and use of the metal." But apart from the question of time, Arrian is shown to be no witness in support of Mr. Cooley's view. Indeed the Alexandrian merchant's testimony is all on the other side, since though he mentions tin as an ordinary article of traffic between the Red Sea and the Coast of Africa to the East Indies, he nowhere enumerates it amongst Eastern imports to Egypt, but always describes it as an export from Egypt to the East. "If," observes the writer, "the merchants of Malabar could have procured tin from the East, they would not have imported it from Egypt. We are told, it is improbable that the most successful and experienced navigator of their day should sail from Cadiz to Cornwall; yet those who make the assertion find no difficulty in believing that a people whose practice of navigation is entirely unknown to us should sail twice that distance, from Ceylon to Banca." Moreover, adds Dr. Smith, "But let it be remembered that we ascribe this voyage to men who had built a city, as a colonial settlement, 2,500 miles from their native shores; to a people so familiarized with maritime commerce as to have established depôts on most of the islands and on every shore of the Mediterranean! Is it reasonable to suppose, that Gades would have been built at the extreme distance to which their commerce reached!" Such is the line of reasoning taken by a treatise which will meet with respectful attention from scholars.

Of publications on the Colenso controversy we have to announce: *Bishop Colenso's Objections to the Historical Character of the Pentateuch and the Book of Joshua (contained in Part I.) Critically Examined*, by Dr. A. Benisch (Allan).—*The Historic Character of the Pentateuch Vindicated: a*

Reply to Part I. of Bishop Colenso's 'Critical Examination,' by a Layman of the Church of England (Skeffington).—The Bible in the Workshop: Part II., A Refutation of the Second Part of Bishop Colenso's Critical Examination of the Pentateuch, The Age and Authorship of the Pentateuch considered, by Two Working Men, a Jew and a Gentile (Kent).—Moses and the Pentateuch: a Reply to Bishop Colenso, by the Rev. W. A. Scott (Freeman).—A Full Review and Exposure of Bishop Colenso's Errors and Miscalculations in his Work 'The Pentateuch and Book of Joshua Critically Examined,' by the Hon. Jude Marshall (Freeman).—The Incredibilities of Part II. of the Bishop of Natal's Work upon the Pentateuch, a Lay Protest, by J. C. Knight (Bagster).—The Pentateuch and its Relation to the Jewish and Christian Dispensations, by Andrews Norton, edited by J. J. Taylor (Longman).—History against Colenso; Examination of the Witnesses, by a Barrister (Wertheim).—Colenso and Joshua; or, the Miraculous Attainment of the Sun and Moon considered, by J. A. Macdonald (Freeman).—Examination of some of Dr. Colenso's Objections to the Pentateuch, by the Rev. E. B. Mocran (Wertheim).—Cumming Wrong; Colenso Right: The Colenso Controversy; The Views of the Kafirs involved in it: The Missionary Meaning at the Bottom of it: a Reply to Dr. Cumming's 'Moses Right; Colenso Wrong,' by a London Zulu (Farrah & Dunbar).—The New Testament and the Pentateuch, with some Remarks upon the Inspiration of the Bible occasioned by the Colenso Controversy, by a Layman (Hardwicke).—Bishop Colenso (Objections to the Historical Truth of the Pentateuch) answered by his own Concessions and Omissions, by the Rev. G. S. Ingram (Freeman).—Letter to Bishop Colenso, together with a Treatise on the Age and Authorship of the Pentateuch, by the Rev. W. H. Hoare (Rivingtons).—The Pentateuch and the Elohistie Psalms in Reply to Bishop Colenso, by Prof. Browne (Parker, Son & Bourn). and What is Faith? a Reply to Dr. Bayley's Challenge to Dr. Colenso, by A. B., a Layman (Hardwicke).

THE HUMAN JAW AT ABBEVILLE.

VAGUE and inaccurate statements have been going the round of some of the daily and weekly papers regarding the proceedings of the conference of men of science—English and French—which was engaged at Paris last week in investigating the case of the asserted discovery of a human jaw at Abbeville in the fossil state.

The following is a *résumé* of the proceedings:—The English deputies consisted of Mr. Prestwich, Dr. Falconer, Dr. Carpenter, and Mr. Busk, three of whom reached Paris on the 9th and the other on the 10th. The French members were, M. Milne-Edwards (President), M. de Quatrefages, M. Lartet, M. Delesse and M. Desnoyers. Three days were occupied in discussing the question of the flint *haches* and in the examination of the jaw, the latter of which was taken up on the third day. No decisive result was arrived at. The English members of the Commission maintained the unauthentic character of all the flint *haches* which were yielded by the "black band," and nothing was established on the other side to shake their convictions. The jaw was sawn up and washed; the black coating was removed from it with the utmost facility; there was no infiltration of metallic matter through the walls of the bone, and the section was comparatively fresh-looking. The tooth was in every respect remarkably fresh-looking also. The confidence of some of the French members of the Commission was seriously shaken by the characters yielded by the jaw, which, so far as internal evidence went, was wanting in every appearance which commonly distinguishes fossil bones, and especially those found elsewhere in the Somme deposits. Had the conference been closed at Paris, it is not improbable that the result might have been the Scotch verdict of Not proven, but, at the suggestion of the President, the Commission adjourned to Abbeville on the 12th, when the complexion of the case was at once altered.

Haches of the supposed unauthentic character were disengaged from the cliff of the gravel-pit of Moulin-Quignon, under the very eyes of the Commission, and direct testimony to the actual occurrence of the jaw in the "black band" was brought forward to the conviction of the Commission. But there was not the same unanimity respecting the age of the jaw itself. Two of the English members of the Commission, Dr. Falconer and Mr. Busk, handed in notes of the opinions at which they had arrived on the general case. These we insert.—

"Abbeville, May 13, 1863.

"I am of opinion that the finding of the human jaw at Moulin-Quignon is authentic; but that the characters which it presents taken in connexion with the conditions under which it lay, are not consistent with the said jaw being of any very great antiquity.

H. FALCONER."

"Abbeville, May 13, 1863.

"Mr. Busk desires to add, that although he is of opinion, judging from the external condition of the jaw, and from other considerations of a more circumstantial nature, that there is no longer reason to doubt that the jaw was found in the situation and under the conditions reported by M. Boucher de Perthes, nevertheless it appears to him that the internal condition of the bone is wholly irreconcilable with an antiquity equal to that assigned to the deposits in which it was found."

Mr. Busk of course refers here to the received opinion that the Moulin-Quignon deposits belong to the "high level" gravels of Mr. Prestwich, which are considered to be the oldest of the Somme beds.

From all this, it will be seen that the question of the relative antiquity of the relic is left open to discussion. It is manifest that the evidence was very conflicting; that it is in some respects of an incompatible character; and that a great deal still remains to be cleared up before the scientific world can arrive at a definite judgment on the case. We may further add, that the subject was again brought before the Academy of Sciences, on Monday last, in two distinct notes, by M. Milne-Edwards and M. de Quatrefages, who, we understand, did ample justice to the candour and frankness of their English opponents, and recognized in terms of praise the readiness which they had exhibited in proceeding to Paris when invited, in order to confront the evidence on the spot. We may add another remarkable incident in the case: that after the communication of their remarks, M. Etie de Beaumont demanded the *parole*, and stated that,

in his opinion, the gravel deposit of Moulin-Quignon did not belong to the Quaternary or Diluvian age at all, but that it was a member of the *terroirs meubles* of the actual or modern period, in which he would not be in the least surprised if human bones were found; adding, moreover, that he did not believe in the asserted existence of man as a contemporary of the extinct elephants, rhinoceroses, &c. of the Quaternary period! The opinion of this very eminent and veteran geologist imports a new element of doubt into the question.

We understand that the English *saravants* were received everywhere by their French opponents in the most cordial and friendly manner, and that the various questions involved were discussed in the best possible spirit. The conference lasted five days.

The *Moniteur* of Saturday last, the 16th inst., contains an article by M. Milne-Edwards, giving a brief *résumé* of the constitution and labours of the conference, and of the results to which they were conducted. It is clear that we have still much to learn regarding this very remarkable case, alike in its geological, palaeontological and archaeological aspects.

THE BRITISH HERRING.

A Report on the Natural History of the Herring and the operation of the Acts of Parliament relating to the modes of fishing, has just been printed. It emanates from Col. Maxwell, Dr. Lyon Playfair and Mr. Huxley, who were appointed a Commission last year to inquire into our herring fishery, and it contains several features of considerable interest.

The Commissioners have been evidently at great pains to make themselves acquainted with the natural history of the herring, and have arrived at these conclusions. The herring does not, as some naturalists have affirmed, migrate to the sea within the Arctic circle, but probably, on disappearing from our shores, passes into deep water near them. The herring is found under four different conditions:—1st, Fry or Sill; 2nd, Maties, or Fat Herring; 3rd, Full Herring; 4th, Shotten or Spent Herring. It is extremely difficult to obtain satisfactory evidence as to the length of time which the herring requires to pass from the embryonic to the adult or full condition. The fishermen examined on this point differed in opinion,—some considering that the herring takes three years, others seven years, while many frankly admitted that they knew nothing about the matter. The Commissioners, under these circumstances, suppose that Mr. Yarrell's statement, that the herring attains to full size and maturity in about eighteen months, is probably correct. It is also probable that this fish arrives at its spawning condition in one year, and that the eggs are hatched in, at most, two to three weeks after deposition, and that in six or seven weeks more the young have attained three inches in length. The Maties, or fat herring, feed, develop their reproductive organs, and become full herrings in about three or four months,—the full herring appearing at first only scattered here and there among the shoals, but gradually increasing in number until they largely preponderate over the maties, or almost entirely constitute the shoal. The herrings then aggregate in prodigious numbers for about a fortnight in localities favourable for the reception of their ova. Here they lie in tiers, covering square miles of sea-bottom, and so close to the ground that the fishermen have to practise a peculiar mode of fishing in order to take them, while every net and line used in the fishing is thickly covered with the adhesive spawn which they are busily engaged in shedding. So intent are the fish on this great necessity of their existence that they are not easily driven from their spawning-ground; but when once their object has been attained and they have become spent fish the shoal rapidly disappears, withdrawing in all probability into deep water at no great distance from the coast. There is no positive evidence as to the ultimate fate of the spent herrings; but there is much to be said in favour of the current belief, that after a sojourn of more or less duration in deep water they return as maties to the shallows and lochs, there to run through the same changes as before. The

Commissioners were unable to gain any information respecting the time which one and the same herring may pass through the cycle. The enemies of this fish are, however, too numerous and active to render it at all likely that the existence of any one fish is prolonged beyond two or three reproductive epochs. Great difference of opinion has been held respecting the spawning season of the herring. The Commissioners were, therefore, particularly desirous to obtain as large a mass of practical evidence on this subject as possible. Their clear conclusion is, that the herring spawns twice annually, in the spring and in the autumn. They did not meet with a single case of full or spawning herring being found during the solstitial months of June and December. February and March are the great months for the spring spawning, and August and September for the autumn spawning. It is not, however, at all likely that the same fish spawn twice in the year; on the contrary, the spring and the autumn shoals are most likely perfectly distinct; and if the herring, as is probable, comes to maturity in a year, the shoals of each spawning season would be the fry of the twelvemonth before.

The food of the herring consists of crustacea, varying in size from microscopic dimensions to those of a shrimp, and of small fish, particularly sand-eels. While in the matie or fat condition, they feed voraciously; and not unfrequently their stomachs are found immensely distended with crustacea and sand-eels, in a more or less digested condition. Herrings thus gorged have all their tissues so permeated with fat, that they will not cure well, and their flesh is liable to break when handled. Scotch fishermen call these fish "gut-pock" herrings, and consider them of very inferior quality.

The Commissioners ascribe the remarkable variability in the annual visits of shoals of herrings to our coasts to the varying quantity of food of the fish, and to the number and force of the destructive agencies at work. Any circumstance which increases or decreases the quantity of crustacea and sand-eels must exercise great influence on herring shoals; but these are even more acted upon by their great destroyers. The latter may be ranged under the heads of fish, birds, marine animals and man. Of these by far the greatest destroyers are fish and marine animals—as porpoises and other cetacea. It is estimated that the total annual take of herrings by our fishermen is 900,000,000: a prodigious number; but great as this is, it sinks into comparative insignificance when compared with the destruction effected by other agencies. Cod alone destroy ten times as great a number as are captured by all our fishermen. It is a very common thing to find a cod-fish with six or seven large herrings in his stomach. When it is further considered that the conger and dog-fish do as much mischief as the cod and ling, that the gulls and gannets slay their millions, and that porpoises and grampuses destroy additional countless multitudes, it will be evident that our fishing operations, extensive as they are, do not destroy 5 per cent. of the total number of full herrings that are destroyed every year by other causes. These facts, which cannot be controverted, prepare us for the conclusions arrived at by the Commissioners with reference to the legislative enactments relating to our herring fishery.

In 1851 an Act of Parliament was passed making trawling for herrings illegal; and subsequently another Act was passed, establishing a close time on the west coast of Scotland. It was further provided, that the only legal mode of capturing herrings should be by drift-nets, the meshes of which are required to be one inch in width. Trawling, which is similar to the operation of seining, was considered to be highly destructive to herrings, rendering them unfit for curing, and that it also greatly injured the spawning-beds.

The Commissioners were at great pains to obtain a large amount of evidence from various parties on these matters; and the result is, that they recommend that all prohibitory legislation bearing on our herring fishery should be repealed. The statistics of our fisheries show that the practice of trawling has not been followed by a decrease of herrings. In Loch Fyne, where it has prevailed, the returns

show, that in the five years ending 1848, 77,137 barrels of herrings were taken; during the next five years, 95,747 barrels; and during the four years ending in 1862, 168,658 barrels. Under such circumstances, the Commissioners report that our herring fishery should not be trammelled by repressive Acts, calculated only to protect class interests, and to disturb in an unknown, and possibly injurious, manner the balance existing between the conservative and destructive agencies at work upon the herring. If legislation could regulate the appetites of cod, conger and porpoise, it might be useful to pass laws regarding them; but to prevent fishermen catching 1 or 2 per cent. of herring in any way they please, seems, in the opinion of the Commissioners, a wasteful employment of the force of law.

They are further of opinion, that the recent legislative enactments have repressed invention, by prohibiting new and more productive forms of labour,—is calculated to be destructive rather than conservative,—and is prejudicial to the consumer of fish and to the public generally.

EARLY ENGLISH POPULAR LITERATURE.

Maldenhead, May 11, 1863.

I am almost afraid that the negligence of some of the recipients of my Reprints of poems and tracts illustrative of our popular literature in the sixteenth and seventeenth centuries, will compel me to relinquish, or at all events alter, my plan. It is now about a fortnight since I issued the small publication which completes my first volume; and before I proceed with a second, I really must know on what I have to depend. Out of the fifty gentlemen who stated themselves to be so anxious to obtain my Reprints, nearly half have taken twelve or fourteen days to consider whether they will transmit me two and six pennyworth of postage-stamps. Some are, and always have been, regular; others seem to fancy that they are laying me under a personal obligation; while a third division cannot make up their minds to take the trouble of putting a few Queen's heads into an envelope. They quite forget that I take all the labour of selecting the tracts, of having them carefully transcribed and accurately printed, and that without one farthing of advantage to me: indeed, if I were to go into figures, I could show that for several I am actually out of pocket. The subdivision of the expense of each tract into fifty portions, and because I do not take an account of odd pence, has sometimes occasioned me to be a small loser. I do not complain of this result: it is my own fault; and for the sake of doing a service to the literature of the period I embrace, I am willing to incur the trifling responsibility. If any gentleman repents, or thinks that he is paying too dear (I can hardly believe this possible), all he has to do is at once to withdraw from my little association; but until he does so, and I am made aware of it, I cannot admit another in his place, and thus appear to do what may be deemed uncivil. I have letters from numbers who wish to join at any period, and who will not suppose that they are doing me, individually, any favour by consenting to receive the tracts.

As I am upon the point of commencing a second volume, like the first, of twelve tracts, and of carrying it on to the close, if I am enabled to do so, perhaps you will give me leave to add an abridged list of the pieces of which I intend my new volume to consist:—

1. Two public documents, issued in 1584, regarding printing and publishing in the metropolis.
2. The Travels of Sir Anthony Sherley, as narrated by W. Parry, and printed in 1607.
3. Edmond Becke's Poem, printed in 1550, against the doctrine of Transubstantiation.
4. Richard Johnson's Pleasant Walks in Moorfields, with a description of them in 1607.
5. The Interlude 'Tide Tarrith no Man,' compiled by George Wapull, and printed in 1576.
6. Speeches in verse delivered to General Monk by various City Companies, just anterior to the Restoration.
7. The Voyage of Richard Ferris and others to Bristol in a Wherry in 1590.
8. Thomas Churchyard's unique poem, never yet mentioned, on the Rebellion in Ireland of 1598.

9. Richard Barnfield's 'Lady Pecunia,' from the sole existing copy of 1605.

10. An additional Collection of 'Lyrics for Old Lutenists,' from early musical publications.

11. The exploits of John and Alice West, called the King and Queen of the Fairies, printed in 1613.

12. Robert Greene's Mirror of Modesty, the history of Susanna and the Elders, printed in 1584.

I do not mean to pledge myself as to the precise order in which these productions shall come in my series; and I may see reason, as I proceed, to insert others, perhaps even more rare and curious, instead of some of them. Of all, and of many more, the transcripts lie now before me; and one of my greatest cares will be to see that they are faithfully printed. A few of them may take up so much room as to render it expedient to conclude my second volume before the issue of the whole of the twelve subjects. If so, they will be carried on to Vol. III.

J. PAYNE COLLIER.

THE SOUTH OF FRANCE.

Nismes, May 10, 1863.

A Spanish bull-fight in an old Roman amphitheatre is a kind of social retrograde development, so to speak, which the middle of the nineteenth century has witnessed under the inspiration of Eugénie, Empress of the French.

This old city is in a wonderful flutter at the present moment, being the scene of what they here term a "*concours régional*"—a mixture of festival, fair, horticultural show, agricultural meeting, and exposition of manufactures, which is to extend to the end of the month, and which is to be enlivened, on two of the Sundays, with the exhibition of bull-fights, got up in the most complete fashion of Madrid, under the direction of the premier matador of the Spanish capital, to take place within the Roman amphitheatre (which is the most perfect thing of the kind now remaining, and which is made as gay as possible by a whole regiment of flags stuck up all round the circumference, at the top reminding one very much of our first Exhibition building in Hyde Park). Excursion trains to-day have brought immense crowds from Marseilles, Montpellier, and even from Lyons, and all the intervening stations. The agricultural and horticultural exhibitions, and that of agricultural machinery, are held on a large open space of ground near the railway station, and which is laid out in rows of booths, and splendidly decorated with the national flags in the picturesque manner so well understood in France; and on an adjoining space, left open, is erected a gigantic popinjay on a tall pole, which moves its neck, wings and the feathers of its tail by machinery, as it happens to be struck by the marksmen. A very large new church has just been erected close to the amphitheatre, dedicated to St. Paul, having a very tall tower at its west end, in two stories, much decorated, and surmounted by a short, crocketed spire, which seems to be the type of most of the Gothic churches in this part of France.

The dreamy old town of Tarascon, with its monasteries (one of which, with two courts, surrounded by cloisters, with rounded arches, both on the ground and first story, is seen close to the railway station), has had some life put into it by the erection of two beautiful bridges over the Rhone, connecting it with the charming, picturesque town of Beaucaire (the chief church of which is remarkable for having a tiled dome in the middle, at the intersection of the transepts and nave), on the western bank of the river, which is here of considerable width. One of these bridges is for railway, and the other for general traffic, starting at its eastern end, close to the old castle of King René, built upon a rock, rising from the bed of the river.

The railway is also effecting great changes and improvements at Montpellier—many fine large houses and wide streets being in course of erection, especially between the railway and the town. The Cathedral, so long with only one of the towers, at its west end, and the nave complete, is now being finished. The two enormous cylindrical pillars, terminating in conical points, standing in front of the west end, are still retained in all their quaint

ugliness; the second tower at the west end is completed, as well as two smaller towers at the extremities of the transepts, and the choir, of large size, is nearly carried up to the springing of the roof. By the generosity of one of the citizens, the town now boasts of a Museum of Paintings and Public Library. The Botanical Garden is well kept, and possesses one tree of interest, *P. adiantifolium*, remarkable for its size and the beauty of the foliage, the stem being not less than seven feet in circumference, considerably larger than the specimens at Kew.

Thanks also to the liberality of M. Doumet, the Mayor of Cette, that town also now possesses a good Museum of Natural History, &c., which is thrown open to the public every Sunday, but admission may also be obtained every day on application. The collections of ornithology, mineralogy and entomology are especially valuable, the possessor sparing no expense in obtaining novelties and rarities; we were therefore prepared to find many of the new and beautiful objects of nature which Mr. Wallace has sent home from the Eastern Archipelago and Mr. Bates from the Amazon Valley, together also with many fine and unique species of insects from the Gaboon river, in tropical Western Africa. In the cases of birds' eggs we were almost startled to find two eggs of the now extinct great auk; but a little examination proved that these were excellent counterfeits, made in plaster, and coloured so perfectly to represent the originals as to deceive even connoisseurs. Amongst the insects are also preserved specimens of both sexes of one of the most extraordinary of the walking-stick insects which has been formed into a separate genus *Craspedonia*, and of which only female specimens had hitherto been known. The museum is also rich in a class of objects of which our British Museum is lamentably deficient, namely, models of life-size of the natives of various countries, clothed in their peculiar dresses, and accompanied by an excellent collection of ethnological objects. Why such things should have been so systematically ignored in our own national Museum has always seemed to me unintelligible. Certainly nothing is more instructive, and nothing affords greater pleasure to the visitor. The Museums of the Louvre and Copenhagen afford excellent examples, which, from the immense facilities in our power, would result in the formation of a splendid ethnological museum: but such a step ought not to be delayed. How many native savage tribes have become extinct within the memory of man, and how completely is navigation doing away with all special nationalities of costumes, manners and customs of hitherto uncivilized tribes!

I. O. W.

SCHILLER INAUGURATION.

Munich, May 14, 1863.

On the 9th of May, being the anniversary of the poet's death, a new statue of Schiller, the gift of King Ludwig, and the work of the sculptor Widmann, was inaugurated in Munich. For two or three days before a tall figure, wrapped in a white cover, had been conspicuous at the branching off of two streets, not far from the old King's palace, and half the town was gathered in front of it on the morning of the day appointed for the unveiling. Casual spectators were certainly disastrously placed, there being no rising ground, and the supply of windows commanding the place only scanty. At about 11 o'clock, we saw a procession, consisting of a few hundred hats and a dozen banners, make its way through the crowd; the banners drew up in front of the statue, and the hats were taken off; a court-carriage arrived with a daughter of Schiller, whom the King had specially invited, and inaudible speeches were delivered. Suddenly, the white cover fell, and displayed the statue of the poet, the music played, and the procession waved hats and shouted. An occasional ode, the words by Friedrich Bodenstedt, the music by Franz Lachner, came in as an interlude; next, an expression of gratitude from the Burgomaster of Munich, which called out King Ludwig to a balcony, whence he bowed graciously in acknowledgment of the applause of all the people, and then a speech from Dr. Förster, as

head of the *Schillerstift* in Munich. "In May, 1805," said Dr. Förster, "a German Prince sat in the ruins of the Imperial palaces of Rome, in the laurel shade, on the north of the Palatine hill, when a German artist brought him the sad news of the death of Friedrich von Schiller, the poet whom he had intended to support in comfort and ease, whom he had hoped to summon to him in Rome, and show him the glories of the eternal city. Not having been able to gratify his wish then, he now erects to him this statue." The inauguration ended after this with the performance of the Hymn to Joy.

Evening, however, brought a more picturesque kind of rejoicing than the formal work of the unveiling. An enormous *Fackelzug*, comprising some 2,000 torches, passed through the town, and, after halting before the newly-uncovered statue, drew up in the large open space where fairs are held. People who saw the halt before the statue describe the effect as something marvellous. The Bengal light burned steady and long, and the figure of Schiller rose up white and ghostly, standing out in the midst of the soft glare as a magic incantation. I was at a window in the Dultplatz, from which I had an equally fine view of the torch procession. The lurid light cast out by the flaring torches as they were massed together in the distance; then the gradual drawing out of the whole into single lights, and the movement of the lines of fire round the immense open space as the bands of torch-bearers marched up and down, with music playing in the midst; the colour shed on the distant houses, and the shadow of the trees marked off on the houses opposite, with a line of brighter glow above; the fitting motion of the rows of torches, like will-o'-the-wisps, reminding you of the enchantment scene in the *Freischütz*, when now they were laid on the ground and burnt in an even line, then they were taken up and came converging towards one centre, or wandered off singly into the darkest corners; all these presented artistic combinations enough for any canvas, and seemed a worthy tribute to the shade of the departed poet. At last, at a given signal, the bands of torches united, and one after another was flung into a pile, from which thick black smoke at first and then tongues of flame arose, so that the place was alight with five or six bonfires, at once the pillar of cloud and the pillar of fire. It seemed as if by magic that the black ring of men grew up round a bonfire in place of the single lights each one of them had borne; and to see torch after torch flung upon the pyre, and as each dropped in like a falling star the figures around were more deeply massed, would make you think that the form had risen out of the ground at a mysterious summons.

The statue itself is good, though almost sinning in excess of simplicity. Schiller stands with his head bent slightly on one side, his left hand on his breast, his right holding a wreath. His look is earnest and piercing, though it neither recalls the majestic musing head of Thorwaldsen's statue at Stuttgart, nor the rapt upward gaze of Rietschl's in Weimar. But the site is one of the best that could be devised for a standing figure. At the point where two streets unite, in a semi-circular space, with soft turf and flower-beds and a curving background of trees, whose young leaves are even now in their tenderest green gradually giving place to blossoms of lilac, King Ludwig has placed the effigy of the poet whose sudden death prevented him from honouring with more substantial favour.

In honour of the feast, a fac-simile of the play-bill issued at the first performance of 'The Robbers' has been published in Munich, and I give an account of it as a curiosity of Schiller literature. The date of the performance is the 13th of January, 1782, when the author was in his twenty-third year, and on account of the unusual length the play began precisely at 5 o'clock. "The Robbers," a tragedy in seven acts (the word *Handlungen* is used instead of the modern term *Aufzügen*, which means drawings up of the curtain), newly adapted for the National Theatre of Mannheim, by the author, Herr Schiller," is the heading of the bill, and below, among the actors, we find the familiar name of Iffland in the part of *Franz Moor*. The

highest price of a seat is a florin (1s. 8d.), and the lowest, 8 kreuzers (not quite 3d.). On the reverse side of the bill, or rather on the side facing the bill, for it is printed on a whole sheet of paper, is given the author's address to the public, which I shall take the liberty of translating.

"The Robbers," the picture of a great soul led astray, furnished with all the gifts for excellence, and with all these gifts ruined,—unrestrained ardour and bad company spoiled his heart, led him on from vice to vice, till at last he stood at the head of a band of incendiaries, heaped horror on horror, plunged from abyss to abyss, in all the depths of despair,—yet lofty and worthy of honour, grand and majestic in misfortune, and by misfortune bettered, brought back to goodness. Such a man must we lament and hate, abominate and love, in the robber Karl Moor. Franz Moor, a malignant, hypocritical sneak, unmasked and blown up by his own mines. The old Moor, a father all too weak and yielding, a pamperer, and founder of ruin and misery for his own children. In Amelia, the pains of enthusiastic love, and the rack of despotic passion. Nor can we look without terror into the inner life of vice and perceive how all the gilding of pleasure cannot stifle the secret worm of conscience, and terror, anguish, despair, are close behind its traces. Let the youth gaze with terror on the end of unbridled dissoluteness, and let not the man go from the play without learning that the unseen hand of Providence has need of the villain to work out its views and its sentence, and can wonderfully untie the most complicated knots of destiny." E. W.

OUR WEEKLY GOSSIP.

DEEPER in human interest than the reported discovery of the source of the White Nile, the geographical secret of many ages, by Messrs. Speke and Grant, is the intelligence from Egypt that Mr. Petherick is not dead, as late news from that country represented him to be. He is alive and well, at Gondocoro. We now know that all the gallant men whom we have sent out into the great African desert, to extend the bounds of knowledge—Baker, Petherick, Grant and Speke—have, so far, escaped the fate which has followed so many of our noblest explorers in every part of the world—Franklin, Leichardt, Burke, and many others—over whose graves we have had to write the glories of discovery. In gratitude for their safety, we can tell the story of their trials, and reckon up the gains of science. Our conjecture, made on the 9th of May, that Mr. Baker must have fallen in with Messrs. Grant and Speke on the upper waters of the White Nile, and rendered them important aid, turns out to have been correct. This adventurous traveller was the first European whom they met on their descent from the tropics; and from him they obtained aid in money, stores and boats. To him they communicated their discovery that the Bahr el Abiad, the main stream of the White Nile, has its source in the Victoria-Nyanza lake; information which induced him to turn his face in another direction, towards the south-east, in search of another inland lake, which is supposed to feed a second branch of the White Nile. He will be lost to us for a year; though the public need not doubt that he will, in due time, turn up again. Lower down the stream they fell in with Consul Petherick and his gallant wife. The news which Captains Speke and Grant bring to London will excite attention in every city of the civilized globe.—The source of the Nile was a puzzle in the time of Moses, and long before the time of Moses. The enigma is suggested on the most ancient monuments of Egypt; it excited the curiosity of Rameses and Sesostris; confounded the wisdom of the Ptolemies; won attention during the Roman occupation; amused the leisure of the Schoolmen; tantalized the Portuguese Jesuits in the sixteenth century; engaged the adventurous spirit of Bruce; aroused the wonder, and baffled the researches of Mohammed Ali; and defied the zeal, the ability, and endurance of our old Correspondents, the Brothers D'Abbadie. At length, the mystery is solved; and the source of the Nile is found, by a couple of Englishmen, to be a lake about four degrees south of the Equator, very

near the position which Dr. Beke, so long ago as 1846, assigned to it theoretically. It is curious that the fact has been discovered not by following the waters of the river upwards from its mouth, the natural course of discovery, but by descending upon it from above.

M. Guizot having written an excellent preface to a French translation of the 'Speeches and Addresses of the Prince Consort,' Her Majesty has sent over to him a private copy of the work, bound in white morocco, on the fly-leaf of which she has written in her own hand:—

"To M. Guizot,

"In remembrance of the best of men, and with the expression of gratitude for the sincere homage which he has rendered to him,

"From his unfortunate widow,

"VICTORIA R."

Sir Roderick Murchison, President of the Royal Geographical Society, has issued cards for two Evening Receptions at Willis's Rooms. The first gathering will take place on Thursday evening, next week.

The Council of the Society for the Encouragement of the Fine Arts have issued cards for an Evening at the Mansion House on Wednesday next, May 27th. The Lord Mayor will preside.

A private rehearsal of Mr. J. K. Lord's entertainment, 'The Canoe, the Rifle and the Axe, being an At Home in the Wilderness,' will be given this morning (Saturday) at the Egyptian Hall, Piccadilly. Mr. Lord was the naturalist to the North American Boundary Commission, and is, of course, personally familiar with the scenes to be described in his illustrated discourse.

The next Congress of the Archæological Association will be held in Leeds, at the beginning of October, under the Presidency of R. Monckton Milnes, when Ripon Cathedral, Fountains Abbey, Kirkstall Abbey, Aldeborough, Wakefield, Pontefract, and other places will be visited.

If the spectroscope had not been invented, would thallium have been discovered? is a question with which *savants* entertain themselves. Certain it is that somewhat more than two years ago Mr. Crookes saw the ghost of a metal in a spectrum, and was thereby incited to search for the substance, and discovered it existing in minute quantities in iron pyrites. The new metal figured as a few grains of black powder in the International Exhibition; at the beginning of the present year it was shown in very small ingots and in the form of wire; since then Messrs. Bell Brothers, of Newcastle-on-Tyne, have succeeded in producing it in comparatively large masses. One of their ingots, weighing nearly 6,000 grains, and more than 10 inches in length, was exhibited at General Sabine's *Conversazione*. The useful applications of thallium have yet to be ascertained; but we hear that an eminent manufacturing firm has taken the question in hand.

In the list of Members of Council of the Royal Institute of Architects given to us last week officially, the name of Mr. T. Hayter Lewis was omitted.

Since the 'Codex Sinaiticus' was published the attention of the learned world has been drawn still more to the 'Codex Vaticanus,' and a desire that this should become more generally known and more accessible to the learned investigator, has lately often been expressed. Cardinal Mai's edition shows that former *savants* have been mistaken in many places. Herr D. Heidenheim, editor of 'Theological Inquiries and Criticism' has worked in the Vatican for two successive winters. The free use of the 'Codex Vaticanus' has been permitted to him for several hours daily. Herr Heidenheim intends to publish part of the New Testament in Uncial letters for the present, and thus give a chance to scholars of forming their own opinion on this celebrated Codex.

Last week, in noticing the rejection of certain pictures at the Royal Academy, we mentioned the case of Mr. Stirling, whose larger and stronger work had been returned to him. This reference has brought us the following singular explanation:

"5, Langham Chambers, May 18, 1863.

"In the *Athenæum* of Saturday last I find it said in a criticism of the Exhibition of the Royal Aca-

demy, that 'of Mr. Stirling's pictures the larger and better one was rejected by the Council.' In order to explain the circumstance of my principal picture not being in this year's Exhibition, and, if possible to exonerate the Academy, in my case at least, from the charge of *intentional* injustice, may I ask the favour of your inserting in your next impression the inclosed copy of a letter which I have received from one of the three members of the Hanging Committee, and which I have the permission of the distinguished writer to make public. I am, &c.,

JOHN STIRLING."

"10, Pembroke Villas, Bayswater, May 6th, 1863.

"My dear Sir,—I think under the circumstances I ought, as one of the Hanging Committee, to write and explain the reason of your excellent picture being returned unexhibited from the Academy. The fault was chiefly mine, for your picture was quite overlooked till it was too late to give it a good place, and the work was too good for a bad one. There is so much misapprehension on this subject amongst the purchasers of pictures, and the idea that a picture is disgraced by being rejected at the Academy is so common, that I feel it to be a duty in your case to disabuse your mind in the matter; and I hope you will send it to the Exhibition another year, when it may be as fortunate as it deserves. With sincere regret that this misfortune should have happened, I am, dear Sir, very faithfully yours, (Signed) W. P. FRITH."

—Mr. Frith, by this note, has done an act of justice to a clever artist; but until this note is read by the public Mr. Stirling will have suffered an unmerited loss by the rejection of his work.

Messrs. Bacon & Co. have published a new Map of Virginia, with the adjoining states of Maryland and Delaware, marked off into counties, separately coloured. It will be of considerable use to a reader who desires to keep up his knowledge of the War.

A political map of Poland has been prepared by Mr. Stanford, of Charing Cross; showing the original Poland of history, the reduced Poland of war, the dismembered Poland of the partition, the vanished Poland of the absorption. It is a very curious and instructive chart, embracing a wide range of political information, and making a vast deal of history visible to the eye. It shows us Poland in a state of dissolution almost from the days of John Sobieski, when the warlike Poles could save Europe from the Turks, but could not save their own provinces from the Swedes. Esthonia went first in 1660; then Tchernigow to Russia in 1667, Kiev and Kherson in 1686. Afterwards came the three great partitions; then the final absorption of Cracow, as it were the other day. This map should be in the hands of every statesman.

Mr. Stone, principal assistant at the Greenwich Observatory, has been making a series of calculations on the mean horizontal parallax of the sun, deduced from observations made at Greenwich on the planet Mars at his recent opposition, compared with similar observations made in Australia. The result is, that the sun is found to be three millions of miles nearer to the earth than previous calculations have made it.

A return lately made of the quantity of rags and paper imported into this country during recent years contains the following figures:—

| | Rags. | Paper. |
|------------|-------------|-------------|
| 1856 | 10,287 cwt. | 15,767 cwt. |
| 1857 | 12,206 " | 12,057 " |
| 1858 | 11,394 " | 11,701 " |
| 1859 | 14,621 " | 18,338 " |
| 1860 | 16,154 " | 45,019 " |
| 1861 | 20,486 " | 94,863 " |
| 1862 | 23,943 " | 193,639 " |

Our exports of paper during the last five years were as follows:—1858, 106,557 cwt.; 1859, 126,454 cwt.; 1860, 112,514 cwt.; 1861, 91,958; and 1862, 129,440 cwt.

We have the following items of information from Yorkshire. It has been decided that there shall be no musical festival at Bradford this year. Music in Leeds has been in a languishing condition since the festival there some three or four years ago, which was a great success. A more hopeful state of things has just been inaugurated by the incorporation of two rival musical societies into one, which

is to be called the Leeds Choral Union. Mrs. Sunderland, who has for the last five-and-twenty years been a great favourite in Yorkshire as a singer of Handel's songs, and has occasionally been heard in that capacity at Exeter Hall with satisfaction, is about to close her public career.

Some books of a curious and rare character were sold during the past week by Messrs. Sotheby & Wilkinson. The following examples may be given:—A poor copy of the first folio of Shakespeare, with the original verses inlaid and a variation of the portrait, being before the shading on the collar, 60l.—Shakespeare's Pericles, first edition, 45l.—Sir John Falstaffe and the Merry Wives of Windsor, edition of 1619, 15l. 15s.—Another copy of the same, 10l.—Chronicle History of Henry the Fifth, 1608, 7l. 10s.—First Part of the Life of Sir John Oldcastle, first edition, 8l. 8s.—Keating's General History of Ireland, large paper, 7l. 15s.—Dugdale's Antiquities of Warwickshire, by Thomas, 31l. 10s.—Medici, Poesie Volgari, Aldo, 1554, 13l.—Bossuet, L'Apocalypse, Paris, 1689, 6l. 10s.—Mauroy, Les Hymnes, Troyes, 1527, 20l.—Peele's Chronicle of King Edwarde the First, 1599, 6l.—Les Costumes et Constitutions de Bretagne, 1485, 43l.—Dialogus Creaturarum, first edition, 14l. 5s.—Vitas Patrum, by Wynkyn de Worde, with several leaves in fac-simile, 12l.—Hieronymo, Vita, 1497, 5l.—Mollet, Le Jardin de Plaisir, 1651, 5l.—Higden's Polychronicon, by Treveris, 20l.—Hasted's History of Kent, 4 vols., 16l. 15s.—Stow's Survey of London, by Strype, best edition, 10l. 15s.—Benlowe's Theophrila, with nearly all the curious plates, 11l. 15s.—Fox's Book of Martyrs, first edition, very imperfect, 15l. 5s.

The Swiss have established an Alpine Club under the title of "Schweizerische Alpen Club," at Berne. It is, we understand, supported by numerous eminent men in that country who are desirous of rendering it an important medium of communication among alpine explorers. It is also intended to encourage as far as possible the exploration of unknown high mountains and peaks, and to erect huts for shelter and scientific observation in the most interesting localities.

The proposition to purchase the International Exhibition Building, which is to be submitted to the House of Commons, is advocated on the ground that the structure will afford accommodation—1. To the Patent Museum, now at South Kensington, but to be removed as the buildings for the Art Department's use progress—much crowded and susceptible of a vast development ere its contents can fitly represent the progress, much less the present condition of the mechanical arts in this country.—2. Ample room for the Museum of Naval Models, now concealed in vaults at Somerset House—interesting as showing the progress of naval architecture, and capable of enlargement to express the existing state of that art.—3. Space for the National Portrait Gallery, now confined in hired rooms in Great George Street, Westminster, and certain, before many years are past, to need greater accommodation than will be obtainable where it is.—4. Galleries for the British Pictures of the National Gallery, now at South Kensington, which, the Art Department avers, might include the Sheepshanks Gift deposited in the newly-erected galleries at its Museum.—5. The Architectural Museum, now in the "Boilers," which, although not a national possession, deserves national accommodation as highly useful to architects.—6. Room if the House of Commons sees fit to reverse its decision of last year, to hold the whole of the Natural History Department now in the British Museum, and half-smothered for want of space.—7. The Royal Academy might be accommodated with vast galleries if it sees fit to quit Trafalgar Square. The cost of all this to the nation is stated at about 240,000l. for the building and the land upon which it stands, the last being seventeen and a half acres in extent, estimated by the advocates for the grant at a value of about 20,000l. per acre. Beyond this original cost further sums must, we understand, be appropriated to the needful fittings up for the contents. Further cost to give an architectural character to the structure might be an after-consideration, but must be taken into account. Stucco, the cheapest

material, is the most objectionable and forever to be protested against. Terra-cotta, stone, marble, or granite, with mosaics, all commend themselves to us.

ROYAL ACADEMY OF ARTS.—The EXHIBITION of the ROYAL ACADEMY is NOW OPEN.—Admission (from Eight till Seven), 1s.; Catalogue, 1s.
JOHN PRESCOTT KNIGHT, Esq., R.A., Secretary.

SOCIETY OF PAINTERS IN WATER COLOURS.—The FIFTY-NINTH ANNUAL EXHIBITION is NOW OPEN, at their Gallery, 5, Pall Mall East, close to the National Gallery, from Nine till Dusk.—Admission, 1s.; Catalogue, 6d.
JOSEPH J. JENKINS, Secretary.

FRENCH GALLERY, 120, Pall Mall.—The TENTH ANNUAL EXHIBITION of PICTURES, the contributions of Artists of the French and Flemish Schools, is NOW OPEN.—Admission 1s.; Catalogue, 6d.

INSTITUTE OF PAINTERS IN WATER COLOURS (founded in 1831 as the New Society of Painters in Water Colours).—The ANNUAL EXHIBITION is NOW OPEN.—Admission, 1s.—Gallery, 23, Pall Mall, opposite Marlborough House.
JAMES FAHEY, Secretary.

MR. HENRY NICHOLLS'S RECITALS of the RECENT POETS and HUMORISTS, at the Hanover Square Rooms, on MONDAY EVENING NEXT, May 26, at Eight, including Masani's 'Horatius'; Fenryson's 'Locksley Hall'; and 'Lady Clara Vere de Vere'; 'Poet's Belle'; 'Good's 'Miss Milmanes'; and 'Desert Born'; Ingoldby's 'Rupert the Fearless'; and 'Lord of Thoulouse, &c.—Admission, 2s., 1s., and 1s.—Communications, 16, Howard Street, Strand, W.C.

MRS. FANNY KEMBLE'S READINGS of SHAKESPEARE.—Dudley Gallery, Egyptian Hall, Piccadilly.—Mr. Mitchell has the pleasure to announce that in consequence of the great success which has attended the First Series of Mrs. FANNY KEMBLE'S READINGS of SHAKESPEARE, they will be continued every Monday and Wednesday Evening, and Saturday Morning.—On Monday Evening, May 25, 'The Merry Wives of Windsor'; Wednesday Evening, May 27, 'Othello'; and on Saturday Morning, May 30, 'Winter's Tale'.—To commence each Evening at Half-past Eight, and on Saturday Morning at Three.—Seats (Unreserved), 2s.; Stalls, 5s.; a few Fauteuils, 7s. each, which may be obtained at Mr. Mitchell's Royal Library, 72, Old Bond Street, W.

LEVAISSOR EN VISITE.—CONTINUED SUCCESS.—FOURTH WEEK.—SCÈNES ET CHANSONS COMIQUES, with change of Programme.—Dudley Gallery, Piccadilly.—M. LEVAISSOR will continue his very successful ENTERTAINMENT, assisted by Mlle. Telesire and M. Rey, every Tuesday, Thursday, and Saturday Evening, at Half-past Eight.—Piano-forte, M. Roosenboom.—Seats (Unreserved), 2s.; Stalls, numbered, 7s.; a few Fauteuils, 10s. 6d. each.—Mr. Mitchell's Royal Library, 23, Old Bond Street, W.

SCIENCE

SOCIETIES.

ASIATIC.—May 18.—Gen. Sir H. C. Rawlinson in the chair.—The Prince of Wales was elected a Member by acclamation.—The Annual Report was read.—Obituaries of some of the deceased Members were given, as of Lord Lansdowne, Sir James Outram, W. Ewer, Esq., Col. Thoresby and Gen. Cullen.—The Auditors' Report showed that the total receipts for 1862 were 973l. 9s. 5d.; while the total expenditure and liabilities amounted to 894l. 12s. 4d., leaving an available balance for 1863 of 778l. 17s. 0d.—The ballot for officers and Council gave the following results: *Director*, Major-Gen. Sir H. C. Rawlinson; *Vice-President*, Gen. J. Briggs; *Treasurer*, E. Thomas, Esq.; *Secretary*, J. W. Redhouse; *Honorary Secretary and Librarian*, E. Norris; *Council*, Messrs. J. W. Bosanquet, Sir J. Davis, Bart., M. P., Edgeworth, J. Fergusson, Prof. Goldstickler, C. C. Graham, Fitz-Edward Hall, Sir F. Halliday, J. C. Marshman, T. Ogilvy, O. De Beauvoir Priaulx, E. C. Ravenshaw, P. B. Smollett, Dr. Forbes Watson, Major-Gen. Sir A. S. Waugh.

SOCIETY OF ANTIQUARIES.—May 14.—J. W. Jones, Esq., V.P., in the chair.—The vote of the meeting was taken on the proposal to alter the hour of meeting on ballot nights from eight to half-past eight P.M., which was carried in the affirmative.—C. D. E. Fortnum, Esq. exhibited a beautiful collection of antique bronzes and four *glances*, or sling bullets.—H. Harrod, Esq. read a paper 'On an Old Carriage at Marston, near Marlborough, bearing on the panel the arms of Baskerville, quartermaster Ward and Danvers.'—C. Goodwin, Esq. read a paper 'On three Coptic Papyri and other MSS. brought from Egypt,' by A. Stuart Glennie, Esq.

BRITISH ARCHEOLOGICAL ASSOCIATION.—May 13.—Annual General Meeting.—Dr. Lee in the chair.—The Auditors delivered in a report and a balance-sheet of the accounts for the past year, by which it appeared that 571l. 6s. 7d. had been received, and 515l. 17s. 10d. expended, and a balance left in favour of the Association of 55l. 8s. 9d. Every account against the Association had been

paid, and all due upon the quarterly *Journal* and two parts of the 'Collectanea Archæologica' discharged. A ballot was taken for officers for 1863-4, when the following list was returned:—*President*, R. Monckton Milnes, M.P.; *Vice-Presidents*, Sir C. R. Boughton, Bart., J. Copland, M.D., G. Godwin, N. Gould, J. Heywood, G. V. Irving, T. J. Pettigrew, and Sir J. G. Wilkinson; *Treasurer*, T. J. Pettigrew; *Secretaries*, J. R. Planché, H. S. Cuming, and E. Roberts; *Secretary for Foreign Correspondence*, T. Wright; *Palæographer*, C. Hopper; *Curator and Librarian*, G. R. Wright; *Draftsman*, H. C. Pidgeon; *Council*, G. G. Adams, G. Ade, W. H. Bayley, T. Blashill, J. Gray, W. D. Haggard, M. Harpley, G. M. Hills, Dr. Lee, E. Leven, W. C. Marshall, G. Maw, T. Page, R. N. Phillips, E. J. Powell, J. W. Previtè, and S. R. Solly; *Auditors*, T. W. Davies and J. V. Gibbs.

INSTITUTE OF BRITISH ARCHITECTS.—May 18.—Prof. Donaldson, President, in the chair.—The Royal Medal was presented to A. Salvin, Esq., Fellow, by the President, and the following medals and prizes as under:—To Mr. T. Hardy, the Institute Medal, —to Mr. T. Morris, the Medal of Merit, —to Mr. G. T. Molecey, the Silver Medal of the Institute, with five guineas, —to Mr. G. A. Scappa, the Soane Medallion, —to Mr. R. P. Spiers, Mr. Tite's Prize of ten guineas, with a Medal of Merit, —to Mr. T. H. Watson, a Medal of Merit, with five guineas from Mr. Tite, M.P. —to Mr. R. H. Carpenter, Sir Francis E. Scott's prize of ten guineas. M. C. Texier, architect, of Paris, gave a description of the town of Perga, in Pamphylia.—A paper by Sir Gardner Wilkinson, 'Upon Ancient Examples of Heads placed over Arches,' was read by Mr. J. P. Seddon.—A short notice of a curious example of Norman polychromatic construction, recently discovered and carefully restored by Mr. Hadfield in Aston Church, near Sheffield, was read by Mr. T. Hayter Lewis.—Prof. Donaldson described the new Tribunal de Commerce, at Paris, from lithographed plans.

ZOOLOGICAL.—May 12.—E. W. H. Holdsworth, Esq., in the chair.—A communication was read from Messrs. J. Alder and A. Hancock, entitled, 'Notice of a Collection of Nudibranchiate Mollusca, made in India by Mr. Walter Elliot; with Descriptions of several New Genera and Species.'—A communication was read from Dr. G. Hartlaub, of Bremen, containing the characters of a new species of sedge-warbler, discovered by Mr. E. Newton in Madagascar, for which the name *Calamohorpe Newtoni* was proposed.—Mr. W. Winwood Reade read some 'Notes on the Derbyan Eland, the African Elephant and the Gorilla,' founded on information obtained by him during a recent visit to Senegambia, the Gaboon, and the adjacent parts of Western Africa. The conclusions Mr. Reade had formed with regard to the gorilla, as derived from the evidence received from the hunters of the Gaboon, were that Mr. Du Chaillu had obtained his specimens of this animal second-hand, and that its reputed ferocity had been vastly exaggerated.—Dr. Sclater read a 'List of Mammals and Birds collected in Madagascar by Dr. Mellor during a recent Journey to the Capital of the Island.'—A paper was read by Mr. O. Salvin describing a new species of Tanager, genus *Calliste*, from Costa Rica, for which he proposed the name *Calliste Dowiei*, in honour of Capt. Dow, by whom a single specimen of this bird had been obtained at San José.—Mr. A. Newton pointed out the characters of two new birds from Madagascar, obtained by Mr. E. Newton, for which he proposed the names *Circus macroceles* and *Erythrosterna brunneicauda*.—A paper was read by Mr. F. Walker 'On some Insects collected by Mr. J. Caldwell in Madagascar.' Mr. Holdsworth exhibited living examples of *Triton palmatis*, obtained by himself from a new locality near Hersford, and made remarks on this and three other species of newts, of which living examples were contained in the Society's collection.—Mr. Leadbeater exhibited castings thrown up by a bee-eater (*Merops Persicus*), similar to those produced by the kingfishers.—Dr. J. E. Gray pointed out the characters of a new species of box

tortoise, procured by Mr. Swinhoe in Formosa, for which he proposed the new generic and specific names *Cistuda-chelys dorsostrigatus*.—Mr. Blyth exhibited specimens of *Coracias Indica* and *C. affinis*, and of intermediate varieties between these two species.

ETHNOLOGICAL.—May 19.—Anniversary Meeting.—J. Crawford, Esq., President, in the chair.—The following were elected office-bearers for the ensuing year: *President*, J. Lubbock, Esq.; *Vice-Presidents*, B. Botfield, Esq., J. Crawford, Esq., R. Dunn, Esq., and Lord Talbot de Malahide; *Hon. Treasurer*, F. Hindmarsh, Esq.; *Hon. Secretaries*, T. Wright, Esq., and F. Galton, Esq.; *Hon. Librarian*, L. J. Beale, Esq.; *Council*, L. Burke, Esq., Prof. Busk, T. F. D. Croker, Esq., Sir A. W. Clavering, Bart., H. Christy, Esq., J. Dickinson, Esq., T. Hodgkin, Esq., Prof. Huxley, D. King, Esq., M. Lewin, Esq., J. Mayer, Esq., W. Napier, Esq., C. R. Des Ruffières, Esq., E. O. Smith, Esq., W. Spottiswoode, Esq., S. B. Solly, Esq., Dr. Tuke, S. Ward, Esq., and S. Wood, Esq.

INSTITUTION OF CIVIL ENGINEERS.—May 12.—J. Hawkshaw, Esq., President, in the chair.—'On the Communication between London and Dublin,' by Mr. W. Watson.

SOCIETY OF ARTS.—May 13.—C. W. Hoakyns, Esq., Member of the Council, in the chair.—The following papers were read:—'On an Improved Mode of Collecting Excrementitious Matter, with a View to its Application to the Benefit of Agriculture and the Relief of Local Taxation,' by Dr. Thudichum.—'On a System of Earth Sewage,' by the Rev. H. Moule.

MEETINGS FOR THE ENSUING WEEK.

Mon. Geographical, 1.—Anniversary.
Linnæan, 2.—Anniversary.
Tues. Royal Institution, 3.—'Sound,' Prof. Tyndall.
Zoological, 9.—'Mr. Motley's Birds from Borneo,' Dr. Sclater.
Wed. Horticultural, 1.—Great Exhibition.
Society of Arts, 2.—
Archæological Association, 24.—'Recent Discovery of Antiquities, Salop,' Rev. T. Owen Roake; 'Pedigree of Derwentwater of Castle Riggs,' Mr. Powell.
Thurs. Royal Institution, 3.—'Geology,' Prof. Ansted.
Antiquaries, 4.—'Portraits of the Wives of Henry the Eighth,' Mr. J. G. Nichols.
Fri. Horticultural, 2.—Election of Fellows.
Royal Institution, 8.—'The Vedas,' Prof. Max Müller.
Sat. Horticultural.—Promenade.
Royal Institution, 2.—'Electric Telegraphy,' Prof. W. Thomson.

FINE ARTS

ROYAL ACADEMY.

IN the amount of capital he has made out of an Eastern tour Mr. F. Dillon surpasses every other painter, except Mr. D. Roberts, who has taken oriental landscape for a theme. He continues to supply us with Nile pictures; one of the best of the series is *The Pyramids from the Island of Roda* (No. 341), which is, nevertheless, somewhat heavy in colour. It is as difficult for us to receive Mr. Dillon's rendering of nature in this matter as to believe in Mr. Roberts's directly antithetical and certainly less valuable system, which produces oriental skies of a monotonous and flimsy blue and white, and most ancient ruins with as little "colour" as modern maps have. The Pyramids at evening, as above, are, however, studied and painted with feeling for the dignity and unscenelike beauty of the subject; the bars of blushing light that go up from the swiftly-sinking sun, and the darkening purple of the land on the removed side of the river are commendable in a high degree.—We prefer to consider Mr. Mason's beautiful picture *Catch* (619) as having a landscape rather than a figure subject, because, in the first, its finest qualities are to be found. A boy, who is watering horses at a brook, tosses oranges to some playful girls. The soft and broad execution and exquisite feeling for grey shown in this work should share the spectator's applause with its fidelity and natural colouring.—Far less complete in execution than the last, yet showing great love of nature and promise of power in landscape art, is Mr. E. Edwards's *Lynmouth Harbour* (644), a glimpse of the beautiful ravine of the Lynn, having the herbage and foliage a little too whitish for those of North Devon.—Mr. W.

Field's *Pastoral* (401), a rounded knoll seen through a slight screen of trees, a meadow that is just growing grey with evening mist, while cows troop home over a stream in front, is bright and vigorous in effect, rich in colour and perfectly true, although a little hard.

Mr. Anthony's ancient castle of Larne, we believe, which he styles "*A Relic of the Old Feudal Time*" (645), is one of the most beautiful as it is one of the most poetical and truly artistic landscapes here. Few painters convey so much dignity and expressiveness in their renderings of natural themes as we find in this. A warm summer evening embalms an ancient hold, long ago deserted and ivy-grown; at its feet is calm water, once a defence, now an ornament; behind spread soft grey clouds threatening a shower that will only make the greenery about the fortress brighter and richer than it is, not harm the relic that has done its work. We scarcely need commend to the artist the breadth and vigour of this picture, nor to the ordinary spectator its faithfulness and expression.—Mr. W. Linnell's work has, of late, lacked refinement and the able use of grey that bespeak the innate power of an artist; in these respects his works will not bear comparison with those of Mr. Anthony; nevertheless, he paints with strength and feeling—see "*O'er the Muir among the Heather*" (463). Taking quite a different view of the purposes of Art from that of the simply representative school of landscape-painters, such as Mr. Lee exemplifies in his practice, Mr. Anthony and the three Messrs. Linnell strive to mean something as well as to paint well, and succeed in both simply because they feel intensely the beauty of nature. It is a strange thing to see how differently men look upon nature with a view to Art; nothing but his eyesight could persuade any one that the grass, for example, of the landscapists we have named is intended to represent the same natural production as appears in Mr. Lee's pictures; it is equally hard to conceive how the latter can, having seen it painted by them, continue to use the dingy hues he does. How can Mr. Creswick, having seen the advantages of Mr. Anthony's exuberant, vigorous and varied treatment of foliage, less minute than his own, but more intelligent as it is, continue his mechanical manner of rendering all varieties of foliage by a like dotting touch, all surfaces by one method, and nearly all substances with one tone? His happy feeling for a lovely phase of nature deserves more thoughtful expression. It is not that we should desire an artist to paint anything he does not feel, but that he should represent, at the cost of a little extra thinking, that which he cannot fail to see and must own to be beautiful. Let Mr. Creswick paint ashes, elms and smooth water for ever, if he will, but let us have in his treatment of each element of a picture the breadth of truth and individuality that are to be found in nature. Trees cannot be represented by dots alone, however innumerable.—Mr. J. Linnell's *Sunset* (472), a shallow valley with stacked corn in front and blue highlands in the distance, above a swirl of rosy cloud, is much such a work as he has often produced, and has the common excellencies of his manner.

We have not often seen a landscape so brilliantly or so artistically painted as Mr. Mignot's *Lagoon of Guayaquil* (595), a sunset effect over a vast marsh, whose waters flash in pools as they lie smooth and still under a sky that is filled with coloured light from the sinking sun. It is easy, with abundance of vermilion and chrome, to paint what may be styled a sensational sunset; but so to treat the subject that the coarse attractions of such works shall be left behind, while the beauty, glory, and, above all, the delicate splendour of nature shall be preserved, is no common achievement. That Mr. Mignot has been successful in this none will deny who looks at the manner in which he has treated the sky here, its pale gold burnished with ineffable light and rising in colour above the sun until the earth-mists cease to be visible, and the eye penetrates into the pure blue of the zenith that is studded with cirri touched with rose-colour. Behind the bright haze the evening band is rising slowly, and, by its shadow, softening and absorbing the horizon and the hills that lie upon it. Across the front, placed to aid

the composition of the picture, is a misty purple bar of cloud. The effectiveness and originality of this work are not to be denied. This artist shows like ability in a theme the reverse of the last, a snow-piece, *A Winter Morning* (677), snow upon a level piece of land with trees behind. The sky is grey and warm with the colour of a second fall to come. Some water, in the foreground, is truly painted of a warm colour, as contrasted with the snow about it.—In *Knowle Park* (486), a study of a glade between high beech trees in broad sunlight, by Mr. R. Butler, appears—but its elevated position makes us uncertain—to be as carefully as it is evidently broadly painted.—Mr. G. C. Stanfield's pictures, of which there are two here, *Oberlahnstein* (554), and *On the Lahn* (648), are solidly painted so far as pigment goes, and, no doubt, present excellent portraits of the localities; they lack those qualities of execution which go so far to make pictures; they want air and breadth as well as richness and variety of colour. The last named suffers least of all Mr. G. C. Stanfield's works that we have seen from the shortcomings in question.

Of coast subjects there are remarkably few examples this year. Having described those by Mr. Hook, Mr. E. W. Cooke's works have pre-eminence by right. Beautiful as is its execution, *Catalan Bay, on the east side of Gibraltar* (415) lacks many of the elements of a picture. We must not be carried away from the intellectual and peculiar purposes of Art, to value, above them, something which is distinct, as we see it to be here. Mr. Cooke's drawing is minute, his colour, to the general scheme attempted, is faithful and always pleasant where pleasantness is required. These good qualities will not alone, however, make a work of Art, although they may go a long way towards the production of an instructive painting. With the geological interest of this picture we have nothing to do beyond admiring the fidelity with which each kind of stone is drawn and coloured, the manner in which the vast slope of sand, piled up by the wind, when rushing through a gap in the edge of the cliff, is drawn, as well as the perfect knowledge of the sand's nature, its limited cohesion of particles and tendency to slip in shelves, so to say, that is so finely evinced in the outline of the heap and where the underlying rock peeps through the great slide. Such fidelity we trace throughout this picture, and rejoice to learn that the Royal Society has elected Mr. Cooke one of its Fellows on account of his geological attainments.

There is more Art-value in Mr. Cooke's familiar theme, *Dutch Traversers at Anchor off Scheveling* (230), than in the last, because there is motion and human life in it. The foremost craft has a long cable out from the bows to keep her from going in shore ere the tide has made enough; her loosed mainsail is filled, like a great bag, with the wind, and almost touches the sea; over her bows a white wave breaks sharply. Scarcely any man has painted the sea so truly or so prosaically as Mr. Cooke does. Here is abundant skill, knowledge of the forms taken by water in given conditions of wind, depth, velocity and tide,—here is colour, a little cold, it is true, but thoughtfully varied and very learnedly applied,—but the main interest of the work lies in the "go" of the heavy boat as it strains at the cable, the swelling sail and the breaking sea—i. e., the vital incidents the picture contains. *The Salute at Sunset, Venice* (585), presents a subject the artist has very often painted. In treatment of a beautiful phase of nature he has not yet produced anything better than this the latest example. The painting is heavy; but we must look through that default of Mr. Cooke's, and own the feeling for grandeur shown in treating the great grey dome of the church with such simplicity, and in the choice of a point of view where it tells so happily with more distant buildings. While we regret that the sea tends to opacity and paintiness, and that the sky cannot be looked into as a Turner sky may be, let us be glad to find no strained attempts at effect, but a broad and honest picture.

Mr. Ansdell has sent a coast scene this year, which better represents his ability than does the Spanish road landscape, *Going to the Fiesta, Granada* (430)—a flat and commonplace picture. To

this we prefer *The Wrecker* (468), an old man, who, with his white pony and dog, has come down to the shore to look for wood drifting from a wreck. The sea tumbles in angrily upon the shore, and is spiritedly rendered, holding in its waves a portion of rigging, a topmast and yard, soon to be cast on the beach. The best parts of this picture are the figures of the drooping pony, patiently standing by his master's side, and the drenched dog that shivers at his feet. As to the man, he is nothing else than one of Mr. Ansdell's old gamekeepers in another guise. The snow piece, by the same, styled *The Rescue, after a Storm* (404), shows dogs and a shepherd finding sheep in a drift after a storm. There is a want of what artists call "colour" in this picture, not redeemed by any remarkable delicacy of handling; the dogs, of course, are best; the general treatment, especially of the figures, is heavy. *Coming out of the Mist—Hare Shooting—Glen Spean* (533), is also by Mr. Ansdell.—Mr. R. Tucker's *Waiting for the Tide* (795), a smack, high and dry upon a stony beach, with richly-verdured cliffs behind, and the sea bright in the sunlight of a windy day, is a little hard—a very little so beyond nature in the phase represented. We do not think the distance too bright, but that the foreground, a mass of carefully-painted stones, lacks breadth of colour and arrangement. The execution of the sky is not good.

It was rumoured some time ago that Mr. D. Roberts, attracted by the picturesque effectiveness and grouping of masses in some of our London localities, and feeling that ere long their aspect must be materially changed by the course of modern improvement, had determined to represent, in an extensive series of pictures, some, at least, of the scenes which struck him as worthy of commemoration. Those who were not aware of Mr. Roberts's peculiar ideas of the duty of a painter, expected, naturally enough, from a man of his reputation, either works of fine art or pictures of things as they are, and such as could not but be useful in the future, rejoiced greatly at this news, and wished some able painter of the time before the Fire had acted upon the same idea. What will be the disappointment of these hopeful persons when they see that the artist, always indifferent to the actual aspects of the localities which give name to his sketches—not only in colour, as we saw when he placed verdurous Baalbec in a sandy desert, but to the proportions and relative positions of buildings—has, in the series of London themes now at the Academy, so far departed from the very pretence of truth as to violate the most obvious laws of perspective by drawing the dome of St. Paul's as if it were part of an architect's elevation, and not a substantial structure. A circle, seen in perspective, at any distance, must, if not truly level with the eye, be represented by something else than a straight line. How, then, will posterity wonder at the structure of St. Paul's as Mr. Roberts paints it, if all the circles of the dome appear as straight lines, however wide apart they are; only one of them, at almost, can, in fact, be on a level with the eye. Such workmanship as this, with the peculiarity of the western towers leaning on one side, is to be seen in *St. Paul's, from the River Thames, looking West* (114). We should care nothing for such mechanical falsification as this, if the work, or its companion, No. 134, *The Same, looking East*, presented anything valuable in Art, although failing in topographical importance. It is not too much to say that the peculiarly picturesque character of the scenes,—the rough masses of building,—their varied, and, however dingy, often fine colour,—the textural characters of various materials of building,—and, above all else, that quality of *chiaroscuro* which is inestimable in such a subject,—are unrepresented in these thoughtless productions—we cannot call them pictures. If we are to accept Mr. Roberts's ideas of Art as not concerned with local truth of colour, form or tone, and ignore *chiaroscuro* altogether, what becomes of painting? Without these qualities photography will render all we require that Art does not afford, and with unchallengeable fidelity, so far as it goes, of its own.

We may turn now from these strangely-conceived productions to another, which, while it represents a part of London with sufficient fidelity to be useful,

possesses all the Art-qualities in which Mr. Roberts's pictures are so lamentably deficient.—Below the "line," and where the crinolines scour its surface, hangs Mr. Whistler's artistic and able picture, *The Last of Old Westminster Bridge* (352), a view taken from the west end of the new structure, looking over the stump, so to say, of the old one, along the forest of piles, to the opposite shore. A comparison of the artistic qualities of this boldly-executed work with what we have seen in those by Mr. Roberts will show, if it be needful to do so, where the last fail altogether in Art, and are little else than misrepresentations of fine themes. One glance at Mr. Whistler's reading of the softened, warm grey of a London sky, so feelingly rendered here, and so beautiful in truth as it is, will satisfy the student that the artist has found something Mr. Roberts's black and white and blue give no idea of. The streaming motion of the river, as it goes past the piles, its many and subtly-hued surface, the atmosphere among the piles, their solidity, so deftly given without toil, and the aerial beauty of the removed shore, are such that, if the Hanging Committee had given a moment's thought to them, would have put this picture where it ought to be, in an honourable position.

We need do no more than call attention to Mr. Whistler's etchings, assuring all lovers of Art that they deserve noble places, and will reward pains taken to obtain a sight of them. No. 941, a dry-point, styled *Weary*, a lady resting back in her chair, has exquisite tone and "colour." *Old Westminster Bridge* (952) is ruined by its position. It treats air and light with all that mystery of Art which nothing expresses so well as etching or dry-point. Among the finest works here is *The Pool* (1003), a view among the shipping and along the shore.—Mr. Gale's *Wailing Place of the Jews at Jerusalem* (403) is decidedly the best picture of its class he has painted. Leaning up against the wall in various attitudes—beating its rude surface with their hands, some seated, praying, some kneeling,—are those who have come to weep. The effectiveness of this work, its brightness of colouring, together with the apt designs of the figures, make it acceptable.

Manliness of execution is, amongst all the ranks of portrait-painters, distinguishable in the Scotch artists' works. Sir J. W. Gordon, if not fortunate in the features of his sitters, or negligent of their handsomeness, produces at least intellectual and characteristic portraits. His *A. Bennett, Esq.* (125) is rather crude and harsh in treatment, but solid and valuable in feeling for grey, and well-drawn.—*R. W. Blencowe, Esq.* (315), if heavy and deficient in colouring, is manly and large in sentiment.—Mr. D. Macnee's *Lady and Child* (64) is well composed, stony in colour, and a little affected in grouping, withal academic, but valuable in execution.—The Scotch manner, with all its excellencies and faults, is seen in Mr. Macbeth's *Dr. Cunningham* (256), which produces a grewsome creature seated at a table as in stern judgment, with the "Institutes" of Calvin before him, a cast-iron portrait.

Our best English portrait-painter and miniaturist is Mr. H. T. Wells, whose *Mrs. Tippinge* (84) has evidences of taste in design, colour and drawing that surpass anything of the kind in the rooms. The accessories in this admirable work are painted with great breadth and felicity. The same artist's miniatures, *Mrs. T. J. Blake* (799) and *Alice* (869), are in delicacy, grace, and completeness worthy of the English School of miniature-painting.—The mannered dexterity of Mr. J. Sant—albeit he has painted works superior to any now here—shows unfortunately beside the artistic execution of Mr. Wells. What can be flatter in handling or more vapid in sentiment than Mr. Sant's *Portraits* (16)? The flesh in *Miss Jones's Portrait* (113) is almost sampler-like, so dull, painty, and weak is it. The *Children of H. S. Thornton, Esq.* (385) are hardly more fortunate; while the head and bust of a lady, *Taking Notes* (727), shown with an affectation of earnestness, painfully like trick, in her fixed eyes, is, notwithstanding its unusually solid treatment, equally meretricious.

Miss Grant, painted in 1856 (6), by Mr. F. Grant, compared with recent works here, shows a sounder style, more grace and truth, as well as feeling for

character. *The Speaker* (68), though evidently the portrait of a gentleman and intellectual man, is thin and stiff in execution, lacking strength of handling and colour.—Mr. G. Richmond has adopted the manner of large portraiture, but his execution retains that of the miniaturist he was. The face of *Mrs. F. Trench* (24) shows stippling—not desirable in oil. The *Archbishop of Canterbury* (61) is a little weak, but agreeable. *The Earl of Home* (281) is the best portrait Mr. Richmond has this year contributed; it is pleasant, if rather too smooth and gentlemanlike.—Mr. J. P. Knight's *Dr. Baly* (80), although it raises the idea of the sitter wearing his "best clothes," is painted with power, feeling and solidity. The purple jacket in the *Portrait of a Lady* (65) is a little crude, and injures the flesh of a well-painted and very characteristic face.—Mr. W. Douglass's *D. Lang, Esq.* (116) has considerable merit in its execution, and is certainly a good likeness.

Besides Mr. H. T. Wells's miniatures already named, Mr. Thorburn's *Second Son of Viscount Hardinge* (794) well sustains his reputation in that class of portraiture.—Mr. E. Moira's *Miss Hancock* (877) is painted with great freshness, character and beauty.—So are Miss A. Dixon's *Daughters of Sir E. Hulse* (838), and others by the same.

Of Animal pictures Mr. J. Wolf's *Row in the Jungle* (769), monkeys tormenting a fearfully irate tiger, is singularly full of character, force and originality. His *Wapiti Deer* (631) is beautiful in textural treatment and drawing.—The Misses Mutrie send few flower-pieces this year. Miss A. F. Mutrie's *Azaleas* (29) is bright and fresh, but a little mannered.—*Was Hæ!* (630), by Mr. J. E. Newton, a group of goblets, &c., is beautiful, solid and brilliant painting; a real work of Art.

There is little artistic design in most of the Sculptures at the Royal Academy. The most important figures are Mr. J. Durham's *Africa* (1014), and *America* (1073), of the series for the Great Exhibition Memorial. These are massive and symbolical; a little academical in style, perhaps, but finely conceived and grandly modelled. If we must have symbolism in our public places—symbolism mixed up with realities—let us have figures like these, rather than such Victories as we have in Waterloo Place.—Mr. W. C. Marshall's *Undine* (1012) is fleshy, but without that finish which contributes so much to Art in sculpture. The face is not beautiful.—Mr. E. B. Stephens's *Earl of Londale* (1013) is well designed, but a little stiff in attitude.—Mr. C. B. Birch's *Margarite* (1037) looking at the casket of jewels, is prettily designed, but rough, and has a weak face.—Mr. H. S. Leifchild's *Mother of Moses* (1038) and *Go, and sin no more* (1041) are both finely conceived, a little disproportioned and unfinished.

Mr. A. Munro's *Two Lovers, Group in Aluminium* (1080), is too merely pretty to be good in Art. Putting aside the untruth of the creaseless and skin-like garments of the pair, the woman's face is unbeautiful. *A. S. Gladstone, Esq.* (1033), bust, by the same, is, if not elaborate and very sound in execution, cleverly conceived as to character, and pleasing. One of the artist's best works.—Mr. J. Adams's *H. Reed, Esq.*, bust (1051), is grand and simple in treatment.—Mr. W. Theed's *Hallam*, bust (1054), has a weak, set smile that is anything but estimable.—Mr. T. Woolner's bust of *Archdeacon Hare* (1141) is sound, careful and bold.—Mr. H. H. Armstead's bronze Medallions (1091 and 1093) are splendid examples of good workmanship, very characteristic and expressive.

FINE-ART GOSSIP.—A highly-interesting discovery has recently been made by Mr. Redgrave, at Hampton Court, to the effect that one of the pictures formerly attributed to Pordenone, a Virgin and Child, with two figures in adoration, life-size, half-figures, is really the work of an artist whose works are extremely rare in this country, Girolamo Savoldo, of Brescia, styled by Ridolfi, G. Bresciano. Vasari ('Lombard Artists') names him Giangirolamo, and says that in the house of the Mint at Milan were four pictures by him, representing confagurations and night-pieces: in that of Tommaso da Empoli a Nativity, also night, "which is very beautiful." He adds,

this painter executed many fantastical of similar kinds, never any works of importance, but merited high commendation for the fancy and ingenuity of his pictures. He was a noble, and gave his productions away to churches and convents. Pino places him in the front rank with his contemporaries. He is always spoken of as a follower of Titian. It seems that the work in question had been covered with the abominable brown composition erst used to give "tone" to pictures, but on removing that, the signature and date, 1527, appeared. Also, at Hampton Court, it has been found that an old and sadly-disfigured picture called a Titian, formerly hung in one of the gallery's darkest cells, when put in order, turned out to be a beautiful specimen of Old Palma, a Virgin and Child, with St. John, &c. This is numbered 746.—As to numbering the pictures in this gallery a stop has been put to a practice which for stupidity and want of consideration for students can hardly be surpassed. Erst, it was usual when a picture was shifted not to shift the number with it, i.e. the number applied to the space on the wall, not to the work. Consequently, the remarks of critics or students' references were, probably to increase the sale of catalogues—rendered unavailable in a very short time. We may thank Mr. Redgrave for the improvement.

Any one who goes into the Art Department Female School of Art at South Kensington, as we went on Tuesday last, and experiences the miseries to which the ladies composing it are exposed and almost habituated, will join us in a remonstrance with the authorities of the Department, or with the Government, which withholds the means of accommodating that school; though it is officially admitted not only to be amongst the most creditable to its teachers, but really profitable in a commercial point of view. The "best-paying" drawing school in London is only half-warmed; the pupils study in draughts of wind; until the recent serious diminution in its numbers, it was overcrowded; it is shamefully ill-lighted, and the ventilating apparatus keeps up a banging and slamming, such as would not be tolerated for a moment in a private house, much less in a public office. All this is the case, while the House of Commons has years ago specially voted money to accommodate the school in question, but which money has been diverted to pressing needs of the Art Department. We repeat, that a private school would be ruined in a month if its frequenters were so inconsiderately treated as the ladies are at South Kensington.

The sale of Mr. Egg's pictures and collection took place on Monday last, at Messrs. Christie & Manson's; the most important items and the prices they fetched were as under:—Cartoons, Launce and his Dog, Peter the Great and Catherine, 40l. 15s. (Vokins). Sketches in Oil, a Lady, 41l. (Anderdon).—A Mother and Child, and Fortune-telling, 47 guineas (Cox).—Heads of a Negro, an Algerine, and a Negro Barber, 62l. 10s. (Creswick).—Raising the Standard, and the Bedroom at Knowle, 53 guineas (White).—The Volunteer, Maria from 'Twelfth Night,' Leicester and Amy Robsart, 82½ guineas (Gilbert). Pictures, by Egg, The Toilet, a Lady seated at a Table, and her Maid, Candlelight, 50 guineas (Gilbert).—A Girl Writing, 52 guineas (Cox).—Italian Peasants seated in a Portico, 41 guineas (W. H. Wells).—The Siesta, 23 guineas (Flatow).—The Leisure Hour, 40 guineas (Gilbert).—The Crochet Lesson, 1862, 94 guineas (Cox).—Travelling Companions, railway carriage, landscape seen through the window, 1862, 330 guineas (Cox).—"Past and Present," the triptych seen at the International Exhibition, 346l. 10s. (Agnew).—An Algerine Girl playing a Guitar, 1863, 80 guineas (Cox). Pictures by other Artists, Mr. J. Phillip, Sketch of 'Teaching the Scotch Catechism,' 27 guineas (Flatow).—Miss Mutrie, A Flower Piece, 55 guineas (Grundy).—Mr. W. P. Frith, Scene from 'Le Bourgeois Gentilhomme,' finished sketch (Cox).—the same, Coming of Age in the Olden Time, finished sketch, 185 guineas (White).—Mr. P. R. Morris, Voices from the Sea, 105l.—Mr. H. Wallis, Death of Chatterton, the celebrated picture, engraved, the subject of various important actions against infringers of copyright, seen at the Art

Treasures Exhibition, 775 guineas (Agnew), cost 200*l.*.—Mr. Holman Hunt, Claudio and Isabella, cost, in 1859, 180*l.*, exhibited at the Academy in 1853, 610 guineas (Agnew). The whole collection realized upwards of 4,000*l.*

The following is a list of pictures that were sold at Messrs. Christie & Manson's, on Saturday last, with the price each item obtained:—Drawings, J. M. W. Turner, Plymouth Sound, engraved, 122 guineas (Vokins).—Mr. F. Taylor, Figures in Conversation and a Dog, The Return from Hawking, and Highland Home, 140 *gs.* (Vokins).—Mr. Stanfield, Fort Rouge, Boat in a Breeze off Brighton, Isola Bella, Lago Maggiore, 206 *gs.* (Vokins).—C. Fielding, A Landscape, with cattle and figures, 101 *gs.* (Croft).—Mdlle. R. Bonheur, Cabinet Landscape, cow and calf in the foreground, cattle in the distance, 186*3*, 145 *gs.* (E. F. White).—W. Collins, View on the Sands, figures by W. Goodall, 101 *gs.* (E. F. White).—A. Solomon, Ball-room in the Year 1700, 1847, 420*l.* (Gilbert).—Mr. T. S. Cooper, Canterbury Meadows, eight cows near a stream, 320*l.* 5*s.* (Langton).—Sir J. Reynolds, Portrait of Sir J. Esdaile, Lord Mayor of London, 1789, engraved, 105*l.* (Wallis).—T. Gainsborough, A Grand Landscape, at the edge of a wood, with a woman and child in a cart on a hilly road, &c., 357*l.* (Thomas).—G. Morland, Landscape, edge of a wood, gipsy family, round a blazing fire, donkey and dog, 1792, 125 *gs.* (Cox).—The Black-Bull Picture, a small landscape, with gipsies, The Woodman's Return, Female Peasant, and Snow Scene, 150 *gs.* (Smith and others).—Repose, 129 *gs.* (E. Bocquet).—Woodland Scene, 140 *gs.* (Wilson).—J. Constable, The Glebe Farm, 319*l.* (Martin).

MUSIC AND THE DRAMA

MUSICAL UNION.—TUESDAY, May 26, Half-past Three.—Quartet, C minor, Beethoven; Duett, B flat, Piano and Violoncello, Mendelssohn. Quintet, C minor, Piano, two Violins, Viola and Violoncello, Spohr.—Vocal Music and Piano Solos.—Artists: Japha (first time), Rice, Webb and Platt. Pianist, Jessell (last time this season).—Tickets, 1*s.* 6*d.* each; to be had of Crumey & Co.; Chappell & Co.; Ollivier & Co.; Austin; at the Hall; and Ashdown & Parry. 18, Hanover Square. J. ELLA, Director.

S. THALBERG'S FIRST MATINÉE, MONDAY NEXT, May 26.—S. Thalberg's remaining Matinées and appearances in London this season, will take place at the Hanover Square Rooms on Monday, June 1, June 8, and June 15, to commence at Half-past-two o'clock.—Stall Subscriptions, 3 Guineas; Family Tickets, to admit four (Stalls), 3 Guineas; Stall Tickets, 2*s.*; Unreserved Seats, 10*s.* 6*d.*; to be had of the principal Music Shops; at St. James's Hall; and of Mr. Fish, at the Hanover Square Rooms, where the Plan of the Seats may be seen.

MRS. JOHN MACFARREN'S ENTERTAINMENT "A MORNING at the PIANOFORTE," on THURSDAY NEXT, at Three, in ST. JAMES'S HALL, when she will read and illustrate a new Lecture on "MUSIC and MUSICIANS," by G. A. Macfarren. Vocalist, Miss Banks.—Tickets, 3*s.*; Stalls, 7*s.*; at Austin's Ticket Office.

MR. HAROLD THOMAS'S MATINÉE MUSICALE, Willis's Rooms, May 30, Three o'clock.—Artists: Parepa, Lascelles, Jules Lefort, Sainton, Piatti, Balair Chatterton, John Thomas, Benedict, Blumenthal, Cusins, Engel, Lindsay Sloper, and Harold Thomas.—Single Tickets, Half-a-Guinea; to admit Three, One Guinea; at the principal Music Shops; and of Mr. Harold Thomas, 37, Maddox Street, W.

HANOVER SQUARE ROOMS.—At the SECOND MORNING CONCERT to be given to the Subscribers of Ewer & Co.'s Musical Library, on TUESDAY, June 3, at Three o'clock. The following New Compositions will be performed: Pianoforte, Mendelssohn; Violin Quartet, Volkmann. Pianoforte Solo: Chant des Sirènes, O'Leary; Spinneried, Liszt; Solo Violoncello, Romance Volkmann. Songs: 'A Poet's Love and Devotion, Schumann; 'Do not in Beauty thus appear, Nicolai; 'Mary of the Oberland,' Dessauer; 'Somebody,' Agnes Zimmermann; Luett, Cornu and Baritone; "Gard'ner, thy Tree am I," Schumann. Instrumentalists: Messrs. Pauer, Sainton, Rice, Webb and Paque. Vocalists: Miss Robertine Henderson, Mdlle. Elvira Behrens, and Mr. Lausmère. Conductors: Messrs. Frank Mori and Evers. All Tickets retained at the First Concert are available.—Programmes at Ewer & Co.'s Musical Library, 87, Regent Street.

MR. CUSINS'S GRAND EVENING CONCERT, at ST. JAMES'S HALL, FRIDAY, June 5, at Eight o'clock.—Artists: Parepa, Sims Reeves, Messent, and Santley, the Orpheus Glee Union, Piatti, Balair Chatterton, John Thomas, Harold Thomas, and Cusins Full Orchestra and Chorus. Conductors, Prof. Sterndale Bennett and Mr. Cusins.—Tickets, 10*s.* 6*d.*, 5*s.*, 3*s.*, and 1*s.*, at Austin's, No. 23, Piccadilly; all Music-sellers; and at 38, Nottingham Place, W.

MR. WALTER MACFARREN'S MORNING CONCERT OF PIANOFORTE MUSIC, Hanover Square Rooms, June 6.—Artists: Miss Robertine Henderson, Madame Sainton-Dolby, M. Sainton, Signor Piatti and Mr. Walter Macfarren.—Reserved Seats, 10*s.* 6*d.*—1, Osmburgh Street, N.W.

WELSH NATIONAL MUSIC.—United Chorus.—Band of Harps.—A MORNING CONCERT, to be given by Mr. JOHN THOMAS (Pencerid Gwallia), at the HANOVER SQUARE ROOMS, on SATURDAY, June 13, at Three o'clock, with the assistance of the Members of the Vocal Association, the Royal Academy of Music, and the Welsh Chorus, Messrs. Lewis Cymru, Madame Sainton-Dolby, Mr. Wilby Cooper, Mr. Lewis Thomas. Harpists: Mr. J. Balair Chatterton (Harpist to the Queen), Mr. T. H. Wright, Mr. J. Cheshire, Mr. John Thomas (Pencerid Gwallia), &c. Further particulars will be duly announced.—Sofa Seats, 1*s.* 6*d.*; Half-a-Guinea; to be had of the Music-sellers; at the Hanover Square Rooms; and of Mr. John Thomas, 109, Great Portland Street, W.

MR. DEACON'S THIRD and LAST SEANCE OF CLASSICAL MUSIC will take place on FRIDAY, June 19 (instead of June 8, as before announced), at 16, Grosvenor Street, by permission of Messrs. Colliard, commencing at Three o'clock. Instrumentalist: M.M. Sainton, Pollitzer, Webb, Pezse, and Deacon.—On this occasion Mr. Deacon has the pleasure to state that he will also have the valuable assistance of Mdlle. Parepa and Madame Sainton-Dolby.—Family Tickets, to admit Three, One Guinea; Single Tickets, Half-a-Guinea; to be had of Mr. E. W. Oliver, 19, Old Bond Street; or of Mr. Deacon, 73, Welbeck Street, Cavendish Square, W.

ROYAL ITALIAN OPERA.—The crowd was brilliant at 'Don Giovanni' on Thursday week. There were the usual *encores*. The performance was as fine a one as could be expected under the circumstances, where so much rapid preparation of novelty must preclude close rehearsal of known works, and where all the principal artists are not first-rate. A *Donna Anna* is not found in Mdlle. Fricci;—we do not indorse the popular admiration of *Leporello* by Herr Formes, feeling its want of real dramatic vitality and humour doubled by contrast with the redundancy, without exaggeration, of both in the *Masetto* of Signor Ronconi. The *Donna Elvira* of Madame Rudersdorff is too boisterously shrill; cleverly and completely expressed as is the music by her. Then, at the risk of our being burnt for heresy in the cause of Mozart's intentions and of good vocal execution generally, it must be represented that Mdlle. Patti's *Zerlina* is too *staccato*, its melodies too much broken and tormented with over-accent—musically, too unfinished entirely to content those who cannot forget Sontag, or Madame Persiani, or Bosio, whose popularity the lady seems for the hour to have succeeded. M. Faure's *Don Giovanni* has improved; he is a modest, earnest, real artist, and as such cannot fail to improve.

HER MAJESTY'S THEATRE.—When Mdlle. Artot began her career only a few years ago in London concerts, it was to be felt by every one who heard her that experience only was wanting to her entire success. A singer so accomplished, both vocally and musically, had not made a first appearance since the coming out of Mdlle. Artot's preceptress, Madame Viardot. Since then stage practice and success have done their work, and the lady, as was proved by her admirable performance in 'La Figlia del Reggimento' on Tuesday, is now something like the best operatic artist before the public;—with a voice excellently in tune, of sufficiently pleasing quality, and thoroughly trained. Mdlle. Artot's acting, too, is good; lively, without the slightest grimace or impertinence,—there is youth in it, but no crudeness nor incompleteness. In brief, nothing could be more enthusiastic than her reception, and never was praise better merited. She is one of the few to be watched and listened for, and to be spoken of not after, but *with* Madame Lind and Sontag, whose performances in Donizetti's prettiest comic opera must have been felt to render the essay of a younger artist in the character of *Maria* hazardous, to say the least of it.

CONCERTS OF THE WEEK.—Mr. Halle's *Recitals*.—Mr. Halle has a sure place in England—such as can be won here only by an instrumentalist under conditions of remarkable accomplishment and progress. Londoners may well be glad that, after two years of exclusive devotion to Beethoven's *Sonatas*, for his own series of concerts this season, he has recourse to the general library of classical music, and not to one particular shelf of it. Yesterday week, we had Beethoven's *Sonata* in A, No. 2, Op. 2 (a work which breaks down every classifying theory of manners and styles, being, in some features, as boldly new as its writer's last *Pianoforte Sonata*),—a *Partita* in B minor, by Bach,—Mozart's Trumpet *Sonata*, Op. 21,—Weber's *Solo Sonata* in C, Op. 24, the performance of which could not be surpassed for sentiment, lustre of execution, charm of tone and unflinching power,—two "Moments Musicaux" by Schubert, the second a quaint *Hongroise* in F minor,—Mendelssohn's "Caprice" in E, Op. 33, this also played to perfection,—lastly, two specimens by Chopin. Better relished the best of music and the best of playing could not be than they were by the large audience assembled.

Herr Pauer's *Historical Performances*.—Half of the fifth of these concerts was devoted to English

composers—Bull, Purcell, Kelway, Pinto (our most promising of instrumental writers), Messrs. C. Potter, Bennett, Wallace, and Bache, of Birmingham,—another young man summoned hence, not, however, before he had given indications of new fancy and genius, which might have carried him far among the composers of the day. The rest of the concert was made up of an agreeable and piquant Serenade by M. Gouvy,—of a Romance by M. Silas,—and of the "Spinnerlied" from Herr Wagner's 'Flying Dutchman,' by much the most graceful and original of Herr Wagner's melodies that is known to us, wrought into a capital display-piece of the delicate kind by Dr. Liszt,—Herr Hiller's 'Zur Guitarr' (of which we have already spoken),—and a *suite* of pieces by Herr Bargiel, a composer who is rising into notice in Germany.

The "command" concert of the *Philharmonic Society*, on Monday, was noticeable in the absence of any instrumental *solo*. Are the directors unaware of the presence in London of some half-a-dozen artists fit to appear before the young royal lady, who obviously takes a real and cordial interest in music? If not, they stand amenable to the charge of giving second-rate, parsimonious concerts, little worthy of the patronage accorded to them. What has become of the spirit which could in former days assemble, at one meeting, three such *solo* artists as Mendelssohn, M. de Beriot and Madame Cinti-Damoreau? Year by year is the decay of a society established for generous purposes of Art more and more wilfully paraded.

Besides the above concerts, the "Derby" week has yielded to the public the ninth harp concert of *Mr. Apotomas*, and performances of chamber-music by *Miss Emma Busby* and *Mr. Deacon*.

HAYMARKET.—Expectation has been lately excited in regard to a new play by Lady Dufferin (now Countess of Gifford) previous to its representation, which took place on Saturday. As the granddaughter of Sheridan, it was assumed that something of the spirit of 'The School for Scandal' might be found in the dialogue of a play proceeding from her pen. These hopes were not altogether unreasonable, nor were they entirely disappointed. The title of the new drama well indicates its plot and purpose. It is 'Finesse; or, Spy and Counter-Spy.' The first refers to the character of a Frenchman, supported by Mr. Wigan in his very best and most careful style, and who passes under the name of *Dr. Bertrand*, physician to the garrison of Messina. This worthy knowing that the political agents of Ferdinand, on the eve of the Sicilian Revolution of 1811, were waiting for the arrival of a spy, contrives to send to them a substitute of his own, in order to gain possession of certain documents. For the performance of this perilous duty, he unknowingly selects his own son, *Jules d'Arriigny* (Mr. W. Farren), whom he supposes to be dead, but who had escaped from the deserter's doom, and now finds himself in contact with his father, who, full of his own devices, fails to recognize his identity. The young man succeeds in deceiving Ferdinand's agents, who have already mistaken one *John Poppleton*, an amateur sailor (Mr. Buckstone), for the man they were expecting, and whose blunders and escapades constitute the comic action of the piece. This worthy drops his pocket-book, which Jules picks up, and, extracting the passport, uses it and Poppleton's name for the purpose of his mission. As the latter soon drinks himself into insensibility, Jules has time enough to accomplish his plans. He has been introduced into the house of *Baron Freienharsen* (Mr. Chippendale) in a mummy-case which the Baron supposes to contain the body of a felon recently executed, whom he hopes to recover by the administration of an elixir which he entrusts to Dr. Bertrand. Jules, released from his temporary place of confinement, makes his escape by the window; and Poppleton, by the aid of the rope-ladder he had left, enters the Baron's apartment, and, still suffering under the fumes of wine, falls asleep on the sofa. Here he is found by the Baron, who concludes that he is the resuscitated felon, and a scene of *equivocal* ensues, which is certainly amusing. Ultimately, the Baron induces him to retire to rest in an inner

apartment. By this time Ferdinand's agents have discovered their error, and enter with their guard to arrest Jules, and Dr. Bertrand, who has been made acquainted that the latter is his son, is greatly excited by his supposed danger. In his frenzy he seizes a sword, and defies the military to prosecute their search. The situation is a fine one, and very pathetic; but, from an error in the construction of the piece, is deprived of its due force. The audience, of course, know that it is Poppleton and not D'Artigny who is in danger. When the youth is brought forth, the doctor favours the mistake; but in vain, for Jules soon enters, and under circumstances which admit of no more *finesse*. The rule of Ferdinand is ended, and Jules bears the order for the arrest of the conspirators, who are taken into custody by the very guards which they had brought for his own. The tables are thus completely turned, and the perplexities of the action brought to a prosperous issue. Besides the characters which we have named, and which are all admirably supported, there are the *Baroness of Freitenharsen*, who is jealous of her husband whose scientific pursuits she cannot understand, and her domestic *Bobbin*, who dreads foreigners, and supports her opinions by anecdotes taken from her own family history. These had full justice done to them by Mrs. Wilkins and Mrs. Wigan. The play was frequently applauded, and its success ultimately attested by the enthusiasm of the audience. The house was crowded.

NEW ADELPHI.—Mr. Benjamin Webster has achieved success in another character-part, called the *Wooden Spoon-maker*. The piece has been written by Messrs. W. Brough & Halliday; but the plot is too simple for detail. It merely proceeds upon the old expedient of substituting one child for another, so that father and daughter are brought into mysterious sympathy, while ignorant of their relationship. Mr. Webster made the most both of the character and the situation.

ST. JAMES'S.—Miss Marie Wilton appears in a new part here, in a piece called 'The Little Sentinel,' which depends entirely on the acting, and receives much of its force from her excellent treatment of the very slight materials of which it is composed. It is the production of Mr. T. J. Williams, to whom the stage is indebted for many similar trifles.

MUSICAL AND DRAMATIC GOSSIP.—Mr. Mapleson is said, by Rumour, to have invited Madame Viardot to come hither for some performances of 'Orfeo.' Every one capable of admiring the greatest masterpiece of Art which the stage has seen since the days of Madame Pasta, and of making acquaintance with one of the five noblest operas in being, may well wish the news to be true, and that the great artist may accede. Those to whom Gluck's opera is only known by Madame Czillag's unpolished and heavy imitation of a greater artist may be satisfied that a pleasure and a surprise are in store for them (supposing the plan wrought out) such as occur very rarely in the lives of play-goers.

The 'Kyrie' and 'Gloria' of Signor Roberti's Mass, mentioned in the *Athenæum* a fortnight since, are (so far as can be judged from following the performance of it at the Brompton Oratory) fairly satisfactory—written, at all events, in a sober, if not severe, style; and without a touch of the new Italian Opera effects which during late years have made such woful havoc of Roman Church-music. In the 'Credo,' the setting of the verse 'Et incarnatus' pleased us best, as being tuneable and expressive, if not representing the mystery of Faith in all its depths. No Service-music, when heard as part of a service, can be reviewed with any certainty, or indeed propriety, seeing that it is merely an appendage to a rite. When it is separated from the ceremonies of altar, choir and pulpit, from incense rising, from holy tapers moving hither and thither, from costumes and crossings and genuflexions—even should it be competently rendered in the church, which in ninety-nine cases out of a hundred is impossible—then, and not till then, can its value as a work of Art, and not of association, be justly ascertained.

M. Thalberg's *Matinées* will begin on Monday

next. By accident, the first appearance of Herr Japha at the Popular Concerts was announced for last, in place of *next Monday*.

Mr. Henry Leslie's 'Holyrood' will, we hear, be given at the Norwich Festival.

Mr. Harold Thomas's coming concert deserves express recommendation because of his desire to travel out of the beaten track. Besides Mendelssohn's *Fantasia*, Op. 28, a work little played, he promises the charming Pianoforte Trio by M. Auber, introduced last year at one of M. Sainton's *Soirées*,—a new composition by Dr. Bennett,—and the *notturno* for two voices from the 'Beatrice and Benedict' of M. Berlioz.—We are told that Mr. Cousins will repeat his Serenade at his benefit concert, and also cause to be performed two "Numbers" from Herr Wagner's 'Lohengrin.'

The appearance at the Royal Italian Opera of Middle Demi as *Enrichetta*, in M. Flotow's 'Martha,' this day week was without importance; Madame Fioretti will replace her this evening. 'Le Prophète' is announced for Monday next.

The next oratorio given by the Sacred Harmonic Society is to be 'The Creation.'

Birmingham papers announce that Mr. F. Howell's new oratorio, 'Captivity,' will be repeated on Whit-Tuesday, with Mesdames Lemmens-Sherrington and Laura Baxter, Messrs. Tennant and Weiss as principal singers, and a band and chorus of three hundred performers.

La Presse of Paris states that M. Gounod is at work on five acts taken from 'Mierio,' "a charming poem (says the journalist) which Theocritus or Virgil might have dictated to Frédéric Mistral, in the old Troubadour language." The poem, its subject and its author are alike, we fancy, unknown on this side of the Channel.

The *Allgemeine Musikalische Zeitung* is barren of interest. Tourists are reminded by it that the Middle Rhine Musical Festival is to be held at Darmstadt on the 16th of August, and following days.—Handel's 'Joshua' was recently given at Hamburg by the Rühl Society.—The text to the fairy opera which Herr Offenbach is writing for Vienna will be arranged in German by Baron A. von Wolzogen, whose Memoirs of Madame Schröder-Devrient, we may here say, may possibly ere long appear in an English dress.

Among the Paris news of the week the only item having any importance is the death of M. Prudent, the well-known pianist, some of whose show-pieces and arrangements of operatic music have had a certain currency in alternation with those of Dr. Liszt and M. Thalberg.

MISCELLANEA

Schiller's 'Robbers.'—Will you kindly allow me to mention a matter of some interest to students of German literature, which some one among your distinguished German Correspondents may be able to clear up. In Section 15 of Schiller's essay, 'On the connexion of Man's Animal Nature with his Spiritual Nature,' a certain passage is illustrated by the quotation of part of the first scene of the fifth act of 'The Robbers.' Some trifling verbal differences between this quotation and the text of the play would be hardly worth noticing, were it not for the following marginal reference in English, given in the essay to indicate—at least apparently—the work from which the quotation has been taken, 'Life of Moor: Tragedy,' by Krake, act v, sc. 1.' The order of act and scene coincides with 'The Robbers.' The solution of the difficulty which suggests itself to me is, that, as the essay was read by Schiller before the Duke of Wurtemberg in 1780, Schiller, having to account for the origin of the quotation, and not wishing to confess that he had composed or was engaged in the composition of 'The Robbers,' invented and used this reference for the purpose of concealing his authorship of the play. This is, however, a mere guess of mine. The marginal reference as it now stands is very puzzling, and it would be desirable to have its meaning explained on good authority. The edition of Schiller's works, in which I found it, is the one published by Cotta in 1847. JULIUS LAX.

TO CORRESPONDENTS—E. T.—H. M. W.—J. H. P.—R. J.—received.

Messrs. SEELEY, JACKSON & HALLIDAY

ARE NOW PUBLISHING:

I.
PARSON and PEOPLE; or, Incidents in the Every-day Life of a Clergyman. By the Rev. EDWARD SPOONER, M.A., Vicar of Heston. Crown 8vo. Frontispiece, 3s. 6d. cloth. [Just ready.]

II.
LESSONS of LOVE; or, Aunt Bertha's Visit to the Elms. By EMMA MARSHALL. In crown 8vo. Frontispiece, 3s. 6d. cloth.

III.
A Third Edition of the SPIRIT in the WORD: Facts gathered from a Thirty Years' Ministry. By the Rev. W. WELDON CHAMPNEY, M.A., Canon of St. Paul's, and Vicar of St. Pancras. In crown 8vo. 3s. 6d. cloth.

IV.
SUNDAY ECHOES in WEEK-DAY HOURS. By Mrs. CAREY BROCK. With a Preface by the Lord Bishop of WINCHESTER. Crown 8vo. 3s. cloth.

V.
A Second Edition of The GOSPEL in MADAGASCAR: a Sketch of Christian Missions in that Island. With Plates. 3s. 6d. cloth. [In a few days.]

VI.
The Eighth Thousand of HELEN FLEETWOOD: a Tale of the Factories. By CHARLOTTE ELIZABETH. In fcap. 8vo. Frontispiece, 3s. cloth.

VII.
The KINGDOM and the PEOPLE. Illustrations of the Parables of Our Lord. With a Preface by Rev. E. GARBETT, M.A. In crown 8vo. 3s. 6d. cloth.

VIII.
A Third Edition of RAGGED LIFE in EGYPT. By Miss M. L. WHEATELY. In crown 8vo. Six Engravings. 3s. 6d. cloth.

IX.
The CHILDREN of LONG AGO. By the Author of 'Words for Women.' In square 16mo. Twelve Engravings. 2s. 6d. cloth.

X.
HORÆ APOCALYPTICÆ. By the Rev. E. B. ELLIOTT, M.A. The Fifth Edition, Revised, Corrected and Enlarged, with 28 Illustrations. In 4 vols. 8vo. price 2s. 16s. in cloth.

Of this Edition the Author writes:—"Regarding it as my final revision, I have made it very carefully, adding wherever I thought addition desirable; improving the argument where such improvement seemed to be needed, and correcting on one or two points, where mature reflection in the course of the last ten years had convinced me of the propriety of such correction."

Of the general argument the late Sir James Stephen wrote:—"That, in his judgment, if the proof of design arising out of the coincidences there traced between the prophecy and history were deemed insufficient, all idea of proof from circumstantial evidence must be laid aside."

And the *Times* remarked, Nov. 3, 1859, that "The 'Horn' of Mr. Elliott does credit to the theology of the age."

XI.
CRAGSTONE COTTAGE; or, Life in the Country. By the Author of 'In-door Plants,' 'Birds and Flowers,' &c. In small 8vo. frontispiece, 3s. 6d. cloth.

XII.
THE WHITE HOUSE at ST.-REAL: a Tale for Schoolboys. Translated from the French of Madame E. DE PRESSENSE. In crown 8vo. frontispiece, 3s. 6d. cloth. "A very excellent translation of a work which has obtained the widest renown on the Continent."—*Daily News*

XIII.
PERILS among the HEATHEN; or, Incidents of Missionary Life. With a Preface by the Rev. J. RIDGEWAY, M.A. Second Edition. In crown 8vo. 6 Engravings, 5s. cloth.

"Such a work as the present is welcome. It embraces the touching incidents of the experience of many who counted not their lives dear that they might testify the Gospel."—*Athenæum*.

XIV.
A Second Edition, small 8vo. 3s. 6d. cloth, of MARGARET WARNER; or, the Young Wife at the Farm. By the Author of 'Nursery Influence.' "This is a charming little book, written with great elegance and spirit. The story is simple and natural, recommending the leading principles of Christianity by a beautiful exhibition of them in action. The whole book is generally valuable, as every part is suggestive of something calculated to make the reader both wiser and better."—*Christian Observer*.

LONDON, SATURDAY, MAY 30, 1863.

LITERATURE

Travels on Horseback in Mantchu Tartary: being a Summer's Ride beyond the Great Wall of China. By George Fleming, Esq. With Map and Illustrations. (Hurst & Blackett.)

By the ninth article of the Treaty of Tien-tsin, right was granted to British subjects to travel freely in any part of the Chinese Empire, and amongst those who availed themselves of that boon were Messrs. Fleming and Michie, the former an officer, in 1861, stationed at Tien-tsin, the latter a merchant, resident at Shanghai. Their ambition was to travel on horseback from Tien-tsin to the birthplace of the Mantchu dynasty beyond the Great Wall of China; and this they gratified to the fullest extent. Their principal object is not so clearly explained. Mr. Fleming, the historian of the journey, hints at the prosecution of scientific labours, and once he climbs a mountain with compass, barometer and thermometer, but on descending loses his way, and we hear no more of these instruments nor of the results obtained by means of them. Mr. Michie is supposed to have an eye to business, and very likely gathered some valuable information during his journey. But we are left in considerable doubt on that point also, and we shall probably not much wrong our travellers by assuming the excitement expected from a ride through a comparatively unknown country to have been their principal object, while scientific and commercial considerations held only a secondary place in their plan of operations. Our travellers could induce only one Chinaman, a groom, and native of the northern provinces, to accompany them, though they held out tempting sums to any Cantonese who would give them the benefit of his "Pigeon English," that ludicrous jargon now possessing a grammar and dictionary of its own. They were afterwards glad that they had not taken a Cantonese, finding as great an antipathy between the natives of Southern and Northern China, as exists between those of the free and slave States of America. Starting about the middle of 1861 from Tien-tsin, mounted on strong, though odd-looking, Tartar ponies, and accompanied by a cart carrying provisions and luggage, our "two adventurous Britons," as they delight to call themselves, kept along the coast of the Gulf of Liau-Tong, passing over a rich and highly agricultural country, fording rivers, passing numerous towns and villages, and experiencing no other inconveniences than those resulting from dirty inns and the excessive curiosity of the people. Whenever they entered a town the mob pressed upon them in overwhelming numbers, and in several instances broke down doors and walls to have a peep at the wonderfully dressed strangers. Riding-whips and sticks had to be used pretty freely both by themselves and the police to keep the intruders at a respectful distance. For the greater part of this inconvenience they had only themselves to thank, they having unwisely retained their European costume: had they adopted the Chinese style of dress they would probably have passed without any molestation whatever. An American Indian, with his feather cloak and painted face, walking through our streets would doubtless not fare much better, when in European attire he would not be subjected to that annoyance. Occasionally there was a brickbat thrown at them by some boys bent on mischief, but at most places they were treated in a friendly manner, and it was not until they arrived at Shanghai-kwan, near the Great Wall,

that their passports were demanded. It will be remembered that it was stipulated by the high contracting parties that the treaty of Tien-tsin should be made known throughout the Chinese Empire, but during the whole of this part of their journey our travellers found the people in happy ignorance of any such treaty, and the right it gave to our countrymen to travel under the protection of a British passport. The legal instrument they had fortified themselves with would therefore have been perfectly useless, and would probably have prevented their penetrating any distance beyond the Great Wall, if they had not adopted the precaution of taking with them a more formidable looking document than that issued by the British Consulate, and supplied to them by one of the Imperial Commissioners at Tien-tsin. When the Mandarins and police officials saw this paper, they became more civil, and allowed them to stay for the night at an inn of the town, from which they were about to be ejected. But suspicion once aroused was difficult to allay. Close to the town, but beyond the boundary of the Great Wall, was a high mountain, from which they hoped to obtain a good bird's-eye view of the adjacent country and the Great Wall. But on mentioning their desire to ascend it, they were plainly refused; nevertheless, the next morning they made their way thither, and, though politely stopped by the guard at the gates, and warned that during so hot a day, and without any path leading to the summit, it would be dangerous to attempt the ascent, our travellers ventured upon it. Mr. Michie had to give in ere the climbing on foot commenced; while Mr. Fleming, though once more warned by the Chinese officials, pushed on, and safely reached the top, where he found an old ruined tower, and obtained a magnificent view. Below him lies a richly cultivated country, across which stretched, like a huge serpent emerging from the sea, the Great Wall of China, one of the most stupendous works of man, hoary with the age of twenty centuries. For miles and miles the Titanic structure is seen to wander, retreating and advancing, bending up and doubling down; now lost altogether to view; now starting at once from the side of a cliff, which it has wound itself round in a manner almost surpassing belief, planting tiny, square towers closely together where the clefts and passes between the rough, steep mountains indicate a possibility of their being practicable, and throwing out one, two, or even three additional barriers or ramifications to aid that in front across those constricted valleys where a few men might be able to scramble; posting odd turrets in the strangest places, where the wall zigzags to and fro, and erecting castellated towers on the spiked points of the mountains. Up hill and down dale, but not always mounting the highest peaks, the Great Wall continues its course for hundreds of miles, from the sea to the desert—the work of millions of labourers during ten, or, as others have it, five years of toil, but proving as useless to keep the barbarians at bay as similar, though comparatively Lilliputian, structures which the Romans erected in various parts of their vast dominions:—

"Even to a Westerner, who has seen some of the triumphs of nineteenth century engineering, and undertakings such as the old world never dreamt of, it seems all but impossible that any people could set themselves down to the performance of so monstrous a difficulty. There is no great amount of skill; there is little, if anything, of ingenuity displayed in its erection, so far as I can see; but there is work—there is labour for giants—in the structure, and this character appears in every brick that goes to make up the solid outline of its towers. The latter are only within the scope of the

most practised climber, and intrude themselves so menacingly into the upper world that one almost expects to see them thronged by rebellious Titans aspiring to make war with Heaven. In every stone of that rampart embankment that embraces with a petrous girdle the confines of far-off Cathay, there is a tale of toil and fatigue such as, perhaps, the modern world never knew, silently told in the computed one thousand two hundred and fifty miles of the country, from east to west, over which it wanders. Surely the king and the people who lived a little more than two thousand years ago, who have left their memories and their autographs written in such a bold hand over such a great tract of the world's uneven surface, and who have submitted to the scrutiny and criticism of innumerable generations such an astounding trophy of human industry and patience, were very different men to those of the present day, and had very much higher incentives to the achievement of greatness and the maintenance of national independence, than the apathetic fratricides and blasphemous robbers of 1861!"

Mr. Fleming had found the ascent comparatively easy, but on descending he lost his way, and suffered so fearfully from heat, hunger and thirst, that he became perfectly insensible, and was only saved from sunstroke by falling exhausted into a cool grotto. Perhaps a little too much is made of this, the only real adventure in the book, by working it up into a regular sensation scene. Suffice it to add, that he ultimately reached the valley in safety, quite knocked up and without boots or hat, nearly frightening some field labourers out of their wits by his sudden appearance amongst them in the character, as they thought, of the genius of the mountain. All things having been made pleasant again, the two travellers pushed on beyond the Great Wall, and without difficulty reached Newchwang, where the mob behaved most insultingly, and compelled them to depart without loss of time for Ying-tze, one of the new treaty-ports, where they had the pleasure of finding Mr. Meadows, the British Consul, who, highly indignant at their treatment at the last halting-place, wrote off a remonstrance to the presiding functionary of that town. "If a strong display of revolvers, rifles and guns, ready at hand, around Mr. Meadows's room and bed-head could be taken as any criterion of his faith in the peaceful character of the Chinese in this region, it was decidedly less than our own," writes Mr. Fleming, "and this was not increased when he told us how, a day or two before, his assistant was just rescued from annihilation by some of the townfolk, for-attempting to save a woman from ill-treatment." Notwithstanding, our author and his companion pushed on to Moukden, the Mantchu capital, which they were surprised to find in so good a condition:—

"The great regularity of the streets—the ample breadth of the principal ones—the absence of filthy and indecent displays at their sides, such as everywhere offend the eyes and nose in Peking; the uniform height and frontage of the shops, and their respectable, though far from gaudy appearance, and the total absence of tumble-down wooden arches, or *Pai-lus*, such as in almost every other town obstructed the way or marred the prospect; quite took our good opinions by storm. Moukden, so far as our experience went, was pronounced to be the Edinburgh of the Middle Kingdom. The people were well, though not luxuriantly dressed, and I do not think during our stay we noticed a beggar or a ragged individual within its walls. There were large stands of cart-cabs with excellent mules in them, superior to those of Peking. There were capital shops with large open windows, in which were counters for the sale of furs, native cottons, dye-stuffs, grain, and medicines, as well as ready-made clothing; but we could perceive nothing European, save a couple of boxes of German lucifer

matches which we saw when we afterwards had an investigation on foot. A good proportion of these shops were kept for the manufactory and sale of bows and arrows, and in some of them there were splendid specimens of the skins of eagles and vultures. We passed several large Yamuns or government buildings, before which were drawn up dozens of cabs, and crowds of attendants awaiting the convenience of their several owners who were within, probably discussing questions concerning the management or mismanagement of a province the length and breadth of which is estimated at 700,000 square miles. Each of these public offices was guarded by rows of high black *chevaux-de-frise*. Booths and stalls there were none, and even the nomadic vendors of eatables, and the peripatetic craftsmen of all grades and trades who roam freely elsewhere, were here invisible."

The author more than once notices in the workshops the analogy existing between the manufacturing, applying and preparing of different articles, as well as the instruments required in the processions of the remote East and West, and answers the question whether the Chinese have borrowed their ideas from us or we from them by adopting the conclusion at which M. Abel Rémusat arrived when he investigated this interesting question:—

"The irruption of the Mongols, by throwing everything into agitation, neutralised distance, filled up intervals, and brought the nations together; the events of war transported millions of individuals to an immense distance from the places where they were born. History has recorded the voyages of kings, of ambassadors, of missionaries. But how many others, less celebrated, were laid in the train of those men, either as slaves, or impelled by the desire of gain, or by curiosity, to countries hitherto unexplored. Chance has preserved the names of a few. The first envoy who came on the part of the Tartars to the King of Hungary was an Englishman, banished from his country for certain crimes, and who, after having wandered through Asia, had finally taken service among the Mongols. A Flemish cordelier met, in the depths of Tartary, a woman of Metz, named Paquette, who had been carried away from Hungary; a Parisian goldsmith, whose brother was established in Paris on the Grand Pont; and a young man from the environs of Rouen, who had been present at the capture of Belgrade. He saw there also Russians, Hungarians and Flemings. A singer, named Robert, after travelling through the whole of Eastern Asia, returned to find a grave in the Cathedral of Chartres. A Tartar was a helmet-maker in the armies of Philip the Fair. * * * All—speaking of a number of discoveries and inventions, such as gunpowder, the polarity of the loadstone, playing-cards, printing, &c.—all were made in Eastern Asia; all were unheard of in the West. Communication took place; it was continued for a century and a half; and, ere another century had elapsed, all these inventions were known in Europe. Their origin is veiled in obscurity. The region where they manifested themselves—the men who produced them—are equally a subject of doubt. Enlightened countries were not their theatre. It was not learned men who were their authors; it was common men, obscure artisans, who lighted up, one after another, these unexpected flames."

Mr. Fleming has not been altogether judicious in drawing up his narrative. He is somewhat given to bookmaking. Details of no importance are often recorded at tedious length. Remarks, really sound and good, are followed by unmeaning platitudes, and hardly any subject is dismissed without snatches of poetry. By weeding his book of such and similar objectionable matter, and relying more upon the real interest springing from the nature of the subject, a less bulky but even more acceptable volume than the present might have been produced; and those who accompany these "two adventurous Britons, for nearly 700 miles among a people to whom the existence of such a place as Great Britain was unknown," would

have been more pleased than they will be with the story of their exploits.

A History of England during the Reign of George the Third. By William Massey, M.P. Vol. IV., 1793–1802. (Parker, Son & Bonn.)

THE genius of Commonplace might have written his name on the title-page of this volume. Mr. Massey, we suppose, calls himself a Liberal, and he represents in Parliament the decidedly Radical constituency of Salford. But in this volume he appears without either strong opinions or distinct personality. The style is smooth, slippery and weak; the matter, for the most part, old and worn; the judgment dull, timid and safe. The book is wanting in dash, fire, originality, acumen, knowledge and liberality. In fact, it is a poor book.

Perhaps the most curious fact about this new Radical history of England during the reign of George the Third is the want of liberality. In the hot old times of Pitt and Castlereagh, while we were at war with the French, it was a pardonable sort of vice to traduce their best men, to misrepresent their best actions. We hated them, and made no puerile profession of being just and impartial. Not only were we in conflict with their fleets and armies, their admirals and generals; we were engaged in a deadly strife against their ideas, their religion, their literature, their science and their institutions. If hate, and all that follows in the train of hate, can ever be justified, it is in the moil and hurry of such mortal fights as began at Dunkirk under the Duke of York, and ended at Waterloo under the Duke of Wellington. What Nelson was on the quarter-deck, we had a right to expect Scott would be in his book-room. To allow the French people a single virtue or their Revolution a single merit, might have abated one pulse of the rapid beating of the national heart against France. To write down the enemy was good policy as well as good patriotism. For abuse there was a ready market, for praise there would have been none. While the Army of England occupied the heights of Boulogne, or the memory of Fleurus rankled in our veins, a writer who attempted to be just and philosophical, who tried to put himself at the enemy's point of view, and to regard the contending nations with the equanimity of a judge, would have found nobody in England to applaud his impertinent tale. But those days of effort and peril, of glory and defeat, have long since passed away. Men of a liberal education can now see the social and scientific fruits of the Revolution, admire the heroism which repelled the Continental armies,—admit the incorruptibility of Robespierre,—applaud the eloquent outbreak of the Girondists,—and allow the military genius of Napoleon. People have become just to their great antagonists of another age. A writer of Liberal principles has, therefore, no need to mimic the style of Scott or Adolphus. He may do all proper homage to a gallant and noble foe, without fearing to weaken the defences of his country or relax its patriotic spirit. It is in this wiser mood that nearly all our historical writers now take up the pen.

Mr. Massey is an exception. With him, the Revolution seems to be a thing accursed. Burke was not more violent in his abuse of that Revolution than the Member for Salford. "Few persons will be disposed to think any terms of abhorrence too strong as applied to the bloodthirsty miscreants who were concerned in the murder of the King of France." This language will appear somewhat strained and comical in a writer who professes to be a disciple of Sydney, Locke and Fox. We do not

know that Filmer himself would have gone further in ferocity of denunciation than the Radical writer. The revolutionary people are always in the wrong; the insurgents who oppose the nation are always in the right. If a city rises against its government, it is, in Mr. Massey's phrase, a brave city, a loyal city, a devoted city; and the soldiers who repress the rising are base, cruel, ragged miscreants. M. Laroche-Jacquelein might have penned this sentence about the conquered Vendéans:—"The fate of these generous rebels, abandoned almost without an effort to the vengeance of their infuriated tyrants, deterred others from following their example." In the mouth of an English gentleman such words are not only illiberal, but indecent. The "generous rebels" were the countrymen of their "infuriated tyrants." The rebels were rebels—in arms against their own government. How should we deal with a foreigner who interfered in our domestic quarrels? Should we think M. Guizot, for example, justified in speaking of our Roundheads and Cavaliers in such terms? In Mr. Massey's view, the Toulonese, who received a foreign garrison into their port, were "the noblest people that ever rose in the cause of freedom." It is the same everywhere. "The brave Royalists were closely pressed by the savage legions of the Republic." Mr. Massey writes of France as Hyde might have written of England. Compare the partisanship of this next sentence with the most violent passages of Clarendon:—"The brave Lyonese were overpowered, and subjected to all the horrors of a ruthless military execution. The Vendéans made a desperate struggle, and were promised assistance by the English Government; but before their tardy succours could arrive, the struggle was at an end. The devoted peasantry with their leaders were scattered and destroyed by the disciplined bands of the republic; and, in the desolation of this noble province, the hope of France was for the time extinguished." Such a passage might have been excused in a Chouan despatch; it is simply ridiculous in a Radical history of George the Third.

The best parts of Mr. Massey's book are those which relate to the civil business of the reign—to the trials of Hardy and Tooke, and to the state of Ireland before the union with Great Britain. Even here he is not compact or lively or fresh; but much of the old material is brought together, and a pretty accurate general view of our home politics is suggested. A portrait of Horne Tooke is perhaps the best bit of literary work in the volume:—

"Horne Tooke had, for many years, been the terror of judges, ministers of State, and all constituted authorities. He was that famous Parson Horne who attacked the terrible Junius, after statesmen, judges and generals had fled before him, and drove him back defeated and howling with his wounds. He it was who silenced Wilkes. Some years afterwards he fastened a quarrel on the House of Commons, which he bullied and baffled with his usual coolness and address. Horne Tooke, indeed, was no ordinary man—a profound scholar, and an accomplished man of the world, he could hardly have failed to attain eminence at the bar and in the Senate, had not a perverse destiny imposed on him the indelible orders of the Church. He applied himself to the study of the law, but the Inns of Court determined that a clerk in orders could not be admitted to the profession of the law. He obtained a seat in the House of Commons, and, for the same reason, an Act of Parliament was passed to disqualify him. The disappointments, for which a man of talents and ambition could find no compensation, embittered his spirit, and determined his character and conduct in a direction to which they did not naturally tend. His powers of ridicule and satire, which the restraints of professional or political life would have kept within

bounds, became the instruments by which he sought to avenge himself on society for the wrongs he had endured. He was as little suited for the vocation of demagogue as for that of a parish priest. He might, perhaps, have accommodated himself with outward decency to a profession which he hated as Swift had done before him; or he might have found that the conscientious discharge of the duties of his sacred calling was not incompatible with the most brilliant reputation, as Sidney Smith subsequently proved. But Horne Tooke was deficient in some of the essential qualities of a popular leader. He neither felt, nor could with any plausibility simulate, a hatred for the upper classes, because his habits and tastes were those of a scholar and a gentleman. For the same reason, he could not stoop to flatter the mob. While he abused the House of Commons as a sink of corruption, he talked about the hereditary nobility being disgraced by the intrusion of that 'skip-jack, Jenkinson,' in the style of a Talbot, or a Howard. He denounced the Opposition, on whom many of the democrats affected to fawn, as 'a pack of scoundrels,' like the Ministerial party; and declared that both parties were equally combined to cajole 'that poor man the King,' and to deceive the people of England. But he never expressed any desire that these scoundrels should be superseded by his friends of the Constitutional and Corresponding Societies."

Of his behaviour in court, when put on trial for his life, we also read:—

"The prisoner himself, however, so far from being moved by his dangerous position, was never in more buoyant spirits than when he was tried for his life. His wit and humour had often before been exhibited in Courts of Justice; but never had they been so brilliant as on this occasion. Erskine had been at his request assigned to him as counsel; but he himself undertook some of the most important duties of his advocate, cross-examining the witnesses for the Crown, objecting to evidence, and even arguing points of law. If his life had really been in jeopardy, such a course would have been perilous and rash in the highest degree; but nobody in court, except, perhaps, the Attorney and Solicitor General, thought there was the slightest chance of an adverse verdict. The prisoner led off the proceedings by a series of preliminary jokes, which were highly successful. When placed in the dock, he cast a glance up at the ventilators of the hall, shivered, and expressed a wish that their lordships would be so good as to get the business over quickly as he was afraid of catching cold. When arraigned, and asked by the officer of the court, in the usual form, how he would be tried? he answered, 'I would be tried by God and my country—but—' and looked sarcastically round the court. Presently he made an application to be allowed a seat by his counsel; and entered upon an amusing altercation with the Judge, as to whether his request should be granted as an indulgence or as a right. The result was that he consented to take his place by the side of Erskine as a matter of favour. In the midst of the merriment occasioned by these sallies, the Solicitor General opened the case for the Crown."

Of course he was acquitted. Mr. Massey thinks that acquittal saved the Government from a great peril. Indeed, Mr. Massey's views on the danger of political persecutions are so frank and liberal that one is amazed to find them in conjunction with such wild abuse of the French and their Revolution. For once, Mr. Massey leaves behind him the age and the school of Filmer. Speaking of the failure to convict Hardy, Tooke, Thelwall, and their associates, he says:—

"If these twelve men, or either of them, had been brought to the scaffold, the consequence would have been disastrous. Disturbances in all the great towns, a rising in Ireland, dangerous commotions in Scotland, would probably have ensued. An Irish rebellion, already planned, and which broke out under less favourable auspices, three years later, would have afforded full employment to the available military force. The gentry and yeomanry, who were loyal to a man, could probably have suppressed any outbreak in the British Isles; but the English

people are peculiarly jealous of blood shed in civil commotions; they had not yet forgotten the riot in St. George's Fields, in which only some half dozen persons were shot down five-and-twenty years before; the Manchester massacre, as it was called, which took place five-and-twenty years afterwards, agitated the island from north to south, and is yet remembered after more than forty prosperous and happy years. The spirit of the Scottish people, slowly moved, but stubborn and dangerous when aroused, has repeatedly been shown. Government might, and probably would, have been able to maintain its authority; but there can be no doubt that the conviction and execution of Hardy and his associates would have given a fearful impulse to the principles of the French revolution in this country."

This is the light of a more liberal philosophy—a philosophy of the age of Mill. But the moment Mr. Massey has to speak of the French, the old fit of Filmerism returns upon him fierce and strong.

For an example of this fury, not the worst of many, take his account of the first collision between France and England. It arose from the desire of France to open up the navigation of the Scheldt and the Meuse. The Dutch had a treaty-right to close the two rivers; but the French Republic declared that a right to pass up and down navigable rivers was one of the *droits de l'homme*, of which the persons living on their banks could not be deprived by any legitimate act. Of course, this doctrine was not acceptable to formalists, either in or out of office. The old theory was that conquest abrogates all rights, and that the conquered have no rights whatever, except such as they can obtain by treaties. It was an infamous theory, though it held sway in every cabinet of Europe, encountering opposition only in the writings of poets and philosophers. It justified those robbers of the Rhine, the Elbe and the Rhone who plundered every boat upon their waters. The French, who in their infancy as Republicans put a good many theories to the test of practical life, brought forward this idea of the necessity for a free people to enjoy a free navigation of the rivers flowing through its territories, even down to the sea, which is the common property of all. It was new; but was it wrong? The Meuse and the Scheldt were the main outlets of several French departments. A right of passage was essential to the trade of an important district. Was it immoral in them to push their freedom so far as a desire to sail on their own rivers to the outlets, even though the Dutch police could plead a claim to stop them by a paper treaty?

A fair historian, who remembers what has since been done by Europe to secure freedom of navigation on the Rhine, the Danube and the Elbe, might have said their claim was against treaty, but not against natural right. He would certainly have refrained from abusing the French for asserting a principle which many good writers had then maintained, and which cabinets and governments are now engaged in discussing. Mr. Massey, however, is one of those easy politicians who, five or six years ago, discovered that the country no longer wanted any reform; and the convenient creed of a Chairman of the Committee of an unbelieving House of Commons clings to the historian of George the Third. He seems, like some other members of the House, to be in a passing phase of bewilderment about many things. During these five or six years of political confusion we have seen some singular conversions of public men. We have in the House of Commons a democratic member defending Austria. We have an advocate of nationalities denying Italian rights. We have a member of the Peace Party hounding on Americans to

slay each other. These inconsistencies, which vex and amaze the more logical politicians of other countries, spring from the fact that few of our public men ever take the trouble to study politics as a science. With most of us, the human interest overpowers the philosophical idea. As a race, we act by impulse, not by logic. A fault detected in a chain of reasoning would not cause us a moment's pain; and we should only smile at an adversary who claimed an advantage over us on the score of our argument being unsound. But we are apt to be much disturbed by facts, and of late some kinds of unpleasant fact have been hard upon us. The second French Empire seems to have disturbed men's judgments of the past; but the temporary hallucination will pass away, when we shall, perhaps, cease to hear writers who profess the principles of Fox and Sydney railing against the French Revolution—the greatest, if the most irregular, stride ever made towards the civilization of the world.

NEW NOVELS.

Giulio Malatesta: a Novel. By T. A. Trollope. 3 vols. (Chapman & Hall.)

Mr. Adolphus Trollope, already well known and well beloved by a large circle of readers for his vivid and vigorous pictures of modern Italian life and society, is again before us. Foreigners are not easily admitted into the inner domesticity of Italian life, and of those few have Mr. Trollope's skill in giving a story about it in a way that is pleasant and interesting to the readers of English novels. At first, when we heard the title 'Giulio Malatesta,' we were afraid that Mr. Trollope had fallen a victim to the ambition of writing a high-class, legitimate, mediæval historical novel, and our hearts failed at the prospect of the stiff ground that would have to be traversed; and we thought, with a cowardly shudder, of the history of the Italian Republics which we should have to take in our course: happily, the Malatesta of the present story belongs to the present time, and he is, we heartily hope, alive and happy at the present moment. 'Giulio Malatesta' is a very interesting story, which is the first, last, and all-including virtue in a novel.

The story opens in 1828 at Boulogne. Two young men, one a rich, handsome, fascinating Marchese Malatesta; the other, the poor, ugly, ill-shaped, stammering, reserved student Varani. The gay and handsome Marchese is using all his eloquence to persuade his companion to consent to serve as witness to a clandestine marriage between himself and a beautiful girl of the lower classes, whom it has pleased the Marchese to honour with—well, with his love. Varani is the friend of the girl and of her mother; he has known her from childhood, and he loves her himself, but, of course, hopelessly and secretly. He objects to the clandestine marriage, but it is the only one the Marchese dare venture upon: that being the case, it is well that some friend of the girl should see that all is right. Varani consents, the plan is arranged, how they are to surprise the Archbishop in his garden, and how, before he can recover from his surprise, the declaration in presence of two witnesses is to be made, which constitutes a binding marriage,—for it seems that, even in the heart of the Church, there exists the possibility of eluding the laws of parents and guardians. It is a mode of marriage which the Church detests and reprobates, but which it does not annul. A declaration before a priest in the presence of two witnesses of legal age constitutes a binding marriage. Malatesta has prevailed on a friend of his own class to be the other witness; explaining, with imp-like candour, that the

whole affair is only a trick on his part to satisfy Maddelena's scruples, it being essential to the validity of such marriage that both witnesses should be of legal age,—and he has taken care to ascertain that Varani wants six months of being twenty-one. The promising young Marchese glorifies himself for his craft in throwing the flaw of the marriage on the girl's own friend and witness, so that no cause of blame or complaint can lie with him, and he will be left free to marry the noble lady destined to unite the estates of her family to his. The sketch of Maddelena herself and of Maddelena's home is very clever. Maddelena is charming; she has not, could not have, a suspicion of evil. The marriage takes place according to the lover's programme. The old Archbishop, angry as he is at having been entrapped, declares that the marriage is lawful, and not to be annulled by man. Maddelena goes away happy; the other witness escapes, to avoid consequences. Varani is ordered to attend before the Archbishop the next day; and then the fatal flaw to his testimony becomes apparent: his despair may be conceived on finding that to him is due Maddelena's ruin. All Mr. Trollope's churchmen are well drawn, and look like types of their class; and the remedy made and provided for cases of fraudulent marriage like the one in question is a type of the government of the Roman Catholic Church in general. The reader need not be told that the young man who, in the high tide of his passion, could so craftily provide for his own escape from all inconvenient consequences, was not slow to take advantage of his own act. At the end of six months, Maddelena is, at the same moment, abandoned and undecieved as to her position. Her "husband" espouses the noble lady provided for him. Maddelena is "provided for" by the old Marchese, her husband's father, who sends her to a convent, and undertakes the support of her baby, which grows, thrives, and is kept in total ignorance of his mother; but is allowed to enter the world as an illegitimate Malatesta.

The story of this ill-starred baby, christened Giulio, is the subject of the remainder of the novel. It is the life of a modern Italian youth such as the Revolution of 1848 brought to the surface. He enters the Sardinian army and distinguishes himself. The incidents of history are told more with reference to their personal bearing on the various characters than as passages in the chronicles of Italy; and as the story is, in spite of all its perilous chances and changes, light and pleasant, it was necessary to make the interest hang on the private fortunes of the actors, and not on the tragical elements of the Italian struggle for liberty: but the reader is throughout made sensible of how much he escapes, for between convents, priests, agents of police and prisons, the dangers and abuses of all kinds make the reader tremble. The influence of convent life is very well painted; and Stella, the heroine of Giulio, is a brave, high-spirited little creature, though even she almost succumbs to the treatment, and except in a novel must have done so. But Mr. Adolphus Trollope is merciful,—we shall not tell the reader who she is, nor shall we hint at the ending of the story; it is enough to say that poetical justice and generosity are both consulted, and the end is so pleasant that we can only wish all parties the blessing of continuance.

A Dark Night's Work. By Mrs. Gaskell. (Smith, Elder & Co.)

'A Dark Night's Work' is unfitted for a serial story, and has, been found a wearying morsel from week to week. There is only one situ-

ation approaching to the dramatic, and the frequent fall of the curtain damped the interest when the story was "continued," as wine becomes flat when the bottle is corked and uncorked day after day. 'A Dark Night's Work,' when read as a whole, has some of the delicate, quiet interest which Mrs. Gaskell knows how to impart to any story she undertakes to narrate. It is a story of the brave and faithful guardianship of a secret, which, if discovered, would involve a father's trial for murder, with only a faint chance that a mercifully-disposed jury might call it manslaughter. In this nucleus of the story, we imagine that Mrs. Gaskell has dealt with an authentic incident, and has only supplied the frame of circumstances which led up to it, and the description of the characters who were concerned in the sad and fatal coil. The characters are nicely, but not vigorously, drawn. The insidious growth of the flaw in the young man's character, originally caused by the error of parental vanity, and the gradual deepening of what, at first, seems like a light mist, into a deadly rust, eating into all manliness of character, until the bright, joyous, gracious young man becomes a reckless, drunken driver, is subtly indicated. The passionate love of Ellinor for her father is well developed in the early part of the story, and it prepares the reader to understand and sympathize with her devotion and self-sacrifice to that father, when he has become an object of pity and contempt.

It is as painfully depressing a book as we ever read. The rash act, the work of a moment, which loads the father's life with guilt, and blights the daughter's youth and life for ever, is extremely well told, and the whole account of that terrible "dark night's work" is described in Mrs. Gaskell's best style. The hurried resolve to conceal the dead man's body,—the fatal mistake which those concerned discover it to be when too late, and the dreary consequences which follow on the concealment, are natural, but they become, in time, oppressively monotonous. The girl, with all youth and energy crushed out by her participation in her father's secret, beginning in her bright beauty and gradually clouding over into a sad, broken-down, grey-haired, patient woman whilst yet in her prime, deserted by her affianced husband (for whom Mrs. Gaskell offers too many apologies in mitigation of the reader's judgment),—the long, long years spent in comparative poverty and positive stagnation in the dull house looking into the Cathedral Close, with the terror of this dread secret always pressing upon her,—her sorrow and patience—weigh on the reader like a nightmare, but kindle no sense of heroic sympathy: we are very sorry for her, but we cannot hold out in persevering sympathy for eighteen years. Mrs. Gaskell insists, with needless iteration, upon the age and greyness and fadedness of Ellinor's appearance. It may sound selfish, but in a novel at any rate, and we fear in real life also, people must make themselves in some degree interesting, if other people are to keep up a sympathy with them. Mrs. Gaskell makes Ellinor very good and very sad, but she also makes her heavy in hand, and the reader grows weary and out of patience with the unmitigated dullness of her life. The discovery of the secret proves nearly fatal to the faithful servant who has been involved in the knowledge of it: he is tried and condemned for the murder; Ellinor is abroad, and the old man, to whom the secret has been almost as heavy a burden as it has been to Ellinor, is willing to die, partly from fidelity and partly from weariness. Up to the very last, Ellinor tries to hold the secret from public knowledge. She goes to the Judge who

tried the old man, and who is no other than her old betrothed, and to him she reveals the facts. The interview is well and delicately told. Before signing her deposition, however, Ellinor stipulates that the truth shall not be made public, and the Judge promises that no one but the Secretary of State shall see her statement: in this we cannot help thinking that he transcended his powers. The true version of so remarkable a trial would certainly have been imperatively called for by the public, when circumstantial evidence so strong that the jury did not even recommend the prisoner to mercy had to be set aside altogether. The culmination of the story is not effective: too much space and detail are given to Ellinor's tremors and anxieties, and the difficulties of her journey to England. It is not a healthy story; it does not brace up or stimulate any brave or heroic impulse, and we like it less than anything Mrs. Gaskell has yet written.

The Family Alliances of Denmark and Great Britain from the Earliest Times to the Present. Illustrated by Genealogical Tables and a Plate of the Arms of Denmark. By J. G. Nichols. (Nichols & Sons.)

WHEN Mr. John Nichols has a subject to his liking, few men know how to treat it more successfully. He does not affect to amuse, but to instruct. The amusers of the public have already put forth "ephemeral brochures" replete with blunders incidental to those who write in haste. We are further told that "trustworthy authorities in such matters are not at every one's elbow." The arms of Denmark, especially, have never been delineated with any approach to "accuracy"; there is "a deficiency of heraldic skill in our artists," and a shield of the Danish arms in an illustrated newspaper is "an abortion." A plate of the arms of Denmark forms the frontispiece to this little work; under the arms are suspended the two collars of knighthood, the Dannebrog (or Danish banner of Waldemar) and the Elephant; and we find that the cross suspended from the collar of the order in this plate is not that of the Order of the Dannebrog, but the picture of one worn by Queen Dagmar. We confess to a smile on discovering thereby that a clever man may stumble with the most "trustworthy authorities at one's elbow," and also on reading the author's acknowledgment that the "misapprehension was discovered too late to be amended."

A thousand years ago, to speak in round numbers, we wedded with the Dane. An English princess, Emma, was the wife of Frode the Sixth of Denmark, and their great-grandson, Gorm, also married an English princess, with a name which we have lately been accustomed to think was Danish, namely, Thyra, granddaughter of Alfred the Great. This English Thyra was, on the other hand, grandmother of that King Sweyn who crossed over to Kent, devastated the coast, left a name to a district, and bequeathed his son Canute to rule everything but the tides, which Canute knew were subject to other influences than his.

There were no other intermarriages between the two peoples till Philippa of Lancaster, in 1402, was betrothed to Eric the Ninth, great-nephew of the renowned Margaret, surnamed Dagmar, or "Day-bright," on whose brows had rested the triple diadem of Denmark, Sweden and Norway. Philippa was one of the daughters of our Henry the Fourth. The betrothal was performed with much ceremony at Berkhamstead, whose royal ruins have recently become the property of Earl Brownlow. The bride was nine, the bridegroom five years her senior. She was kept at home four years longer. At the

mature age of thirteen she set forth, royally attended, to take her place at the head of the house of Eric, but she had a long wayfaring before she reached her destination. Above two months were consumed in crossing the sea between Norfolk and Helsingborg, and on the 26th of October, 1408, the truly young couple were made one, in the cathedral of the then metropolis of Sweden, quaint and ancient Lund.

Our English Princesses have not been fortunate in their Scandinavian alliances; and no one of them merited the hard destiny which befell them. Northern poets, however, have done Philippa justice, and she is spoken of as Eric's good angel and the beloved of the North; a little given to meddle with politics, yet never interfering without benefiting those for whose welfare she had entered on mediation. Her wayward husband was often absent, and in his absence she became Regent, by law. On one occasion, he wandered forth in disguise as far as Jerusalem, and was nearly entrapped by the Sultan, who, by missing him, lost a ransom. In that absence she in person defended Copenhagen successfully against the besieging Holsteiners; and had she been content with the triumph all would have been well, but she sent the Danish fleet to attack Stralsund, in which enterprise it was destroyed. Eric on his return forgot his wife's victory, remembered only the defeat, and treated Philippa with a cruelty which is said to have hastened her death. Legend has, we think, been free with this story. It is certain that the English Queen of the North died of the consequences of giving birth to a still-born heir to the three crowns, after a married life of nearly a quarter of a century, — in 1430.

In earlier times, Scotland and Scandinavia had made matches in which the royal blood of England went for something. Thus, Margaret, the daughter of Henry the Third, married the Scots king Alexander, and their daughter espoused Eric the Second of Norway, and became the mother of that "Maiden of Norway" whom Edward the First had destined, but in vain, for the bride of his weak son and successor. That marriage with Eric brought the Hebrides under the Scottish Crown for an annual payment of a hundred marks. The Scottish kings got shamefully in arrear with their rent, and after disputes which threatened to end in bloodshed, a marriage took place between James the Third of Scotland and Margaret, the daughter of Christian the First. By the marriage-treaty, all arrears of the rent of the Hebrides were cancelled, and Christian pledged the Orkney and Shetland Isles to Scotland, for the payment of his daughter's dowry. The dowry was not paid, and the pledge is unredeemed; but a native Udaller has signified pretty plainly, in a book we reviewed some time since, that if England be not more tolerant of old Orkney privileges, the islands will strike colours and pay allegiance to kings beyond the sea!

Till the Princess Anne married George of Denmark, England had no more alliances with the North, but we once nearly approached that consummation. Christina, the daughter of Christian the Second, and widow of two Dukes,—of Milan and of Loraine-and-Bar, was wooed by proxy for Henry the Eighth; but this daughter of Denmark was sharp-witted as well as sharp-sighted, and declined the royal offer, on the ground that she had only one head and wanted to keep it!

Then from the North came the offer of Eric, son of the great Gustavus, to Elizabeth, who combined incivility and coquetry with her ultimate refusal of that Lovelace among royal

woosers. To the most romantic marriage which the luckless Eric ultimately contracted, Mr. Nichols does not allude, though out of the 'Arabian Nights' there is nothing in the loving way to which it bears resemblance.

To England, our James the First brought the Danish bride Anne, whom he had wooed and wedded in her own country, and conducted, spite of storms and suspected witches, to Scotland. After this couple became sovereigns in England, the people here called Anne's especial residence in the Strand, Denmark House, which before and since the Danish Queen's death has been known by the name of the Protector Somerset, "though he scarcely saw it (the original) building completed." It is worthy of being noted that when her brother Christian the Fourth came over here to visit his sister in 1614, he dined at an ordinary in Aldgate, and then drove to the Strand "in a hackney coach."

Between Prince George of Hanover and Prince George of Denmark, the Princess, afterwards Queen Anne, chose or accepted the latter; but of the fruitful union no child survived. The marriage which gives cousinship, though remote, to the present Prince and Princess of Wales, was that of the unhappy Louisa, youngest daughter of George the Second, to Frederick, subsequently the fifth Danish king of that name. One of the children of this marriage was Louisa, grandmother of Prince Christian of Denmark, the father of our recent royal bride.

Two of our princes stand on record as having declined or avoided these northern alliances,—namely, Henry of Agincourt, when Prince of Wales, and William, Duke of Cumberland, son of George the Second. The Duke would hardly have known how to extricate himself but for the wit of Sir Robert Walpole, who advised him to express his willingness if his royal father would entertain a similar willingness to bestow a handsome "settlement." This course proved effective.

Finally, William's brother Frederick left a posthumous child, Caroline Matilda, who wedded with Prince, afterwards King, Christian the Seventh. She was even more unhappy in Denmark than her Aunt Louisa had been; and on a charge of being on too intimate terms with Count Struensee, who was beheaded, would probably have fared ill, but for the intervention of her brother George the Third, in consequence of which she was permitted to withdraw to Zell. The ballad-mongers took up the exaggerated story, and yelled rhymed lies through our highways; and Walpole sneered at the bad taste of theatrical managers who could play 'Hamlet' before royalty,—a piece in which one of the heroines is "an adulterous Queen of Denmark"!

Our present Princess of Wales was born at Copenhagen, in 1844, and furnished with six baptismal names. A quotation from a letter (apparently a private one) written in the summer of 1862, by Sir John Bowring, says, "The young Prince saw her first in Germany, *stealthily*, his presence not being announced to her. The Prince afterwards met her at the Duchess of Cambridge's villa, near Frankfort, and the impression made was deep and lasting." Of this scrap of gossip, the first sentence is absurd and mischievous. We place no belief in it. Sir John was, doubtless, deceived. All manliness of character is taken from the lover who is described as "*stealthily*" peeping at his future and unconscious lady; but there was no lack of manliness, we may be assured, in any step of the courtship made by him who is now the husband of the lady for whom, as we once before remarked, there is a homage of love in every English home.

However, of mere gossip this is the only item in a book full of solid and serious historical matter; and which not only well serves as a compendium of Danish history, but which renders intelligible, in a few words, even that perplexing matter—the Schleswig-Holstein question.

Social Pictures from England—[*Sociale Bilder aus England*, von Julius Althaus]. (Hamburg, Nestler; London, Thimm.)

Herr Althaus passed through several phases before he attained the stand-point from which the subjects of this book are contemplated. When first he reached London he was struck with admiration at the magnitude of things in general; he was pleased to miss the political police, which he had seen too often at home; he observed with satisfaction the different workings of a self-government, which had about it so little of the paternal character; he marvelled much at the *apparently* uncontrolled liberty of the press (one feels there is a solar spot in this word "*apparently*"); the luxurious manner of living was gratifying to his taste. Compared with the mighty land on which he had set foot, his native Germany appeared paltry, pitiful, and above all, unfree. At least these are the reflections which he describes as natural to the German visitor, who has been uncomfortable at home, and there is no doubt that he is thus speaking of himself in the third person.

When the first dazzle was over, Herr Althaus rubbed his eyes, and found that England was not so pleasant as it appeared at the first glance. The magnitude of things in London, which had seemed so admirable, comprehended length of distance between different quarters, and this harmonizes ill with the German notion of comfort. In a short time he grew so much accustomed to personal liberty that it lost its exceptional value. He took it as a matter of course, and the mere absence of restraint produced no more pleasure than freedom from a forgotten toothache. With respect to the habits of daily life, he grew morbidly inconsistent, finding the English existence sometimes too exciting,—sometimes too monotonous. Then he discovered that the English people are not the most affable in the world, and that one might live among them a long time without being admitted to any close intimacy: in a (Teutonic) word, there was a lack of the German "*Innerlichkeit*." Even the newspapers grew unpleasant; they turned out to be distinguished rather for licence than for liberty; and as for the servility of editors towards men of certain ranks and conditions,—never was such flunkeyism seen in Fatherland. Herr Althaus felt decidedly uncomfortable, and sighed after a couple of paradises, that are only familiar to the more curious among Continental tourists,—the Casino at Glauchau and the Reessource at Detmold.

However, on mature reflection, he arrived at the conclusion that he had gone from one blunder to another, and that if at first he had been too ready to take all that glittered for gold, he had afterwards passed into the opposite extreme of deciding that a metal could not be gold precisely because it glittered. He therefore settled down midway between prostrate admiration and cross depreciation, and being thus comfortably placed, wrote his book '*Sociale Bilder*,' for the purpose of introducing German readers into the different circles of English life. If our readers, from the mere title of the work, guess what the "social pictures" are like, clairvoyance is no humbug. They do not represent clubs, or Derby-days, or oyster-shops, or Casinos, or May Meetings, or

Mechanics' Institutes, or Lord Mayors' dinners, or social tea-parties. They are simply a series of biographies, in which Lord Cochrane the naval hero, Havelock the soldier, Robert Owen the socialist, De Quincey the *littérateur*, Sydney Smith the clergyman, Zachary Macaulay the abolitionist, and Thomas Babington Macaulay the statesman and historian, are successively presented to the reader. The biographies are clearly and pleasantly written; and the author gives a great deal of information in a short compass, without approaching that dry manner which is too often the concomitant of brevity; but as his material is necessarily derived from books, and not from personal experience, we cannot see that the severe London training, in the course of which Herr Althaus was successively fascinated, distressed and rectified, was absolutely requisite for its production.

Playtime with the Poets: a Selection of the best English Poetry for the Use of Children. By a Lady. (Longman & Co.)

Beautiful Poetry. 6 vols. (Crockford.)

It would appear a greater difficulty to obtain a "selection" of poetry fitting its place and fulfilling its purpose than it is to get the poetry written. One editor will possess a taste so peculiar as to exclude a song like Bishop Still's jolly 'Back and side go bare' from a collection of our best English lyrics, and coolly leave out two stanzas from Hood's perfect little poem called 'The Death-bed.' Another has too dainty a stomach for the lines—

Love in it, drink of it,
Then if you can;

and so they are cut out of 'The Bridge of Sighs.' 'Playtime with the Poets' is an elegant volume, the outward appearance of which would make us desire to say the very best for a bonny-looking book. It is beautifully printed, admirably bound, and just adapted in size and shape for the hands of children. Unfortunately, it is wretchedly edited. The want of knowledge is unpardonable. The "lady" starts nearly on the right track for producing such a book in giving every prominence to the poetry of action and incident, only she does not keep to the track. Then, we suspect, she soon loses sight of the sort of poetry a boy would best appreciate, and obtrudes her own taste, which is too sentimental. It leans too much in the direction of Mrs. Hemans, L. E. L. and Longfellow. We need something more robust for English boys—more of the blue breezy sea and the merry greenwood. Something about Robin Hood would have been acceptable. Ferguson's 'Forging of the Anchor' would have supplied better stuff. Browning's 'Pied Piper' should certainly be in any collection of poetry intended for children at play-time. But the omissions are numberless. Here is neither Hood's 'Parental Ode,' 'I Remember,' nor 'The Dream of Eugene Aram,'—Browning's 'Home Thoughts,' nor 'Incident in the French Camp,'—Allingham's 'Up the airy Mountain'; neither of the 'Cuckoos,' Wordsworth's nor Logan's, Tennyson's 'Lady Clare' nor 'The Brook.' And if it was necessary to go to the German, why select such hackneyed translations as those from Bürger, when there remained such poems as Rückert's 'Ride round the Parapet,' Freiligrath's 'White Lady,' the old popular ballads of 'The Fisherman's Hut' and the 'Great Crab in the Lake Mohrin,' and scores more, fresh and full of attraction? Any complete collection of the kind should include 'The Fairy Thorn,' by Ferguson, 'John Tod,' by the Baroness Nairn, 'The Child-Mother,' by Mr. Macdonald, and 'The Wife of Usher's

Well,' with at least two or three specimens of William Blake, who was half an angel and half a child imperfectly mixed in manhood, but a dear lover of children and a writer for them. The editor of this volume is either very careless or ignorant with regard to names. "Cullen Bryant" is not the name of any poet we know, and it makes us wonder whether he be a son of "William Cullen Bryant," whom we all know. Nor is "Arnold" a sufficient signature to a poem. There are at least three "Arnolds." 'The Grave of the Greyhound' is attributed to "Spencer." Does not the "Lady" know that there is but one "Spencer" in English poetry? There was an Hon. William Robert Spencer, a dandy who wrote *vers de société*,—the man of whom Rogers tells the anecdote. Moore wished that Spencer would bail him when in custody after the duel with Jeffrey, and Rogers says Spencer did not seem much inclined to do so, remarking that he could not very well go out, for "it was already twelve o'clock, and he had to be dressed by four." This was the Spencer who wrote 'The Grave of the Greyhound.' Why has the present editor left out the last stanza of the poem, with which the story properly concludes? Without it the title is inappropriate. Why also has she sometimes ventured on new readings which are so evidently all her own, as in the ballad of 'Sir Patrick Spens'? Such lines as these—

The king has written a letter broad.

Oh, who is this hath done this deed,
To tell the king of me?

While I go up to the tall topmast
To try if I can't see land.

sound inexpressibly ludicrous. The editor has been trying to English the Scotticisms, and has made sad work of it. Here is the chief example in the opposite case:—

And there lies good Sir Patrick Spens,
With the Scots Lairds at his feet.

"Lord" and "Laird" are as one to the editor; and here she has given the Scotch the benefit of their own language, not knowing the difference betwixt the Lords of the Scottish court and the Lairds who are farmers on their own lands. If possible, the version of 'Auld Robin Gray' is still worse. We cannot do better than print most of this, as a warning to all meddling editors not to make a series of alterations in lines which they do not understand.—

When the sheep are in the fauld, when the kye come hame,
When a' the weary ward to quiet rest are gane;
The woes of my heart fa' in showers fra' my ee,
Unkenned by my gudeman, who soundly sleeps by me.

Young Jamie loved me weel, and sought me for his bride,
But saving as crown-piece he'd nothing else beside.
To make the crown a pound, my Jamie gaed to sea;
And the crown and the pound, O they were baith for me!

Before he had been gane a twelvemonth and a day,
My father brak his arm, our cow was stown away;
My mother she fell sick—my Jamie was at sea;
And Auld Robin Gray, oh! he came a-courting me.

My heart it said na, and I looked for Jamie back;
But hard blew the winds, and his ship it was a wrack:
His ship it was a wrack! Why didna Jamie dee?
And wheresome am I spared to cry out, Woe is me?

My father urged me sair, my mother didna speak,
But she looked in my face till my heart was like to break.
They gied him my hand, but my heart was in the sea;
And so Auld Robin Gray, he was gudeman to me.

I hadna been his wife a week but only four,
When mournin' as I sat on the stone by my door,
I saw my Jamie's ghaist—I couldna' think it he,
Till he said, "I'm come home, my love, to marry thee!"

O sair, sair did we greet, and mickle did we say;
As leas we took, nae mair—I had him gang away.
I wish that I were dead, but I am no like to dee;
For O, I am but young to cry out, Woe is me!

I gang like a ghaist, and I carena much to spin;
I darena think o' Jamie, for that wad be a sin;
But I will do my best a gudie wife aye to be,
For Auld Robin Gray, oh! he is sae gudie to me.

There are various versions of this ballad, and the author herself in later life made some corrections and changes, which were no improvements, but only did for the poem what Burns in his second version did for the 'Banks and

braes o' bonny Doon.' But if Lady Anne Lindsay had written the above copy, her ballad would never have sunk so deeply into the human heart. Had twenty-four cockney tailors crossed their legs and leaned their heads together over it, they could not more effectively have turned its tears of pathos into a little salt water. The editor has never felt the music of it, which pauses so touchingly on certain accented words, as though the voice choked while the misery looks out of the eyes with a yearning wistfulness. So she ekes out the lines to the regular jog-trot measure with spriggish exclamations, that are only fit for "sweetly pretty" poetry.

And wheresome am I spared to cry out, Woe is me!

Is not that mixture of Little Bethel cant and slang enough to give us what the Scotch call a "scunner"? Again, the line,

For O, I am but young to cry out, Woe is me!

is given in place of the line in one version,

For tho' my heart is broken, I'm but young, woe is me!

with all the pathos gone. We point out one more specimen of "gushing" young-ladyism in the last line, and need not seek any further the beauties "to disclose," unless it be to remark, that in the very first line the "Lady" has strayed into the Ettrick Shepherd's song, 'Come all ye jolly Shepherds.' Children would have felt the natural touches of this poem more than the editor has done, being nearer to nature.

What are we to make of such a reading of Shirley's stately poem, called 'Death the Leveller,' as this?—

The glories of our birth and state
Are shadows, not substantial things;
There is no armour against fate;
Death lays his icy hand on kings.

Sceptre and crown
Must tumble down,
And in the dust be equal made
With the poor crooked scythe and spade;
All heads must come
To the cold tomb;

Only the actions of the just
Smell sweet, and blossom in the dust.

—This is the march of the measure destroyed, and three perfect stanzas knocked into nothing. Again, in 'Robin Goodfellow,' the opening lines, beginning "From Oberon in Fairyland,"—so well known by Stevens's superb setting,—are left out. The poem is here attributed to Ben Jonson, although he is only the supposed author. Our editor, however, is not particular to a shade: she boldly ascribes the anonymous poem, called 'The Fairy Queen,' from the 'Mysteries of Love and Eloquence,' 1658, to Shakespeare. This is the poem from which Horsley has set 'Come follow, follow me.' It is one of several that were written in the wake of the 'Midsummer Night's Dream,' under the fairy influence. But there is no probability whatever of its being Shakespeare's.

Possibly there may still be merit enough in the book to recommend it to the uncritical community for which it was published; but if such a selection be worth making, it ought to insure the best workmanship possible, and the result should be a sort of celebration of the wedding of true taste and complete knowledge. The only verses in this volume which we have never met before are the following:—

BABY SLEEPS.

The Baby wept;
The Mother took it from the Nurse's arms,
And hush! its fears, and soothed its vain alarms,
And Baby slept.

Again it weeps;
And God doth take it from the Mother's arms—
From present griefs and future unknown harms,
And Baby sleeps.

'Playtime with the Poets,' however, compares favourably with the six volumes called 'Beautiful Poetry.' This work is stated to have had the advantage of several editors. And most assuredly no one editor could have contributed

all the blunders and mistakes. Such a heap of rubbish and gems was never before swept up. Such a display of folly and presumption we do not remember in connexion with English poetry. Many of the poems are printed twice; at first we fancied this might be a way of marking those which were considered particularly good, but we found the same method adopted with those which were particularly bad.

The collection seems to have been made up of cuttings from old newspapers, magazines and annuals, with no knowledge of authors and their works. The errors and blunders are amazing. Here is one prime specimen. The note is so good that we give it:—"The Lady's Dream," from an old magazine, where it appeared anonymously. It is an admirable imitation of the style and sentiment of Hood, and the author, *if it was not himself*, ought to achieve as great a fame." That is delicious, coming, as it does, so many years after Hood's poems were collected. Two other of Hood's well-known poems are treated in a similar way. 'The Sailor's Consolation' is attributed to Charles Dibdin instead of William Pitt. This, however, is a common error, though one we should like to see strangled. Of richer flavour is the proclaimed belief that the Author of 'Singleton Fontenoy' is an American! Dora Greenwell is also said to be an American poetess, her identity being absorbed in that of Grace Greenwood. At one time we find Robert Story announced as an American poet, and at another as a Northumberland peasant. On one page we read that Mr. Hedderwick is the author of a little poem called 'Sorrow and Song,' and on another the same poem is set down to an author unknown. A poem entitled 'Believe in God,' which will be found in 'Reverberations,' is called "An Energetic Lyric from 'The Purgatory of Suicides,' by Thos. Cooper." It is needless to state that this latter poem is in the Spenserian stanza, and contains no lyric. John Clare, we here learn, died years ago in a madhouse. This is twice announced; but we fancied he was still in the asylum at Northampton. Dean Alford, we are told, is "one of the most promising of our young poets." There is no need for us to go on enumerating such mistakes as these.

North of England Institute of Mining Engineers—Transactions. Vols. X. and XI. 1861-2. (Newcastle-on-Tyne, Reid.)

WHAT may be called the Curiosities of Coal-mining are occasionally illustrated in the densely technical volumes of these *Transactions*; but to select them and to put them together demand as much labour as hewing a ton of coal. Sometimes a note is all that would interest the public out of many consecutive pages, and every paper read would require to be put into popular form before a single reader out of a coal-pit would peruse it; yet there is much that might be interpreted for all.

On a former occasion we did something of this kind for the Davy Lamp, and we may now make a trial with reference to another topic, namely, the great enterprise displayed in the mining of this field, and the outlay involved.

The pith and power of such enterprise may be shown in one or two striking instances. What is called Murton Pit, not far from Durham, is remarkable for the difficulties overcome in sinking to the coal. In the process of excavation the sinkers encountered probably the largest body of water ever met with in any one mining adventure. The estimated quantities seem incredible. No less than 9,300 gallons of water were lifted every minute, from a bed of quicksand, which lay at a depth of 540 feet

from the surface. This bed was forty feet in thickness, and for its whole extent thoroughly saturated with water. Any person may conceive of the difficulty of sinking through such a quicksand. To encounter and defeat not far short of 10,000 gallons of flooding springs, minute after minute and day after day, might well have appalled any engineer. But Mr. Potter fought the floods with their own weapons; he made use of the vapour generated from water—steam—and added horse-power to horse-power until, in all, he placed steam-engines around that one pit to the extent of no less than 1,584 horse-power. Night and day those pumping-engines were at work in pumping up the floods; cranks, "crabs," and all kinds of requisite engineering were added, and the water was obliged to give in—or, rather, to come out. Murton Colliery is now a thriving concern, and sends up tubs of coal instead of gallons of water, every minute, to the surface. But at what cost was this water pumped out? At an expenditure of no less than 400,000*l.*

It is remarkable that in another sinking for coal, about a couple of miles from the same locality, the same enemy was again encountered, and in a continuation of the same bed of quicksand. The colliery-viewer, however, conducted his campaign so adroitly that he was able to insulate each separate "feeder" of water as it was met with in each stratum of sand and limestone,—so that, while an aggregate amount of upwards of 5,000 gallons of water was met with in passing through the various beds, so cleverly was the whole passage accomplished that at no time were there more than 500 gallons in one minute to pump away. This, indeed, was a quantity sufficient to frighten some; but in comparison with the 9,000 and odd gallons at Murton it was as nothing.

There are pits where, long after coal has been for many years extracted from them, the waters break in and flood the mine. In these instances, again, great enterprise is manifested. In the case of the "drowned" colliery at Jarrow an attempt was made a few years ago to draw off the water, and to resume ordinary operations. But the sum of 22,000*l.* was spent fruitlessly in this attempt, and it was ultimately abandoned without drawing up a single ton of coal. It is, indeed, mortifying to throw more than 20,000*l.* into the dark waters of a drowned mine,—yet there was true commercial daring even in this abortive outlay.

Whence all this subterranean water comes is an interesting question; but scarcely capable of receiving a satisfactory reply. Its amount must be immense to afford nearly 10,000 gallons per minute at one sinking,—and probably it is the accumulation of numberless centuries of surface waters which have percolated through the porous strata. It is always threatening, and never materially diminished, as respects its vast aggregate, by any efforts of man; on the contrary, it is always gaining on man, and filling up his excavations. No less than thirty-six collieries near the River Tyne have been, in mining phrase, "drowned out," or rendered unworkable by an irresistible irruption of water, and after the best main Wallsend seam had been nearly exhausted. These stand in the coal district like closed factories in the cotton towns,—with this difference, that the cotton-factories may be re-opened and busily at work again, while the drowned collieries are probably drowned until the world shall be burnt up. The late Mr. Thomas John Taylor, indeed (of whom we have formerly briefly spoken), devised a plan for drawing off the water from the whole of the drowned pits, and gave notice of his intention to apply to Parliament for an act empowering its execution. Death, however,

overtook him and the plan: he is beneath the earth, and the coal is still below water. Here again was a grand enterprise,—grand, though abortive.

As we have said, unsuccessful attempts, nevertheless, display enterprise. A few others, therefore, may be added to the list. The owners of Haswell Colliery commenced sinking a pit in the quicksand part of the coal-field, and did not give up in despair until they had expended 60,000*l.* A corresponding fruitless outlay was made so far back as 1820, at another colliery. Other similarly disappointing outlays might be named; and the most vexatious part of the whole business is, that sometimes a project is executed successfully, not far from an utter failure. For instance, at a mile to the "dip" of the abandoned Haswell pit, the South Hetton owners sank another, which is now in full prosperity. It is true they paid dearly for their coal, and not much less than 100,000*l.*; but this included four miles of railway.

When such sums of money are named for single collieries, it is not so difficult to understand how some thirty-five millions of money are sunk in the great Northern coal-field, especially, too, when we assign some ten or twelve millions out of the total to railways, and some six or more millions to shipping. This grand total justifies us in claiming a high place for the mining enterprise of this district—not only a high, but the highest place, for where else in the world is there anything at all approaching to it? Amid that uninviting scenery, the ground which men walk over has been deeply undermined; the pent-up waters have been challenged, fought with, pumped up and driven away; ships, docks, harbours, wharfs, railways and stations, manufactories, a forest of tall chimneys, and some 30,000 begrimed labourers have been called as if by monetary magic to this great centre of mineral business. The lazy Tyne, too, once rolling in sluggish solitude through swamps and dense, dank herbage, is now covered with laden vessels, blackened with too liberal contributions of coal, and flanked on either bank with the most ingenious machinery for shipping it. It is even said that the money invested, and to be shortly increased, if necessary, in the improvement of this river for traffic, is not less than three and a half millions sterling.

These are facts which are new to the general public, and they redound to the credit, if not always to the wealth, of the enterprising explorers of coal.

Another highly and generally interesting topic might be popularly represented—viz., the probable duration of this great Northern field in relation to its supplies of coal. The crudest notions are current upon this point, nor indeed does anything like a well-founded opinion generally exist. New light is thrown on the question by the more perfect knowledge which we gradually acquire of the contents of this deposit of mineral fuel. It is manifest that three conditions govern the question; and these are, the amount of available coal now remaining underground, the rate at which it is now being exhausted, and the probability of the increase of that rate in future years. Now, as to the last consideration, the rate of exhaustion has been gradually and greatly increasing of late years. Fifteen years ago, a mining engineer declared that if the annual production of saleable coal in the Northern coal-field should reach 10,000 tons, the beds would last for 331 years only. He was thought to be too hasty a chronologer; but in 1854 another engineer estimated the duration of the supplies at 315 years, while the annual produce was, as then computed, 14,000,000 tons. Should 20,000,000 tons be

raised yearly, the fuel, as he calculated, would be exhausted in 256 years. Now, the annual yield in 1861 was 22,500,000 tons, according to Mr. Hall; and if it should rise to 28,500,000 tons in each year, this great coal-field will be, in effect, exhausted in 177 years. If this annual yield be thought exaggerated, it is said to be only in proportion to past augmentations for the last six or seven years. The same engineer further proceeds to show that by a prevalent practice of giving overweight (in Newcastle chaldrons of 53 cwt., and even 55 cwt.), the estimate already formed may yet further be curtailed, and the duration of the supplies be reduced to 167 years!

This will be a startling estimate to most readers, and to many coal-miners also. The date of exhaustion, so inconsiderately postponed by many to something like one or two thousand years, comes down to hundreds in place of thousands; and our children's children may possibly see the end of the so-called "Wallsend." They may be the first to shiver over a fireless grate in those very houses in which we are now so luxuriously warmed.

The Birds of India, being a Natural History of the Birds known to inhabit Continental India, with Descriptions of the Species, Genera, Families, Tribes and Orders, and a Brief Notice of such Families as are not found in India: making it a Manual of Ornithology specially adapted for India. By T. C. Jerdon. Vol. I. (Calcutta.)

WE have here the first volume of an excellent descriptive catalogue of the birds of India, containing the birds of prey and the perching birds (exclusive of the conirostral division). It is not surprising that such charming objects of nature as those described in the work before us should in the East attract the attention of our fellow-countrymen, especially military men, who have generally much time at their disposal, and who being sportsmen are led on from shooting game-birds to become professed ornithologists, rejoicing in possessing an amusing occupation to kill the ennui attendant on a lazy life in a hot climate. Hence it is that we find that Major-General Hardwicke, Colonel Sykes, Major Franklin, Capt. Hutton, and other military men have done good service to science by their researches in the ornithology of India; but we must not overlook the labours of such civilians as M'Clelland, Hodgson, Horsfield, and especially Edward Blyth, who carried with him to India a more profound acquaintance with the habits of English birds than any other person we have ever known.

An Introduction of forty-five pages gives us a general sketch of the structure of birds, external and internal, with observations on their senses, instincts, migrations and general habits. The author then attempts the difficult task of defining a species and a variety, in the following manner:—

"A species may be defined as a number of individuals closely resembling one another in size, structure and colours, and propagating a like race; or, it may be said to be the whole of those individuals that resemble each other so closely as to lead us to conclude that they may have descended from a common origin. Some add to this that individuals of one species are incapable of producing a fertile offspring when crossed with individuals of another species, but late observations should make us cautious in accepting this character as fixed and unvarying. A variety is considered by some, as one or more individuals resembling certain other individuals sufficiently to be considered identical in species, and yet differing in certain external points of colour, size or form; and these may either propagate individuals precisely like themselves, or

revert to what is usually called the type form of the species. Moreover, they breed freely with one another and their offspring is always fertile."

He adds, however,—

"When such differences are found to co-exist with such a different geographical distribution I certainly prefer the views of those who look on all permanent distinctions of colour, size, structure, &c., as distinct species, and I believe that no change of climate, or food, or other external circumstances will produce any alteration in them or in their descendants if they remain true to each other! and as yet I know of no recorded instance where any well-marked race has produced offsprings differing from their own or tending to revert to a supposed original type. * * * As far as our brief experience goes, geographic distribution is against Mr. Darwin's theory. To give one example, *Malaccocircus striatus* of Ceylon is more allied to *M. Bengalensis* of Bengal than to *M. Malabaricus*, which is spread through a vast region between those provinces. Other examples will occur to the Indian ornithologist."

These remarks are followed by a short but excellent dissertation on classification, which as the production of a thoroughly practical zoologist is worthy of much attention. He here considers that the striking analogies existing between various groups, which have indeed furnished the keystone to the classifications of M'Leay and Swainson, will afford the means of testing thoroughly the Darwinian theory. He adopts the five primary divisions of Vigors, namely, the birds of prey (Raptores), perching birds (Insessores), game birds (Rasores), wading birds (Grallatores), and swimming birds (Natatores), but adds a sixth order, Gemitores, of Blyth, composed of the pigeons. He also proposes a geographical distribution of the country into Northern, Central and Southern India, omitting, however, Assam and Sylhet from the first of these, on the ground that here commences the peculiar Indo-Chinese Fauna, which extends through Burmah to China and Malaya. This we consider a mistake, as the peculiar grandeur of the natural products of these regions merits a place, distinct indeed though it be, in an Indian Fauna. He does not, however, attempt to trace the ornithic peculiarities of these different regions, proposing to give them as a supplement in his second volume. Neither does he furnish us with any details of the general character of Indian ornithology as contrasted with that of other countries.

The descriptive portion of the work is occupied, for the most part, with technical characters and other specific details of the birds contained in the volume, interspersed, however, with life-like sketches of the habits of many of the species. Perhaps the most striking of the Indian birds are the hornbills, which seem well to represent, in the East, the equally strange Toucans of the New World. Of the great hornbill (*Homratus bicornis*, Linn.), he states that—

"it breeds in holes in large trees, and the male builds the female in, by covering the hole in the tree where she incubates with mud (Baker says with its ordure), leaving only room for her bill to protrude and receive food from his. This Major T. R. Tickell, who was the first scientific observer of this most curious fact, 'has seen with his own eyes.' Mason, in his work on Burmah, makes the following statement:—'The female must sit during her incubation, for if she breaks through the inclosure her life pays the forfeit; but to compensate for the loss of freedom, her spirited mate is ever on the alert to gratify his dainty mistress, who compels him to bring all her viands unbroken, for if a fig or any other fruit be injured, she will not touch it.' This I look on as a native story, and as improbable. Fruit forms the only food, in the wild state, of this as of most other Indian hornbills, and it always swallows it

whole, tossing it in the air before swallowing it, and catching it again in its mouth."

The present volume, devoted to the birds of prey and perching birds (exclusive of the Conirostres), contains descriptions of 372 species—namely, 59 Diurnal Raptores and 22 owls; 291 Insessores—namely, 65 Fissirostres, 76 Scansores, 33 Tenuirostres, and 117 Dentirostres. These numbers will sufficiently show the richness of the country in bird species, as there are only in the whole of Europe 35 species of Diurnal Raptores (16 in Great Britain) and 15 owls (8 British); whilst there are only 172 insessorial birds in Europe (including the Conirostres), of which rather more than half are natives of our own islands.

Chronicles of the Monastery of St. Albans. English History of Thomas Walsingham, formerly a Monk of St. Alban—[Chronica Monasterii S. Albani. Thom. Walsinghami, quondam Monachi S. Albani, Historia Anglicana]. Edited by H. T. Riley, M.A. Vol. I., 1272–1381. (Longman & Co.)

FEW and unimportant are the known circumstances of the life of the able writer of this history—the first volume of which, in a greatly improved form, is now added to the list of chronicles and memorials published under the authority of the Master of the Rolls. That Walsingham was a Benedictine monk of St. Albans,—that he was living, useful in his own and agreeable to future generations, at the close of the fourteenth and beginning of the fifteenth centuries,—and that in the latter part of his life he filled the office of Prior of Wymondham in Norfolk,—and his personal tale is told! Of other particulars in reference to him we know none whatever. Even the date of his death has not, hitherto, been ascertained.

But his work, comprising a century and a half of the History of England in stirring and eventful times, is more familiar to scholars than the story of the author. Formerly it seems to have been known by the title of 'Historia Brevis,' from the fact of its embracing a comparatively short period (A.D. 1272–1422) as compared with the 'Ypodigma Neustrie,' or History of Normandy, of the same author. The range of the latter is, indeed, more extensive chronologically, for it reaches from A.D. 1066 to 1418; but it is briefer as regards the space in which the author narrates his story, not being, in that respect, half so long as the English History now being edited by Mr. Riley. Nevertheless, the 'Ypodigma' is spoken of by some of our early antiquaries as the 'Historia Major.' The so-called 'Historia Brevis' is now put forth under the more correct and appropriate title of 'Historia Anglicana.'

Mr. Riley has had noble predecessors as editors of Walsingham's English History—namely, Archbishop Parker, under whose auspices, if not supervision, an edition appeared in 1574, and Camden, whose folio was published at Frankfurt in 1603. These editions, replete as they are with errors, are too costly for "scholars"; wealthy or enthusiastic book-collectors are almost the only purchasers of them.

Mr. Riley's account of whence he took the text of the present edition is so interesting in its notice of a celebrated personage, who could write as well as fight, that we make extract of it:—

"The text of the present edition is taken from a small folio manuscript, No. VII. in the Arundel Collection, in the Library of the College of Arms, once in the possession of the Lord William Howard, of Naworth, a soldier and scholar of the latter part of the sixteenth and first half of the seventeenth century, now best remembered, perhaps, in our Border history as the 'Belted Will' of the North.

He seems to have perused the volume with no little diligence, as his handwriting, easily recognized by its singular regularity and distinctness, is plentifully interspersed on its pages. The manuscript is of the earlier half of the fifteenth century; written upon vellum, in a small but easily legible hand, the style of which is very similar throughout, though the comparatively greater frequency of inaccuracies in orthography at certain intervals satisfactorily proves that more than one (or perhaps two) transcribers were employed by the compiler in its preparation."

It is worthy of remark, as an illustration of the value of the editor's labours, that he has discovered the *immediate* source of the more valuable portion of the history,—“from an older compilation once belonging to the Abbey of St. Albans, made probably between the years 1379 and 1392, a large folio, now forming part of the MS. collection in the King's Library in the British Museum, and numbered 13 E. ix. in the Catalogue. That the MS. was penned in the busy *Scriptorium* of that Abbey, from the internal evidence it affords, in the eyes of those acquainted with the St. Albans MS., there cannot be a doubt." The existence of this source seems to have been hitherto overlooked, although Walsingham's obligations to an earlier writer were well known.

Walsingham, in constructing this Chronicle, has borrowed nearly *verbatim* from the St. Albans MS. above named, from its commencement to the year 1392, at which period it closes. There are, however, occasional omissions, and, as Mr. Riley notes, there is also the addition of about a dozen lines supplied by the compiler.

But it would appear that the St. Albans volume, so useful to Walsingham, is itself, in part, derived from an earlier compilation, so far as the reigns of Edward the First and Second and part of that of Edward the Third are concerned. The sources of this derivation are numerous, but they are duly named by Mr. Riley in his Introduction; the whole of them being traced out, in this edition, with marginal references.

We have compared the present text devoted to the propositions or conclusions propounded by Wyclif (353-364), and the text in Camden's folio of 1603 (204-8): the result has been to convince us of the general incorrectness, abominable punctuation, and comparative worthlessness of the old edition, and to lead us to conclude that this, one of the most important chapters in our early ecclesiastical history, is now *re-written* in the words of the original author.

Numerous are the features of interest and importance in this portion of Walsingham's work which has any claims to originality,—not excluding, however, some portion of the reign of Edward the Third. To the chronicling of fifteen years is given about a half of the whole work, and herein we possess material valuable, in the highest degree, to the writers and students of English history. The details are so graphically rendered, that we live old English life over again. They who witnessed the lovingly-greeted entry of our Danish lady will see how matters were arranged in the City when Richard passed through it to be crowned; how angelic maidens offered him “*florenos aurios sed sophisticos*,” and how the thirsty people, hoarse with shouting and faint with struggling, were regaled with wine from the public conduits. The municipality of those days could be hospitable to the folk as well as to their feudal master. The whole scene to the end is splendidly portrayed. Equally powerful, in another way, is the description of the French attack on the Isle of Wight, in 1377, and how they left it after their repulse by Sir

Hugh Tyrrel, before Carisbrooke, “*non arbitrantes tutum cohabitare tam vicino serpenti.*” Excellent man, too, that Abbot of Battle whom the same French commanded (when before Winchester) to ransom that city. “*Abbas vero negat se empturum quod non perdiderat.*” *he would not buy what he had not lost*, and he made the place too hot to hold them.

Then, again, the whole detail of the persecution of Wyclif is rendered with the utmost picturesqueness, but with very small sympathy for the reformer, “*versipellis Johannes*,” as Walsingham contemptuously styles the protester, who employed no “*circumlocutio*,” but “*nude et aperte docuit*,” and, worse than all, “*Episcopis derisit.*” Another bright name is that of John Philpot, citizen of London, who equipped a naval force, swept the seas of the piratical Mercer, and took terrible toll at Cherbourg itself. He is one of the noblest of many noble cockneys who have served their country with heart, hands, and head.

But the volume glows brightly under the glory reflected in the story of great deeds and heroic names. It has its shadows also. Quite Rembrandtesque is the picture of the murder of the squire Hanch in the Sanctuary at Westminster Abbey; and when Walsingham begins the subject it is with the sighing remark,—“I am now going to tell you something more than tragical, I who would very much prefer to write only what is comic!” And yet, despite his inclination for light subjects, he is masterly in treating largely of grand and grave matters, such, among others, as the conflict at Cherbourg between the English and French, in which the former came off victorious.

Those were days when the principles of Free Trade were so little understood that a Genoese merchant endeavouring to act on them in London was murdered, by way of warning, in the street, by rival merchants who took the freedom of differing from him! From this bit of tragedy Walsingham again turns away for a touch of the comic. The Scots were ravaging and committing dreadful atrocities in the North, found themselves among a people smitten with the plague, and who declared that that and every calamity came to them “*by God's grace!*” Whereupon, the pious assassins from Scotia daily put up a prayer which, says Walsingham, who gives it in Latin, sounds much more ridiculous in their own idiom, namely, “*Gode and Seynt Mango, Seynt Romayne, and Seynt Andrewe scheld us this day from Goddes grace, and the foul dethe that Ynglysh men dyene upon!*” This was as selfish a practice as that of the Turks, who, when they have the plague in a town, pray to the Prophet, not to protect them from God's grace, but to be good enough to send the pestilence on to the next city.

Again, what a *pendant* to the picture in the ballad of the Comte Ory we have in that of Sir John Arundel and his men, who take up their quarters in a nunnery, to the great horror of the Lady Abbess. The young soldiery behaved with far too much gallantry to the inmates, who are described as consisting of widows who have shut themselves up in the cloister, lest they should be tempted by the world and other strong tempters,—of married women, who, in the absence of their lords, put themselves out of harm's way,—of professed nuns, and of “*virgines filie majorum provincie que servabantur ad discendas literas*,”—young ladies, daughters of gentlemen of the province, who were there for their education.

For what occurred in this locality the reader is referred to the volumes, wherein there are few illustrations of the times more ably delineated, except, perhaps, the trial by battle on a charge of treason between Sir John Annesley

and Thomas Katrington:—each reminds us in its clearness and minuteness of one of Callot's pictures.

The volume closes at an interesting point in the insurrection of Wat Tyler, detailed with a completeness to be found in no other record. On the first scene in this stirring drama the curtain descends, to rise again in the next volume, which will continue a narrative that, in this Wat Tyler portion of it especially, has quite a “*sensational*” flavour. The stage is crowded with actors capitially grouped; and the sufferings of the monks of St. Albans are naturally placed in a light to show them off the most effectively. The volume could not close at a better juncture, for he who reads thus far will assuredly desire to read further; and let us especially remark that the book no longer presents difficulties to the general reader of some little education. For the first time, thanks to Mr. Riley, we have this work in a text upon which much care has evidently been bestowed, and which is readily intelligible to even a moderately fair Latin scholar.

OUR LIBRARY TABLE.

Mamecestre; being Chapters from the early recorded History of the Barony, &c. of Manchester. Edited by John Harland. Vol. III.—*History of the Chantry within the County-Palatine of Lancaster.* Edited by the Rev. F. R. Raines, &c. Vols. I. and II.—*Chetham Miscellanies.* Vol. III.—*General Index to the Remains, Historical and Literary, published by the Chetham Society, Vols. I.—XXX.*—All the above are contributions to the collection published by a society, to some of the members of whom antiquaries are indebted for various communications which serve especially to illustrate the history, manners and customs of folk in the olden time of Lancashire and Cheshire. Mr. Harland has brought his account of Manchester to a close, with additional matter of interest alluding to county families. Mr. Raines has begun the History of Chantry, supplying ten times the amount of information in his own introduction to what is to be found in the body of the work. Indeed, the Preface is a valuable chapter in Church History in every way creditable to the writer as a scholar and a Christian. The ‘Chetham Miscellanies’ touch upon county dialects, curious position of landlords and tenants, and other illustrations in connexion with an especial locality. The General Index also deserves a passing word of praise. Its value, and the merit of him who made it, will be thoroughly appreciated by scholars.

Philip of Königsmarkt, and Poems. By Maresco Pearce, B. A. (Picking.)—We have here a tragedy founded upon the painful story of Sophia Dorothea, wife of our first George. The subject certainly presents some tragic opportunities, but Mr. Pearce wants the power to turn them to account. He gives us the mere surface of feeling and character; his attempts at passion and pathos are deficient in vigour and depth; his motives want likelihood, his dialogue freshness. The assault of Countess Platen upon Königsmarkt's heart is told in as forcible a passage as we can find; but after such an example of her eloquence, we can hardly affect surprise at her discomfiture:—

Pity me, Count!

Nay, keep your pity, it may be you'll need it
For other than for me. What! you have dared
To spurn my love, and trample on my heart,
And now you talk of pity? Know you then,
That those who deeply love, can hate as deeply,
And I have power, you dare not brave my hate!
But you are smiling, Philip; ah, you know
I was but jesting when I spoke of hate.
You are too brave to tremble at my threats,
And so you'll try to love me, won't you, Philip?
You'll give me back a little of my love.
O, do not shake your head; what have I done
That you should goad me thus to madness, Philip?

—Mr. Pearce is rather more successful in some of his minor efforts. Now and then we meet with a pleasing picture or with a tender and graceful thought; but, after all, the casual oasis bears no proportion to the extent of the desert. We have hitherto spoken of the writer's ability, not of his

sentiments. He shows at times a flippancy and a "fastness" in the latter respect which quite reconcile us to his shortcomings in the former.

The Pilgrimage to Rome: a Poem, in Two Books. By R. Owen, B.D. (Oxford, Hammans.)—These pages contain an account of the writer's journey to Rome, through various cities of Southern France and Northern Italy. Mr. Owen describes in general terms the most famous places which he visited, and moralizes upon the impressions which they suggest. A rather laboured comparison of the Rhone to the course of human life will give a fair notion of his manner:—

O! what a lively image of our life
Is mirrored in that wildering eager Rhone!
Like it, our life sprang from the pathless hills
Of everlasting stillness, and amain
It quivered keenly with bright sapphire foam,
All bounding in an ecstasy of joy,
When all the world lay open to its march,
As if it courted conquest. Ah! too soon
Shall turbid floods of passion stain its course,
And from the native mountains hurry it
Adown the sliding levels to the embrace
Of many a peopled Lyons of the world,
Where Wealth and Commerce whirl in feverish rout
And Poverty doth pine in secret cell;
Happy, if yet between the arid wastes
And close defiles of rocky solitudes
It may perchance rove o'er romantic meads,
And couch beneath some city of the Church,
Until it sink into the charmed sleep
Of some Mediterranean isle of rest.

—The book evinces thought and abundant culture; but its best passages belong rather to pulpit rhetoric than to poetry. The combination of guide-book and sermon is, however, a novelty that may attract the graver class of travellers.

Sonnets; and other Poems. By Sigma. (Manchester, Hall & Roworth.)—"Sigma" presents us with a collection of pieces most of which were written on local occasions. A performance at the theatre, a recollection of a visit, the death or the birthday of a friend, are among the subjects handled, and will sufficiently denote the general contents of the book. The writer expresses much kindly feeling in verse of average merit.

Æone; or, before the Dawn. (Edinburgh, Black.)—The Æone of this poem is a Pagan priestess, who, by the light of reason and the evidences of nature, rises to a higher faith than that of her country and time. Though the daughter of a king, she is doomed to death as a misbeliever; pardon is offered to her as an inducement to recant, but she remains constant and suffers. This story, though simple, affords large scope for poetic treatment. The author deserves credit for an elevated conception and for the consistency with which it is maintained; but his style, spite of the sonorous verse, is too vague and diffuse for the successful accomplishment of his design.

Easter Week. (Wilson.)—If we except a few lines towards the end of this production, it is difficult to trace its connexion with the theme that it professes to commemorate. The little brochure is chiefly occupied with remarks upon the aspects of Nature, and the poets who have celebrated them. It contains neither fresh thought nor vigorous expression. All that is said might have been better said in plain prose; and there seems no actual need that it should have been said at all.

The Boyhood of Martin Luther; or, the Sufferings of the Heroic Little Beggar Boy, who afterwards became the great German Reformer. By Henry Mayhew. (Low & Co.)—By means of a sort of historical romance, and as much liberty taken with what people did or did not say, as ever Livy took, Mr. Henry Mayhew has furnished a considerable amount of interesting information touching the boyhood of Luther and the later years of his parents. As a biographer for boys and of boys, Mr. Henry Mayhew has few if any equals, for there is such skill in his treatment of a subject that from the boys, his volumes find their way into the hands of the older folk, and this is a species of success which few writers for the young have achieved since the days of Miss Edgeworth.

The Geographical Distribution of Material Wealth. By A. Keith Johnston. (Edinburgh, Private Press of Peter Lawson & Son.)—Mr. C. Lawson, on retiring from the office of Master of the Merchants' Company of Scotland, made the occasion memorable by giving a *conversazione*, as the fashionable slang

has it, at which Mr. Johnston delivered a lecture on the above subject. This lecture the Messrs. Lawson have privately printed, adding thereto some valuable and interesting notes on the history of the Company (many of whose members had listened to the lecture), furnished by Mr. A. K. Mackie. Another Scottish gentleman, Mr. Clark Stanton, has enriched the book with a few very pretty designs, and the whole forms a handsome volume, worthy of being read now and of being consulted hereafter.

Love's Last Labour not Lost. By G. Daniel. (Pickering.)—A volume of essays, like a volume of sonnets, is not work that any man can accomplish. Mr. Daniel has not fully succeeded, but he has a certain facility of hand which may yet enable him to do better in the cabinet-picture department of literary art. At present, he uses many words to say but little. A master in essay-writing employs few words to say a great deal. Mr. Daniel has good choice of subjects, but he is hardly equal to them; and we would ask him, in connexion with his notes, if he referred to Buffon before or after he wrote that Buffon, after describing the music of the robin-redbreast, coldly observes: "This little warbler is excellent, roasted."

Oriona: a Play. By Anon. (Printed for the Author.)—An amateur poet, one whose wishes are stronger than his powers, is sometimes like those amateur actors of whom Walpole said, they played so well, that he only wondered they had not had sense enough not to play at all. "Anon" has amused himself by constructing a North-American-Indian tragedy, which is not without a respectable side to it, but which is not North American—civilized or Yankee. We do not think that a Comanche would say of daybreak, that

The smile of day o'er yonder brooklet steals,
And the world, rebirth'd, awakes the welkin
With her cries.

We have more respect for Mrs. Le Mayne, who gives farewell counsel to her son Roland, in such terms as to show that she has read Shakspeare, and especially the scene between Polonius and Laertes. To be sure, Shakspeare himself mentions "Anon, Anon, Sir" and our author may therefore claim to be older than our national poet!

The Universal Text-Book of Photography. (Leeds, Harvey & Co.)—This is one of the numerous manuals issued by dealers in photographic materials, in which, under pretext of giving directions to the learner, they advertise their own chemicals. There is a larger amount of pretension than usual in this "universal" text-book, and, as might be expected, numerous shortcomings. The language employed to convey information is so grammatically imperfect, and often so carelessly constructed, that the reader is left in doubt as to the Author's meaning. "The Æsthetics of Photography," translated from the French of M. Disdari, which forms one of the chapters of this Text-book, does furnish a few hints by which many photographers might profit. It would, however, have been far more valuable had it been less wordy.

Practical Advice to Amateur Photographers, &c. By Henry Matheson. (How.)—Within the brief space of thirty pages, a considerable amount of instruction is given. It is really practical advice which is communicated, and the descriptions of the manipulatory details of each process are, generally, so clear, that any amateur may, with a little ordinary care, follow them, without fear of error.

A Manual of Chemical Analysis, Qualitative and Quantitative. For the Use of Students. Part I. *Qualitative.* By Henry M. Noad, Ph.D. (Reeve & Co.)—Dr. Noad has produced an exceedingly useful little book. From his long experience as a teacher, he has been enabled to convey his directions to the chemical student in the simplest form; and knowing the ordinary impediments which cross the learner's path, he enables him to overcome them without difficulty, if care and attention are given to the teacher's precepts. Writing a work for the use of a medical school, the author has introduced much that is new and valuable on the subject of poisons, and the chemical means for detecting them in the human body after death. In the books devoted especially to this subject, the information will, necessarily, be more ample, but

the clear conciseness of Dr. Noad's directions for determining the presence of poisons in organic matter, recommends these sections to attention. If Part II., devoted to Quantitative Analysis, be executed with equal care to that shown in Part I., which embraces the Qualitative determinations, Dr. Noad will have produced a very useful Manual of Chemical Analysis.

Diutiska; a Historical and Critical Survey of the Literature of Germany. By Gustav Solling. (Trübner & Co.)—A great deal of information not accessible to the general English reader is afforded in this volume, which answers the purpose not only of a history, but to a certain extent of an Anthology. Herr Solling begins his survey of German literature at the very earliest period, and his copious descriptions of the Niebelungen Lied, and other mediæval epics, will be highly acceptable to many who have no inclination to study early poetical art, but would gladly be made acquainted with the subjects of the minstrels' songs. The several periods prior to the age of Klopstock are well defined, and each of them is illustrated by an alphabetical list of the writers, with a summary of characteristics appended to each name. On the other hand, Klopstock, Lessing, Wieland, Herder, Richter, Goethe and Schiller, each the subject of a separate section, are examined at length, and illustrated by copious extracts. Altogether 'Diutiska' is the very book for those older students, who would like to take a general glance at the literature with which they are about to become more minutely acquainted,—that is to say, in parts, for those who know more about the earlier writers than Mr. Solling tells them will be few indeed. Another volume is promised, devoted to the writers of the Romantic School, the one before us terminating with Goethe and Schiller.

French Writers, their Life and Works; or, a History of French Literature.—[Les Ecrivains Français, leur Vie et leurs Œuvres, &c. par F. Baurère]. (London, Williams & Norgate; Paris, Ducrocq.)—Some years ago, we had to speak in terms of praise of M. Vinet's work on French literature; we may speak with increase of eulogy of M. Baurère's volume, for the latter gives a general and lucid history of the literary men of France, from the earliest times, whereas M. Vinet treated only of those of a particular period. In a small space, the author has contrived to impart a vast amount of information, much of it anecdotal, and we commend his volume to the study and approval of all who are desirous to acquire, at small pains, a clear view of the outlines of literary France, from the era of the Langue d'Oil and Langue d'Oc, to that brought to a close by the death of Voltaire.

Lord Byron: a Biography.—[Lord Byron, seine Biographie, von Dr. Felix Eberty]. (Leipzig, Herzog; London, Williams & Norgate.)—Encouraged by the favourable reception given to a previous biography of Sir Walter Scott, Dr. Felix Eberty, a Breslau Professor, has completed, for the use of the German public, a life of Byron which, short as it is, comprises a critical examination of the poet's principal works. The tone of the book is generally eulogistic.

The Life of Mohammed.—[Das Leben Muhammed's, von Theodor Nöldeke]. (Hanover, Rümpler; London, Williams & Norgate.)—Herr Nöldeke has entertained the opinion that a succinct popular biography of the Founder of Islam drawn from original sources would be acceptable to the public; and, in pursuance of this opinion, he has written the small volume before us. He has long, it seems, been a student of Arabic poetry, but his book is designed for those who are not equally erudite. The statement of one of the difficulties he has met with in the execution of his task may be interesting to chronologists:—"There is one defect in my book which I am bound by way of preliminary to admit. This is in the inaccuracy of the chronology of Mohammed's last ten years. If we have few reliable dates for the time before the Hegira, not one of which can be reduced to a date of the Julian Calendar, our chronological information relative to the period after the flight is much more abundant. However, it is only when we come to the very last days of the Prophet that we can reduce even the later dates to a conformity with our mode of reckoning, for it was not till then that Mohammed firmly

settled that year of twelve lunar months or 354 days, which regulates the computation of his adherents to the present day. It is almost certain that before this period the Arabians computed time by a lunar year, which was, on one occasion, rectified with the solar year, by intercalary additions. Of the nature of these, however, nothing is accurately known."

Of Miscellaneous Publications we have to mention: *A Constitution for Poland and Russia considered Politically and Commercially*, by J. D. (Mann, Nephews).—*A Concise Review of Poland's History and Russian Policy, including Remarks on the Reputed Will of Peter the Great*, by W. Handcock (Dublin, Robertson).—*Note on the Block of Tin dredged up in Falmouth Harbour*, by Col. Sir H. James (Stanford).—*The Case of Servia*, by a Serb (Bell & Daldy).—*The Serbian Nation and the Eastern Question*, by Vladimir Yovanovitch (Bell & Daldy).—*Irish Fallacies and English Facts: being an Appeal to the Common Sense of the British Public on the Subject of the Irish Convict System*, by Scrutator (Ridgway).—*Recognition: a Chapter from the History of the North American and South American States*, by F. W. Gibbs (Ridgway).—*The Present American Revolution: The Internal Condition of Democracy considered*, in a Letter from the Hon. T. D'Arcy M'Gee to the Hon. C. G. Duffy (Hardwicke).—*A Treatise on Positive Printing*, by T. Sutton (Lampray, Tibbitts & Co.).—*An Essay on Production, Money and Government: in which the Principle of a Natural Law is advanced and Explained*, by W. A. Thomson (Buffalo, Wheeler).—*Remarks on the Rig of Sailing Ships*, by H. D. P. Cunningham (Whitehead & Morris).—*Irish Facts and Wakefield Figures in relation to Convict Discipline in Ireland*, investigated by J. T. Burt (Longman).—*The Position and Duty of Pennsylvania: a Letter addressed to the President of the Philadelphia Board of Trade* (Mackintosh).—*Lectures on Coal-Tar Colours, and on recent Improvements and Progress in Dyeing and Calico-Printing*, by Dr. Calvert (Trübner & Co.).—*A Serious Fall in the Value of Gold ascertained, and its Local Effects Set Forth*, by W. S. Jevons (Stanford).—*Mr. Napoleon Bonaparte (Jérôme)*, by a French Soldier (Farrah & Dunbar).—*The Case of the West Hartlepool Harbour and Railway Company: Debenture Stock no Security; An Act of Parliament no Protection* (Wilson).

LIST OF NEW BOOKS.

- Ainsworth's Lord Mayor of London, new edit. cr. 8vo. 5/6 ds.

SHAKESPEARE CELEBRATIONS.

As yet we do not hear of any large and inclusive attempt to organize the Shakespeare celebration of next year: though there is, in every section of our intellectual societies, a strong desire that something worthy of Shakespeare and of his countrymen should be done. There is a local movement at Stratford, with a view to a dinner, a speech, and perhaps a statue. The Canadians are preparing for a demonstration of their own, and have actually made some progress toward holding a great festival in Toronto. Australia, too, is moving. But with the exception of a small body of gentlemen connected with a club in Clerkenwell, some of whom are members of the Dramatic Authors' Society, we are not aware of any persons being engaged with the idea of a great national celebration to be held in London or elsewhere. We have not one word to say against the Urban Club; on the contrary, we think some credit is due to them for taking the open initiative in a matter to which everybody professes to wish well, while he is indolently waiting for his brother to move. But a Shakespeare Committee—if it is to do anything considerable, or even creditable, in the Poet's name—should, in our opinion, represent all the intellectual forces of the country, all the grades of our society, all the activities of our literature. No doubt, when duly appealed to, "the press, the heads of literary institutions, the clergy, and persons of local standing throughout the land, will lend prompt and hearty assistance in the matter; not merely on account of the homage that is due to the memory of Shakespeare, but in order to vindicate the English character from a charge of insensibility to the claims of literary excellence alleged against it on the ground that we have erected public monuments to kings, conquerors, statesmen, divines and disciples of science, and public philanthropists alone, leaving to Germany, France, Spain, Portugal, Scotland and Ireland the proud distinction of manifesting open reverence for the memory and the genius of their great national poets." But then the press, the clergy and the heads of literary institutions will desire to know with whom they are co-operating, and to what definite end.

To begin, it is, we think, desirable that whatever is done should be done under the inspiration of a common thought, made visible by the ascertained sanction and adhesion of the one august personage who represents the whole country. The patronage of the Queen, the Presidency of the Prince of Wales, would give to the project of a grand commemoration the only basis worthy of the name of Shakespeare. This adhesion gained, the next step should be an invitation to the Fellows of the Royal Society and the Society of Antiquaries, to the Royal Academicians, to the heads of Colleges, to the members of all our learned bodies, and the managers of all our theatres to join a Committee. The Committee might be a large one, made to include every sort of celebrity, social, literary and scientific. The chief, perhaps the main difficulty is—how to begin?

Now, it happens conveniently that a Committee has been gathered together, for a special purpose, in connexion with the Shakespeare Fund, established in 1861 for the preservation of objects illustrative of the Life and Works of Shakespeare at Stratford-on-Avon. A public reading of Shakespeare, by Mr. and Mrs. Kean, is about to take place in St. James's Hall for the benefit of that Fund; and a Committee of noblemen and gentlemen connected with Shakspearian literature has been named to aid in that object. At present this Committee consists of The Duke of Newcastle (President), Sir C. H. R. Boughton, Bart., C. H. Bracebridge, Lord Justice Knight Bruce, B. Bond Cabbell, The Earl of Casdale, J. P. Collier, F. W. Cosens, W. Hepworth Dixon, James Dugdale, The Earl of Dunraven, The Rev.

A. Dyce, E. F. Flower, Mayor of Stratford-on-Avon, The Earl Granville, F. Haines, Sir R. Hamilton, Bart., The Rev. W. Harness, R. S. Holford, The Earl Howe, H. Johnson, Lord Lindsay, Lord Lonsdale, The Lord Mayor of London, Sir E. Bulwer Lytton, Bart., D. MacLise, W. C. Maeready, Lord John Manners, Herman Merivale, R. Monckton Milnes, C. N. Newdegate, Sir C. Nicholson, Bart., Sir James Prior, Gen. Sabine, President of the Royal Society, H. B. Sheridan, William Tite, S. H. Walpole, B. Webster, J. Wilkinson, T. Wright, Lord Vernon; with J. O. Halliwell as the Honorary Secretary.

If these noblemen and gentlemen, while aiding to complete the Shakespeare Fund, should think proper to undertake the arrangements for a National Celebration in April next year, the thing might be done, and well done. To a body already organized, it would be easy to bring accessions of strength. The Shakespeare Fund Committee includes a goodly portion of our known Shakspearian students; and the rest might be invited to come in on equal terms. By this easy process a very large and very influential body could be brought into combination with scarcely any waste of time. Our own duty is done in placing these hints at the service of the Duke of Newcastle and his friends.

MUSEUMS IN HOLLAND.

Amsterdam, May 26, 1863.

IN 1860, Mr. Carel Joseph Fodor, a merchant of this city, left by will to the municipality of Amsterdam his collection of paintings, sculpture, drawings, etchings and engravings, together with his residence and adjacent buildings. The conditions on which this valuable legacy were made, were, that the works of Art which he had collected should be preserved by the city, in a building to be constructed on the site of his residence and warehouses, to be called the Fodor Museum. This museum he further endowed so liberally that there will always be sufficient funds to keep it in thorough order, and to pay the salaries of the Director and the attendants. In order, however, that the museum might not be exclusively for the benefit of the educated and intelligent classes, to whom alone perhaps his collection will prove attractive, he provided that a small charge, to be fixed by the city authorities, should be made for admission. This charge has been fixed at 10d., and (on Sundays) at 1s. 3d.; and the entire amount of these charges is, according to the desire of the testator, to be distributed among the city poor.

The Fodor Museum has recently been opened. The very handsome building consists of three large rooms, in addition to a residence for the Director. The large hall, or gallery, has been admirably constructed, so as to render the light as useful as possible in showing off the merits of the works it contains. The collection consists of 121 paintings of the Modern Dutch and Flemish Schools, the chief-d'œuvre of this division is Scheffer's 'Christus Consolator,' which Mr. Fodor purchased at the sale of the Duchess of Orleans' collection, for 2,100l.; 30 French, and 12 German pictures complete the collection of oil paintings. The Dutch and Flemish drawings number 788; French, 161; German and English, 15; Italian, 14. In the catalogue of the engravings, there are 87 of the old Dutch, Flemish, German, and French schools, and 275 modern specimens. 'A Nymph,' by Cartellier, and 'Innocence playing with a Serpent,' by Eugene Simones, are the only specimens of the statuary art in this museum.

Mr. Fodor's collection so liberally bequeathed to his native city, may justly be considered one of the greatest attractions in this quaint capital of the Low Lands, to every amateur and connoisseur of the fine arts who may happen to stroll thither. Mr. Murray should "make a note of it," for the benefit of those who may consult his handbook. The public and private collections in this city were already excellent and numerous; and while the old masters, whose best works are among those collections, will always find their full per-centage of admirers, those modern masters, whose works now literally adorn the walls on which they have been so judiciously hung, cannot fail to render a visit to

the Fodor Museum a most gratifying intellectual treat to every man of taste and intelligence.

I am unwilling to close this communication without referring to an attempt that is now being made to obtain subscriptions to the amount of 500,000 florins for building a National Museum in Amsterdam. This museum is intended to be commemorative of the restoration of the national independence of Holland in 1813. As disputes have already arisen among the patriots at the head of the enterprise, it will probably prove to be a museum divided against itself, and fall down before it is built up. Should the design be realized, however, the scattered collections of paintings, drawings and sculpture in the various museums in the country—so far as they are the property of the nation—will be transferred to this National Museum. It is thought more than probable that patriotism here will contrive a much cheaper way for ventilating itself; and if it do not, it will be a greater curiosity than any which the museum will contain.

C. H. GUNN.

AUGSBURG.

Munich, May, 1863.

AN afternoon spent in the streets of quaint old Augsburg is the most singular commentary on the modern architecture of Munich. The utter stillness and repose of the mass of buildings, each one of which harmonizes with the rest in the commanding look—the absence of all striving after effect—the decided character of every façade—the citizen simplicity of ornament—contrast very strangely with the search for novelty, the mongrel mixture of styles, and the profuse decoration that characterize the capital. In Augsburg, every restoration is effected with a view to improving what already exists, instead of grafting something new upon the old stock. Slight changes have been made during the six years that have passed since my last visit; a few new houses have been built, several have been restored, and yet there is only one attempt to introduce the new Munich architecture. You may still roam about the winding streets, and gaze on old patrician houses, with their mounting roofs and the series of steps at the angles; you may lose yourself in narrow lanes, and extricate yourself at last by a dive through mysterious passages, propped open by beams; you may admire unaccountable little doors, made of a single plank, and locked with bars and padlocks, though scarcely large enough to admit anything bigger than a rat; you may look up with the most genuine admiration at the noble pile of the towering Rathhaus, and still find nothing to displease you in the old free town of the commercial Middle Ages. Perhaps there is no very real interest in thinking of Charles the Fifth and the Emperor Maximilian—as Murray tells you to think—when you have none of their works before you; and I have no doubt the admirable cellar of the Drei Mohren is far more worthy of a visit than the room in which Fugger burned the bond that Charles the Fifth had left as a security. But there are people of such eminently historic minds that the least association is of value to them, so long as it can be duly authenticated.

This year, however, Augsburg has acquired a new historical significance, which may not be so grateful to its patriotic citizens as their ancient connexion with the heads of the German empire: a house is pointed out in one of the less-frequented streets with a tablet on it announcing that the Emperor Maximilian used to inhabit it during his stay in Augsburg. A few doors off is a more modern building, of a light, agreeable colour, with trellis-work on two sides, and a projecting wing running out from the centre, flanked by two courts. This is the house in which the present Emperor of the French lived with his mother; and to his residence in which he looks back with such pleasure that only last month he made a present of books to the school in which he was educated, accompanying them with a letter to the rector, in which the following phrase occurs:—"J'ai été bien heureux de cette nouvelle occasion de me rappeler au souvenir d'un pays pour lequel je ne cesserais jamais d'avoir la plus vive sympathie." In one way, the connexion of Louis Napoleon with Augsburg is really remarkable, especially at the present

moment. Mr. Kinglake has made a disrespectful comparison of the Emperor to a weaver; and the great endeavour of Augsburg is to glorify the founder of the Fugger family who practised that trade. A fine statue of Jakob Fugger has lately been erected by King Ludwig, and the ancient Fugger-haus in the Maximilian Strasse is even now being decorated with frescoes. The statue, which, strangely enough, is executed by the same artist to whom so many of the weak and paltry figures in Munich owe their origin, gives us a fine head and figure in trunk-hose, at once noble and characteristic. The frescoes are painted by Ferdinand Wagner, and are devoted to the history of the family and that of the town of Augsburg. The first picture shows the foundation of the old town, Rudolph of Habsburg giving the municipal privileges to its citizens. In the second, the Emperor Ludwig, the Bavarian, takes refuge in the town when defeated by Archduke Leopold of Austria, brother of the rival emperor, Frederic the Handsome. Another picture presents the building of the Fuggerei, that quaint, little, inclosed quarter, with its four gates and its rows of miniature houses, which are let out to poor Catholic families at the nominal rent of two florins a year. Round the frescoes are arabesque borders, one of the large pictures being surmounted by the Imperial eagle of Germany, another by the coat-of-arms of the Fuggerei. Below them runs a frieze, to some extent suggested by Kaulbach's companion work in Berlin. The development of arts and sciences and the progress of the town are typified by groups of children, some hammering out weapons and armour, others working in gold and chasing, others as meistersängers, architects, painters and sculptors. The colour and design are especially pleasant in this frieze; in the larger frescoes the colour is sometimes of an exaggerated warmth that looks hot and glaring.

The block of buildings belonging to the old Fugger mansion stretches some way along the Maximilian Strasse, and one of the houses attached to it is now the famous "Drei Mohren." A lover of wine can hardly speak with too much respect of that admirable institution. There is a story of a man dining at some restaurant in Paris, and being told that some dish would not be ready for half-an-hour: "But Monsieur will not wait for something to occupy him," said the master of the house, handing him the red velvet volume that contained the *carte*. The catalogue of the "Drei Mohren" fulfils the same conditions. It is like a journey to the East to read such names as Vin du Carmel, Vinum Sanctum Bethlehemitanum, La Rosée de l'Hermon. One may live long in Italy without finding any such wines as are recorded here—our old favourites in Horace, the Cæcuban, and the Formian and the immortal Massic. A classical scholar is said to have drunk a bottle of the latter without speaking, and at the end of it to have uttered the phrase, "I see now how Latin verses ought to be written!" The Isles of Greece, too, are so well represented by Chian and Samian, the wines of Cyprus and Asia Minor, that you cease to wonder at the tenacity of the Bavarian dynasty, and ask if Hellas has not been ungrateful to her truest lovers. At the head of each division of the list of wines is the sentence, "Chosen by me in my travels through the East," or "Bought by me at the 'quinta da Trapiche' in the island of Madeira," and frequent quotations from the Latin poets, or from Rediti's 'Bacco in Toscana,' run through the volume. There have been so many "Travels in search of —" from the time of Moore that travels in search of wine ought to be respected.

As a commercial town, and one in which large sums of money are "turned over," Augsburg is celebrated for the number and the wealth of its charitable foundations. A member of the Council of Magistrates has lately published an account of the various institutions, tracing them back to their origin, and showing the intentions of their founders. With this view, he gives the history of no less than seventy-three foundations, possessing a capital of 720,000 florins, the yearly income of which is devoted to forty-one different objects—as the support of the poor, elementary teaching, and training in higher branches, especially the fine arts and

arts of design. These seventy-three form the United Protestant Charitable Fund, and of them four were in existence before the Reformation, two more came into being between the Reformation and the religious peace of 1555, sixteen between the Peace and the beginning of the Thirty Years' War, three only during the Thirty Years' War, and forty-one from the Peace of Westphalia to the end of the eighteenth century.

E. W.

DISCOVERY AT GIBRALTAR.

Gibraltar, May 13, 1863.

I send you an account of the discovery of an ossiferous cavern on this rock. The mere fact of a cave containing osseous remains having been found would not perhaps be of sufficient interest to justify me in asking you to give place to a letter on the subject. But there are circumstances connected with this discovery which induce me to believe that some account will not be unacceptable to geologists. At any rate, it is desirable to determine if possible the antiquity of these remains, even though they be, as some declare, comparatively recent. The fact of a human skull having been discovered in a cave embedded in bone earth, in close contiguity to a stone implement and the bone of a huge mammal twenty feet below the surface of a limestone plateau, is sufficient to justify some inquiry. For the last six months the Royal Engineers have been employed excavating a large tank for the use of the military prison on Windmill Hill. The spot where this excavation has been made is situated upon an oval plateau, 400 feet above the sea, at the southern point of the rock. The plateau is composed of compact limestone, in most places scarcely concealed by the superficial soil. So solid is the rock that the quarrying of the tank was done entirely by blasting. About ten days ago I heard casually that some bones, described as "beef bones," had been discovered in the excavations, when proceeding to the spot I found the quarrymen working about fifteen feet below the surface, and they were removing portions of a blast which had just taken place. Beneath two large blocks of limestone some dark, loamy earth was visible, and it was from here that the first discovered bones had been taken. Unfortunately, being considered valueless they had been thrown away. A few turns of the spade, however, brought up others, including three portions of a human skull and a humerus, also human. Close by was found a fragment of rude pottery made of baked clay. Since this discovery the search has been prosecuted more carefully, and with the following result. It was ascertained that no fissure of any kind leading from the earth's surface was observed during the progress of the excavations. The superincumbent limestone was compact, and measured twelve feet in thickness at the spot where the first bones were found. After a few hours' careful digging, during which many bones were collected, the roof of a cave was reached. Labour was then directed to the excavation of the cavern. It was filled to its ceiling with dark, rich mould. This mould was filled with bones, broken and dislocated, and presenting the same appearance as the bones found in other osseous caverns. The roof of the cave is covered with broken stalactites. The depth of the cavern has not yet been ascertained. It has been excavated vertically 24 feet below the surface; and an iron rod forced through the mould gives no bottom at 14 feet lower. The organic remains and works of Art found in the small portion yet excavated are numerous. Seventeen feet below the level two human jaws were discovered. Close by were two stone knives and an oblong slab of sandstone, with one surface much worn and polished as if by friction. Within a few feet on the same level was a stone instrument shaped like a rude pestle. The bottom surface is worn and polished, and the handle or upper part has three small concavities, which exactly fit the thumb and two fingers when the instrument is grasped most conveniently. It seems probable that this implement was used for grinding cereals or breaking nuts on the slab of sandstone. Mixed with these remains were found numberless bones of animals, including a portion of the vertebra of a huge

mammal. An experienced surgeon has declared this bone to have belonged to the elephant, but of what date he is unable to say. In my opinion it is the bone of a smaller animal. Amidst the vast quantity of bones I have been able to recognize the teeth of a large species of ox, the horse, a large deer, the wild boar, the lagomys, the jaw of a carnivorous animal which I believe to be the hyæna, and portions of the jaws of other carnivorous animals which I cannot determine. At the lowest point yet reached two flint hatchets, more highly finished than those of Abbeville, were turned up. Also, a small highly-polished and sharpened flint (?) implement, cut with some skill. At this point, portions of three human jaws were found with the femurs of a man and woman.

Fragments of pottery abound; also bits of charcoal. A vessel of baked clay of the rudest manufacture, which appears to have been used as a pipkin, has been preserved unbroken. When found a *Pecten jacobæus*, or common scallop, was inside it. Three rolled pebbles, of greenstone, have been found; also, a large piece of coral, quite bleached. The coral is recent, and of the species *Oculina Bamea*. Among the shells I fancy I recognize the *Murex alveolatus*.

It is somewhat singular that, close up under the roof of the cavern, a copper fish-hook three inches in length was found. The vertebrae of many fish have been picked up. The lower jaws of mammalia are in greater abundance than any other part of the skeletons.

Since writing the above, I have again visited the cave. The excavations are progressing rapidly under the superintendence of Mr. Brome, Governor of the military prison. As far as can be judged, the cave is not very extensive, though its depth cannot be ascertained. It is choked with bone earth. Another slab of sandstone, about one foot long, and eight inches wide, slightly concave in the centre, where it is worn and polished by friction, has been brought out.

A skull (human) was also found to-day, but broken into many pieces. Its position when taken out was about fourteen feet from the level of the ground. Some recent shells, including the common oyster, have been found at the same level. A few rolled pebbles have been picked out of the mould at the depth of twenty feet. All the specimens found are carefully collected and preserved for inspection by competent persons.

FREDERIC SAYER.

NATIONAL GALLERY.

SEVERAL of the pictures announced in a previous number of the *Athenæum* are now exhibited to the public. A large, square altarpiece by Crivelli, in a richly-carved frame with bold cornice, and flanked by pilasters panelled with gilded arabesques, attracts immediate attention by the side of Uccello's battle-piece, in the first room, or vestibule. This picture was formerly in the church of the Franciscans at Matelica, a small town between Assisi and Macerata, and was purchased from Count Luigi di Sanctis. The composition is very simple, but impressive. In the centre the Virgin is enthroned, holding the infant Saviour seated on her lap. St. Jerome stands on the left of the central group, and St. Sebastian on the right. The picture is thinly but very carefully painted in a sober grey tone, with much elaborate gilding in the way of ornament on the dresses. The Virgin wears a jewelled coronet, with a gauze veil, and the embroidered mantle which covers her knees is drawn also over her head, to serve like a hood. The infant Saviour has a necklace of red beads round his neck, and a small coral of the same colour pendent from it.

The five predella pictures are exquisitely finished, and show the superior qualities of Crivelli most advantageously. Without losing a certain tone of quaintness and occasional extravagance of gesture, into which Crivelli is prone to fall, these small paintings show him to have been capable of very deep feeling. The St. George, on a white horse, having broken his spear, and about to destroy the dragon with a sword, held in his right hand alone, anticipated in a great measure the famous compo-

sition of Raphael from the same subject. This picture is on the extreme right, under the pilaster. At the opposite end is a half-length figure of St. Catherine holding a palm-branch of martyrdom and the broken wheel. The central picture, below the Madonna and Child, represents the Nativity, where the infant Saviour is lying on the ground, adored by the Virgin; Joseph remains seated hard by, in a deep sleep. The ox and ass are introduced; the form of the latter as seen stretched on the floor of the stable is drawn with a careful attention to nature: neither is made to kneel, as ridiculously shown in many early pictures.

Beneath the figure of St. Sebastian is an animated picture of his martyrdom. Three archers, one holding a cross-bow, are attacking him. There is something demoniacal in their expression, whilst the slender human forms are very accurately rendered. St. Sebastian himself affords a strong instance of the quaintness of conception inherent in the painter: having been struck in the foot by an arrow, he raises the limb with an evident cry, thus contrasting strongly in point of treatment with the ecstatic expression adopted by the Umbrian and Florentine representations of the same subject. A graceful and well-studied figure of a large greyhound standing in profile immediately behind the figure of the martyr, increases, by his tranquil attitude, the effect of violence in the rest.

St. Jerome doing penance occupies the left-hand compartment, beneath the standing figure of the saint. In this small picture he kneels before a crucifix in a wild scene. His red hat hangs on a tree near him, and a crane has very strangely perched on the top of the crucifix which is the object of his adoration. This Oriental feature is further carried out in the background by the walls of an Eastern town with Turkish figures on the shore, and in a boat on a piece of water. The entire altarpiece is in excellent preservation, and a far more favourable example of the master than the picture which had previously been acquired for the Gallery. It is signed in gold on one end of a cornice, below the figure of St. Sebastian, "CAROLVS . CRIVELLVS . VENETVS . MILES . PINXIT." It is not dated.

Another interesting picture of the Venetian school is a bright and cheerful representation of St. Jerome reading in his study. It was purchased direct from the proprietors of the Manfrini Gallery at Venice. The figure of the saint is very small in proportion to the size of the picture; but there is a deep earnestness in the attitude, as he studies the volume, with absorbed attention, on the desk before him. The picture exhibits a large proportion of horizontal lines and plane surfaces, since both the side of the apartment and of the great reading-table also, are directly facing the spectator. The flatness of the wall is relieved by certain square cupboards, which, being partially open, reveal a variety of objects lying within them in great confusion, but painted with a clearness, brilliancy and minuteness that bespeak a close affinity to the most laborious Flemish painters of the fifteenth century. The general tone of colour is cheerful, very pale, and far different from that which we usually observe in Bellini. The dress of the figure is pink, shaded with a rich crimson; his cape or hood, a deep, rich blue, and the cardinal's hat, lying flat on the ground, is the exceptional colour of bluish lilac. The deep green running round the lower part of the wall contributes much to the general brilliancy of the picture, and relieves the masses of grey on the upper part with which it comes in contact.

Another Venetian picture, and also from the Manfrini collection, is by Andrea Previtali. This artist was a pupil of Bellini, and distinguished for his perspective and for the richness of his landscape backgrounds. The latter quality is conspicuous in the left-hand side of this picture, where a forest glade, in all the freshness of spring, is seen gilded by a brilliant sunlight. The principal figures are the Virgin seated, seen a little below the knees, holding the infant Saviour, who blesses a monk kneeling in adoration, and holds a passion-flower in his left hand.

A very impressive picture, notwithstanding the extreme simplicity of the subject, has been placed

towards the upper end of the north side of the great new saloon. It is a half-length figure by Moroni, and represents a tailor standing at a board, about to cut a piece of black cloth with a large pair of shears. He seems to be in the act of taking up the cloth, and looks thoughtfully at the spectator. He is a young man, bare-headed, with small beard and cropped hair; the dress white, covered with spots, close fitting to the body, with tight sleeves, and a plain leathern strap round the waist. The background is quite plain, with merely a diagonal course of shadow cleverly introduced so as to assist the moving line of the figure. The picture was known in Italy as the 'Tagliapanni,' and purchased by Sir Charles Eastlake, in October last, from Signor Federigo Frizzoni de Salis, of Bergamo.

A curious picture, from the Lombardi collection at Florence, by a fantastic artist, Piero di Cosimo, has been hung over the door leading into the large saloon. It is long in shape, and serves very well for what the Italians call a "sopra porta." Cosimo was celebrated for his landscapes, and assisted his teacher and godfather, Cosimo Rosselli, in the background of his famous picture, 'The Sermon on the Mount,' in the Sistine Chapel at Rome. Piero di Cosimo was gifted with extraordinary invention, and delighted in the representation of strange animals. These qualities and tastes are manifest in the picture now added to our national collection. A wounded female figure lies on the grass; a brown dog is seated at her feet, and a young satyr kneeling on the opposite side gazes at her. The subject is supposed to be the Death of Procris. Beyond the grass extends a line of sea-shore thronged by strange-looking animals, but the extreme distance is bright and clear, fully bearing out the praise which the historians of Art have bestowed on Piero for his powers in landscape. The principal figure is far from graceful, and exhibits a fullness of form combined with a wildness that reminds the student alternately of Lorenzo di Credi and Luca Signorelli. The absence of any fixed style seems always to have been a peculiarity with this artist; he seems, however, like Sandro Botticelli, to have frequently indulged his fancy in the embodiment of classic themes. He was a genuine painter in oil-colours, and is said to have worked in emulation of Leonardo da Vinci. It is, however, as the instructor of Andrea del Sarto that he is more especially deserving of remembrance.

A very fine life-sized portrait of this illustrious pupil, painted by his own hand and bearing his well-known monogram, consisting of the combined letters A.V., has, by a fortunate coincidence, just been hung in the saloon near the Moroni picture already described. It was purchased from the executors of a certain Niccolò Puccini of Pistoja. The picture is painted in oil on fine linen; the hands, holding a book, remain in a very unfinished state. The figure is seen below the waist seated in a wooden chair with his back partly turned, and looking over his left shoulder at the spectator. The face is very much in shadow, and the cheek is thinner than in the other portraits of Andrea del Sarto, but the look is very keen and thoroughly artist-like.

A fine picture by Lorenzo Lotto has also been added to the collection. It contains the portraits of Agostino and Niccolò della Torre. The elder of the two, Agostino, is clothed in a long grey gown, holding a letter, addressed to himself, and a napkin in his right hand, and bearing a ponderous volume of the works of Galen on his left arm. A fly that has settled on one of the hanging folds of the napkin is painted with marvellous truthfulness, although, for the higher purposes of Art, it is too prominent an object in the picture. The younger of the two persons is bearded, with full dark hair, and wearing a large cap and a mantle; he has a full plaited shirt round his neck; the figure is placed behind that of his companion. The picture is on canvas, and signed in the right-hand corner L. LOTTO. P. 1515. The style of painting, although a comparatively early work of the master, clearly confirms the biographical records of his having been a scholar of Bellini with closer affinity to Giorgione, his fellow-pupil. The picture was purchased from Signor Morelli, of Bergamo.

OUR WEEKLY GOSSIP.

A grave gentleman, a scholar and a man of science, M. N. C. Szerelmey, advertises as on view, a Portrait of Jesus Maria Hodegedria, as painted by St. Luke the Evangelist. The painting and the pamphlet which accompanies it are both very curious. We have examined the one and read the other. A visit to Regent Street and a conversation with the proprietor have helped us to some conclusion respecting the alleged antiquity of the work and the authenticity of the story about its passing from one owner to another. We cannot subscribe to the opinion that the picture is as old as Luke the Evangelist, nor to the conjecture that it was painted by him. The tradition that Luke was a painter as well as physician, is not well founded. Even if it were, the probabilities, not to use a stronger word, are all against his having painted these two portraits of the Virgin and her Son, which appear to be not many centuries old. The faces of both are not pleasing. There is nothing masterly about them. Hence we cannot set much value on the work. It may have come from Mount Athos and be of monkish origin. The Chaldaic letters, said to be on the gilt ground of the picture and to attest its genuineness, signify little. They could be easily put there. In our view they have no independent value. A learned German, it is alleged, has transferred them to paper and translated them. We should like to catechize this scholar after an examination of the letters themselves, which we could not see with the naked eye. The proprietor of this picture, M. Szerelmey, believes in his treasure, and, naturally enough, sets a high value upon it. He exhibits it for the aid of the distressed and wounded Poles. This is a laudable object. But there is no attractiveness about it; and the public will be slow to believe that Luke himself painted that which bears plain evidence of Romanist times and tastes.—The story of the picture is a sort of legend, of which the original might perhaps be found by any one who would search through the Bollandist *Acta Sanctorum*. It is this: A poor Greek priest was found in a weak, diseased state, in Palestine, was charitably taken by the narrator to Egypt, whence he implored to be transferred to Europe, but died on board the vessel. His only property, a leathern pouch, having been bequeathed as a legacy to his benefactor, the captain ordered it to be thrown overboard for fear of infection. Instead of this being done, the narrator's servant saved it, and it was opened at Ancona. Among the contents was a picture of the Madonna and the Infant Christ, painted on metal, together with a piece of parchment and a paper, inscribed with Greek letters. Having undergone different cleanings, the work was brought to its present state. The fact of its being painted by St. Luke is stated in the will of one Azarias, some pious predecessor of the Greek monk from whom its present possessor received it. Such is the story.

The following award of prizes has been made to architects in the Freemasons' Hall Competition:—150*l.*, T. H. E. Carpenter, with the motto, "L'Union fait la Force,"—100*l.*, Edward Barry, "Stability,"—75*l.*, S. W. Dawkes, "Experientia."

On the 3rd of June Mr. William Hawes will read a paper, at the Society of Arts, 'On the Results of the International Exhibition.' The Duke of Cambridge, who represented Her Majesty at the opening of the Exhibition, will preside.

The Council of the Society of Arts have issued cards for an evening party at the South Kensington Museum, on Friday, the 12th of June.

The President of the Institution of Civil Engineers will hold his Annual Conversazione on Tuesday evening, June 2, when the co-operation of members and visitors is requested, in order that a collection of Models of Engineering Construction, and of specimens of works of Art, worthy of the Institution, may be made.

The Arandel Society, as will be seen in our columns elsewhere, holds an important General Meeting on Tuesday next, June 2, when it is proposed to modify the rules under which it is at present existent.

Seven thousand persons gathered in Her Majesty's

Gardens—as the Royal Horticultural might be called—and in the adjoining edifice, on Wednesday last, to see the first great flower-show of the season. The sight was in the highest degree splendid; the whole nave being filled with stands and flowers. The public seemed to feel that the uses of such a building, covering acres of ground, in a climate like ours, were many, and that they had found out one of the most delightful. A fortnight hence, they will find another.

The Royal Colosseum, in the Regent's Park, has been opened, under a new management, with special entertainments for the Whitsun holidays, including many of the old, and some new attractions. Among the former, are the two famous views of London and Paris—marvels of pictorial art; and, among the latter, a series of Orchestral Concerts, under the direction of Mr. W. Howard, the Musical Gleanings of Mr. George Buckland, and Juvenile Christy Minstrels.

This year, the May examinations of the Department of Science and Art are, on the whole, satisfactory. In geometrical drawing the number of pupils examined in 1862 was 119; this year they have increased to 239. In machine drawing the number has increased from 70 to 194; in building construction there has been an increase from 45 to 107. In theoretical mechanics there has been a falling off from 52 pupils to 35; and in applied mechanics the decrease is from 47 to 22. The experimental sciences appear to be more popular. In acoustics, light and heat, there is an increase from 47 to 121; and in magnetism and electricity the increase is from 105 to 207. Inorganic chemistry shows an increase from 558 to 679; organic chemistry an increase from 105 to 157. In some of the natural sciences there is failure. Geology has fallen from 189 to 129, mineralogy from 81 to 46, animal physiology from 349 to 343; zoology from 84 to 41. In vegetable physiology there is an increase from 66 to 126; and in systematic botany from 26 to 84. In mining and metallurgy, which has been lately added to the list of subjects, there were 29 pupils in the former and 63 in the latter. The centres of examination have increased from 54 in 1862 to 71 in 1863; and the number of pupils examined in the different subjects has increased from 1,943 to 2,672.

The Master and Court of Painters, in the City of London, have got up another Exhibition of Decorative Works of Art. A private view of the collection will take place this day (Saturday).

A Reader at the British Museum calls attention to the great risk which is run by leaving exposed to deprecation the Shakespeare autograph in Florio's *Montaigne*. "Why," he asks, "is not the book withdrawn, and placed, as it should be, in the cases, with the other MSS. and autographs? We all recollect the fate of the letter which Lord Byron addressed from Greece to Sir Walter Scott, and which had been placed in the vase at Abbotsford. It is little short of a miracle that the autograph is still in the book; and I almost dread to forward this remonstrance, fearing it may call the tardy attention of some literary sharper or enthusiast to the lucky chance which is still open." A Reader probably exaggerates the risk of loss, but we shall do no harm by putting the authorities on their guard.

The Society for Promoting the Amendment of the Law has received a Report from the Special Committee on Convict Discipline. Sir Walter Crofton gave the Committee an elaborate account of the Irish system; and that Committee, after much debate, arrived at the following resolutions:—"That it is not desirable to revive the system of transportation, but it is desirable to promote the emigration of criminals sentenced to penal servitude, who shall have by steady industry and labour, whilst in prisons or whilst under probation, earned a sum sufficient to enable them to defray the whole or the greater part of their passage-money to any colony they may select.—That the present system of short imprisonments requires revision.—That it is desirable that the convict system should be remodelled on the principle of the convict system now in force in Ireland.—That for this purpose the preliminary imprisonment should be made more severe; that a system of marks should

be established in the second stage of labour; that intermediate prisons on the plan of Lusk and Smithfield should be organized, and that a strict supervision should be exercised over convicts discharged on tickets-of-leave, the conditions of which should be stringently enforced."

Dr. Norton Shaw, so long the active and successful officer of the Royal Geographical Society, has resigned his commission—mainly, it would seem, on the ground of health. The Society, for which he has done so much, have testified their sense of his services by a vote of 500*l.* towards a testimonial. In consequence of Dr. Shaw's retirement several changes will be made in the Secretary's office: in place of three Honorary Secretaries there will be, in future, two Secretaries, who, by virtue of their office, will be members of the Council, also a Foreign Secretary, and a paid Assistant-Secretary, who will reside at the Society's apartments, and edit the Society's publications.

Messrs. Jackson, Walford & Co. have published a chart of ancient and modern chronology. It is an elaborate table, and exhibits a good deal of historical information, of the kind required in schools and libraries. It cannot fail to be a useful companion to the reader of history.

Mr. Sorby has turned his microscope upon meteorites, or rather upon sections of those exotic minerals, with a view to ascertain their origin by close examination of their microscopical structure. The evidence thus far appears to be strong in favour of the conclusion that they are formed by the aggregation of smaller fragments or minute particles, in which particular they are most nearly resembled, among terrestrial rocks, by consolidated volcanic ashes. Is there anything in this fact of aggregation which touches the nebular hypothesis?

In reply to the letter of Herr Julius Lax, in our last week's number, we are now able to state that the quotation from 'The Robbers,' disguised under the fictitious title of 'Life of Moor, Tragedy, by Krake,' in Schiller's dissertation, 'Ueber den Zusammenhang der thierischen Natur des Menschen mit seiner geistigen,' is easily explained. It is nothing more nor less than a hoax by Schiller; at the expense of the illustrious Founder and the grave Professors of the "höhe Karlsruhen." Herr Lax is quite correct in supposing that Schiller invented and used the reference to the Tragedy, by Krake, for the purpose of concealing his authorship of the play; but he is not aware of the waggery which prompted the quotation. At the time when the Dissertation was written and printed, 'The Robbers' existed only in manuscript, and was not known to any one except the author and his intimate friends. To them, in the merriment and excitement of youth (Palleke, in his 'Life of Schiller,' suggests the possibility of a wager), he seems to have promised the dangerous experiment of introducing a passage from the Drama into the Dissertation,—and thus, apparently translated from the English (the learned Examinators, it seems, did not doubt of the existence of the fabulous 'Krake'), the first scene of the fifth act of 'The Robbers' appeared in print about a year before the drama itself was published. The little story, altogether, is an amusing game at hide-and-seek played by genius and unsuspecting pedantry.

We notice that the Catalogue of the Sculptures now exhibited in the Royal Horticultural Society's Garden does not contain the price at which each work is for sale. As it is understood that most of the examples are for sale, and as the Society, which gratuitously exhibits them, can hardly be expected to maintain a clerk to answer the questions of intending purchasers, would it not be considerate, on the artists' part, if they enabled the Catalogue-makers to complete it?

"A Constant Reader" complains that he has in vain searched the Engraving Copyright Acts to find the conditions upon which the legislature has granted copyright in engravings and lithographs. We are not surprised at his want of success, inasmuch as he has had no less than six Acts of Parliament to read. He will, however, find what he wants in the first of them, Hogarth's Act, 8 Geo. 2. c. 13. s. 1. This statute gives the copyright in a print for

a limited period, "to commence from the day of the first publishing thereof, which shall be truly engraved with the name of the proprietor on each plate, and printed on every such print." The Courts have in several instances held the performance of these conditions to be imperative. Consequently, the copyright in an engraving or lithograph will be lost if the above conditions are not complied with.

We have pleasure in announcing that the Saxon government has permitted the architect Semper, to whom the Dresden theatre is due, to return to Germany. The measure seems tardy, it must be owned, as fourteen years have just elapsed since the May of 1849, when the King of Saxony took refuge in the virgin hill-fort of Königstein, and the fight in the streets lasted more than a week, till the arrival of Prussian troops restored the balance of power. But the Saxon government is gradually wiping off old scores, and haste in this respect would be too little in accordance with the nature of any German monarchy, however quick in picking a quarrel with its subjects.

A new bi-monthly publication, approaching more nearly in its character to an English quarterly than to the ordinary type of German periodicals, is being issued in Vienna, under the name of the *Austrian Review*. It has long been a subject of complaint with Germans and of wonder with English, that so little of the kind has been attempted in so learned and so exhaustive a country, and that of the mass of periodicals so few should attain to an English standard. The first number of the *Austrian Review* gives more promise of completeness, and is not without decided literary merits. The opening article, on Napoleon's Italian Campaigns, founded on his lately-published Correspondence, is admirably written, and throws new light on the character of a man with whom Austria has naturally little sympathy. It is curious to find an Austrian writer raising the question how far Napoleon would have trod in the same path if he had arrived at the command of the Italian army at the age of sixty or seventy, after the usual promotion of peace time, instead of leaping into the saddle at twenty-seven, amid the general disturbance of Europe.

ROYAL ACADEMY OF ARTS.—The EXHIBITION of the ROYAL ACADEMY is NOW OPEN.—Admittance (from Eight till Seven), 1s.; Catalogue, 1s.
JOHN PRESOTT KNIGHT, Esq., R.A., Secretary.

SOCIETY OF PAINTERS IN WATER COLOURS.—The FIFTEENTH ANNUAL EXHIBITION is NOW OPEN, at their Gallery, 5, Pall Mall East (close to the National Gallery), from Nine till Dark.—Admittance, 1s. Catalogue, 6d.
JOSEPH J. JENKINS, Secretary.

INSTITUTE OF PAINTERS IN WATER COLOURS founded in 1831 as the New Society of Painters in Water Colours.—The ANNUAL EXHIBITION is NOW OPEN.—Admission, 1s.—Gallery, 33, Pall Mall, opposite Marlborough House.
JAMES FAHEY, Secretary.

FRENCH GALLERY, 130, Pall Mall.—The TENTH ANNUAL EXHIBITION of PICTURES, the contributions of Artists of the French and Flemish Schools, is NOW OPEN.—Admission 1s.; Catalogue, 6d.

THE THIRD ANNUAL EXHIBITION of WORKS of DECORATIVE ART, at the HALL of the PAINTERS' COMPANY, No. 9, Little Trinity Lane, City, commences on MONDAY, June 1, and continues for One Month.—Admission Free, from Ten to Seven daily.
F. G. TOMLINS, Clerk.

MRS. FANNY KEMBLE'S READINGS of SHAKESPEARE.—Dudley Gallery, Egyptian Hall, Piccadilly.—Mr. Mitchell has the pleasure to announce that in consequence of the great success which has attended the First Series of Mrs. FANNY KEMBLE'S READINGS of SHAKESPEARE, they will be continued every Monday and Wednesday Evening, and Saturday Morning.—On Monday Evening, June 1, 'Anthony and Cleopatra'; Wednesday Evening, June 3, 'Macbeth'; and on Saturday Morning, June 6, 'The Tempest.'—To commence each Evening at Half-past Eight, and on Saturday Morning at Three o'clock (Unreserved), 3s.; 5 Shells, 6s.; a few Fanshills, 7s. each, which may be obtained at Mr. Mitchell's Royal Library, 33, Old Bond Street, W.

LEVAISSOR EN VISITE.—FIFTH WEEK.—Dudley Gallery, Piccadilly.—SCÈNES ET CHANSONS COMIQUES.—In consequence of the great and increasing success attending these ENTERTAINMENTS they will be continued every Tuesday, Thursday, and Saturday Evenings till further notice.—Commencing at Half-past Eight.—Seats (Unreserved), 3s.; Stalls (numbered), 7s.; a few Fanshills, 10s. 6d. each.—Mr. Mitchell's Royal Library, 33, Old Bond Street, W.

SCIENCE

SOCIETIES.

ROYAL.—May 21.—General Sabine, President, in the chair.—The following papers were read: 'On the Nature of the Sun's Magnetic Action upon the Earth,' by C. Chambers, Esq.—'Numeric Elements of Indian Meteorology, Series 1,' by Her-

mann de Schlagintweit.—'On the Structure of the so-called Apolar, Unipolar and Bipolar Nerve-Cells of the Frog,' by Dr. Beale.—'On the Belts of Jupiter, in a Note addressed to the Secretary,' by Prof. J. Phillips.—'Notes of Researches on the Polyammonias, No. 23, Hydrazobenzol, a new Compound Isomeric to Benzidine; and Note on the Composition of Aniline Blue,' by Dr. A. W. Hofmann.—'On the Calculus of Symbols, Third Memoir,' by W. H. L. Russell, Esq.

GEOGRAPHICAL.—May 25.—*Anniversary Meeting.*—Sir R. I. Murchison, President, in the chair.—A ballot was taken for officers for 1863-4, when the following list was returned: *President*, Sir R. I. Murchison; *Vice-Presidents*, Lord Ashburton, Capt. R. Collinson, Col. Sir G. Everest, Viscount Strangford; *Trustees*, R. Monckton Milnes, Esq., Sir W. C. Trevelyan; *Secretaries*, C. R. Markham, Esq., W. Spottiswoode, Esq.; *Foreign Secretary*, Dr. Hodgkin; *Ordinary Councillors*, Right Hon. H. U. Addington, Col. G. Balfour, Lord A. Churchill, Lord Colchester, J. Crawford, Esq., J. Fergusson, Esq., A. G. Findlay, Esq., Right Hon. Sir T. Fremantle, C. C. Graham, Esq., Rear-Admiral W. H. Hall, W. I. Hamilton, Esq., Rear-Admiral the Hon. H. A. Murray, Sir C. Nicholson, Dr. Rae, Major-Gen. Sir H. C. Rawlinson, Commodore A. Ryder, Earl of Sheffield, E. O. Smith, Esq., J. Walker, Esq., Major-Gen. Sir A. Waugh, Col. H. Yule; *Treasurer*, R. Biddulph, Esq.

GEOLOGICAL.—May 20.—Prof. A. C. Ramsay, President, in the chair.—Sir C. T. Bright, J. Dees, E. C. H. Day, W. D. Eye, R. F. Hodgson, the Rev. C. Kingsley, E. C. Masson, T. G. Bylands, and J. Scott were elected Fellows.—The following communications were read: 'Further Observations on the Devonian Plants of Maine, Gaspé and New York,' by Dr. J. W. Dawson.—'Notice of a new species of Dendroperon, and of the Dermal Coverings of certain Carboniferous Reptiles,' by Dr. J. W. Dawson.—'On the Upper Old Red Sandstone and the Upper Devonian Rocks,' by J. W. Salter, Esq.

NUMISMATIC.—May 21.—W. S. W. Vaux, Esq., President, in the chair.—J. Hunt, Esq., J. M. Hunt, Esq. and R. Pullan, Esq., were elected Members of the Society.—Dr. Lee exhibited an Oxford sixpence of Charles the First, being the only one in the hoard of 2,428 coins found at Hartwell, of which 181 were sixpences of Charles the First.—Dr. Lee also exhibited as a curiosity a penny of George the Third, reduced to an oval shape by rolling.—Mr. Evans exhibited a British coin found at Bury St. Edmunds.—Mr. Evans read a paper communicated by W. Aylton Dyer Longstaffe, Esq., and entitled 'Northern Evidence on the Short-Cross Question.' The paper is of great length, and one of the most valuable contributions to numismatic science that has appeared for years. A summary of Mr. Longstaffe's arguments may be given to show what the paper contained.—1. William was moneyer at Carlisle and Newcastle during the whole of Henry the Second's first great reign and no longer. These coins exhibit the varieties of the type of the Tealy bind; therefore, that type represents Henry the Second's first great re-coinage only.—2. Alan was moneyer at Carlisle during the rest of the reign of Henry the Second. He was the King's moneyer. The earldom of Northumberland was in the King's hand. There was no mint at Durham. In the reign of Richard the First the Bishop of Durham might cause him to coin at Durham, being Earl of Northumberland. Alan ceased office before John's coinage. His coins exhibit a plurality of pearls in the diadem and the short-cross type. They occur for both Durham and Carlisle, and are of the first or archaic variety of the type. He lived at Carlisle, and, though his mint was principally in Northumberland, no coins struck at Newcastle have occurred to Mr. Longstaffe; therefore, Alan's coins, struck at Durham, must be referred to Richard the First's time, and Henry the Second did coin short-cross pennies, and those of one variety only, which was continued into Richard the First's reign without change of legend. 8. John's coinage was contemporary with Otho the Fourth's of Germany, who reigned before its com-

pletion. Thomas, son of Alan, was not moneyer at Carlisle until the reigns of John and Henry the Third. Otho's coins are in imitation of our short-cross pennies with the quatrefoil Mint mark, which Mint mark occurs on one variety only, and which variety, with and without that mark, has been found in a worn state with new Irish pennies of John. The coins of Thomas of Carlisle are of a short-cross type; therefore, John continued to strike short-cross pennies without change of legend, and the type was thus continued to the reign of Henry the Third. 4. Adam Tailor did not acquire a die at Canterbury until the reign of Henry the Third. His coins are of a short-cross type, differing in character from those above; therefore, Henry the Third's first coinages were also of a short-cross type.

LINNEAN.—May 25.—*Anniversary Meeting.*—G. Bentham, Esq., President, in the chair.—The Treasurer read the financial statement, by which it appeared that there was a balance of 177l. 2s. 4d. in favour of the Society, on the year's account.—The Secretary reported that since the last Anniversary, eleven Fellows and two Foreign Members had died; and that twenty-two Fellows, one Foreign Member and one Associate had been elected during the past year.—At the ballot which subsequently took place, J. Bateman, Esq., M. T. Masters, M.D., H. T. Stainton, Esq., T. Thompson, M.D., and G. C. Wallich, M.D., were elected *Members of the Council*, in the room of others retiring from it, in accordance with the provisions of the Society's charter. The following officers were unanimously re-elected, viz.—G. Bentham, Esq., *President*; W. W. Saunders, Esq., *Treasurer*; and G. Buak, Esq. and F. Currey, Esq., *Secretaries*.

ZOOLOGICAL.—May 26.—Dr. J. E. Gray in the chair.—Dr. Sclater read a list of the birds collected by the late Mr. Motley, at Banjermassing, in Borneo, with notes on their habits by the collector. Dr. Sclater also pointed out the characters of a spine-tailed swift of the genus *Chaetura*, from West Africa, for which he proposed the name *Chaetura Cassini*.—Mr. R. Swinhoe exhibited specimens of a new species of *Zosterops*, from Northern China, for which he proposed the name *Z. erythropleurus*, and an example of the scarce wader *Pseudocolaptes semipalmatus* of Blyth, obtained at Tien-tsin, in China, in full summer plumage.—Mr. E. Blyth read a synoptical list of the species of Felis inhabiting the Indian regions and the adjacent parts of middle Asia, with indication of their range and geographical distribution.—Dr. Gray gave the outlines of a new general arrangement of the Cetaceans founded upon the additional information recently acquired concerning these animals. Dr. Gray also read a paper 'On the Box Tortoises of the Genera *Kinixys* and *Sternotherus*,' and made some remarks on the peculiarities presented in the formation of the eyes of the species of tortoises of the family Emydidae.—Mr. O. Salvin exhibited thirteen new species of birds, discovered in Central America by himself and Mr. F. Godman during their recent explorations in Guatemala and the neighbouring republics.

INSTITUTION OF CIVIL ENGINEERS.—May 19.—J. Hawshaw, Esq., President, in the chair.—At the Monthly Ballot, the following candidates were elected:—Messrs. W. Neill and G. Smith, jun., as Members; Capt. Fowke, R.E., and Messrs. A. Joy, A. W. Staffs, J. H. Tuok, and W. Wilson, as Associates.—The paper read was 'On the Manufacture of Duplicate Machines and Engines,' by Mr. John Fernie.

ROYAL INSTITUTION.—May 1.—Sir J. P. Boileau, Bart., in the chair.—'On Japanese Art, illustrated by Native Examples,' by J. Leighton, Esq.

May 8.—Sir R. I. Murchison in the chair.—'On some Chemical and Physical Properties of Soils, and the Productive Powers of the Soils of England,' by Dr. A. Voelcker.

SYRO-EGYPTIAN.—May 12.—J. Lee, Esq., in the chair.—Mr. Marsden read a paper containing some remarks on the name of the King engraved

on the Coffin-Lid which was found by Col. Vyse, in 1837, in the Third Pyramid of Ghizeh, and attributed to Memka-va, the Mycerinus of the Greeks. He conjectured that in the absence of a hieroglyphic alphabet at that early period of Egyptian history, it was probable the real or verbal name of this King, reaching us as it does but through a Greek source, as well as for other reasons which he endeavoured to explain, was neither satisfactorily proved nor firmly established.

MEETINGS FOR THE ENSUING WEEK.

- Nov.** Archaeological Institute.—Exhibition of Sculpture in Ivory.
 — Asiatic, 3.
 — Entomological, 7.
 — Architects, 8.—'Colour,' Mr. Lightly.
 — Royal Institution, 2.—General Monthly Meeting.
Thurs. Ethnological, 8.—'Caste System, India,' Prof. Tagore.
 — Photographs, 8.
 — Engineers, 2.—'Conversations.'
 — Royal Institution, 3.—'Sound,' Prof. Tyndall.
Wed. Horticultural.—Promenade.
 — Geological, 8.—'Sandstones of Cromarty,' Rev. Dr. Gordon; 'Section at Moulins-Guignon and Flint Implementa,' Mr. Prestwich; 'Tertiary Shells, Jamaica,' Mr. Carrick Moore; 'New Fossil Thecodium, Malta,' Mr. Macdonald.
 — Society of Arts, 8.—'Results of International Exhibition, 1854,' Mr. Hawes.
Thurs. Royal, 4.—Election of Fellows.
 — Linnean, 8.—'Monstrosity in genus *Passiflora*,' Mr. Salter; 'Fertilization of *Dios grandiflora*,' Mr. Trimen.
 — Chemical, 8.—'Synthesis, Methods in Organic Chemistry,' M. Marcelin Berthelot.
 — Antiquaries, 8.
 — Royal Institution, 3.—'Geology,' Prof. Ansted.
Fri. Philological, 8.—'Cultivating the Vernacular Keltic Languages, British Isles,' Rev. G. C. Geldart.
 — Royal Institution, 3.
 — Archaeological Institute, 4.
Sat. Actuaries, 3.—Annual General.
 — Horticultural.—Promenade.
 — Royal Institution, 3.—'Electric Telegraphy,' Prof. Thomson.

FINE ARTS

THE ARUNDEL SOCIETY.

THE Fourteenth Annual Report of this Society lies before us, and suggests much that must be gratifying to lovers of Art. Its operations have been extended, and its prosperity is great. During the year 1862 the annual publications were, for the first time, delivered within the year in which they were due; those for the present year will be delivered in November next. While this is the case, the expenses and cash balances have been so managed that about 800*l.* remained in hand in January last. The publications for this year will be taken from the two series of frescoes now in course of illustration, and will consist of an engraving by Herr Schäffer, from Fra Angelico's 'St. Stephen thrust out, before Martyrdom,' and five chromolithographs, by Messrs. Storch & Kramer, from the following works of Masaccio in the Brancacci Chapel:—1. St. Peter raising a Youth from the Dead, with, 2, a Life-size Head, from the same,—3. SS. Peter and John giving Alms, with, 4, the Head of St. Peter, full size,—5. SS. Peter and John healing the Sick. Mr. Gruner's engraving of 'The Conversion of St. Paul,' after the tapestry in the Vatican, designed by Raphael, is postponed for 1864.

More satisfactory even than this report of regular progress is the fact stated, that the sale of the "Occasional Publications" of the Society,—a class very highly to be esteemed, and, in some respects, including the most valuable of its productions,—has largely increased. The chromolithograph of 'The Marriage of Sta. Cecilia,' after Francia, and that of 'St. Augustine Preaching,' after Benozzo Gozzoli, have lately been published. Two fac-similes of illuminated letters, from the collection already engraved in outline, will shortly appear, and two chromolithographic copies, from 'The Conversion of Hermogenes,' by Mantegna, and 'The Annunciation,' by Fra Angelico, will appear in November next. The casts of the Theæus and Ilissus have been withdrawn from sale, the moulds being quite worn out. 'The Horse's Head,' Elgin Marbles, was published by the Society last year. The collection of drawings is continually on the increase. Copies were made last summer from three of the finest frescoes by Fra Angelico, in the Convent of St. Marco, Florence; from an important historical subject by Fra Filippo Lippi, at Prato, and four masterpieces by Luini, at Saronno, together with several heads from these paintings. A drawing has also been made from a small picture by S. Memmi,

now at Paris, and commissions given to copy two of the great frescoes by Raphael, in the Stanze of the Vatican, and for a copy of a triptych by Memling, in the Hospital of St. John, Bruges. From these drawings future publications of copies may be made; and, at any rate, by them will be preserved transcripts of many noble works, too often threatened with destruction, and liable to be lost altogether. Added to what the Society has already done in the publication of works of Art, this is indeed a noble list, deserving success.

So successful is the Arundel Society, that it is at present a little embarrassed by the number of its members. The possibility of supplying to all applicants chromolithographic copies, without injuring their quality, is seriously doubted. 1,600 members already test the capabilities of the process; a certain reserve must also be made, for financial and other reasons, of copies for general sale. To maintain this important reserve, the Council proposes to limit the number of members in future. At the general meeting, to be held on Tuesday next, June 2nd, a new set of rules will be proposed, expressing, amongst other points, that the number of members shall be allowed to fall to 1,500, who will alone receive the annual publication in return for their subscriptions; secondly, that new members, who will be admitted at first as Associates, and afterwards as Subscribers, on the occurrence of vacancies in the 1,500, will be required, on entrance, to contribute to the Copying Fund—a fund set apart for purposes suggested above; and, thirdly, that, as the sale of supernumerary and occasional publications will probably increase, the profits arising from the sale may be applied to support the said fund. We may here say that the Society earnestly desires subscriptions to this fund; its application may be indefinitely extended, because the works which cry aloud for transcription and preservation are innumerable.

The latest publication that comes within the list of occasional works by this Society is that which has just been issued, 'St. Augustine Preaching,' from a fresco painted by Benozzo Gozzoli in the Church of that Saint, at S. Gignano, near Volterra, about the year 1465, and when he was about forty years of age, nearly at the prime of his life and style, which culminated in the gloriously exuberant works in the Campo Santo, Pisa. Putting aside certain technical objections, to be urged below, to this production, it is amongst the most satisfactory results of the Society's efforts. The work itself was favourable; the simplicity of composition, the repose, that, without being statueque and severe, is complete, yet broken enough in the design to give it a lively interest, the variety of expressions,—all characteristic and beyond a doubt put into portraits of men of note of the artist's time,—give it an effectual appeal to us. In the design Benozzo has placed the Saint seated on a slightly-raised desk, and reading some text from a book placed before him: he runs his fingers along the page, following the line as it is read off. In a line on either side is a portion of the audience, some standing, some sitting, their expressions varied as in abstracted attention, consulting with each other, and delighted at the "sweet preaching." This artist seems, from Vasari's account of other works by him, to have been unusually habituated to introducing portraits of men he knew into his pictures. That writer cites the picture of 'The Queen of Sheba visiting Solomon,' the portraits of M. Ficinus, Agriopolo, Platina and B. Gozzoli himself. In the Cathedral at Pisa was 'The Dispute of St. Thomas Aquinas,' containing many other portraits. Knowing thus much, we are convinced that all these heads are portraits, taking into account the individuality they have, and that some faces have been identified. Benozzo painted in the church in question stories of the life of the titular Saint, of which this of his "Preaching" is perhaps the best, from his conversion to his death. Vasari says of the series "of all this work I have the design, by the master's own hand, in my book, with several drawings of those described above as executed in the Campo Santo of Pisa."

Our objections to the methods of transcription and reproduction adopted by the Arundel Society are, (1) that its publications are of the nature of re-

storations; (2) to a certain extent mechanical; and (3) exhibiting less of the artistic vitality than they might and should do. We have no trace in any of its works of the ill usage of men and the effects of time upon pictures; patches that have long ago fallen out of the originals, stains that traverse them, and decay that has invaded them are all ignored, so that we get not each picture as it is, nor even as it ever could have been, but something the copyist thinks it should be. The leathery surface and the curry-powder-coloured flesh that are the peculiar sins of Berlin chromolithographers come out in all examples,—Pinturicchio shares them with Ghirlandajo, Gozzoli with Giotto. Del Sarto, into whose greys not even the heart of a Berlin artisan could introduce curry-powder, retains the element of leather and takes a woful green. We do think it would be possible for the Society to secure the services of persons gifted with a higher perception of Art altogether:—men live in different heavens of Art, as we all know,—to that the professional copyist it employs has attained. Such men would never dream of filling up and restoring broken parts of pictures, but, knowing how the ends of Art should be best served, would be faithful to her even in her works' decay. A fac-simile of the pictures as they are is what men want in authoritative reproduction. There is too little difference in the complexions of the men in the chromolithograph before us, to justify Gozzoli, too little variety in the textures of the objects represented, flesh, robes, walls and ornaments, to be receivable as worthy. The mechanical reproducer does not seem to have even so little of an artist in his composition as to see that the textures *cannot* be all alike in a great artist's work. His rendered colouring is often crude: see the bright blue and red robes of the personages on the proper right of the picture before us; the very execution is of an unpleasant and technically-wrong uniform semi-opacity, so that the qualities of the pigments employed by the artist of old are neglected, and the copy rendered flat and dull where it should be intense and forceful in tone and in colour. We hope not to seem hypercritical in these remarks: knowing the difficulty of the task before the managers of the Society, we give them the honour that is due for what they have done; but desire, now the movement is prosperous, that it should be directed in a manner worthy of the cause.

FINE-ART GOSSIP.—One of the protests to which we have before alluded as likely to be made against the selecting and hanging of pictures for the current Exhibition of the Royal Academy has taken effect by the collection of a few rejected works. These are to be seen, on application, at the rooms of the Cosmopolitan Club, 30, Charles Street, Berkeley Square. Mostly landscapes,—many are admirable, some are eccentric, but not therefore and *necessarily* condemnable, for eccentricity sins only against convention, and is not, because it is eccentric, wrong. By the way, let us add that the Academy contains many pictures of which the eccentricity exceeds that of any of these, and some of them without the redeeming intellectual faculty present here. It would be absurd to deny the beauty of Mr. Naish's 'Castle-Rock, Lynton,' a learnedly studied and lovely phase of Nature.—Mr. Hughes's 'La Belle Dame sans Merci' has, beyond all denial, exquisite poetry in the lady's head.—Mr. Holliday's 'Scriptural Allegory of the Lost Lover' shows feeling for beauty, with some affectation so robust an artist will soon outgrow. Like Mr. Hughes's picture, this is not free from absurdities, but in neither are the absurdities those of dull men. The beauty of some of the faces in Mr. Holliday's picture is as rare as it is estimable. This collection of rejected works, by about a dozen painters who have agreed to appeal to the public, must not be taken at more than it professes to attempt; it is the protest of so many men against the wrong-doing or want of consideration of others who have made them suffer. It is farcical to talk, as some do, of its being "an opposition" to the Royal Academy. By the undeniable value of these works, the painters establish their case, and we are quite sure their protest will have effect.

The election for Members of the Society of

Painters in Water Colours, for the present year, takes place on Monday, the 8th of June. The existing number of Members is twenty-seven; it is the custom of the Society not wholly to fill up its ranks. We understand that it is probable the Members will take into consideration the untoward result of the last attempt at an election of Associates of the Society, which was a "tie" between Messrs. E. B. Jones and Duncan. Both of these gentlemen being figure painters, and the Society needing to strengthen itself with able artists, especially such as paint with brilliancy and originality, to which qualities recent exhibitions owe their attractiveness and Art-interest, we hope an end may be put to the question of choice between them. As there are at least three vacancies for Associates, no great harm would be done and much positive good arise from the gracefulness of the act of electing both these gentlemen. The public will soon decide which is the more worthy.

As it seems probable that the plan initiated by the Society of Arts for giving prizes to encourage Art-workmanship amongst modellers, workers in metal, iron, brass and copper, ivory-carvers, chasers, enamel-painters, porcelain-painters, inlayers, glass-engravers and embroïderers, will be so far successful as to bring forward many worthy competitors, we understand that it is contemplated to distribute the premiums in a public and ceremonial manner. This may take place at the Crystal Palace or some equally suitable locality. We may remind competitors that they must designate themselves in their own names, or by cipher, to the Secretary of the Society of Arts, John Street, Adelphi, W.C., on or before the 15th of July next; and that each work sent in competition must be delivered, free of charge, on or before the 31st of August next, at the Society's House.

Mr. J. C. Robinson will deliver a lecture at the South Kensington Museum on the evening of Tuesday next, June 2nd, 'On the Art-Collections at South Kensington, considered in reference to Architecture.' On the 16th of June, at the same place, Mr. T. Gambier Parry will lecture 'On Architecture, its Purpose and its Place among the Fine Arts.' The last will conclude the series of discourses promoted by the Architectural Museum for the current session.

MUSIC AND THE DRAMA

MUSICAL UNION.—LEOPOLD AUER, the Hungarian Violinist, will play for the first time at the Music Union, on Wednesday, June 3, at Three o'clock. J. ELLA, Director.

MRS JOHN MACFARREN'S ENTERTAINMENT, "A MORNING at the PIANOFORTE," on THURSDAY NEXT, at ST. JAMES'S HALL, when she will read and illustrate a Lecture by G. A. Macfarren, Esq., on the Pianoforte. Miss Palmer.—Tickets, 3s.; Stalls, 7s.; at Austin's, 28, Piccadilly.

HANOVER SQUARE ROOMS.—AT THE SECOND MORNING CONCERT to be given to the Subscribers of Ewer & Co.'s Musical Library, on TUESDAY, June 2, at Three o'clock, the following New Compositions will be performed: Pianoforte Quartet, Sichi; Violin Quartet, Mendelssohn's 'Chant des Sirènes'; O'Leary; Spinnelried, Liszt; Solo, Violoncello, Romance Volkemann; Songs: 'A Poet's Love and Devotion, Schumann'; 'Do not in Beauty thus appear, Nicolai'; 'Mary of the Oberland, Desseaux'; 'Somebody, Agnes Zimmermann'; Duets, Contralto and Baritone: 'Gardner, by Treeman'; Schumann. Instrumentalists: Messrs. Dannreuther, Santon, Ries, Webb and Paque. Vocalists: Miss Robertine Henderson, Mdlle. Elvira Behrens, and Mr. Lausener. Conductors: Messrs. Frank Mort and Evers. All Tickets retained at the First Concert are available.—Programme at Ewer & Co.'s Musical Library, 67, Regent Street.

ST. JAMES'S HALL, June 5.—MR. CUSINS'S CONCERT.—Under the immediate patronage of His Royal Highness the Prince of Wales, and Her Royal Highness the Princess of Wales, Full orchestra and chorus. Parepa, Sims Reeves, Messent, Santley, Orpheus Gluck, Gounod, Buxton, Buxton, Chatterton, and John Thomas. The Serenata, composed in honour of their Royal Highnesses by Mr. Cusins, and other works of interest will be performed. Conductors, Prof. Bennett and Mr. Cusins.—Tickets, 10s. 6d.; 5s., 3s., and 1s.; at Addison & Lucas's, 210, Regent Street, all Music-sellers, and Austin's, 28, Piccadilly.

WELSH NATIONAL MUSIC, sung by United Chorus, accompanied by a Band of Harps.—A MORNING CONCERT, to be given by Mr. JOHN THOMAS (Pencroft Gwalla), at the HANOVER SQUARE ROOMS, on SATURDAY, June 13, to commence at Three o'clock, with the kind assistance of the Members of the Vocal Association, the Royal Academy of Music, &c.—Vocalists: Miss Edith Wynne (Eoc Cymra), Madame Sainton-Dolby, Mr. Wilbye Cooper, and Mr. Lewis Thomas; Harpists: Mr. J. Belsir Chatterton (Harpist to the Queen), Mr. T. H. Wright, Mr. J. Cheshire, Mr. John Thomas (Pencroft Gwalla), &c. Further particulars will be duly announced.—Sofa Stalls, 15s.; Tickets, Half-a-Guinea; to be had of the Music-sellers; at the Hanover Square Rooms; and of Mr. John Thomas, 109, Great Portland Street, W.

JUNE 16.—BARDIC FESTIVAL.—APTOMMAS'S CONCERT OF NATIONAL AND MODERN MUSIC.—Vocal Association, Band of Harps, &c. Parepa, Sims Reeves, Messent, Edith Wynne, Eleanor Ward; Messrs. Reichardt, Wilbye Cooper, Lewis Thomas, Engel, Harrison, &c. Conductors, Messrs. Benedict and Ard II. Accompanists, Messrs. Gans and Archer.

MISS FANNY CORFIELD'S MATINEE MUSICAL, at 16, Grosvenor Street, by kind permission of Messrs. Colliard, on WEDNESDAY, June 3, at Three o'clock. Instrumentalists: Herr Molique, M. Paque and Miss Fanny Corfield. Vocalists: Miss Eleanor Armstrong, Miss Marian Moss and Mr. Bedford. Conductors: Mr. Arthur O'Leary.—Tickets, numbered, 10s. 6d.; Reserved, 7s.; at Cook, Hedges & Co., 25, New Bond Street; and of Miss F. Corfield, 29, Burton Street, Eaton Square.

MR. FREDERICK CHATTERTON (Harpist to Her late Royal Highness the Duchess of Gloucester, and Courts of France and Belgium) has the honour to announce his GRAND HARP CONCERT, at the HANOVER SQUARE ROOMS, June 8, at Eight o'clock. The Orchestra of Harpe, commencing with the Prince Consort's March, composed by Mr. Francis Chatterton, who will also perform a new Fantasia and Duett with his daughter, Madame Bohrer Chatterton, and take part in a Selection of Welsh Melodies, assisted by the West London Madrigal Society.—Artists: Mesdames Parepa, Louisa Vinning, Taylor and Weiss; Messrs. Tennant, Montem Smith, Allen Irving and Weiss, Bohrer, Klallmark, G. E. Allen.—Stalls, 10s. 6d.; Tickets, 5s., 3s.; to be had at all Music Shops; at the Rooms; and Mr. Frederick Chatterton, 23, Acacia Road, Regent's Park.

JUNE 11.—MR. HENRY LESLIE'S CHOIR.—THE DIRECTOR'S BENEFIT.—St. James's Hall.—Lemmings-Sherrington, Wilbye Cooper, and Miss Fanny Corfield, Charles Halle, Madame Lemmens will sing Blumenthal's new Song, 'A Day Dream,' and the Variations in 'Les Diamans de la Couronne.' Mr. Lewis Thomas will sing Gounod's Cantique, 'Nazareth.' Madame Arabella Goddard and Mr. Charles Halle will play Mozart's Sonata in D for Pianoforte. The Programme will include Mendelssohn's Psalm, 'Judge me, O Lord'; Mozart's 'Ave Verum'; and the following Compositions by Henry Leslie:—New Trio, 'Love, gentle, holy, pure,' 'Blow ye the Trumpet,' and the Grand Duett and Final Chorus from 'Holywood.'—Stalls, 6s.; Family Ticket for Four, 21s.; Boxes, 3s.; Area, 2s.; Admission, 1s.—Addison's, 210, Regent Street; Austin's Ticket Office, 28, Piccadilly; and all Music-sellers.

ROYAL ITALIAN OPERA.—Mdlle. Fioretti made another step in the good graces of our public by her admirable singing and natural behaviour in M. von Flotow's opera, 'Martha,' this day week. Had she not sung anything but the "Rose" song, it must have assured every hearer that she is one of the complete Italian vocalists, who bid fair to become as few as the Sibylline leaves. Though she has been denied beauty by Nature, the entire absence of affectation in her manner on the stage makes large amends. She is not merely tolerated, but increasingly admired as a valuable acquisition to the company of the theatre,—most welcome, for instance, as a substitute for Madame Penco. Though Signor Mario has still his good moments, which set him high above any other tenor at present on the stage, he must now rely on his impassioned style, and the elegance of his bearing. Never has there been such an opera lover in mortal recollection. Madame Didiée does not regain the ground she has lost,—we suspect owing to mistaken ambition. Her Nancy, though graceful and gay to see, was weaker as a piece of singing than it used to be.—On Monday she adventured in the difficult part of *Fides* in 'Le Prophète.' It would not be fair to pass judgment on this performance, seeing that it was in some sort under protest, indulgence being requested for her on the score of indisposition. Mdlle. Dottini, another novelty in the cast, has hardly weight enough for the part of *Bertha*. Only parts of the opera went finely, yet, perhaps, the music of the cathedral scene was never more cordially relished on any previous performance.—'Il Trovatore' was given the evening before last, with Mdlla. Patti as the heroine: 'La Gazza Ladra' is announced for Thursday next, with the same lady as *Ninetta*.

CONCERTS.—We last week omitted to notice a concert given by Mr. Henry Leslie's Choir on Thursday evening week; and to mention that the first appearance of Miss Madeline Schiller duly took place at the Musical Union. M. Jules Lefort was the singer, and introduced one of the most beautiful modern songs in being, 'Le Vallon,' M. de Lamartine's 'Méditation,' excellently set by M. Gounod.

Mr. Halle's Second Recital was a "command" performance for the pleasure of H.R.H. the Princess of Wales.

M. Thalberg's Matinees began duly on Monday with a perfect performance, as was to be expected: the artist not having lost an iota of his incomparable manual power and grace. He is, however, still most admirable in his own music,—not entirely satisfactory in his readings of Chopin, which are too heavy, or of Mendelssohn, which are hardly expressive enough. Nor do his later *fantasias* and transcripts seem to us so happy as those which electrified the public, he will not care to be reminded how many years ago.

The last concert of the Musical Society was principally noticeable for the essay of Miss Madeline Schiller in Mendelssohn's second *Concerto*,—a

piece of execution at present beyond her powers. We do not, however, recollect any lady who is equal to the difficulty and fatigue of the last movement. Miss Schiller shows true musical feeling, and practice before the public may give her that force and firmness which are at present to be desired in her performance.

Concerts of pupils have been given during the last ten days by the Royal Academy of Music and by Dr. Wylde's Academy. Quarter after quarter are these exhibitions made—year after year fades out—the results are unchanged and vexatiously monotonous. Here and there we are tantalized by signs of promise, both vocal and instrumental which fail to be fulfilled; the plain and paradoxical fact being that our concert-rooms and theatres are sustained in interest by English artists who have made their education abroad, or by foreigners who, having arrived in England, and who, finding the country more cultivated than a howling wilderness, in which there is, nevertheless, a good "yield" of gold, intelligently adapt themselves to our tastes and requisitions.

NEW ADELPHI.—The drama of 'Angel or Devil' has been added to the bill for the last ten nights, and the character of the wife, whose conduct raises the doubt implied in the title, has been acted by Miss Avonia Jones with her wonted energy. 'The Wooden-Spoon Maker' is likely to become a favourite, and the hero one of the best impersonations by Mr. Webster. A new burlesque by Mr. H. J. Byron has been produced, under the title of 'The Ill-Treated Il Trovatore.' The main outline of the opera has been preserved, but with humorous modifications from which the story suffers no little distortion, while the text of the dialogue bristles with those mechanical puns which are now expected in these stage-caricatures. The parodical songs introduced had the advantage of two excellent vocalists,—Miss Sara and Miss Carry Nelson,—who show an ambition to excel in the singing as well as in the eccentric action of their parts. The piece gains in importance and interest by their engagement. Perhaps, however, the main element of its success lies in the acting of Mr. J. L. Toole, who, as *Arucena*, the gipsy, gives full swing to his extravagance; and whether he sings, dances or maddens, excites the audience to such demonstrations of mirth as are seldom witnessed even in this theatre.

SURREY.—This theatre opened on Saturday for the summer season, under the management of Mr. Loraine, with Mr. Falconer's drama of 'Peep o' Day,' which is here performed, with one exception, by the Drury Lane Company, illustrated with beautiful scenery and efficient accessories. The part of *Mary Grace* was supported by Miss Margaret Wilton with considerable elegance. The play was well received, and on the fall of the curtain, Mr. Loraine was called to receive the approbation of the audience.

MUSIC IN LEIPZIG.

MY last report of the season will deal more with revivals than with new compositions. None of the latter have been produced in the *Gewandhaus*—but the former have been very interesting. A Symphony by the Abbé Vogler showed more life and freshness than could have been expected; the first movement, which is decidedly the best, contains some devices, not to say tricks, which speak more to the eye than to the ear; the other movements fall off somewhat. Very solemn, and excellently fitted for its purpose, is Mozart's 'Masonic Funeral Music,' written for the funeral of the Grand-Master, Prince Esterhazy. I must return to the concerts devoted to French music, having sketched the programme:—Overture to 'Semiramide,' Catel,—two Choral Songs (Brunetta's) of the middle of the seventeenth century,—'La Violette' and 'Grisélide,' compositions of exquisite grace and beauty,—Ariette and Chorus from the ballet 'La Mascarade de Versailles,' Lully; strangely Handelian in many touches,—Violin Variations, Rode, superbly played by Herr David,—Aria and Chorus from 'Hippolyte et Aricie,' Rameau; graceful and pleasant, but with rather too many bird-effects for modern taste,—

Overture 'Jean de Paris,' Boieldieu.—Symphony in G minor, Méhul; the longest, but the least interesting, work of the evening; some of the themes are good enough, and the *scherzo* and *finale* have piquancy and life, but the way in which the whole is worked out makes the effect monotonous; the second movement is a singular anticipation of Mendelssohn's four-part song, 'Ein Vöglein in den Zweigen schwank,'—Chorus from 'Les Deux Avars,' Grétry,—'Fée Mab' *Scherzo*, Berlioz, a wonderful piece of orchestral sonority, but in which the harp effect was lost, only one harpist being engaged,—Le Sueur's March and Magicians' Chorus from 'Alexandre à Babylone'—a good winding-up piece.—In one of the *Gewandhaus* Concerts, M. Auguste Werner, of Geneva, a pupil of the Leipzig Conservatory, made his first appearance, and proved himself a thoroughly well trained pianist; his touch is strong and his technical acquirements brilliant. He chose Herr Hiller's *Concerto*; the second and third movements may be placed by the side of any piano *concerto* of late times. Herr Wilhelmj has again won deserved applause by his rendering of Bach's 'Chaconne' and Ernst's 'Élégie.' Hanover has sent us a most welcome contribution—two singers who can really sing. Fräulein Weiss has a high and sweet *contralto*, and uses it with true musical and poetical feeling. The other guest was Dr. Gunz, likewise a member of the Hanover Opera, with a tenor voice of pleasant quality: if not very powerful, well suited for lyrical music, which he sings with great purity.

At the *Euterpe* Concerts, M. Rubinstein's Overture to 'Dimitri Donskoi' was produced for the first time—the best of the works of this very unequal composer which I have heard this season. Dr. Liszt's music to Herder's 'Der entfesselte Prometheus' does not grow upon us; though it contains some good passages, the Reapers' Chorus especially, the greater part is an extravagant use of means, with a result most disproportionately meagre and unpleasant.

Two chamber compositions call for notice. The first, which was given in a *Gewandhaus* Quartett Concert, is a String Quartett in E minor, by Herr Musik-Director Richter, a Professor of Harmony in the Conservatory. Most refreshing is it in these exercising times to find a writer who does not think it beneath him to be cheerful and gracious. Herr Richter's name is a sufficient guarantee that his Quartett would be clear in construction and judicious in his treatment of instruments; but, besides, there is a pleasant and novel elegance which will recommend his work. Very different is Herr Volkmann's Trio in B flat minor, for piano, violin and violoncello, given in an *Euterpe* Chamber Music Concert. This composer seems to despise beauty of sound and clearness of form; his themes, however good in themselves, make no pleasant effect, and the hearer is sent away dissatisfied and weary. Belonging to the same class is another *Suite* for the Piano in E minor, Op. 72, by Herr Raff, which was played by Herr von Bülow in the last of his Pianoforte *Soirées*. Besides this *suite*, the aforesaid pianist gave us, among other things, Sebastian Bach's 'Italian Concert' and a *Sonata* in A flat, by Philip Emanuel Bach, a new edition of which has been somewhat strongly "edited" by the player. Herr von Bülow also introduced two new pieces by Dr. Liszt—'Venezia e Napoli.' The first, a *Gondoliera*, is very graceful.

In a Concert of the Dilettanti Society, for the conducting of which Herr von Bernuth deserves all praise, Mr. Dannreuther played Mendelssohn's 'Variations Sérieuses,' as well as other music by Bach, Schumann and Chopin, with remarkable power and promise.

Herr Riedel's Choral Society always gives an interesting programme. In the last concert we had Glück's only known sacred composition, a 'De Profundis,' a work very monotonous, and quite unworthy of the master. Its dreary effect was not removed by the three next pieces,—a song 'On Death' by Beethoven, a composition rarely heard, and its effect marred by the substitution of a very injudiciously "stopped" organ accompaniment,—the Requiem and Kyrie from Berlioz's 'Requiem,' and the 'Agnus Dei' and 'Dona nobis' from Schumann's Mass. But the concluding two num-

bers made rich compensation; two of Bach's best Cantatas, "Ach wie flüchtig," and "Ein feste Burg." A page might be written upon the beauties and strong contrasts of these two works,—the one so tender,—the other as strong as some old-world fortalice.

Herr Louis Lubeck, whom I mentioned in my last letter, has been appointed to the several posts lately held by Herr Davidoff, in the Conservatory and in the Church, Gewandhaus, and theatre orchestras.

A "Concert Grand," of a new form, has just been built by Herr Julius Büttner of this city; each side has a curve similar to the one curved side of the ordinary instrument. This symmetry of shape makes it much more easy to dispose of this usually so despotic instrument in any part of the room. Internally it is provided with two soundboards, and the lower bass strings are made to cross the others obliquely. For a concert instrument the tone is brilliant and penetrating, but is a little too hard for a small room. The touch is excellent. A.

—It is impossible to print the above closing report of the Leipzig concert-season without pointing out the quantity of topics touched (which has rendered condensation necessary), as a matter worthy of English consideration.

MUSICAL AND DRAMATIC GOSSIP.—Even clever Mrs. Beecher Stowe, to whom no notoriety or gifts seem to come amiss, cannot, we imagine, have anticipated such a tribute to her popularity as briek Italian ingenuity has struck out, and Mr. Mapleson has produced to wondering English eyes within the week. Who could have been prepared for a *bailet* founded on 'Uncle Tom's Cabin'? Such a delightful entertainment, however, is actually in London—a running accompaniment to the not very cheerful excitement which all persons must feel who seriously contemplate the fratricidal state of affairs on the other side of the Atlantic. We may, possibly, speak of it more in detail when we discuss the new tenor, Signor Baragli, of whom much has been expected,—and tell how "the Ace" of Mr. Mapleson's company, Mdle. Artot—one of the two fine singers now in London, Mdle. Fioretta being the other—acquits herself in 'La Traviata,' which is selected as her second opera.

Madame Ristori will give some performances at Her Majesty's Theatre during the month of June.

The singers at the performance of 'The Creation' by the Sacred Harmonic Society yesterday were Madame Lemmens-Sherrington, Mr. Swift and Mr. Weiss.—Mr. Sims Reeves was the attraction at 'Judas,' given on Thursday by Mr. Martin's society.

Among other of the musical strangers now in London is Mdle. Ennequist Biondini, a *soprano* lady, who is described as possessing a *soprano* voice of extraordinary beauty.—Signor Batocchi, of Rome, a professor of some eminence, is also here for a time.

'L'Allegro' will be given again, in the course of the season, by Madame and Herr Goldschmidt.

The reign of Contortion, with its barbarous excitement of terror, is, we are disposed to fancy, on the wane in the provinces—apparently in London. Simultaneously with advertisements of Spanish acrobats at the Alhambra, who are described as more frightful than any of their predecessors, we have to notice a project of regenerating that unlucky and unwholesome haunt of pleasure by converting it into a popular music-hall, in which a large proportion of really good and new music shall be brought forward. Mr. G. Macfarren is the Chairman of the Committee, and undertakes to write for the establishment. Other English composers, it is to be presumed, may follow his example. Treaties are on foot to place the concerts, which are to be evening entertainments, under the conduct of Herr Manns, of the Crystal Palace.—Meanwhile, Mr. Morton, who has never been led astray by tumblers and gymnasts so wildly as some rival caterers for the idle and the thoughtless, keeps pace, as usual, at the Oxford, with the opera-excitements of the year by forestalling managers, with

selections from 'Faust' and 'La Forza del Destino.' 'Alceste,' too, still figures in his programme.

It is said that the score of a lost opera, 'Maria Stuarda,' by Donizetti, written at Naples in 1834, and then suppressed by the censorship, has been recovered, and will be produced so soon as an artist can be found able to support the heroine's part.

What are we to have next in the way of foppery fancying itself originality?—Herr Hiller has been producing a four-handed pianoforte composition, entitled "an operetta without words."

A grand composition for *solo*, male chorus and orchestra, 'The Deliverance of Leyden,' by Myraheer Hol, has been produced at Amsterdam, greatly to the honour of the writer, who was decorated on the occasion by Royalty.

The first appearance of Mdle. Agar, a new *Phédre*, which took place, a few evenings since, at the Théâtre Français, was disastrous to the artist, who, M. Janin assures us, is a beautiful woman, having a real vocation for tragedy. Passing behind the scenes, some one (it is to be hoped not purposely) trod on her long robe. She fell, and bruised herself so severely that, after struggling through three acts of the play, she was compelled to leave the remainder unfinished, and the performance was abruptly closed. It was feared that she might be disfigured for life; but this, happily, proves not to be the case.

Marseilles is a very Paradise for *prima donna*. Some of our readers may not have forgotten to what an "Arabian Night" of praise and luxury Madame Charton-Dameur was treated there a year or two since. The other night an ovation little less picturesque and splendid fell to the lot of that excellent artist, Madame Miodan-Carvalho, on the last night of her engagement there. She will, by the way, be here forthwith, having halted in Paris, to appear for still a few evenings more in 'Faust,' which opera holds "the town" with a pertinacity almost unprecedented.

MISCELLANEA

Fresco in Islington.—Mr. Armitage has painted a large fresco in the Roman Catholic church of St. John the Evangelist, Duncan Terrace, Islington. The church itself is a large structure, Basilican in plan, very lofty and effective in composition; its aisles are narrow, set off for chapels and special altars. In one of these is the fresco, painted against the external wall of the church. The figures are life-size; the subject, St. Francis of Assisi, in 1210, receiving the approval of Pope Innocent the Third to the Rule of the Order of the Fratres Minores, or Franciscans, as they are now called. Their founder stands, his head humbly bent, his hands held together before the enthroned Pope, who reads article by article the Rule of the Order. A monk on each side of the saint kneels, as do others behind him. The Pope is supported by a cardinal on each side, seated, all splendidly dressed. Attendants stand behind the throne. The scene is an open-sided hall in the Capitol, where the Pope is presumed to have lived at the period in question.—Through the arcade we look over Rome and its ruins as in the thirteenth century. Following that sound rule of Art which demands character everywhere, Mr. Armitage has given a portrait-like character to his heads, which in the broad style he follows individualizes each figure and face, and gives a striking look of truth to the whole. The expressions are effective, without anything of the theatre; the design, large and simple in composition, suits the subject and the material perfectly. We trust the effect may be temporary and its cause removable; but that this work has not suffered in colour and tone since it was painted is beyond doubt. It seems faded, not scurfing off at the surface as in the frescoes at the Parliament House, and is in a much finer condition than they are. In the apex of this church is the fresco before described by us (*Athen.* No. 1814), representing Christ and the Apostles. In the semi-dome above the last is a fresco, very much faded and stained, representing God the Father with the Angels, &c., painted by A. Aglio about 1844.

LITERATURE

Journal of a Residence on a Georgian Plantation in 1838-1839. By Frances Anne Kemble. (Longman & Co.)

From the day when English ladies put aside 'Uncle Tom's Cabin' and hastened with throbbing hearts and tearful eyes to take part in the Stafford House demonstration, the best and most thoughtful of our countrywomen have often asked themselves how they would think and act on the question of slavery, if they had been born in the Southern States of America, and not in Europe's isle of freedom? What, also, would they say and do if, with their English birth and education, they by marriage with wealthy owners were made participants in a system which they abhor? Would they give a passive support to the peculiar institution, forbearing to examine and criticize its influence on lord and bondman? Or would they endeavour to mitigate its atrocities, whilst they strove by cautious suggestion and mild entreaty to create a desire for abolition in the breasts of those best able to uproot the evil? Without doubt the latter course has been elected by every Englishwoman who has considered the question of slavery by the aid of such personal hypotheses. To those of our wives and mothers who have deemed it possible for woman to do battle against slavery in the Southern States by such means as she employs in Europe to combat injustice and alleviate suffering, this book will give saddening and needful enlightenment. It tells the story of a lady who, born an Englishwoman and reared in the atmosphere of British freedom, was in an evil day induced to marry a Southern proprietor, being at the time of her wedding ignorant that the man whom she swore to love and honour had a vested interest in human wretchedness and degradation. It tells how, after she had become the mother of beautiful children, she together with her babes accompanied her husband to Georgia just five-and-twenty years since, and made acquaintance with the "peculiar institution" as a fact of daily experience,—not as a system observed from a distance through the glasses of opponents and apologists, novelists and poets. It tells how she saw the iron piercing the soul of an oppressed race and might not raise a hand to pluck it out,—how her womanly sympathy for her wretched servants only brought them stripes from the taskmaster and a sterner bondage. Finally, it tells how, utterly defeated in her attempts to do good, and forbidden to weep with those whose tears she had daily to witness,—whose cries were constantly in her ears,—she fled from scenes where compassion was a crime. A more startling and fearful narrative on a well-worn subject was never laid before readers, and the story does not lose in effect from the fact that its teller is well known to her countrywomen and honoured by all who honour genius.

Her husband's estate lay in a region of no ordinary loveliness, a land in which orange-groves welcomed her with blossom, whilst oaks put forth their greenest leaves. Writing to the friend for whose benefit the "Journal" was kept, she said:—"Honeysuckles twine round every tree; the ground is covered with a low white-blossomed shrub more fragrant than lilies of the valley. The acacias are swinging their silver censers under the green roof of these wood temples; every stump is like a classical altar to the sylvan gods, garlanded with flowers; every post, or stick, or slight stem,

like a Bacchante's thyrsus, twined with wreaths of ivy and wild vine, waving in the tepid wind. Beautiful butterflies flicker like flying flowers among the bushes, and gorgeous birds, like winged jewels, dart from the boughs,—and—and—a huge ground snake slid like a dark ribbon across the path while I was stopping to enjoy all this deliciousness."

Amidst such scenes did Mrs. Fanny Kemble collect her facts on slavery,—facts which she has put forth in a manner that signally shows how much the cause of Abolition has lost through idealistic treatment by romance writers. She uses plain terms, calling a spade a spade, and we thank her for so doing. The mealy-mouthed apologists, whose function it is to "make things pleasant" with regard to slavery, and to whom we could not justly refuse a hearing in answer to the exaggerations of the novelists, have of late had it all their own way. But the time has now come for heed to be given to the other side. For many a day we have heard enough, and rather more than enough, about the chivalry of Southern gentlemen, the moral and physical graces of Southern women, the patriarchal character of the peculiar institution, the devotion of slaves to their masters, the tenderness of overseers who with aching hearts flog their blackies mercifully, just as mothers whip their children, to do them good, and make them upright members of society. It is time to look at the picture from a fresh point of view, and hear its features explained by other lecturers. But before we give heed to the author's revelations, it is well for us to know that though she entered Georgia "prejudiced against slavery," as every Englishwoman must be, she went there "prepared to find many mitigations in the practice to the general injustice and cruelty of the system, much kindness on the part of masters, much content on that of slaves." It appears, however, that these moderate expectations were disappointed. Slaves were more debased, masters more cruel, and life in every respect more barbarous than she had anticipated. First, for the ruling class, whom there exists a transient fashion to extol as the chivalric descendants of English cavaliers. When Mr. Russell recently made the acquaintance of Southern proprietors, the best of them fulfilled his ideal of the Irish aristocracy of a century since. Five-and-twenty years ago Mrs. Fanny Kemble drew the same comparison. On all sides lawless debauchery, selfish passion, and absence of refinement astonished her. The men, caring for no pastime more elevating than field sports, passed their days in drinking, gambling, coarse debauchery, and savage feuds. More frequently gentlemen who had quarrelled over drink exchanged shots before going to bed. Sometimes, however, they arranged all the preliminaries of mortal conflict, but deferred the final settlement of accounts till a convenient season. Two of the lady's neighbours, proprietors of good repute in their county, having quarrelled about the ownership of a strip of land, agree to fight it out with fire-arms. The hostile meeting, it was arranged, should stand over for a few weeks, but that the surrounding gentry might be well assured the event would come off, the terms of the challenge were advertised in a local paper. The enemies would fight with pistols, standing at a certain distance from each other; each combatant would wear a piece of white paper, or other mark immediately over the region of the heart; nothing less than the death of his adversary would satisfy either combatant; the victor was to have "the privilege of cutting off his enemy's head, and sticking it up on a pole on the piece of land which was the origin of the debate." Nice neighbours these! Far from

causing scandal, this deliberate compact to commit murder and mutilate a dead body was an affair of pleasant gossip amongst the quality of the aristocratic district. "No one," wrote Mrs. Fanny Kemble in her Journal, is "astonished and nobody ashamed of such preliminaries to a mortal combat between two gentlemen, who propose firing at marks over each other's hearts, and cutting off each other's heads; and though this agreeable party of pleasure has not come off yet, there seems to be no reason why it should not at the first convenient season." There is no need to describe minutely the characteristics of a society which could tolerate such ferocious and yet cold-blooded ruffianism. All that the writer saw of Southern gentlemen accorded with what she heard of them from Southern ladies, of whose domestic revelations she says: "If the accounts given by these ladies of the character of the planters in this part of the South may be believed, they must be as idle, arrogant, ignorant, dissolute and ferocious as that mediæval chivalry to which they are fond of comparing themselves; and these are Southern women, and should know the people among whom they live." But though the woman of English birth saw clearly the vices of her adopted countrymen, she was not less alive to their valuable qualities, which, far from being checked, are nurtured and strengthened by the circumstances of slavery. "The devil must have his due," she writes, "and men brought up in habits of peremptory command over their fellow men, and under the constant apprehension of danger, and awful necessity of immediate readiness to meet it, acquire qualities precious to themselves and others in hours of supreme peril." These words written in 1839 have been signally verified in 1863. But if she found little to please her in the men, she found even less to admire in the women of Georgia. Steeped in indolence, these ladies could not conceal their astonishment at the eccentric demeanour of their new friend, who, bringing with her the tastes and habits of Englishwomen, regarded bodily exercise as a source of enjoyment, and persisted in paddling her own canoe over the waters of the Altamaha, and in riding an ill-broken stallion over her husband's plantations for hours together. Their ordinary pastime was "doing nothing," as they lolled on the sofas of their ill-furnished rooms; their favourite topic of conversation was the utter degradation of the negro race—the impossibility of educating "black women" into good domestic servants. The descriptions of their houses, and ways of managing them, will cause English ladies equal terror and amusement. The former are such as thriving English farmers would disdain to inhabit, whilst the latter would provoke adverse criticism amongst gipseies. Till our countrywoman visited Georgia, and knife in hand taught her husband's cook how to cut up a dead sheep into "joints of civilized mutton," it was the custom for the plantation carpenter to operate on the carcass, and prepare for table some half-dozen rectangular chunks of meat, cut without any reference whatever to the natural conformation of the animal. The following passage also gives information on certain points of Southern life that will interest English ladies:—

"This morning I went over to Darien upon the very female errands of returning visits and shopping. In one respect (assuredly in none other) our life here resembles existence in Venice; we can never leave home for any purpose or in any direction but by boat—not, indeed, by gondola, but the sharp cut, well made, light craft in which we take our walks on the water is a very agreeable species of conveyance. One of my visits this morning was to a certain Miss —, whose rather grandiloquent

name and very striking style of beauty exceedingly well became the daughter of an ex-governor of Georgia. As for the residence of this princess, it was like all the planters' residences that I have seen, and such as a well-to-do English farmer would certainly not inhabit. Occasional marks of former elegance or splendour survive sometimes in the size of the rooms, sometimes in a little carved wood-work about the mantelpieces or wainscoatings of these mansions; but all things have a Castle Rackrent air of neglect, and dreary careless untidiness, with which the dirty barefooted negro servants are in excellent keeping. Occasionally a huge pair of dazzling shirt gills, out of which a black visage grins as out of some vast white paper cornet, adorns the sable footman of the establishment, but unfortunately without at all necessarily indicating any downward prolongation of the garment; and the perfect tulip-bed of a head-handkerchief, with which the female attendants of these 'great families' love to bedizen themselves, frequently stands them in stead of every other most indispensable article of female attire. As for my shopping, the goods, or rather 'bada,' at which I used to grumble, in your village emporium at Lenox, are what may be termed 'first-rate,' both in excellence and elegance, compared with the vile products of every sort which we wretched southerners are expected to accept as the conveniences of life in exchange for current coin of the realm. I regret to say, moreover, that all these infamous articles are Yankee made—expressly for this market, where every species of thing (to use the most general term I can think of), from list-shoes to pianofortes, is procured from the North—almost always New England, utterly worthless of its kind, and dearer than the most perfect specimens of the same articles would be anywhere else. The incredible variety and ludicrous combinations of goods to be met with in one of these southern shops beats the stock of your village omnium-gatherum hollow: to be sure, one class of articles, and that probably the most in demand here, is not sold over any counter in Massachusetts—cow-hides and man-traps, of which a large assortment enters necessarily into the furniture of every southern shop."

Of the dialect of the Southern ladies, the writer, whose opinion on a question of enunciation has special claims to respect, observes—

"In this matter, as in every other, the slaves pay back to their masters the evil of their own dealings with usury, though unintentionally. No culture, however slight, simple or elementary, is permitted to these poor creatures, and the utterance of many of them is more like what Prospero describes Caliban's to have been, than the speech of men and women in a Christian and civilized land: the children of their owners, brought up among them, acquire their negro mode of talking—slavish speech surely it is; and it is distinctly perceptible in the utterances of all southerners, particularly of the women, whose avocations, taking them less from home, are less favourable to their throwing off this ignoble trick of pronunciation than the more varied occupation and the more extended and promiscuous business relations of men. The Yankee twang of the regular down-easter is not more easily detected by any ear nice in enunciation and accent than the thick negro speech of the southerners: neither is lovely or melodious; but though the Puritan snuffle is the harsher of the two, the slave *slobber* of the language is the more ignoble, in spite of the softer voices of the pretty southern women who utter it."

But Mrs. Fanny Kemble's most valuable testimony relates to the working of slavery. Prepared to take a liberal view of the peculiar institution, she found it not less atrocious in details than in principle. As the negroes on her husband's plantations were treated better than the involuntary labourers on many estates in the same region, slavery was displayed to her under favourable circumstances, but what she saw differed widely from what the apologists of the system had led her to look for. The first fact which deeply impressed her was the large quantity of white blood that manifestly flowed

in the veins of her husband's bondmen. It would almost seem that it is affectation for planters to speak of slavery as the fate of the African race, since Anglo-Saxon sires have contributed so largely to the production of the present generation of slaves. "I cannot," observes the lady, with splendid scorn, "help being astonished at the furious and ungoverned execration which all reference to the possibility of a fusion of the races draws down upon those who suggest it, because nobody pretends to deny that, throughout the South, a large proportion of the population is the offspring of white men and coloured women. In New Orleans a class of unhappy females exists whose mingled blood does not prevent their being remarkable for their beauty, and with whom no man, no *gentleman*, in that city shrinks from associating; and while the slaveowners of the Southern States insist vehemently upon the mental and physical inferiority of the blacks, they are benevolently doing their best, in one way at least, to raise and improve the degraded race, and the bastard population, which forms so ominous an element in the social safety of their cities, certainly exhibit in their forms and features the benefit they derive from their white progenitors." The next features of the oppressed race which most strongly and unpleasantly struck the observer were their dirt, stench and stupidity, all which three qualities are used as arguments why they are fit for nothing better than slavery, though Mrs. Kemble shows them to be necessary results of "the system." Of the hardships endured by these repulsive wretches she speaks with startling frankness. Their dwellings were filthy sties; their food was coarse in kind and insufficient as to quantity; of religious instruction they received nothing but a mere form, just enough to make things pleasant to the consciences of their owners; their only discipline was the whip. Not only were the bondwomen subject to the lash; but daily, women of every variety of age and strength, decrepit crones, young girls, women with child, were fearfully cowed by drivers and overseers. Lissom girls were flung down in the fields where they had been working, or tied up to trees, and when their clothes had been put over their heads they were welled on their bare bodies by men, who gave all the force of their muscular arms to the stripes which they administered as servants of "the paternal system." We have of late been often assured that slaves are humanely treated because humanity is the master's best policy; but Mrs. Fanny Kemble shows that sometimes it is the owner's policy to "work off" his cattle, in order that he may be rid of beasts who can no longer render him efficient service. She bids us also bear in mind that a large proportion of the Southern proprietors do not visit their estates for years together, and that "resident planters" live on their plantations for but a few months of each year. When the paternal chief is away, his labourers are under the control of an overseer, whose chief object is to get the greatest possible amount of work out of them, as his efficiency is estimated by the state of his crops and the balance for the year of the plantation ledger, not by the condition of his workmen.

A few words will show how the system has worked on estates in which Mrs. Kemble had a personal interest. In the time of her husband's grandfather the soil was very productive, and the female slaves were allowed five weeks' rest after increasing the servile population—five weeks' pause between experiencing the labours of childbirth and returning to the labours of field-work. Not too long a pause, English mothers will think! But in two generations the agriculture, with which Mr.

Olmsted's readers are familiar, had so exhausted the once fertile land that, to keep up the income derived from the estates to something like the old standard, it was found necessary to screw more labour out of the negroes. Consequently, before Mrs. Kemble visited Georgia her husband's overseer had diminished the pause between birth-labour and field-labour to *three weeks!* Let the mothers of England attempt to realize the full significance of these words. No wonder that Mrs. Kemble found these brutally-maltreated mothers showing in their bodies the evidence of such incredible barbarity. "This morning I had a visit from two of the women, Charlotte and Judy," she wrote to her friend, "who came to me for help and advice for a complaint which, it really seems to me, every other woman on the estate is cursed with, and which is a direct result of the conditions of their existence; the practice of sending women to labour in the fields in the third week after their confinement is a specific for causing this infirmity, and I know no specific for curing it under the circumstances." And yet the apologists of slavery have the impudence to say that masters take good care of their slaves because it is their interest to do so. Those same apologists have argued that the slaves are well treated because they increase and multiply, whereas the free negroes show a tendency to numerical decrease in the Northern States. Mrs. Kemble replies to this fallacy by showing how procreation is artificially stimulated in the Slave States, where even the three weeks' pause between birth-labour and field-labour, and the few indulgences granted to pregnant negro women, induce the female slaves to have children as soon and frequently as possible. So also to the apologists who aver that the slaves as a rule are affectionately attached to their owners Mrs. Kemble answers, "I know that the Southern men are apt to deny the fact that they do live under an habitual sense of danger; but a slave population, coerced into obedience, though unarmed and half-fed, is a threatening source of insecurity, and every Southern woman to whom I have spoken on the subject has admitted to me that they live in terror of their slaves."

As soon as Mrs. Kemble had taken up her abode on her husband's Georgian estates, the slaves flocked to her with the tears that slaves shed, the entreaties that slaves make of those from whom they can hope for pity. Doubtless they made many exaggerated statements, and became more earnest and pathetic when they saw gentle commiseration for their lot in the bright eyes of their massa's lovely wife. For once they found a ready listener to their tales of suffering. The lady to whom they pleaded answered with kindness. On Sundays she gathered them together in her dining-room; and the voice which still charms far different audiences read to them the words of that Sacred Teacher who brought into the world a message of love to all mankind. She sate by them in their sickness, comforted them in their trouble, knelt by the graves to which their dead were committed. What marvel that there was commotion throughout the plantations, that overseers averred the work of the estates could not be carried on till the Christian English lady was sent about her business! The overseers did their duty bravely. The slave who was caught tale-bearing to missis was promptly stripped, and lashed with cowhide or cat. Even female patients in the infirmary were flogged for the hideous offence of shedding tears when massa's wife spoke to them pitifully. Of course it was necessary to maintain discipline! So thought the lady's husband, when he commanded her never again to bother him about his slaves. "He desired me," she wrote

to her friend, "this morning to bring him no more complaints or requests of any sort, as the people had hitherto had no such advocate, and had done very well without, and I was only kept in an incessant state of excitement with all the falsehoods they 'found they could make me believe.' . . . I must return to the North, for my condition would be almost worse than theirs,—condemned to hear and see so much wretchedness, not only without the means of alleviating it, but without permission even to represent it for alleviation,—this is not the place for me, since *I was not born among slaves, and cannot bear to live among them.*" Mrs. Fanny Kemble returned to the Northern States. The moral of the autobiographical portions of this book—which is a perfect contrast to the same writer's previous 'Journal' on America, a book which was a mistake and almost a scandal—has two-sided, having a lesson for Southern planters and another for English ladies. It bids them keep apart, saying to the former, "Do not wed women who have not been reared from infancy to admire your peculiar institution"; and reminding the latter that, as "they were not born among slaves, they could not bear to live among them."

The Varieties of Dogs, as they are found in Old Sculptures, Pictures, Engravings and Books; with the Names of the Artists by whom they are represented, showing how long many of the numerous Breeds now existing have been known. By Ph. Charles Berjeau. (Dulan & Co.)

Bacon's saying to Secretary Winwood, "Every gentleman doth love a dog," is in as full force now as at the time when he uttered it, and the canine assembly at Islington last week bore strong testimony to this fact, both by the list of contributors and by the visitors who crowded thither. The book before us appears very opportunely, and is extremely well conceived. Hitherto we have known Mr. Berjeau as an admirable reproducer and expounder of ancient woodcut and typographical works, but the present undertaking treats of animated nature as seen through the medium of various artists, and extending over an almost boundless range of time. The object of his book has been fully and concisely stated on the title-page. To this we add, that "as hounds and greyhounds, mongrels, spaniels, curs, shoughs, water-rugs and demi-wolves are classed all by the name of dogs," each particular type may, doubtless, be found in Mr. Berjeau's collection. His engravings are spirited, but, in some respects, too roughly executed to render so excellent a subject the justice it deserves. Too great a preponderance of specimens taken from old woodcuts and engravings gives an unnecessary appearance of coarseness to the book. The real interest, however, consists in the certainty of date, combined with evident truthfulness of the representations, and, above all, in finding that those animals which now surround us really existed so remotely, without any apparent modification of form or habit. This point a fierce mastiff-looking Assyrian dog (Plate I.), taken from a wild-ass hunt on an Assyrian bas-relief, establishes at first view. The most curious thing, however, about Mr. Berjeau's book is the great number of omissions.

The author has given no instance of Egyptian dog-portraiture; animals remarkable both for the variety of breeds and for the vigour of character with which they were depicted. The veneration felt by this nation both for the canine and feline species is almost proverbial; and, whether the Roman writers were right or wrong in assigning a dog's head

to the divinity Anubis, we may still point to a well-painted group of dogs of the period of Thothmes the Third, and remember the couching figure of a greyhound holding the statue of its deceased master between its fore-paws. The Grecian examples selected in this series are not very satisfactory; the groups from which the specimens have been selected are, in fact, Roman work of an equivocal period. The best examples of Grecian dogs are to be met with on the painted vases, where, indeed, all kinds, and with great spirit of action, occur very frequently. Such subjects as Paris when a shepherd, Diana and Actæon, Castor and Pollux, Meleager, and The Attack of the Caledonian Boar, are all subjects of purely Greek character, and abound in representations of different dogs in every possible variety of position. In representations of the last-named subject, we find dogs occasionally mounted on the back of the boar, whilst others, wounded, are rolling on the ground, kicking in the agonies of death, depicted with much of the force and artistic daring carried afterwards to such perfection by the pencil of Rubens and Snyders. The greyhound and wolf-dog seem to have been much used for the chase; but the Grecian ladies appear sometimes on vases accompanied by small dogs, with full curling tails, partaking very much of the character of our spaniels; children and youths are also represented playing with them. Homer mentions table-dogs, and, both on sculptures and Etruscan paintings of feasts, we find dogs as well as poultry employed in picking up the crumbs. That famous subject, never as yet worthily treated by sculptor, ancient or modern, Ulysses recognized by his faithful dog, Argus, very rarely appears on works of ancient Art, but where it does we find the dog was of the large sporting kind, with long head, square muzzle, and curved tail. Those who have visited the Vatican cannot fail to have been impressed by the rich variety and force of character displayed in the sculptures of the "Sala degli Animali," nor is it possible for any one, except Mr. Berjeau, to forget the famous gigantic Molossian dogs, placed on each side of the entrance. Whether the great and very valuable dog belonging to Alcibiades, whose tail, as related by Plutarch, he wantonly cut off, belonged to this breed, has not been ascertained, but there can be little doubt that these Molossians illustrate a story mentioned by Pliny, in his 'Natural History,' when treating of dogs. He says that Alexander the Great received the gift of a very large dog from the King of Albania, which delighted him extremely. He turned loose before it bears, wild boars and stags, in turn, without producing any effect whatever on the animal, upon which, attributing the dog's indifference to cowardice and laziness, he ordered him to be destroyed. This being told to the King of Albania, he sent him a second dog, with a recommendation not to try him with such *small* animals, but rather to set a lion or an elephant at him. Alexander, acting upon this advice, put out a lion, which immediately had his back broken and was torn to pieces by the dog. His encounter with an elephant was still more fierce. "For the dog," to quote the words of Philemon Holland's translation, "at the first, with his long, rough, shaggy hair, that overspread his whole body, came with full mouth, thundering (as it were) and barking terribly against the elephant. Soon after he leaped and flung upon him, rising and mounting against the great beast, now of one side and then of another, maintaining combat right artificially, one while assailing another while avoiding his enemy, and so nimbly he bestirreth himself from side to side, that with

continual turning about to and fro the elephant grew giddy in the head, insomuch as he came tumbling down and made the ground to shake under him with his fall."

One of the most spirited illustrations in Mr. Berjeau's book is a group of a greyhound caressing a bitch, from an antique marble in the British Museum. A duplicate found with this in the Monte Cagnolo, near Rome, is now in the Vatican. The dogs attacking Actæon (given on a preceding plate) are Roman work of the time of Antoninus Pius; but they are interesting as showing the same kind of animal as appears on a roughly painted Etruscan vase, and also on the very primitively sculptured metope, of the same subject, found at Selinus. There is, it may be observed, generally a consistency and traditional treatment of particular subjects; thus, for instance, the heads of Cerberus were represented in Greek and early Roman works with long pointed noses, erect ears, and generally with a long tiger-like tail. To Byzantine representations of the dog no importance can be attached, as they are so very *heraldic*; but in the Saxon illustrations of our forefathers we recognize an attempt at truthful designs of shepherd and hunting dogs. Where Harold is seen hawking, in the Bayeux tapestry, the two kinds of dogs attending him are so well defined as to merit quotation in a work on dogs as represented in works of Art; other specimens exist in the rude stitchery of the borders. We are disappointed to find that between the antique greyhounds above referred to and a French dog (poodle) of the fifteenth century, from an engraving in the British Museum (plate 5), Mr. Berjeau gives us no example whatever. Some striking instances of the varieties of dogs might be found in early Italian paintings, especially in the famous 'Triumph of Death,' painted about the middle of the fourteenth century, by Orcagna, in the Campo Santo, at Pisa. A very small thin spaniel sports in the lap of a lady seated next to a gentleman holding a falcon, and on the extreme left of the picture two different spaniels, belonging to a hawking party, are seen starting and sniffing at an open coffin, whilst a large and well-formed greyhound bounds gallantly forward in the same direction. The various forms of these animals have been carefully rendered by the artist. The smaller dogs on the extreme left are remarkably fat and round-bodied, with high curved spine, curling tail, long sharp claws and long pendent ears. This breed seems to have been much employed by ladies in hawking, and we frequently find them at the feet of ladies on English monumental brasses of the fourteenth and fifteenth centuries. Their fat round necks are generally decorated with a string of bells. A similar animal, wearing also a collar of bells, is figured in a rough woodcut by Aldrovandus, in his curious work on Quadrupeds, published at Bologna in 1637, where it is called a *French dog*. Whilst speaking of brasses, it may be observed that dogs are the only supporters to ladies, whilst their lords generally rest their feet upon a lion. In later times, however, they also adopted a dog; but invariably a greyhound, not with bells, but with a strap-collar with buckle fastened round the neck. The possession of a greyhound became, it may be remembered, a sign of nobility. Some fine examples of this animal are to be found on the supporters of the royal arms of Henry the Seventh, and a spirited representation of the running hound appears on the great seals of Henry the Eighth and several of his male successors. Various dogs may also be found in the paintings by Benozzo Gozzoli, dating from 1469 to 1485, on the wall of the Campo Santo at Pisa. He was, together with Paolo Uccello,

a diligent observer of animal life, and depicted these forms with great success. It would be useless to particularize the pleasure which Titian and Paul Veronese took in the introduction of this animal. One of the finest full-length portraits by the former of Charles the Fifth by Titian, belonging to King Charles the First, represented him with a large Irish dog. The little spaniels known as King Charles's, from the fondness which Charles the Second showed for them, might, with almost as much reason, have derived their name from his royal father; for, in Van Dyck's great picture of Charles the First with his Queen and two children at Windsor, these spaniels are prominently introduced. Again, in the smaller picture of Charles the Second as a boy with his two sisters, these spaniels play an important part. But perhaps the most impressive example of Van Dyck's power as a painter of animals is to be found in the fine picture at Windsor, representing Charles the Second as a slim boy, standing with grave expression, and resting his hand on the head of a huge mastiff. Van Dyck's grand portrait of Philip le Roy, Murillo's Don Andres de Andrada, and the Cardinal Infant Ferdinand, and 'Las Meninas,' by Velasquez, are all instances of the great extent to which the interest of a picture may be increased by the introduction of a faithful portrait of man's appointed companion. In the same category may be included the famous picture by Hogarth of himself and his pug. Reynolds's charming picture of the little Princess Sophia of Gloucester, measuring her pretty face with the grim countenance of a poodle, is fresh in the recollection of all who saw the Kensington display of last year, or the British Institution a season or two ago. Greuze's picture of a little girl fondling a lap-dog, once in the possession of the Duc de Choiseul, is one of the most charming pictures ever seen. In all these instances the breed and nature of the dog can well be seen and depended on. How, within our own period of Art, dogs continue the same, may be observed in the successive pictures of generations of the Marlborough family, where the Blenheim spaniels, invariably introduced, appear identical from the time of the first Duke to the present, a period of more than a century and a half. It has been truly remarked, that the dog very rarely appears in Italian paintings of sacred subjects; whilst, on the contrary, in German Art it is frequently intruded even when treating on subjects the most solemn. A dog generally is seen sleeping on or at the foot of the throne of a judge. In Albert Dürer's smaller 'Passion,' in 'Christ before Caiaphas,' a dog is introduced, and in 'Christ sent to Herod,' a crouching one lies behind the feet of the judge. In Cranach's 'Christ before Pilate' two dogs are fighting at the feet of the judge. A strange-looking German cur occasionally appears also in scenes of popular tumult on painted glass windows.

The dog, however, appears of necessity in Italian pictures of sacred subjects, such, for instance, as St. Roch, St. Hubert, Tobit and St. Dominic. In connexion with the latter may be remembered the famous picture by Simone Memmi, about 1332, in the Spanish Chapel at Florence, where a pack of dogs is seen in the foreground attacking and tearing to pieces several wolves. These dogs are spotted black and white, in reference to the dress of the Dominicans (Domini Canes), and represent the faithful destroying the heretics.

The dogs of Albert Dürer are figured by Mr. Berjeau. These plates, including a capital sketch of a Terrier from Van Eyck's picture in the National Gallery, and Cornelius Van Noorden's engraving (1683) of a dog with a collar of bells

round his neck, are among the best in the book. The bear-baiting woodcut used by old Richard Pynson (1521), and the sporting engravings by Jost Ammon (1575), are rough, but very much to the purpose in such a book as this. The dogs of Beckerveld (1626) are also full of character. The plates from Theodor de Bry do not sufficiently express the delicacy of the original master.

Enough now has been said, both suggestively and descriptively, to show both the interest of the subject and the manner in which Mr. Berjeau has treated it. The book, which is of a convenient and portable size, will, we venture to say, find its way into many hands. In another edition it should be much improved.

Tea Cultivation, Cotton and Agricultural Experiments in India: a Review. By W. Nassau Lees, LL.D. (Allen & Co.)

Notes on the Propagation and Cultivation of the Medicinal Chinchona or Peruvian Bark Trees. Printed and published by order of the Government of Madras. By W. G. M'Ivor. (Madras, Graves & Co.)

LADIES who love their cup of tea, and who object to a decoction from sloe, willow, cherry and maple leaves, may derive some consolation from the fact that within a very few years we shall be altogether independent of China for the article. Thanks to Mr. Fortune, the hill districts of our Indian empire are in a condition to supply any amount of the finest teas. The quality of the article may be judged from the fact that the best Souchong from that new source has been sold in the London market for 21s. per pound, and the best Pekoe for 34s. per pound; whilst the quantity actually gathered in Assam, Cachar and Darjeeling alone amounted, in 1862, to 2,203,781 lb., and almost every mail brings us word that new companies are forming to cultivate tea, either alone or conjointly with coffee and Peruvian bark.

The idea of introducing the tea-shrub into India was first attempted in 1793, by Lord Macartney, who, during his celebrated Embassy to China, actually sent, as Sir G. Staunton informs us, plants to India, some parts of which he thought adapted for their cultivation. But no practical end resulted from this attempt, and the subject seems to have dropped altogether until revived in a singular manner. It should be known that the tea-shrub, although so extensively cultivated both in Japan and China, has hitherto not been found wild in any part of those countries. We have historical proofs that the Buddhist priests introduced it into Japan from China, probably before the ninth century; and as early as the fourth century after Christ it is mentioned that a certain Chinese minister drank tea, though it was not until the year 800 that a duty was laid upon the article. That tea was indigenous to any part of the Celestial Empire, and had yielded the national beverage from time immemorial, is nowhere stated. The gradual spread of its use would seem an argument in favour of its being an introduction from abroad, and was slowly, but firmly, establishing itself in a country long considered by us its real home. In 1816, Mr. Gardiner, the British Resident at the Court of Nepal, thence transmitted a plant to Calcutta, which was sent on to London, and which Mr. Gardiner justly pronounced to be the wild state of the Chinese tea. Again, in 1826 Mr. David Scott sent from Munnipoor certain leaves of a shrub "which he insisted upon was a real tea"; and four or five years later Lieut. Charlton actually obtained from Beesa, in Assam, several young tea-plants,

which were found wild in the neighbourhood of that place. Further evidence was supplied by Major Bruce and his brother, Mr. C. Bruce, but all to no purpose. Dr. Wallich, at that time Director of the Botanic Gardens at Calcutta, took it into his head that the so-called wild tea of Assam was a *Camellia* and not a *Thea*; whilst our Society of Arts, who probably had a better botanist among their members, awarded to Mr. Bruce "their Gold Medal, for discovering the indigenous tea tracts, and cultivating and preparing tea in Assam." That Dr. Wallich was entirely wrong in his determination is now generally known, and Dr. Seemann, in his monograph in the *Linnean Transactions*, has shown that the Assam tea, so far from being a spurious kind, must be regarded as the plant from which all the other varieties of teas grown by the Chinese have sprung. Lord William Bentinck, when Governor-General, did everything he could to promote the cultivation of tea in India, and referred the subject to a body of gentlemen, who were called "The Tea Committee," and of which Dr. Wallich was a member. But this Committee seems to have done very little. Even after tea had actually been manufactured from the wild plant, Dr. Wallich still clung to his notion about the *Camellia*, and the Committee, when in 1834 forced to admit an established fact, still begged to suspend their decision until they should be in possession of the fruit of the shrub, which they considered—but which in reality, is not—the only test they could safely take as a guide:—

"Now eight years is a very long time to allow for a suspension of judgment regarding the species of a plant so long known to the commercial world as the tea-plant. Had the Tea Committee, with the knowledge they confess to have been so long in possession of, either individually before or collectively after their appointment, taken any active measures to satisfy themselves on the point which they imply in their Report was in question, they might have been admitted to some share in the merit of this discovery. But there is nothing to show that they did so, or that they were not quite as much taken by surprise as every one else in India. On the contrary, their proceedings, both before and after the discovery, negative any such conclusion."

The battle was ultimately fought out by Drs. Falconer, McClelland and, above all, Griffith, the most able of Indian botanists, and the high prices we have already quoted which the first chests of Assam tea fetched in the London market led, in 1839, to the formation of a Joint-Stock Company, "The Assam," with a nominal capital of a million sterling. In 1840, they commenced operations for bringing the "tea forests of Assam," as they were called, into cultivation. But, so ill was the company managed, that it was reduced to a state of insolvency so nearly verging on bankruptcy, that 20l. shares were sold, in the Calcutta market, for less than a shilling apiece:—

"The prospects of tea in Assam, so bright in the commencement, were now dimmed almost to extinction; and had it not been for the energy and perseverance of a few individuals, it is possible that the cultivation of the plant would have been abandoned altogether. Among them should be specially mentioned Mr. H. de Mornay, the regenerator of the experiment, Mr. Williamson, and a military officer, the late Lieutenant-Colonel Hannay, Commandant of the 1st Assam Light Infantry. The latter gentleman having by high and careful cultivation brought a small experimental garden, of the *China* plant, into a flourishing condition, he obtained a further grant of land, and extended his cultivation with great success (1851). Encouraged by the success which attended the operations of the Colonel and the gentlemen above mentioned, Messrs. Warren and Jenkins, G. Barry of Seraj-

gunge, and others, soon followed their good example; and the work rapidly progressed. The choked-up gardens of the Assam Company had, by this time, been completely reclaimed. A *dividend* was declared! (1852.) Planters generally took heart. Proper care was bestowed on the selection of the soil, the cultivation of the plant, and finally, on the manipulation of the leaf and other processes of manufacture. The tea, always in itself good, gradually assumed an altered appearance,—until at last the produce of the indigenous Assam plant, which the brokers rejected, became more sought after, and, once more, fetched higher prices in the London Market than the very finest China teas."

Since then, the cultivation of tea is proceeding at a rapid rate:—

"The quantity of land appropriated to the cultivation of tea by the latest returns (July, 1862) had reached the sum of 71,218 acres, 13,222 of which are actually under cultivation, bearing an estimated crop of 1,788,737 lb. of tea, and affording employment to 16,611 daily labourers. There are now in Assam one hundred and sixty plantations, owned by sixty Companies and individuals. Of the Companies, five are joint-stock concerns, the Assam, the Jorehat, the East India, and the Lower and the Central Assam; besides which there are fifteen private Companies. And, if an idea be required of the favour with which the public now views India tea investments, it may be gathered from the stubborn fact, that the shares of the Company which, as before mentioned, were once sold in the Calcutta Market for less than one rupee, can with difficulty be obtained for *four hundred and fifty!* Nor was the cultivation confined to Assam. It was discovered for the second time (1855) that the plant was indigenous to Cachar also, and the discovery was no sooner made, than enterprising men (especially Messrs. Williamson and Barry), were found to turn it to account. In this province up to date, (18th July, 1862) upwards of 68,149 acres have been leased to tea planters; there are thirty-one working concerns; and, though the experiment has a development of but six years, 6,077 acres have been brought under culture, the estimated crop of which for the year is 336,800 lb. of manufactured tea. From the chops moreover which have been sent into the London Market, it has been pronounced quite equal, in every respect, to the best Assam. The cultivation afforded employment last year to 6,719 labourers. At Hazareebagh, and especially Darjeeling, both places in point of climate well suited to the European constitution, the cultivation of tea has been also introduced, and I believe with every success. I say, I believe, because from Hazareebagh I have no information further than that the tea that has come to Calcutta from it is good. But regarding Darjeeling as a tea-growing district, there are differences of opinion. Some think that at an elevation of 7,000 feet, the cold is too severe for the delicate young seedlings, and that the heat in summer is not sufficiently great to ensure fine flushes. But in opposition to these opinions, we have the simple facts that practical planters have taken up 21,865 acres of land for the purpose, and employed, last year, 4,819 labourers in cultivating it; and though operations were only commenced five years ago, 8,762 acres have been brought under the hoe. Of this, 5,152 acres have been planted out, the out-turn of which for the year was estimated at 78,244 lb. of manufactured tea, musters of which having tested, I have no hesitation in pronouncing, though perhaps somewhat too highly flavoured to please all tea drinkers, a very first-class tea."

Though we have been told, over and over again, that India can supply all the cotton we require, both quantitatively and qualitatively, yet up to this time these expectations have been only partially verified, and those interested in the subject will find, in Dr. Lees's book, capital materials for forming an opinion respecting it.

The question which Mr. M'Ivor brings before us has repeatedly been discussed by us, and its vast importance pointed out. It will be remembered that Mr. Clements R. Markham,

after overcoming innumerable obstacles, finally succeeded in introducing the chinchona or Peruvian bark trees into India, so as to ensure the supply of quinine and chinchonine, after, by the ruthless destruction by the natives, the plants have become extinct in the South American forests. Mr. M'Ivor was charged with the superintendence of the plantations in the Neilgherry Hills, and it is principally owing to his ability and industry that the success of the undertaking is no longer doubtful. So successful has Mr. M'Ivor been in propagating and growing the plants, that the plantations under his charge are now in a position to supply thousands of seedlings to public companies formed for the purpose of cultivating the chinchona for commercial purposes. Quite recently Mr. M'Ivor was able to send home some branches of his trees, and these have been analyzed by Mr. Howard, the largest importer of Peruvian bark in this country, and at the same time one of those best qualified, as is evident from his magnificent folio last year reviewed by us, to pronounce an opinion. It is gratifying to learn from his analysis, that all fear entertained by desponding botanists of the chinchona plants grown artificially in the East Indies not containing the same alkaloids as those produced spontaneously in South America, is groundless. Mr. Howard finds not the slightest difference between them; and Mr. Markham's labours are, therefore, crowned with complete success.

Both Dr. Lees's book and Mr. M'Ivor's pamphlet have been printed in India, and are published most opportunely, at a time when capitalists are investing largely in tea, cotton, coffee and chinchona plantations, and search for reliable information, such as is contained in these publications.

Calendar of State Papers, Domestic Series, of the Reign of Charles I., 1633-1634, preserved in Her Majesty's Record Office. Edited by John Bruce, Esq. (Longman & Co.)

Calendar of State Papers, Domestic Series, of the Reign of Charles II., 1664-1665, preserved in Her Majesty's Record Office. Edited by Mary Anne Everett Green. (Longman & Co.)

THE first volume of these *Calendars of State Papers*, Mr. Lemon's, was produced in the year 1856. We have now on our shelves no less than twenty-four volumes,—an average of one volume produced for every quarter of a year since the commencement. This great scheme of publication has been conducted, not only with commendable rapidity, but with uniformity and regularity. There have been no spurts and spasms. Four volumes is the average per annum, and four volumes were produced last year. At the present rate of progress, the whole task of indexing the State Papers may be achieved in a single generation.

The new volumes are not perhaps among the most attractive of the series. Few names of the first order occur in either of them: John Milton, Oliver Cromwell, Robert Blake, the younger Henry Vane, are absent from Mr. Bruce's index,—John Dryden, Edmund Waller, John Locke, from Mrs. Green's; yet a careful gleaner would find a rare sheaf of corn in either of the fields thrown open to him by Mr. Bruce and Mrs. Green.

We shall pick out a few ears from the mass. We begin with Mr. Bruce's *Calendar*, as the earlier in point of date. On the 2nd of May, 1633, we read:—

"Articles of agreement between Bishop Laud and Hubert le Sueur, of London, sculptor. The latter agrees, before Michaelmas Day, 1634, to make and cast in brass 'the statue' of the king,

'six foot high,' and the statue of the Queen 'in brass likewise as big as the life.' The Bishop agreed to pay 400*l.* for the two statues, and to remove the same when finished."

Not much is known of Hubert le Sueur, and the foregoing will be a welcome addition. Of the Earl of Somerset, the subject of our next gleaning, too much perhaps is known. In his day of pride, besides being allowed to marry against the canon, Somerset had been loaded with money and jewels—some of these latter being jewels of the crown. Charles the First, on coming to the throne, required these jewels to be given up; and in 1633, on the eve of his departure for Scotland, his Secretary, Windebank, sent one Sir Robert Carr, perhaps a kinsman of the luckless Earl, with a peremptory message. Somerset, who seems to have thought a king's gift good in law, refused to return the jewels,—whereupon we have a more angry message. On the 15th of May, Windebank writes:—

"The King is very ill-satisfied with the Earl's answer returned by Sir Robert Carr concerning the jewel belonging to the Crown, and observes besides the manner of putting it into Sir Robert's hand, and not addressing it to his Majesty nor to the writer. The substance was an evasion or device to elude his Majesty's command which he much resents, and the rather because the Earl, having been many years in some nearness to his Majesty's father, to whom he owes his fortune, should better understand how to treat with his Sovereign. Besides, his present condition is not fit for a scormer. His Majesty will be no longer delayed, but will take another way in case of a second refusal. The Earl is therefore to send the jewel by the bearer."

—Somerset was not convinced, and the King had to depart without the jewel. Coke, at the end of a week, begged Windebank, if he succeeded in getting the treasure, to send it by a special messenger to the King.

In the same year, 1633, we have a curious report from the Mayor of Banbury as to certain strolling players. The Mayor and Justices send up to the Lords of the Council—"a patent of licence pretended by the bearers to be granted by His Majesty, and a commission from the Master of the Revels. The patent they suspect, the commission they find rased. The parties are wandering rogues, if not more dangerous persons, as appears by their examinations, in which it is apparent they have changed their names. Have committed them to prison till their Lordships' pleasure be signified." Inclosed are the examinations, some of which are of interest. For example, that of Bartholomew Jones:—

"Examination of Bartholomew Jones. Has gone with this company up and down the country these two years, and has acted his part in divers places. They played by virtue of this commission at Leicester, Market Bosworth, Stanton, Solihull, Meriden, and Stratford, at Sir Thomas Lucy's, and divers other places. At Coventry and other places where they played not they received rewards. The commission under the privy seal was one Edward Whiting's, and he and Richard Bradshaw were partners, and were both gone to London. 2nd May 1633."

It is odd to find Sir Thomas Lucy among the early patrons of the wandering drama,—in fact, the only gentleman at whose house the comedians were entertained. An examination of Richard Whiting, another member of the troop:

"Examination of Richard Whiting of Cothelston, near Derby. Has been with this company of players about half a year. Met his father, Edward Whiting, in Cornwall. Thence they came to Bristol. Has acted a part with these players lately in divers places; at Leicester, Stratford, Meriden, Solihull, at Sir William Spencer's, and Sir Thomas Lucy's. On Saturday last they came to Keinton, and there they played three days."

In a paper of notes by Secretary Windebank

of business to be transacted in the Council there is a bit of information about Blackfriars Theatre. It is entered in these words, under date of November 20, 1633:—

"Notes by Sec. Windebank of business transacted at the Council this day. Blackfriars' play-house. The players demand 21,000*l.* The Commissioners (Sir Henry Spiller, Sir William Becher, and [Laurence] Whitaker) valued it at near 3,000*l.* The parishioners offer towards the removing of them 100*l.* An order of the Board to remove the coaches from thence, and to lay the coachmen of whomsoever by the heels. That no coaches stay between Paul's Chain and the Fleet Conduit. The officers to be punished if they do not their duties. The Lord Mayor to have this commandment directed to him, and every ward to be answerable."

In the same year, Taylor, the Water Poet, sends in a petition to Lord Cottington, on behalf of His Majesty's watermen. It is in rhyme, and brief enough for quotation:—

Shows that your Lordship is so well inclined
To pay us, that our order you have signed,
For which we humbly thank you, though as yet,
We sue, and seek, and can no payment get.
We live in debt, we coin and credit lack,
And we do fear Sir Robert Pys is slack,
Or else unwilling; therefore we implore
Your Lordship to remember him once more:
And we shall pray unto the power supernal
To bless your Lordship, temporal and eternal.

George Wither, the poet, presents to the Council a petition respecting his licence to vend the Book of Hymns, from which a fact may be gathered for any future memoir of his life:—

"Petition of George Wither, his Majesty's servant, to the Council. Upon a former complaint against the stationers, for resisting a privilege concerning a book of Hymns and Spiritual Songs, the Lords ordered that the stationers should be conformable thereunto, and the petitioner expected their conformity to the King's pious injunction and their lordships' just order, without using the least compulsion, partly in regard it concerns the furtherance of devotion, which he would not give them colour to scandalize, and partly because he would have won them by his long suffering. But gentleness making them more obstinate, and the petitioner having by their contentions disbursed and injured himself about 1,200*l.*, having likewise about 500*l.* worth of the aforesaid hymns upon his hands above three years without profit, which, had not the stationers wilfully hindered, might have been vendid in less than one year, and he being thereby destitute of means, beseeches them that their former order may be renewed, and warrants granted to bring before them such as disobey the same, that they, who enjoy all their privileges by royal prerogative, may not be suffered to resist and despise the same; otherwise the petitioner's best approved studies, and the benefit intended him will become both his disgrace and undoing. By their assistance he shall be the better enabled to glorify God and serve his Majesty in some other good employment."

If we turn to Mrs. Green's Calendar we shall find plenty of the like curious details. Here, for example, on an early page, is a bit of local gossip about Pall Mall. The date is September 23, 1664:—

"Warrant for a grant to Baptist May and Abraham Cowley, on nomination of the Earl of St. Alban's, of several parcels of ground in Pall Mall described, on rental of 80*l.*, for building thereon a square of thirteen or fourteen great and good houses; also of the common highway lying between the houses in South Pall Mall Street and St. James' Park wall, on rental of 40*l.*, with proviso of erecting no building thereon that should cause annoyance to the inhabitants. The said grant is made because persons were unwilling to build such great houses on any terms save that of inheritance, and the former leases recapitulated were only for years."

Five months later they obtain, on the same influential nomination, a second grant:—

"Grant to Baptist May and Abraham Cowley, on nomination of the Earl of St. Alban's, of ground

in Pall Mall, whereon thirteen or fourteen houses are intended to be built, on rent of 160*l.* a year, to begin from Michaelmas, 1666; and also lease to them of part of the ground sometimes used as a highway from Charing Cross to St. James's, with the usual provisos and exceptions."

These grants were the beginning of an enclosure of St. James's Park.

The appearances of Samuel Pepys in these papers are very numerous; but then they are in his official, not his private capacity. His attitude here is highly decorous and his character respectable. He is drawing up papers, auditing accounts, communicating lists, and behaving generally like a good clerk, not railing at Sir William Penn, quizzing the Duke of York, chronicling the small scandal of the theatres, or gloating over his own little peccadilloes. The public will not care for him in the better part. We have grown so familiar with Pepys as the funny man, who is always peeping under women's bonnets, gaping for a coarse joke, or kissing somebody's wife, that we regard him as a privileged fellow, like clown or pantaloon, on the sole condition that his impudence and eccentricities make us laugh. We no more care for him in his office than we should for Mr. Buckstone as a banker's clerk.

Of the notorious Tom Chiffinch, keeper of the back-stairs at Whitehall, we have a few glimpses. The first may appear a little odd from such a fellow:—

"Thomas Chiffinch. Begs that for avoidance of the pestilence, which in 1605, 1625, and 1636, were brought into this kingdom from the Mediterranean, precautions may be used here as in all those parts, except by the Turks who believe in predestination; that an office be erected to visit goods or passengers, none to land without certificate, and that all diseased persons remain first on shipboard, and afterwards apart on shores."

Fancy Tom Chiffinch being the predecessor of John Howard in the great question of Quarantine! Tom had probably no interest in the affair, except that of the "office to be created." The next appearance is in his own proper character of the King's confidant:—

"Warrant for discharging Thos. Chiffinch from all writs of *distringas* and other processes, for not accounting for several sums received and disbursed by him according to the King's commands, notwithstanding any grant thereof to others."

Nor is there much difficulty in understanding the next item:—

"Warrant to Thomas Chiffinch to retain in his hands 250*l.* from moneys paid on composition by persons charged with goods, furniture, &c., of the late King, in reward for his zeal and industry in recovering the same."

If Tom, like Sir Kenelm Digby, Anthony Hamilton, and other great men, had chosen to write memoirs of his life and misadventures, we should have known exactly what the services were for which he received the 250*l.*

Both in Mr. Bruce's volume and in Mrs. Green's volume, the general history of the country is presented in a curt but authentic form; all commissions are recorded, all proceedings of the Court described. A good deal of attention is bestowed on the royal progresses through the country; the letters reporting which abound in traits of manners. For example, Sir William Coventry writes to Lord Arlington, from Leicester, under date of August 1, 1665:—

"The Duke of York is well, but has not been without alarms. At St. Alban's, one of his pages fell ill with fever and vomiting, and the innkeeper, thinking it the plague, was about sending him without leave to the pesthouse; he is now better. The magistrates of Leicester waited on the Duke at his arrival. Lords Devonshire and Bridgewater waited on him at St. Alban's. In his journey, the Earl of Kent, and Lords Bedford, Maynard, and

Lucas met him, near Woburn, an excellent and capacious house, where he lodged and was well treated by Lord Bedford; there several gentlemen attended him. Towards Northampton, the sheriff of Buckinghamshire, with Sir Wm. Tyringham and others, met him; also in Northamptonshire, the sheriff, who made a good speech, with some gentlemen. There Lord Sunderland invited him to his house near Northampton; he declined, but dined there yesterday, and supped at Lady Thomond's. The magistrates of Northampton met and attended him through the town, also Lords Northampton, Peterborough, and Thomond. The Duke declined an invitation to breakfast at Lord Banbury's, but his lordship stopped the coach as it passed, and being again refused, laid hold of his Highness' leg, and pulled so hard that he had almost drawn off his shoe. This rhetoric, with the trouble he expressed, induced their Royal Highnesses to go in, where a table was prepared with sweetmeats and fruit. He was importunate with the Duchess to see his lady, who was lying in, but as she was not ready to be seen, the Duchess broke loose, with a promise to see her on her return. Lords Westmoreland and Exeter sent excuses that they could not come in time. At the entrance to Leicester, the Duke was met by Sir G. Villiers and other gentlemen, and by the magistrates. Their Highnesses have dined and been well treated at Mr. Griffin's, where came the Duke and Duchess of Buckingham, Lords Cardigan, Rockingham, Brudenell, the Attorney General, and other gentlemen of those parts. Lady Yerbury's sisters, Mrs. Jennings and Mrs. Temple, have impaired their beauty by heat and swelling in the face; thinks this a providence to preserve those who approach them frequently from danger."

In this Calendar a reader finds a great mass of details as to the unhappy Dutch war, then raging. The subject is not a pleasant one; and a patriotic man will perhaps be content with the record of it contained in Pepys.

Fish Hatching. By Frank T. Buckland. (Tinsley Brothers.)

"You are to know that there is a brook in Kent that breeds trouts to a number incredible, where you take them twenty in an hour." Thus wrote Izaak Walton, just two hundred years ago, in his delightful book on Angling; by which we of this generation are to know that in ancient Izaak's time the rivers near London abounded with trout; and he also informs us that there are streams which yielded their lusty two and three pounders, where now you may angle in vain for a gudgeon.

But better days for the angler are at hand, and we do not despair of seeing our rivers well stocked with trout and other fish, for the great importance of fish-culture is now fairly engaging public attention. Not long since we noticed a work by Mr. Francis on 'Fish Culture,' and now Mr. Buckland gives us very valuable results derived from his experience in 'Fish Hatching.' His book is the more welcome because it contains, with but few unimportant exceptions, original observations and experiments on this interesting subject. The substance of the work was given in a lecture at the Royal Institution, in April last, but so much new matter has been added that the present publication may be regarded as original.

Mr. Buckland draws attention to the important fact that, while from the earliest days there have been agriculturists or land-farmers, *aguculturists* or water-farmers have not existed. This is the more surprising when it is remembered that the yield of our rivers and lakes under judicious pisciculture would be enormous, for it was obtained from the beginning of the world that the waters should bring forth abundantly. Obedient to this law, the germ of this abundance is ever present, but instead of protecting and developing it, we have neglected and in many instances destroyed it. "Gold

suggests have been under our noses in the water," says Mr. Buckland, "and we have not stooped to pick them up."

Unwilling, as is too much the custom with writers on natural history, to quote stereotyped statements from books, Mr. Buckland personally examined the roes of the ordinary fish used for human food for the purpose of ascertaining the number of eggs contained in them. The following are the results. A trout of one pound, 1,008 eggs; a jack of four and a half pounds, 42,840; a perch of half a pound, 20,592; a roach of three-quarters of a pound, 480,480; a smelt of two ounces, 36,652; a brill of four pounds, 239,775; a sole of one pound, 134,466; a herring of half-a-pound, 19,840; a mackerel of one pound, 86,120; a turbot of eight pounds, 385,200; and a cod of twenty pounds, 4,872,000.

Thus it is evident that nature is abundantly prolific, and it is further remarkable that though salmon and trout carry, on an average, 1,000 eggs to one pound of their weight, other fish differ in this respect, that the heavier they are the more eggs do they bear. Another important fact respecting the eggs of some fish is their great toughness, a provision, doubtless, intended to enable them to resist the crushing effect of stones and gravel in their spawning beds. In order to ascertain positively how much direct weight trout's eggs would bear, Mr. Buckland placed iron weights upon individual eggs, which did not give way until the pressure amounted to five pounds and six ounces.

Mr. Buckland describes with great minuteness the process of salmon and trout spawning, bringing forward various trustworthy witnesses of the operation. It is generally believed that both the male and female salmon make the "ridd," or spawning bed, but, according to Mr. Buckland's authorities, the female alone performs this operation, the male being intent, during the process, in driving away all intruders, against which he fights with great ferocity. It is supposed by some persons that the curious beak, or horny projection, at the top of the lower jaw, with which the male salmon is provided during the spawning season, is for the express purpose of enabling him to do battle efficiently, being analogous to the horn of the deer.

Our author devotes a chapter to the enemies of the ova of salmon and trout, among the chiefest of which are water-scorpions, the larvæ of the May and dragon fly, ducks and swans. "If you desire good fishing," says Mr. Buckland, "drive off the ducks—you cannot have both." Our experience enables us to indorse this precept, for wherever ducks have abounded trout have been scarce; and we know an excellent trout stream in Hampshire where the fishing was very indifferent until the ducks which infested the water were kept off. Swans are quite as mischievous, gobbling up the spawn of fish until they are gorged.

Mr. Buckland gives very precise directions respecting the breeding-boxes, the manner of hatching, and the best food for the young fish when they have ceased to be nourished by the umbilical sac. Boiled liver, finely powdered, is the usual pabulum, and generally agrees with the fish; but it appears that small flies, and particularly midges, are also excellent food.

A most important feature connected with fish-culture is the transport of eggs, which being more easily carried than young fish may, if properly managed, be sent very long distances. It is essential that no attempt should be made to move the eggs until the eyes of the embryonic fish are visible. These are generally seen about the thirtieth or thirty-fifth day, according to the temperature. When the eggs are thus de-

veloped, the following is the best method of packing them for carriage:—

"Procure some wide-mouthed bottles, three or four inches high—common pickle bottles will do very well—place at the bottom of the bottle a layer of fresh moss (this must have been well washed previously), then dip it in clean cold water, and squeeze the superfluous water out, so that the moss shall be wet but not dripping. Portions of rough sponge, the size of a walnut, well cleaned, are as good packing as moss and are cleaner (these must also, of course, be damped). Upon the layer of moss deposit a layer of 'eye-showing' eggs, arranging them so that they shall not touch one another. Place another layer of moss, another layer of eggs, and so on till the bottle is full,—but there must be no pressure anywhere. Pour out any water that has collected at the bottom of the bottle, cover the top with a bit of common paper, and stab some holes in it with a penknife. The bottles being filled, get a stout but light box,—arrange your bottles in it in the most convenient position and stuff them down quite tight with moss that is dripping wet with water, put the cover on the box and fasten it securely. Then place this box inside another box, leaving about two or three inches of interspace. Fill this up quite tight with wet moss, and send them off by the quickest route of transport to your friend. The latter should immediately on receiving the eggs pick the moss out carefully; the eggs still packed in the bottles should be placed upright in the breeding-boxes for a couple of hours, the water *not* by any means being allowed to get into them. The eggs will thus gradually assume the temperature of the water in which it is hoped they will hatch out."

The above method of packing eggs for carriage is that used at the great piscicultural establishment at Huningue, and has been found to answer admirably. When young fish are transported to distant places, it is essential to change the water frequently; and if the fish become sickly, the water should be oxygenated by splashing it or blowing air into it by means of bellows. But with every precaution it is found that young fish do not bear carriage as well as eggs, upwards of sixteen millions of which were distributed over Europe by the establishment at Huningue in 1861. So easy indeed and inexpensive is fish-hatching, that Messrs. Ashworth—who declare that it is cheaper to breed salmon than lambs—state that the total cost of the carriage and hatching of 770,000 salmon-eggs for the supply of Loughs Mask and Carra in Ireland was only 18*l.* One of the most important facts stated by Mr. Buckland in connexion with fish-egg hatching is the discovery that salmon-eggs preserve their vitality after having been imbedded in ice for the long period of ninety days. Eggs thus treated have been successfully hatched; and there is, therefore, every reason to expect that if ever salmon are transported successfully to Australia it will be done by freezing the ova in ice and developing the egg into the fish on its arrival in that country.

We cordially recommend Mr. Buckland's treatise to all interested in pisciculture. That the art is capable of improvement cannot be doubted; but it has already worked wonders: 35,000 young salmon, trout, charr and grayling were turned into the Thames during the late season, hundreds of which will afford recreation to the London angler and provide delicacies for the table; and we know many rivers which, long barren, are now showing pleasant signs of ichthyological life.

Memoirs of Miles Byrne, Chef de Bataillon in the Service of France, &c. Edited by his Widow. 3 vols. (Paris, Bossange & Co.)

BORN March 20, 1780, of a gentle family, in the county of Wexford, Miles Byrne was an

Irish malecontent who, after taking an important part in the insurrections of 1798 and 1803, managed to escape to France, where he obtained a commission in the Irish Legion which, from 1804 to 1815, fought gallantly in the service of the French Empire. When the Irish Legion was dissolved by the Bourbons after the battle of Waterloo, Miles Byrne was put on half-pay, and had to reconcile himself to a condition of military inaction until the year 1828, when he was appointed to the staff of General Maison, and served with the French army in Greece. Returning to France in the autumn of 1830, he continued to act as *chef de bataillon* to the 56th regiment till 1835, in which year he retired from the service and settled in Paris, where he continued to reside up to the time of his death, in 1862. During the later years of his life, this soldier of fortune amused himself with the composition of the *Memoirs* which his widow has edited and put before the world in three volumes. The first volume contains the story of Irish politics between 1798 and 1803, told, of course, from a malecontent's point of view; the second gives the history of Bonaparte's Irish Legion; and the third is made up of biographical sketches of those Irish exiles and enthusiasts whom the author naturally regards as "patriots." Although these volumes cannot be recommended as brilliant, they contain much that will interest Irishmen of all parties. Wexford men will enjoy the local minuteness with which Miles Byrne describes those scenes of the insurrection which came under his personal observation. The story of the Irish Legion contains many well-told episodes of gallantry and martial prowess; and the glimpses given in the third volume of the lives of Irish exiles in France are suggestive and saddening. Pathetic is the fact, apparent in every page of these autobiographical reminiscences, that to the last hour of his life, which closed in 1862, the writer looked upon the country of his birth as that same oppressed and suffering land from which he fled in early manhood. Fifty years of change and improvement in the condition of Ireland had made no difference in the view he took of her wretchedness and degradation. To the veteran of fourscore years she was just as much the subjugated land as she had been to the youthful rebel of the last century. Speaking of Miles Byrne as he appeared in 1860, an Irish writer observes:—"He knows that a just God reigneth on the earth; as a Frenchman and an Irishman, he feels that the balance must be struck; and whenever the shifting scenes of diplomacy appear to open a prospect that a kind Providence is about to bring the hour of final settlement, even now—even in this day—a flush burns on that ancient warrior's thin cheek, and the hand that has swayed a sword for two generations trembles like a maiden's." In the same spirit Mrs. Byrne, Francis Horner's sister, expresses a hope that her husband's *Memoirs* "may awaken sympathy in England and Scotland for the wrongs of Ireland." A novelist of Lever's school would find in Miles Byrne, as he appears in these volumes, an admirable hero for a work of fiction.

NEW NOVELS.

Heart and Cross. By the Author of 'Margaret Maitland.' (Hurst & Blackett.)—Some of our readers may dimly remember a story by the same author, in which Derwent Crofton is the hero, and the heroine, despairing of ever marrying the man of her heart, endows an asylum for the orphans of the middle rank of society, left often more friendless and destitute than the children of the poor; but at the last hour, when the hero is believed to be undergoing the very ceremony of marriage with

the wrong person, he comes forward, and, to the great comfort of the reader, persuades the heroine to carry on her charitable institution by deputy, and devote herself to him for life. The present story takes up the couple some years after, with an only child, a son of seven years old. The family of an excellent clergyman who died in the former story are here grown up, and are heroes and heroines on their own account, and the story chiefly concerns them. Alice Harley, the daughter, a beautiful, stately young woman, has many offers of marriage, but refuses them all, cherishing a secret but obstinate attachment to a cousin, who went off to India in the former story, and who is now a gallant and distinguished officer. There is a handsome coxcomb, her brother, and a pretty married sister, and a younger brother, a cripple, in ill health, and a young curate in love with Alice, supported by the wishes of the mother and his sister, a handsome flirt, and Mrs. Derwent Crofton's only son, an *enfant terrible* of seven years old, and Bertie, an officer in India; these are the persons of the story. There is the anxiety during the Indian Mutiny, and the harassing suspense; but the officer comes safe back, receives the Victoria Cross and the heart of his pretty cousin. All ends well: but the tale is so very slight, that all its interest depends on the graceful manner in which Mrs. Oliphant relates it.

Arrows in the Dark. By the Author of 'Said and Done.' (Smith, Elder & Co.)—This is a well-intentioned novel; with the moral that men and women ought to act up to the light they have at the moment, and do what is the absolutely right thing, and not to be impatient to bring on what they wish, nor to be insincere towards themselves by trying to fancy that gold which is not, but to wait and patiently to accept the duties of the state of life in which they are placed, no matter how dull, or dark, or heavy. The reason and meaning of all that troubles them are the "arrows flying in the dark," which in the end will assuredly reach their mark and be justified in their aim. This is a lesson we all of us need to learn more or less, and it is one that needs to be impressed line upon line and precept upon precept, for we all are apt to think ourselves wiser than the "Providence that shapes our ends." The story before us is gently drawing, and rather dull; and each event has its duplicate, which gives a mechanical regularity of composition that wearies. The author lacks vigour of style and force of interest, but it is a book that will be useful to girls on the threshold of womanhood, when counsel and wise guidance are most needed to strengthen foibles that look almost like virtues, and to teach them that "to be weak," under whatever guise of romance or heroism, "is to be miserable." It is a book we can recommend for such young persons as are allowed to read fiction in moderation.

Bertha's Repentance: a Tale. By J. Frazer Corkran. (Chapman & Hall.)—'Bertha's Repentance' is a pleasant little story which reads like the plot of a French drama; it is skilfully told, and the English point of view which the author assumes gives it the piquancy of pleasant broken English. The story is not said to be a translation from the French. Considering all the strong elements for a tragedy this short story contains, the escape into an amusing book, so light and slight and graceful, is something for which a reader may be at once glad and grateful. It is capable of being adapted for the stage, and would have more force when put in action than read as plain prose: the characters are made for representation. We recommend it to the attention of the purveyors of dramatic literature. The incidents are indicated rather than detailed, and the skeleton of the story would give little idea of the graceful improbability of the whole, which floats with the ease and lightness of a successfully-turned soap-bubble. Michel Freymann, a young Swiss mountaineer, just descended from the diligence which has brought him to Paris to seek his fortune and his uncle's family, naturally loses his way, and he finds himself contemplating the *Wandschüsseln* at work near the Pont des Arts;—suddenly he discerns the body of a woman floating past; he springs into the water, rescues the woman, who is all but dead, with a locket tightly clasped in one of

her hands, the locket containing a scrap of baby-hair. Michel loses his own bundle, with his little store of money in it, and stands dripping and destitute on the quay; an enthusiastic bystander thrusts a purse of gold into his hand, and a *restaurateur* living close by takes him home for dry clothes and something to warm his shivering limbs. The *restaurateur* is a brave man too; he makes much of the young Swiss, gives him brandy-punch and an omelette *aux fines herbes*, and when he goes away makes him promise to come again. A hearty, jolly, prosperous fellow this *restaurateur*, but he, too, has his sorrow; his only niece, his adopted child Bertha, is married to a blackguard husband who makes her miserable, and Bertha, who is the soul of all that is beautiful and poetical, has married this man under the idea that he, too, is a poet and a patriot, and the leader of a secret patriotic club, and M. Savellot, the uncle of Bertha, is made as miserable as his niece. We need not tell the reader that it is Bertha whom Michel has saved. On Michel's road to his destination, he enters the Church of St. Roch, and there he finds a basket and in the basket a baby, and a paper attached to it, announcing that the mother, about to die, had placed it there. This baby, of course, is the next piece of the puzzle, and fits accurately to the rescued woman. Michel, by an inspiration, takes up the child and carries it with him. At last he arrives at the house of which his uncle is *concierge*—it is an *hôtel garni*,—and he finds, in the various *locataires* of the different floors, the disconnected links of the chain of circumstances which it is the will of Fate he should weave into a romantic drama, and be the good angel of all concerned, though at the expense of being thrown into prison himself as a murderer. Bertha's repentance turns upon her regret at having married her husband in spite of good advice, in which species of repentance she has many suffering sisters: the title is not at all descriptive of the story. The incidents, except in a novel or in a drama, are improbable; but they are so well narrated, and hang together so lightly, that the reader will accept the amusement without having the heart to demolish the pretty air-spun fabric by the demonstration of reasonable objections.

Wayfe Summers: the Story of an Inner and an Outer Life. By Thomas Archer. 2 vols. (Low & Co.)—This story of an inner and an outer life is a morbid, unnatural, wearisome story, like a tale in a bad dream. Wayfe Summers is the child of somebody, undoubtedly, but neither she nor the reader knows of whom. She lives in a dull old house, in a dull street, in vulgar poverty, under the care of a sordid, bad-tempered old woman. The description of the neglected child is the best part of the book; indeed, the only part with anything like truth or nature in it. A guardian visits her, who, of course, knows nothing of the ill-usage to which she is subjected. A mystery evidently hangs over her, but though the scenes of the story lie in London, in well-known streets, the reader is oppressed and bewildered as though under a nightmare. The young person, Wayfe Summers, is as much pursued and persecuted by mysterious myrmidons as any heroine in old novels; she is waylaid and forced into hackney-coaches; frightened by mysterious maids-of-all-work whom she dares not denounce; she finds a mother who dares not claim her; there is a young French girl who is living in a state of perpetual bewilderment, her only solace being the companionship of her deceased mother's workbox and the company of a handsome young fisherman. There are mysterious documents contained in secret drawers; everybody seems to have been married to somebody in a former state of existence, and to have left their respective partners and their children, and otherwise to have complicated their position. The reader is thoroughly bewildered.

Mildrington, the Barrister: a Romance. 2 vols. (Skeet.)—There is a good deal of cleverness but more of affectation in 'Mildrington, the Barrister'; written in a sharp, quick, incisive manner by one who is accustomed to society, and able to give the appearance of things as they are,—not exactly graphic, but suggestive of the matter in hand, whether it be a dinner, a drawing-room, or the fair face and dress of a lady. The story is one that

has been told, and, alas, transacted many times, in prose, verse and reality,—a man beginning the world, bent on rising, with much talent, some goodness of nature, but with no more principle of stability than what results from never having been tempted; he marries, not altogether imprudently, but less ambitiously than his mother would approve, and on her he is partially dependent,—he keeps his marriage a secret: thence, heart-burnings, distrust, difficulties, and, finally, the beginning of disgust. Meeting the lady his mother had selected for him and schemed to secure, Mildrington becomes captive to her attractions,—she is a finished coquette, a siren of respectability. Complications arise; discovery ensues; Mildrington suffers exposure and banishment from the high social regions in which he had been received; his worldly prospects are overclouded, and of course he makes his wife the victim under him. The story is natural and true to human nature; but the pleasure is marred by affectation. The style is a jumble of Carlyle, Trollope and Sala, all good in their way, but detestable in imitation, as all mock jewelry is.

Charlie Thornhill; or, the Dunce of the Family: a Novel. By Charles Clarke. 3 vols. (Chapman & Hall.)—For readers who want to hear about horses, races, steeple-chases, *Bell's Life, mis en scène et en action*, the conversation and observations of real owners of thorough-bred, betting books made up, wagers lost, jockeys and gentlemen riders described as they are among themselves, may here have their curiosity gratified. Society at Baden-Baden and at Homburg, the Kursaal, the gambling at home and abroad, French steeple-chases, &c., are displayed in these pages by one who has the appearance of knowing what he talks about. The story plays a very secondary part; it is vague and disjointed, standing still for a while, and then going on with a start. There is a murder, and a villain who holds the strings by which he works other villains,—there are mysterious gipsies and blacklegs, and an estate which seems to belong to two owners,—lost documents, and police officers, and there is a hero who would be an excellent man if he did not gamble, and who would be a rich man if he did not lose his money on every occasion; indeed, his purse seems to bleed at every pore, and how he does not become a beggar is a miracle,—and there is a good younger brother who enters his uncle's banking-house; he is the dunce and sensible man of the story, and a very good fellow. The framework of the story is weak, but as readers will take up the book for the sake of the scenes of real life, it is of not so much consequence. Where the author has worked on his own knowledge and experience, the book is good; the school scenes are especially pleasant, and the general tone of the book is fresh. It will be more acceptable to men than women, because men do not care so much for a story as for detached scenes, and those in 'Charlie Thornhill' are very spirited and well written.

OUR LIBRARY TABLE

Songs in the Night. A Collection of Verses by the late Grace Dickinson. (Wertheim & Co.)—These are songs in the night in sad verity! sung by a poor bed-ridden woman in a union workhouse. The description of the circumstances under which they were sung is touching indeed—one of those pathetic facts of life which beat the best fictions of literature. Grace Dickinson became an inmate of the Halifax workhouse in consequence of being in a decline; and it was there she wrote this collection of verse. At first she jotted her thoughts down on a slate—later she was unable to do this; but curiously enough she had learnt the deaf and dumb alphabet on purpose to converse with a poor deaf and dumb workhouse companion, and when she could not sit up in bed to hold her pencil, she dictated her verses to her mute amanuensis. Books have been composed under many singular conditions, but these we look upon as among the most singular and interesting. The chaplain of the Halifax union workhouse vouches for the verses being a genuine expression of the writer's religious feelings, and as such they give us one more proof

that many and many a jewel of God gets trampled and darkened in the mire of this world that shall one day shine very brightly in its heavenly setting. They also suggest the thought that men in the position of workhouse chaplains may do a world of good and be great comforters to suffering souls who are let out of life by that grimest door of death, the pauper's grave. Blessings be upon all who in this way are true to the Master's work! Several of the pieces in this little book may fairly claim a place in collections of hymns, as the following characteristic specimen will show:—

My lot on earth is poor and mean,
My circumstances sad indeed;
But Jesus cheers the dreary scene:
He meets me in my greatest need.

He smiles on me though some may turn,
He pities fallings none can see;
He welcomes me, whoe'er may spurn:
How kind my Jesus is to me!

He comforts and he succours me;
He teaches me to look above,
Beyond this life and its rough sea,
To yonder land of rest and love.

He hushes all my passions still,
He makes the storm become a calm,
Brings sweet submission to his will,
And holds me with his mighty arm.

He makes the curse a blessing prove;
He turns my sorrow into joy;
He teaches this hard heart to love,
And make His praises my employ.

He turns my darkness into light,
He makes this earth become a heaven;
Gives inward peace 'midst outward fright:
All glory to His name be given.

—The piety is better than the poetry—such is often the case with hymns; and, apart from the literary estimate, the little book deserved publication for the facts which it contains. There must be many kind hearts that will be touched by the story to put forth a helping hand; for it appears that when poor Grace Dickinson fell worn out at the workhouse-door she had with her a burden of two children. These she had toiled hard for during eighteen months of widowhood, and failed at last. These are still living in the workhouse. The book is printed in their behalf; and the dying mother would undoubtedly have thought her verses had won ample fame if she had known that they would be of service to her little ones, as we trust they may be.

The Teacher's Crown (with Notes), and Minor Cadences. By Alexis Paget. (Dublin, M'Glashan & Gill; London, Simpkin, Marshall & Co.)—The Teacher's Crown is partly a versified record of the author's school-days and partly a dissertation upon various topics suggested by his narrative. Mr. Paget pays an ardent and, probably, a deserved tribute to his village schoolmaster, and we intend no slight to the good man's memory in saying that self-knowledge was not among the benefits which he conferred upon his pupil. This is a science the mastery of which depends more upon the scholar's nature than the preceptor's skill; and it is but too obvious that Mr. Paget has not attained it. He shows no qualifications for his self-imposed task. His attempt at didactic narrative has neither suggestiveness of thought nor interest of story. Simple facts and harmless truisms are hidden in such patchwork of metaphor that the reader has before him all the pains of discovery without any of its rewards. Here is an instance:—

Go, classmate, to thy work! build up a fame
With goodly deeds and freeborn truth; nor fall
Before that hideous idol of fair name—
POLICY—whose oblation is the gall
Of Error mingled with the wine of Truth;
Her hellish talons gloved with godly sooth.

How the oblation, which is at once "the gall of error and the wine of truth," can be at the same time "hellish talons," and how these talons can be gloved with "godly sooth"—the word "sooth" really meaning truth or reality, not, as the writer implies, show or appearance—is a problem that may be solved when that peculiarity of mind is explained which could deliberately put on record such jingle as the following:—

Unknown before
That sacred stream
Whose waters dream
Along the shore,
As, mirrored on its bosom, gleam
The fairy beauties of Glenmore.

But Mem'ry's hand,
With pow'r untold,
Grasping, shall hold
Those mountains grand;
And o'er her swanlike bosom fold
The drapery of sky and land.

No more again
Shall ALL we meet
With converse sweet
In yonder glen;
Nor, one by one, those strains repeat
That issue from the Poet's pen.

We have read verses as puerile as Mr. Paget's before, but none which—if we except a few devotional pieces—are so pretentious or ushered in with such an air of importance. The writer complains, in his Preface, that the critics have "complexed the subject of poetry with their irreconcilable definitions"; and he therefore gives the public liberty to read his matter either as poetry or prose. The public has, however, the choice of a third course, which, we fancy, will be the one adopted.

Evenings with the Muses. By Frank Stephens. (Ewins & Co.)—Why these verses are so called we do not see, unless the author alludes to his own mental twilight, and wishes to leave the reader completely in the dark. Morning or evening he has not been with the "Nine" at all. There is nothing in the pamphlet to warrant the jaunty affectation of its preface; and the dedication to Alfred Tennyson will be resented by those who read it as presuming and insolent. The verses themselves merit neither praise nor blame: the manner in which they are presented smacks of Malvolio.

A Field Full of Wonders. By Charles Smith Cheltnam. With numerous Illustrations. (Routledge & Co.)—This little book, no doubt, may prove instructive and entertaining to those who are more ignorant than Mr. Cheltnam respecting grass, crows, moles, grasshoppers, hedgehogs, earwigs, toads, frogs, rats, newts, butterflies, ants, wasps, redbreasts, larks, spiders, sparrows, bees, snails, ladybirds, field mice, worms, squirrels, gnats, leeches, cockchafers and flies. We, however, have read the book through without finding a single original observation in it to prove that the author has ever used his eyes, except in reading the books of other writers on natural history. Now, compilations are at best but bad reading. They blunt curiosity instead of whetting it. They give their readers something to say, instead of a desire to observe and know. It would be a good thing if it were an established rule among the students of the natural sciences, never to read any book which does not contain new observations.

Complete Solutions of every Class of Examples in Algebra. By T. Wharton, B.A. (Longman & Co.)—This is what we must call a thundering lot of examples, which we hope no one will work right through. But any one may go on until he finds he has the power he wants in one subject after another. It is well suited to the time: and, accordingly, we find a large supply of those conundrums which are called "problems" producing equations. Much time should not be wasted over such things: the little knack of sharpness which they foster will be gained soon, or never. The following is one of the most full-blown flowers of a dubious plant which we ever saw: "A regiment in which there are between 10 and 100 officers and twice as many sergeants, in clearing the streets during a revolution, loses two officers: and after storming a barricade in which 3 more fall and 1 accidentally joins, is obliged to retreat, and loses other 3. Whilst engaged in clearing the streets, the liability of an officer to fall is half that of a sergeant or private, but at the barricades as 4 to 3, and in the retreat as 3 to 4. Also, on leaving their barracks, the number whose left-hand digits are the sergeants and right the officers, is 20 more than ten times the number of privates; but in coming back (including the officer who joined) it is only 13 more, the number of officers being still greater than 10. Required the state of the regiment at first!" Here is a problem for a Woolwich examination! For all this, the book will answer the purpose well, and it has what a teacher wants, plenty of it.

Record Revelations: a Letter, &c. By an Irish Archivist. (J. R. Smith.)—This is a letter to the Treasury on the Calendar of Chancery Rolls in Ireland, recently published under the direction of the

Master of the Irish Rolls. Had a work of literary pretension met our eye with such a specimen of bad taste as "Let there be light!" for a title-page motto, we should have felt inclined to accede to the request by throwing the book on the fire. But as it is only a complaint about the execution of a public work, against the justice of which the impugner's taste proves nothing, we read the pamphlet, and were pleased to find that, so far as appears, the author may have more sense than the reader of his title would give him credit for. It is a plain statement, to be answered by those whom it concerns, of inaccuracies and improprieties, especially of plagiarisms. On this last point the originals and the copies are given side by side, the resemblances being very close. The author complains generally of injustice to Ireland, on which we can only say, Go to the House of Commons, in which an Irish gnat will be seen with the naked eye, when an English camel would be invisible through a microscope.

Galileo and the Inquisition. By R. R. Madden. (Burns.)—This is a review of all who have written on the subject of late years, by a Roman Catholic. It will be useful for reference: but we do not find anything in it to demand separate notice. The author wants information on many points, by which he makes his caseless strong than it might be. A vestige of the practice of attributing all the works of the Diffusion of Knowledge Society to Lord Brougham is to be found: surely by this time a professed searcher into the Galileo affair might have known that the 'Life of Galileo' was written by Drinkwater Bethune.

A History of Christian Missions during the Middle Ages. By G. F. Maclear, M.A. (Macmillan & Co.)—A History of Missions suggests something like those reports to the missionary societies which set forth that Brother Smith has been ill, but has now a congregation of thirty, four of whom seem inclined to listen. Very differently, however, will the pages before us strike the reader. Here we have it how the king or chief was converted in one dialogue by some holy hermit, and baptism or death the edict of next morning to all his subjects; with many an incident of as striking a character. The book is interesting reading, and the author has drawn from numerous sources. His Middle Ages run from the fourth to the sixteenth century; and the narrative will give definite shape to the notions of many whose history of the spread of Christianity, from the time of the Apostles to that of Luther, is summed up in a vague picture of St. Augustine and St. Patrick coming over with mitres on their heads, and establishing cathedrals.

L'Esprit des Volcans,—or spirit of thieves,—or thieves' wit, with a vocabulary of French slang, is the name of a poor and trashy book, by Emile Colombry, and published in the Hetzel Collection. Of such a subject much might have been made, but the volume never rises above the average of the Percy Anecdotes. To the curious in dialects, however, the vocabulary in slang will not be without interest. It curiously illustrates how a man may speak perfect French that is not at all the French of Paris, and how very ordinary words do not bear the meanings assigned to them by ordinary dictionaries.

Of Religious Publications we have to record, *The Kingdom and the People; or, the Parables of our Lord Jesus Christ explained and illustrated*, with a Preface by the Rev. E. Garbett (Sealey),—*The Importance of Linguistic Preparation for Missionaries in general; with some Remarks on Christian Literature in Eastern Vernaculars*, by the Rev. C. H. H. Wright (Williams & Norgate),—*Shall the Burial Service be Revised? an Appeal to the Most Reverend the Archbishops and the Right Reverend the Bishops of the United Church of England and Ireland*, by Fiat Justitia (Wertheim),—*Ipsissima Verba; or, "Those be the very Words. Are they Wise? are they Safe? A Letter to Lord Ebury in reference to his Lordship's Bill, intitled, 'An Act to amend the Law respecting the Declaration of Assent to the use of the Book of Common Prayer, required of Ministers and others of the United Church of England and Ireland'*, by D. C. L. (Wertheim),—*My Ministerial Experiences*, by the Rev. Dr. Büchsal (Strahan & Co.),—*Scripture*

Facts and Scientific Doubts, by G. Palmer (Hamilton).—*Answers to James Morrison's Questions on the Shorter Catechism*, by a United Presbyterian (Simpkin).—*A Letter to the Lord Bishop of London on the State of Subscription in the Church of England and in the University of Oxford*, by the Rev. Dr. Stanley (Parker).—*England's Crown of Rejoicing*, by the Rev. M. Margoliouth (Wertheim).—*The Spirit Witnessing with our Spirit*, by the Rev. D. Moore (Parker).—*The Perfected Work of the Spirit*, by the Rev. Dr. Alfred (Parker).—*Counsels and Warnings before and after Confirmation*, by the Rev. W. B. Casparn (Parker).—*The Negro Race not under a Curse*, by the Rev. A. THE SHAKSPEARE CELEBRATION.

SINCE our last impression came out some very good names have been added to the Shakspeare Committee, including those of Earl Russell, Lord Talbot de Malahide, the Lord Chief Baron Pollock, Gen. Sir John Burgoyne, Bart., Sir C. Wentworth Dilke, Bart., Sir Fitzroy Kelly, William Ewart, M.P., F. W. Gibbs, David Roberts, R.A., Tom Taylor and Alfred Tennyson. The Committee is now strong, and its increase in strength is a question, not of power, but of convenience. It is now large enough for its special purpose. All the needful arrangements for the public reading at St.

James's Hall have been made, and a notable addition to the Shakspeare Fund may be confidently expected from the exertions of Mr. and Mrs. Keane. As to the details of that public reading, the announcements by placard and advertisement tell everything that need be told; and we may pleasantly regard that affair as having been put on the sure, highway to success. When this is achieved, there will remain for consideration how we can give effect to the great desire of our countrymen to commemorate, in some worthy manner, on a scale of sufficient magnitude, and to an appropriate end, the third centenary of our national poet. We have done much for Handel; we cannot do less for Shakspeare. It is only a question of—how?

That there will be some sort of celebration of Shakspeare's birthday next year—other than the annual dinners of literary clubs—may be taken as the starting-point. Indeed, it is proved by many facts that the 23rd of April, 1864, will be celebrated in every part of this globe in which the language of 'Lear' and 'Hamlet' is spoken or read—in London, in Calcutta, in New York, in Sydney and Quebec, in Cape Town and San Francisco, in Boston and Kingston. The demonstration may be more or less general, more or less imposing. In some places it may begin and end in a dinner and a speech; in some there will be a procession, a dramatic performance, a lecture on the poet's genius; in others, again, the celebration may take all these forms. The dinners and the speeches may be regarded as general and certain; but that on the Poet's natal day the sun, in his visitation of the great belt of provinces and cities which constitute the empire on which he never sets, will shine from hour to hour on a succession of festivities in the name of Shakspeare, no man can doubt. In London alone, unless some general scheme should draw the lesser to the greater, there will be a dozen clubs and public bodies each making its own demonstration on that memorable day, for some special purpose of its own. That it would be well, if it were possible, to bring these committees into free communication and mutual help, nobody, we imagine, will dispute. It is only by a common effort that anything worthy of Shakspeare and of England can be done. Even the Handel Festival required a vast deal of organization. The question is, how to harmonize all interests, so as to bring the various activities to a common centre. If this attraction were once achieved, some of the preliminaries of success in the great celebration would be secured.

The Shakspeare Fund Committee held a meeting on Monday, at the rooms of the Royal Society of Literature, when the subject of extending the labours of the Committee, so as to include in its objects a movement in favour of organizing the Shakspeare Festival of 1864 was broached. It was found to be a general idea, and was considered to be opportune and feasible. The response obtained to a partial appeal from men of rank and letters proved that the name of Shakspeare is one to conjure with. Most of the replies expressed a strong devotion to Shakspeare, and a warm desire to be associated in any public scheme to do him honour. It is not supposed that any member of the Committee would object to the proposed extension of its labours—should those labours appear to be necessary to the success of the celebration next year. Shakspeare is the first consideration. That it would be well to have one grand Committee, such as the Prince of Wales might be asked to preside over, may be assumed. If such a grand Committee can be formed elsewhere, let it be done; if help be required in forming such a body, a Special Shakspearian Committee which already includes within its ranks many of Her Majesty's Ministers, many eminent judges, poets, and historians, many excellent artists and commentators, may very well offer its aid towards the end which all of us have in view.

The parties to be mainly considered, so far as London goes, are three. There is the Shakspeare Fund Committee, which Mr. Halliwell may be said to represent; the committee of noblemen and gentlemen which began in the Garrick Club—though its members are not confined to that pleasant brotherhood; and the body of gentlemen who

meet the Urban Club. Each of these parties has a separate existence, and a different object. Mr. Halliwell's purpose is to buy the Shakspeare estate, in Warwickshire, including Anne Hathaway's cottage and freehold. The Garrick Club are mainly concerned for the Dramatic College, in behalf of which they would devote any of their surplus fund. The Urban Club propose as their chief end to erect a statue to the Poet somewhere in London. Now it happens, fortunately, that all these objects are legitimate, and might, with due subordination, be made to rank in the same general plan. All parties would consent to a statue of Shakspeare being the first thing secured; and no one would object to any surplus which might remain being handed over to the Dramatic College or the Shakspeare Fund. We do not think there would be any great difficulty in either amalgamating the various committees or in harmonizing the several projects. Goodwill towards the purpose in view would supply the lubricating kindness of spirit.

THE POST-OFFICE.

THE Report issued by the Postmaster General tells us how his department treats obscurely or imperfectly directed letters, and such as cannot be delivered. Whenever a letter is found, the address of which is illegible or incomplete, it is passed at once to the "blind officer," whose duty it is to try to decipher the writing, to correct any evident mistake or omission, and to put the letter in course to reach its destination. The "blind officers" are supplied with all the principal London and Provincial Directories, Guides and Gazetteers, by the help of which, and of their own intelligence, they generally succeed in making out the destinations of the letters referred to them. They are indeed able at once to dispose of many letters which a stranger would consider it impossible to find owners for. A letter is always presented in the first instance at the place to which it is addressed; but, if wrongly directed, and the name is known to the letter carrier, it is then offered to the person for whom it is supposed to be intended. Unless the cause for non-delivery is conclusive, no letter is sent to the Returned Letter Branch without the attempt to deliver it being repeated by another letter carrier. After leaving the letter carriers' hands, the address of every undelivered letter, and the endorsements it bears, are carefully examined by a superior officer, who is held responsible for discovering any wrong treatment it has undergone, and for having recourse to any further available means of finding the owner. The regulations by which this officer is guided are framed with the double purpose of leaving no reasonable chance of delivering the letter untried, and of insuring its speedy return to the writer if these efforts prove unsuccessful. It is, however, considered better that the sender should be aware, as soon as possible, that the letter has not reached its destination, than that the letter should travel about with but little probability of its ever reaching the person for whom it is intended. On its arrival at the Returned Letter Branch, every letter is first examined by an experienced officer to make sure that it has been actually presented as addressed, and that the reasons assigned for its non-delivery are sufficient. In doubtful cases the Directories and other books of reference in the Returned Letter Branch are consulted, and, should it be found that there has been any oversight or neglect, the letter is immediately re-issued. The addresses of some letters are at once seen to be erroneous. Thus—"Lombard Street, Manchester"; "St. Paul's Churchyard, Liverpool"; "Ludgate Hill, Newcastle"; all obviously intended for London; or "London" is sometimes added in mistake for a provincial town. Such letters are at once sent out for trial at what are believed to be their real destinations. In the same manner, letters for officers in the army and navy, when on service, for dignitaries in the church or state, and for other persons of rank or eminence, whose correct addresses are known or can be ascertained, are immediately sent to their right destination however erroneously directed. About 300 letters, &c., are thus re-issued daily. When it has been fully ascertained that nothing further can be done to effect the delivery

of a letter, such letter if it contains an address, is returned to the writer on the same day that it reaches the Returned Letter Branch; and when possible this is done without breaking the seal, or examining the contents; some hundreds of letters being returned daily by means of information on the outside of the covers. If, on opening a letter, it is found to contain any article of value, the address and contents are recorded for reference in case of inquiry. When such letters contain the sender's address they are specially returned, and a signature obtained for them; and if there is no address in them, pains are taken to discover the writer by the names or addresses of persons mentioned in the letter, or in other ways. Bills of exchange, cheques and money orders almost always furnish a clue to the senders, and inquiries are often made of bankers and others. When all the efforts to effect a delivery fail, the letter, if from abroad, is retained from one to two months, and then returned to the country from which it was received; but if it originated in this country, and does not contain property, it is not preserved. A much larger proportion of the undelivered letters could be returned if the senders were more careful in writing their names and addresses fully and plainly inside, or if they were embossed on the envelope. With few exceptions these regulations apply also to newspapers and books.

Owing to the successful measures which the Post-Office authorities have adopted, very few losses, of late years at least, have occurred from defalcation. More than twenty years ago, however, a postmaster, who owed the Office more than 2,000*l.*, but who had given security for only part of that sum, absconded, leaving an unpaid debt of upwards of 1,000*l.* The recovery of this debt had long been regarded as hopeless, but a short time ago a letter was unexpectedly received from the postmaster's son inclosing a remittance in payment of part of his father's debt, and expressing a hope that after a time he should be able to pay the remainder; a hope which was soon realized, every farthing of the debt having now been discharged, in a manner most creditable to the gentleman concerned.

The number of newspapers delivered last year was nearly 78,000,000, which is about half a million more than in the previous year; and the number of Book Packets was rather more than 14,000,000, being an increase upon the previous year of about 1,700,000, or nearly 14 per cent.

Hitherto there seems to be no tendency to abandon the old practice of sending Valentines. Last year the number of Valentines which passed through the London Office was upwards of 430,000, showing an increase of more than 20,000 upon the previous year; and in the present year there has been a further and yet larger increase.

It is found that more than 91 per cent. of the inland letters are sent in envelopes; but the number of foreign and colonial letters so despatched is, as might be expected, smaller; being about 65 per cent.

Without counting home services, such as those to Ireland, the Channel Islands, and Orkney and Zetland, the voyages performed by the mail packets during the year were equal, in the aggregate, to more than 8,000,000 of miles, and the cost (including payments by the Colonies) was nearly 1,000,000*l.* sterling, or about 6*s.* 4*d.* per mile. The most distant point to which mails are conveyed by British packet is Auckland, New Zealand, about 15,000 statute miles from Southampton; the nearest is Calais, twenty-six miles from Dover. The excess of time, when the packets were too late, was often a few hours only; sometimes only a few minutes.

Several instances occurred of remarkable punctuality in the delivery of mails conveyed over great distances, even when such punctuality was dependent on packets arriving at a point of junction by different routes. Among them were the following:—1st. The arrival of the mails *via* Marseilles despatched from Sydney, New South Wales, distant nearly 13,000 miles, on the 22nd of September; from Calcutta, distant 8,000 miles, on the 10th of October; from Shanghai, distant upwards of 11,000 miles, on the 19th, and from Hong Kong, distant upwards of 16,000 miles, on the 27th of September. These mails were all due in London on the 13th of

November at midnight, and they arrived one hour and ten minutes before that time. 2nd. The mails from the West Indies and Central America despatched from Southampton on the 17th of September, were delivered at the Danish Island of St. Thomas, distant more than 4,000 miles, at the precise moment at which they were due, viz., at 6 A.M. on the 2nd of October. On the same voyage the mails for Jamaica and Demerara, conveyed in each case by a separate branch packet, were delivered within a few minutes of the time at which they were due; while the mails for parts of Central America and for the Pacific were delivered at Colon, on the eastern coast of the Isthmus of Panama, distant 5,400 miles, thirty minutes after time, the packet having been detained at sea that precise time by H.M.S. Orlando; and the mails for Chili, after having been conveyed with others across the Isthmus of Panama, were delivered at Valparaiso, distant nearly 9,000 miles from Southampton, two hours before the appointed time.

The total number of steamships employed in the packet service, exclusive of tenders, &c., is ninety-six, with an aggregate of 140,000 tons and of 36,000 horse-power. The largest and most powerful packet is the paddle-wheel steamship *Scotia*, of 3,871 tons and 1,000 horse-power, belonging to Messrs. Cunard, Burns & Maciver, the contractors for the North America Service; and the smallest is the *Vivid*, of 300 tons and 128 horse-power, the property of Mr. Churchward.

During the year 1862 there was a large number of shipwrecks in the mail service, five packets having been totally lost; viz., the *Karnak*, in entering the harbour of Nassau, Bahamas; the *Lima*, on a reef off Lagarto Island, in the South Pacific Ocean; the *Cleopatra*, on Shebar Reef, near Sierra Leone; the *Colombo*, on Minicoy Island, 400 miles west of Ceylon; and the *Avon*, at her moorings in the harbour of Colon, New Granada. The only loss of life was in the case of the *Cleopatra*, where one officer and four Kroomen were washed from a raft in endeavouring to reach the shore and were drowned; nor was there any considerable loss of correspondence, although many letters on board the *Colombo* arrived in a state requiring the greatest care in drying and handling to prevent their crumbling to pieces, while others were found reduced to a hopeless state of pulp.

Experiments are in progress with a view of seeing whether, without undue hindrance in the despatch of the mails, or in the sorting on board ship, registered letters, at least, may not be packed in bags or boxes which are waterproof.

THE ABBEVILLE HUMAN JAW.

Nash Mills, Hemel Hempstead, June 2, 1863.

THE articles which have appeared in the *Athenæum* and the letters of Dr. Falconer in the *Times* have placed the public in possession of the conclusions at which the conference of English and French men of science arrived with regard to the human jaw and flint implements from the gravel beds of Moulin-Quignon, near Abbeville.

I had seen both jaw and implements at Easter, and had expressed an opinion as to the implements in question being of recent date, and I was in consequence summoned to the meetings both at Paris and at Abbeville, but unfortunately was not able to attend. From what I had seen of the implements and what I knew as to the circumstances of their discovery, I was surprised at the verdict agreed to by the majority of those present. I could not see what possible evidence could have been adduced that would determine that "the human jaw had not been fraudulently introduced into the pit at Moulin-Quignon," for it seemed to me that the utmost that could be proved on this head was that about which there was no dispute, viz., that M. Boucher de Perthes and others saw the jaw-bone still engaged in the bed, and believed the surrounding gravel to be undisturbed.

It was further found, with the one dissentient voice of Dr. Falconer, that the greater part, if not all, of the flint instruments discovered about the same time as the jaw are authentic. This finding was not based upon the characteristics of the implements themselves, but upon the fact that some members of the conference and others who had

visited the pit had seen the implements in question exhumed, from what they believe to be undisturbed portions of the gravel. Had it been clearly shown that the four implements of peculiar character discovered during the excavations made by the conference had been fraudulently introduced into the beds of gravel, there can be no doubt that the whole of the suspected *haches* would have been at once condemned, and that the jaw would in all probability have fallen under the same condemnation. We have here, then, the basis of the whole verdict—the *belief* of such members of the conference as witnessed the finding of the implements that the beds in which they occurred were in their undisturbed natural condition.

When I look at the eminent names of those who were present at this meeting, for many of whom, indeed, I have the highest possible esteem and regard, and in whose powers of observation I should under ordinary circumstances place the most implicit reliance, I feel how presumptuous it is to suggest that on this occasion they may possibly have been mistaken. The evidence of the flints themselves is as strong as possible in one direction; the evidence of those who found them is equally strong in the other. But in the one case it depends on physical facts, in the other on observation.

In a case of such conflicting evidence, a judgment, if it be necessary to form one, must be based on a balance of probabilities; and, unwilling as I am to be driven to such a conclusion, it appears to me more probable that, under circumstances of great excitement, there may have been an error on the part of such able observers, than that there should have been such a conjunction of exceptional circumstances, both as to the flints themselves and the manner of their discovery, as is implied by their being reckoned authentic.

I will now point out some of these exceptional features, a portion, but not all of which were discussed at the meeting of the conference. Genuine flint implements, from the drift of the valley of the Somme and elsewhere, as an almost invariable rule, present some one or more of the following characteristics: glossiness of surface, dendritic markings, calcareous incrustations, and discoloration, varying, of course, with the nature of the beds in which they have lain. Of upwards of 150 in my own collection there is not one but what presents at least one of these signs of antiquity. The suspected *haches* have not one of these characteristics, but when washed their surface is as fresh as if made the same day. The pebbles in the "black band" in which the *haches* are said to have been principally found are, without exception, more or less stained by the ferruginous matrix, a stain which cannot be removed by washing. The same remark holds good with those said to have been found in more ochreous beds. The suspected implements, though coated with this matrix, are, when washed, perfectly unstained. All the genuine implements formerly found at Moulin-Quignon are variously discoloured and patinated, and in general slightly rolled. The surface of the suspected implements is as fresh as if recently shaped, and, as a rule, the edges are quite sharp and uninjured. Genuine implements have been hitherto comparatively rare at Moulin-Quignon. The suspected implements are now found in abundance. The usual form of the flint implements from the drift are now well known. Some of the suspected implements are of "new types," and all, to a certain extent, differ from the ordinary forms. Genuine flint implements have been found at Moulin-Quignon for upwards of twenty years. It is only within the last few months that those of the suspected character appear to have presented themselves, and then not only at Moulin-Quignon, but at the Porte St.-Gilles, Mautort and Épergnette, in beds on three different levels, and probably differing in geological age.

Beyond this, the internal condition of the jaw, pronounced by Dr. Falconer and Mr. Busk to be "wholly irreconcilable with an antiquity equal to that assigned to the deposits in which it was found" throws additional doubt on the whole discovery, and still further strengthens the case against the worked flints. When, therefore, we find them combining every attribute of novelty with the absence of every

characteristic of antiquity, and "discovered," not singly, but by dozens, not in one place only, but in three or four, their authenticity may well be questioned.

But when I add, that the suspected *haches* first shown to me by M. Boucher de Perthes were all smeared over with the ferruginous matrix as if to disguise their natural colour, that some have iron marks upon them as if chipped out with an iron hammer, that many of them are apparently made by the same hand, and some are identical in form and character of surface with celts, said to have come from the peat beds of the valley of the Somme, but which present no appearance of antiquity, and that I purchased a twelvemonth ago an indisputably forged drift-implement from one of the *terrassiers* of Abbeville, I think I have said enough to show that I was justified in pausing before accepting the verdict of the conference as final.

But I have now been again to Abbeville, in company with several friends, and the further observations I have thus been enabled to make have, in my opinion, placed the question as to the suspected implements beyond all doubt.

On proceeding to the pit at Moulin-Quignon, a workman, who was there in waiting for us, commenced a search in the gravel, and under the eyes of Mr. Lubbock, Mr. J. W. Flower and myself, dug out an implement of the suspected character, which had apparently rested on the face of the "black band," though concealed at the time by a few inches of talus. It was carefully picked up by the edges and its surface left untouched; and yet, in the parts which were not concealed by portions of the matrix, there were visible small striae, just as if it had been smeared by hand or brushed with the dark ferruginous clay of the band to give it its colour. On no other smooth surfaces of flints from the same spot could we discover these striae, but a recently fractured surface smeared by myself with the clay, presented the same sort of marks. The implement differed in colour, as well as in the character of its surface, from any other flints dug out at the same time, and when washed was as fresh-looking as if just broken. Having found this specimen, the workman soon gave up digging, as if it were useless then to look for more.

On our return to the pit the next day, after some difficulty in obtaining work-people, we resumed operations, and a genuine implement and a portion of another were discovered, though not *in situ*, but no others until after we had left the pit, when one was brought after us which was said to have just been found. I at once returned, and our workman of yesterday, who was the solitary witness of the finding of the *hache*, pointed out its supposed place in an ochreous sandy seam, every pebble of which was discoloured. The surface of this implement had been rubbed in places to remove the adhering matrix, but I marked with a pencil round the outline of the parts on which the matrix still adhered apparently intact, and on dipping it into water all the sand fell off, leaving a surface which presented the most evident marks of having been smeared or brushed all over with ochreous clay in order to colour it, as on washing it further it became as fresh as if just broken. These marks or striae were not such as could have resulted from the passage of sand over the surface, but were evidently hand-made smears, such as would have disappeared had the implement lain any length of time in the ground. These implements must therefore have been smeared or brushed in order to give them a fictitious colouring, but recently before being found as supposed *in situ*! There remains therefore not the slightest doubt on my mind that a fraud, and a most ingenious and successful one, has been practised by some of the Abbeville *terrassiers*.

Such a result is but the natural consequence of the demand for flint implements from the drift which has arisen since attention has been called to these, the earliest relics of man. It may be paralleled by the frauds practised in Italy and Egypt, where the excessive demand for antiquities is met by a corresponding supply of forgeries.

It may be asked why, when so many genuine flint implements had been found in the beds of Moulin-Quignon, and there was therefore no reason why the bones of the men who made them might

not be found there also, it was worth taking so much trouble to prove that a certain small number of implements reputed to have been found there were false, and the jaw which accompanied them probably unauthentic? To this I reply, that trivial as the question may appear the consequences of a wrong answer to it are most important. For if these implements, without a solitary sign of antiquity about them, had been determined to be undoubtedly genuine, we should have then had no characteristics left whereby to distinguish true from false, and should have been at the mercy of every unprincipled flint-knapper and gravel-digger who thought fit to impose upon us.

Allow me to add a few words to caution a section of your readers against jumping to any such conclusions as that, because there may have been one error in observation, therefore all the observations on the occurrence of the works of man in undisturbed beds of gravel have been illusory, that because certain flint implements are fabrications therefore all are false, or that because a human jaw, supposed to have been found in the drift, is modern, therefore man did not exist at the time when this drift was deposited. On the contrary, let them rest assured that the energy which has been displayed in investigating a mere minor matter such as this Abbeville case, shows how thoroughly the great question as to the contemporaneity of man and the extinct mammals of the drift has been examined, and remember that it is the experience thus acquired that has served to detect this imposition, even though it would, if undetected, have told in favour of the views of the detectors.

JOHN EVANS.

ART IN ROME.

IN the intervals of severer and more worldly occupations, what greater luxury or repose can there be than in visiting a Roman studio, and particularly if that studio be Gibson's! The work of Gibson this season, though it is but a repetition, is a *Hébe*, of the size of life, resting easily on the left leg, whilst the right is slightly drawn back. She is in the act of presenting a cup of nectar to the gods. A gold bandeau around the head secures the hair, which is coloured, as is the body, except where the drapery relieves, and I would say redeems, it. Underneath is the apt inscription, *HBH ÆQVN KAAAIETA*. It is a noble work, and the original was secured to our country by Mr. Howard Galton. Repetitions of it have been ordered this season by Sir Francis Goldsmid and Mr. John Bowring. The bandeau is carried round the head and supports the nodus at the back,—a great improvement, by the by, on the ugly network which ladies wear, and is sanctioned by high classical authority. By the Greeks it was called the *opisthosphendone*, and, decorated with stars as Gibson has represented it, it is an elegant ornament. Small repetitions of the coloured *Venus* have been ordered, too, by the Prince of Wales and Mr. Bowring. One of Mr. Gibson's largest works now in course of execution is a bas-relief for Mr. Saubach representing 'Christ calling to him little Children.' It consists of eighteen figures, and graphically describes the various dispositions of our human nature. A man on the left is explaining the scene to two attentive women, one of whom, a mother, is trying to lead her struggling boy to the Saviour; another is urging on her child; before them are two girls,—one of them, the elder, has already yielded her heart to Christ, whilst her younger sister is shyly looking over her shoulder. A little, fearless fellow is leaning on the Saviour's knee, and looking boldly into a face which is full of sweet benevolence. With his left arm Christ clasps a little girl, whilst his right hand is extended. The other figures which complete the group are all expressive. A Wounded Warrior is a new work. So is, almost, a bust of Lady Lilah Clifden. It is rarely that Mr. Gibson executes a bust, but he could not resist the beauty of that head and face. The last work to be noticed is descriptive of the death of Mr. Preston, who was the purchaser of the original coloured *Venus*. He is seated in a chair, whilst his wife hangs over him from behind, and in the midst of her grief is soothing him. His four children are around him, and hovering in the air is an angel ready to receive his soul. It is full of

touching sentiment. In his studio there is also a pretty work, executed by Miss Hosmar for Lady Marian Alford: it is a Cupid seated on a Dolphin, and is intended for a fountain.

Taking other studios in the order in which I visited them, Mr. Storey has a grand and colossal statue of Judith. The moment is supposed to be just before she slays Holofernes; and the sculptor has dignified the act by his mode of representing it. Her left hand and her face are lifted towards heaven as in prayer; whilst in her right hand, from which the full, loose sleeve has fallen back, she holds a sword. The figure is draped in a long robe. This noble work is well adapted to, and would adorn, a public building. The same may be said of 'Saul,' who is imagined at the moment when the evil spirit comes upon him. It is a colossal figure, seated in an antique chair. The eyes are dilated with madness; the right hand grasps his beard. The royal Saul is draped in a regal robe, and, in spite of his mental alienation, is every inch a king. 'Sappho' is seated carelessly on the side of an antique chair, against which she leans; whilst her folded hands and her whole expression indicate the utmost despondency at having been abandoned. The left shoulder is nude, the drapery having fallen from it; by her side is a harp. 'Sappho' is a commission for Mr. Stirling Crawford. Besides these works, there is in Mr. Storey's studio an 'Infant Bacchus on a Panther.' With his left hand thrown back, he supports himself on his steed, whilst in his right he holds above his head, which is upraised, a bunch of grapes.—Mr. Gatley deserves to be better known as the Landseer of sculpture. He has long been employed on a *basso-relievo*, representing the Re-joining of the Israelites after the passage of the Red Sea—a grand work, which is intended for Edinburgh. A man of grand conception and of infinite labour, all his studies are from the life, and there are figures of Lions in his studio which, perhaps, are only second to those of Thorwaldsen or Canova. It is saying much, but let visitors another season go and see. 'A Bull being led to the Sacrifice' is also another work in Mr. Gatley's peculiar and life-like style. A pretty idea is 'Narcissus,' reclining on the left arm, with the left leg crossed under the right. He is looking into a fountain; behind him is 'Echo,' half-stooping, with her left hand at her ear. She is half-nude, whilst Narcissus is nude. Another beautiful figure is that of 'Echo,'—a favourite subject with our sculptors. With her left hand raised to her ear, she is looking intently forward—eye and action alike telling the history of the fable.—Mr. Mozier, an American, maintains the honour of his country. Of all his great works he has been executing repetitions. His 'Esther,' which was in the Exhibition last year, was sold to an American, and he has executed another for a countryman. 'The Wept of the Wish-ton-Wish' he has repeated several times; and the 'Tacite' and 'Truth,' companions, the originals of which were executed for Astor Place Library, have been repeated seven times. 'The White Lady of Avenel' is a new design and work of this winter. 'The Peri,' who has at last gained an entrance into Paradise, is a new work, executed for a lady in Washington. Her left hand, which hangs down, has three tears upon it; whilst in her right hand she holds one of the "thousand goblets." Her face breathes her delight.—

Joy, joy for ever, my task is done;

The gates are passed, and Heaven is won.

'Jephtha's Daughter,' which was exhibited in London last year, and bought by Mr. Tite, has been repeated for Chicago.—Who has not heard of the 'Highland Mary'? It is one of Mr. Spence's happiest works, and has been repeated seven times. The original was executed for the Queen, and, in a reduced form, it is now being repeated for another commission. The 'Parting of Hector and Andromache,' full of heroic vigour and of womanly affection, is being done for Mr. Brassey. The likeness of Miss Gibbs, Mr. Spence is executing as the Highland Mary, and who could fail to love it? 'Jennie Deans appealing to Queen Caroline in the Garden for her Sister' is an order for Mr. Bowring, and, in a reduced form, is being

done for Mr. Richardson. 'Flora Macdonald mourning for the Departure of Prince Charles' is a noble subject, and full of expression. It is a commission for Mr. Morris, of Liverpool; but there is nothing in this studio so charming for its sentiment as the 'Angel's Whisper.' By the side of a sleeping infant an angel kneels, and hanging over it whispers in the ear. W.

OUR WEEKLY GOSSIP.

Her Majesty proposes to pay a visit to the Royal Horticultural Gardens on Tuesday, to see Mr. Durham's Memorial of the Great Exhibition and Statue of Albert the Good. The visit will be private, the gardens being closed to the public on that day. But the streets through which she will pass are open and the approaches to the gardens broad; so that of the many millions who will rejoice over her partial re-appearance among her people, some will be able to obtain a glimpse of their Queen.

The annual dinner of the members of the Society of Arts will take place this year at St. James's Hall, on Saturday the 20th of June, under the presidency of Her Majesty's Solicitor General, Sir Roundell Palmer, M.P.

A Select Committee of the Guild of Literature and Art, consisting of Mr. Charles Dickens, Sir E. B. Lytton, Messrs. R. Chambers, W. H. Wills, C. Wordsworth, and F. Ouvry, has for some time been considering plans for remodelling that institution. At length they have made a Report to their clients, in which they say:—"We find that to make life assurance a qualification of membership of the Guild is attended with difficulty and hardship, inasmuch as a case has already occurred in which the life of one of the original promoters of, and workers for, the Guild cannot be assured in any life office. And we find that, for various reasons—pecuniary and otherwise—the classes eligible as professional members are not generally disposed thus to qualify themselves. We find that the attempt to establish a sickness fund as a qualification of membership has failed, by reason of its small sphere of action. We recommend therefore that the prosecution of these two objects be discontinued, and that the qualification of professional members shall, for the future, consist in the payment to the funds of the Guild of an annual sum of one guinea each, in addition to the entrance fee of one guinea; such contribution to cease on the part of any member who may (in accordance with the recommendations we shall presently offer) be chosen as an occupant of one of the Guild's free dwelling-houses, or as the recipient of one of the Guild's annuities. We recommend that the funds of the Guild shall be (for the present) wholly devoted to such purposes as are contemplated by 'The Grand Institution.' Towards this end Sir Bulwer Lytton, present at our second meeting, agreed to fulfil his generous promise to give the Guild a piece of land, consisting of two acres, on which to build dwelling-houses, agreeably to the recital in the preamble of the Act of Parliament. We recommend that on such piece of land three free dwelling-houses be forthwith erected, with all necessary fixtures and fittings, at a cost for the whole not exceeding 1,500*l.* The occupants of these free dwelling-houses to be elected by the Council, and not to be debarred from following their usual avocations. We recommend that the income of the Guild derivable from the remainder of its funded capital, and from annual subscriptions or other sources, be devoted to the granting of annuities to professional members, either occupants of the dwelling-houses or not, according to the discretion of the Council, after making due provision for the current expenses of the Guild, including the repairs of the residences to be erected, power being reserved to the Council to accumulate and invest income as they may think fit." These recommendations have been adopted by the Guild.

Prof. Lister, of Glasgow, is appointed to deliver the Croonian Lecture at the Royal Society, on the 11th inst. The subject announced is 'The Coagulation of the Blood.'

Those who are interested in the history of Art would do well to look in at Messrs. Christie's in the course of next week to see a very curious collection of

early Italian pictures, previous to their dispersion by public sale on Friday and Saturday. They were the property of the late Davenport Bromley, who purchased largely from the Otley, Solly, Fesch and Woodburn galleries. He commenced his collection at a period when pictures of the earlier Italian masters were little known and less cared for. The present management of the National Gallery has done much to prepare the public to look at these primitive works with a proper interest, and it is to be hoped that the Director, Sir Charles Eastlake, will avail himself of this opportunity of adding several historical celebrities to our national collection. Mr. Davenport Bromley rarely contributed to the British Institution: he sent a few, and confessedly not his best, pictures to the Manchester Exhibition, in 1857; and the choicer part of his paintings, many of them large altar-pieces, were secluded in his country-house of Wootton. His interesting picture of 'The Burial of the Virgin, and Christ receiving the Soul in his Arms,' by Giotto, and mentioned by Vasari, will alone repay the trouble of a visit. It was seen at the British Institution during the term of the Manchester Exhibition.

Herr Julius Lax, the gentleman who called attention to Schiller's intentional mystification in 'The Robbers,' is of opinion, that the perplexing marginal reference to Krake, having served its turn in deceiving the founder and the professor of the "Karlschule," should not be played by Schiller's publishers on the public at large. In this we agree with Herr Lax. Few of Schiller's readers ever see Pallese. It would certainly be well if, in future editions of Schiller, the reference were explained by a foot-note.

The Oxford Local Examinations have been going on in various cities and towns throughout the country during the present week. There is an increase in the number of candidates, the total being 1,071, of whom it was expected more than 1,030 would actually present themselves. This steady advance from year to year affords satisfactory evidence of the estimation in which the examinations are held; and we have no doubt they will continue to rise in public esteem, as their bearing upon middle-class education becomes more evident. It has always appeared strange to us that, considering how little parents can know of what their sons are doing at school, until it is too late to remedy defects, they do not more frequently insist upon having their acquisitions tested by so highly qualified an authority as the University of Oxford or Cambridge. The efficient and faithful schoolmaster will be glad of an opportunity of showing the results of his teaching; and, as a general rule, it may be safely concluded, that those whose pupils habitually do well at these examinations, are entitled to public confidence. The examiners announce that the results of the present examination cannot be made known till nearly three months hence, a period longer than is required at other examinations, and far beyond the apparent necessities of the case. In their solicitude to avoid a hasty decision upon the merits of each candidate, they seem to overlook the inconvenience of long-continued suspense.

The Report of the Director of the National Gallery has unusual interest this year. Much of its substance has already been rendered in our recent account of the new purchases of pictures. 'The Miraculous Draught of Fishes,' Vandyke, has been added since the last report.—22 works were lent to the International Exhibition; 42 were removed,—9 to the National Gallery, Dublin; 7 to Edinburgh, and 23 for the use of the Art Department, South Kensington. Bequests of Haydon's 'Punch,' by Dr. Darling; 'St. Hugo,' in the dress of a Carthusian, holding a crozier, as Bishop of Grenoble, oil, attributed to G. Mansueti; 'Ecce Homo,' by L. Spagna, oil; 'St. Catherine,' crowned, and with the instrument of her martyrdom, by Pinturicchio, and the 'Madonna and Child,' school of Perugia, four works left by Lieut.-Gen. G. Moore, have been accepted. A 'Portrait of an Astronomer,' F. Bol, has been given by Miss E. A. Bennett. Seven pictures have been protected with glass during the past year: making, in all, foreign pictures, 92; British school, 32; and 202 frames of drawings. The students'

attendances in Trafalgar Square, 92 days, were 5,283; South Kensington, 154 days, 6,802. Average daily attendance of students of oil painting, Trafalgar Square, 41; South Kensington, 24; of painters in water-colour, respectively, 16 and 19. Of the number of copies made, we learn that Vandyke's 'Gervartius' maintains its ancient pre-eminence, as it should, being an excellent subject, with 12 copies; Guido's 'Ecce Homo,' a very bad subject for practice, has occupied, we might say wasted, the time needed to make 11 copies; Murillo's 'St. John and the Lamb,' 8 copies; the inferior Greuze, 'A Girl's Head,' 6 copies; and most unworthy of all, the hard and feeble picture by Dyckmans, 'The Blind Beggar,' 4 copies. This is, however, a smaller number than in preceding years; we trust soon to learn that students will cease to occupy themselves with this frivolous and meretricious production. The total number of visitors to the National Gallery has been, for the year, 2,146,261; of which 904,892 went to Trafalgar Square, and 1,241,369 to South Kensington. The difference is explainable by considering that the gallery in Trafalgar Square stands alone as a collection of pictures independent of the South Kensington Museum's attractions, and consists, for the most part, of the less popularly attractive works by old masters. The International Exhibition must also have brought a large number of visitors to the section of the National Gallery at South Kensington.

We wish Sir Edwin Landseer may live for ever, but one-third of his number of sixty years and one has passed since he received the commission to execute the famous African lions that will some day astonish us in Trafalgar Square. No man has yet seen even the models for them, nor anything more solid than a drawing on paper, and it is reported that the sculptor's visits to the Zoological Gardens, where he has dissected several lions, are incessant and so alarming to those brutes that each one turns tail when the growl is passed that he has arrived. He will forgive us, under these circumstances, for jogging his memory once more. It is twenty years since the granite Nelson was mast-headed, and yet nothing has been done towards finishing the National Memorial the price of blood for which was honourably paid by the great Admiral more than fifty-eight years ago. Why, he might have lived another life of forty-seven years, gone to the North Pole for us, been at another Calvi, St. Vincent, or Santa Cruz, won another Nile and another Trafalgar for us, and been almost forgotten again, while we are loitering over the monument. Upon Sir E. Landseer lies the performance of this duty. If the price of 3,000*l.* for the four lions be, as may well be, not enough, the nation that has just voted seventeen times that amount to commemorate the Prince Consort will not grudge a few thousands more to the best artist she has for the work due to Nelson. England can afford to do this seeing that she has saved a good deal of money by letting the man who slew the Admiral's slayer, Lieut. Pollard, who still lives at Greenwich Hospital, remain a lieutenant ever since. Enough has surely been saved out of the Lieutenant to pay for the lions.

The estimates for Public Education, Science and Art, this year were asked and granted at the sum of 1,386,417*l.* Public education, Great Britain, takes 804,002*l.* Of this, 316,221*l.* is for the grants remaining to be paid according to the Code of 1860. For elementary schools under the Revised Code, 239,146*l.* For fabric and fixtures of premises and support of training-schools, 173,605*l.* For administration, 75,030*l.* The total expenditure for this object from 1839 to December 31, 1862, has been 6,710,862*l.* 14*s.* 10*d.*—an enormous sum, out of which 2,344,160*l.* 4*s.* 10*d.* has been given in stipends to pupil-teachers and gratuities to schoolmasters and schoolmistresses, and 1,514,522*l.* 7*s.* 11*d.* for building, enlarging and furnishing premises. The Science and Art Department takes 122,882*l.* Of this, 5,020*l.* goes for general management in London (against 4,750*l.* for last year), schools, 46,650*l.*; South Kensington Museum, &c., 33,971*l.*; School of Mines, 7,034*l.*; Geological Survey, 11,069*l.*; special purchases from the International Exhibition, 5,000*l.*; total increase, 6,187*l.* 17*s.* 6*d.*

(there are 89 Art-schools, having, in all, 88,265 students). Public education, Ireland, costs 306,016*l.*, (increased 15,112*l.* since last year). Scottish Universities, 19,905*l.*; Queen's University, Ireland, 2,296*l.*; Queen's Colleges, Ireland, 4,800*l.*; British Museum, 90,541*l.*; (decrease, 8,471*l.*); National Gallery, 16,028*l.* (increase, 4,075*l.*); Historical Portrait Gallery, 1,500*l.*; scientific works and experiments, 7,141*l.*; Royal Society, 1,000*l.* On the whole estimate a total decrease is shown of 23,697*l.* since last year.

Dublin, it appears, has its troubles with the locomotive Frankenstein as well as London. An Irish Shandean writes in denunciation:—"Would you let us put on record a protest against the monstrous sacrifice about to be made to the god of steam and rails, now fast becoming the greediest of all the greedy Molochs of our day. Never was there so hideous a promise of convenience (and even this benefit is debatable) purchased at so frightful a cost of all that is beautiful, as in this Dublin Metropolitan Railway, which cuts clean through our noblest streets, and, with a perverse wantonness, obstructs every classical view and vista. Anything more odious than the effect cannot be conceived; and a sort of temporary model which has been wisely put up, has become an eyesore, almost painful for those who, like Leigh Hunt, revel in the cheap out-door shows of city and country. I firmly believe, that the constant viewing of monstrosities like this, must degrade the tone and general morale of the populace."

A letter from Berlin tells of considerable activity among artists, and of some encouragement given by the Government, although it confirms the general complaint of feudal and military sympathies overriding all sounder maxims. This symptom of disease is most apparent in the new statues of Prussian generals, erected in the Wilhelms Platz; bronze works having been substituted for the former ones in marble, as better able to bear exposure. The extreme poverty of the new bronzes, and the care with which the details of regimental costume, down to the number of the buttons, have been observed, to the entire exclusion of all artistic merit, are severely censured; while the removal of the marble statues "out of the air" means only that they have been placed in the open court of the Cadets' College, and the excuse for putting them there is that they are too heavy to be set up inside the college in question. The sole advantage of the new bronzes is said to be that they are not railed in, and that the nurses and maid-servants of Berlin use the pedestals for benches. The valuable collection of Rauch's remains, which was bought six years ago by the Government, and which amounts to about 800 works, including the last great group on which the sculptor was engaged, is left unordered and uncatalogued. Meanwhile, Adolf Menzel, the painter of Frederic the Great, is at work on a large picture of the Königsberg coronation, a subject which excited so much unfavourable comment two years ago. The King has bought Lessing's picture of 'Huss at the Funeral Pile' for the National Museum, and statues of eminent men in art and science, beginning with one of Winckelmann, are being prepared for the hall of the same building.

ROYAL ACADEMY OF ARTS.—THE EXHIBITION OF THE ROYAL ACADEMY IS NOW OPEN.—Admittance (from Eight till Seven), 1*l.*; Catalogue, 1*l.*
JOHN PRESCOTT KNIGHT, Esq., E.A., Secretary.

SOCIETY OF PAINTERS IN WATER COLOURS.—THE FIFTY-NINTH ANNUAL EXHIBITION IS NOW OPEN, at the Gallery, 5, Pall Mall East (close to the National Gallery), from Nine till Dark.—Admittance, 1*l.*; Catalogue, 6*d.*
JOSEPH J. JENKINS, Secretary.

INSTITUTE OF PAINTERS IN WATER COLOURS (founded in 1831 as the New Society of Painters in Water Colours).—THE ANNUAL EXHIBITION IS NOW OPEN.—Admittance, 1*l.*—Gallery, 33, Pall Mall, opposite Marlborough House.
JAMES FAHEY, Secretary.

FRENCH GALLERY, 120, Pall Mall.—THE TENTH ANNUAL EXHIBITION OF PICTURES, the contributions of Artists of the French and Flemish Schools, is NOW OPEN.—Admittance 1*l.*; Catalogue, 6*d.*

THE THIRD ANNUAL EXHIBITION OF WORKS OF DECORATIVE ART, at the HALL of the PAINTERS' COMPANY, No. 9, Little Trinity Lane, City, commences on MONDAY, June 1, and continues for One Month.—Admittance Free, from Ten to Seven daily.
F. G. TOMLINS, Clerk.

W. P. FRITH, E.A.'s Picture of THE RAILWAY STATION.—This celebrated picture is NOW ON VIEW, at Mr. Plakou's Fine Art Gallery, 11, Haymarket, from 11 till 6.—Admittance 1*l.* A Descriptive Pamphlet, by Tom Taylor, M.A., 6*d.*

RAPHAEL.—THE HOLY FAMILY, by Raphael, being returned from the inspection of His Royal Highness the Prince of Wales at Marlborough House (who has been graciously pleased to express his admiration of it), is NOW ON VIEW DAILY, at 191, Piccadilly.—Admittance 1*l.*

LEVASSOR EN VISITE.—Dudley Gallery, Egyptian Hall, Piccadilly.—LAST THREE WEEKS.—SCENES at CHANSONS COMIQUES, every TUESDAY, THURSDAY and SATURDAY EVENINGS during the month of June, when the Entertainments must positively terminate, in consequence of M. Levasor's Continental Engagements.—To commence each Evening at Half-past Eight.—Seats (Unreserved), 2*s.*; Stalls (numbered), 7*s.*; a few Fauteuils, 10*s.* 6*d.* each.—May be obtained at Mr. Mitchell's Royal Library, 23, Old Bond Street, W.

MRS. FANNY KEMBLE'S READINGS OF SHAKESPEARE.—Dudley Gallery, Piccadilly.—MONDAY EVENING, June 8, 'Much Ado about Nothing'; WEDNESDAY EVENING, June 10, 'King Lear'; and SATURDAY MORNING, June 12, 'King Henry the Eighth'. To commence each Evening at Half-past Eight, and Saturday Morning at Three o'clock.—Seats (Unreserved), 2*s.*; Stalls (numbered), 5*s.*; a few Fauteuils, 7*s.* each.—May be obtained at Mr. Mitchell's Royal Library, 23, Old Bond Street, W.

SCIENCE

SOCIETIES.

ASIATIC.—June 1.—Gen. Sir H. C. Rawlinson, Director, in the chair.—M. H. Scott, Esq., was elected a non-resident, and Gen. Sir J. Low, a resident Member.—A paper was read by J. Muir, Esq., 'On Manu, the Progenitor of the Aryan Indians, as represented in the Hymns of the Rig-Veda.'

BRITISH ARCHAEOLOGICAL ASSOCIATION.—May 27.—T. J. Pettigrew, Esq., V.P., in the chair.—R. B. Hay, Esq., and W. Holdgate, Esq., were elected Associates.—The Rev. E. Kell gave an account of a recent find of a hoard of coins at Farringford, Isle of Wight, the seat of A. Tennyson, Esq. They were in number 250, and were found by a labourer in an urn, which was broken into fragments. The coins were of the time of Gallienus, of whom there are several, also of his wife Salonica, various examples of the two Tetricuses, Victorinus Postumus and Claudius Gothicus. They are of brass, though many appear as silvered over.—Mr. Blashill exhibited a drawing of a Roman tessellated pavement recently found near the site of the portico of the East India House. It forms a square of about five feet, set in a floor of common red tesserae. The pattern is ingenious and beautiful. Under it were found broken portions of plaster, with red, black and grey stripes, very perfect as to colour. The pavement has been removed to one of the rooms of the building, and can now be seen to advantage.—Mr. Powell delivered in a Pedigree of Derwentwater, of Castle Rigg upon Derwent, and accompanied it by a rubbing of the brass of Sir John Ratcliff and Alice his wife in Crosthwait Church, the heraldic bearings on which were peculiarly placed.—Mr. Gunston exhibited a fine iron lance-head found at Queenhithe.—Mr. Cuming sent remarks upon this and other early lances in iron, and drawings of the Holy Lance from various authorities.

INSTITUTE OF BRITISH ARCHITECTS.—June 1.—E. Christian, Esq., V.P., in the chair.—A paper was read, by Mr. W. Lightly, 'On the Principles to be observed and the Processes to be employed in the Decoration of Churches.'

ENTOMOLOGICAL.—June 1.—F. Smith, Esq., President, in the chair.—Mr. A. R. Wallace was elected a Member.—Exhibitions:—By Mr. Stainton: certain Lepidopterous larva mining the leaves of the hazel; the same larva had been found on *Ribes sanguineum*, and in the north of England in birch-leaves; it was most probably that of *Incurvaria pectinea*. By Mr. Waterhouse: British specimens of a species of Homalota, apparently undescribed, and which he named and characterized as *H. platycephala*; it was closely allied to *H. gregaria*; five specimens had been taken, four in the corridor of the Crystal Palace, and the fifth in the courtyard of the British Museum.—By Mr. Bond: hermaphrodites of *Anthochorus Cardamines* and *Papilio Machaon*, the former captured near London, the latter from Whittlesea Mere; in both specimens the right side of the insect was of the female form, and the left side of the male form.—

By the President: drawings of two hermaphrodites of the Honey-bee: in the first specimen the right side partook of the male characters, the antenna, eye, anterior and intermediate leg being male, whilst the wing and posterior leg were female or worker, and the left side was entirely worker; the second specimen was partly male and partly worker, the left side partaking of the male characters; the left eye, antenna, wing, anterior, intermediate and posterior leg being of the true male form; and the abdomen was considerably enlarged on the left side.—By the President: specimens of *Branla cæca*, which on the Continent had been found to be very destructive of the honey in beehives; it had only recently been found in this country, and had been imported with the *Apis ligustica*, in a hive of which species the exhibited specimens had been discovered.—By Mr. M'Lachlan: three new British species of Trichoptera, viz., *Hydropsyche ophthalmica* (Rambur), *Philopotamus columbina* (Pictet), and *Psychomyia derelicta* (n. sp.).—Papers read:—By Mr. M'Lachlan, 'Notes on the above-mentioned Trichoptera,' with a diagnosis of the new species.—By Mr. Stainton, 'On *Tinea vivipara* (Scott), described in the *Transactions of the Entomological Society of New South Wales* as being viviparous in its habit.'—By Mr. Stainton, 'Notes on the Proceedings of the Entomological Society of Philadelphia.'—The Secretary read a letter from Mr. C. A. Wilson, of Adelaide, giving a brief account of the entomological captures of Mr. F. G. Waterhouse, the naturalist attached to the South Australian exploring party under Stuart, which had recently succeeded in crossing the Australian continent from Adelaide to the north-west coast and back again.

Special General Meeting.—After the conclusion of the ordinary meeting, a special meeting was held, pursuant to notice given, for the purpose of considering the following Report of the Library and Cabinets Committee, dated the 30th of March, 1863:—"That the present income and the financial prospects of the Society do not warrant this Committee in believing that the Society is or will be able to provide the sums requisite for forming a collection of British Insects which shall be worthy of the Society, and for maintaining the same in a satisfactory state. This Committee therefore recommends to the Council that the Society's collection be discontinued, and that proper steps be taken for the disposal of the specimens and cabinets. The Committee, however, further recommends that the type-specimens be not dispersed, but be placed in some public institution where they will be readily accessible and available for scientific purposes; and the Committee suggests the feasibility of some arrangement by which the specimens in question might be placed in the British Museum." This Report was adopted.

ROYAL INSTITUTION.—June 1.—W. Pole, Esq., Treas., and V.P., in the chair.—Prince Louis of Hesse was elected an Honorary Member.—Messrs. W. Barnet, J. Goulden, G. Johnson, M.D., G. Prevost, G. H. Strutt, and Miss Elizabeth Woods were elected Members.

SOCIETY OF ARTS.—May 27.—Thomas Winkworth, Esq., Member of Council, in the chair.—The paper read was, 'Destructive Distillation, considered in reference to Modern Industrial Arts,' by Dr. Paul.

June 8.—H.R.H. the Duke of Cambridge in the chair.—The paper read was by Mr. W. Hawes, 'On the Results of the International Exhibition.'

MEETINGS FOR THE ENSUING WEEK.
Mon. Geographical, 8*l.*
Tues. Syro-Egyptian, 7*l.*—'Dates of Pentateuch,' Mr. Sharpe.
— Royal Institution, 8*l.*—'Sound,' Prof. Tyndall.
— Zoological, 9.
Wed. Horticultural.—'Uncovering of the Memorial of the Exhibition of 1851.'
— Microscopical, 8.
— Society of Literature, 8*l.*—'Phœnician Inscription, Sardinia,' Mr. Deutch; 'Ancients' Knowledge of Sources of the Nile,' Mr. Vaux.
— Archaeological Association, 8*l.*—'Leadon Objects found in London'; 'Seals of the Bishops of Man,' Mr. Cuming; 'Jewry Wall, Leicester,' Mr. Wright; 'Roman Discoveries, West Coker, Somerset,' Mr. Moore.
THURS. Antiquaries, 8*l.*—'Human Sacrifices among the Romans,' Dean of Christ Church; 'Unpublished Antiquaries of Bononiensis of Treviso,' Mr. Black.
— Royal, 8*l.*—Croonian Lecture: 'Coagulation of the Blood,' Prof. Lister.
— Royal Institution, 8*l.*—'Geology,' Prof. Ansted.

| | |
|------|--|
| FRI. | Astronomical, 8. |

| SAT. | Royal Institution, 8.—'Electric Telegraphy,' Prof. Thomson. |

FINE ARTS

EXHIBITION OF SCULPTURES IN IVORY.

The Collection of Works of Ancient Art, which has been for several years past provided by the Archæological Institute, comprises this year, one of the best representative gatherings of sculptures in ivory it is possible to have. This collection is more complete than that of ecclesiastical vestments or of enamels and works in niello. How much the arts owe to the Institute may be known when it is recollected that its efforts aided, if they did not originate, the idea of the great Loan Collection of works of Art at the South Kensington Museum, to which we all owe so much.

The use of ivory has been fortunate to the arts; specimens may be seen here of all dates, and from almost all climates, from the Nimrod lions, belonging to Mr. Mayer, a carved (Greek) head of a tiger, remarkable for expression and precision of treatment, as well as sharpness of preservation. Two remarkable Roman ivories of the second century, contributed by the Monmouthshire Antiquaries' Association, were found at that ancient station of the legions, probably the most western of the Roman colonies, Caerleon-upon-Usk, a locality admirably illustrated in the recently published 'Isca Silurum.' These represent a tragic mask, and the ends of a casket. Almost all occidental classes of works in ivory are here represented, more or less completely, from these ancient periods to those of quite recent date and almost contemporary uses, and from parts of the globe as widely removed as Nineveh and Caerleon. Of Oriental works there are not a few, embracing Japanese, Chinese, Indian—a remarkable school—and Burmese, most of which, being of uncertain date, we must exempt, in the present state of our knowledge at least, from any attempted chronological arrangement.

The mass of the collection before us has been arranged chronologically, and thus illustrates the history of the art in a very complete manner. Besides the examples above named, we may quote, as of interest, the famous Fejérváry Collection, the property of Mr. Mayer, which he declined to send to South Kensington, and is therefore of novel interest to us, although known wherever the art of ivory sculpture is known. Here are the beautiful consular diptychs of Æsculapius and Hygiea, probably of the second century; that known as of the Emperor Philip the Arab, who presided over the secular games, given in the year A.D. 248, to commemorate the thousandth year of Rome; this represents three seated figures as in the imperial "box" of an amphitheatre—below are men holding shields and fighting with stags, as in the arena. Contributed by the same are two Byzantine drinking-cups (the authenticity of one of which, at least, has not been allowed to pass unquestioned); also a diptych representing the Crucifixion and the Ascension. A remarkable work of the second Byzantine period, representing Christ enthroned, in a large and very broad manner, testifies highly to the artistic excellence of that period; the throne itself is very interesting in form, as illustrating the furniture then in vogue. Of later date, are six tablets from a box of fifteenth century Italian workmanship, evincing an early attempt at the antique manner, and two paxes, of the fourteenth century, representing the Dead Christ and the Crucifixion. Mr. Mayer's contributions comprise works of Egyptian, Greek, Roman, and other styles. Mr. T. G. Parry's contributions are numerous and valuable. Amongst them is a Virgin and Child enthroned, attended by angels, French, fifteenth century, a perfectly artistic work. Again, in another, Christ is seen seated on a throne placed upon a mound, attended by angels bearing the emblems of the Passion; as a piece of sculpture, hardly surpassable. Also a beautiful diptych, having for subjects the Ascension, quaintly showing the feet and robe-edges of the rising figure above the heads of those below; the Betrayal of Christ; the Annunciation, and Virgin Sleeping, treated in

the manner known to be conventional at the period of the ivory in question, the fifteenth century; the Descent of the Holy Ghost; Crucifixion, and Adoration of the Magi, a perfect work in art and preservation. Mr. Webb is not less liberal in his contributions; among them are two very curiously carved book-covers, early sixteenth century. Mr. Hope sends several fine *oliphants*, or carved ivory horns of various dates and styles; and together with other interesting items, a "Peace-Dagger," or token of amity between Hercules D'Este and the Republic of Venice, dated 1484, containing, with other carvings suitable to the object of the work, the arms of the Visconti and Colonna, as guarantors of the pledges. Other contributors of works of various dates are: Lord Amherst, Rev. Fuller Russell, Rev. J. C. Jackson, Messrs. A. Way, H. G. Bohn, Brett, E. Waterton, Wynne, Beresford Hope, Phillips, W. E. Gladstone, O. Morgan, A. Lewis, E. W. Cooke, Dunn Gardner, J. Henderson, Barraud, C. L. Mainwaring, Rolla, R. J. Pritchett, R. Blackburne of Tunbridge Wells, Canon Rock, the Hon. Mrs. Stapylton, the Society of Antiquaries of Newcastle, &c.

It is in Mediæval works, as might be expected, that the collection is richest; still there are here specimens of every era of Christian Art in ivory, and even consular diptychs, produced before Art had received the impress of Christianity; the like with indications of its effect, such as the Cross, defining the influence of the new religion, although most of the works have an official and some an Imperial character. Also diptychs, triptychs, paxes, pyxes and crucifixes of the times when Art existed only as the handmaid of Religion. Numerous specimens are brought together of the period when Art had once more disseminated itself amongst the people, and found an aim and object in the production of articles for secular use. Of this period are tankards, medallions, statuettes, articles for personal adornment and domestic use. A casket of the eleventh century, belonging to Mr. T. G. Parry, may be noted for its splendid top and side carvings. Mr. Webb sends a lovely sleeping figure of a boy, attributed to Fiamingo,—Mr. Philips, of Cockspur Street, a remarkably fine group, said to be by G. Gibbons, of Adam and Eve, and a large St. Giovanni, vigorously designed. The same artist is represented in great force, and to great honour, by the rare example, in ivory, of a medallion portrait of Sir Isaac Newton, after a picture by Sir G. Kneller, the property of Mr. Brett. The Chancellor of the Exchequer has contributed largely, and, particularly, as follows: a statuette of Christ at the Pillar; another of Louis the Fourteenth as Hercules, a very noteworthy example in portraiture; a fine figure, in wood, representing Labour (probably a St. Christopher); and an elaborate piece of modern Greek work. Mr. O. Morgan and others send snuff-graters of ivory: from the action of rapping which,—when it was desired to remove the grated tobacco that had fallen through,—the appellation *Rappee* probably arose. Some of these are very beautifully carved, and indicate a fine state of the art at a time when almost every branch of sculpture was in anything but a satisfactory position. Mr. E. W. Cooke sends three medallion portraits, which had belonged to Sir Walter Scott, and were presented by him to Mr. Blore,—Mr. Dunn Gardner a beautifully carved spoon,—Mr. Barraud a large crucifix, seventeenth century,—Mr. C. L. Mainwaring a fine tankard,—Mr. Blackburne's tenure horn, on silver feet, is very fine. The collection will remain on view the whole of next week,—we trust longer. It is much to be desired that something like a catalogue, even of the most incomplete nature, of such collections as this should be obtainable.

FINE-ART GOSSIP.—Among the results of the General Meeting of Royal Academicians on Thursday evening last, is that Mr. Witherington accepts the rank of Honorary Retired Academician; following the examples of Messrs. Baily and Cockerell, who, after a life of usefulness and service to the arts, leave the places they have held so long for younger men to fill. These three gentlemen have resolved not to stand in the way of the advancement of other men. For

the future, it was resolved that not more than four works are to be allowed to be placed below the "line," i. e. about seven feet from the ground; this is to apply to members as well as outsiders. Mr. Partridge was re-elected, for a term of five years, Professor of Anatomy. Mr. Frith's explanation respecting the non-hanging of Mr. J. Stirling's picture, as conveyed to us by the last-named gentleman in a letter from Mr. Frith himself, is understood to have been disputed. So far was it from being the fault of Mr. Frith, that a picture, which is admitted by him—one of the hangers—to be worthy of a good place, was not hung, that Mr. Knight, the Secretary, is reported to have shown that the picture in question was amongst the rejected works, and was never at the disposal of the Hanging Committee at all. The misunderstanding is a curious one; and we refer to it solely on the ground of our having been the channel through which Mr. Frith's mistake—supposing it was a mistake, and that he is really in error—was conveyed to the public.

Mr. Foley has been commissioned to execute the Cambridge Memorial to the Prince Consort,—a marble statue.

It is proposed to restore, at a cost of 240*l.*, the ancient city cross at Winchester.—A new carved oak pulpit is being placed in Lincoln Cathedral, constructed after designs by Mr. G. G. Cuthbert.

In treating so large an exhibition as that of the Royal Academy, some noteworthy items of its contents are sure to be overlooked. Such are those we now briefly notice. *Laboratory of a French Chemist* (No. 8), by Mr. W. Linnig, is excellent in tone and keeping, as well as character.—*A Hill-Side Flock* (11), by Mr. F. W. Keyl, a landscape, with sheep, has the opal-tinted distance carefully studied, and the fleeces well painted.—Mr. E. J. Poynter's *Day-Dream* (38), a young lady abstractedly fingering a pianoforte, is one of the best painted and most expressive pictures in the rooms: very solid and strong.—*Miss L. P.* (42), a portrait-study, although crude in colouring and rather incomplete in form, does Mr. G. R. Chapman great credit for its solidity, and promises much of his feeling for expression and character.—*Conquered, but not Subdued* (77), by Mr. T. Morten, a little girl, put up for punishment, who sulks with her bread-and-butter, is crude, but full of character and humour.—*Robinson Crusoe teaching his Parrot to Talk* (92), Mr. J. D. Watson, has character, but is super-dextrous in execution.—*An Autumnal Evening* (131), by Mr. V. Cole, the sun setting behind trees on the edge of a high moorland, with fern and gorse in front, is exactly what the artist so often paints with felicity, brightness and skill: it is a little mannered.—*A Winter Scene* (143) in a wood is very capably painted, solid and well drawn, by Mr. R. Butler.—*Twilight, Autumn, on the way to Sandwich* (127), by Mr. H. Williams, scene over the watery flats and sea-sands, the sun setting, his rays streaming from behind a cloud, is very solid and true: this picture is inconsiderately hung at the top of the room.—*The Moorland Edge* (137), by Mr. J. Smetham, is rather rank and crude in colour, but potent enough to promise well.—Mr. F. Talfourd's *Margherita* (95), a young lady in a dress of white and black, is solidly painted; exuberant, it may be, in style, but far from coarse, having an expression of gladness well rendered, and altogether so powerful, that we hope to see something more important from the painter, who must do well if he will do heedfully.—Mrs. D. Cooper's *Fresh Gathered* (212),—study of flowers, is crisp and clear, but a little slaty and hard.—*In the Woods, Knowle Park* (348), by Mr. J. Knight, is a fine rendering of the great serpent-like beeches of that place.—*Dead Swan, &c.* (558), by Mr. W. Duffield, if a little cold in colour, is large and solid in treatment,—the work of an artist.—Mr. E. N. Downard's *Rest by the Way* (816), sheep by a road-side, is rather hot in the shadows, but singularly felicitous and broad in colour: a happily-treated work.—Mr. R. Tucker's chalk heads, portraits (754, 778), are finely and soundly drawn.—We seldom see fruit painted so carefully or with such truth as by Mr. J. Sherrin: *Bough of Apples* (776), exquisite in textures, and *Beauties of Kent* (756), a similar subject.—

Miss R. Solomon's *Good Night* (668), a boy kissing his mother ere going to bed, is the best picture she has painted, solid and aptly expressive.—In Mr. T. Heaphy's production, Kepler at Venice mistaken for an Astrologer (696), there is much that is estimable: see the fullness and brightness of expression in the ladies' faces, who interrupt the astronomer's observations, and a good deal of dash in the execution that is at times happy; but much of these qualities is marred by mere glitter and want of atmosphere in the picture.

A sale of pictures by old masters took place at Messrs. Christie & Manson's on Saturday last. Items and prices fetched by them were as follows:—J. and A. Both, Rocky Landscape, half of cavaliers, 160 guineas (Isaacs, of Liverpool).—An Italian Landscape, with peasants, mules and sheep, near a pool, 133 guineas (Cox).—J. Both, View on the Tiber, 106 guineas (Pearce).—K. du Jardin, a Cavern Scene, a soldier, beggar and peasant gambling, 190 guineas (Evans).—W. Van der Velde, Coast Scene at the mouth of a river, stranded man-of-war being caulked, boats, calm, 212*l.* (same).—Van der Heyden and A. Van der Velde, View of a Dutch Town, the figures by the last, 105 guineas (Bourne).—Rembrandt, Portrait of a Man in a rich dress, with a black cap and a gold chain, signed, and dated 1646, 220 guineas (White).—M. Hobbema, a Wooded Landscape, peasants on a road, &c., 315*l.* (Cox).—Backhuyzen, A Sea View, a man-of-war and fishing-boats, 110 guineas (same).—The same, in a stiff breeze, three figures on the shore in front, 115 guineas (same).—Lingelback, The Hay-Cart, 210 guineas (same).—J. Ruysdael, A Rustic Water-Mill, 111 guineas (same).—N. Bercham, Landscape, peasants milking cows and goats, 175 guineas (Mainwaring).—P. Wouwermans, View before a Country Inn, 126*l.* (Cox).—Murillo, St. Francis nursing the Infant Saviour, 165 guineas (same).—Tintoretto, The Raising of Lazarus, and Worship of the Calf, both painted for the family of Da Mula, in whose possession they have been from 1570 to 1861, 110 and 100 guineas respectively (Bourne). From Mr. Solly's collection:—L. da Vinci, St. Jerome at his Devotions, kneeling before a large crucifix, which is placed on his crimson mantle and raised on some volumes of the Scriptures; to the right, a richly cultivated landscape, with buildings, rocky mountains beyond; to the left, a dense wood: from the Dominican convent Del Bosco, near Bologna, 105*l.* (Seguier).—The Madonna and Infant Christ, seated in a cavern; a bishop kneeling; St. Jerome writing; behind the last, Joseph: formerly in the Crivelli family at Milan, one of whom is represented in the picture, 209*l.* (same).—Mazzolini di Ferrara, Passage of the Red Sea, the well-known example, presumed to be the largest by him, engraved in Agincourt, 249 guineas (same).—Rubens, Portrait of Anne of Austria, 209*l.* (same). The whole produced 7,410*l.* 12*s.* 6*d.*

MUSIC AND THE DRAMA

MUSICAL UNION.—TUESDAY, June 9, Half-past Three, St. James's Hall.—Quartet in C. Mozart; Réverie, Vieuxtemps, Violin Solo; Duet in F. Piano and Violoncello, Beethoven; Quartet in D. Mendelssohn; Piano Solo. Executants: Leopold Auer, from Pesth, first time in England, Ries, Webb and Piatti. Pianist, Halle.—Victors' Tickets, Half-a-Guinea each, to be had of Cramer & Co.; Chappell & Co.; Ollivier & Co.; Austin, at the Hall; and Ashdown & Farry, 18, Hanover Square.

MR. WALTER MACFARREN'S MORNING CONCERT OF PIANOFORTE MUSIC. Hanover Square Rooms, June 6.—Artists: Miss Robertine Henderson, Madame Sainton-Dolby, M. Sainton, Signor Piatti and Mr. Walter Macfarren.—Reserved Seats, 10*s.* 6*d.*—1, Omsburgh Street, N.W.

MR. FREDERICK CHATTERTON (Harpist to Her late Royal Highness the Duchess of Gloucester, and Courts of France and Belgium) has the honour to announce his GRAND HARP CONCERT, at the HANOVER SQUARE ROOMS, June 8, at Eight o'clock. The Orchestra of Harps, commencing with the Prince Consort's March, composed by Mr. Francis Chatterton, who will also perform a new Fantasia and Duet with his daughter, Madame Bohrer Chatterton, and take part in a Selection of Welsh Melodies, assisted by the West London Madrigal Society.—Artists: Mesdames Ferepa, Louisa Fanning, Taylor and Weiss; Messrs. Tennant, Montem Smith, Allen Irving and Wells, Bohrer, Kiallmark, G. B. Allen.—Stalls, 10*s.* 6*d.*; Tickets, 5*s.*, 3*s.*; to be had at all Music Shops; at the Rooms; and of Mr. Frederick Chatterton, 53, Ansonia Road, Regent's Park.

S. THALBERG'S FAREWELL SEASON.—S. THALBERG'S THIRD MATINÉE and last appearance but one will take place at the Hanover Square Rooms, on MONDAY, June 8. The Last Matinée on Monday, June 15, to commence at Half-past Two o'clock.—Stalls, 5*s.*; Family Tickets, 3 Guineas; Unreserved Seats, 10*s.* 6*d.*; to be had at all the principal Libraries; Austin's, Piccadilly; and of Mr. Fish, Hanover Square Rooms, where the Plan of the Seats may be seen.

JUNE 11th.—Mr. HENRY LESLIE'S CHOIR.—THE DIRECTOR'S BENEFIT.—St. James's Hall.—Lemmens-Sherrington, Wilby Cooper, Lewis Thomas, Arabella Goddard, Charles Halle, Madame Lemmens will sing Blumenthal's new Song, 'A Day Dream,' and the Variations in 'Les Diamans de la Couronne.' Mr. Lewis Thomas will sing Gounod's Cantique, 'Nazareth.' Madame Arabella Goddard and Mr. Charles Halle will play Mozart's sonata in D for Two Pianofortes. The Programme will include Mendelssohn's Psalm, 'Judge me, O Lord'; Mozart's 'Ave Verum'; and the following Compositions by Henry Leslie:—New Trio, 'Love, gentle, holy, pure.' 'Blow ye the Trumpet,' and the Grand Duet and Final Chorus from Holywood.—Stalls, 5*s.*; Family Tickets, 10*s.*; Admission, 1*s.*—Addison's, 210, Regent Street; Austin's Ticket Office, 25, Piccadilly; and all Music-sellers.

Mr. J. F. BARNETT'S GRAND CONCERT. Queen's Concert Rooms, Hanover Square, THURSDAY EVENING, June 11.—Vocalists: Mdlle. Carlotta Patti, Mesdames Weiss, Laura Baxter, Mrs. Weiss, and the West London Madrigal Society. Instrumentalists: Messrs. Pollitzer, N. Mori, Webb, Paque, Ganz, and Mr. J. F. Barnett.—Tickets, 10*s.* 6*d.* and 5*s.*, at the above Rooms; the principal Music-sellers; and of Mr. J. F. Barnett, 21, Brecknock Crescent, N.W.

INTERNATIONAL EXHIBITION BUILDING, South Kensington.—A GRAND MILITARY CONCERT, in aid of H.R.H. the PRINCESS MARY FUND, for Providing Nurses for the Infants of the ARMY and NAVY, will be given in the International Building, South Kensington (by permission), on SATURDAY, June 13, under the immediate Patronage of His Royal Highness the Prince of Wales, Her Royal Highness the Princess of Wales, Her Royal Highness the Duchess of Cambridge, Her Royal Highness the Duke of Cambridge, Her Royal Highness the Princess Mary Adelaide, The Bands of the Household Brigade, consisting of the First Life Guards, the Second Life Guards, Royal Horse Guards (Blue), the Grenadier Guards, Coldstream Guards, and the Scots Fusilier Guards, will perform on this occasion.—Admission, 5*s.*; Reserved Seats, 7*s.* 6*d.*; Tickets to be obtained at Mr. Sams's Royal Library, St. James's Street; Mr. Mitchell's Royal Library, Old Bond Street; Mr. Westerton's Library, St. George's Place, Knightsbridge; Messrs. Keith & Prowse's, 48, Cheapside; and at Austin's Ticket Office, 25, Piccadilly.

WELSH NATIONAL MUSIC. Song by United Choirs, accompanied by Mr. JOHN THOMAS (Percussion Concert), at the HANOVER SQUARE ROOMS, on SATURDAY, June 13, to commence at Three o'clock, with the kind assistance of the Members of the Vocal Association, the Royal Academy of Music, &c.—Vocalists: Miss Wynne, Mrs. Edith Edson, Mrs. Eleanor Ward; Messrs. Eschard, Wilby Cooper, Lewis Thomas, Engel, Harrison, &c.—Conductors, Messrs. Benedict, Arditt and Frank Mori. Accompanists, Messrs. Ganz, Hargitt and Archer.

APTOMMANN'S BARDIC FESTIVAL.—WELSH, IRISH, and SCOTTISH MELODIES.—TUESDAY EVENING, June 16.—Vocal Association, Congress of Harps, Desnoailles Ferepa, Louisa Fanning, Montem Smith, Edith Edson, Eleanor Ward; Messrs. Eschard, Wilby Cooper, Lewis Thomas, Engel, Harrison, &c.—Conductors, Messrs. Benedict, Arditt and Frank Mori. Accompanists, Messrs. Ganz, Hargitt and Archer.

Mr. KUHE'S RECITAL OF CLASSICAL AND MODERN PIANOFORTE MUSIC, at the Hanover Square Rooms, on THURSDAY, June 18, at Three o'clock. Vocalists: Madame Lemmens-Sherrington, Sainton-Dolby, and Herr Reichardt. Conductor, Mr. Benedict.—Reserved Seats, Half-a-Guinea each; Family Seats (Reserved Seats), to admit Three, One Guinea; Unreserved Seats, 5*s.* each; to be had at all the principal Music-sellers; Fortman Square, W.; and of all the principal Music-sellers.

HERR MOLIQUE'S ANNUAL CONCERT will take place, at the Hanover Square Rooms, FRIDAY MORNING, June 19.

JUNE 22nd.—BENEDICT'S CONCERT, under the immediate Patronage of His Royal Highness the Prince of Wales and Her Royal Highness the Princess of Wales, St. James's Hall, to commence at Two o'clock. The full Programme in its entirety, immediate application for the few remaining Stalls is solicited.—At the Music-sellers'; Austin's Ticket Office, 25, Piccadilly; and of Mr. Benedict, 3, Manchester Square, W.

HANOVER SQUARE ROOMS.—Mdlle. ELVIRA BEHRENS and Herr FRANZ ABT have the honour to announce that their CONCERT takes place on THURSDAY EVENING, June 25. Assisted by most eminent Artists. Full particulars will be duly announced.—Address Mdlle. Behrens, 23, Dorset-place, Dorset-square.

MADAME LIND-GOLDSCHMIDT.—HANDEL'S CANTATA.—Mr. Mitchell respectfully announces, in answer to numerous inquiries, that arrangements have been made for a Second Performance of the CANTATA, 'L'Esclavage et le Commerce,' which will take place, at St. James's Hall, Piccadilly, on WEDNESDAY EVENING, July 8. The Vocal Parts by Madame Lind-Goldschmidt, Madame Lemmens-Sherrington, Miss Lascelles, Mr. T. Montem Smith, and Mr. W. H. Weiss. Band and Chorus of 25 performers. Conductor, Mr. Otto Goldschmidt.—Stalls (numbered and reserved), One Guinea; Reserved Seats (not numbered), 10*s.* 6*d.*; Back of the Area, and Gallery, 5*s.*—Seats will be appropriated according to priority of application, and Tickets delivered on and after Monday, June 22. Mitchell's Royal Library, 23, Old Bond Street; Addison & Lucas, 210, Regent Street, and all Libraries and Music-sellers.

CONCERTS OF THE WEEK.—It cannot be required to say that Mr. Halle's performance, at his third *Matinée*, of Weber's *Sonata* in a flat (that most elegant, bold and fanciful of its composer's *solo* works) could not have been exceeded. This day week, too, he had recourse—as must all classical players, sooner or later, now that Beethoven has become a household word—to the library of Clementi's music, choosing, however, his specimen somewhat timidly—a well-known *Sonata* in C major. There are a dozen besides—those in B, F sharp and G minor,—the grand one in D minor, which forms the second of the 'Didona' set,—the rhythmically singular and delicate one in F major,—that in B flat, with its elaborate *cadenza* inclusive—better worth being brought forward; especially since there no longer exists any need of managing our musical public with a view of sparing its digestive powers. We duly noted the originality of Mr. Harold

Thomas's programme. The success of his concert was, in every point of view, encouraging. Of most of the unfamiliar music selected, however, we have spoken, and in some detail of its most special novelty—the singular and delicious duet from the Shakespearean opera by M. Berlioz.—It remains, then, to offer a word of sincere admiration on the new and short introduction written by Dr. Bennett for the clever 'Chasse' of Mr. Thomas, which is as delicate as it is individual; and to say that the concert-giver was playing his best, as his execution of Mendelssohn's very difficult *Fantasia* in F sharp minor made evident.

M. Thalberg's second *Matinée*, now announced as one of a "farewell" series, was held on Monday. Like other men, an artist has every right "to do what he will with his own"; but no earthly reason save this presents itself why one in such plenitude and perfection of power as he should retire from giving pleasure and instruction to the world of amateurs and pianoforte-players.

Herr Pauer's last *Historical Concert* was devoted to music by Murschhauser, Scarlatti, Rameau, Handel, Sebastian Bach (this specimen was the *Concerto* in the Italian style), Emmanuel Bach, a *Tocatta* by Clementi, Mozart, a Beethoven *Sonata*, Hummel's 'La Bella Capricciosa,' Schubert, Mendelssohn, Schumann. It was closed by the tremendous 'Hexameron,'—the variations on Bellini's 'Suoni la tromba,' edited by Dr. Liszt.—In his programme Herr Pauer adverts, with pardonable complacency, to the fact of his having played ninety-eight compositions during the series. The high feeling for Art which can have prompted and carried through the necessary research on the part of one so incessantly occupied as he is known to be cannot be over-estimated. It is his intention, he says, to resume—nay, also to extend—his concerts next year.

Messrs. Ewer's second concert of new music was as interesting as its predecessor. Its principal features were a Pianoforte Quartett by Herr Stiehl, Op. 40, and a Stringed Quartett by Herr Volkmann, Op. 43. The numbers affixed to these compositions may be admitted as denoting some maturity on the part of their writers; in neither, at all events, have we to complain of the violence and the vagueness which tincture too much of modern German instrumental music. Curiously, the *schizzo* in both (in Herr Volkmann's Quartett in $\frac{3}{4}$ tempo) was the least interesting movement, whereas, generally speaking, the *schizzo* "comes out" the best—a certain appearance of character being inherent in the form of it. The *finale* of the Quartett pleased us by its animation and rapidity.—We have purposely spoken of these two works in company, to indicate the want which ranges them, to our thinking, among compositions of the second class. In both the ideas are distinct, and many of them pleasing; in both the treatment is judicious, showing a fair amount of constructive science and ingenuity; but in neither is there such individuality as would make the transfer of any movement from one composition to the other musically unpleasing or preposterous. It would be impossible to place an *adagio* by Spohr after an *allegro* by Mendelssohn, so clearly defined were their respective manners. Without a style of his own, let a composer be ever so clever, he is but one among the many. That there is style even in arrangement was proved in Dr. Liszt's attractive transcript of Herr Wagner's 'Spinnerlied,'—which, with a Siren *Fantasia* by Mr. O'Leary and a *Violoncello Solo* by Herr Volkmann, completed the instrumental portion of the concert. The pianist was Mr. Dannreuther, who, young as he is, and only an importation of yesterday, so to speak, has already taken a firm place among the best players on his instrument; and who will remain, we may say, in London, so decided has been his success. He wants but that which only time can add.—Miss Robertine Henderson was singing better than we have heard her; among other things, a Swiss song by Herr Dessauer, 'Mary of the Oberland,' which, like all Herr Dessauer's music, is "distinguished," (as they say in France), hackneyed though the pattern be. The other singers were Mdlle. Behrens and Mr. Lansmere.

Among other concerts of interest must be mentioned that one given the other evening, with true

brotherly sympathy, by *Mr. Lea Summers*, for the benefit of those, like himself, afflicted with blindness.—*Signor Vailati*, a blind performer on the mandoline, is here, deserving the consideration of all who care for instruments of the kind played on by him. Signor Vailati's instrument is not the most grateful as to sound of its quaint family, but he masters it, or, it might perhaps more precisely be said, caresses it, excellently well.

Madame Arabella Goddard performed Beethoven's G major Concerto at the last Concert of the *Philharmonic Society*. Madame Lehmann, from Stockholm, made her first appearance there.—The last Concert of the *New Philharmonic Society* had a more varied programme than usual—including Spohr's Symphony 'Irdisches und Göttliches in Menschen Leben,'—Schumann's Overture to 'Genoveva,'—and Mendelssohn's 'Serenade and Allegro Gioioso,' played by Mr. Halle.

To bring our list of concerts nearer completeness, we may enumerate those of *Herr Jansa* and *Miss Fanny Corfield*,—also another of *Mrs. John Macfarrren's* concert-lectures,—as having taken place.

OLYMPIC.—Under the title of 'The Ticket-of-Leave Man,' Mr. Tom Taylor has placed a new drama, in four acts, on these boards, in which he has endeavoured to correct the natural prejudices of society against the returned convict. He has not exactly fairly stated the case, for his hero is an innocent man, who has been unjustly accused, and is, accordingly, more "sinned against than sinning." His drama, therefore, however cleverly constructed, is no answer to the question, what is to be done with the real criminal? Society would know whether he is to be trusted. If we are to judge from the character of *James Dalton* in the play, we should reply, that he is not; for the author has drawn this individual as hardened and impenitent, necessarily, on account of the circumstances which invariably and effectually prevent his return to honest life. This man, finding it impossible to re-enter the ranks of respectability, makes up his mind to his destiny, and under various *aliases* employs himself profitably in the practices of fraud. Having seduced a Lancashire young man into the dissipations of London life, and reduced him to a penniless condition, he next tempts him to change a forged 20*l.* note at a tobacconist's shop, for which almost immediately afterwards he is taken into custody by a detective. *Brierly* (for that is the name of the youth) serves his four years at Portland, and for his good conduct obtains his ticket-of-leave. On his return, he visits one *May Edwards*, a street-singer, to whom he had given in charity two sovereigns out of the proceeds of the forged note, a right-hearted wench, whose correspondence has operated with him as a motive for his redemption, and who has used her small capital to great advantage and is thus enabled to live in very decent lodgings. These are kept by *Mrs. Willoughby*, a talkative landlady, from whose confused jargon he learns that she was the wife of the tobacconist who had changed the forged note, and suffered ruin in consequence. Just that sum he has saved from his overwork at Portland, and he sends the twenty pounds to her anonymously, "in discharge of an old debt." Employed, by the recommendation of *May Edwards*, in the service of Mr. Gibson, a bill-broker, *Brierly* is in the fair way of recovering his position in life, when the fence-keeper, *Melter Moss*, the manufacturer of the forged note, denounces him as a returned convict to his employer, and thus secures his discharge. Both *Moss* and *Dalton* are determined that *Brierly* shall not return to that society from which they are themselves shut out, and so dodge his whereabouts that he cannot get employment even as a navvy. Having reduced him to despair, they solicit him to join them in a burglary on Gibson's premises, to which he accedes, but contrives to send notice to the former by *Hawkshaw*. The thieves are taken in the act, and *Brierly*, though wounded in the conflict that follows, benefits by the opportunity of thus showing that he is still an honest man. Mr. Taylor has been extremely fortunate in his actors. Every character, without exception, is well played. Mr. H. Neville as the hero, Mr. Atkins as *Dalton*, Mr. G. Vincent as *Melter Moss*,

Mr. Horace Wigan as *Hawkshaw*, Miss Kate Saville as *May Edwards*, Mrs. Stephens as *Mrs. Willoughby*, Miss Raynham as her scapegrace son, Mr. R. Soutar as *Mr. Green Jones*, a foolish lisping young man, and Miss Hughes, as the ballet-girl whom he marries, and who, adopting the name of *Emily St. Bermond*, sings a "sensation" song, called 'The Maniac's Tear,'—one and all, both looked and acted the characters confided to them with a completeness seldom realized on the stage. Mr. Telbin, too, has supplied some very effective and appropriate scenery, and Mr. J. H. Tully the incidental music. At the fall of the curtain, all the performers were summoned to the footlights, and greeted with the unanimous approbation of the audience.

PRINCESS'S.—Mr. George Vining has commenced his management with spirit. Under the name of 'Court and Camp,' he has produced a version of a melo-drama by M. Paul Meurice, which was acted some years since at the Porte Saint-Martin, and entitled 'Fanfan la Tulipe,' and appears himself in the character of the eccentric hero, whom he has named *Bibi*. This man, who is totally uneducated, is selected by the *Count Salviati* and the *Duke de Maurepas* to substitute the lost heir of a noble killed in a duel, and also to compromise the character of the *Countess Du Barri*, the mistress of Louis the Fifteenth (*Miss Amy Sedgwick*). This bluff, bold, honest fellow happens to be the friend and companion of the rightful heir, who under the name of *Angelus* is also in the army. *Bibi* is determined to do the right thing with all parties, and to defeat the purposes of the rascally Count and Duke. In carrying out his plan he encounters innumerable dangers, caused principally by the treachery of his courtly employers, who would sacrifice him in the service of the camp; but by his courage and straightforward conduct he contrives to checkmate them at every turn, until the last, when *Marshal Saxe* comes to his aid, and delivers him from the impending peril. Some part of his conduct having proved mysterious to his friend *Angelus*, an angry scene takes place, in which a young actor (Mr. J. P. Warde) sustains his part with great force and spirit. One of the most striking assumptions was that of *Marshal Saxe*, by Mr. H. Marston, who played it with dignity and determination. That, however, which will most conduce to the success of this piece is its scenery and machinery, which have been painted and contrived by Mr. F. Lloyds, and are exceedingly picturesque and clever. The explosion of the *Lawfield Mill*, at the end of the second act, and the arrangement of the *Watteau fête* in the third, are both highly creditable to the artist, and will, we think, prove attractive.

MUSICAL AND DRAMATIC GOSSIP.—If there were no other than opera-music this year, it would not be possible to report on that point by point and week by week, save in a journal exclusively operative:—so rapid are the changes of performance, so numerous and of unequal value are the new candidates for favour at the rival theatres. Nothing is possible for the present moment beyond recording that a new bass, Signor Fricca, a German with an Italianized name (says the *Morning Post*), has appeared for Mr. Mapleson in 'Les Huguenots,'—that Signor Baragli has not fulfilled expectation,—that a Signora Lustrans sang the other evening for Madame Nantier-Didié, in 'Il Trovatore.' There would seem such a thing as "a run of luck" in theatres as well as in gambling-houses. At present Fortune seems against *contralto* singers, no artist having that voice at all striking or even up to the average mark, having presented herself since *Mlle. Barbara Marchisio*.—On the appearance of *Mlle. Artot*, in 'La Traviata,' and *Mlle. Patti*, in 'La Gazza,' we shall report in a column to come.—The latter lady, the other evening, surprised her greatest admirers, by dramatic power hitherto unsuspected, put forth by her in 'Il Trovatore.'—Mr. Mapleson's cast of 'Faust' is as follows:—*Margaret*, *Mlle. Titieni*; *Faust*, Signor Giuglini; *Mephistopheles*, M. Gassier; *Valentine*, Mr. Santley.—M. Obin has arrived, and is to make his appearance this day week, as *Bertram*, in

'Robert,' at the Royal Italian Opera.—New York journals announce that Miss Kellogg, whose name appeared in Mr. Mapleson's programme for the season, is not coming this year.

A Festival of Parochial Choirs was the other day held by the Salisbury Diocesan Association. Eighty choirs, making up the ample number of fourteen hundred and fifty voices, were brought together.—The first meeting of the *London Motett Choir* was held on Wednesday.

The performances of the Marchesa Piccolomini-Gaetani, for Mr. Lumley's benefit, are said to have answered their object. The sprightly lady's voice, however, is not what it was.

Miss Alice and Miss Florence Phillips are engaged for this autumn's Festival of the Three Choirs.

Some three years ago, at a Wiesbaden concert, we heard Herr Auer, and were satisfied as to his remarkable promise as a violinist. It is, therefore, with much pleasure that we see announced his arrival in this country, to play at a coming concert of the *Musical Union*.—M. Lotto, another violinist of whose extraordinary executive powers our readers have heard, is here.

Never, we conceive, even in the somewhat questionable days when England got the epithet of "merry," were our countrymen so resolute to be amused, "up-stairs, down-stairs, and in my lady's chamber," as now. It is not that they are urged by the sight of princes and princesses moving about among the treasures and pleasures of Art, with an excellently small cumber of etiquette and parade;—but in every class of society there is a determination to make and take holiday in one form or other, the existence of which, only a quarter of a century since, would have been represented and protested against as impossible.—Look at the amount of amateur industry and entertainment now to be found in the worlds of painting, music and drama. There is no taking up a journal, at the time being, without being "avised" of volunteer theatricals,—the managers of which can engage a sprightly Irish noblewoman to dance a jig, as part of the *ballet*,—of amateur concerts, where an Earl's daughter, strong enough as a pianist to deal with Mendelssohn's music, can appear without discredit to her order. There were such "unbendings," it is true, in the days of Strawberry Horace, when the Ilchesters and Ailesburys and Waldegraves acted plays, before, and, what is more, with the aid of—royal personages. But those manifestations were limited to a small circle; whereas, to-day, they are used frankly to bring the different classes of society together and to encourage that minute study of and close sympathy with Art, which must bear one golden fruit,—an increase of intelligent appreciation, and with this, of liberal patronage.

The Opéra Comique of Paris promises us for the autumn and winter season, M. Auber's 'Fiancé du Roi de Garbe,' M. Gevaert's 'Capitaine Henriot,' M. Maillart's 'Lara,' M. Massé's 'Péruvienne,' M. David's 'Hermine,' and M. von Flotow's 'Nuit des Dupes.'

M. Léon Escudier, long connected with *La France Musicale*, is about to publish his "Recollections."

Gluck's 'Orfeo' is about to be produced in New York, with Madame Vestvali in the principal character.

A meeting of Orphéonistes was the other day held in the old Southern-French town of Agen.

Olten, in Switzerland, on the 3rd of May, saw the birth of an oratorio (!)—'Helgi and Kara,' by Herr Edward Munzinger.

The sensible leading musicians of Brussels (so we must esteem them), MM. Fétis, Daussoigne-Méhul, Blaes, Mabillon, Hanssens, Bender and Samuel, have sent in a Report to the Government on the question of pitch, announcing it to be their unanimous judgment that the diapason ought not to be lowered.

The papers tell us that M. Fechter and Mr. Phelps have parted company on the troublous subject of the *Ghost* in 'Hamlet,' and that (to use the particularly new phrase) "the gentlemen of the long robe" are likely to have something to say in the matter.

MISCELLANEA

The International Exhibition Buildings.—A supplementary Civil Service estimate shows that a vote of 172,000*l.* is to be asked for the "purchase of land and purchase and alteration of buildings used for the purposes of the late International Exhibition." The following are the particulars of the vote:—

| | Total Estimate for the Service. | Vote required for 1863-4. | Further Amount that may be required. |
|--|---------------------------------|---------------------------|--------------------------------------|
| | £. | £. | £. |
| For the purchase of land and certain buildings from Her Majesty's Commissioners for the Exhibition of 1861 | 120,000 | 67,000 | 53,000 |
| For the purchase of existing Exhibition buildings from the contractors | 80,000 | 85,000 | — |
| For repairing, altering and eventually completing the building | 284,000 | 25,000 | 259,000 |
| Total | 484,000 | 172,000 | 312,000 |

Photo-zincography and Photo-papyrography.—It is curious to note, whenever the properties of any substance (if light can be so designated) have been discovered, and the students of the science are intent upon multiplying the variety of its applications, how by apparent accident, and sometimes coincidentally, the phenomena of a new art are suggested to persons widely sundered by place and circumstance. Colonel Sir Henry James, at Southampton, and Mr. Osborne, at the Antipodes (Melbourne), hit upon the zincograph in the same month: the latter obtaining for his invention a patent, with a reward of 1,000*l.* from the spirited and munificent Government of Victoria; Colonel James and his accomplished subordinate, Captain A. De C. Scott, resting content under the conscious sense of public usefulness with the honour conferred by the noble and enlightened of all lands. In December, 1859, an ingenious young lady asks Sir Henry how she could get her etchings cheaply printed; and he takes one of them to the Ordnance Office at Southampton, submits it to the chromo-carbon process, and transfers the imprint to the zinc plate.—This was the first zincograph. Again, shortly afterwards, one of the workmen having, by mistake, laid the ink on the wrong side of the paper, thus giving a reversed outline, Sir Henry obtains from this negative on paper a copy of the original, and ascertains that the negative can be printed on paper instead of glass.—Here was the first papyrograph. Now, by these discoveries we possess the means of reproducing, with a fidelity, cheapness, and durability hitherto unattained, copies of any subject, unaltered, enlarged, or reduced in size, and with every gradation of shade or tone; for the lithographic ink used, of which the main ingredient is pure carbon, is, like the carbonized ink of some of the ancient palimpsests, ineffaceable except by the destruction of the material on which it is inscribed. In the reduction of plans and maps the greatest deviation by the photographic process did not amount to $\frac{1}{16}$ th part of an inch in the rectangle; and even this minute error is not cumulative, and can be estimated with mathematical accuracy, if required. With deeds, MSS. and all artistic and natural objects, so minute a deviation would, even if appreciable, be of no consequence. It would not be admissible to detail here the modes and manipulation of these novel appliances of photography, which afford to all the learned professions, as well as the workers in every employment, useful and ornamental, advantages as widely diffused as the very light which is their intervenient instrument; but the manipulation is not so difficult, nor the materials so expensive, as to prevent the practice of photo-zincography and photo-papyrography even by lady amateurs, who would wish to furnish their drawing-rooms with fac-similes of objects of rare beauty and elegance, whether the originals be the productions of their own talent, or gathered from the kingdoms of Nature and of Art.

JOHN LOCKE.

Dublin, June 1, 1863.

TO CORRESPONDENTS.—L. R.—M. F.—W. N.—J. G.—J. J.—J. A. D. (declined)—P. F.—J. W. T.—J. C. D.—J. N.—H. Y.—G. M.—A. T.—W. R.—received.

Now complete, in 22 Volumes, 4to. and INDEX,

THE ENGLISH CYCLOPÆDIA, A NEW DICTIONARY OF UNIVERSAL KNOWLEDGE. CONDUCTED BY CHARLES KNIGHT.

THE ENGLISH CYCLOPÆDIA is published in Four Divisions, each Division being complete in itself, and sold as a Separate Work.

In 4 Vols. cloth, 2*l.* 2*s.*; or half morocco, 2*l.* 10*s.*

THE CYCLOPÆDIA OF GEOGRAPHY.

In 6 Vols. cloth, 3*l.*; or 3 Vols. half morocco, 3*l.* 12*s.*

THE CYCLOPÆDIA OF BIOGRAPHY.

In 4 Vols. cloth, 2*l.* 2*s.*; or 2 Vols. half morocco, 2*l.* 10*s.*

THE CYCLOPÆDIA OF NATURAL HISTORY.

In 8 Vols. cloth, 4*l.* 16*s.*; or 4 Vols. half morocco, 4*l.* 12*s.*

THE CYCLOPÆDIA OF ARTS AND SCIENCES.

To which is now added, in 1 vol. 4to. uniform with the work, price 6*s.* cloth, or 9*s.* half-bound morocco,

A SYNOPTICAL INDEX TO THE FOUR DIVISIONS.

. The price of the complete Work, in Twenty-two Volumes (exclusive of the Index), bound in cloth, is 12*l.*; and in Double Volumes, half-bound in morocco, 14*l.* 4*s.*

From the QUARTERLY REVIEW, April, 1863.

"In short, the 'English Cyclopædia' is a work that, as a whole, has no superior, and very few equals of its kind; that, taken by itself, supplies the place of a small library; and, used in a large library, is found to present many points of information that are sought in vain in any other cyclopædia in the English language."

From the TIMES, Oct. 4, 1861.

"As regards the contents of this Cyclopædia, it is, however, impossible to give any sufficient impression of an aggregate which includes somewhere or other all the information generally required upon every conceivable topic. A good Encyclopædia, as every one knows, is a compendious library; and though students may require further information upon some points than its summaries contain, even students will be surprised in this instance to find the materials at their disposal when they once adopt the habit of resorting to its pages. For all practical purposes a large proportion of the articles may be said to be exhaustive; they are accurate to a degree which will strike even those who know what pains have been taken to render them so; and, as they are concise as well as full, every column being rammed like a sky-rocket, the owner has a reservoir out of all proportion to the library-shelves it will occupy."

BRADBURY & EVANS, 11, Bouverie-street, Fleet-street, E.C.

The Intellectual Observer:

Review of Natural History, Microscopic Research, and Restorative Science. Published Monthly, price One Shilling. Illustrated. No. XVII., JUNE, 1863.

Contents.

The Bucerotidae, or Hornbills. By ALFRED R. WALLACE, F.R.S. F.R.G.S. With a Coloured Plate.
Dartmoor and the Dart. By PHILIP HENRY GOSSÉ, F.R.S.
Spectrum Analysis applied to the Stars; or, The Stars, What are They? By WILLIAM HUGGINS, F.R.A.S.
The Feet of Hymenoptera. By L. LANE CLARKE. With a Tinted Plate.
The Procession of the Equinoxes, and Apparatus for its Imitation. By THOMAS W. BURN, F.R.A.S.
Microscopic Pursuits.
New Theories and Facts of Heat.
Cometary Phenomena. By the Rev. T. W. WEBB, M.A. F.R.A.S.
The New 1-80th Microscope Objective.
Proceedings of Learned Societies. By W. B. THORNTON.
Notes and Memoranda.

Objects for the Microscope.

A Popular Description of the most instructive and Beautiful Subjects for Exhibition. By L. LANE CLARKE.

Contents.

On the Use of the Microscope.
Directions for Mounting Objects.
Mounting in Balsam.
Objects from the Vegetable Kingdom.
Sections of Wood.
Infusorial Earths.
Objects from the Animal Kingdom.
Objects from the Arachnida.
Insect Parts.
Insects Mounted Whole.
Diptera.
Parasites.
Microscopic Moths.
Slides of Zoophytes.
Marine Algae.
Fossiliferous Shells.
Spicules of Sponges.
Hair.
Spicules of Holothurim.
Slides of Crystallisation.
Solamite.
Polarising Objects.
Anatomical Injected Preparations.

Second Edition, Revised and Enlarged. Small 8vo. cloth, 3*s.* 6*d.* (Ready this day.)

Profitable Gardening.

A Practical Guide to the Culture of Vegetables, Fruits, and other useful Out-door Garden Products. Intended for the use of Amateurs, Gentlemen's Gardeners, Allottees, and Growers for Market.

By SHIRLEY HIBBERD.

Small 8vo. cloth, with Illustrations, 2*s.* 6*d.* (Ready this day.)

The Desk Book of English Synonymes:

Designed to afford Assistance in Composition, and also as a Work of Reference, especially to the Secretary, and useful to the Student. By JOHN SHERREK. Small post 8vo. cloth. [In the Press.]

Home Influence.

A Tale for Mothers and Daughters. By GRACE AGUILAR. New Edition, Illustrated, fcap. 8vo. cloth gilt, 6*s.*

Telescope Teachings.

A Familiar Sketch of Astronomical Discovery, combining a Special Notice of Objects coming within the range of a Small Telescope, with Illustrations in Colours. Dedicated by permission to the Earl of Rosebery.

By the HON. MRS. WARD.

Imperial 16mo. cloth gilt, 7*s.* 6*d.*

Marvels of Pond Life.

A Year's Microscopic Recreations among the Polype, Infusoria, Rotifers, Water-Bears and Polyzoa.

By HENRY J. SLACK, F.G.S.

Illustrated with Seven full-page Plates in Tints and Sixty-five Engravings on Wood, post 8vo. cloth, 6*s.*

Wayside Weeds and their Teachings.

Botanical Lessons from the Lanes and Hedgerows. By SPENCER THOMSON, M.D. Author of 'The Structure and Functions of the Eye.' With many Illustrations. [In preparation.]

The Magnet Stories

For SUMMER DAYS and WINTER NIGHTS. 5 vols. ready, each Illustrated with 20 Engravings, elegantly bound as Gift Books in Magenta cloth, gilt, 2*s.* 6*d.*

Beautiful-Leaved Plants.

A Description of the most Beautiful-Leaved Plants in Cultivation. Illustrated with Sixty Coloured Plates and other Engravings.

By E. J. LOWE, F.L.S., and W. HOWARD, F.R.H.S. Royal 8vo. cloth gilt, 11*s.*

GROOMBRIDGE & SONS, 5, PATERNOSTER-ROW, London.

LONDON, SATURDAY, JUNE 13, 1868.

LITERATURE

Adventures and Researches among the Andaman Islanders. By Frederic J. Mouat, M.D. (Hurst & Blackett.)

If modern criticism has reduced records thought to be historical to the level of myths, knocked down the Roman kings like ninepins, and left William Tell hardly any other existence than the short-lived one he enjoys in Sheridan Knowles's and Schiller's plays or in Rossini's opera, it has on the other hand raised accounts which generations have regarded as mere fiction to the dignity of history. Our ancestors would never have dreamt of looking for real facts into the pages of the 'Arabian Nights' Entertainments, yet nothing would seem more natural than to search for historical substrata in a book which contains so faithful and vivid an account of Oriental life that a Frank on first visiting the East feels more at home than in any other foreign country, though everything around him is seen for the first time. The charming pictures Scheherazade has painted pass before him in real flesh and blood. He feels almost tempted to ask what has become of all the characters she has made him familiar with, of the talkative Barber, Morgana, and Sindbad. Does the Old Sailor still spin yarns out of the inexhaustible materials of his seven voyages? Does his back still ache from carrying the Old Man of the Sea? Were the so-called precious stones as common as blackberries in one place real jewels, or did they turn out pebbles after all? What allowance has to be made in accepting his account of that gigantic bird, the *roc*? Was he only gulling us—sailors have done such things—when he told us of savages who fattened the shipwrecked mariners and then ate them? We can believe a good deal, knowing that Malayan pirates will and did employ captives, like asses, to carry them on their backs, that Ceylon is famous for the abundance of its precious stones, and that in the island of Madagascar fossil eggs of such dimensions have been discovered that Sindbad's *roc* may not have been without its prototype in nature. But with regard to the fattening of the shipwrecked by man-eaters, we feel ourselves very nearly in the position of the old grandmother, who, after fully believing in the temples of gold and diamonds and other wonderful things described by her seafaring grandson, indignantly protested against being expected to put faith in his accounts of the flying fish. Yet the existence of the flying fish is a fact, and so are the main features of Sindbad's yarns. That sailor seems to have lived about the eighth century; and the account of his remarkable voyages, though best known to us in what may be called a popularized form in the 'Thousand-and-one Nights,' constitutes a distinct and separate work in Arabic, a translation of which into French was made by M. Langlès, and published in Paris in 1814. Baron Walckenaer had the merit of first calling attention to the real importance of this singular collection of voyages in a geographical point of view, and claiming for it a value equal to the narrative of Soliman and Abu Said, the former of whom, probably, was a contemporary of Sindbad, whose fame, like that of Marco Polo and Bruce, gets brighter and brighter the further research is pushed.

Mr. R. H. Major, in his Introduction to 'India in the Fifteenth Century,' one of the publications of our Hakluyt Society, has given a summary of what in 1857 was thought of Sindbad's exploits. In his third voyage the restless sailor is supposed to have visited the Anda-

mans,—a group of islands situated in the Bay of Bengal, on the very high road of commerce, but of the inhabitants of which we know less than of almost any other people under the sun. One day, when Sindbad was at open sea, a tremendous tempest, probably a cyclone, sprang up, which lasted for several days, and drove his ship "near an island, which the captain would gladly have been excused from touching at, but we were obliged to cast anchor. The captain told us that this, as well as some of the neighbouring isles, was inhabited by hairy savages, who would come to attack us. That although they were only dwarfs, we must not attempt to make any resistance; for as their number was inconceivable, if we should happen to kill one they would pour upon us like locusts and destroy us. . . . We were soon convinced that the Captain had spoken the truth. We saw coming towards us an innumerable multitude of hideous savages, entirely covered with red hair, and about two feet high. They threw themselves into the sea and swam to the ship, which they soon completely encompassed. . . . They began to climb the sides and ropes of the vessel with so much swiftness and agility that their feet scarcely seemed to touch them, and soon reached the deck. They unfurled the sails, cut the cable from the anchor, and after dragging the ship to shore obliged us to disembark; after this they conveyed us to another island, from whence they had come." He then goes on to say—we quote the popular version of the Arabian Nights—that the pigmies took them into the presence of a giant, who, after examining their bodily condition, found only the Captain fat enough for eating. The others were allowed to reve about freely till they had improved, and were one after another introduced to the spit,—only a few, Sindbad amongst the number, saving themselves by flight on hastily-constructed rafts.

Even in this highly-coloured version we recognize the chief peculiarities of the Mincopie, or Andaman Islanders. They may truly be termed pigmies or dwarfs, being on an average, when fully grown, only four feet five inches in height, and weighing about 76 lb. They are certainly a most ugly race, and though not covered entirely with red hair, as stated by Sindbad, they paint themselves all over with a mixture made of oil and red ochre. Their agility and nimbleness are incredible,—their swiftness of foot surpassing belief; whilst their hostility to strangers is affirmed by all who have ventured on their shores:—

"As the cutters neared the part of the shore where they had stationed themselves (says Dr. Mouat), and they clearly perceived that we were making preparations to land, their excitement was such that they appeared as if they had suddenly become frantic. They seemed to lose that restraint and self-control which it is the pride of the savage to exhibit in time of danger, and jumped and yelled like so many demons let loose from the bottomless pit, or as if there had been a Bedlam in that locality, and they the most unmanageable of its frantic inmates. Their manner was that of men determined and formidable in the midst of all their excitement. They brandished their bows in our direction, they menaced us with their arrows, said by common report—so often a liar—to be poisoned, exhibiting, by every possible contortion of savage pantomime, their hostile determination. To use a common vulgar expression of some of the seamen, they seemed to have made their minds up to 'chaw us all up.' One man, who stood prominently out from the others, and who seemed to direct their movements, was, to the best of our judgment, their chief. The spear which he flourished incessantly was terminated by a bright, flat, pointed head, which gleamed with flashes of light, as, circling rapidly in the air, it reflected the rays of the sun.

Sometimes he would hold it aloft, poising it in his uplifted hand, as if with the intention of hurling it with unerring and deadly aim at the first who dared to approach the shore of his native island. At length, in a paroxysm of well-acted fury, he dashed boldly into the water, boiling and seething around him as it broke in great billows on the beach, and on the rocks by which it was defended, and fixing an arrow in his bow he shot it off in the direction of the steamer, as if that were the arch-enemy that had provoked his bellicose fury. * * * But meanwhile what was doing on the sandy beach, where the other party of natives were collected? There was evidently some performance of a very different description in the course of enactment there, the nature of which, when we became aware of it, fully accounted for the remarkable heroic antics of the warrior on the reef. A timid knot of frightened females, as destitute of any respectable patch of clothing as their male protectors, ran to and fro in helpless, hopeless alarm. They evidently did not know what to do, as, with those significant gestures in which untutored savages so often indulge, they expressed more plainly and impressively than they could have done by language—even if it were intelligible to us—the anxiety and terror by which they were possessed. * * * Their complexions were as black as soot could make those of our Ethiopian minstrels at home. Their small dwarfish figures were hard and angular, and their general contour the very reverse of graceful. * * * Their heads were perhaps the best part about them. They were certainly small, bullet-like appendages, but they are not otherwise ill-formed. The fact that they were entirely destitute of that natural ornament which has a graceful appearance even when the phrenological development is far from being what the professors of Spurzheim's 'mental science' call beautiful, namely, an abundant head of hair, or even any hair at all, did not at all tend to make their other defects less perceptible. The red ochre with which their bald occiputs were daubed was no doubt meant as an ornament, but we cannot recommend it as an article of the toilette, for it only rendered their appearance more repulsive."

Both sexes have no other clothing than a thick covering of soft mud, which is put on regularly every evening, to protect them against the bites of the mosquitoes, ticks, and other tormentors abounding in their islands. No sort of garment is provided for newly-born babes. If it should rain, however, while the party to which the mother belongs are on a march, a few leaves are collected and rudely stitched together by thread obtained from ratan. The leaves of which the covering is made as well as the covering itself are called *Kapa*,—a word, we would remark, which under various forms occurs throughout Polynesia, and signifies cloth, garment, covering, thatch. The Mincopie lead a migratory life, keeping chiefly near the coasts of their thickly-wooded islands, where the sea yields them a never-failing supply of turtles, oysters, mussels, and fish. They do not seem to cultivate anything, and eat only such fruits as are the spontaneous produce of their country. Their architecture is of the most primitive description. A few sticks put into the ground and covered with the gigantic leaves of palms constitute their houses. But they devote more time and ingenuity to the construction of canoes from the trunks of trees.

"The buoyancy of these boats, when they are well constructed and carefully finished, is remarkable. They float lightly on the top of the waves, and, unless they have received some injury, it is considered almost impossible to sink them. We sometimes made the attempt, but never succeeded. We fired at them repeatedly when at Port Mouat—which may be regarded as a sort of Andaman Pembroke yard, where a fleet of Mincopie men-of-war were lying in every stage of preparation—but they still floated with as great ease and buoyancy as ever. They would make most excellent life-boats,

such, we believe as have never yet been constructed by any of our most experienced boat-builders. When the Mincopie go to sea in them, they attach to some part of the boat an outrigger, in some respects resembling that which the Cingalese fishermen attach to their boats. The use of this outrigger must be a thing of comparatively recent practice among the Mincopie, for no former writers, who have given any account of them and their customs, ever allude to them. Hence many surmises have been formed as to the origin among them of this useful adjunct to their boats. But none appeared to me so probable as that which has occurred to my own mind, which easily accounts for its sudden adoption. During one of the monsoons, a Cingalese outrigger boat may have been overtaken by the storm before it could return to port, and being drifted with the currents of the Indian Ocean, from the power of which its crew must have found it impossible to escape, it may have been drifted onward at the mercy of the current, until it was, in all probability, stranded on the sandy beach of one of the Andaman Islands. On being observed by the natives, it may have been attacked by them, taken possession of, and paddled to one of their small natural, land-locked harbours, where, on examining it, they would at once be struck by the peculiarities of its construction, which they would endeavour to imitate."

We do not think that Dr. Mouat's surmise respecting the origin of the outrigger is the right one. The Mincopie canoe, as represented in one of his plates, is quite unlike the Cingalese, and closely resembles the canoes we find in the Fijian and other islands inhabited by the Papuan race. In the Cingalese canoe the pieces connecting the body of the canoe with the outrigger are bow-shaped and directly attached to the outrigger, whilst in the Mincopie and Papuan canoes, the piece alluded to—we know no English term for it—is quite straight, and hence three additional pieces of wood are necessary, which, tripod like, are inserted in the outrigger, and to which the poles are secured with strings. The difference, easily understood by comparing models or drawings, is an essential one. The Cingalese plan is the most simple and at the same time the most safe, there being a direct connexion between the body of the canoe and the outrigger, and little danger of its getting loose, whilst in the Mincopie and Papuan handiwork exactly the reverse is the case.

Nothing has been learnt, as yet, respecting the religion of the Mincopies, and it has been supposed that they are entirely without any; but we cannot accept the absence of idols as a proof of this conclusion, knowing that several Papuan tribes characterized by the same deficiency, believe in a Supreme Being and the immortality of the soul; and until we shall know more of the inner life and language of the Andaman Islanders, it would be premature to indorse the conjecture respecting their want of religion:—

"When a member of any of their communities dies, the Mincopie make little if any demonstration of grief. There is neither weeping, nor wailing, nor gnashing of teeth. The body of the dead man, while still flexible, is tied tight to the knees, and then buried in an upright position. After decay has gone on for some time, and the body is almost entirely decomposed, it is again dug up, and each relation appropriating any bone of the deceased he may be able to obtain, they all commence howling over it, although so long a period has elapsed since the death of their relative. If he was a married man, the widow obtains his skull, which she suspends by a cord round her neck, carrying it about as a lugubrious kind of ornament, which, for the remaining period of her natural life, is considered as a manifestation of the affection with which she regarded her deceased husband. But this outward display is the only way in which they are really faithful to the memory of the dead.

The Nicobarians, inhabiting some islands about seventy miles or so farther south, put their dead in a bundle and bury them under trees. Once a year the inhabitants of a village carry one of their dead relations round its precincts until the body drops to pieces. It is a curious fact that the slinging of the husband's skull round the neck of the widow is also a custom prevalent among the natives of Terra del Fuego."

The origin of these singular islanders is wrapped in the greatest obscurity; the belief that they were descended from a body of shipwrecked Portuguese slaves, and that their hostility to strangers found a ready explanation in their having at one time been in degrading bondage, is pretty well exploded. But whether they are an aboriginal race, as Professor Owen is inclined to think, or related to the Papuan or some other dark-skinned races is still an open question, to the solution of which Dr. Mouat's 'Adventures and Researches among the Andaman Islanders' furnish valuable materials.

It may not be generally known that towards the end of last century the Indian Government established a convict settlement in the Andaman Islands, but that in 1796, on account of the great mortality amongst the prisoners, the settlement was given up. A few years ago the scheme was revived, and when all India was in rebellion, and the fate of Lucknow trembled in the balance, the author was despatched by Lord Canning to explore the islands once more, with the view of finding suitable sites for such a settlement. Accompanied by a French photographer, of whose productions we should like to have seen a few more in this book, Dr. Mouat and his party made a survey of the whole group, and finally fixed upon Old Harbour, as the most suitable spot for the purpose of a settlement. Their intercourse with the natives was most unsatisfactory. Generally the Andamans greeted their visitors with a discharge of arrows, and then disappeared in the woods. Nobody could follow them, their swiftness of foot being extraordinary, and their running over the entangled roots of the mangrove swamps a feat which no one could hope to imitate. Dr. Mouat's party, in self-defence, were obliged to fire upon them, and they succeeded in capturing a native boy, who was taken to Calcutta, where he became the lion of the season, and collected such crowds around Dr. Mouat's house, that it was found necessary to dress up a lay figure, and place it at some other house; a trick proving effectual till discovered by the crowd. The boy, to whom the sailors had given the name of Jack, was very docile and became a great favourite; but Dr. Mouat's black servants could never become reconciled to him, fancying that he was a cannibal like the rest of his nation; but for which infatuation, as the author remarks, there is no direct proof. Jack, however, though receiving much kindness, did not thrive, and his return to the Andaman Islands was resolved upon:—

"He was at first conveyed ashore in the clothes he usually wore at Calcutta, but the reflection immediately occurred to those in whose charge he was, that in that condition it might not be possible for any of the natives to recognize him. He was therefore stripped, with his own consent, and left naked on the shore, a condition to which he had been accustomed all his life, except during the short period of his sojourn at Calcutta. * * He took an affectionate leave of all who had accompanied him, appearing very dejected and low. The crew of the boat were very unwilling to leave him behind, and were it not that they believed it was for the benefit of his health, they would not have done it, so lonely and sad did the poor fellow appear. After taking a last farewell, they rowed out to the ship, gradually losing sight of him, still standing silent and melancholy in the same place;

and, as soon as they had got on board, they steamed away from the Reef Island on their return to Calcutta. After this sad parting nothing was ever seen or heard of our captive again. Alas, poor Jack!"

Dr. Mouat's book rather increases than satisfies our curiosity as to the pigmies of the Andaman Islands. Whilst forming a most important and valuable contribution to ethnology, it will be read with interest by the general reader.

Gleanings from Westminster Abbey. By G. G. Scott, R.A. Second Edition, considerably enlarged. (J. H. & J. Parker.)

"That you will take none other sepulchre than mine, and that you will lie by my side in the abbey at Westminster," were the last words of Philippa the Beloved to Edward the Third. How many of us that walk by the graves of these two think of the tenderness of the farewell? We know the prayer was granted; in seven years they met again, and the piety of five centuries has spared their tombs, no hands having lifted the lids. These words alone are enough to render sacred the Abbey that surrounds the grave of her whose entrance into it Froissart describes in words no Englishman ought to be ignorant of as part of the history of a place holding so much glorious dust. Lord Berners, as usual, renders the passage best:—

"There fell in Englande a heuy case and a comon; howbeit it was right pyteouse for the kyng, his chyldren, and all his realme. For the good Quene of Englande, that so many good dedes had done in her tyme, and so many knyghts socoured, and ladyes and damsels comforted, and had so largely departed of her goodes to her people, and naturally loued always the nacyon of Heynaulte, the cuntry where she was borne. She fell sicke in the castell of Wyndesore, the which sicknesse contynewed on her so longe that there was no remedye but dethe. And the good lady, whanne she knewe and perceyued that there was with her no remedye but dethe, she desyred to speke with the kynges her husbunde. And when he was before her she put out of her bedde her right hande, and toke the kyng by his right hande, who was right sorowfull at his hert. Then she sayd, 'Sir, we have in peace, joye and great prosperyte used all our tyme toguyer. Sir, now I pray, at our departyng, that ye will grant me thre dayres.' The kyng, right sorowfully wepyng, sayd, 'Madame, desyre what ye will, I graunt it.'—'Sir,' sayd she, 'I requyre you, firste of all, that all maner of people, such as I haue dault withall in their merchaundyse, on this syde the see or beyond, that it may please you to pay every thinge that I owe to theym, or to any other. And, secondly, Sir, all such ordynances and promyses as I haue made to the churches, as well of this cuntry as beyond the see, whereas I haue hadde my denocyn, and that it maye please you to accomplyshe, and to fulfyll the same. Thirde, Sir, I requyre you that it may please you to take none other sepulture, whansoevre it maye please God to call you out of thys transytorie lyfe, but besyde me in Westmynstre.' The kyng, all wepyng, sayde, 'Madame, I graunt all your dayre.' Than the good lady and quene made on her the signe of the crosse, and commaunded the kynges her husbunde to God, and her youngest son, Thomas, who was there besyde her. And, anone, after, she yelded the spiryte, the whiche I beleue surely the holy angels recyued with great ioy up to heuen, for in all her lyfe she dyd neyther in thought nor dede thyng whereby to lese her soul, as ferr as any creature coude knowe. * * She was the moeste gentyll quene, moost lyberall and moost courtesse that euer was quene in her daye."

We may add the above to Mr. Burges's account of the tomb of Queen Philippa. If we go from it a little further round the ambulatory to the tomb of Edward the First, about which the author tells all that is known, another idea may be gained of a time men style barbarous,

Gothic, and what not, but which was earnest above almost all times. The stark, square sarcophagus of Edward is in keeping with the man whose bones it holds, and about whose disposal of his own bones we learn thus much:

"When he perceived he could not recover, he called to him his eldest son, who was afterwards king, and made him swear, in presence of all his barons, by the Saints, that so soon as he should be dead, he would have his body boiled in a large cauldron, until the flesh should be separated from the bones, and that he would have the flesh buried and the bones preserved; and that every time the Scots should rebel against him, he would summon his people, and carry with him the bones of his father, for he believed most firmly that so long as his bones should be carried against the Scots, those Scots would never be victorious. His son, however, did not fulfil what he had sworn, but had his father carried to London and buried—for which much evil befell him, as you have before heard."

Had Edward the Second been the man to keep this erie oath, the history of Scotland might have read another way, and both nations escaped the Stuarts.

The mass of Mr. Scott's additions consists of papers by Mr. Burges.

We collect from Mr. Burges's account much of interest respecting the iron-work of the Abbey. Thus, that which originally surrounded the tomb of Queen Philippa came from St. Paul's, "being bought by the King for 40*l.*, paid by his own hands for an iron tomb lately existing above the tomb of the Venerable Father Michael, late Bishop of London, without the west porch of the same church." The plain sarcophagus of Edward the First was, until quite recently, inclosed in an iron railing: this is shown in Dart's book, and had heads (busts) attached to it, which were declared, probably without good reason, to be portraits of the King. No doubt this iron-work was covered with a gorgeous pall, the whole being surrounded by burning candles. The cost of Queen Eleanor's grille was 13*l.*, including 20*s.* travelling expenses and carriage of the work to London, from Leighton Buzzard probably; for, like all the fine architectonic work of that age—as the perfect Eleanor Crosses, that queen's three tombs, and the effigy on the last remaining one, &c.—this grille was English work, being made by Thomas de Leghton. English, likewise, were the workmen of the splendid brass grille of Henry the Seventh's tomb, there being a marked difference between its details and those of the monument it incloses. The spoliation of portions of this work that has taken place of late years has been shamefully great, if we are to trust Dart's engravings, made about forty years since.

Another revived ancient manufacture illustrated in this work is that of mosaic. Mr. Burges's examinations of the fine piece of *Opus Alexandrinum* before the altar, and that somewhat inferior one which forms the pavement of the Confessor's Chapel, are of great interest. The former was made about 1269, by Ordericus, employed by Abbot Ware, who went, as other abbots did, to Rome on his election, and, returning, brought the artist for the work that remains still, and is much less injured than might be feared. The true *Opus Alexandrinum* is, of course, based in white marble or cippolino, but, as neither of those materials were obtainable in England, Ordericus used Purbeck marble in which to set his tessere; an unfortunate choice, seeing that this marble ill resists damp. Consequent upon this defect, much of the work in question has had to be replaced. Its chief perils have been from the hands of men. We have to thank Lord Oxford and the Bishop of Rochester that the workmen employed in erecting the pagan altar-piece, in the Augustan

reign of Anne, did not destroy the whole of this admirable relic.

To the antiquary the chapter on the Retabulum, so fortunately discovered by Mr. Blore, has high interest. Whether this admirable specimen of Middle-Age art be a retabulum at all, still less one intended to go at the back of the high altar, may be doubted. It might have been a frontal for the last, or one of the sides of St. Edward's shrine itself; certainly it is one of the most beautiful works of its kind in existence, and has engaged the attention of all antiquaries and writers on the history of Art since the time of its discovery. M. Viollet-le-Duc claims it for French work, but gives no satisfactory reasons for so doing. It is a painting upon oak panels, enriched with imitation jewels, enamels, gilding and diapers of the richest character. It has five compartments; 1, in the centre, a sort of triptych or space divided in three by highly-enriched shafts that sustain a canopy of tabernacle work in three sections. The central space of this is filled with a picture of the Saviour as Creator; in the right and left sides of this are, respectively, figures of the Virgin and St. John,—not as we find stated in Sir C. Eastlake's 'Materials for a History of Oil Painting,' angels with palm branches. Mr. Burges's iconographic knowledge has enabled him to read the whole of this invaluable work so completely, and the plates of this book so well illustrate it that his description may be used to correct the work of our P.R.A.

The Sedilia, erected in the latter part of the reign of Edward the First, show but a mere wreck of their ancient splendour; no small part of their interest is derived from the extreme rarity of wood-work of the thirteenth century. This is enhanced by the colouring the examples still retain. It seems, from Sir J. Ayloffe's description, and engravings, dated 1775, that these fine works were at that time in a much finer state than at present. About the time of the coronation of George the Fourth, no end of mischief was done to these as to other works in the Abbey. Mr. Burges suggests the removal of an ugly plaster imitation of King Sebert's tomb that now stands at their feet, and the substitution of an oak seat, but no restoration. In these recommendations we heartily join. Above all things in relation to the Abbey, *no restoration*. If the mania for restoration ever threatens this edifice we shall propose that "Puffing Billy" and the "Rocket," patriarchal locomotives now in the Patent Museum, be refitted, painted and varnished; as well one thing as the other.

Mr. Burges agrees with most modern writers in trusting the authenticity of the famous Scone stone that has been placed for so many generations under the seat of the Coronation Chair. Whether it was Jacob's pillow at Beth-el, which has travelled into Egypt, Spain and Ireland, or not, there can be no reasonable doubt that the rugged cube is the one which Edward brought from Scone Abbey. The chair the Conqueror made for his own throne was originally purposed to be of bronze (would it had been so!) for Adam, the King's workman, had begun such a one. From the multiplicity and fineness of the mouldings, says Mr. Burges, it is very easy to credit the account of its being a copy of a work intended to be cast in bronze. From the remains of ornamentation on the chair a tolerable idea has been presented, for the first time, in the book before us, of the decorations and splendour of the ancient work. The ground was covered with a priming of gesso, then gilt, the gold burnished, and a pattern pricked upon it before the ground and gilding had lost their elasticity. Of the exterior we learn that the panels were

filled up with dotted foliage, *i. e.*, a design indicated by dots pricked, as above. The inside of one of the arms was decorated with diapers, containing birds and foliage very spiritedly executed; on the other a diaper of compound quatrefoils, each of which inclosed a different object; thus, in one we see a knight on horseback brandishing his sword, in another a monster's head ending in foliage. The figure at the back of the chair, long known to exist, has been made out to represent a king seated, his feet resting on a lion, the front of the throne panelled, and the panels filled with foliage; the cushion on which he sits is diapered with lozenges, the back exhibits a series of quatrefoils connected by pellets.

The account of the shrine of Edward the Confessor would demand a separate examination to do justice to the almost complete history Mr. Burges conveys to us in his admirable treatise on the relic. Suffice it here to say that the author has got together all that is known on the subject, illustrated it with singular felicity of remark, and a vivid manner that carries interest to a theme second to none in archaeological and historical importance. In like manner, the account of the tombs in the Abbey is excellent. The author does no more than justice to the sculptor, Torel, who had nothing to do with the Italian family Torelli, but was a "goldsmith and citizen of London," who made the beautiful effigies of Henry the Third and of Queen Eleanor for her three tombs, one of which remains here. Of the art of these it is impossible to speak too highly. With regard to the action of the left hand of the last-named statue, commonly said to be holding a crucifix, but correctly here as holding the string of the cloak, we may point out to Mr. Burges that the same action is to be seen in the beautiful figures of the Queen in the Waltham and Northampton Crosses. The account of the enamels on the tomb of William de Valence will be read with interest, as will the papers on the three tombs of the Earl and Countess of Lancaster, and of Aymer de Valence.

While we heartily thank Mr. Scott and his associates for this book, with a specially low bow to Mr. Burges, we cannot but regret that they have not given an index of its contents. The little table of contents and the index of tombs are but indications of the necessity for such a thing in a book that is specially qualified for reference.

The King's Mail. By Henry Holl. 3 vols. (Low & Co.)

'The King's Mail,' by a writer whose dramas created a stir in London theatres in past years, is a brisk and entertaining story, full of action, and containing several descriptive passages of considerable merit. As a work of fiction it will find favour with subscribers to circulating libraries, whilst many readers who pay little heed to the ordinary novels of the season will turn over its pages for the sake of their pictures of provincial manners towards the close of the last century. The chief interest of the narrative is drawn from an occurrence which in the days when George the Third was king raised Hue and Cry in Sussex, gave occupation to Bow-Street runners, and struck consternation into the breasts of those who had cause to make frequent journeys through the wild and sparsely inhabited region which lies between Petworth and Chichester. The event is still preserved by tradition in the hamlets and homesteads on which the tourist looks, as he wanders along the bleak Blackdown range; and Mr. Holl has done well in gathering the particulars of the strange story

from peasants' lips and old wives' gossip, and placing them on permanent record. The scene of the drama is put before the reader in well-chosen words:—

"Amid wild picturesque scenery, lying about, and forming, as it were, the centre of a triangle, the counties of Hants, Surrey and Sussex meet at a point, and then branch off, spreading far away over their several shires: immediately contiguous to this junction, and stretching towards the south, is a bleak range of hills called Blackdown. This swelling upland of slate-coloured, sandy heath, stands prominently forth; the stretched-out hill, lying high and dark against the way beyond, while from its top the southern coast is visible, the gleaming ocean, and the sailing ships. Overgrown with whort, gorse and heather, the bare black hill, and the surrounding country of sterile down, or broken slope, remind the sportsman of the wilds of Scotland, to which its general aspect might be compared, or to the swelling heights of Cumberland. From the summit of this bleak range the prospect stretches far away over a valley towards Petworth, while due south lies Chichester; the wide expanse, rich and varied in its landscape, studded with wooded dells, copses and underwoods, is relieved here and there by the green slope of fertile valleys. The sharp edge of the hill, crowned and clumped with fir-trees, cuts sharply down amidst broken rock and crumbling earth, tangled and overgrown with hawthorn, sloe and holly bushes, spreading up the steep ascent, or hanging from its side in strange, fantastic growths; while sweeping from its base, and stretching miles away, crossed and intersected by high old-fashioned hedge-rows, the grass land spreads its level way. Even in this bleak November month the earth looked fresh and green, the foliage of the trees still hung upon their boughs in scattered knots, unwilling to fall before the winter's frost set in and sent them whirling to the ground. On either side the shadowing range of hill lie thick and frowning woods of oak, and birch, and ash; while further on, towards Bexley Heath and Midhurst, the woodlands skirt along a sloping vale, rich in its pasture and varied in its beauty; the dark umbrageous woods shading the emerald land with dense dark patches, clustered and massed upon the rising ground, while threading along the distant valley runs a narrow stream, fed in its course by drainage from the far outlying lands, its winding channel twisting through the marshy soil, until at last it flows into the Wey near Godalming."

In the heart of this wild country still stands an old manor-house, called "The Chase," which in the year 1785 was inhabited by Martin Blakeborough, lord of the manor and lands adjacent, and last representative of an old Sussex family. A roystering, fast-living young squire, Martin Blakeborough had made evil friendships at college, and discreditable associations in London. His name was in ill odour with his county neighbours, and when he stirred away from home disrepute attended him. It was rumoured that his conduct had broken his mother's heart; it was known that the old squire had put beyond the young man's reach all that portion of his property which was not settled by entail; neighbouring proprietors whispered that "The Chase" was deeply mortgaged, and would soon be in the market; tenants were crying shame on the young squire for dealing unfairly by old occupants of his ancestral soil, and for seducing his gamekeeper's pretty daughter Nelly; in London the police were watching the riotous young spark from Sussex, who showed himself at hells and drinking-kens with the worst reprobates of the town. In short, Martin Blakeborough was covered with ill fame, and merited no better lot. At "The Chase," however, he still maintained an establishment, keeping hounds, and riding over his tenants' crops in the society of swaggering roysters whom he brought down from town, to take the place of the county gentry who

held aloof from him. Rapidly affairs grew worse. Debt was added to debt, and mortgage piled upon mortgage, till, rendered desperate by duns and debauchery, Martin Blakeborough made a grand attempt to retrieve his fortunes by stopping the King's mail, on its way from London to Portsmouth, and seizing the bullion which it conveyed from the capital to the great port. The daring project would be beyond his powers, if he essayed to carry it out single-handed; but he had near him friends who were peculiarly qualified to assist him in the undertaking. The scheme was speedily arranged; and on a certain night in the year already mentioned the young squire and three "gentlemen of the road" mounted horse, stopped the mail, and after an affray in which one of the attacking party, Mike Garroway, was wounded by a ball from the guard's blunderbuss, relieved the coach of its treasure, amongst which were the mortgage deeds on the Blakeborough estate, and sundry bundles of I O U's and promissory notes given by Martin Blakeborough to a London attorney and a Hebrew money-lender, who were amongst the passengers. So far the raid had been successful. Parting with his friends, Martin rode back to "The Chase" and re-entered his house ere any of his servants had risen. His coadjutors were less fortunate. The Hue and Cry was soon raised; and a party of horsemen were speedily in hot pursuit of Messrs. Baxter, Bridgeman, and Garroway. This hunt is capitally described, and forms the most exciting part of the story. At Godalming the wounded Garroway is left behind, and falls into the hands of justice. Baxter and Bridgeman have a narrow escape. The scene in Guildford, where Baxter secures Bridgeman's retreat, and then turning round on his pursuers charges and rides straight through them, is excellent in its way, calling up recollections of bold Dick Turpin mounted on Black Bess. In dealing with Mike Garroway, who is in due course tried and executed at Guildford, Mr. Holl is guilty of an error which he will do well to amend, should his vivacious story reach a second edition. Mike's counsel could not have made the speech attributed to him in the trial scene, for prior to the 6 & 7 Will. 4. barristers were not permitted to speak in behalf of prisoners upon trial for highway robbery, except on points of law. This slip, which many readers will think a matter of trifling importance, is made more remarkable by the conscientious care with which Mr. Holl has sought in official reports and old road-books for facts bearing on the main incidents of the tale. Of the plot and episodes of the narrative we say nothing, as we should be sorry to diminish any reader's interest by revealing too much. We may, however, add, that though 'The King's Mail' sets forth attractively the manners and deeds of lawless men, it contains nothing against which morality has any right to exclaim.

Memoirs of the Abbé Le Gendre—[*Mémoires de l'Abbé Le Gendre, Chanoine de Notre Dame, Secrétaire de M. de Harlay, Archevêque de Paris, Abbé de Clairfontaine. Publiés d'après un Manuscrit Authentique, avec des Notes Historiques, Biographiques et Autres, par M. Roux*]. (Paris, Charpentier; London, Jeffs).

LET us begin our dealings with this French memoir of the times of Louis the Fourteenth by stating that, however curious, we cannot conceive that it is to be wholly relied upon. Prejudice, scandalous assumption, suppression ingeniously adjusted, are to be discerned in most of its pages by any reader who has only a moderate acquaintance with the epoch and the persons referred to. Its author was a man of

letters who had singular notions of their use. Moreri mentions that in his will the Abbé desired that his autobiographies should be published, having written no fewer than five memoirs of his own life, all differing one from the other in style and taste. Only a fifth of this strange testamentary request has been fulfilled; and that not till to-day, by the issue of the present volume. The book, with its notes of animadversion and correction by M. Roux, amounts to a contribution to French history of some value and amusement.

The Abbé was one of seven boys, born at Rouen, to the son of a member of the body-guard of Henry the Fourth;—a man "of parts" rather than of prudence, who wasted his property. Such good as the youth learned came from his mother, a woman of true discretion, and from an elder brother, who would be neither priest, monk, nor married man, but who gave himself up to literary studies. Our Abbé wished to be either a Jesuit or an Advocate, but the former choice was not sanctioned by his Jansenist mother, and the alternative desire gave way to some prospects of church preferment. The youth accordingly decided on becoming a preacher, and, to that end, studied nine or ten hours a day,—learned the four Gospels by heart,—dived into the writings of the Fathers, among whom his predilection was for St. Chrysostom; borrowing his books from his mother's Jansenist confessor, whose sole notion of theology lay in vilifying the Jesuits and accusing them of immorality. By this he drove a brisk trade among his penitents; and, true to the vocation of his class, fomented dissension between the would-be Jesuit and his mother. The former came to Paris with some discourses,—there began to preach, and to criticize other preachers. Of these we will string together a few notices.

For a long time, the Court favourite was the Abbé de Fronteniers, who seems to have fulfilled his duties with considerable tact; as when he had to address La Vallière on her becoming a Carmelite, and managed, says M. Roux, to observe all due courtesies, without compromising his severity as a minister.—Fléchier, afterwards Bishop of Nismes, in spite of personal drawbacks—in spite of a sluggish intellect, which was evidenced by the utter want of interest in his conversation—was popular from the ingenuity, polish and accuracy of his sermons, which bear the test of reading.—A certain Dubourg, who assumed the name of Des Alleurs, as being genteeler than his own, was pushed into notoriety by M. de Fantouville, a free-living counsellor of Rouen, who gave the Abbé house-room in admiration of his merry sayings, took him wherever there was play, good cheer and music,—ill-natured people said, even to comedies and operas.—Anselme, whom Madame de Sévigné approved and Madame de Montespan protected, was another shining light, though he had "the ways of a pedant, and his morality was so vague that as it hit no one, no one was touched."—The Capuchin Father Seraphin got on in another fashion:—

Madame de Maintenon, who possibly feared the too free tongue of this good man, to pacify him permitted him to preach two Lenten sermons at the Louvre. He had no talent save that of making a loud noise and crudely saying abusive things. When preaching before the King, in the presence of the first physician, the latter asked him if God had not in this world those who execute his justice. "Who can doubt it?" replied the Father, "and who are they that execute? The physicians; who, by their prescriptions, given at random, kill the larger number of those that die." Though this good man was such a Diogenes in the pulpit, he was nothing of the kind when at table; but a famous diner, and one who, when he was out of his con-

vent, would eat and drink nothing save the best. Being about to preach in St. Benedict's, one of the parishes of Paris, he said to one of the beadles six weeks before Ash Wednesday, that, being desirous of passing Lent in the preachers' apartment, he begged that they would advance him, on account of the fee he was to receive at Easter, enough to put wine in his cellar and to pay his cook-shop bill. This fee, though amounting to five hundred francs, was eaten up before Palm Sunday came. The beadle on duty, a man little disposed to any risk, acquainted the Father, dryly enough, that he could furnish him with nothing more. The Father, without being disconcerted, replied, "If money be wanting, let them make a collection in the parish; otherwise, I will not preach." It cost a thousand francs to Cardinal de Noailles to treat this Capuchin, who, during the Lent when he preached for us, had always at his table four Capuchins with as good appetite as his own.

Other pulpit orators are sketched in the list:—among them the famous Bourdaloue, the Corneille of preachers, whom M. Le Gendre praises magnanimously,—Bourdaloüe having been ungrateful to him. That famous orator, however, he tells us, gesticulated too much. The revelations here made concerning the science and art of preaching will be found by many more curious than edifying. Those whose standard in regard to the duties of a Christian priesthood is high will hardly come forth, without a saddening impression, from the sacristy in which the great orator of the fast or festival day has been robbing himself with persuasion and enthusiasm—here meditating an ingenious illustration—there providing for some change of tone, by which expectation was to be excited or flagging sympathy aroused. The admission that eloquence is a craft—that those who have swayed the hearts of vast congregations have been so many performers—must bring with it surprise and pain to all who cling to the theory of inspiration in proportion as the matter to be delivered is solemn and weighty.

To return to the Abbé Le Gendre's personal history,—one of the familiars whom M. de Harlay, Archbishop of Paris, employed to keep him advised of all the clerical novelties of his diocese, brought the dignitary and the rising preacher together. The former, as his habit was, gave the younger man sundry commissions in secret, which the latter executed so satisfactorily as to lead to the connexion announced on the title-page. The first of these was the translation of papers relating to "the affair of Charonne,"—which is worth dwelling on for a moment as one consequence of the gallantries of the great monarch. Betwixt him and Pope Innocent the Eleventh there was an old grudge. The Pontiff conceived himself to have been hindered in reaching his throne by French influence, and complained that his authority was little respected in France. The King, who destined one of his natural sons—Le Comte de Vexin—for the Church, memorialized the Pope for an exemption from the tonsure for the Count, with permission to hold benefices. This request the Pope flatly rejected, replying that the youth was the fruit of a double adultery, Madame de Montespan's husband being alive. During this time of irritation it fell out that the nuns of Charonne, a convent half a league from Paris, finding their establishment in debt and disorder, owing to the misconduct of a Superior, entreated the King, for the re-establishment of discipline, in place of a triennially-elected Superior to give them a permanent one. This the King did;—but the Pope, in the absence of due formalities, refused to ratify the arrangement; whereupon the lady besought the Archbishop to sanction the nomination, if but provisionally. M. de Harlay complied. The whimsies and bad temper of the new Superior so provoked the nuns that they

complained to Rome. The Pope annulled the election and commanded another; the second vote was, in its turn, declared by the Parliament void and illegal, because contrary to precedent and privilege. The end was that the community was dispersed and the convent broken up.

Many other passages of the kind, belonging to the earlier period of these Memoirs, make it clear that only a peculiar kind of Archbishop could then have sat on the episcopal throne of Paris without being tormented past mortal composure by the thorns in its cushion. Such an one was M. de Harlay; if not a time-server, a man not averse to managing,—a man, too, with no extraordinary severity of morals, as such entitled to rebuke the licences claimed by the imperious King, who dared to affront the Court of Rome with them. Scandal was busy with his name. The genial De Sévigné insinuated tales of his gallantries among the other pleasant wares of her budget for Grignan. The Jansenists (less unimpeachable themselves, it is possible, than their eager partisans have chosen to represent them) adverted to them freely; not thereby improving their own chances of Court favour. M. Le Gendre, who here writes of these rumours as so many calumnies, does not scruple to contribute such a testimony to the Archbishop's laxity as the following anecdote, which belongs to a later period. Though M. de Paris was "trimming," so as to satisfy M. de Pomponne, the suspected court favourite of Jansenism, M. Le Gendre assures us that he could do substantial service to a black sheep of his own party.—

Father Bouhours, so well known by his 'Remarks on Language' (the best thing he did) and by some Lives of the Saints, the serious not being his line, had a *liaison* with Madame de Bourdonné, Canoness of Remiremont, who was at Paris to carry on a trial of the ladies of the Chapter against their Abbess. Bouhours drew out the pleas of Madame de Bourdonné, and for that purpose saw her often;—a thing which would have excited no remark, she being old, if she had not had with her a pretty, young and sprightly daughter. Bouhours, who was of jovial nature, often talked with the daughter, and took so little pains to keep up appearances that a *Procureur* in whose house the lady and her daughter lived for some time, in the cloister of St. Benedict, wished, perhaps out of jealousy (it was said that he loved the daughter), perhaps out of curiosity, once for all to throw light on the Father's assiduities.

By spying, the *Procureur* became eye-witness of a scandalous scene. What he had himself witnessed, he told his friends, and one of them having repeated it in the Cloister of Notre Dame, at one of M. Ménage's receptions, it became, presently, public. At these receptions were sometimes found people of worth, but oftener only ribald rhymesters. Songs were made on the adventures of the Vestal. I wish to believe that M. Ménage had no part in these songs; he was not, however, grieved to have humiliated Bouhours, because the latter had maltreated him in grammatical quarrels which they had held formerly. * * An affair making so much noise greatly mortified the Jesuits; and as they are inexorable in matters of gallantry, to the point of not pardoning the most illustrious of their confraternity who was proved guilty or legitimately suspected,—they would have brought Father Bouhours to trial if his friends from without had not come to his assistance. His innocence depended on the recantation of the *Procureur*; but it was not easy to bring this to pass, the accuser having armed himself with letters of which he had become possessed, in one of which the Father expressed himself, to say the least of it, in a suspicious manner. "Let the other Jesuits go to the Indies," wrote he to the damsel; "for my part I will not quit you; you are my China and Japan." In vain M. Lamoignon, one of the Advocates-General, a private friend of Father Bouhours, did what could be done to bring

him through this affair, but not coming to an end, he entreated the Archbishop to exorcise the *Procureur*. M. de Harlay, not to commit himself, paved the way through the intervention of the curate of St. Benedict. The negotiation succeeded;—the *Procureur*, insensibly led on by threats or otherwise, to the convenient point of docility, came to the Archiepiscopal Palace,—verbally deposed, as he afterwards did in writing, that he had no share in the evil reports which had been spread concerning Father Bouhours, and that he acknowledged the Father to be very virtuous and chaste. The public mocked at this extorted or lying disavowal, and believed none the less for it what the *Procureur* had said of the priest and the Vestal.

To be just to our easy Archbishop, while on the one hand he served as screen to the Jesuits, on the other he gave them umbrage by standing forward to defend M. de Rancé, the Abbot of La Trappe, an order abominable to the followers of Loyola, when calumnious accusations were brought against him by one De Chalippe, a renegade postulant, set on to breed scandals.

It was a time—as must be all times of corrupt morals and lax principles—of hot controversies. There were academical quarrels,—appeals against the abuses of the theatre to be looked into, wherein our Archbishop had to play pacificator. Then, the Molinists were beginning to give trouble; and among them Madame Guyon, whose person and mystical writings were alike unpalatable to the Abbé Le Gendre and to his patron. Further, it was necessary to propitiate a strange, secret woman, who meddled in everything—a woman of whom the world will not be speedily tired of hearing, of thinking—Madame de Maintenon. This may be explained by a reason, the force of which is not flattering to poor humanity,—namely, that the world can never be made to like her. She was a cold, inscrutable (some maintain), hypocritical devotee, at once cautious in her proceedings and careless in her friendships;—holding on to Ninon de l'Enclos, on the pretext of gratitude for the past loan of her yellow room, in which she had received M. de Villarsaux privately, and other accommodations,—a pretext the reality of which is belied by almost every other action of her self-interested life. She was chamber counsellor to one of the great sovereigns of Europe,—a formal religionist, who promoted a genteel and intellectual form of Catholicism,—a steady persecutor of all who read her elected scripture with interpretations and practical deductions different from her own. Commentators are disagreed as to the amount of chastity preserved in early life by the patroness of the school at St. Cyr,—as to the degree of her participation, active or passive, in that awful state crime,—the Revocation of the Edict of Nantes. It may, however, be asserted that she was watched, feared, mistrusted, throughout her sinuous and decorous years of Court favour. It is evident that the hollow hypocrisies which it was the necessity of her position and the tendency of her disposition to encourage (weak barriers against that outbreak of Fanaticism under many forms, real and unreal, which was in part represented in Jansenism) did much, whether by promoting or by destroying, to sap such genuine religious belief as existed in France, and thus to pave the way for the abominations of the St.-Médard Cemetery,—the philosophical tendencies of Voltaire's "sincere et tendre" Pompadour (who yet, as the Barbier *Mémoires* remind us, took up devotion under distress at the loss of her daughter),—or the later, more insolent and extravagant orgies of "La Belle Bourbonnaise," Jeanne Vaubernier,—all three heralds of the disorders of the first French Revolution. In the outset of her career a wife to a worn-out, heartless wit,—in its meridian the consort of a worn-out *débauché*, the

King, whose wasting faculties she had the weary task of preventing from utterly stagnating, and so rendering their owner deaf to her ambitious insinuations,—raised from a poverty that solicited and accepted alms, to the splendour of one who, by plucking the royal sleeve, could direct the shower of gold and honours which fell from it,—there is not in History a more unamiable heroine than Madame de Maintenon. The place she occupied in the hearts of all around her (for the thing she played upon in Louis the Fourteenth was not a heart) had been singularly prefigured by the circumstances of her birth. So indignant was her widowed mother, Madame d'Aubigné, on the occasion, that, out of deference to her grand relations, who had forbidden her to increase her family, she concealed as long as possible the birth of her unacceptable baby, Françoise,—as we are reminded by a new collection of portfolio-rakings put forward and edited by M. Bonhomme ('Madame de Maintenon et sa Famille,' &c. Paris, Didier & Co.), not of sufficient interest to claim a separate notice.

M. de Harlay made an enemy of Scarron's prudent and prudish widow by opposing himself to the declaration of themorganatic marriage, at which he had been one of the three witnesses. The Father de La Chaise elbowed him out of the royal favour and the distribution of patronage. The clergy, in spite (or possibly because) of the light hand he had held over them, began to show contempt and disrespect for their Chief so soon as it became known that he had no longer pre-ferment in his gift. The world abandoned him.

All the graces of his body and his intelligence (says M. Roux), which were infinite and perfectly natural, withered. He found no resource save to shut himself up with his good friend the Duchess de Lesdiguières, whom he saw every day of his life, either at her house or at Conflans, where he had made a delicious garden, and which he kept so neat that, wherever the two walked, gardeners followed them at a distance to smoothe over their footprints with rakes.

Habits of life like those revealed by the above anecdotes were common in other sees than that of Paris. The successor of Archbishop de Harlay, Cardinal de Noailles, a more severe man than his predecessor, who chose that the theatre should be purged of many of its abuses, found doves and money-changers in other temples than that of Notre Dame. There was Hervé, the Bishop of Gap; ruled in his palace by a rapacious Irish lady, who figured with her friend at the theatre, and who, on being stinted in the supplies which she wished to lavish on fresher lovers, carried her audacious complaint against her reverend protector to head-quarters. The Bishop had the effrontery to appear as respondent, and denied every accusation. The strict Archbishop, moved by the tears of the Irish lady to believe that she spoke truth, recommended the King to send Hervé to a remote convent, to end his days in penitence. The Bishop of Gap, however, had powerful friends—and money. This he spent freely on sundry Jesuit charities favoured by Madame de Maintenon,—and to such good effect that, on leaving Gap, he was placed by his grateful friends in the Abbey of Aubriac, a *domerie*, which means an abbey having feudal power.

The story of the Bishop of Fréjus is stranger. Louis the Fourteenth's first physician, Daquin, a man of Jewish extraction, long a first favourite at Court, was as rapacious as he was fortunate in preserving the King's health. He never ceased asking for favours and grasping money with both hands:—

A surgeon named Dutertre, anxious for the post of royal surgeon, had promised 2,000 louis to the first physician on the condition that the money should only be paid down when Dutertre had bled

the King. The first physician, to put the surgeon in possession, ordered that His Majesty, who was then at the siege of Mons and in good health, should be bled for precaution.

This Daquin had already established his three sons, and had asked for his third, who was an Abbé, the archbishopric of Tours; but his stratagem came to the knowledge of Madame de Maintenon, and Daquin was swept out. On this, the Abbé, disappointed of Tours, set his heart on Fréjus, of which his uncle was then Bishop. Could the uncle be got rid of, he had hopes of succeeding to the see. With this view, the nephew accused his relative of many crimes,—not the least an intrigue with his own niece! The Bishop had already become unpopular;—the slander was believed, and the culprit was invited to exchange Fréjus for the Abbey of St.-Denis de Rheims, which was almost an equivalent—an ingenious mode of reproving vice! This arrangement, however, was so loudly bruited about by the incautious nephew, that it reached the ears of M. de Noailles, and the Bishop of Fréjus, whether truly or falsely accused, was exiled to Maine, there to live on a pittance more fit for a monk than an abbot.

The bishops' evil, one so fruitful in temptations to the partisan judge or the hypocritical scandal-monger, spread far and wide. Even "the Eagle of Meaux," whose discourses are among the classics of pulpit oratory, could not go to his grave without equivocal demonstrations following his death, which gave rare occasion for attack to idle scoffers or to those bitter philosophers, who were bent on showing how worm-eaten were the pillars of the Church in France. A Demoiselle de Mauléon, Bossuet's friend during life, who had made acquaintance with him when he was the obscure sub-dean of St.-Thomas du Louvre (then a handsome and well-made youth), and who from time to time had re-appeared as an influence in his private affairs, some days after Bossuet's death claimed a dower and its appanages as his widow. So much for the uses, privileges and profits of celibacy in the "Church"! Who can wonder that after a period illustrated by such events as are here told—allowing to their narrator something of exaggeration, more of self-interested malice,—the Church establishment of France should have dropped into the disrepute from which it has only of late begun to redeem itself.

The peculiar interest of M. Le Gendre's Memoirs does not cease with the death of his patron and the appointment of the Cardinal de Noailles. But what has been above written must suffice: and though (to repeat a former caution) the book, by its very face and utterance, warns us not to rely on it, it is one which no future writer on church matters in France can pass by without sifting it for purposes of correction, comparison or admission.

A Hebrew Grammar, with Exercises. By M. M. Kalisch, Ph.D. M.A. Part II. (Longman & Co.)

HEBREW grammars are very numerous. It is calculated that a thousand have been published,—most of which have passed into oblivion. A very few survive on account of their prominent excellency. Dr. Kalisch has now completed a work on which he has spent nearly five years. The First Part was noticed in the *Athenæum* after it appeared. The Second is for more advanced students of the language, containing the exceptional forms and constructions, preceded by an Essay on the History of Hebrew Grammar. The whole work is excellent in design and execution. The learned author has spared no pains in its elaboration; and we may

safely pronounce it the best Hebrew grammar in the English language, as it is also the fullest in all requisites for a thorough acquaintance with the sacred tongue. Few will need any other grammar; for they will find it sufficiently comprehensive, minute and clear. The arrangement is good and perspicuous. We have, therefore, no hesitation in recommending it to the favourable attention of all who desire to know the language of the Old Testament.

The grammar before us is completed at an opportune time, when new interest is awakened in the Hebrew Scriptures, and controversy about their authority is rife. Already questions are agitated which cannot be silenced by noisy bigotry or ignorant assertion. The foundations of men's faith in old records of venerable antiquity are boldly canvassed. Doubts are openly promulgated in England; and sacred criticism is beginning to bestir itself. All this is favourable to the study of Hebrew, without a good knowledge of which no real progress can be made: and the basis of acquaintance with Hebrew must be laid in a thorough knowledge of grammar, with all its peculiarities and difficulties.

We have been pleased with the preliminary Essay on the History of Hebrew Grammar, which shows extensive reading and sound judgment. The sketch is both full and masterly. We observe, however, that the Hebrew grammar of the late Prof. Lee is unnoticed. And yet it was published, with some pretensions, as one based on new principles. The important works of Nordheimer and Justus Olshausen should have been characterized, not dismissed with a simple mention. The latter is the production of an accomplished philologist, and has an independent value.

As Dr. Kalisch's grammar is constructed on the inductive or Baconian principle, it most resembles the *Lehrgebäude* of Gesenius. Our learned Hebraist follows in the path of the Halle Professor, much more than in that of Ewald. Hence he is clear and methodical, though less philosophical than the Göttingen Professor. We could have wished for some of Ewald's manner and profound analysis, since Gesenius's method is empirical.

Several things in the work we were hardly prepared to find, such as *preterite* and *future* instead of *perfect* and *imperfect*. It is high time that the former names were discarded. We should also dismiss *vau conversive*, and give the true philosophy of the matter. The *pluralis majestaticus* is also a fictitious thing. Doubtless the writer has retained these because they are common, not wishing to alter the nomenclature; but the retention of them conveys erroneous ideas. Delitzsch's name is misspelt throughout, of course by an oversight. In some cases we differ from the explanations given, and should express ourselves differently here and there; as, in page 284, when we read "the singular is sometimes inaccurately used where the plural would be properly required"; but there are few niceties for which we have turned to the pages of the volume and been disappointed in their explanation. Thus, Dr. Kalisch gives the proper construction of Psalm xlv. 7, where the suffix is appended to the governing, instead of the dependent, noun. So good a scholar as the late Dr. Robinson, of New York, in his English translation of Gesenius's Lexicon, ventured to deny the applicability of this construction; and Bishop Colenso has failed to perceive it, retaining the usual English version, which is incorrect. We are glad also to find that Dr. Kalisch pronounces the termination *in* in Isaiah liii. 8, and elsewhere,

to be plural (p. 130). Here he is correct, though Ewald appears to deny it. The following quotation we commend to a large class of theologians who seem strongly inclined to what Lessing has called Bibliolatry:—

"Hyperboles are peculiarly in harmony with the emphatic nature of the Hebrew style; they are found, in every degree of boldness, not in the enthusiastic language of poets and prophets alone; even the simplest diction in prose is generally tinged with a spirit of poetical elevation; figurative expression, everywhere a sure characteristic of early literature, is pre-eminently an element in all eastern composition; and the fresh and vivid conceptions of the imagination predominate over the severe abstractions of balancing reason. Even in historical books we meet with phrases such as, 'Like an angel of God, so is my lord the king, to discern good and bad, to know everything on earth,' words addressed to David by the wise woman of Tekoah (2 Sam. xiv. 17, 20); or 'my little finger is thicker than my father's loins' (1 Kings xii. 10), a simile intended to describe the relative power of Rehoboam and Solomon; and repeatedly the descendants of Abraham are compared to the sand on the sea-shore, or to the stars of heaven which cannot be counted for multitude, although the Hebrews are, in other historical portions, called the smallest, the least numerous of all nations (Deut. vii. 7). In many passages it is, indeed, of the utmost importance for a correct interpretation to appreciate and to take into due account this spirit of hyperbole, to distinguish between plain statement and poetical amplification, and to discern the kernel of fact through the veil of metaphor and imagery."

Now that this excellent Grammar is finished, we hope that it may be the means of stimulating many to a thorough study of the old Hebrew Scriptures in their original language. While smatterers are pronouncing dogmatically on grave questions of criticism, and decrying the sure results already attained in Biblical literature, we think that an extended acquaintance with the Hebrew and its cognate languages will lead to conclusions favourable to religion. We welcome light and truth from every quarter, convinced that they must lead mankind to God, and promote that charity which is the greatest, as it is the most permanent, of Christian virtues.

Arabian Days and Nights; or, Rays from the East. By Marguerite A. Power. (Low & Co.)

THERE is a pleasant, piquant vein of unconscionable Irish humour in this light sketch-book of Eastern travel. Miss Power has christened her volume 'Arabian Days and Nights' because it describes life in Alexandria and Cairo, and she has never set foot on Arab soil. In the same spirit, when she speaks of the vice-regal family of Egypt, and draws attention to the fact that seven out of Mohammed Ali's nine children have already passed to the silent land of death, she says,—“I learned, while in Egypt, some touching traits of the strong domestic affection subsisting between the members of this nearly exhausted race. Most of them live under the perpetual and perfectly well founded impression that their already 'brief and evil days' are in considerable risk of being *cut yet shorter* by the instrumentality of some other member or members of their own family." How can this be? Surely this gloomy impression is ill-founded. Mighty rulers fall to the earth at the nod of Death; but even the universal tyrant is powerless to alter the past, to diminish the enjoyment man has already experienced. Rich also is the volume in feminine drolleries and gushing young-ladyisms of expression. "Presently I wandered out to the balcony," writes Miss Power, "to make a closer inspection of the flowers, for which I am at all times perfectly *fanatical*." How does a lady act when love of

flowers inspires her with fanaticism, which Theodore Parker defined "hate before God"?

But notwithstanding its many laughable slips, 'Arabian Days and Nights' is a readable book, and gives new glimpses of a land in which interest will never be exhausted. And it is no small praise to say that there is novelty in a volume which describes a country, or rather two cities of a country, about which so many travellers have written and spoken from widely different points of view. Bearing more resemblance to Albert Smith than Sir Gardner Wilkinson, Miss Marguerite Power paints the picturesque and grotesque aspects of Alexandrian streets, as she saw them through the blinds of an English lady's London-fitted drawing-room, or the windows of a Long Acre carriage. Her gossip about the East is the prattle of English cliques resident in Egyptian cities, being May-Fair gossip with a difference—Hyde-Park scandal spiced with Oriental immorality. The atmosphere of Said Pasha's Court, according to the writer's testimony, can have been neither pure nor invigorating. His Highness is depicted in his last days as an indolent, coarse voluptuary, surrounded by European parasites who bought the privilege of plundering the royal exchequer with unchaste stories suited to their patron's depraved tastes. A good practical joke would get its performer—not a sinecure, but "a contract," out of which he was permitted to make all the profit his own elastic conscience would permit him. One of these courtiers obtained a commission to supply the Pasha with kid gloves for ten years, and he availed himself of the order by casing the royal fingers with lambskin gloves, bought in Paris at two francs a pair, and sold in Egypt at 5*l.* a dozen. Another lucky adventurer furnished one of the Viceroy's palaces with splendid mirrors, for which he paid 700*l.* and received 10,000*l.* each! Who wouldn't be a Pasha? or a Pasha's favourite?

Miss Power's best chapters are those in which she describes the life and women of Egyptian harems. The picture of Mahomed Bey's gorgeously-decorated statue of a bride is a revelation to be thought about. "Anything," observes the tourist, speaking of the reception-room in Mahomed Bey's temple of dalliance, "more strangely incongruous than the aspect of the place and its inhabitants it is impossible to conceive. The walls of the room were covered with an ugly, common European paper, and the floor with a gaudy and equally ugly Brussels carpet. Round the walls were ranged a drawing-room set of two sofas and some chairs covered with dark-green silk. In the middle of the room stood a little round table, with a covering of the cheapest and most ordinary brown and white cotton-print, trimmed with a coarse edging, such as may be bought in England for about a penny the dozen yards." The hours were even less attractive than their home:—

"Of these ladies truth compels me to state that few were young, still fewer at all good-looking. They were of all shades of complexion and casts of feature, one or two being nearly black, with negro faces, while others were fair, and had no Oriental type at all in their countenances. Not one, however, had the slightest freshness or brightness of colouring; and the weary listlessness of expression visible—in the slaves especially—was too marked to escape notice. Many of the older women were extremely fat, and so unwieldy that when they sat down they had to be hauled up by some of their more active companions. I observed that the same incongruity which marked the style of the furniture displayed itself in the women's dresses. A few were handsomely attired—others wore a curious mixture of splendour and shabbiness—others were mere bundles of old clothes. The cos-

tume consisted, first of the nondescript garment looking like half skirt, half trousers, wrapped loosely about the figure from the waist to the feet. This is a necessary part of every dress. Over this some wore a tunic of another colour and material. Sometimes the dress had a body to correspond, crossing over the bosom, with large loose sleeves and very short waist. But in general a jacket, long or short—in some cases quite loose, in others fitting the figure pretty closely—was worn over an under-vest. The head-dress consisted generally of a little Cashmere handkerchief, black or some bright colour, and edged with gold or silver tinsel or spangles, pinned about the head; in some cases it was decorated with stars and other ornaments in diamonds; but some of the ladies, the old ones especially, had their heads tied up in anything that came to hand. I did not see a single turban in the harem. Long hair seems much prized among these fair ones; and I was amused at the naïve attempts made by some of those who evidently studied appearance to produce a semblance of it. I (being shortsighted) was struck with admiration at the two long thick plaited tails that fell low down the back of a lady handsomely dressed in rich lilac silk, trimmed with silver. But when the lady approached, I perceived that the hair which showed under her head-dress was black, while the tails were of a light brown."

The reader must pay his respects to the bride:—

"This was the bride. Immediately gilt and satin-covered chairs were placed for us within a yard of the divan, and directly in front of it; and the invitation, 'Shoof aroussa' (look at the bride), was given. I have seldom experienced so singular an impression as that which seized me on obeying the injunction. There she sat—a girl of sixteen, very beautiful, rich, in the full possession of her woman's charms—but no woman. For the time being she was simply the aroussa—a show, a sight, a thing on which to hang gorgeous jewels, gold, glittering stuffs, feathers, embroidery—nothing more. She sat upright, supported and surrounded by cushions, her legs tucked or crossed under her, her hands folded on her lap, her eyes drooped. This position she never changed during the whole time—about an hour and a half—that we remained there. I shall never forget the cold, handsome, scornful, weary face I then gazed on, nor the suggestions it conveyed to me of the struggles between the external and internal life some of these women must undergo before they settle down into the usual routine of the harem existence. There was this young creature, passively and silently submitting to what to any woman must have been a frightful penance, physical as well as moral—submitting without a murmur expressed, while her face was one persistent protest against the enthrallment she was enduring, and which must have been inexpressibly painful; for her finely-cut closed lips were nearly colourless, and all her face was wan with the fatigues and constraint of her position, maintained daily during many consecutive hours."

Let us turn from the bride in her hour of triumph, and glance for a moment at a dowager-hour:—

"This old lady, who, in addition to being fat and shabby, was, as her subsequent conduct proved, so very jovial as to awaken a suspicion touching the use of stimulants, evidently considered that the answers indicated a very backward state of civilization. Did they sing at the wedding? she inquired, beginning herself one of the tuneless monotonous chants of which Eastern song consists. No. She tossed her chin with an air of pitying contempt. Did they dance! and here, scrambling to her feet, she began a slow swaying, rhythmical movement, twisting her arms and her head in a manner that would have been graceful, had some twenty years been taken off the lady's age, and some four or five stone from her weight, accompanying the dance with a slow song (to which, however, she gave anything but a 'slow' expression, in the slang acceptation of the word) and a clapping of the hands in time to the measure. And now, for the first and only time, did the bride indicate that she was a living woman, and not a deaf and dumb and

blind and senseless image. At the first movement of the old lady, the shadow of a smile flickered over her fine set features and was gone; but when the dance and song actually commenced, the passive scorn of her face changed for an instant into an indignant sneer; up went the chin, still lower dropped the lids, and a little inarticulate sound, indicative of contemptuous impatience, escaped her lips; then again her face became rigid. Meanwhile, considerable sensation was produced in the harem by the conduct of the old lady; and though some laughed, it was evident from the demeanour of the ladies in general, that they were greatly scandalized by the proceeding. But in vain. The dancer wavered and quavered on unheeding, addressing both dance and song especially to us, and, for the first time since my entrance into the harem, I began to acknowledge that there were cases where ignorance might be bliss; for there were evidently portions of the song so little suited to ears polite, that some of the women uttered exclamations of horror, and one or two covered their faces with their hands."

—Between Miss Power and Lady Mary Wortley Montagu the contrast is striking.

At Cairo Miss Power encountered Mr. Buckle, of whom she writes:—

"At Cairo we had the good fortune to fall in with one whose premature death a few weeks later now makes the souvenir of the encounter doubly interesting. This was Buckle, who, in his researches for fresh materials for his 'History of Civilization,' was now on his way back from a journey up the Nile. He had, on his arrival in Egypt, brought letters of introduction to the R—'s, so that as they were already acquainted he came almost immediately to call, and was asked to dinner on an early day. I have known most of the celebrated talkers of—I will not say how many years back—of the time, in a word, when Sydney Smith rejoiced in his green bright old age, and Luttrell, and Rogers, and Tommy Moore were still capable of giving forth an occasional flash, and when the venerable Lord Brougham, and yet more venerable Lord Lyndhurst, delighted in friendly and brilliant sparring at dinner-tables, whose hosts are now in their half-forgotten graves. I have known some brilliant talkers in Paris—Lamartine and Dumas, and Cabarrus, and brightest, or at least most constantly bright of all, the late Madame Émile de Girardin. I knew Douglas Jerrold; and I am still happy enough to claim acquaintance with certain men and women whose names, though well known, it were perhaps invidious now to mention. But, for inexhaustibility, versatility, memory, and self-confidence, I never met any to compete with Buckle. Talking was meat, and drink, and sleep to him: he lived upon talk. He could keep pace with any given number of interlocutors on any given number of subjects, from the abstrusest point on the abstrusest science to the lightest *jeu d'esprit*, and talk them all down, and be quite ready to start fresh. Among the hundred and one anecdotes with which he entertained us I may be permitted to give, say the hundred and first. 'Wordsworth,' said Charles Lamb, 'one day told me that he considered Shakespeare greatly over-rated.' 'There is an immensity of trick in all Shakespeare wrote,' he said, 'and people are taken in by it. Now if I had a mind I could write exactly like Shakespeare.'—'So you see,' proceeded Charles Lamb, quietly, 'it was *only the mind* that was wanting!' We met Buckle on several subsequent occasions, and his talk and his spirits never flagged; the same untiring energy marked all he said, and did, and thought, and fatigue and depression appeared to be things unknown to him."

Of such gossip there is an abundance in Miss Power's entertaining volume, which is a success because she usually confines her remarks to the trifles which she understands. The poorest part of her performance is where she rides out from Alexandria to explore Roman remains, and as she gallops her donkey homewards composes some singularly feeble verses, on 'The Grave of a City.'

Wills from Doctors' Commons. A Selection from the Wills of Eminent Persons proved in the Prerogative Court of Canterbury, 1495—1695. Edited by John Gough Nichols and John Bruce. (Printed for the Camden Society.)

THE records in Doctors' Commons are open to students of history, and the world is not loosed from its foundations. Never was locality so absurdly guarded to no good end. When admittance was given, it was for money paid down; and the reader of a will was watched as a man likely to be guilty of larceny. He came there, of course, for information which he particularly desired to remember; but if he attempted to take a note, to assist his memory, the watchers were upon him; and the poor man, rebuked, bewildered, and half-conscious that his reputation for morality was small in the estimation of the vigilants, withdrew from the office neither wiser nor better than he came.

Thanks to Sir John Romilly and Sir Cresswell Cresswell, such reformation has been made that all wills may now be freely read and copied, the dates of which are previous to the year 1700. We hope to see an improvement even upon this great step, and that all wills which are a century old may serve to illustrate social, political or religious history, if students can get anything out of them for that purpose.

Into the collection now accessible, Messrs. Nichols and Bruce have dipped, and brought up between two and three dozen wills, whose dates range over two centuries. They are of persons of various degrees, from the mother of Edward the Fourth to Davies the writing-master; and most of them display the common alacrity of testators in giving away money after their deaths, when it really becomes the property of their heirs. There are some exceptions to this practice, in which case the person benefited is named; and the moribund testator, having done what he liked with his own, intimates to his heirs that, as far as that person is concerned, the property which has fallen to their hands will suffer no diminution.

In the very first will, that of Cecily, Duchess of York, dated 1495, we find an early allusion to carriages, in the legacy "to my daughter of Suffolk the chair with the covering, all the cushions, horses and harness belonging to the same, and all my palfreys." A later bequest to Richard Boyville and Griselda, his wife, gives to that couple, among other things, "my chariot, and the horses, with the harness belonging thereunto,"—a lot that might figure in any modern Duchess's will of this later era. The books of this not too happy lady, the Duchess Cecily, consisted of a *Legenda Aurea*, Lives of St. Catherine of Sienna and St. Matilda, and an antiphoner with the rules of music in the latter end, with a "legend book," a "collect book" and a "gospel book." On the other hand, the widow of him who was slain at Wakefield died possessed of much miscellaneous property,—of which she gives to Dame Jane Pesemershe, widow, "mine inn that is called the George, in Grantham." The whole is devised "at my castell of Berkehamstede," where the greatest of the Plantagenets had kept his Court, and under the shadow of the relics of which nigger melodists now ply their harmony and Aunt Sally endures the assaults of all comers.

We should have liked to have heard more in detail of the books of Archbishop Warham, the predecessor of Cranmer, at Lambeth. We learn, however, that he lent them, and he bids his nephew, William Warham, to keep those which the said nephew had borrowed! The rest are "pricksong books," theological books, ledgers, grayles and antiphoners, bequeathed to various colleges. Stephen Gardiner, Bishop of Win-

chester, leaves "to Thomas Worlyche, all my humanity and law books," and Casaubon, in 1614, "to the library of the French Church in London four of my greatest books among the fathers, and my Gregory Nyssen Manuscript." Of Prynne's library we get fuller knowledge from these details:—

"Item, I give to the library of Lyncolnes Inn all my manuscripts of Parlyament rolles and journalls, and other records not yet published, together with my Rerum Germanicarum Scriptores in five, Rerum Hispanicarum Scriptores in 4, and Goldastus in 3 folio volumes. Item, I give to the library of Oriall Colledge in Oxford, whereof I was both a member and a tennant, my Ocham upon the Sentences, Saint Bugel's Revellacions, Laurentius Surius his Comments in 4 tomes, and one of each sort of my owne printed bookes, which they yet want. All the rest of my divinity and ecclesiastical history bookes I give to my deare brother Mr. Thomas Prynne, and all my other history bookes, phisick, philosophy, chirurgery bookes, and poets I give to nephew William Clerke, with this proviso, that he shall not sell them. And for my law bookes I give see many of them to my brother George Clerke as he shall make choyce of."

The editors add in a note—

"The books given to Lincoln's Inn are not indicated in the library of the Society as having been the subjects of this bequest; but several of the manuscripts in that library have Prynne's handwriting in them, or can be shown in other ways to have passed through his hands."

Prynne left to Tillotson "one of each of my three tomes of my 'Exact Chronological Vindication,' 8vo., bound." William Lilly, the astrologer, bequeaths his "library of books" to his wife Ruth; and Vossius makes precisely the same bequest "to my loving niece, Attia." This latter collection was held to be the best then in the possession of a private man (1688), and it was bought by the University of Leyden.

The tracing of the descent of pictures is not much facilitated by these documents, but something of interest concerning them is not wanting. Archbishop Warham, for instance, leaves to his nephew all his clothes hanging "in the chamber in which I sleep at Knoll, in which are the pictures of Jesus Christ, John the Baptist, and of some of the other Apostles, which I bought from my lord Sir Arthur Darcy"; and further to the same nephew the hangings "in another room in which I sleep at Knoll, in which are pictures of huntsmen, bears, boars and stags, which I bought from John Barret." Some of these pictures may still exist at Knowle Park, though that possession has so often since changed hands.

Isaac and Peter Oliver, specimens of whose handiwork may be found at Kensington, meet together in the following extract from Isaac's will:—

"I give and bequeathe to my eldest sonne Peter, yf he shall live and exercise that arte or science which he and I nowe doe. But, if he shall dye without yssue and not use the same arte, then I will that all the same drawynges onely shall remaine to such an other of my sonnes as will use and exercise that arte or science. Item, my will ys that my sayed sonne Peter shall have the first proffer of the sale of my pictures that shalbe soulede, and fyve shillings in a pound cheaper than any will give for them."

Great as Isaac was as a miniature painter, he was excelled by Peter. The Digby collection of Peter's miniatures was one of the features of the Strawberry Hill sale. Another master, Lely, directs his pictures to be sold. They were so numerous, including the drawings, as to take six weeks in the selling. They realized 26,000l.

In such remote times as 1529 there was no directing money to be invested in Consols, as will be seen by the will of Dame Maude Parr, mother of Queen Catherine Parr, and of Anne,

wife of the first Earl of Pembroke, of the Herbert family:—

"I will that all suche mony that I have in keeping toward the marriage of my daughter Anne, whiche my husband willed to hir, and all suche plate and other bequestes as I have willed to my said daughter Anne by this my will, be putt into an indifferent place in suer keeping in cofers locked with divers lockes, wherof every one of my executors and my said daughter Anne to have every of theym a key, and there yt to remayne tyll it ought to be delyvered unto hur."

Cardinal Pole, too, husbands his money well. He could not have foreseen that Matthew Parker was to succeed him in the Archbishopric of Canterbury; but he particularly protests against his estate being called upon for dilapidations:—"Pro dilapidacionibus autem non est cur successor meus in ecclesia Cantuariensi aliquid petat, cum in melioramentis domorum ut fiquido apparet his paucis annis quibus eidem ecclesie prefui plusquam mille libras expendim"; and 1,000*l.* was no small sum to have expended on improvements during a two years' tenure of the primacy.

To Pole and to Queen Mary, Stephen Gardiner is particularly flattering in his will. To the latter, whose graciousness he could not requite if he were to live many lives, he leaves "a cup of gold with a sapphire in the top, as worthy to have precious stones and gold as ever was a princess." To Pole is bequeathed "a ring with a diamond, not so big as he is worthy to have, but such as his poor orator is able to give."

The most business-like will, and one of the briefest, is that of Frances, Duchess of Suffolk, and mother of Lady Jane Grey. The widowed Duchess re-married with her equerry—superintendent of her stables, in fact,—Adrian Stockes. "Has she married her horsekeeper?" said Elizabeth to Cecil.—"Yea, madam," the latter is reported to have answered,—and he was a bold fellow if he did,—and she says you would like to do the same with yours"—alluding to Leicester. The Duchess by courtesy, Mrs. Stockes according to Canon and Civil law, was happy, we suppose, with Adrian, for she bequeaths to him everything she possessed, and that for the very sufficient reason "that the said Adrian Stockes, my husband, is indebted to divers and sundry persons in great sums of money." Admirable specimen of womanly foresight and kindness, where a wife consoles her husband for his loss, by paying his debts!

Uncles are not so unreservedly liberal to their nieces. Here is Sir Thomas Gresham, who must have had a precocious young kinswoman, for he bequeaths 300*l.* to his niece, Catherine Neville, to be paid on her marriage-day, "so that she mary not afore she be fifteneh yeares of ayge." Barbarous *avuncule*, to keep Kate Neville waiting to such an advanced time of life before she might give her hand to a lover! It reminds us of the maid in the French ballad, who sings,—

Hier, Damon, qui me pourrui sans cesse,
M'offrait un œur tout prêt à s'enflammer,
Allez, lui dis-je, allez à la jeunesse!
Moi j'at quinze ans, on ne doit plus m'aimer!

Although most of the wills deprecate all disputes, some of them must have given fine grounds for that rare domestic luxury—a family quarrel. Such must have been Casaubon's bequest "to the son who, walking in the fear of God, shall be the fittest to sustain my family, I do give the cup of Mr. Scaliger, of most happy memory." Here was a legacy to set brethren at issue. Who was to decide the question? Apparently the mother—which circumstance was not likely to render the settlement more easy.

Then, again, here is that triple rake, Wilmot, Earl of Rochester, speaking of his dear wife, Elizabeth Mallet, and their children, and adding to their legacies a bequest "to an infant child of the name of Elizabeth Clarke, forty pounds annuity, to commence from the day of my decease, and to continue during her life." Was this last and little Elizabeth the daughter of another Elizabeth, "the great Mrs. Barry," who was then drawing tears at Dorset Gardens by the most touching of all her creations, Monimia, to Betterton's Castalio? But, perhaps, Lady Rochester—the Mrs. Mallet whom Lord Herbert wished to have, Lord Hinchinbroke did not care to have, Lord John Butler could not have, Popham would have done anything to have, and Rochester was determined to have, for a wife, and so carried her off by force and married her—construed mildly of proceedings, of which Prince Rupert speaks more unreservedly in his own case than Rochester does in his.

We have drawn these illustrations of past life and death from only a few of the wills in this volume, put forth under worthy editorship. It is a book in which everybody seems to prosper by death, even the dying who are full of hope, but especially the heirs who come into possession, and who,

— like the black and melancholic yew-tree,
Do stand and root themselves in dead men's graves,
And there do prosper.

A Commentary, Critical, Experimental, and Practical, on the Old and New Testaments. By R. Jameson, D.D., A. R. Fausset, A.M., and D. Brown, D.D. Vol. V. *Matthæw—John*, by D. Brown, D.D. (Glasgow, Collins; London, Nisbet & Co.)

COMMENTARIES on the Bible are plentiful, and their number increases from year to year. It is very difficult, however, to write a good one. A single scholar cannot do so on the whole Bible. Excellence in this department, as in others, can only be attained by division of labour; different men taking different books. To some extent, the present Commentary partakes of this benefit. It is distributed among three divines; and the first instalment consists of the four Gospels. According to the title it is *critical*. It had been better, however, that the department in question should have been omitted; for the specimens of criticism are comparatively few and of inferior merit. The scholarship of the writer is evidently of small grasp. This appears plainly enough from the introductions to the Gospels, where difficult questions are settled in a very perfunctory way. Thus in speaking of miracles, he asserts, in an off-hand style, "To our thinking, the possibility or credibility of a miracle is simply a question of Theism or Atheism. If there be no God, there can be no miracle, in any proper sense of the term. But if there be, 'the laws of nature' are but his own method of rule and his own physical creation." No light whatever is thrown on the points handled, such as the primitive language of Matthew's Gospel; and the proof for an Aramæan original is badly stated. The reasoning is like that of an advocate, who takes his side at the beginning. When the writer asks, "Who can readily bring himself to believe that if such Hebrew original of the Gospel according to Matthew was in existence for nearly four centuries, the orthodox Church would have allowed it to go out of their own hands almost from the first, and that this treasure was preserved exclusively among a contemptible body of Judaizing heretics, who at length melted away altogether, and their Gospel with them?"—the reader sees the writer's incompetency to deal with questions of a critical nature. This is confirmed by the note on John v., 3, 4, where

it is stated, incorrectly, that the external evidence for the authenticity of the passage is much stronger in fact than in appearance, and that the internal evidence is quite sufficient to outweigh even stronger external evidence against it than there is. Equally wrong is the tenor of the remarks made upon John vii., 53—viii., 11, the genuineness of which is upheld contrary to the most convincing evidence. In like manner, Mark xvi., 9–20 is defended as an authentic part of the Gospel, and it is gravely asserted that "the argument from difference of style is exceedingly slender." But it is needless to show the worthlessness of the commentator's critical judgments. No scholar can attach the slightest value to the portions which bear this character.

The value of the work lies in the experimental and practical part of the notes, which is the largest. Here the Calvinistic theology of the Westminster Confession of Faith underlies the whole; and therefore the volume may be popular with those addicted to that system. With many of the annotations we incline to agree. They are instructive, edifying, devotional. The commentator writes clearly, and displays much good sense. Plain readers of the New Testament will thank him for his help. Yet it cannot be said that *exegesis proper* is the body and soul of the Commentary. It should be so, but it is not. Difficulties are not explained. In many cases they are not even attempted. Thus, not a word is said of the *subjective or objective* nature of Christ's temptation. It is simply assumed that the whole was objective. The first two chapters in Matthew's Gospel are beset with great difficulties, most of which are ignored. Those who look to the work as a *commentary proper* courageously entering into, and attempting to explain the difficulties inherent in the words of Scripture, will be greatly disappointed. Thus, the word "therefore," in John, vii. 22, is passed by; the commentator not knowing apparently that the two Greek words so translated belong to the preceding verse, not to the twenty-second. In many instances, Barnes's notes are superior in exposition. Thus in Matt. i. 22, the expression *that it might be fulfilled, &c.*, is passed over; whereas Barnes has a very good note upon it. Had the commentator given more space to exegesis, and less to sermonizing remarks—had he refrained from inserting pieces of hymns and sacred poetry, reserving his space for more important matters, he would have produced something better. As it is, the value of his book is not great. There is more of pretence than performance in it. We notice, in conclusion, that the spirit of the annotations is moderate and good. Bitterness and intolerance hardly appear. Here and there, there is an allusion to the Tübingen school and the Unitarians, which might have been spared with advantage, but such phenomena are rare.

NEW POETRY.

The Laureate Wreath; and other Poems. By John Edmund Reade. (Longman & Co.)—Mr. Reade has heretofore given better proofs of his ability than are to be found in the book before us. 'The Laureate Wreath,' though it has a few good lines and truthful descriptions, is tedious as a whole. The style is frequently vague and pretentious; and not all the amplitude of verbal dexterity can lend dignity to the meagre ideas which it too often envelopes. Here is an example in point:—

There are three gods in one that rule mankind,
Idols material and self-create,
Before whose shrines we offer sacrifices,
Time, life, and circumstance. While onward roll
Their chariot-wheels whose cycles are our years,
There is no ill cast forth without its good,
The attendant shadow, and no wrong but brings
Awarding retribution, that ungrasped

By the quick hand and ever-watchful eye
Is lost for ever. Chance no substance owns,
The anarch ghost embodied in the fate
Which is necessity.

—These lines have certainly an imposing sound, but no corresponding depth or justness of thought. In what sense, for instance, can time be so distinguished from life, or life from circumstance, as to make them three separate powers? Either time and life are the mere spheres in which circumstance evolves itself, or, if otherwise understood, they are identical with circumstance; and in neither case can they form a trinity of causes. Besides this, when we are told of their operation that there is no good without ill, and no wrong without retribution, we cannot but feel that such very plain axioms might have dispensed with the pomp of a metaphysical introduction. The most serious objection, however, to Mr. Reade's poem is the unreality of its interest and story. A "grey and thoughtful man," who bears the romantic name of Astrophel, and whose high and open brow is "signed by ancestral race," rather imprudently goes to sleep upon the grass. In this condition he is found by Cornelia, the heroine of the poem, and her father. Cornelia and Astrophel love at first sight, and the latter is invited to be a guest at her father's house. We next learn that Astrophel, notwithstanding his high birth, is very poor; but as he is also a poet of the loftiest order, his indigence takes a romantic colour from his genius, and endears him still more to the susceptible Cornelia. When her father's guest, Astrophel meets another poet, Auriol of the West, whose second-rate effusions are highly popular, while the nobler strains of Astrophel are comparatively neglected. A trial of skill takes place between the rivals, in presence of the company assembled, who have the bad taste to prefer the verses of the inferior genius. Astrophel forthwith quits Cornelia, resolving never to marry her until he has achieved a reputation and reversed the judgment in his rival's favour. This he eventually accomplishes. A second audience of judges is convened, both poets again declaim their compositions, and this time Astrophel comes off triumphant. Cornelia bestows on him the wreath, and he is now content to accept the hand which she accords, and to ascribe his victory to the inspiration of her love. How utterly foreign all this is to modern habits and notions, we need not point out: it has, moreover, the graver fault of being untrue to the dignity of genius. Unappreciated poets have ceased, now-a-days, to weary society with their complaints; and it is to be hoped that they have a higher object than the laurel won at a public competition. As some of the works here ascribed to Astrophel have subjects in common with those of Mr. Reade's previous poems, we cannot avoid the inference that the fictitious bard in 'The Laureate Wreath' is intended for a reflex of its author. From this point of view, Mr. Reade's protest against public taste is, to say the least, ill advised. We have every respect for him as one who has devoted his life to worthy labour, although he has often been unfortunate in choosing themes which had already been treated by celebrated writers. We could point out many fine passages in his poems which, owing to this cause, have been unduly neglected. In his tragedy of 'Catiline' he took more independent ground; and the vigour and characterization displayed in that work might have found a response in days when the classical drama had admirers. Mr. Reade, however, would do more wisely to let his writings speak for themselves than to speak for them. If they have true claims upon public attention, it will one day be conceded. The result depends upon their own qualities, not upon the author's opinion of them.

Mirvan: a Moorish Tale, &c. By an Author without a Publisher.—'Mirvan' is introduced by a Preface in which the author, Mr. J. A. Smith, complains bitterly of our leading publishers. None of them, it seems, would undertake to issue his volume, even at the expense of the writer, who, indeed, received from one firm an intimation that they "never published works which did not issue from the presses of their own printers." We cannot direct Mr. Smith to any remedy for hardships of this kind. They are but illustrations of a universal law,

which compels every new labourer to prove his merit in the face of difficulty, and which gives capital the power to be exclusive. There are really no means, legal or moral, by which publishers can be forced into the service of unknown genius. They may show blindness to their own interests, the consequence of which is that they miss a prize,—or they may be simply arrogant, in which case they send the author to houses of humbler standing and more pliant dispositions, and thus help to establish their future rivals. Commercial power, like any other power, if misapplied, thus draws on itself a natural retribution. We know of no other penalty that would be just or even possible. Our readers may wish for a sample of the book which publishers have declined to introduce. This description of Mr. Smith's heroine is perhaps as good a one as we can select:—

The strain hath ceased, and o'er her lute
A lady bends with pensive brow;
But though her passion'd voice is mute,
Her inward thoughts tumultuous glow,
And fan with scarily hidden sighs
The love-light of those dove-soft eyes.
Her neck the sculptor's marble shames,
Her soft sunned cheek the orient claims,
And keeps such beauty still a prize
'Mong passion-flowers and Pnylin akies.
As musk-rose in dawn's ruby ray,
As dream that haunts the wakening day,
As virgin white rose with the blush
Of conscious purity appears.
Her inward love's impassioned gush
Warms the ripe peach her rich cheek wears,
And stirs a soul, by joy inspired,
With beauty's dream of passion fired.

—Further on we meet with a hand-to-hand combat, which is told with considerable force. Indeed, the story throughout is sufficiently fluent and lively to be readable. It has nothing, however, original enough to seize on the memory or to invite re-perusal.

NEW NOVELS.

Grace of Glenholme. 3 vols. By William Platt. (Newby).—Mr. Platt's stock-subject for illustration appears to be money, and its influence on those who possess it, or who wish to possess it. His stories are provoking,—they offer glimpses of a plot, capable of being made thoroughly interesting, and the glimpse afforded in the early pages lures the reader on, in a hope that, we regret to say, is never realized. The story itself is swamped, and the interest frittered away in prolonged conversations between characters who do nothing to help on the story, and who talk at their leisure and for the pleasure of the author, whilst the story itself is so cramped and curtailed, that instead of gradually ripening to a conclusion, the explanations are huddled together in a few pages, and the *dénouement* is precipitated in a crude, unsatisfactory manner: the whole story resembling an ill-dressed joint of meat, burnt to a cinder on one side and not cooked at all on the other. Apparently, Mr. Platt wishes to develop his characters,—but mere characters who only talk, and do nothing but enter right and exit left or centre, and who do not contribute any action to the story, are tiresome supernumeraries—no matter how naturally they may be dressed or described: if they say nothing to interest the reader, it is no matter how easily or characteristically they may discourse. The story of 'Grace of Glenholme' might have been made extremely interesting, but as it stands we can only record our disappointment at seeing good materials produce so little effect. Mrs. Kitty Oldcastle is a woman of immense fortune, which she has inherited from a brother, to the total exclusion of her sister Amy, who having made an imprudent marriage and gone out to India with her husband, has never been forgiven. There is some skill shown in drawing Mrs. Kitty's character; who, hard, capricious, proud and tyrannical as she is, cannot be called a wicked woman, and the reader is obliged to feel a regard for her, although it is evident she has done something at which her conscience is ill at ease. There is knowledge of human nature shown in the mode in which she endeavours to quiet her remorse by doing anything and everything except make atonement to the individuals whom she has injured. She is not naturally a bad or designing woman, but she is proud and hard, and having once done wrong, will

not own to it, but obstinately persists in trying to turn wrong into right. She refuses to recognize her sister Amy, who has been left a widow under tragical circumstances, but she adopts a mysterious baby, which has been dropped into the river one night by a dark lady attired in a long black cloak. This baby grows up to be a beautiful young lady, whilst Amy's baby is a little boy, who grows up into an equally-beautiful young man, whose name is Ernest Harrington. These two babies are of course destined for each other, but instead of working out the tragedy begun by the death of Amy's husband, the whole of the three volumes is occupied with the amiable endeavours of the doctor, the clergyman and an old servant to penetrate the mystery that lies on Mrs. Kitty's conscience; they carry on their conversations in a semi-jocular manner, and always with some reference to future legacies. There is an intriguing solicitor and an intriguing poor niece, companion to Mrs. Kitty, well described; and no use whatever is made of the dark lady, who does nothing else except lose a locket, containing two miniatures, which, after lying exposed to wind and weather for seventeen years, is discovered in all its pristine freshness, and of course leads to the discovery of Miss Grace's parentage; but the author dallies with his subject, doing only the easy parts of the story, till the interest grows quite cold; and when the closing scene comes, when the wrong is made right, and there is a grand awarding of poetical justice, the reader has pretty well ceased to care about the matter.

Cost of a Secret. By the Author of 'Agnes Tremorne.' 3 vols. (Chapman & Hall).—This is a clever but uncomfortable novel; it is not natural or probable. A Monsieur Corsand, a French hero, and the noble French Providence of the book, has made a secret marriage before the book begins, and events are in a considerable state of complication when the story opens. Cordelia Ashley, a beautiful young woman, full of musical genius, with a divine voice, is living apart from her husband with her own family, who, though worthy people, are entirely uncongential. There is a mystery and much discomfort in her position; her own marriage has been unhappy; but what has been the matter the reader does not know. Cordelia leaves home, goes to Italy, becomes a *prima donna*, has immense success, and the mystery about her husband grows more impenetrable. M. Corsand goes for a great deal in the difficulty. There is a Russian princess of the stamp of fascinating demons, familiar to readers of French novels, who makes mischief between Cordelia and her husband; but the reader can make nothing out of the entanglement. Cordelia, it appears, is the only one who knows the secret of M. Corsand's marriage; his wife is dead long ago, but he still persists in the secret, and he is mistaken for Cordelia's lover. It is not until everybody has been made miserable and Cordelia is nearly dying that M. Corsand magnanimously resolves to act with common sense, and to sacrifice a secret for which the most flimsy reason only existed. The air with which he discloses the innocent fact that he had been the lawful husband of a rich and excellent woman is almost comic, although the author does not intend it as such. The conclusion is, that he had done wrong to make an inviolable secret of what has so bitterly compromised another; whilst the other actors in the story apportion their own respective shares of blame; only the Russian Princess, the "white devil" of the story, insists on being a good angel, and will not own to having done anything but what is heroic. The story winds up comfortably; but the radical fault remains—the plot is theatrical and unnatural, whilst the "secret," which it has cost so much to keep, is machinery too slight for the strain upon it.

The Fate of a Year: a Novel. By Miss Sarah Stredder. 3 vols. (Skeet).—We should imagine that the novel with the above rather vague title was a first attempt. It is not without promise of better things; but the author must be warned not to tease her readers out of all their interest by long desultory conversations, which interrupt the action, and by telling the story in hints and allusions and fragmentary incidents. The story is fatiguing to follow, and not particularly worth the trouble. Vere-

nica and her brother Rayner, the orphan brother and sister, living with an old miser uncle, are well sketched, but they begin and break off so often that the reader grows tired before the story fairly begins. The indecision of George Elishaw, and his conduct to Veronica, does not give the reader much promise of happiness for their future married life, which gleams out at the end, and is intended for the bright evening after a day of clouds and rain. The loves of Agatha Brandistone and the impoverished owner of Romanaleigh is a pathetic story, which would move the reader more if it were more distinctly told, and if the Master of Ravenswood and Lucy Ashton had never been heard of. The novel wants force and distinctness. There is a constant intrusion of secondary characters, who overcrowd the stage and hinder business. If the work had been shortened by the suppression of extraneous characters, the story would have gained considerably in interest. 'The Fate of a Year' is not satisfactory as a whole, but we repeat that it gives the promise of better things.

OUR LIBRARY TABLE.

The Alpine Journal: a Record of Mountain Adventure and Scientific Observation. By Members of the Alpine Club. Edited by H. B. George, M. A. (Longman & Co.)—A very desirable new Quarterly, which though consisting only in the present number of but few pages will probably enlarge its dimensions and include more miscellaneous matter than the number before us does. All kinds of useful scraps for pedestrians and mountaineers, together with a Notes and Queries department, should be added. If made a thoroughly accessible and popular medium of communicating Alpine information and science, it will probably live out the days of periodical peril; but if suffered to be merely a bare record of adventures in the High Alps, its interest will be limited to the few who dare the arduous passes and climb the greater heights. All the papers in this number are of value, but they mostly lack liveliness, excepting Mr. T. J. Kennedy's account of Zermatt and the Matterhorn in winter. In the course of two or three pages that gentleman will describe his toiling up the much-encumbered valley of St. Nicholas to Zermatt, and his bold, not to say rash, attempt to scale the Matterhorn. Of course he failed, but he has not failed to interest all who have trodden the same ground—save and except the Matterhorn itself.

Something New; or, Tales for the Times. By several Writers. Edited by Eustace Wilberforce Jacob. (Faithfull.)—The times must be sadly out of joint if they can find pleasure in the miserable little novelettes which make up this volume of rubbish. What right, apart from their singular folly, they have to the title of 'Something New' we are at a loss to say. Stupid stories are common enough; and it is no new thing for several silly people to lay their foolish heads together and produce a joint work, in the hope that their combined weaknesses may appear a phalanx of powers to the eyes of simple gazers. It is customary for sheep to run about in flocks. Far from novel also are the charitable professions of the several writers, whose avowed object in putting forth their opusculi is to swell the receipts of the "Lancashire Distress Fund." Never does a London season pass by without exhibitions of that sort of benevolence which induces amateur actors to hire a theatre, and, in the name of an hospital, tout for spectators to whom they may exhibit their histrionic powers. There is, however, something unusual in the frankness with which Capt. Jacob avows the means by which he has obtained money from the public, and the reserve that makes him keep a profound secret the exact amount which he has squeezed from the charitable. "I had certainly," observes the Captain, in a Preface which either admits too much or says too little, "intended bearing the whole expense of publication; but I soon saw that it would do no service to the Lancashire Distress Fund unless, in order to secure the desired result, I determined to publish it by subscription. To those who have so kindly aided me by subscribing to this volume, I would tender my grateful thanks. It is simply from

a reluctance to multiply matter that I have been induced to omit their names." The gallant Captain's "reluctance to multiply matter" is, we presume, reluctance to incur the additional expense of publishing the list of his pecuniary contributors. The terms, therefore, in which he apologizes for his reticence imply that his subscribers have been numerous, and that the sum of money confided to his hands has been considerable. Such being the case, we would gladly have received more exact information as to the mode in which he has hitherto carried out a public trust. People who are asked to buy these worthless tales for the sake of the "Lancashire Distress Fund" may reasonably be curious about the proceedings of their almoner, and ask how much he has collected, what proportion of the gathered fund he has paid to Miss Faithfull, and what proportion has been absorbed by the cost of advertisements and other incidental expenses. When every committee for raising a "Lancashire Distress Fund" has presented the public with a balance-sheet, why should Capt. Jacob not be called on to render an account of his stewardship? Doubtless he has acted with good faith and to the best of his abilities, but his "reluctance to multiply matter" leaves his subscribers much in ignorance as to the amount of good their charity has done to the suffering operatives.

Matilda the Dane. By C. J. Collins. (Ward & Lock.)—A story on the too well known tradition of Matilda of Zell and Count Struensee. Where the outline, progress and dénouement of a drama have been so minutely set before the world that no room is left either to ask or to answer any further questions, to attempt a romance upon the subject at this time of day is unremunerative labour. There is nothing novel or original in this volume.

The Farm Homesteads of England. Edited by J. Bailey Denton. (Chapman & Hall.)—We have here a general acquaintance with the agricultural districts of England, good judgment in the selection of the best specimens of farm architecture, great skill in draughtsman and lithographer, and the best typographical ability, all united in the production of a work at once useful and ornamental. Mr. Bailey Denton has done well to publish pictures and working drawings of buildings when their fitness to the farms on which they have been built has been proved by actual experience. Designs for ideal circumstances would not have been so satisfactory. He has also done well to publish, in short descriptive essays accompanying the drawings, an account of the farm-buildings which have been thus selected as the models and illustrations of those rules in farm architecture which, in the concluding part of his volume, he has to discuss. His readers will thus be able to appreciate the soundness of his reasoning and the general applicability of his rules. The work is being issued in Parts: each of which contains the particulars, in ground-plan and isometrical perspective, of three selected homesteads. Part I. describes in this way the Prince Consort's Flemish Farm, the Duke of Bedford's Thorney Farm, near Peterborough, and Bucken New Farm, near Kimbolton, the property of Col. Linton. Part II. contains similar illustrations of first-class farms in Gloucestershire, Lincolnshire and Oxfordshire. The whole volume when completed will present a very striking picture of the complete equipment which agriculture now requires and very generally possesses.

Of publications on American affairs and other subjects we have to mention *An Appeal to the American People and a Protest against the American People; together with Three Letters in reference to the Great American Question, Peace or War?* (Tallant),—*A Letter to W. H. Russell on Passages in his 'Diary North and South,'* by A. D. White (Stevens),—*Union Foundations: a Study of American Nationality as a Fact of Science,* by Capt. E. B. Hunt (Trübner),—*Peace the Sole Chance now left for Re-union,* by J. L. O'Sullivan (Brown),—*Refutation of Fallacious Argument anent the American Question* (Ridgway),—*A Northern Plea for Peace,* by the Hon. W. B. Read (Macintosh),—*Holmes's Magneto-Electric Light as applicable to Lighthouses,*—*A Statement of the German-Danish Question, with reference to the Propositions for its*

Adjustment lately made by Great Britain (Leipzig, Brockhaus),—*Four Centuries of Modern Europe,* by T. B. Bishop (Freeman),—*Short Explanation of the Sketch of the Analytic Universal Nautical Code of Signals,* by Count D'Escayrac de Lauture (Hotten),—*Military Despotism; or, the Inniskilling Dragoon: Addenda to the Case of the late Regimental Sergeant-Major Lilley* (Chapman & Hall),—*The Flying Dutchman, and Precursor of the Overland Route to India* (Dublin, Robertson),—*Letter to the Most Noble the Marquis of Clanricarde on the Sale of Waste Lands and Law of Contract for India,* by J. O'Brien Saunders (Ridgway),—*The Abolition of the Law: an Essay,* by the Rev. Dr. Whately (Hodges, Smith & Co.),—*Iron-Clad Sea-going Shield Ships,* by Capt. Coles (Harrison),—*London and its Gas Companies,* by S. Hughes (Waterlow),—*Remarks and Experiments on English Hexameters,* by C. B. Cayley (Asher),—*The Metric System: its Prospects in this Country,* by the Rev. J. Kerr (E. Wilson),—*The Science of Ship-building considered in its Relations to the Laws of Nature,* by H. B. Wilson (Potter),—*Mr. Cobden's Speech on the Foreign Enlistment Act* (Ridgway),—*Insecurity of British Property in Peru,* by H. De Wolfe Carvell (Chapman & Hall),—*Sequel to 'Britons Robbed, Tortured and Murdered in Peru,'* by Capt. Melville White,—*Capt. Melville White to Earl Russell* (Hardwicke),—*The Nemesis of Drink: Passages in an Autobiography,* with a Preface by the Dean of Carlisle (Hatchard),—*Outlines of a New Theory of Muscular Action,* by the Rev. S. Haughton (Williams & Norgate),—*Ought France to worship the Bonapartes? Ahirman I.* (Hardwicke),—*An Appeal to the British Public on behalf of the Indian Tax-payers,* by C. Bathoe (How),—*Observations on Wine,* by A. and H. T. Grainger (Lynn),—*The Essentials of a Healthy Dwelling, and the Extension of its Benefits to the Labouring Population,* by H. Roberts (Ridgway),—*and Report of the Supposed Progressive Decline of Irish Prosperity,* by W. N. Hancock (Dublin, Thom).

LIST OF NEW BOOKS.

- Albert's (Prince) Golden Precepts, 2nd edit. 16mo. 2/6 cl. gt.
- Austin's Lectures on Jurisprudence, Vols. 2 and 3. 8vo. 24 cl.
- Bacon's Proficiency & Advancement of Learning. Summary of, 2/
- Bacon's Essays, The Illusion, by Stansby, n. ed. 8vo. 12/6
- Boy's Own Paper, Fiction, History, & Biography, 8/ cl.
- Bretherton's Laws affecting the Qualifications of Voters. 16/ cl.
- Brown's (Stafford, M. A.) Memoir, with Extracts, by his Widow, 3/6
- Burn's Outlines of Modern Farming, Vol. 2. 12mo. 3/ cl.
- Cromwell's Art of War, by Thomas Arden, 12mo. 1/6 cl.
- Charlesworth's Ministering Children, new edit. cr. 8vo. 2/6 cl. limp.
- Chesterford and some of its People, 2 vols. post 8vo. 31/6 cl.
- Church and Chapel, by the Author of 'High Church,' 3 v. 31/6 cl.
- Dixon's Lives of the Archbishops of York, ed. by Raine, V. 1. 15/6 cl.
- Ezra's (Sophia May) Poems, 16. 8vo. 6/ cl.
- False Positions, or Sketches of Character, 2 vols. post 8vo. 21/ cl.
- Ferguson's Life's Bye-ways & What I Found in Them, 6s. 8vo. 2/6
- Few Words on the Apocalypse, 4to. 1/ swd.
- Gilbert's 2,600 Questions on English History, Biography, &c. 1/ swd.
- Hunt's Fulfill'd Prophecy, Truth of Revealed Religion, 8vo. 10/ cl.
- Gospel in Madagascar, 2nd edit. cr. 8vo. 3/6 cl.
- Goulburn's Family Prayers, on the Liturgical Principle, 6s. 8vo. 3/
- Goulburn's Sermons on Different Occasions, 3 ed. 2 v. 8vo. 10/6
- Handbook for Kent and Sussex, 2nd edit. post 8vo. 10/ cl.
- Hannam's Pulpit Assistant, revised by West, 8th ed. V. 1. 2/6 cl.
- Hinchliff's South American Sketches, post 8vo. 12/6 cl.
- Homilist, The, Vol. 1, Third Series, cr. 8vo. 5/6 cl.
- Howitt's The Poet's Children, 8vo. 2/6 cl.
- Howitt's The Wye, its Ruined Abbeys and Castles, imp. 16mo. 3/6
- Hunt's Universal List, 1863, oblong 18mo. 4/6 cl.
- Jones's Mercantile Directory of Leeds, 1863, cr. 8vo. 3/ cl.
- Juvenal's Satires, Construed literally, by Giles, 18mo. 2/ swd.
- Lea's Poemata Medica. Original Odes, 18mo. 4/ cl. gt.
- Lyttelton (Lord) and Gladstone's Translations, 2nd edit. 4to. 9/ cl.
- Maid's Indoor Gardener, 8vo. 5/ cl.
- Manual of Family Devotions, from Book of Common Prayer, 1/6
- Memorable Events in the Life of a London Physician, 8vo. 7/6 cl.
- Monckhoven's Treatise on Photography, tr. by Thornthwaite, 1/6
- Morreau's Examination of Some of Dr. Colenso's Objections, 1/ swd.
- Motley's Rise of the Dutch Republic, new edit. cr. 8vo. 6/ cl.
- Penn's Fruits of Solitude in Bedouin and Maritime, 4to. 5/ cl.
- Phillimore's History of England, during Reign of George 3. V. 1. 12/
- Pindar's Odes, Pt. 2, Construed by Giles, 18mo. 1/6 swd.
- Purcell's Sir Aberdour, or the Sceptic, Cantos 3 & 4, cr. 8vo. 4/ cl.
- Select Library, Lever's One of Them, new edit. cr. 8vo. 2/6 cl.
- Stearns' Gard, its Adaptation to Horticulture, 8vo. 1/
- Stevens and Hole's Grade Lesson-Books, Third Standard, 1/ cl.
- Testament, New, Gr.; Commentary by Alfred V. 1, Pt. 1, n. ed. 12/
- Townley's Parturition without Pain, 3rd edit. post 8vo. 3/6 cl.
- Twenty-Seven Sermons Preached by Emancipators, 2/6 cl.
- Vin's A Narrative of the Wars of Britain and the British, cr. 8vo. 3/
- Walker's Sufferings of the Clergy during the Great Rebellion, 3/
- Waring's Hymns and Meditations, 9th ed. 2/6 cl. gt., cheap ed. 1/

ALBERT THE GOOD.

AFTER a dozen years, the glories of 1851—the triumphs of peace and genius, of art, of commerce, of inventive skill—have been illustrated in marble and expressed in bronze. After a dozen years! In those few words lurks the true cause of an unexpected and a mournful association of ideas. The trophy which we have raised is not a memorial; it is a cenotaph. It tells us less of triumph than of death. The commemoration of the great congress in Hyde Park has been nobly made by the public, and its meaning has been well expressed

by the sculptor in his group of figures; yet the glories of 1851 are to the popular mind of only secondary interest. Albert stands first, the Exhibition next. In the dedication of Wednesday the world, we may be sure, thought less of the Crystal Palace and all its wonders than of that prince of men who first conceived it in his mind, and then by skill and courage translated the ideas of his soul into its perfect material shape. It was an unwelcome rather than an infelicitous combination; the fitness being perfect, while the need for that fitting combination was full of pain. The figure which should have crowned the pedestal in the Horticultural Gardens was a Britannia—making the whole work symbolical, instead of partly real and partly ideal, as it now stands, to its manifest artistic loss. But the years consumed in making out the original thought brought with them changes which compelled us to adopt new plans. Britannia gave her place to Albert; the true genius of the Exhibition,—the best representative of Peace, Industry and Art.

We could well have spared the mournful poetry of this association; but having no choice in the affair, we may take to heart the tender teaching, the benignant moral, of events, which come upon us against our selfish will. That lapse of a Dozen Years which changed our memorial into a monument must be accepted with other facts. It is the old story. We go a safe and steady pace. A more sprightly people, to whom a *fanfare* of trumpets is an event and real events are but a *fanfare* of trumpets, would have enjoyed, and quizzed, and libelled, and forgotten the doings in Hyde Park long ago. This haste to do and to forget is not in our sober and chastened natures. We play our music in slow time. Our festivals become solemnities. We pause so long about our rejoicings that Time and Death come knocking at our gate and add some fresh and unwelcome visitors to our string of guests. It has always been so with us; for our movement of ideas is like the growth of our oaks, our Constitution and our empire. We are talking of a monument to Shakespeare and asking whether Cromwell is to have a statue. Our Nelson column is still unfinished. With us, everything has to *grow*, and while growth is proceeding change may come. It is the principle of our national life, and we must accept the law even when, instead of giving us, in our most frequented and brilliant public places, a memorial of our enterprise and greatness, it reminds us of an irretrievable loss.

As a mere spectacle, the uncovering of Mr. Durham's group was singularly fine; recalling more than any other show of a dozen years, that festive scene when the Queen and Prince, in the bloom of youth and manliness, rode over into Hyde Park on the 1st of May, 1851. There were the same bright colours, the same royal salutes, the same graceful harmony of trees and flags, the same fitful sunshine, broken by straying clouds, and the same serpentine winding of a rich bright line of representative men and women. Some of the chief performers were the same; and where, as in the foremost, change had done its melancholy office, there were gleams of beauty and of hope which proved that if the cloud which weighs upon the nation is very dark, it has, nevertheless, a most radiant golden fringe.

The Gardens in which the statue stands and the ceremonial took place were looking magnificent, and the commodious edifice used as vestibule and ante-room served its purpose well. We know of few combinations of garden and palace so admirably suited for such a state ceremonial as that of Wednesday last.

THE ROYAL OBSERVATORY.

On Saturday last, June 6th, the Board of Visitors went down from the Royal Society to Greenwich to inspect the Royal Observatory. They were met by the Astronomer Royal, who led them over the premises, and read to them his annual report.

The first point on which Mr. Airy dwelt was the state of the edifice. Since the visitation of last year, Struve's Observatory, and the former Dip House and Deflexion House, have been taken down, and a range of seven rooms has been built.

The Magnetic Ante-room has been much extended; an alteration which, had it been made earlier, would have saved some expense in the magnetic reductions of 1848—1857.

A Map of the grounds and buildings in their present state has been nearly prepared for engraving.

Mr. Airy referred to the project of carrying a railway in a tunnel through the lower part of Greenwich Park. Three plans were proposed, by three different companies; two of them are withdrawn, but one (that of the London, Chatham and Dover Railway Extension) is still pressed. The Astronomer Royal thinks it would be possible to render such a railway innocuous to the Observatory; it would, however, be under restrictions which might be felt annoying to the authorities of the railway, but whose relaxation would almost insure ruin to the Observatory. The communication between Woolwich and London was, some years ago, carried round in the *détour* by Lewisham; if a connexion between Woolwich and Blackfriars is required, a junction can be made either in the Ravensborne valley (which makes connexion both with Blackfriars and with the Crystal Palace) or at Gravel Lane; so that a very small expense would independently connect Woolwich with Greenwich. The passage through the Park is now therefore actually unnecessary.

The Parliamentary Copies of the Yard Standard and the Pound Standard, which are deposited in the Royal Observatory under the provisions of the Standard Act, for official custody, are in good order.

The arrangement and cataloguing of the bound Manuscripts by Mr. Carpenter, one of the Assistants of the Royal Observatory, have been completed. The current arrangement of Manuscripts, as they accumulate daily, is closely kept up, on a system which the experience of many years has shown to be very satisfactory; and volumes are bound from time to time, when the amount of collected papers on any special subject appear to make binding desirable. The Library continues to increase, partly by moderate purchases, but principally by presents.

The Transit-Circle is in an excellent state. The Altazimuth is in good order. The Prismatic Spectrum Apparatus has been completed, and is very efficient. It is constructed on the principle of giving breadth to the linear spectrum by allowing the conical pencil of light, that diverges from the image of a star, to fall in a diverging state upon the prism, which is placed in a position differing from that of minimum deviation. When both these conditions are secured, the light, on emergence from the prism, diverges differently in the two transverse planes; and the apparatus of lenses which then receives the pencil, and which gives complete convergence in the direction that produces purity of the spectrum, does not give complete convergence in the direction that produces narrowness of the spectrum. The construction is the simplest that has been proposed for its purpose. Prof. Airy, however, still regards it as experimental; there may be some risk in the oblique refraction of conical pencils; and he proposes soon to try the effect of the prism with parallel pencils of rays passing through it; breadth being given to the spectrum by a cylindrical lens.

The general details given were satisfactory; though it is matter of regret that from unavoidable causes the work of the Observatory is falling slightly into arrear.

SPURIOUS COPIES OF PICTURES AND DRAWINGS.

FROM facts which have recently been communicated to us we regret to find that the fraudulent manufacture and sale of spurious copies of pictures and drawings are still carried on in England. The original works thus copied are by artists of eminence; dextrous hands are often employed for the purpose, and every artifice is used to imitate the originals as closely as possible, including the *signatures*. There is, perhaps, not one British artist whose works command high prices that cannot cite numerous instances where spurious copies of his productions have been made and sold. The injury to artists and to the innocent purchasers of

these fraudulent copies has been very great; and we are induced again to call attention to the subject because there is reason for supposing that some of the persons engaged in this disgraceful trade are under the delusion of supposing that 'The Copyright Works of Art Act, 1862,' only relates to pictures and drawings which are the subject of *copyright* under that statute. Happily, it not only grants copyright in pictures, drawings, and photographs, but likewise contains provisions "for repressing the commission of *fraud* in the production and sale of such works." The seventh section of the Act was expressly framed to meet the class of cases to which we have alluded. Therefore it provides that—1st. No person shall *fraudulently* sign any name, initials or monogram upon any painting, drawing or photograph, &c.—2ndly. No person shall *fraudulently* sell, publish, exhibit, or dispose of, or offer for sale, exhibition or distribution, any painting, drawing or photograph, &c. having thereon the name, initials or monogram of a person *who did not execute or make such work*.—3rdly. No person shall *fraudulently* utter, dispose of, or put off, or cause to be uttered or disposed of, any copy or colourable imitation of any painting, drawing, or photograph, or negative of a photograph, *whether there shall be subsisting copyright therein or not*, as having been made or executed by the author or maker of the original work from which such copy or imitation shall have been taken.

Every offender under this section will, upon conviction, forfeit to the person aggrieved a sum not exceeding 10*l.*, or not exceeding double the full price, if any, at which all such copies, &c. shall have been sold or offered for sale. And all such copies, &c. will be forfeited to the person, or the assigns or legal representatives of the person whose name, initials, or monogram shall be so fraudulently signed or affixed thereto, or to whom such spurious or altered work shall be so fraudulently or falsely ascribed as aforesaid.

And all such penalties and unlawful copies, imitations, &c., may be recovered either by action or by summary proceeding before any two magistrates having jurisdiction where the party offending resides. Such has been the law as to spurious copies of pictures, drawings, and photographs since the 29th of July, 1862.

Now to the persons engaged in the manufacture and sale of such works it is useless to point out the *injustice* of their conduct. They are men of that class who are so absorbed with the lust of gain that in its acquisition they are only to be restrained by the strong arm of the law. The original and chief delinquents in this miserable trade of plunder are usually persons who can afford to give considerable prices for *original* works. To give an artist, say, five hundred guineas for his picture, then employ some needy creature to make minute copies of it at 30*l.* each, and sell each of them at a profit of several hundreds per cent. upon their cost price; all this is looked upon by such persons merely as a very "smart" transaction.

All sorts of devices are resorted to and various agencies employed for effecting the sale or exchange of spurious copies. Tempting offers of "a great bargain" from persons professing to be rather short of cash and having some bills just coming due, should usually be regarded with suspicion. So, likewise, should "very cheap lots" at public sales.

It may be advisable also to state that the fraudulent sale or exchange of a spurious copy of a picture, drawing or photograph brings the offenders within reach of the law as being a *criminal offence*. By an Act of 1861 it is provided that "whoever shall by any *false pretence* obtain from any other person any chattel, money, or valuable security, with intent to defraud, shall be guilty of a *misdemeanor*, and being convicted shall be liable, at the discretion of the Court, to be kept in penal servitude for the term of three years, or to be imprisoned for any term not exceeding two years, with or without hard labour, and with or without solitary confinement." And every person who shall aid, abet, counsel, or procure the commission of any such misdemeanor will, by the same Act, be liable to be indicted and punished as a principal offender. We desire to call especial attention to this latter provision of the Statute as to *abetors* in

misdeemeanors, because it includes in its operation not only the person who makes a spurious copy, but also the original delinquent, his employer.

It will have been observed that to bring an offender within the provisions of either of the statutes mentioned it must be established that he *fraudulently* did the act complained of against him, consequently it may be supposed that there would be great difficulty in doing so. Such, however, is not the fact. As in the case of a man found in the possession of stolen goods, it lies upon a person offering for sale or selling a spurious copy satisfactorily to account for its being in his custody. If he fails to do so, his knowledge of the fraud may be *presumed*, and his conviction thus insured. If, on the other hand, he can satisfactorily explain how the copy in question came into his possession then he may escape, but his disclosures would almost inevitably lead to the detection and conviction of the original delinquent.

From these observations on the present state of the law as regards the manufacture and sale of spurious copies of pictures, drawings and photographs, it will be seen how very dangerous it has become to engage in any transaction of the kind; and what ruin it may involve where a man has any character to lose. We trust the risk will be found to outweigh the profit of such scandalous ventures, and thus abate a prolific source of injury to British artists and the purchasers of their productions.

DISCOVERIES NEAR ROME.

Rome, May 23, 1863.

ON leaving Rome by its northern gate, Porta del Popolo, and proceeding on the Flaminian road towards the north and north-west, the Campagna offers a physiognomy differing considerably from that met with on excursions towards the east and south, to the Sabine and Alban Mountains. In the east direction you find yourself on an undulating plain, that, in pre-historic times, was the bottom of the sea, and still, by its form, may remind you of the sea and its waves, whilst yonder you ascend the old bed of the Tiber, a valley that, serpentine between rocky hills, becomes narrower and narrower. The Tiber now is visible like a white or grey riband only at the bottom of the valley, but time was when it filled the whole space between the hills, and when, five or six miles broad, it opened into the sea. At about midway of its mouth in those times, when the hills on which Rome should rise were covered with brackish water, was the spot where now *Ponte Molle* bridges a curve of the senile stream.

These and other similar remarks are made by my friend, the geologist, and no place in the world can be more fit for such observations, investigating the remotest incidents and revolutions of nature, for the naked greenish hills with their scattered remnants of ruins proclaim in stern silence that we are moving over an immense tomb, over ages of activity and glory that now seem to have interrupted nature for a moment only.

Under such circumstances I feel almost ashamed of mentioning such incidents of yesterday as the names of the locality remind me of. It was at Ponte Molle, Pons Milvius, that the Allobrogian ambassadors suffered themselves to be attacked and deprived of the despatches Catiline had entrusted to them, and thus gave the consul, Cicero, the means of laying bare before the senate the formidable conspiracy. If, whilst proceeding, we turned to the left, we should come to Cremera, the place of sad memory where the Fabian family were cut to pieces. Were those three hundred Fabians, with their thousands of *clients*, only going to wage war against Veji? or, dissatisfied with the ascendancy of the Latin tribes at Rome, were those Sabian aristocrats bent upon establishing a new Rome when they should have conquered Veji? and did the consul therefore leave them to their fate? I would at this moment give more for the solution of this problem, in which the human heart throbs, than for an insight into the volcanic mysteries by which the hills arose and the river took its course.

As we proceed, even my friend, the geologist, cannot help forgetting for awhile eras and strata,

and allowing his imagination to re-people our road with men instead of with fire, for we are on the battle-field where Constantine conquered Maxentius, which event prepared the triumph of Christianity, and to which Raphael has given a second immortality by his picture in the Vatican. Ay, we are at this moment between Saxa Rubra, where the battle began, and the river, where it was ended by Maxentius perishing in the waves. The hills around us no longer appear as representatives of mute, indifferent nature, but seem wrapt in conscious, majestic, sympathetic silence; nor do we at the moment see them bare and desolate, for our inner eye is filled with colours—those of the first Christian banner, "In hoc signo vinces," singularly blended together with those by the greatest Christian painter. Down this very road Alaric, a hundred years later, descended—the first conqueror of the city of Romulus, Cæsar, Constantine. What a yell of Gothic triumph these hills must have witnessed! Ay, ay, I understand their silence.

But whilst memory and fancy are creating life around us, the very interior of the hills reargues into life, or, to reduce my words to prosaic correctness, one of the hills, at least,—that which towers over the little osteria or inn at Prima Porta—is being excavated with good results. On the top of this hill, which we now ascend on foot, a ruined brick wall, for centuries peeping out of the soil, beckoned man to come and dig; but the invitation was answered only this spring, when almost the first spade hit upon the ruins of a villa. The villa, it is said, belonged to Calpurnia, the wife of Cæsar; and a clay pipe, exactly resembling a modern drain-pipe, bears in distinct letters the inscription, Calpurnia. From Calpurnia or Cæsar the villa may have been inherited by Octavianus and Livia, and through generations it may have remained an imperial summer abode. Scholars now call it *Livia's Villa*.

A few feet beneath the surface of the soil is found a suite of rooms, no doubt the first floor of the villa. The walls of one of the rooms are, singularly enough, decorated with landscape paintings, a grove of palm and orange trees, with fruits and birds on the branches—the colours all as fresh and lively as if painted yesterday. Though exquisite, they may, however, be looked upon by most visitors with less admiration than surprise; for not only is it a strange taste to decorate rooms of a villa with a representation of trees, but this kind of picture is in itself an exception from what we know of antique Art, the Romans, as well as their descendants, being without that romantic feeling which prompts the Teutonic race to landscape painting. A learned friend of mine even expresses a doubt of the decoration being antique; but who in later times would have descended beneath the earth to execute such a work? The ceilings have fallen down; but in their scattered fragments can be seen the beauty of line and colour, and the fine floating figures, &c., so well known from Pompeii. Glass and earthenware have been found likewise.

The most essential part, however, of the discoveries, that which has caused so much sensation at Rome, is a statue of Augustus. I admit that, on hearing of it at Rome, I had my doubts about the sincerity or depth of the enthusiasm it occasioned, considering the number of such statues with which the museums abound, nor did the statue at first sight make an impression answering to the expectations aroused. It has been removed to a shed, and lies on straw, on a litter, exactly like a man found drowned near a village. But, on closer inspection, the unpleasant feeling of misfortune and death gives way to a singular, most agreeable sensation—it is not death, but life, that has been found; or, if death has been at work, here is resurrection. Beauty, ideality, in the sense in which this work was created, assuming by emanation their power over the mind, and throwing their veil before the ages, cause a feeling of strange gladness or felicity, which it is the secret of eternal Art alone to produce. The statue evidently was executed shortly after the death of Augustus; it is, at once, a portrait and an attempt to idealize and deify him, and to incarnate in him the imperial power of Rome. The face has a remarkably happy expression of grandeur, gentleness and intellect.

He is clad in his triumphal garb, in armour, the *chiton* loosely thrown from arm to arm, so as to cover the trunk. On the armour the following emblems in bas-relief are seen. Lowest, Roma, with a cornucopia, the twins at her side. Over her, to the left, Apollo, with his lyre, riding a hippogriff; to the right, Diana on a hind. Over these, to the left, Mars, holding out his sheathed sword (potent or armed Peace); to the right, a figure with a torch and dog, the signification of which I do not know. Over these, and closer together, a soldier with banner and eagle, evidently Loyalty; to the right, a trophy, Victory. Over these, a figure in a triumphal car, drawn by four horses, and preceded by soaring Victories, rides into heaven, which Jupiter holds open, or expanded, for their reception.

The statue, eleven Roman palms high, was found quite unscathed, with the exception of the feet, and these are but broken off, not lost, and may be easily joined on to the body. At the right foot was an Amor with a dolphin—hinting perhaps at the battle at Actium. This Amor, and some little things about the garment and the right knee are wanting in execution, and in so far the work stands behind, for instance, "Britannicus" in the Museum of the Lateran, whilst by the ideality of the head and the gracefulness of the emblems it surpasses that statue as well as any other of the same period and in the same style.

But, says my learned friend, how has the iron protruding from the broken leg been able to resist rust during centuries? This I cannot answer; but no one can doubt that the statue is antique, and if even the iron be modern, it would only prove that the statue has been seen by man since the decline and fall of the Roman Empire, some time or other before its present excavation at Porta Prima. It is said, that occasionally, when a statue is found at a time unpropitious for sale, Romans know how to ignore it and to find it again at a happier moment.

The statue bears traces of having been coloured; but all such traces are strictly confined to the garment of the emperor and the emblems. In the villa are found three other sculptural works, busts of Septimus Severus, his wife and their son, Geta; and the leaders of the excavation confidently hope to find still more. M. GOLDSCHMIDT.

THE HUMAN JAW OF ABBEVILLE.

10, Kent Terrace, N.W., June 8, 1863.

THE letter of my friend, Mr. Evans, in the last number of the *Athenæum*, calls for some remarks on my part as member of the conference whose conclusions he calls in question. Mr. Evans is steadfast to his first opinion, an opinion shared by me up to the 12th of May. The reasons for my original disbelief were the same, with few modifications, as those of Dr. Falconer, Mr. Evans and Mr. Busk; and it must not be forgotten by Mr. Evans that all the points he insists on, with the exception of the finger-markings, were strongly felt and maintained by us at the conference in Paris, at the close of which we were unshaken in our convictions. Our distinguished French associates gave full attention to every objection, and the same spirit of candour and an earnest desire to arrive at the truth seemed to animate all the members of that conference. The discussions of the four days were carefully recorded by M. Delesse, and the *procès verbaux* will probably be published. Mr. Evans was invited to attend this conference, and I much regret he was unable to be present. The leading objection (identical with our own) urged by Mr. Evans is the absence of all the ordinary characters of age in the new type of flint implements from Moulin-Quignon. Our objections on this point were combated by the observation that some of the undoubted specimens, such as those disinterred by Dr. Gaudry at St.-Acheul, and some others, appeared, like the suspected implements, as fresh as though they had been recently made. Other specimens found by myself at Menchecourt, on my first visit to Abbeville, in 1859, are singularly fresh-looking, and even without the habitual lustre. A closer examination of most of these specimens showed however some minute indication of antiquity, such as a speck of calcareous incrustation, or of dendrites, or some of those small points perceptible to the experienced observer. Nevertheless it is quite possible to sup-

pose a case where such minute traces might be altogether wanting, and then we should be entirely without the ordinary test of age. This might be an extremely exceptional condition, still the possibility of its occurrence is manifest.

With regard to the test by shape, I confess myself unable to adopt it without limitation. On the one hand, I think the form of the facets and the depth of conchoidal fracture depend upon the shape of the instrument used, and upon the force of the blow, rather than upon the material of which the breaking implement is made; and on the other hand I see no reason why, with a little practice, flint implements of quaternary age should not be imitated, as far as form is concerned, as well as celts and arrow-heads of the age of stone, which have, we know, been fabricated with such skill as to deceive even practised antiquaries. But while admitting thus much, I do not agree with Mr. Evans, that if so "we should have no characteristics whereby to distinguish true from false, and should be at the mercy of every unprincipled flint-knapper and gravel-digger who thought fit to impose upon us." There may be cases where it is difficult, and others where it is impossible, to say from intrinsic characters alone whether a flint implement is genuine or not, but from experience I am satisfied that such instances are of rare occurrence.

The other objections of Mr. Evans were the iron-marks found occasionally on some of the suspected implements, and the apparent finger-smearing. The iron-marks are rare, and such as might be produced by the pick or by the shovel in digging out the gravel, or, as the men often put the specimens in their pockets, they might be marked by a knife or a key. The finger-marks are not so apparent to me as to my able friend. The two specimens he examined had slipped down in the gravel, and in so slipping the movement of the sandy matrix might cause striae on the moist coating of flints of this shape.

The surest test of the genuineness of any flint implements is, however, their identity in mineral character with the component flints of the gravel itself; and this, I admit, was a weak point in our case. Where these are stained brown or yellow, so should be the flint implements if of contemporaneous date; where the one are unstained and unaltered, so should be the other. Thus, at St.-Acheul, where the mass of the gravel is white, the flint implements often retain their natural black colour, and are but little changed; but in the few intercalated ferruginous seams there they are found stained and discoloured. So, notwithstanding that the mass of the gravel at Moulin-Quignon is ochreous, there are subordinate light-coloured seams, and it was quite within the range of possibility that some variations in the character of the bed in which the newer flint implements had been discovered might account for their exceptional character; while, as these beds are amongst the most ancient of the post-pliocene deposits of the valley of the Somme, it was possible that, as in the newer beds of Montiers and Menchecourt we have a different type of flint implement, so in the older of the beds of Moulin-Quignon there might have been preserved an earlier and ruder type than any with which we were previously acquainted.

Seeing, therefore, the difficulty of arriving, upon intrinsic characters alone, without a knowledge of the condition of the beds themselves, at a positive result as to what the characters of the flint implements should be, it was, I think, a judicious resolve on the part of M. Milne-Edwards to adjourn the meeting to Abbeville, for the purpose of investigating the beds *in situ*.

No announcement was made of our intended visit, and we appeared unexpectedly on the ground early on the morning of the 12th of May. Sixteen workmen were engaged, and kept at work during the whole day, under the careful supervision of the members of the conference and of several visitors. The talus and a certain portion of the gravel were cleared away, so as to obtain a fresh surface, and in the course of the day five specimens were discovered. One (No. 2) was of the old undoubted type; the other four were of the new and suspected type. The first one was taken out by

one of the workmen under the eyes of M. Alphonse Milne-Edwards; No. 3 by another workman, in presence of M. Bert; No. 4 was found by Dr. A. Gaudry; and the fifth by M. Alphonse Milne-Edwards, who saw this specimen while yet imbedded in the gravel. Mr. Brady and his son had also before our visit to Abbeville, in a search conducted with much care, found seven specimens under similar circumstances. This cumulative evidence led me to accept the authenticity of the discovery and the genuineness of the specimens, although I did not myself witness the disinterring of any of them. This I had hoped to have accomplished on a second day; but a further delay was hardly thought necessary, and would have been attended with much inconvenience to several members of the conference. That evening, therefore, when asked my opinion, it was expressed as recorded in the *procès verbal*:—"M. Prestwich déclare que bien qu'il n'avait pas assisté à la mise à nu des haches, prenant en considération le soin extrême avec lequel l'opération a été dirigée et surveillée, il n'élève plus aucun doute sur l'authenticité de ces haches et de la plupart des haches contestées dans les réunions antérieures, y compris les deux échantillons trouvés par M. Quatrefages."

With respect to the intrinsic evidence of the jaw, the opinions of Dr. Falconer and Mr. Busk as to its recent character are entitled to the greatest weight; but, on the other hand, we have the authority of M. Delafosse for supposing that the coating of limonite must have been the work of ages, and the two eminent French authorities, M. Quatrefages and M. Lartet, saw reason to maintain in its high antiquity. As to the quantity of gelatine present in the bone it is much a question of the nature of the matrix. A human bone of a Gallo-Roman sepulture at Lillebonne contained not a trace of animal matter, while a bone from the cavern of Miallet contained 7.17 per cent., and another from Oreston gave 11 per cent. Fossil teeth especially are often singularly fresh-looking. As to the possible colouring effect of the black band I have flints from it covered with black clay and limonite, and yet almost as fresh-looking and as white as a flint recently taken from the chalk. On the palæontological question, however, I speak with due reserve.

"In the multitude of counsellors there is safety" does not always hold good in geological research. It is not the clash of opinion, but quiet and close observation, that is required in the field. I abandoned myself to the former, on the first day, intending to stipulate for a portion of the latter on the second day; but that second day never came, and consequently one important point we had in view was overlooked. We were to have washed a mass of the gravel taken from the spot where one of the flint implements had been found so as to ascertain what proportion of the flints composing it were permanently stained and discoloured and what number were unaltered, for it is evident that, on the assumption that the flint implements were of the age of the Moulin-Quignon beds, they should, as before observed, present generally the same aspect as the gravel, after eliminating any cause of variability. I had suggested it at the pit, and some of the gravel had actually been brought away, but, owing to the late hour to which the discussion that evening was prolonged and the early close of the conference the following morning, this essential test was overlooked: The circumstances under which the flint implements were found seemed to us all to prove that they were *in situ*. The assumption of fraud was therefore discarded and the authenticity of the case accepted. Dr. Falconer and Mr. Busk alone still maintained that the conditions of the jaw were not consistent with its being of any very great antiquity, and Dr. Falconer held by the same conclusion with respect to the flint implements. For my own part, the first point, that no fraud had been practised, (unanimously accepted) carried the rest, as I was satisfied from previous study that the beds were undisturbed and of early quaternary age. I may also observe, that these beds contain sufficient independent evidence of the antiquity of man.

My visit to Abbeville last week, in company with Mr. Evans, Mr. Godwin-Austen, Mr. Lub-

bock and Mr. Flower was made with a view to determine some geological points, and to corroborate some former observations. I took, also, the opportunity to conclude our neglected experiment. I washed a portion of the gravel containing 135 flint fragments, and of them 108 were completely stained and coloured, 22 partially so, and only 5 (all small) not at all altered. There exists one possible cause of variability, which is, that some of the flints might have been stained before they were imbedded in their present position. That this happens in places in these high-level gravels, is evident from the fact, that such coloured flints are found mixed with the unaltered flints of the white gravel-beds of St.-Acheul. But there are always flints not of this secondary derivation, and others with fractures of the period; the rarity, therefore, of unaltered flints in this bed is in contradiction to the unaltered condition of the totality of the flint implements of the new type.

Among the specimens in M. Boucher de Perthes' collection are the fragments of two skeletons—a child and an adult from Mesnières, a village about fifteen miles south of Abbeville. These were coated with brick-earth, and had been reported to M. de Perthes to have been found in undisturbed ground. M. Quatrefages and Mr. Busk were struck with some peculiarities presented by these remains. Both these gentlemen wished me to visit Mesnières and report on the character of the beds in which these skeletons had been found. We accordingly went, and found the small pit at the corner of a road. The upper two feet consisted of brick-earth or loess, and the lower six to eight feet of coarse angular flint-gravel, very open and porous. It was at a depth of two feet in the latter that the skeletons were reported to have been found. They appeared, from the description given us, to have been buried in an open trench, which was filled up with the soil taken out, and were of great antiquity, possibly Celtic. In a discussion which took place at the Geological Society on Wednesday last, Mr. Busk stated that the jaw of the child from Mesnières presented the same peculiar form as that of the aged adult of Moulin-Quignon, that their mineral condition was the same, and that he found the same coating of limonite on some of the bones. This coating I also found in unusual quantities on some of the flints in this gravel. These are coincidences which may be worth the while of M. Quatrefages and Mr. Busk to inquire into. The workmen employed at Mesnières were from Mautort, and it was from one of them that Mr. Evans obtained the three Mautort flint implements that he alludes to.

In all inquiries, when the evidence is conflicting or circumstantial, the opinion necessarily vacillates according as the balance of evidence tends to preponderate on one side or the other, until after a time a right adjustment is made. Such phases of a scientific question are not, therefore, to be regarded as unusual, though they do not generally come before the public. It is enough, I think, that they should trouble the observers until study and discussion amongst themselves have removed some of the difficulties. For my own part I object to this kind of thinking aloud. As a geologist, I cannot dispense with time, and like to use it.

JOSEPH PRESTWICH.

OUR WEEKLY GOSSIP.

IN his distribution of the Civil List Pensions for the past year, Lord Palmerston appears to have freed himself from the influence of Lord Aberdeen's ideas. The men and women who receive the nation's bounty have done the State some service, of which all the world can judge. The merit of the claimant has been thought of more, the poverty less. In only four of the fourteen cases are "straitsened circumstances" named as part of the claim advanced; in these four they are mentioned incidentally, and along with better ground for receiving the national award. In ten cases the service is put forth alone. The distribution, too, seems fair enough, as the following analysis will show. Nine pensions are given to Literature:—that is to say—to Miss Frances Browne, 100*l.*, on account of her works in prose and poetry, composed in spite of blindness existing from birth. Mr. S. W. Fullom, 70*l.*, in consideration of a long career as author and journalist, and

of the merits of some of his works. Mr. Lane, 100L., in testimony of the value of his Arabic Dictionary, the product of twenty years' labour, ten of which were passed in Egypt for the better accomplishment of the task. Dr. Robert Latham, 100L., in appreciation of his eminence in the studies of grammar, philology, and ethnology, and of his contributions to the knowledge of the same. Mr. Gerald Massey, 70L., in appreciation of his services as a lyric poet sprung from the people. Mrs. O'Donovan, 50L., in consideration of the late Dr. O'Donovan's valuable contributions to Irish literature and archaeology. Mr. Cyrus Redding, 70L., in consideration of his labours in the field of political and other literature, extending over more than half a century. Mrs. Elizabeth Strutt, 70L., in consideration of her straitened circumstances at a great age, and after 58 years of contributions to literature. Dr. Tregelles, 100L., on account of his valuable labours on subjects connected with Biblical criticism, and of similar works still in hand.—Four pensions have been given to Science:—to Sir Thomas Maclear, 100L., in consideration of his services as Astronomer Royal at the Cape of Good Hope. Mr. Joshua Alder, of Newcastle, 70L., in consideration of his labours as a naturalist, especially in the department of marine zoology, and of his being suddenly reduced to poverty by circumstances over which he had no control. Mrs. Atkinson, 100L., in consideration of her husband's contributions to geographical science, the fruits of six years' explorations in Eastern Siberia and Mongolia—during which she accompanied him, and aided in preserving a record of his researches—and of his having expended all his means in these efforts, leaving his widow totally unprovided for. Mr. George Bartlett, 100L., in appreciation of his pursuit of the natural and physical sciences during thirty-six years, resulting in the establishment of the "Devon and Cornwall Natural History Society," and the publication of many works, but also in a total prostration of mind and body now that he is old.—The remaining pension is on account of Education:—to Mrs. Hughes, 100L., in consideration of her husband's labours in the cause of education during a long service as master of the Greenwich Hospital Schools, and of the straitened circumstances in which she is left.—Except that Sir Robert Peel had a manifestly larger notion of the true functions of a Civil List—excluding "straitened circumstances" altogether from his consideration—we do not know that he ever distributed his country's dole to its very serviceable children with a wiser hand than Lord Palmerston has this year done.

Our attention has been called to the fact that the vote for completing the Nelson Column by Sir E. Landseer's lions is six thousand pounds. The larger sum implies the deeper obligation on the sculptor's part. It is surely time for Sir Edwin to begin his task or yield it to a readier man. When alluding to this subject last week, we suggested, laughingly, that the country had, perhaps, saved enough out of Lieut. Pollard to pay for the Nelson lions. But the neglect of Mr. Pollard is something worse than a joke. The man who avenged his great commander was the signal midshipman on board the Victory; he helped to pass that glorious motto round the fleet, "England expects that every man will do his duty": and he did his duty on that memorable day, by avenging his adored admiral's death. That deed will live in history so long as Trafalgar is remembered by mankind. Yet the hero of it is still a lieutenant, is living in a public hospital, and we understand is suffering from feeble health and domestic trials.

The members and friends of the Ecclesiological Society will hold two meetings on the Twenty-fourth Anniversary:—one in the afternoon in the Tower of London, when by permission of Lord De Ros, Lieutenant of the Tower, the White Tower, including the Norman Chapel, and the other Historical Antiquities of the place will be open to the inspection of the party; a second, in the evening, at the galleries in Conduit Street. Mr. Beresford Hope, the President, will attend both meetings.

In answer to the Correspondent who inquires where he can find the old lyric 'Back and Side go Bare,' which, in a recent review of some books

of collected verse, we called Bishop Still's, we have to say that he will find it in 'Gammer Gorton's Needle.' We may add, however, that Mr. Dyce, in his edition of Skelton's Works, prints a version from a manuscript copy in his possession, which he describes as of an earlier date than 1575, the year in which the play was printed. The song requires collating; for if Bishop Still adapted it, he has missed one or two of the hits made by the older writer. The lines—

No frost, nor snow, no wind, I trow,
Can hurt me if I wold,

loses the reckless jollity and precision of—

Nor frost, nor snow, nor wynde, I trow,
Canne hurte me yf hyt wolde.

—We fancy the "[c]oynve of golde" of Mr. Dyce's copy is a misprint for "coyne of golde." We referred to this song because of its real English jollity. A far more serious omission of early poetry is that of Raleigh's 'Wrong not, sweet Empress of my Heart,' in which occurs that lovely conceit:—

Silence in love bewrays more woe
Than words, tho' ne'er so witty;
A beggar that is dumb, you know,
May challenge double pity.

—But, in order to make a good collection of poetical extracts for general reading, a compiler ought to read the original writers.

The power possessed by locomotives to surmount steep gradients has been lately demonstrated in a very remarkable manner by the opening of the Bhore Ghaut Incline of the Great Indian Railway. The incline attains at one long lift the great height of 1,832 feet, which is the highest elevation hitherto attained by any railway incline. It is fifteen and a half miles long, and the average gradient consequently is 1 in 46.39.

We would very gladly help Mr. Fuller to recover, if possible, the paper about which he inquires in the following note:—

"Boston, May 21, 1863.

"In the London *Athenæum*, of 1852, p. 254, near the bottom of the second column, it is stated that my sister, the late Margaret Fuller, Countess d'Ossoli, left with some person, whose name is not given, certain papers in a sealed parcel, being journals, &c. I am her executor, as well as brother, and have the charge of all her works. I should be very glad to get those papers, and to be put in communication with the party who has them. Can you give me the party's name, or get the party to write to me?"

"RICHARD F. FULLER."

Can any of our readers tell us where these journals may now be found?

The following note is from the Secretary of the Royal Institute of British Architects:—

"June 3, 1863.

"At the Arundel Society's Annual General Meeting, held on the 2nd inst., it was argued, that the Society could not issue *faithful* copies of the Italian frescoes in consequence of their mutilation; and that it was necessary to restore the missing or decayed portions. Allow me to remark, that the Architectural Photographic Society have just issued unrestored photographs from the mutilated sculptures at Wells Cathedral, among which is the subject of 'The Gift of Tongues,' without one head to the whole group of apostles, so gifted as must be taken on faith; and further to say, that I for one value the faithful representation of this sculpture as it exists better than if it had been restored. I allow the cases are hardly parallel, but we should at least be shown clearly which is original and which not.—I am, &c., JOHN P. SEDDON."

The Trustees of the National Portrait Gallery, in their sixth Report, urgently invite the attention of Government to the want of space for the collection under their care. The pictures and busts now amount to 158 in number, 47 of which are presentations. The number of visitors during last year, when the Gallery was open only two days in the week, from twelve to five o'clock, amounted to 12,448, being nearly double that of the previous year—6,676. On the last Easter Monday there were 942 visitors as against 672 in 1862. There can be no doubt that, notwithstanding the obscurity of its position, the collection is steadily growing in favour with the public. Although artistic merit is not a

primary object in this institution, the collection already contains some five-and-twenty works (whether painting or sculpture) that would hold a respectable position in any gallery of Art. The Trustees announce themselves wholly at a loss to provide for fresh accessions. Pictures are already placed upon the ground, and in dark corners round the windows; but it would be a great pity if so good an enterprise were to fall through merely by the want of extended house-room, and a more decent light for the advantageous display of the few works belonging to the collections deserving attention on grounds of Art.

Mr. J. P. Berjeau writes to say that he is not the author of the 'Varieties of Dogs,' reviewed in the *Athenæum* of Saturday last. The work was executed by his son, also Mr. J. P. Berjeau.

A curious and interesting discovery of ancient church ornaments has been recently made at Douai. According to the French papers, the students of the formerly-celebrated college at that town secretly buried two coffers full of valuable church plate at the time of the great French Revolution. The secret, which was carefully kept for many years, has recently been divulged. A corps of engineers, who now occupy the buildings formerly used by the college, searched for the hidden treasures, and they have already succeeded in disinterring various silver vases bearing the names of Presidents of the College, and that of Philip Howard of Norfolk, with the date 1744. The search is being prosecuted for other articles supposed to have been also buried.

The King of Prussia has purchased Lessing's picture, 'Huss on the Funeral Pile,' which was exhibited in London last summer, for the sum of 15,000 thalers. Kaulbach's cartoon, 'The Reformation,' destined for the hall of the new museum at Berlin, has arrived there. Kaulbach will soon follow, and execute his work with the help of Berlin artists.

Although an artist is not expected to be an historian, there can be no doubt that he is bound to be reasonably heedful of the authenticity of any event he illustrates. Many persons, feeling this, and cognizant of the denial by the Duke of Wellington that he first met Blucher at La Belle Alliance on the field of Waterloo, according to the popular legend, have challenged Mr. Maclise's historical fidelity in the great water-glass picture in the Parliament Houses. By some inconceivable blunder, this is decided to represent the meeting of the generals; and even M.P.s, who have opportunities of using their senses on the subject, complacently enter the Royal Gallery, where the picture is, and dilate upon the philosophy of error with the unction of Sir Thomas Browne himself. Countless times has the press repeated this "vulgar error," especially in reviewing the latest published section of Wellington's Despatches, within the last few months. No doubt this opinion will be held for generations, unless some one shows that the whole discovery is a mare's nest, and founded upon mere heedlessness of the most obvious points in the picture. If Mr. Maclise had blundered, as people say he did, who could blame him for receiving the authority of Lords Stanhope and Macaulay,—both members of the Fine Arts Commission? If it was anybody's business it was surely that of the two professed historians to inquire into the point in question. Mr. Maclise might be excused in their default, or on the authority of M. Edgar Quinet, who, on the French side, says:—"En revenant du côté de la Belle Alliance, Wellington revenant contre Blucher. Tous deux mirent pied à terre, et se jetèrent dans les bras l'un de l'autre. La ferme de la Belle Alliance avait servi de point de direction à l'armée Prussienne; Blucher voulait qu'on appellât de ce nom la bataille; l'orgueil des Anglais l'a emporté," &c. ('Histoire de la Campagne de 1815,' p. 279.) All this might justify Mr. Maclise in accepting the already entertained and rather picturesque popular legend that the meeting took place at the farm in question; but he did nothing of the kind, and the very title of his picture might have suggested to those who were in haste to find fault that he has not attempted to represent the meeting, but, so it runs, 'The Interview between

Wellington and Blucher.' Some suspicions had all along rested upon the legend, and the artist, heedful beyond the occasion and his strict duty, has painted not the meeting but the parting of the commanders. The Duke himself had contradicted the legend in a letter to Mr. Mudford (Gurwood, vol. 8, p. 332). Mr. Maclise inquired of Lord Sandys, who, as Lord Arthur Hill, one of the Duke's *aides-de-camp*, was present on the occasion, and is painted in the picture, and from him learned that if the meeting of the generals took place at, or near, Gemappes, they parted at the farmhouse of La Belle Alliance, and that he (Lord Sandys) saw them there, both mounted on horseback, from which place Blucher and Gneisenau pursued the French, while the Duke rode sadly back over the death-strewn fields to the little village of Waterloo. Upon this authority, which thoroughly fits in with the history of the battle and with the Duke's letter to Mr. Mudford, Mr. Maclise proceeded. That the parting and not the meeting point of the interview is expressed in the picture, anybody may see with his own eyes who will go into the Royal Gallery.

ROYAL ACADEMY OF ARTS.—The EXHIBITION of the ROYAL ACADEMY is NOW OPEN.—Admission (from Eight till Seven), 1s.; Catalogue, 1s.
JOHN PRESCOTT KNIGHT, Esq., R.A., Secretary.

SOCIETY OF PAINTERS IN WATER COLOURS.—The FIFTY-NINTH ANNUAL EXHIBITION is NOW OPEN, at their Gallery, 5, Pall Mall East (close to the National Gallery), from Nine till Dark.—Admission, 1s.; Catalogue, 6d.
JOSEPH J. JENKINS, Secretary.

INSTITUTE OF PAINTERS IN WATER COLOURS (founded in 1831 as the New Society of Painters in Water Colours).—The ANNUAL EXHIBITION is NOW OPEN.—Admission, 1s.—Gallery, 33, Pall Mall, opposite Marlborough House.
JAMES FAHEY, Secretary.

FRENCH GALLERY, 190, Pall Mall.—The TENTH ANNUAL EXHIBITION of PICTURES, the contributions of Artists of the French and Flemish Schools, is NOW OPEN.—Admission 1s.; Catalogue, 6d.

The READING GIRL is now at 110, REGENT STREET.

THE SLEEP OF SORROW AND DREAM OF JOY is NOW ON VIEW at the London Stereoscopic and Photographic Company's Establishment, 110, REGENT STREET. This Statue and the 'Reading Girl' are the Originals from the International Exhibition of 1862, and which were purchased by the Company.

LEVASSOR EN VISITE.—LAST WEEK BUT ONE.—Dudley Gallery, Piccadilly.—It is respectfully announced that M. Levasor will give his admired ENTERTAINMENTS OF SCENES et CHANGONS COMIQUES, on TUESDAY and SATURDAY EVENINGS, June 16 and 20, at Half-past Eight, and (in compliance with numerous requests for a Morning Representation) on THURSDAY MORNING NEXT, June 18, at Three o'clock, assisted by Mlle. Tessiere and M. Rey, being the last week but one of these very successful Entertainments.—Seats (Unreserved), 3s.; Stalls 7s.; a few Parterres, 18s. 6d. each.—Mitchell's Royal Library, 33, Old Bond Street, W.

SCIENCE

SOCIETIES.

ROYAL.—June 4.—General Sabine, President, in the chair.—The Annual Meeting for the election of Fellows was held this day. The under-named were balloted for and elected:—Messrs. E. W. Cooke, W. Crookes, J. Fergusson, F. Field, Rev. R. Harley, J. R. Hind, C. W. Merrifield, Prof. D. Oliver, F. W. Pavy, M.D., W. Pengelly, H. E. Roscoe, Rev. G. Salmon, D.D., S. J. A. Salter, Rev. A. P. Stanley, D.D., Col. F. M. E. Wilmot.

ASTRONOMICAL.—May 8.—G. B. Airy, Esq., Astronomer Royal, in the chair.—H. Johnson, Esq., C. Baume, Esq., and Lieut. G. L. Tupman were elected Fellows.—'On Solar Spots, and on the Variable Star η (Argo) Navis,' by Prof. Wolf.—'Note on the Coefficient of the Parallaxic Equation in the Lunar Theory,' by E. J. Stone, Esq.—'On the Acceleration of the Mean Motion of the Moon,'—'Note on Planes Lunar Theory,' by A. Cayley, Esq.—'Jupiter's Satellites: Are they visible to the naked Eye?' by C. Mason, Esq.—'Phenomena of Jupiter's Satellites and Occultations of Stars by the Moon,' observed by S. Gorton, Esq.—'Occultation of ϵ Cancri observed at Highbury,' by T. W. Burr, Esq.—'Remarkable Phenomenon attending the Lunar Occultation of ϵ Cancri, on the 26th April, 1863,' by the Rev. W. R. Dawes.—'Some Observations of the Lunar Crater Plato,' by the Rev. W. R. Dawes.—'On a Portion of the Surface of the Mare Imbrium, observed with the Hartwell Equatorial,' by W. R. Birt, Esq.—'Elements of the Comets II. and III., 1863,' by Mr. Hermann Romberg.—'Observations of the Comets II. and III., 1863,' by R.

Hodgson, Esq.—'Observations and Parabolic Elements of Comet III., 1863,' by M. Karlinaki.

GEOLOGICAL.—June 3.—Prof. A. C. Ramsay, President, in the chair.—The Rev. R. W. Greaves, M.A., was elected a Fellow.—The following communication was read: 'On the Section at Moulin-Quignon, and on the peculiar Character of some of the Flint Implements found there,' by J. Prestwich, Esq.

SOCIETY OF ANTIQUARIES.—June 4.—Octavius Morgan, Esq., V.P., in the chair.—J. Farrar, Esq. exhibited a stone implement (supposed to be a hammer left unfinished) found at Orkney. Mr. Farrar communicated some particulars as to its discovery.—G. Roberts, Esq. exhibited a volume of "Warrants and Grants," ranging in date from 1610 to 1631.—The Rev. S. Lysons communicated an account of discoveries of arrow-heads, &c., made at Rodmarton, in the county of Gloucester.—J. G. Nichols, Esq. read a paper 'On Portraits of the Wives of King Henry the Eighth.' The paper was profusely illustrated by prints of such portraits gathered from all quarters. To these illustrations Sir J. Boileau, Bart. contributed a portrait, on which was the legend "Anna Regina, 1580, HB.," and which has unfortunately been adopted as the original of the portrait of Queen Anne Boleyn in the Historical Gallery at the New Palace of Westminster, where it is converted into a full length. Whoever the lady may be, there can be no doubt she never was intended for Anne Boleyn, and the sooner such a blunder is corrected the better.—Mr. Scharf also contributed to the exhibition a very rare portrait of Catherine of Arragon, and, what was of still greater value, a series of critical comments on the various portraits of the wives of Henry the Eighth. Mr. Scharf's remarks on this occasion will be published in the Society's *Transactions*; but meanwhile we would lay particular stress on a fact which Mr. Scharf brought forward, and which we believe to be new and original. It is this, that the only portrait of Anne Boleyn on which reliance can be placed is the oil portrait in Windsor Castle, with a golden letter B pendent from her pearl necklace. This picture was copied in miniature by Hoskins, for Charles the First, and formed one of the well-known set in the original black frame now belonging to the Duke of Buccleuch. The portraits of Jane Seymour, Mr. Scharf also observed, are reducible to two types; the original drawings for both of these will be found at Windsor. The two types are seen, one at Hampton Court, where the peak of the black veil attached to the hood is in front of the face, and the other, at Woburn Abbey, where the black peak is at the back of the head.

ZOOLOGICAL.—June 9.—J. Gould, Esq., in the chair.—Dr. Sclater made remarks on some of the animals he had lately observed living in the Zoological Gardens of Amsterdam, Rotterdam and Antwerp, and read some notes on the period of gestation of certain ruminants which habitually bred in the Society's Gardens.—A communication was read from Mr. W. Williams, containing observations on the growth of some West Indian tortoises hatched in this country.—Mr. Bartlett exhibited a living Lemurine animal of the genus Galago, obtained by Mr. J. J. Monteiro in Angola, which he considered new to science and for which he proposed the name *Galago Monteiroi* after its discoverer.—Dr. Sclater read some notes on the modes of incubation of the birds of the order Struthion.—Mr. Gould exhibited a collection of birds made by Mr. F. G. Waterhouse during Mr. Stewart's late exploring expedition through Central Australia. The most remarkable of these was a very elegant new parrot of the genus *Polytelus*, which Mr. Gould proposed to call *P. Alexandræ*, in honour of H.R.H. the Princess of Wales.—Dr. Günther communicated a paper by Capt. B. R. H. Beddow, entitled 'Descriptions of New Species of Serpents of the family Uropeltidae from India.'—Papers were also read by Mr. E. D. Cope 'On a New Species of *Vipera*,' supposed to be from Africa, and proposed to be called *Vipera confluenta*; and by Dr. J. E. Gray 'On a new Genus of Lizards from the Arabian Desert.'

ROYAL INSTITUTION.—May 22.—The Rev. J. Barlow, M.A., V.P., in the chair.—'On the Direct Measurement of the Sun's Chemical Action,' by Prof. Roscoe, B.A.

- MEETINGS FOR THE ENSUING WEEK.
- Mon. Asiatic, 8.
 - Tue. Ethnological, 8.
 - Wed. Horticultural, 1.—Great Exhibition.
 - Thurs. Meteorological, 7.—'Meteorology of Years 1858 to 1862.' Mr. Glaisher; 'Hurricane of May 1852.' Mr. E. J. Lowe; 'Theory of Vapour,' Mr. J. C. Bloxam.
 - Geological, 8.—'Sandstones of Cromarty and Reptilian Footprints,' Dr. Gordon and Rev. J. M. Jones; 'Tertiary Shells, Jamaica,' Mr. Moore; 'New Fossil Invertebrates,' Mr. Macdonald; 'Sandstones and Shales of Gales of Scarborough,' Mr. Leakey; 'Ammonites of Cambridge Greensand,' Mr. Seeley; 'Geology and Mineralogy, Borneo,' M. Groot.
 - Naturalists, 7.—Annual.
 - Chemical, 8.—'Electrolytic Action,' Mr. Abel; 'Lithic Acidammonium,' Dr. Guthrie.
 - Linnean, 8.—'Relations of Tanalis, &c.,' Mr. Blanford; 'British Fungi,' Mr. Curry; 'Botanical Collections of Dr. Ljvall,' 'Anisostichium, new Genus of Musci,' Mr. Mitten.
 - Antiquaries, 8.—'Recent Discovery of Human Remains at Pompeii,' M. Goldschmidt; 'Cranage, near Ballisborough, Co. Cavan,' Prof. Huxness.
 - Royal, 8.
 - Philological, 8.—'Keltic Races of England,' Rev. J. Davies.
 - Horticultural.—Promenade.
 - Society of Arts, 8.—Annual Dinner.

FINE ARTS

BRITISH INSTITUTION.

A peculiarity in this year's Exhibition of Paintings by the Old Masters is the entire absence of any grand historical pictures. Portraiture is in the ascendancy, and of that the best are Flemish; only two or three of the Italian school being at all remarkable. The first picture in the Catalogue, and worthily occupying the post of honour, in the North Room, is Lord Overstone's large altar-piece, by Murillo, representing the Virgin standing on clouds with the infant Saviour in her arms, and surrounded by groups of very lovely boy-angels. This picture stands forth among the works of Murillo, as Raphael's 'Madonna di San Sisto' does from all other paintings in the world. Indeed the *motive*, with the solemn thoughtfulness of the Child and the serious expression of the Virgin, shows an accidental affinity to the masterpiece of the great Italian. There is in this picture a remarkable purity about the forms, although slight and even vague in some parts, which, combined with clear colour and solidity of shadow, render this picture singularly impressive. Its history is curious. It has been known as 'La Vierge Couplée,' from the following circumstance. Whilst still at Seville, the central part was cut out by the monks and concealed with the view of deterring the French from disturbing the picture. Sout, however, saw the value of the angels still remaining, and took possession of it. In the General's gallery the centre part was made up by a modern hand. The cut-out portion found its way to England, and passed from the choice collection of Mr. Gray, of Harringay House, to that of Lord Overstone. The sale of Sout's pictures in 1852, afforded an opportunity of purchasing the rest, and of this the present owner subsequently availed himself. The parts have lately been re-united with great skill and once more form a grand whole, rivaling, in fact, if not outshining, the great picture in the Louvre which was originally connected with it; both forming a part of one series of paintings in the same building. A large picture of a similar subject (No. 95), placed in the centre of the middle room, suffers very severely by the comparison, whilst a fine Magdalen (30), contributed by Mr. Beaumont, M.P., shows, very advantageously, a refinement and intensity of feeling, united with a wonderful depth, although sobriety of colour, but rarely to be found in his works. The great picture of St. Joseph leading the Infant Saviour (31), the property of the Earl of Strafford, is a conspicuous but not very favourable example of the painter. Beyond these we find no Spanish picture to record. A large "Conversation Piece," attributed to Titian (61), and consisting of seven figures, all seated, with the exception of the youthful St. John, is deficient in first-rate quality and deserving rather to be ranged among the works of Palma or Bonifazio, where largeness of limb and smoothness of features more frequently occur.

A remarkably fine picture, although much im-

jured, a portrait of the Doge Gritti, by Titian, is one of the grandest works in the room. It is said to have been rescued from a fire in the Ducal Palace at Venice in 1578, and to have been inserted, as a fragment, in a panel in the Contarini Palace, where it remained till purchased in 1856 by the present owner of the Palace, when it was transferred to a handsome frame, and finally sold to the present exhibitor, the Dean of Bristol. Few portraits now extant display a greater breadth, simplicity and grandeur of treatment. The benignity of the face, the broad painting of the gold brocade, both of his robe and of the cap, show abundant care, with Art concealed. The action of the hands confirms the tradition that it is only a portion of a larger picture, and that, when destroyed by fire three years after the painter's death, Tintoretto was appointed to reproduce the composition from memory in the throne-room of the Ducal Palace. In contrast to this, but only because on a minute scale, may be mentioned a fine head of the youthful Saviour (51), contributed by Mr. J. C. Robinson. The conception is large and grand; but the peculiarity of type, together with the exquisitely refined handling, show a more decided affinity to Albert Dürer than to Bellini, whose name is appended to it in the Catalogue. Boldly conceived and massively executed is the Meroni portrait of a disagreeable-looking man, with a beardless face, surrounded by a ruff. It belongs to Mr. E. Hawkins (85), and peers forth from the dark corner of a wall on which not many good portraits are to be found; the principal exception being a fine study of a male figure, attributed to Hanneman (82), from Warwick Castle: it had formerly passed as the portrait of Macchiavelli, by Titian. A very striking picture, a careful and most life-like study of the head of a Jew (65), and here, without any apparent authority, styled 'Portrait of Monsignore Pucci,' is, with still less probability, ascribed to the pencil of Raphael. It is possibly the work of a North Italian, perhaps a Bergomask or Brescian painter, and is remarkable for equality of finish and individual character, with a certain dryness of manipulation. Nor should we omit a grand and remarkably fine portrait, belonging to Lord Lindsay, of a young man tying his hose (58); it is full of dignity, and worthy of Sebastian del Piombo, whose name is assigned to it. Mr. J. C. Robinson's Portrait of a Young Man (38), by Francia, with very black shadows, seems almost to belong to an earlier time. In the dearth of Italian paintings of historical subjects, we have only to particularize the very fine Lorenzo di Credi (47), belonging to Lord Overstone, and formerly a conspicuous ornament in the collection of the poet Rogers. Lord Overstone also contributes a fine but frequently repeated head of the Praying Virgin (92), by Sassoferrato. A singular picture, by Melozzo da Forlì (28), the property of Mr. Spence, is one of a now dispersed series of paintings from the Sacristy of the cathedral at Urbino, which represented the different Dukes of Urbino and their descendants. In the picture before us a youth kneels upon the green carpeted steps of a throne, before a seated female, possibly a personification of Rhetoric. She hands him a book and, at the same time, points to a small organ which lies on the step close by his small Florentine cap. A sprig of myrtle is seen falling upon him from the other side. Numerous small pictures with well-sounding Italian names float before the eye, but the pooriness of No. 48, claimed for Mazzolino di Ferrara, and the gorgeoussness of the frame, together with its prominent position by the side of so fine a work as the Lorenzo di Credi, already specified, compel us to renew a word of remonstrance against the practices of the hanging committee. The so-called Sebastian del Piombo (134) of Christ bearing the Cross, although not occupying a position of undue prominence, is, in itself, a sad reflection on the judgment of those who regulate admission in the first instance. Lord Elcho's Sandro Botticelli (135) affords a pleasing relief, and is, in fact, one of the very finest examples of this unequal master. It represents the Virgin Mary kneeling and adoring the infant Saviour in a garden of roses. It formerly belonged to Lord Northwick. Lord Elcho is likewise the contributor of a genuine piece of early

Italian portraiture in the Profile of a Lady attired in Crimson (52) by Filippo Lippi.

The distinctive features of this Exhibition, besides the first on the list, are the three, if not four, Portraits by Rembrandt. Lord Clifden's Burgomaster Six (26), with light-brown parted hair, in an arched frame, is, perhaps, one of the most perfect works he ever painted, and the Berchem (126) and his Wife (130), both belonging to the Marquess of Westminster, are in no way inferior. The fourth picture, the Wife of the Burgomaster Six (34), is less generally accepted as Rembrandt's, although the colour is wonderfully fine and the vivacity of the figure equal to almost any of his portraits of ladies in the prime of life. Only one picture by Van Dyck appears in the Catalogue. That, however, is an interesting family piece, belonging to Lord Strafford (62), representing Wentworth, Earl of Cleveland, his Wife, Son and Daughter, half-length figures the size of life. It is a fine and little-known painting; the lady, dressed in white satin, is seated in the centre of the picture, with her son, in armour, behind her, and the daughter, in blue, standing at the side, fondling a dog jumping up. Two large and very ugly full-length portraits of Lady Westmoreland (2) and Robert Spencer (20), the property of Lord Falmouth, are, unfortunately, attributed to Daniel Mytens. They are quite unworthy of the contemporary of Janssen and Van Dyck, and are either the work of Geerards or Van Somer. Notwithstanding their artistic crudities and stiffness, they contain many curious pieces of detail in point of costume, and are well deserving of more than a passing glance.

There are many very choice cabinet pictures of the Dutch School, which at the present time it would be impossible to particularize. The principal contributors in this class of Art are, Miss Bredel, Mr. John Walter, M.P., and Mr. George Perkins. The Both (123), Landscape and Figures, belonging to the latter gentleman, is singularly fine. A large and brilliant Snyders (84), a Flemish Larder, contributed by Lord Overstone, maintains a prominent position, and by the intensity of its colour, pales many a surrounding picture. Two hooks of the central ring, intended for suspending game, are now empty, but in the original state of the picture, and when recently exhibited at Christie's for sale, an unsightly carcass was seen hanging from these points, forming a very objectionable central object, and serving still more to increase the even now crowded effect of some parts of the picture. This part has been cleverly painted over, and only remains to be discovered some centuries hence by an active picture-cleaner. A fine Boar Hunt, also by Snyders (27), the property of the Duke of Northumberland, shows the power of the painter in favourable contrast as treating animated objects in the open air. Two large and very fine London views by Canaletto will command great interest among the topographers of our ancient city. The one (132) represents Charing Cross and Northumberland House, looking up the Strand, with all the sign-posts and signs suspended in front of the houses, and the other (125), a view looking northwards up Parliament Street, or King Street in the olden time, with the Treasury Buildings and Downing Street to the left; the Holbein Gate stretching across the road, Whitehall Banqueting House as an isolated block near the centre, and Montague House on the right, with a distant peep of the Thames and the dome of St. Paul's, which in some measure serves to mark the period when the picture was painted. They are judiciously hung on a line with the eye, so that their technical qualities may also be looked into.

Turning to the English School, we this year look in vain for any really worthy specimens of Sir Joshua Reynolds. The Terpsichore (150), a nymph with cymbals, adapted from his figure in the portrait of Garrick between the Muses of Tragedy and Comedy, The Duchess of Cumberland (71), contributed by the Marchioness of Waterford, and Meditation (156), belonging to Mr. G. Perkins, are all that admit of special enumeration. Of Romney we have a numerous collection. Among his best, and the most equally finished—a quality always rare with him—we would cite Lord Heytesbury's Mrs. A'Court (187); Portrait of

a Lady (111), highly refined and delicate; Portrait of Mrs. Trench (137), recently published in the Memoirs; and a charming, but slightly painted picture, belonging to the Earl of Derby, Lady Horton fondling a dog (104); Admiral Geary (176), is a clear and boldly painted whole length; Wortley Montagu (183), seen to the knees, in a Turkish dress, full of dashing colour and more mellow than usual, is one of his best and earliest pictures: it never fails to attract attention in its accustomed place among the numerous treasures of Art in Warwick Castle. The most charming, however, of Romney's works exhibited this year is the Portrait of the Earl of Derby (father of the present Lord) and his Sister, represented as children, standing full length in the open air (180). The *naïveté* of the girl and the temper of the boy are caught with amazing power. Romney's Serena (109) is highly finished and delicate, but his fame is still liable to suffer from such coarse colossal pictures as The Infant Shakspeare (182), and the Newton with the Prism (186), or such shortcomings as The Boy and Dog (161), A Lady as Hebe (160), A Lady (191), or Lord de Tabley's very loose sketch of Lady Hamilton (153). The very large and weak pictures by Thompson, contributed by Mr. Brassey, unprofitably occupy as much space as his very large and strong Apostles, attributed to Spagnoletto (44 and 46), in the first room. An interesting little painting, by Hogarth (168) representing Sarah Malcolm in Prison, is valuable as a further illustration of a portrait of the same person reviewed in the last year's Exhibition. Gainsborough's Sea-shore (185) is a fresh and charming piece of painting, and his Girl with a Pan of Milk (184) affords a good specimen of his fuller and richer style of colouring, like the well-known Cottage-girl, with the dog and pitcher. Gainsborough's powers as a copyist are shown in his very faithful and masterly copy of Van Dyck's Pembroke Family at Wilton House (152). It belongs to Lord Clifden, and is a minute and carefully worked transcript. One picture in the South Room deserves special mention, as the first of a very considerable number of portraits of William Pitt (154). It was painted by Hoppner, for the Marquess of Normanby, and served after the statesman's death as a prototype for the very large number of copies which now exist. Mr. Huth's fine Constable, Hadleigh Castle (181), and Mr. Anderdon's beautiful Woody Scene (162), by Crome, show English landscape-painting most advantageously, whilst Leslie's charmingly-finished cabinet picture of The Rivals (148), and Wilkie's Guess my Name (170) stand prominently forth as figure-subjects. Apart, however, from the National Gallery, it would now be difficult to point to two more complete illustrations of the best powers of Wilkie than in the finished sketch for the Blind-man's Buff (99), and The Card-players (118), both the property of Miss Bredel. The Landscape, with a Mill, (189) is curious as a specimen of Sir Joshua's landscape-painting. It is a free adaptation of the celebrated Rembrandt, now at Bowood, and was probably an experiment painted after it from memory.

FINE-ART GOSSIP.—The grateful English nation voted a monument in St. Paul's to Wellington, hardly so long ago as that still remaining unfinished to Nelson in Trafalgar Square, but more than ten years since, and long enough to have got the thing executed three times over. We buried the Great Duke November 18th, 1852. They performed funeral services for him at Vienna and Madrid a month or six weeks before. Our national monument was, after a competition, entrusted to Mr. A. Stevens, a sculptor, or architect, unheard of before or since. Will anybody in Parliament ask about the monument?

Hardly any branch of applied art is more worthy of attention than the silversmith's; in none have the English been more unfortunate of late. The International Exhibition showed that there had existed for years an extensive manufacture of homely vases, tripods, candelabra, dishes, &c., utterly foolish in character and evidently abandoned by artists to ignorant mechanics, working under the

inspiration of stupid "patrons." It was apparent that somehow or other the art Stothard and Flaxman delighted in had been almost given up by able men to popular illustration and childish criticism. It is not too much to say that Messrs. Veichte and Armistead stood almost alone before the world last year as worthy of their ancient profession. Messrs. Hunt & Roskell derived much credit from the work of those artists, which made their collection at the great gathering worthy of notice. The public owes the firm much for this. We trust they will persevere in the same intelligent employment of Art, giving a worthy character to all their works; and therefore see with satisfaction that the Ascot Cup, produced by them from the designs of Mr. A. Barrett, is, although not a remarkably original example, worthy of praise and wholly free from the hideous fooleries common in like works.

Works intended for the Manchester Institution must be sent so as to arrive not later than the 17th of August. Pictures, &c., from London will be forwarded by Mr. Green, 14, Charles Street, Middlesex Hospital, W., if delivered to him before the 3rd of August; if from the Academy, these works must be delivered to him immediately on the closing of that Exhibition. The Council offers the annual prize of fifty guineas to the artist of the best picture exhibited, provided that it has been painted within three years, but it reserves the power of withholding the prize should there be no work of sufficient merit in the collection.

The new rules for the government of the Arundel Society were adopted at the General Meeting. Mr. Layard stated the case of the Council; Messrs. G. E. Street and Rose deprecated the idea that seemed to be held by some members, that the Society's objects were to encourage the production of popular pictures, such as might be hung on the walls of houses, rather than of faithful and legitimate transcripts from the works of the old masters in their present state. Mr. Rose urged the employment of engraving, in place of chromo-lithography, as suited to the objects of the Society, and averred that the method of reproduction now used is not so satisfactory as might be wished.

'The Vision of St. John' is the title of a rather commonplace treatment of a grand theme, by Mr. W. Armitage, now exhibiting at the Gallery of Illustration, Regent Street. Very well meant, and not devoid of ordinary executive merits, this picture, if we may so style it, is without any of the higher qualities of Art. Its producer has yet to learn that innumerable figures and many incidents do not, of themselves, make a picture.

The Chief Commissioner of Works has caused to be placed in the central south pathway of St. James's Park, leading to the bridge over the lake, a marble statue of a boy, a water-carrier, filling a vase, which surmounts a drinking-fountain. The work has been designed and executed by Mr. R. Jackson, and is a very creditable production in every respect.

The church at Shenfield, which is one of the most interesting among the many such in the county of Essex, has been recently restored by Mr. Bartlett, of Brentwood. This is one of the very few sacred edifices that have clustered oak columns of solid timber with carved capitals and bases. Formerly the arches connecting these columns were of oak also; these will be replaced, the iron shafts that had been introduced being removed. The chancel arch will likewise be of oak, with proper mouldings. The interior of the church will be much enlarged by throwing the base of the tower open within, and enlarging the chancel. Our readers may remember that Greensted Church, near Chipping Ongar, Essex, has, or had until recently, a portion of its exterior walls formed of roughly-hewn oak-trunks.

The Architectural Photographic Association is about to publish an extensive selection of photographs from Gothic and Romanesque buildings in France, including churches and civil and military edifices at Vezelay, Leon, Macon, St.-Lo, Carcassonne, Aix, Nismes, Avignon, &c. Messrs. Cundall & Downes are engaged in making the negatives.

MUSIC AND THE DRAMA

MUSICAL UNION.—TUESDAY, June 16, Half-past Three. St. James's Hall.—Quartet, Op. 18, in D, Beethoven; Quartet, E flat, Op. 7, Piano, &c., Schumann; Quartet, 'God preserve the Emperor,' Haydn; Tema and Variations, Kreutzer Sonata, Beethoven. Execution by Leopoldina (Leopoldine in England), Rice, Webb, and Piatti. Pianist, Dannreuther (first time).—Visitors' Tickets, Half-a-Guinea each, to be had of Cramer & Co.; Chappell & Co.; Ollivier & Co.; Austin, at the Hall; Ashdown & Parry, 18, Hanover Square. J. ELLA, Director.

S. THALBERG'S FAREWELL.—S. THALBERG'S FAREWELL MATINEE, at the Hanover Square Rooms, on MONDAY NEXT, June 15, at Half-past One o'clock.—Stalls, 12s.; Family Tickets, Three Guineas; Unreserved Seats, 10s. 6d.; to be had at the principal Musicians' and Libraries; and of Mr. Fish, at the Hanover Square Rooms, where the Plan of the Seats may be seen.

APTOMMA'S BARDIC FESTIVAL.—TUESDAY NEXT, June 16, at the Hanover Square Rooms.—NATIONAL MELODIES, &c., by the Vocal Association, Congress of Harps, Demoiselles Parepa, Louisa Vinning, Messent, Edith Wynne, Eleanor Ward; Messrs. Reichardt, Wilby Cooper, Lewis Thomas, Harrison, Engel, Ganz, Harvitt, Archer, &c. Conductors, Messrs. Benedict and Frank Mort.—Sofa Stalls, 10s. 6d.; Tickets, 5s. and 3s.

MR. KUHE'S RECITAL OF CLASSICAL AND MODERN PIANOFORTE MUSIC, at the Hanover Square Rooms, on THURSDAY, June 18, at Three o'clock. Vocalists: Mesdames Lemmens-Sherrington, Saindon-Dolby, and Herr Reichardt. Conductor, Mr. Benedict.—Reserved Seats, Half-a-Guinea each; Family Seats (Reserved Seats), to admit Three, One Guinea; Unreserved Seats, 5s. each; to be had of Mr. Kuhe, 17, York Place, Portman Square, W.; and of all the principal Musicians.

MRS. LASCELLES and Mr. FRANCESCO BERGER'S MORNING CONCERT will take place at the Hanover Square Rooms, under the immediate patronage of her Serene Highness the Princess of Serbia, Her Grace the Duchess of Roxburghe, the Right Hon. the Countess of Cathness, the Right Hon. the Countess of Camperdown, the Right Hon. the Countess of Glasgow, the Right Hon. the Countess of Morley, the Right Hon. the Viscountess Forbes, the Lady Carey, the Lady Abercrombie, the Hon. Lady Phillips, Lady Easthope, Mrs. Darby Griffith, the Hon. Mrs. Charles Gray, on WEDNESDAY, June 17, at Three o'clock precisely.—Stalls, 10s. 6d.; Tickets, 7s. 6d.; may be had at the principal Musical Warehouses; of Miss Lascelles, No. 8, York Street, Portman Square; and of Mr. Francesco Berger, No. 38, Thurloe Square.

JUNE 19.—ST. JAMES'S HALL.—M. GEORGE PEIFFER'S GRAND ORCHESTRAL CONCERT, on FRIDAY EVENING, June 19. Under distinguished patronage. Vocalists: Madame Lemmens-Sherrington, Miss Palmer, Mr. Wilby Cooper, and Mr. Wynn; Violoncello, M. Leborio (his first appearance in England); and Pianoforte, M. George Peiffer, who will introduce his new Concerto for Piano and Orchestra, adopted by the Conservatoire of Paris, and other works. Virginia Gabriel's successful Cantata, 'Dreamland,' for the first time with full orchestra and chorus. Conductor, Mr. Alfred Mellon. Pleyel, Wolf & Co.'s new patent grand pianoforte will be used. Commence at Eight.—Tickets, 10s. 6d. to 2s. 6d. and 1s. 6d. at Austin's, 28, Piccadilly.

MR. DEACON'S THIRD AND LAST SÉANCE OF CLASSICAL MUSIC for the Season, will take place on FRIDAY, June 19, at 16, Grosvenor Street (by permission of Messrs. Colliard), commencing at Three o'clock.—Vocalists: Mlle. Parepa and Madame Saindon-Dolby. Instrumentalists: M. Saindon, Herr Politzer, Mr. H. Webb, Signor Pezzo, and Deacon.—Tickets, Half-a-Guinea each; Family Tickets, to admit Three, One Guinea; to be had of Mr. H. W. Ollivier, 18, Old Bond Street; or of Mr. Deacon, 72, Welbeck Street, Cavendish Square, W.

HERR MOLIQUÉ'S CONCERT will take place on FRIDAY NEXT, at the Hanover Square Rooms, at Three o'clock.

MONDAY POPULAR CONCERTS, ST. JAMES'S HALL.—Last Two Concerts of the Season.—MONDAY EVENING, June 22. MR. SIMS REEVES'S BENEFIT, on MONDAY EVENING, July 6, the DIRECTOR'S BENEFIT, on which occasion the Programme will be selected from the Works of all the Great Masters.—Programmes and Tickets at Chappell & Co.'s, 50, New Bond Street; and at Austin's, 28, Piccadilly.

MONDAY POPULAR CONCERTS.—MR. SIMS REEVES'S BENEFIT, and LAST CONCERT BUT ONE of the SEASON, on MONDAY EVENING, June 22, at ST. JAMES'S HALL.—Pianoforte, Madame Arabella Goddard, Violoncello, Signor Piatti, Vocalists, Mr. and Mrs. Sims Reeves. Conductor, Mr. Benedict.—Sofa Stalls, 10s. 6d. and 5s.; Balcony, 3s.; Admission, 1s.—Tickets and Programmes at Chappell & Co.'s, 50, New Bond Street; and at Austin's, 28, Piccadilly.

MONDAY POPULAR CONCERTS.—THE DIRECTOR'S BENEFIT and LAST CONCERT of the SEASON, on MONDAY EVENING, July 6, at ST. JAMES'S HALL.—Pianoforte, Madame Arabella Goddard, and Mr. Charles Halle; Violoncello, Signor Piatti.—Vocalists: Madame Saindon-Dolby and Mr. Sims Reeves.—Conductor, Mr. Benedict.—Sofa Stalls, 5s.; Balcony, 3s.; Admission, 1s.—Tickets at Chappell & Co.'s, 50, New Bond Street; and at Austin's, 28, Piccadilly.

MADAME LIND-GOLDSCHMIDT.—HANDEL'S CANTATA.—St. James's Hall, WEDNESDAY EVENING, July 8.—Mr. Mitchell begs to announce that a Second Performance of Handel's Cantata, 'L'Allegro and Il Penseroso,' will take place at St. James's Hall, Piccadilly, on WEDNESDAY EVENING, July 8. The Vocal Parts by Madame Lind-Goldschmidt, Madame Lemmens-Sherrington, Miss Lascelles, Mr. T. Montem Smith, and Mr. W. H. Nisam. Band and Chorus of 250 performers. Conductor, Mr. Otto Goldschmidt.—Stalls (numbered and reserved), One Guinea; Reserved Seats (not numbered), 10s. 6d.; Back of the Area, and Gallery, 5s.—Seats will be appropriated according to priority of application, and Tickets delivered on and after Monday, June 22. Mitchell's Royal Library, 38, Old Bond Street; Addison & Lucas's, 210, Regent Street; and all Libraries and Musicians.

ROYAL ITALIAN OPERA.—The revival of Signor Rossini's delightful and lively 'La Gazza Ladra,' which, after 'Otello' and 'Semiramide,' contains some of his most impassioned dramatic music, and throughout overflows with melody,—is, in many respects, welcome to the ears of every one who loves the best things in Opera, and who can keep that importunate sprite, Memory, quiet.—Mlle. Adeline Patti cannot replace Madame Griani, as she was when, at Mlle. Patti's age, she entered her London career by singing "Di piacer"; but her

'Ninetta' is, we think, by much the best of her serious characters. Her phrasing of it is larger than formerly; her power of voice is sufficient; the pathos of the part is tenderly felt by her, if not, in every case, wrought out to the fullest; her ornamental passages retain little or nothing of the *staccato* manner which we feared might grow into a mannerism. We were pleased with it throughout,—especially with the great trio in the first, and the prayer interrupting the march to the scaffold.—Madame Nantier-Didiée's Pippo at once displays her to her utmost advantage, and marks the limit of her resources and attractions. M. Faure's *Fernando* is the best since Signor Tamburini's. He is always sedulous, always finished, and in this character is called on for a vocal brilliancy such as has not been till now demanded from him in London. Signor Neribaldi sings the soldier-lover's music well. Alas, for Time! the truth must be told, that not all Signor Ronconi's wondrous adroitness and genius can make up for the ravages wrought on a voice which, in its best day, never belonged to the part,—never had the required tone, weight, or compass. The bass is of the deepest musical importance in this opera; and his deficiencies seriously compromised some of the most striking concerted pieces. We would have no more confessions of weakness urged on an artist of such consummate genius. Lastly, while the orchestra was as superb as ever, the execution of the chorus told of too frequent strain on its energies, and was, in more scenes than one, unfinished and out of tune, for a wonder,—or rather no wonder! Overwork can have but one consequence. On Tuesday evening the house was crowded, and the opera most cordially received—as a welcome change after 'Traviata' and 'Rigoletto' and 'Trovatore.'—'Robert le Diable' is to be given to-night.

HER MAJESTY'S THEATRE.—'La Traviata' has been the luckiest of unlucky heroines whose devices and desires have been set to worthless music. Rarely has an opera-character been so well sustained as hers in this capital by three representatives so different from each other as Madame Bosio, Mlle. Fioretti,—and now Mlle. Artot, who the other evening took the town by storm in this poor production. Our expression is the more exactly fitting because her one fault is a certain exuberance in the production of certain notes and in the launching of her daring ornamental passages. Mlle. Artot may have been encouraged in these effects by her having principally appeared before German audiences, who are apt to regard every vocal exhibition as real and precious in proportion as it is vehement and over-expressed. London and Paris influences may, and we hope will, abate this slightly superfluous animation of hers; meanwhile, it is the solitary drawback on a success as brilliant as it is thoroughly merited. As to action,—in the first act, Mlle. Artot was as lively as our first *Traviata*, Mlle. Piccolomini, without those displeasing coquetries, which, nevertheless, with a portion of her public carried off that lady's defective singing. The natural feeling for better things than thoughtless libertinism made by the dramatist to grow into the character of *Violetta*, was excellently indicated by Mlle. Artot, even in the heyday of her feverish spirits. Not till now has the second act been so well played in London. Never has the struggle in which the heart breaks, and the decay of frail mortality is hurried on, been so touchingly yet so delicately represented. Her performance, in truth, has shown us an artist all but first-rate. Mr. Santley, now the best baritone on any stage, was the most effective *Germont* who has been here. His pronunciation has refined and settled itself, and the polish of his vocal training and the truth of his expression tell doubly because of his thorough musical preparation.—'Un Ballo in Maschera' has also been performed, with Mlle. Volpini as *Oscar* and Mlle. Trebelli as *Ulrica*,—the other characters as before.

CONCERTS OF THE WEEK.—Mr. C. Halle's Fourth Recital was memorable by reason of Schubert's Sonata, Op. 42. Here, again, with Beethoven, Clementi and Weber may be named a fourth Sonata

composer of the highest merit;—in fertility and originality of idea next to the first-named king and ruler. The disproportion which often exhausts the hearer's pleasure in Schubert's compositions, even when attention has been most eagerly engaged by some striking invention at their outset, has little existence in this Sonata. Its first *allegro* is restless and impassioned, with a distinctness of subject not always to be found in movements of a minor key, the nature of which is to conceal commonplace and to encourage vagueness of thought. There is not a phrase in it which does not tell. The library of Sonatas contains no lovelier air, with variations, than the theme in C major, so deliciously "changed," which stands for the second movement. (This was played to perfection.) In the *third*, or Minuet, the trio in F major must be pointed out for the delicate charm of its melody,—one among a myriad of no less exquisite airs lavished by Schubert throughout his compositions. The finale, a *Presto*, is less happy. We can only, besides this admirable and important work, specify M. Heller's 'Chant du Berceau' (from his Op. 81), and the wood *Réverie* from his Op. 86, as full of beauty, and beautifully rendered by Mr. Halle.

The Concert of *Mr. Cusins*, being orchestral, gave him the occasion of playing, and playing well, Mendelssohn's *First Concerto*, and of repeating his own wedding *Serenata*, which was performed at the opening of Her Majesty's Theatre this season. We cannot praise this work as we could wish. Mr. Santley gave the song of *Polyphemus* from Handel's 'Acis' with more spirit and relish than we have ever heard given to it till now.

One of those astounding performances which have of late been got up about once a month by *Mr. Howard Glover*, and to the weariness of the world that plays and sings and the world invited to hear forty pieces of music, was given this day week;—at the same time when *Mr. Walter Macfarren* was receiving his friends, and introducing some new compositions by himself and a Trio by the lady who was Miss Kate Loder. Of these we hope to speak on some future occasion.—The principal "stars" announced for Sydenham were *Mdlle. Carlotta Patti*, *Madame Lemmens-Sherrington* and *Madame Arabella Goddard*.

So much for last week. The one closing to-day has been little less busy. On Monday came *M. Thalberg's* third recital, and a *Popular Concert* devoted to Beethoven. *Madame Arabella Goddard* was the pianist. These entertainments are in a somewhat languishing state. Has not the repetition of a few known works been overdone? We are disrespectful enough to conceive that even 'Adelaide' would not be the worse for a rest, even though *Mr. Sims Reeves* sings it, and though *Madame Goddard*, by a usurpation which is more fashionable than courteous, takes it out of the appointed accompanist's hands, there being no peculiar difficulty or complexity which places it in the rank of slow pieces.

M. Auer, the young violinist announced last week, made, on Tuesday, a first appearance at the *Musical Union*, which must have satisfied the most fastidious amateur of classical music and lover of the instrument. He is another of the youths under twenty belonging to another class than the doleful and factitious prodigy-species, who make up so remarkable a group at the time present. His tone is pure and sufficient, without the trick of trembling, now, good taste be thanked, falling into disesteem. His reading is modest, which means true without exaggeration,—not cold, though susceptible of a little added warmth and emotion. His execution is neat, bright, and, so far as we can judge, very considerable. His violin *solo*, a *Réverie*, by *M. Vieuxtemps*, could not have been better played—could not now be so well played—by the composer himself. As a performer of concerted music, he was tested in Mozart's Quartett in C and by Mendelssohn's in D major, and stood both tests with firmness and finish. In brief, here is an excellent violinist beginning what we hope will be a long career.

The concert of *M. and Madame Sainton* was an excellent one,—made more than ordinarily interesting by a full and rich orchestra, conducted by *Mr. Mellon*, and by the production of some novelties. The one to which we must confine our notice

was *M. Auber's Concerto*—or rather *Concertino*—for the violin, a work of the veteran's early days,—but rarely graceful and effective—to range with the too-much-forgotten *solos* of *M. De Beriot*. By its disinterment, *M. Sainton* has done the world a real service. *Madame Sainton* was singing her best in a great song from Gluck's 'Alceste,' and an air of parade by *Mercadante*. We like *Mdlle. Carlotta Patti* less and less on every subsequent hearing. *Madame Arabella Goddard* has never played with greater spirit, more perfect mechanism and true expression than in Mendelssohn's *First Piano-forte Concerto*. For the present we must content ourselves with announcing the concerts of *M. Blumenthal* (that sterling young artist), *Mr. J. F. Barnett*, and *Mr. Henry Leslie's* benefit, as having duly taken place. At each of these, new compositions by the concert-givers were produced,—*Mr. Barnett's* being nothing less important than a stringed Quartett and a Sonata for pianoforte and violin.

HAYMARKET.—'An Unlucky Mortal' is the title of a new farce at this theatre, for which the author is indebted to a French vaudeville, the hero's ill luck consisting in his uncle having devised his estate to an adopted daughter, and cut off his nephew with a thousand pounds. *Henry Vincent* (*Mr. Farren*) proposes to speculate with this at Newmarket, but stops on the road at the Old Red Lion, where he makes the acquaintance of *Miss Blanche Tremaine* (*Miss Maria Harris*), the young lady to whom the estate in question has been devised. After some flirtation and some explanation, *Blanche* acts the generous part, and offers to abandon the bequest, in his favour,—to which he consents on condition that she will also give herself. The treatment of the theme, simple as it is, is not without skill, and the acting was sufficiently lively. The comedy of 'Finesse' continues attractive.

PRINCESS'S.—'Cousin Tom' is the title of a farce produced on Monday. It is an old friend with a new face, and originally derived from a French source, but exactly fits the humour of *Mr. Belmore*. Five years have passed since *Cousin Tom* went away, and *Lucy Lothbury* (*Miss M. Oliver*) retains her affection for him, yet readily enough mistakes *Newington Cosway* (*Mr. Belmore*) for her old playmate and admirer. When *Tom* actually returns, he finds his place supplied; but as he has married and is deeply in debt, it is fortunate for the young lady that she has already transferred her love to another. *Old Lothbury* (*Mr. Fitzjames*), who was always favourable to *Cosway*, is pleased at the result, and all parties are made happy in their own way. The vivacity of the dialogue and the oddity of the situations (for, in fact, it is throughout a "comedy of errors") provoked constant laughter. The new drama of 'Court and Camp' progresses in public favour.

OLYMPIC.—'A Lad from the Country' is the title of a new farce produced at this theatre,—an adaptation from the French, by *Mr. J. M. Morton*, which is sufficiently strange in its plot, but not so effective as might be wished, though skilfully played. The principal part is supported by *Mr. Atkins*, who, as *John Chickabiddy*, acts with fidelity to nature and rustic peculiarity. *John* has fled to town to escape prosecution for the misfortune of having been the cause that some sheep were run over in the country, and becomes the servant of *Mr. Peckover*, a gentleman in difficulties (*Mr. R. Soutar*). In fear of being served with a writ, and his furniture seized, *Peckover* makes over his property to the country lad, who, when the affair is over, is reluctant to give it up. Meanwhile, he perplexes himself and others by mixing up his own private misfortunes with his master's, and in his answers confounds the legal with the criminal case; but the amusement obtained from this source is not very piquant.

STRAND.—On Monday this house re-opened under the management of *Mr. W. H. Swanborough*. 'The Handsome Husband,' 'Aladdin' and 'Marriage at any Price' were performed.

MUSICAL AND DRAMATIC GOSSIP. — Public opinion (it cannot be helped) is a power, and those

who will not wisely lead must needs submissively follow it. There is no longer keeping 'Faust' out of England's musical theatres. Reluctant and slack as our managements have been in its acceptance, and scornfully as our contemporaries have averted their attention from the career of one who is confessedly the most popular rising musical composer in Europe, the opening of the doors has become a necessity. The name of *M. Gounod* has, of late, been in every concert-bill (even in that of the slumberous Philharmonic Society). Publishers are contending with each other which shall have the preference in producing his works; and here the rivalry betwixt the old and the new house has rarely, if ever, been more sharply stirred up, or the race been harder run, than in this production of what has been voted unanimously in France and Belgium, throughout Germany, nay, even in Lombardy, to be the opera of the time. Regarding the performances of 'Faust' with more than common interest, as justifications of prophecies which were mocked at during many a year, we can but for the moment announce that *Mr. Mapleson's* presentation of the work came to hearing on Thursday, and shall be spoken of in detail seven days hence.

M. Raonkilde, a Danish composer, who has for some years been resident in Rome, and presents himself as a writer of pianoforte music, is here.—So, too, is *Signor Marchesi*, who began his career as a singer some dozen years ago in England, and whose intention it is to give an historical concert, if not a short series devoted to vocal music.

We can heartily confirm the good report of *M. Lotto's* extraordinary accomplishments as a violinist. He will perform at the Crystal Palace to-day, where *Mdlle. Artot* will sing.—For the next Philharmonic Concert, which again is a "command" one (the third, if not the fourth, this season), the Directors have intrusted *Mendelssohn's* violin Concerto to *M. Buzian*.

Madame Ristori's performances will commence on Monday next, with 'Medea.'

Mdlle. Stella Colas, a young French actress attached to the Court of Russia, whose graceful performance in *M. Le Musset's* 'Caprice,' together with *Mdlle. Duverger* and *Mr. Fechter* some two years ago, in a private theatre here, is not to be forgotten by those who had the good fortune to witness it—is again in London, rumour says, with the intention of appearing on the English stage.

A Correspondent intimate with French playhouses and plays desires us to point out that 'The Ticket-of-Leave Man,' at our Olympic Theatre, was last season 'Léonard' at one of the Boulevard Theatres, and very successful there.

The *Allgemeine Musikalische Zeitung* of the 3rd inst. reviews at length a Symphony in D major, by *Herr Reintaler*, citing its principal subjects, which are sufficiently well contrasted and lend themselves to musical treatment. We are glad, after so long a silence, to receive a sign of life from a composer so rational and accomplished as the author of 'Jephtha and his Daughter.'—A *Herr Dallmann* has been out-Heroding Herod in his programme of a descriptive overture to Schiller's 'Diver,' lately produced at one of *Herr Liebig's* Symphony Concerts at Berlin.—A new name comes to us from Rostock,—that of *Herr von Roda*, whose works are on a large scale. Among others by him mentioned are a grand Cantata 'Thomela,' and an oratorio 'The Sinner.'

Nicolai's 'Merry Wives of Windsor' is to be given at the Théâtre Lyrique of Paris this autumn. This opera should be produced at our Royal Italian Opera, *Mr. Gye's* company containing every artist capable of doing it justice—save a *Falstaff*; but he is wanting everywhere as there, *Falstaff* having passed from the opera-stage when the grand *Lablache* died.—*M. Berlioz* has read his opera 'Les Troyens' (the book of which is by himself) in the green-room of the Théâtre Lyrique.—The part of *Dido* is to be taken by *Madame Charton-Demeur*. The work is on the most ambitious scale, in five acts, with a prologue.

There is to be a Singing Festival at Augsburg on the 3rd of August, with upwards of 3,000 singers;—another on the 6th and 7th of September at Aix-la-Chapelle;—and a Musical Festival at Munich on the 1st, 2nd and 3rd of October, for which *Herren*

Joachim and Stockhausen are promised, and, perhaps, Madame Schumann.

'Les Vêpres Siciliennes,' by Signor Verdi, is to be revived, forthwith, at the Grand Opéra de Paris—and 'Zampa' at the Opéra Comique.

The Société de Sainte-Cécile, of Bordeaux, has awarded the prize announced by it for the best Concert Overture to M. Camille Saint-Saëns.

A Mlle. Spohr is announced to appear at Berlin as *Alice*, in 'Robert.' The name has promise in it.

A rather grand concert of sacred music has been given at Sotteville, near Rouen, with choruses by Bortinsansky, Jomelli, Lasso, Lulli, Palestrina, Carissimi, &c.:—some of the works, in short, of the choicest vocal writers.

Mr. Lumley promises a pamphlet, in which will be explained how it was that his benefit performances were shut out of Her Majesty's Theatre.

MISCELLANEA

Lessing, Schiller and Goethe.—On the 10th of November, 1859, the foundation-stone of a Schiller Monument was laid at Berlin, on the Gensd'armen-Markt, before the theatre. On that day, the centenary birthday of the favourite dramatic poet of Germany, it seemed an indisputable fact, that only Schiller should occupy the place of honour before the theatre; but the contest of opinion soon began, and went on unabated till now, in spite of the great constitutional struggle absorbing almost every other interest. The admirers of Goethe looked upon the intended monument in the centre of the Place, not only as a privilege of Schiller, but almost as an insult to Goethe, for whom they claimed the same right as had been granted to Schiller. They formed a Goethe Committee, obtained the permission to erect a Goethe Monument, and wanted the foundation-stone of the Schiller Monument moved more on one side, either to the right or to the left. Perhaps this would have been another matter for disagreeing, but for the Schiller Committee declining altogether to move either way, maintaining the centre place for Schiller as an acknowledged right. The proverbial saying, that there are not two Germans of one mind, had a full opportunity of displaying itself on this occasion; whatever was proposed by one party was rejected by the other, and all attempts at reconciliation remained fruitless. The grouping of the two poets on one stone, as at Weimar, was rejected by both Committees. The controversy lasted for about a year, when a little pamphlet, 'Three Poets' Monuments at Berlin,' seemed to bring about peace and harmony; its proposal to erect also a monument to Lessing before the theatre, leaving to Schiller the centre place, found approval with the two Committees as well as with the authorities of the town, and was granted by a Cabinet Order of November 6, 1861. A Lessing Committee formed at once, and every thing seemed settled, when, lo! the Goethe Committee felt pangs of conscience, for having admitted Lessing in the presence of Goethe and Schiller. In its turn it published a pamphlet, trying to prove that the "Poet-trias" was from an artistic point of view not feasible, and from a literary and historical point unsuitable. In confutation of this strange assertion, a little work has now appeared, by Herr Friederich Blömer, 'Lessing, Schiller und Goethe,' which not only points out the possibility of three monuments standing on the large Place, but asserts the right of Lessing to stand near the two great poets,—a right which ought never to have been disputed. The little book is written with good taste and good sense, and will prove interesting also to those who are not specially concerned in the vexed question; having to plead the cause of Lessing in particular, it brings highly interesting extracts from his letters, giving a total picture of the great critic and excellent poet, in his relations to life and literature. May the little book fulfil its mission, by ending a dispute which is almost ridiculous! No doubt, Goethe and Schiller will be pleased with their companion, and the German people will be proud to see the three together.

To CORRESPONDENTS.—Cecilia—G. J. M.—C. H. G.—J. J.—C. C.—E.—M. C.—H.—J. H.—A Reader—W. S.—received.

A SELECTION OF BOOKS, AT REDUCED PRICES, FROM S. & T. GILBERT'S NEW REMAINDERS CATALOGUES.

Every Book warranted perfect and precisely the same as when issued by the Publishers, and as good as if full price were paid.

ART of DECORATIVE DESIGN, by C. DRESSER, 2s. 6d., published at 12s.

ART ALBUM, Fac-similes of Water-colour Drawings, elegantly bound, 12s., published at 21s.

ART of ILLUMINATING, by W. R. TYMMS, with Letter-press by Digby Wyatt, 22s., published at 21. 10s.

ART-TREASURES of the UNITED KINGDOM, in Six Divisions, half morocco, 71. 7s., published at 211.

BROOKS'S (Shirley) The GORDIAN KNOT, 6s., published at 14s.

CHURCH'S FLORAL KALENDAR, illuminated by W. R. Tymms, 15s., published at 11. 11s. 6d.

EPHESUS and the TEMPLE of DIANA, by EDWARD FALKENER, 12s., published at 21. 2s.

GRAMMAR of ORNAMENT, by OWEN JONES, handsomely half-bound morocco, 21., published at 18s. 12s.

HARBOURS of ENGLAND, after Paintings by J. M. W. TURNER, R.A., with Illustrative Text by RUSKIN, 9s., published at 21. 2s.

HUMPHREY'S (H. Noel) THE GENERA and SPECIES of BRITISH BUTTERFLIES, with Coloured Plates, 16s.

JOHNSTON'S (Keith) PHYSICAL ATLAS of NATURAL PHENOMENA, half russet, 71., published at 121. 12s.

NIGHT FLYERS (The), a Series of Moth Pictures, Sixteen Coloured Plates by Paul Jerrard, 15s., published at 11. 11s. 6d.

PARADISE and the PERI, illuminated by Owen Jones, 21s., published at 21. 2s.

PASSAGES from MODERN ENGLISH POETS, Forty-seven Etchings by the Junior Etching Club, India Proofs, 22s., published at 21. 2s.

The Same, Artist's Proofs on India paper, half morocco, 22s., published at 61. 6s.

PENNY CYCLOPÆDIA, complete, with all the Supplements, 30 vols. bound in 17. 4. 15s., published at 121.

POETS' WIT and HUMOUR, selected by W. H. WILLS, profusely illustrated, 10s. 6d., published at 211.

ROYAL GALLERY of ART, with descriptions by S. C. HALL, 144 splendid large Plates by the most eminent Artists, choice artists' proofs on largest paper, elephant folio size, in 4 half-morocco portfolios, 211., published at 144 guineas.

SOME of MY BUSH FRIENDS in TASHMANIA, by L. A. MEREDITH, 12s. 6d., published at 21. 2s.

TREASURY of ORNAMENTAL ART, 71 splendid Plates, 25s., published at 21. 12s. 6d.

VICTORIA PSALTER (The); or, the Psalms of David, illuminated by Owen Jones, embossed calf, 21. 12s., published at 121. 12s.

Catalogues gratis, and post free.

4, Copthall-buildings, back of the Bank of England, London, E.C.

J. LILLY respectfully begs leave to announce the publication of the following Valuable and Interesting Literary Works:—

MEMOIRS OF THE LIFE And TYPOGRAPHICAL LABOURS of WILLIAM CAXTON;

The Venerable Founder of English Typography, (1422—1491).
Compiled from Original Sources, by WILLIAM BLADES.
In 3 handsome volumes 4to. illustrated with more than 60 fac-simile Plates, executed by Tupper, in the most careful manner, half-bound morocco, edges uncut, price 41. 2s.

Besides copious quotations from Original Documents, illustrative of the Life and Times of this great and good man, to whom England is indebted for the introduction of the "Divine Art" of printing, derived from hitherto unexplored sources, it includes the whole of his Prologues and Epilogues attached to the various Books printed by him, also his own Historical Work, entitled 'Policonion Liber Ultimius.'

The second volume is devoted to a Bibliographical and Literary Account of all the Works printed by or ascribed to the Press of Caxton, in number 91, including many Books undesignated by Dr. Dibdin and other Bibliographers, accompanied with most careful collations of them, and a List of copies of Books printed by Caxton, in number 254, now in the Public and Private Libraries of Great Britain, &c.

Under each work is noticed every occasion in which it has been offered for sale, with the purchasers' names, price, &c.
As only 250 copies of this work are printed, early application is earnestly requested by Gentlemen desirous to receive a copy.

"This is a thoroughly good and genuine book..... A second volume is promised, in which the bibliographical peculiarities of the Caxton press will be thoroughly examined and illustrated. Meanwhile, we may safely say that the investment of Mr. Blades' work which has been already given to the public is a good example of the mastery and exhaustive treatment of a subject."—*Extract from a very favourable article on the first volume in the Saturday Review*, Dec. 1, 1861, p. 673-4.

"We have examined the concluding volume of Mr. Blades' work on Caxton, and are happy to report of it that it forms, in every respect, an important addition to the present series. Mr. Blades' second volume consists of two principal parts,—the first being a dissertation on printing as practised by Caxton, founded upon a critical examination of his workmanship; the second, a bibliographical and literary account of every production of his press at present known to exist."—*Athenæum*, May 22.

AN INQUIRY CONCERNING THE INVENTION OF PRINTING.

By the late WILLIAM YOUNG OTTLEY, Esq.,
Author of 'An Inquiry into the Origin and Early History of Engraving upon Copper and in Wood.'

With an Introduction by J. Ph. Berjean, Editor of the Reproduction of several of the Early Block-Books, namely, Biblia Pauperum, Canticum Canticorum, Speculum Humane Salvationis, &c. Handsomely printed in 1 volume 4to. consisting of 36 pages of Introduction and Description of the Plates, and 278 pages of the Work itself. Illustrated with 27 Engravings upon Copper and Wood, besides numerous Wood Engravings on the letter-press, executed under the care of the Author himself. Price, capitolly half-bound morocco, 21. 12s. 6d.

In the author's preliminary observations on the method pursued in this work, he says:—"The following work contains an account of researches, prosecuted at intervals during the last twenty years, upon the Origin of Printing, with a view to ascertain, if possible, whether the claims of Holland to the honour of that invention be really well or ill founded. In further prosecuting this Inquiry, I have endeavoured to bring to bear on the subject various kinds of evidence, not resorted to, and perhaps not thought of, by previous writers; and I flatter myself that, in some instances, I have been enabled, in not a few instances, to clear up doubtful points; to prove the falsehood of opinions, until now generally held to be true; and to establish, incontrovertibly, the truth of some facts, at least, which have heretofore been denied, or contested."

It contains a most minute analysis and particulars of all the numerous arguments forward by those who favour either the claims of Holland or Germany, including the systems of Meerman, Heineken, Santander, and Köning; the early use of Wood-engraving in Europe; an accurate collation of the various editions of the early Block-Books, viz. the Biblia Pauperum, Historia, seu Humanæ Salvationis, &c. &c.

As only two hundred copies of this very learned and interesting Work are for sale, early application is earnestly recommended for the purpose of securing a copy.

* It may be remarked that this very handsome volume could not have been published by the Author himself under at least 41. 4s.

J. LILLY having disposed of some copies in the exact state in which the Work was left by Mr. Ottley, begs to notify that the Title, Introduction, a Description of the Plates, and the last five leaves, completing the work, together with the thirty-seven Copper and Wood Engravings, can be had for 11. 8s. 6d., to perfect such copies.

IMPORTANT to NOBLEMEN and GENTLEMEN forming or adding to their LIBRARIES, Amateurs of Rare, Curious, and fine Books, Curators of Public Libraries, &c.

This day is published, 8vo. 129 pages,

A Catalogue Raisonné of 50,000

Volumes of Rare, Curious, and Valuable BOOKS, Ancient and Modern, in various Languages and Classes of Literature, splendid Books of Prints, Picture Galleries, Illustrated Works, beautifully illuminated Manuscripts on vellum, &c., interspersed with Bibliographical Notices and Extracts, now on Sale, at very greatly reduced prices affixed.

J. LILLY having determined, in the 27th year of his continuance in business, to commence selling off his very extensive and valuable Stock of Books, all those in this Catalogue are marked at very greatly reduced prices, and to prove this to be the case, the present and the former very reasonable prices are printed in parallel columns.

This very interesting and valuable Catalogue will be forwarded post free on the receipt of 24 postage-stamps.

JOSEPH LILLY, 17 and 18, New-street (removed from Bedford street), Covent-garden, London, W.C.

LONDON, SATURDAY, JUNE 20, 1863.

LITERATURE

History of England during the Reign of George the Third. By John George Phillimore. Vol. I. (Virtue Brothers & Co.)

THE first of the British-born Georges is likely to have justice rendered him at last. If he have not, it will not be for want of inquiry or for lack of sifting evidence. The testimony is conflicting enough, because of its abundance and because the witnesses are many, and a little more like advocates than witnesses. Nevertheless, we shall be able to pronounce a true verdict at last, the bearing of which undoubtedly will be that George the Third was neither so peerless as "the king's friends" would have him to be, nor quite such an ogre as he was painted by his adversaries.

It is strange that we should be so ignorant of late events, and of the actors in them. The fact is, that our sires and grandsires knew nothing of contemporary history except its gossip, and we ourselves, perhaps, think chiefly of George the Third as the good old man with a sempiternal smile and a large cockade, a dozen and more children, and a wife whose sole personal beauty was in her arms. Under our new lights, this homely George begins to come before us in heroic dimensions, for good or for evil, as interesting as the Conqueror himself.

That we require such revelations of the recent past should be a profitable lesson to us in the actual present. Young people should learn the contemporary history in which they live and of which they are a part. Vicksburg is as important as Saguntum; to follow Forey from the coast to Puebla (and learn why he went) is as exciting as accompanying Cortez; and to know something of the history and the sayings and the doings of those who govern and of those who would like to govern us, is, at least, as important for our youth of either sex as to learn the constitution of the Roman legislature.

We have heard objections made to this on the ground that such instruction would lead to partisanship. Why, so it ought, if by partisanship be meant that a young fellow should be able to entertain an opinion of his own, and have spirit to support it. It would breed dissensions among boys, we hear some one say. We hope it would, if by that we are to understand discussions and an obstinate sticking to an opinion till it can be logically reversed. Partisanship! Dissensions! Do they not exist among the young students of ancient history? We can say, for our own parts, that we have seen furious fights between the respective supporters of Hector and Achilles, and have ourselves bled for the beautiful Helen, of whose cause we have since become ashamed.

We rejoice, therefore, at the development which is being given to modern, that is, to recent history, with the details of which our ancestors of two removes little troubled themselves, or learnt it so blunderingly as to rob it of all charm. The truth is, that the History of England during the reign of George the Third looks, in the books and papers of that period, as heavy as the portrait of that monarch himself, dull as his smile and pert as his cockade. Yet what a reign it was for the rise and the ruin of empires, for bloody battles, for marvellous duellos on the sea, for dazzling oratory, for sweeping changes over the face of the world, for glory, corruption and calamity, in all of which our country had a part, and sometimes a suffering and humiliating part! We all know this much. What we want further to know is, —why there came this much; how the results

were obtained; and *what* were the hidden springs by which these great effects were arrived at. Mr. Phillimore is the new witness who comes to dispel obscurity on many of these points, and who modestly says that he will be content if he be found like the torch-bearer who does not so much enlighten himself as the path of those who follow him.

Mr. Phillimore, it must be understood, does not write his history with rose-water. To stern views he gives strong language. He is a Royalist, and he abhors a king who is not, in his turn, a Royalist too, and a loyalist to boot. He would be ashamed to paint George the Third in any other colours than those which represent him as coarse, illiberal, and—the word must be said, though Mr. Phillimore employs many dainty phrases to express the same terrible thing—a liar! We shall have to look upon George the Third's children as a rude, graceless, ill-nurtured set of boys and girls; and on George the Third's mother as something which cannot be expressed in plain phrase, but which Mr. Phillimore expresses by asking, "Would any Court-chaplain venture to say that his mother was spotless?" After this query, it is needless to say that the Princess-Dowager of Wales and Lord Bute are constantly together in unseemly propinquity, and that, indeed, the whole Georgian family is seen under very unpleasant aspects.

Mr. Phillimore has not undertaken a disagreeable task without very excellent reasons, and for this smashing of the old idols at St. James's, Carlton House, Buckingham Palace, Windsor and Kew, he pleads his justification in these words:—"Yielding to no one in loyal and dutiful attachment to Her Majesty,—an attachment founded, not upon the servile notions which her family was placed upon the throne of England expressly to destroy, but on the solid ground of gratitude for the happiness which my country has enjoyed under her mild and constitutional rule,—I have not hesitated to point out the crimes and errors of her kindred."

We confess that it seems at first sight strange that because a lady is supposed to have secured to you a certain amount of happiness, you are therefore to expose her wicked old grandfather, and assure all the world of the worthlessness of her whole kith and kin. Would Mr. Phillimore have refrained from pillorying this family, unclean in his eyes, if their successor had inherited only their vices? Mr. Phillimore, despite some exaggerated and some unquestionably mistaken views, has rendered excellent service to history; but we think he should have left Her Majesty's name out of the matter altogether. He had better grounds to go upon than those he assigns. It is not because he sits comfortably under the olive-tree with the lady, that he can find just reasons for abusing her kinsman who cut down the oak. Even in the French proverb we are told that if you dine with a man whose father was hanged, you will do well not to make so much as an allusion to a rope.

But, to come more immediately to the volume before us, let us state that all the preliminary pages tend to show that if George the Third was but an indifferent king, he succeeded to a worse than indifferent system, with which he did his best, according to his nature and his training. The preliminary chapters, and those devoted to the history of Ireland and of India, although they travel a little beyond the limits in which an historian might keep himself who professes to write an account of the reign of George the Third, are admirable for the lucidity in which they place a vast amount of facts, all of which are preserved by rare skill in condensation.

This skill, indeed, is manifest in all parts of the book, and as one sample of it, we give Mr. Phillimore's character-portrait of George the Third himself; if "the wen and the wrinkles" be there, the good points are put "i' the sun" also:—

"The object of George the Third was to make his will as absolute in England as that of any German prince was over the boors and servile nobles in his dominions. Everything was to be drawn to his personal favour and inclination: ministers were not to look to the House of Commons, nor the House of Commons to the people—every tie of social affection and public trust was to be dissolved—parties were to be broken up—the great families were to be stripped, not only of the influence derived from the abilities and virtues of their representatives, but of that which property must always command in a free country. Nothing was to stand between the Crown and the populace. The Rockinghams, Grenvilles, Bedfords, Saviles, were to be reduced, so far as political authority was concerned, to the condition to which the nobles of Castile had been brought by Ximenes, and the French aristocracy by the third monarch of the house of Bourbon. The smile and favour of the sovereign were in the eighteenth century to be the sole object to which an English gentleman, however ancient his lineage, however great his possessions, however splendid his abilities, however numerous his titles to the love and veneration of his countrymen, should aspire. They were to stand in lieu of all other qualifications: with them Bute, or Sandwich, or Barrington—a minion, a knave, a parasite—were to be omnipotent; without them Pitt, Grenville, Rockingham, Savile—probity, knowledge, station, genius—were to be ciphers. The king was to interfere directly and personally in all the affairs of government, from the highest to the lowest and most minute detail of office—from the choice of a prime minister to the appointment of an architect. Even Louis the Fourteenth, in the height of his power, had been kept somewhat in check by the dread of public opinion, and of the sneers of a keen-eyed and sarcastic race; but in England, where duller men, rolling without respite in the mire of practical life, were hardened against wit and opinion, and looked only to what they could see, and touch, and count,—to the letter of the law, and the distribution of wealth and power,—the sovereign, if he could once emancipate himself from the control of the aristocracy—I use the word in its widest sense—if he could succeed in reconciling the ends of arbitrary power to the forms of a free constitution, had no such restraint to apprehend. He would have no more to fear from gibes and epigrams than Amurath or Aurungzebe. But let me not be unjust. If George the Third had quite succeeded in this object, England would have had no reason to dread a repetition of the injuries she bore under the Tudors, and did not bear under the Stuarts: men's lives and properties, the honour of their wives and daughters, so far as the monarch was concerned, would have been safe. He would have been able at the end of his reign, like the Jewish prophet, to have called on those whom he had ruled to witness—whose ox or whose ass he had taken, or whom he had defrauded—and he would have obeyed the law. He would neither have exacted a hundred pullets from a great lady, as the price of an interview with her husband, like King John; nor have flung Members of Parliament into prison for their votes and speeches, like Charles the First; nor have murdered them by bills of attainder, like Henry the Eighth. George the Third would not have imitated the debauchery of Augustus of Saxony, nor have allowed a courtesan to choose his ministers and generals, like Louis the Fifteenth; nor would he have run about the streets of his capital beating respectable women with his cane, like the father of Frederick the Great. The earnings of the labourer and the tradesman would not have been squandered on harlots and men as infamous as harlots, but (and in no very lavish measure) on parasites, hypocrites and dunces. He would have contented himself with exacting strict and absolute submission to his wishes in Church

and State. He would have been satisfied if he could have excluded every glimmering of light from the moral horizon of England; if he could have guarded himself against the danger of admitting to his councils any man of greater abilities than his own; if he could have disposed of every place of importance in the kingdom to a series of beings like Lord Bute and Lord Sidmouth, and have brought this island to be the Goshen of lords of the bed-chamber and maids of honour—a flat, monotonous level of German servitude and repose. If he suffocated all political speculation, he would have promoted agriculture. If to inquire into the nature and destiny of the soul would have been perilous, investigations into irrational matter, into acids and alkalis, and the habits of molluscs, topics in no way likely to cherish any love of independence, would have been secure, and perhaps encouraged. The example he gave of temperance was to the last hour of his rational life a public blessing. Though, treading in the steps of his race, he was an unkind father, he was a faithful husband. The English pardoned much when they saw the virtues they most appreciate on the throne."

In the portrait of George the Third's mother, on the contrary, there is little of pleasant light at all; the whole figure is in sombre shade. She is described as "a corrupted and dissembling woman, bent on power and greedy of money," and a mother who combined with her son's tutors to exasperate the defects in that son's character:—

"It is evident that George the Third had been early and carefully taught the lesson which had proved fatal to the House of Stuart, and which at one time was on the point of being destructive to himself. Lord Harcourt, his governor, a courtier, but not without a sense of honour, resigned rather than witness what 'he found himself unable to prevent.' When Lord Harcourt was asked by the minister to assign the cause of his resignation, he replied that the reason was 'too delicate to mention to any but the king himself,' clearly pointing out the mother as the cause of the evil that he complained of. That mother, the Princess Dowager, was, in the opinion of all, high and low, of the best informed contemporary writers, as well as of the populace, before and after her husband's death, the mistress of Lord Bute. To him she sacrificed, if some writers are to be believed, at least one rival. To him she certainly sacrificed her reputation, and, what she valued more, her wealth. In order to strengthen her ascendancy over her eldest son, whom she despised, she excluded him as much as possible from all society, while she carefully instilled into his mind the arbitrary notions which were exemplified in the petty courts of Germany, and which were in speculation the cherished maxims of her paramour. These were the seeds sown, which fell on a most congenial soil, and soon sprang up into a bitter harvest."

Darker still is a family group, with a whole House of Lords in the gloomy background:—

"George the Second, from wise and benevolent motives, had been anxious to see his heir married before his death, and with that view had proposed the hand of a princess of Brunswick-Wolfenbuttel, a beautiful and highly-accomplished lady, to his grandson. The Princess Dowager, however, true to her system, and determined that her son should have no wife but of her choosing, interfered successfully to thwart this project. Lord Waldegrave's remark on this transaction deserves to be quoted, as well from its intrinsic value, and as it shows the notoriety of the relation in which Lord Bute stood to the Princess (the cause of so many calamities to this country), as because it has carefully been kept back by the optimists who have undertaken to write the history of this humiliating epoch of English story: for these reasons, notwithstanding the familiar tone in which it is written, it ought to find a place in the text of the narrative. 'Here, that is, in sending for the Prince of Wales on occasion of the proposed marriage, 'his Majesty was guilty of a very capital mistake; instead of sending for the Prince he should have spoken firmly to the mother,—told her that as she governed her son she should be answerable for his conduct; that he

would overlook what had past and treat her like a friend, if she behaved in a proper manner; but, on the other hand, if either herself, her son, or any person connected with them, should give any future disturbance, she should expect no quarter. He might then have ended his admonition by whispering a word in her ear that would have made her tremble.' Before the ashes of George the Second were cold, two circumstances disclosed the spirit and policy of his successor: one, the favour shown to Lord George Sackville, a strict friend of Lord Bute's, who had dishonoured the English name at Minden, and was, at the close of the last reign, in a state of just and complete disgrace; the other, the terms of the speech, and the minister by whom it was prepared. The first act of the king had been to put Lord Bute in the cabinet. The speech was drawn by him without any assistance from the other advisers of the Crown, and spoke with a purpose not to be mistaken of a bloody and expensive war, and of obtaining a just and honourable peace. In this state it was delivered to his colleagues, and it was not till after an argument of three hours with Lord Bute that Mr. Pitt succeeded in changing the words so far as not to cast a direct censure on his policy. Mr. Pitt must have been destitute of all penetration if he had not discovered the spirit and complexion of the new reign. He went to Newcastle, and urged him to make common cause against the favourite. Newcastle, impatient to shake off the yoke of Pitt's imposing genius, with his usual baseness and pusillanimous cunning, refused to take this course; and thus George the Third was almost enabled to establish royal power at once on the ruins of English honour and prosperity. Newcastle, indeed, affected a wish to retire from public life; but a few words, of course, from George the Third, whose schemes—though Newcastle's ultimate removal from office was essential to them—were not yet mature, induced him to remain and to drag his unrespected age through courts and antechambers, till he was finally pushed off the stage by his insolent and successful rival. Much has been said of the expression inserted in the speech, and alluding to the fact that, unlike his father and grandfather, George the Third was born within the precincts of this island. But no notice that I recollect has been taken of the scandalously servile reply—the result, no doubt, of Lord Bute's dictation—made to the speech by the House of Lords. 'What a lustre does it cast upon the name of Briton when you, Sir, are pleased to esteem it among your glories.' Strange language for a powerful aristocracy in a free country, still reckoning Howard, Berkeley, Somerset, Nevile, Seymour, Cavendish, Stanley among its technically noble; Bagot, Harcourt, Wrottesley, Dering, Shirley, Courtenay among its unennobled members! Stranger still, for the countrymen of Shakespeare and Hampden, of Raleigh, Blake, and Marlborough, of Edward the Third, Elizabeth and Cromwell, to use to an ignorant, dishonest, obstinate, narrow-minded boy, at that very moment the tool of an adulteress and her paramour!"

Mr. Phillimore supports much of what he says against Lord Bute by references to Bubb Doddington's Diary. These references have given us some trouble; and they are certainly, we will not say disingenuously made, but not correctly made. The first one, quoted at page 289, in one paragraph of nine lines, with a single break, thus, . . . forms detached portions of six paragraphs in our edition of the Diary, occupying two pages and a half. There is not much harm done by this proceeding; but we do not know how the case may be with quotations which we are unable to verify at all.

We will add here, that there is too much of a sneering tone throughout the volume, and an epigrammatic smartness without the epigrammatic point, which may be said to mar many a fair precedent. Speaking of the last century, the author says,—“In those days it was usual for a clergyman of the English Church, even if he were a dean or a canon, to believe in the inspiration of the Old and New Testaments.” The inference is, that deans and canons enter-

tain no such belief now; and as future deans and canons are among the teachers of our youth, Mr. Phillimore does not look for better things, we fear, from their hands.

“Great improvements in machinery, enormous shops, and the most intense study of entomology, are quite consistent with the decay of all public spirit, and entire apathy to the motives that animated the men who gave England her rank among the nations; nor will incessant and boisterous panegyrics on ourselves, and on the worst and coarsest parts of the national character, which are as disgusting to men of refinement as they are captivating to the herd of readers, avert any one calamity we have to apprehend, or remedy one single evil under which we suffer. We may do well to recollect the passage in which Plutarch describes the Athenian pilots—‘They gave great names to their ships—they called them Minerva, Neptune, Apollo—but they were cast away like other men.’ Nor, if those intrusted with the education of youth among us (I am making, I know, an extravagant supposition) were more ignorant of the art of writing than they are, and have been, with few exceptions indeed, for the last forty years, would that, in my opinion, at all justify such a tone of exultation, or in any way improve the future prospects of the country. ‘I have lost all the blood in my body,’ says Dr. Sangrado's dying patient, ‘and yet do not feel the better for it.’ If, instead of giving up their time to read, and servilely to repeat, what the Germans have written about the classics, they studied the classics themselves—if they read Livy instead of Niebuhr, and Demosthenes instead of Boeckh—if, instead of cramming their pupils for examinations, bringing every mind to the same dead, tutor's level, and so in nine cases out of ten stunting the intellectual growth of the unhappy boys for ever, they taught them to read Homer, and Virgil, and Cicero, and Euripides, as they were read by Milton and Dryden, by Addison and Barrow, and Atterbury and Fox—England might hope to shake off the sleepy drench which, where gain or physical exertion are not concerned, has so long benumbed her faculties. Then, instead of the authors of Tract Ninety, and the History of the British Beetle, and biographies of Fox-hunters and Railway Contractors, men might arise in England who would recall the days when the Tale of a Tub, and the Vision of Mirza, and the Idea of a Patriot King, delighted the readers of Milton, and Dryden, and Shakespeare, and added splendour to a literature already glorious.”

When treating of a bygone literature, and comparing it with the present, Mr. Phillimore advances some singular ideas, not unmixed with much truth. He traces much of the excellence of the old authors to the fact that their writings were not based on a mere mercantile speculation!—as if ‘The Vicar of Wakefield’ were not written with a view to the money it was to produce and the rent it was to pay. “Our greatest writers,” he says, “were beyond the mob”; as if Milton were not more the possession of the middle classes, in all times, than of any other. We do not know why he says, “Cicero, in our days, would have been a Baron (not of the Exchequer) and Tacitus a Baronet”; for it is one of the commonest remarks that to literary men are awarded the smallest measure of honours. One merit the older writers certainly had—sincerity; they affected neither religion, nor modesty, nor decency, if they had it not: but even an affectation of it, in a book which is to go among readers who know nothing of the author, is better than a violation—if we only have the old wit with it. All modern novelists are leather and prunella to Mr. Phillimore, in which he is a little wrong; but Fielding he accounts as “the Rubens of novelists,” and in that he is abundantly right—a Rubens without a school.

But when Mr. Phillimore contrasts the Georgian dramatists with the older brethren of the craft, we find him, in one sense, sadly

astray. He finds "overflowing wit and command of language" in Etherege, the dullest of common-place talkers of any of the fraternity. Of Wycherley he makes too little, of Congreve far too much; and he sees in Sheridan an imitator of the latter, where we see a close imitator even of the incidents in Wycherley's comedies, though Sheridan was incessantly praising the wit of Congreve, and even his indecency, protesting that he would rather go without both than have them separated. But Sheridan, who studied Wycherley so closely, had very good reasons for drawing popular attention to Congreve. As to "Congreve's wit," it is a cant term in the mouths of many who never read a line of him, and who are none the worse for it. When Congreve was received for a wit, he was not censured for his indecency; but opinions have changed as to what is witty and decent. The preface to one of the wittiest of his comedies, 'The Double Dealer,' emphatically asserts its cleanliness, but you may read it through without being dazzled by more than a few sparkles, and you cannot read half a page without falling upon allusions that are disgusting.

We do not think so ill of modern English literature as Mr. Phillimore does; even the men who search after the "British Beetle" and write about it are witnesses to a healthy state of society, agents in promoting useful knowledge, and practical missionaries in developing the glory that resides in the meanest of the works of God.

Nevertheless, we do not mean to say that Queen Charlotte was justified in preferring 'Polly Honeycombe' to 'The Double Dealer,' for the reading of her daughters; though Miss Burney, who read the former aloud to them, was probably charmed with the mission assigned to her by a mistress, who is thus delineated by the unsparing pencil of Mr. Phillimore. The time referred to is before the royal marriage, when

"The king gave a proof of his blind deference to his mother's wishes, which took all men by surprise. While every thought was occupied by the negotiation, the Privy Council was suddenly summoned to hear the king announce his intended marriage with the Princess Charlotte of Mecklenburgh-Strelitz, which soon afterwards took place. Colonel Græme, a notorious Jacobite agent, had been sent to different states in Germany, to discover among the little states of that enslaved country some Princess whose appearance, disposition, and understanding would be to the mother of her future husband a complete guarantee against any dread of the loss of her ascendancy. For this purpose a better choice could hardly have been made. The new queen was chaste; but if to watch over the education of her children and to promote their happiness be any part of a woman's duty, she has little claims to the praises that have been so lavishly bestowed upon her as the model of domestic virtue. Her religion was displayed in the scrupulous observance of external forms. Repulsive in her aspect, grovelling in her instincts, sordid in her habits; steeped from the cradle in the stupid pride which was the atmosphere of her stolid and most insignificant race; inexorably severe to those who yielded to temptations from which she was protected, not more by her situation and the vigilance of those around her, than by the extreme homeliness of her person; bigoted, avaricious, unamiable to brutality, she added dulness and gloom even to the English court. The marriage was precipitated to prevent George the Third from again soliciting the hand of a lady of a sweet and generous temper, one of the noblest and most beautiful of his subjects, who, by a lot the reverse of that which attended the royal bride, became the mother of a distinguished, high-minded, and intellectual race—especially illustrious for two highly gifted men, in whose destiny it was, both by the pen and the sword, by the qualities which fit men to lead in war and to rule

in peace, by heroic courage and commanding genius, to exalt the fame and extend the dominion of their proud but not very grateful country."

Grateful! What is gratitude? Mr. Phillimore presents the public with this portrait of Queen Charlotte, because of his comfort under the mild constitutional sway of Queen Victoria. It would have been but justice if he had added whatever little there may have been of bright and good in the older Queen's character. In a dissolute age, she set a virtuous example, and a similar course reflects the greatest lustre on the crown of her granddaughter, one of a race of whom Mr. Phillimore is pleased to say, that it is the reverse of that of which Lady Sarah Lennox was the mother,—the "reverse of distinguished, high-minded, and intellectual."

Notwithstanding the drawbacks which we have indicated, this volume gives promise of a work which will deserve to be read. If there be a little too much of assertion, there is no want of argument; and if there be exaggeration of expression and sentiment, in an exactly opposite direction to that taken by Mr. Massey—another historian of whom we had occasion to speak recently—there is no suspicion aroused that the censor is exercising his right in any but an honest spirit. In intention, the book is good; in execution, *very* good; unpleasant, perhaps, to the bigots of all parties, but acceptable to every man who may be glad to know what an honest thinker and a rough but able writer has to say about the times of George the Third.

The Pentateuch and Book of Joshua Critically Examined. By the Right Rev. John William Colenso, D.D., Bishop of Natal. Part III. (Longman & Co.)

Dr. Colenso is still alive, and apparently unhurt. He shows the same bold front and the same quiet attitude, though his shield bears the marks of every kind of blow from every kind of opponent. He enjoys the respect of a great many who differ from him: for while, on the one hand, it is difficult to imagine what, except love of truth, should lead him to face such a shower of obloquy, it is certain, on the other, that his opponents are, in great part, though perhaps without knowing it, acting in imitation of those who, in former time, endeavoured to extinguish light by authority. His modes of behaviour are only presumptions; but they are strong ones: and some of Dr. Colenso's opponents would do well to put on an appearance of Christian temper and civilized language. He picks out of one short letter of one of his brother Bishops the phrases *unfounded, false, childish, heretical, blasphemous, abominable, unhappy, blind, daring, ignorant self-sufficiency, instrument of Satan, poor Bishop Colenso*. This brother Bishop no doubt eased his own mind, but he also showed the world what sort of ease his mind wanted, and what sort of mind it was.

The Third Part of 'The Pentateuch' takes in the question of the Book of Deuteronomy, which Bishop Colenso, in agreement with many critics, places about the time of Josiah. The Convocation and its adherents will have nothing to do with the school of Biblical critics whose works are in the hands of all scholars. The clergy examine and report as if all the argument against the usual suppositions about the Pentateuch was brought from Africa by one isolated inquirer. The clergy ought to know better, for the world is beginning to know better; and he is a good friend of the Church as established in this country—a church of light, of freedom, and of inquiry—who has the courage and the skill to show the clergy that in Biblical criticism they must lead, not follow, the lay inquisition.

Our chief concern is with the Preface, in which the attacks on the previous Parts are noticed. Dr. Colenso is fortunate in his opponents, if, as stated by him, the one whom a leading Quarterly describes as having effectually disposed of the greater part of his objections is obliged to make Jacob go down to Egypt with a thousand and more followers who were *reckoned* as his descendants. This is the way in which "three score and ten persons" are made the progenitors of the millions who went out of Egypt. Dean Milman says that he sees no way out of all the "difficulties, contradictions, improbabilities, impossibilities," of these numbers, if no reduction be allowed, except "one vast continuous miracle." It is amusing to see how much licence is permitted to those who refrain from using the word "unhistorical." Dean Milman says, "The moral and religious truth, and this alone, I apprehend, is 'the word of God' contained in the sacred writings." To this maxim the learned Dean has adhered, through good report and evil report, ever since—some thirty years ago—he published a work which made him the Colenso of his day. Our modern critic says the same thing: namely, that God's word is not the Bible, but *in* the Bible. He criticizes those details of historical fact which are not part of the moral and religious teaching; and for this he is assailed, as a subverter of the "word of God," by a Convocation which numbers Dean Milman among its members. This is certainly illogical.

The Primate of all England has pronounced that Usher and Watson have already answered all that Dr. Colenso has advanced. This is a neat excuse,—but, unfortunately, both too easy to make and too hard to believe,—on which the Upper House of Convocation may decline both to point out *accessible books* to which plain people may refer, and to furnish answers of their own. The Bishop of Natal deals with the assertions of the Archbishop of Canterbury as follows:—

"It is hardly necessary for me to repeat what the Public Press has already said in reply to such assertions as the above, viz. that many of the criticisms in these volumes have *never* been answered, and that the writings of Archbishop Usher and Bishop Watson will throw no light whatever upon the most important questions which are here discussed. As well might we refer to books of the last century for a refutation of the objections which are raised to the historical truth of some portions of the book of Genesis, by recent discoveries in geological science. But, on behalf of those who regard the Bible with a true reverence, as a Divinely-given Teacher, which God in His Providence has 'caused to be written for our learning,' but which He wills us to read with intelligent discrimination of its contents, not with a blind unreasoning idolatry of the mere letter, I respectfully protest against the language which the Archbishop of Canterbury has, apparently, applied to all those who read my books with interest, by summing them up under three categories, as either 'ignorant,' or 'half-informed,' or else 'rejoicing in anything which can free them from the troublesome restraints of religion.' The object of my whole work is to bind the consciences of men more imperatively than ever by the law of true Religion, which is the law of life and happiness. But, inasmuch as multitudes have already broken loose from the restraints of that traditional religious teaching, which they know to be contradicted by some of the most familiar results of modern Science, now made the common heritage of every educated English child, I believe that I have only done my duty, as a Minister of the National Church, in endeavouring to re-establish a permanent union between the teachings of Religion and Science, and to heal effectually that breach between them, which otherwise will assuredly widen day by day, with infinite injury to the Church itself, and to the whole community."

Dr. Colenso goes on to notice the charge

that he has denied the inspiration of the Bible. He replies, that he has not touched the point, either way: and this appears to us true. His opponents have made an inferential denial for him. It is the commonest trick of theologians to deduce what, by views of their own, they think an opponent *ought* to hold, and then to affirm that he *does* hold it. There was once a man in Bedlam who thought he was St. Paul, and who favoured his comrades with many sermons. One of them, whose madness took a different turn, pronounced him an impostor. "You infamous wretch," said the first, "do you dare say that St. Paul was an impostor!" If this had been all, the poor man ought no more to have been shut up than Dr. Colenso's opponents. "I am St. Paul," said he; "this heretic says I am an impostor; therefore he says that St. Paul is an impostor." His reasoning was perfectly logical: its only fault was, that he tacked one premise of his own on to one of his opponent's, and made that opponent answerable for their joint effect.

The Bishops addressed a letter to Dr. Colenso, in which they impute to him that he does not now believe what at his ordination he declared he did believe; that he could not use the Ordination Service; that he could not use the Baptismal Service. To this Dr. Colenso makes a frank reply. He admits that when he was ordained he made that declaration of unfeigned belief in "all the Canonical Scriptures" which a deacon is called on to make, in the sense usually understood; that is, he believed, and professed to believe, in the historical as well as the doctrinal statements. When his researches led him to a conviction of the existence of inaccuracies of historical fact, he avows that he really felt himself at issue with his oath, and so continued until he read the decision of Dr. Lushington in the Court of Arches. By this decision, our readers are aware, it is pronounced to be and to have been the law that a clergyman is bound to think of the Bible as laid down in the Articles; namely, to receive all the Canonical Books, and to admit that all that is necessary is contained in them. On that decision, Dr. Colenso finds himself able to use all the services, provided he be allowed to explain his meaning, in its conformity with the recent declaratory decision. He is accordingly able to tolerate allusions to the facts of Mosaic history which he could not have made in the sense which Convocation would demand: but those who cannot go so far he would recommend to omit them—and take the consequences. Singularly enough, just in time to save him from the uproar which this declaration would have excited, the Archbishop of Canterbury, on the 1st of this very month, told the House of Lords that he had often been consulted by clergymen about the obnoxious words of the Burial Service, and had answered that there were cases in which nothing would induce him to pronounce these words,—that he would stand the risk of all the penalties of the law rather than do so. This declaration of the Archbishop was made just in time for Bishop Colenso to add a note to his account of his own advice:—

"This, then, is what I meant when I contradicted publicly the assumption of my Episcopal Brethren, that with my present views I cannot use the language of the Baptismal and Ordination Services. I can use that language—provided that I claim it as my right, as a Minister of the National Church, and lay it upon myself as a duty, to explain freely and fully to my people in what sense I use it. And what are others doing in this respect? How does my conduct differ essentially, in respect of honest adherence to the principles of the Church of England, from theirs? The Bishop of Oxford was the first to issue a letter of inhibition, after

my reply to the address of the Archbishops and Bishops. Not, then, in his personal capacity, but as a representative of those, who have followed him in adopting this extraordinary mode of public Church censure,—upon the mere judgment of each individual Bishop, without any hearing or trial of the accused,—I would ask the Bishop of Oxford before my fellow-countrymen, Does *he*, a Fellow of the Royal and other Scientific Societies, believe unfeignedly in the literal historical truth of the account of the Creation, the Noachian Deluge, or the numbers of the Exodus? If the Bishop will say that he *does* 'unfeignedly believe' in all these matters, as related in the Pentateuch, of course I have nothing more to say as regards this part of my argument. But, if he does not, then how, I repeat, does his present conduct differ essentially from mine? *He* has some way of explaining these matters, which satisfies his own mind, as I have. And the only difference is this, that I think it to be my duty, and shall make it my practice, to tell my people plainly, on such points, what I believe, and what I know to be true; and the Bishop of Oxford has not yet, as far as I am aware, thought it necessary to say what he really thinks upon any one of these subjects."

This is truly an odd state of things. When will the hierarchy begin to see that it cannot last? The first prelate in the realm, a few weeks after he has addressed reproaches, in a letter to his clergy, against the Bishop of Natal for not resigning his see because he cannot perform the whole of certain functions, declares that there is a service which, in certain cases, he himself, the Archbishop of Canterbury, would refuse to perform entire, and would take the consequences. The worthy prelate—he well deserves the title, in spite of an inconsistency—forgot that he had impressed on Dr. Colenso the obligation of *resigning his see*. Dr. Colenso does what the Archbishop said he would have done—namely, awaits the consequences. It is yet to be seen whether he has broken any law: those who say he has broken law are preparing to call him to account. The Archbishop would, perhaps, use the excuse of the young woman whose child had no legal father—that it was a very little one. He thinks that he only refuses to read a bit of one service, and that but in certain cases, while the Bishop of Natal refuses certain services, as he supposes, and in all cases. But discretionary law-breakers cannot be allowed to place limits to the discretion of other persons. An offender against rule is not entitled to make rules for other breaches of rule, by which to bind other offenders. Dr. Colenso adds:—

"But what do my Episcopal Brethren mean by this proceeding? Do they really suppose that, by the obstruction of Church censures and anathemas, or the mere exercise of authority, they can bar out the entrance of that light of Critical Science, which God Himself has given us, as one of the special blessings bestowed upon us by His Goodness in this day? May it not be that the Science of Biblical Criticism is as needful to our true progress and highest happiness as any other of the Sciences—as Geology, Astronomy, Chemistry, Natural History, &c.—all which have been aroused into new life in this very age, and many of which—like that of which the most recent results are exhibited in the works of Davidson, Kalisch, &c., and in the Parts already published of this work—were almost wholly unknown to our forefathers? May it not be true that each one of these Sciences is as truly intended by the Wisdom and Grace of God for the present stage of human development, as any other of the sisterhood,—that we cannot despise or refuse the help of any one of them, without 'rejecting the counsel of God against ourselves.'—that, 'if this work be of God, we cannot overthrow it, lest haply we be found fighting against God'? In short, may it not be true that this light of Criticism may be but one of the many-coloured rays of modern Science, which come to us all from the 'Father of Lights,' in this our own age of wonderful Illumination,

and which are meant to blend together into the pure, white, Light of Truth, that Light which our spirits need, and which His Wisdom and His Love at this time impart to us? Must we, then, English Christians, live on, as men did in former ages, under strict ecclesiastical restraints, as if there was a 'dark chamber' in the house, into which we have once looked, but have shut to the door, and dare not look again, lest we should see something to frighten us out of our 'hopes for eternity,' and cause us the loss of 'all our nearest and dearest consolations'? How much better to open wide the door, and let in the blessed light and air of day into every part of our spiritual dwelling! That light, indeed, may show us that the stories of the six days' Creation, the Noachian Deluge, the slaughter of 68,000 Midianitish women and children, are no longer to be spoken of as historical facts. We may perceive that it is no longer possible to confound the early legends of the Hebrew people, and statements contrary to reason and the facts of nature, or condemned by our moral sense, and by the Voice which witnesses for God within us, with the Eternal 'Word of God.' But we shall find in the Pentateuch, notwithstanding, precious things without number, of which little or no use is made at present in the instruction of the people,—unquestionable facts of ancient history, mixed up, no doubt, with much of uncertain or unreal tradition,—and, above all, rich lessons of spiritual Truth, by which our souls may be cheered and strengthened for the work of life. What a day of regenerated life will it be for the Church of England, when these things shall be spoken of, plainly and freely, in every pulpit of the land,—when the Bible shall be opened, and the story of its origin explained, and the real value of its histories discussed, as the records of living men, like ourselves, written down by living men,—with the reverence due to a Book so venerable, and endeared to the inmost heart of every Christian, but yet without fear of treading with irreligious feet upon holy ground,—rather, with the deepest and most sincere conviction that we can only thus serve God acceptably, and discharge our duty before Him, as Christian men and Ministers, by such free inquiry after Truth, and such free utterance of it."

The Bishop then proceeds to consider the charges of heresy and blasphemy. One of them is that of Dr. M'Caul, who charges Dr. Colenso with robbing Christ of his Deity by denying his omniscience. On this point a letter is printed from the Rev. W. Houghton, containing, among other things, a long list of those who have done the same thing. Whom shall we select from this tribe of M'Caulian blasphemers? Will Athanasius do? He says—after much of the same purport,—"For as, on becoming man, he hungers and thirsts and suffers with man, so, with men, as man, he knows not." And Theodoret says,—"If he knew the day, and, wishing to conceal it, said he was ignorant, see what a blasphemy is the result: truth tells an untruth."

Mr. Houghton, the largest contributor to the natural history of the Bible in the second volume of Dr. Smith's 'Dictionary,' comes forward with the following testimony:—

"And now, my Lord, with respect to the general character of your recent publications on the Pentateuch, I feel it my positive duty, at whatever cost, to say a few plain and honest words. I have diligently, conscientiously, and prayerfully, studied the whole question at issue for the last six months, and am compelled to admit the general truth of your arguments, though differing in some particulars. You are aware that I published a pamphlet in reply to your Part I.; I have withdrawn that reply from circulation. Before the appearance of your Book, however, I was quite certain that the Bible and Science were opposed to each other. Four years' examination of almost every word in the Bible relating to its Natural History has convinced me that, in many essential points, the Biblical and Natural records are, to use the words of the learned and candid Kalisch, 'utterly and irreconcilably at variance.' The more I examine the whole question

for myself, the more certain I become that, in the Bible, 'legend is mixed up with history, poetic imaginings with prosaic narrative, that no miraculous power has been exerted to preserve it from omissions, interpolations, and corruptions of the text,' and that the Bible 'is, therefore, not infallible in the sense in which the popular creed assumes it to be.' We acknowledge, my Lord, notwithstanding a large admixture of the human, and therefore fallible, element in the Bible, that in that Book there is a *jewel* of heavenly lustre and of priceless value. Why are we to suppose that this *jewel* shines less brilliantly, or loses one iota of its value, because the gold of its *setting* has a considerable per-centage of alloy? Why will men refuse to drink of the 'water of life' because it is offered to them in an earthen vessel? Your Lordship is at liberty to make any use you please of this letter."

The Bishop proceeds to notice,—very briefly, but quite sufficiently,—the recent report of Convocation. This we will not lengthen our article by discussing. The quotations which are made from others, not only here, but in previous pages, show that there is not a point on which Dr. Colenso is blamed but what is held by some clergyman of high position. There is a Colenso ready made to hand in Stanley, Milman, Alford, Browne, and others, for those who will put the fragments together. As in the celebrated case produced by Cowper, one divine has eaten this bit of the animal, another that, and so on: the crime of Dr. Colenso is that he has eaten the whole hog. He has collected, he has enforced, he has attracted attention by the position which he holds. What he may have said, how far he may be right, how far he may be wrong, are of personal, rather than of literary, interest. The right of the clergy to consider questions which the laity are considering is the main question. Dr. Colenso and a few other bold men are the promoters of an inquiry which is much wanted, which must be made, and which will be made. In the last century there was a system, political and ecclesiastical, which required reform much more than ours. The examination was left to the enemy; the unbeliever was allowed to train a generation. That system fell, as we all know: it fell because it found no enemies within its own citadel at the right time; it found enough when the crash came. We believe in the day when the English Church will be thankful that the shattered part of its routine, the conventional chapter of its belief, and the self-blinding element of its spirit, raised up assailants among its own clergy, and that the reform was conducted from within.

Strange Things among Us. By H. Spicer. (Chapman & Hall.)

In his Preface Mr. H. Spicer describes his experiment on public credulity as "a sketch—a study—a '*ballon perdu*,' flung up among the currents which have of late set, somewhat steadily, in a direction of much promise." We should doubt the steadiness and deny the promise. Of all the delusions brought from New York to amuse or afflict the idle people of this generation of Englishmen, the most foolish, barren, and indecent is that of the spiritual circle. This is said, however, by the way. Mr. Spicer is not so credulous as Mr. Howitt or so impudent as Mr. Home. He does not believe in the spiritual office of every charlatan who can rap with his toes or write letters upside down. Indeed, he has a healthy contempt for your ordinary spirit-rupper or table-turner, who, himself unable to speak the Queen's English, undertakes to put you, at the small cost of half-a-guinea an hour, into communication with the souls of men who, amongst other changes, have forgotten how to spell. He thinks the swarm of Americans which infested our society and fed

on our curiosity a year or two ago arrant impostors. Much of his mistrust we share; but when he parts from these humbugs we have ourselves to part from him. So far our roads run together; there they begin to diverge. Mr. Spicer would dismiss the impostor into oblivion; and would afterwards approach, consider and adopt the imposture.

This, in a few words, is the form of his plea for the 'Strange Things among Us.' Society is fond of ghosts. Every old house has its haunting spirit. Many persons have seen sights, more persons have heard sounds, which cannot be accounted for by natural causes. Some of these manifestations have been foolish and unmeaning; others have been grave and serious; some have had no results, while others have been followed by the direst calamities. The minds of men and women are disquieted by the frequency and unexpectedness of these warning sights and sounds. Many persons, not absolutely weak or silly, have begun to think there must be something in them, which it is the duty of philosophers and naturalists to consider. Mr. Spicer thinks so too. He finds that the world has knowledge of a sufficient number of isolated facts on which to lay the foundation of a new spiritual science. It is only necessary to ascertain which are the true facts, to gather them up into a common storehouse, to arrange them in their just order and class; and you can then reason from premise to conclusion, as in any other science. In short, spiritualism waits its Bacon, and Mr. Spicer offers to supply the want.

The reader shall judge with what share of success Mr. Spicer has enacted the part of spiritual critic and lawgiver. His object being, not to write a volume, but to lay the foundations of a new philosophy, he writes down certain rules for his own guidance, and for that of his followers, should he have any. We do not mean to discuss these rules—they are somewhat lax in form and commonplace in substance; but we may usefully show the fashion in which a sober and comparatively philosophical writer on ghostly matters deals with the rules which he prescribes to himself. On page 5 we read, "As a general rule, it is advisable to refrain from any voluntary testimony to the well-strung nerves of Mr. B. (the hero). In all probability, you know nothing about them; and, if you did, it remains yet a question whether nerves have much to do with the subject." No doubt, this is a good rule, if not a very profound one. But when Mr. Spicer begins to collect his facts—that is, to tell his stories—he straightway violates the very law which he has laid down.—

"M— (with whom the writer was well acquainted) was a man of the coolest nerve, of the most imperturbable self-possession. It was his habit to sit up reading in the chamber of his invalid wife, after the latter had retired to bed. One night, Mrs. M— having fallen asleep, the door opened, and her maid, Lucy, who had been sent home ill to the charge of her friends, a few days before, entered the room. Perfectly conscious, as he declared, from the first, that the object he beheld was no longer of this world, the steady soldier fixed his eyes on the apparition, careful only to catch its every movement, and impress the unexpected scene with accuracy on his memory. The figure moved slowly to the side of the bed,—gazed with a sad and wistful expression on the sleeper's face—and then, as though reluctantly, died away into the gloom. Colonel M— then awoke his wife, and related what had occurred. Together they noted the precise moment of the vision. It proved to be that at which the poor girl had breathed her last, murmuring her mistress's name."

This is, however, but a minor breach. The main objection to Mr. Spicer's manner of treating his spiritual facts is the entire lack of

authentication. In many places, he affects the utmost scrupulosity as to his materials. At the opening of his book he says, "The circumstances of each case have been verified with unusual care, because another object than simple curiosity, or the making a readable book, suggested the inquiry." Other expressions to the same effect occur. Yet in the face of these declarations, the facts are really stated on no available authority. In nearly every case it is M—, or Colonel —, or X. Y. Z., who tells the story or suffers the visitation. Where a name is given in full, we are told it is a false one. Thus, after telling one horrible story about two brothers who had quarrelled, Mr. Spicer says,—"It may be as well to add, that Mr. 'Hare' (the name by which the friend who supplied this incident desires to be known) furnished the most sufficing verifications of the fact related." No names are given. An uncle and a nephew are the speakers: who they are, where they live, when the event happened, are not related. Even the friend who told the tale to Mr. Spicer will not vouch for the truth of it under his proper name. He is only Mr. "Hare"; and, for anything we know, Mr. March Hare. Again, in another story we read,—"The headstrong squire, Mr. Barnett, as *I will call him*." Why this concealment if the facts are true? Would Mr. Spicer accept a new fact in chemistry or astronomy on such evidence? What would be the value in a court of law of such testimony as this?—"The late Mr. G—, a gentleman of large property in Norfolk, used to vouch for the following anecdote." Suppose the following, "furnished by a lady, Miss B—," were offered as evidence before the Lord Chief Justice,—"On Saturday, the 21st of June, —, being on a visit at H—, Scotland (at the house of a friend of the author), I retired to bed rather earlier than usual, about ten o'clock,"—would not Sir Alexander ask Mr. Spicer why the year was omitted, also the locality?

In the mass of cases, Mr. Spicer's treatment has the advantage of baffling criticism. You cannot follow Mr. — to his home and press him with cross-examinations. When Mr. Spicer, by accidental or indiscreet allusions to common life, enables us to follow his line of inquiry, we return from the excursion with enfeebled powers of belief in his care and judgment. One of his wonderful stories professes to be taken from the lips of "the lady of a distinguished German diplomatist." She is mentioned as Madame L—, with no address in particular; and the scene of her strange experience is not suggested even by an initial and a blank line. But she has one reference in her narrative to a third party:—"Much troubled in mind, Madame L—, after some deliberation, resolved to appeal to the strongest and most ardent soul within the range of her acquaintance, in the person of —, sometimes called the 'German Luther.'" What German diplomatic lady could have been ignorant that Luther himself was German? We can fancy a foolish fellow calling Gavazzi a Neapolitan Luther or Spurgeon a Bermondsey Luther; but it is beyond even the power of folly to style any man whatever the German Luther.

There is at least one English story told, about which it is possible to arrive at some conclusions from the external facts. As will be seen, it is introduced with a special testimony to its accuracy:—

"In the following additional example, the names of those concerned have been supplied to the writer—coupled only with the stipulation that nothing beyond the correct initials should be made public. The Lady J. T—, sister-in-law of the Duchess of L—, was much attached to her young nephew,

Lord C. A.—, the duchess's second son. This lady was sitting one evening, about six o'clock, in her drawing-room, when, looking up from her work, she saw Lord C. A.— (who was at the time a student at Oxford) standing before her. 'Ah, C.—!' she exclaimed, astonished at his silent entrance. 'How did you come hither?' He made no reply, but began gradually to disappear, and, in a few seconds, was gone. Much disturbed, Lady T.— drove over, early next morning, to visit her intimate friend, Lady S.—, and related her vision; on her return, a messenger had arrived from H.— Castle, requiring her presence. Proceeding thither, she learned the sad news of Lord C.—'s death, at Oxford, from the effects of an accidental blow received from his friend, the present Marquis of D.—."

It is a pity the Duchess of L.— was so squeamish about giving her name in full; since a little more frankness on her Grace's part would have saved Mr. Spicer from the appearance of having been made the subject of a hoax. Mr. Spicer says he has the names, which we are glad to hear, as, otherwise, an unbelieving public, with a Peerage in its hands, might doubt whether any possible Duchess of L.— could have a son with the name of Lord C. A.—. That book, which we quote under correction of Mr. Spicer and the spirits, shows us only two Duchesses of L.—, Leeds and Leinster, neither of whose family names begins with A.—. Lord C. A.—, the hero of the story, could not have been an Osborne or a Fitzgerald. The Marquis of D.— is not so easily hunted down, there being quite a crowd of Marquises of that initial—Douro, Donegal, Douglas, Downshire, Drogheda and others. But we think an incredulous world would like to see Mr. Spicer's list of the real names in this romantic case.

Mr. Spicer must forgive us for rejecting his philosophy. As a story-teller he is not amiss; and we shall show our charity by quoting from his pages, without objection, one little French anecdote:—

"A young German lady (still living) had arrived with a party of friends at one of the most renowned hotels in Paris, and occupied, for her part, an apartment on the first floor, furnished with unusual magnificence. Here she lay awake, long after the hotel was wrapt in slumber, contemplating, by the faint glimmer of her night-lamp, the costly objects in the room, until, suddenly, the folding-doors, opposite her bed, which she had secured, flew open, and the chamber was filled with a bright light, as of day. In the midst of this, there entered a handsome young man, in the undress uniform of the French Navy, having his hair dressed in the peculiar mode à la Titus. Taking a chair from the bedside, he placed it in the middle of the room, sat down, took from his pocket a pistol with a remarkable red butt and lock, put it to his forehead, and, firing, fell back apparently dead! Simultaneously with the explosion, the room became dark and still, but a low soft voice uttered these words:—'Say an Ave Maria for his soul.' The young lady had fallen back, not insensible, but in a far more painful state—a kind of cataleptic trance, and thus remained fully conscious of all she imagined to have occurred, but unable to move tongue or hand, until seven o'clock on the following morning, at which hour her maid, in obedience to orders, knocked at the door. Finding that no reply was given, the maid went away, and, returning at eight, in company with another domestic, repeated her summons. Still no answer—and again, after a little consultation, the poor young lady was delivered over for another hour to her agonized thoughts. At nine, the doors were forced—and, at the same moment, the power of speech and movement returned. She shrieked out to the attendants that a man had shot himself there some hours before, and still lay upon the floor. Observing nothing unusual, they concluded it was the excitement consequent upon some terrible dream. She was therefore placed in another apartment, and with great difficulty persuaded that the scene she so minutely described had no founda-

tion in reality. Half an hour later, the hotel-proprietor desired an interview with a gentleman of the party, and declared that the scene so strangely re-enacted had actually occurred three nights before. A young French officer had ordered the best room in the hotel—and there terminated his life—using, for the purpose, a pistol answering the description mentioned. The body, and the weapon, still lay at the Morgue, for identification, and the gentleman, proceeding thither, saw both; the head of the unfortunate man exhibiting the 'Titus' crop and the wound in the forehead, as in the vision. The Archbishop of Paris, struck with the extraordinary nature of the story, shortly after called upon the young lady, and, directing her attention to the expression used by the mysterious voice, urged upon her, with much fervour, the advisability of embracing that faith to whose teaching it appeared to point."

There is a touch of human interest in the visit of Monseigneur Sibour, who, very properly, attended to his own business in the office. Of course we fail to see the steps by which the prelate arrived at his conclusion; but then it is not permitted to lay critics to reason in the manner of an archbishop.

A History of Discoveries at Halicarnassus, Cnidus and Branchidae. By C. T. Newton. Vol. II. Part II. (Day & Son.)

FIFTEEN months after the appearance of the first volumes of this important work the conclusion is issued, at a time which is just four years from the breaking up of the expedition in Asia Minor,—June, 1859. It is not difficult to believe that all the interval of time that has elapsed has been occupied by Mr. Newton in completing his home researches into the history of his theme, and in the illustration of his labours in the field. The text of the work is laborious in character, rich in the results of study, and an excellent record of what has recently been found, brought into union with much that was previously known of the history, topography and Art-remains of the cities named above, and of those hardly less worthy of note—Lagina, Myndus, Bargylia, Mylassa, Labranda, Stratoniceæ, Keramos, and the island of Cos. The last was visited by Mr. Pullan, the architect appointed to accompany the Budrûm Expedition, who took with him the inevitable Corporal Spackman, R.E.,—an individual who played so important a part in the early portion of the service. The controversy, if we may so style it, between Mr. J. Fergusson and Mr. Pullan on the nature of the proposed restorations for the Mausoleum at Halicarnassus will not be forgotten by our readers, who will, perhaps, think with us that Mr. Fergusson got the best of the argument, as he unquestionably produced the most characteristic, complete and beautiful reconstruction of the work of Satyros and Pythios.

Mr. Newton does not aim at writing a book of "travels," or a popular work of any order: probably he would fail in an attempt to do such a thing. His work is, consequently, almost a register of antiquarian labours and discoveries in the field and at home, divested of that personal element which sometimes renders the narratives of explorers so readable and so generally interesting. He neither records his own sufferings nor those of his companions; never seems moved with success, and is seldom tempted to enlarge upon the often highly suggestive themes in hand, by diving—as he is well qualified to do by education, if not feeling—into the scenes and secrets of the past. We would not desire a man in Mr. Newton's place to produce anything like "fine writing," nor can we regret that he does not treat us to picturesque descriptions of scenery and adventures. Nevertheless, the flesh and blood of the personal element is a blessed thing in a book of this

sort, and it has been imported into those of Mr. Layard and others. If Mr. Newton had no troubles, he must surely have had pleasures in the prosecution of his task; and we should really be glad to feel some sympathy for one or the other of these apparently inevitable contingencies. Throughout the book there is, however, not a heart-beat, not a hope, not a smile. When the author found the Mausoleum itself, he does seem to have been moved—it is true Prof. Donaldson had given him a broad hint of its locality, which was probably a damper;—but when he stood in the secret-chamber of the Carian king, we doubt if he so much as sneezed. Mr. Newton is so good a Greek as to preserve the unities in his drama of explorations. It is hardly fair to say that he himself is the central figure, excluding others; but there is only an impersonality, named Newton, in action. The very chorus of companions is absent; and, with rare exceptions, the wrecks of the chief Carian cities echo no other voice than his.

Cnidus forms the main theme of this concluding volume of the series. In treating it, the author follows the plan already adopted with respect to Halicarnassus, and describes the site of the city, which was originally built upon an island, like Myndus and Mytilene, so close to the mainland as to form two harbours connected by a narrow strait, such as the Greeks called an *euripus*. This island was the ancient Triopium, so famous of old, and well remembered in the history of the Dorian colonies as the meeting-place, and indeed Acropolis, of the Asian Hexapolis—so called until Halicarnassus was excluded from the League on account of some misbehaviour of one of her citizens, who, winning the tripod in the games—probably held on this very spot—of the Triopian Apollo, bore it off to his own house and did not leave it to the god. Pentapolis the confederacy was afterwards named, and comprised Cnidus, Cos, Camerius, Ialysus and Landus. The appropriation of a "challenge cup" is thus said to have broken up the potent League. Mr. Newton is of opinion that the famous Temple of Apollo stood on the island, and not, as has been surmised by many writers, on the adjacent mainland: he, however, found no traces of its site. Like most of the cities on the Ionian coast, Cnidus rose, in a series of grades, like an amphitheatre, from the shores of the sea; it had the advantage of its duplicated situation, upon the island and the main, and ascended in two faces, with the harbours between them. The axis of the island lies north-east and south-west: from its south-west point a citizen could look across the bay and see the Lion promontory that, with its grand memorial statue—one of the most important acquisitions of the expedition of which we are now treating—commemorated, thinks Mr. Newton, a great naval victory over the Lacedæmonians (B.C. 394).

Cnidus took a high place in what concerns us most—Science and the encouragement of Art. Eudoxus, the astronomer, who discovered Canopus on the southern horizon from his observatory in the city, was a native, and framed a code of laws for the people. In the fifth century before Christ, Cnidus had invested part of its wealth in two pictures painted on the walls of the Lesche at Delphi by Polygnotus—two great pictorial epics, says Pausanias: one representing the taking of Troy and the return of the Greeks; the other the descent of Ulysses into the infernal regions. Above all the possessions of the city, she owned the famous undraped Venus by Praxiteles. Round about this work a temple was erected, with groves, gardens and fountains. Among other great artistic posses-

sions of Cnidus, Pliny mentions a Minerva by Scopas, a Dionysos by Bryaxis—works only surpassed by the Praxitelian Venus. Ctesias, the physician, was a Cnidian, as was Sostratos, architect of the Pharos; Artemidorus, who warned Cæsar that the Ides of March were dangerous to him, seems to have been a citizen of influence. His name occurs in inscriptions found by Mr. Newton.

In the ruins of what Mr. Newton styles the Temple of Demeter were found the seated and standing statues of Demeter and that of Persephone, now in the British Museum. The first of these is exceedingly valuable as a work of Art, but not, probably, of the best period. The standing Demeter is a finer work. Perfect proportion is one of the unquestionable signs of the best periods of Art, as Mr. Newton would feel if he added the knowledge of an artist to his antiquarian attainments and native taste. Judging by the indifferent drawing in the costly book of plates that accompanies the work before us, we do not believe the head of the sitting Demeter belongs to the body on which it is placed. This drawing is taken from a photograph, and sanctioned by the author. Not far from this were found numerous lamps which had been, probably, deposited at the base of some statue. "We learn from Pausanias that lighted lamps were offered to Persephone, and let down into the trenches or chasms consecrated to the infernal deities"—a very striking and characteristic rite. Some of the offerings prove to have been of so late a date as the third or fourth century after Christ. Notwithstanding the careful excavations made on this spot, Mr. Newton does not seem to have found anything throwing a new light on the great questions respecting the Eleusinian or other rites of Demeter or Persephone.

The Lion Tomb was the most important single relic discovered at Cnidus; it is instructive as illustrating the structure of similar works in Asia and elsewhere, being probably the most complete of its class yet known. It stood on the summit of a bold headland, forming the end of a bay. The Lion is now in the British Museum, where every one may see it. As we have very recently discussed its character and merits (*Athen.* No. 1855), we need not repeat our opinion, especially as that of Mr. Newton is substantially the same as our own. It was surely an oversight of the author to say, p. 497, that no means of comparison between the Cnidian Lion and the fragments of that of Charonea have been afforded him. At Branchidæ were found the statues that lined the Sacred Way to Apollo's famous oracular temple; these are highly interesting as testifying to the influence of Egyptian upon early Greek art, our knowledge of which has been confirmed in the course of Messrs. Salzmann and Biliotti's discoveries at Rhodes. "The evidence of these extant monuments" (from Branchidæ), says Mr. Newton, "is an interesting corroboration of the story told by Diodorus, that the Samian artist, Theodoros, made one-half of a statue in his workshop at Samos, while his brother, Telekles, made the other half at Ephesus; so that the same canon of proportion was observed so exactly by the two brothers, working independently, that the two halves of the statue were found to tally exactly!"

The Phantom Bouquet: a Popular Treatise on the Art of Skeletonizing Leaves and Seed Vessels, and adapting them to Embellish the Home of Taste. By Edward Parrish. (Philadelphia, Lippincott & Co.; London, Bennett.)

Mr. Edward Parrish is an eminent drug cook. His writings on drug cookery, or pharmaceu-

tical chemistry, have gained him the esteem of the brethren of his craft in Europe as well as in America. When they learn, therefore, that he has been recreating himself from the fatigues of graver labours, if not more useful pursuits, by writing in a high-flown style a *brochure* on a "Phantom Bouquet," they will receive the information with some amusement. They will smile all the more when they learn that the book is obviously misnamed. Opticians can make phantom bouquets; and now that scientific spectres are doing the business of poetical and dramatic ghosts upon the stage, spectral flowers may soon be seen adorning theatres and drawing-rooms with their ethereal and startling beauty. It is the optician, and not the botanist, who can make phantom bouquets. But leaves and not flowers, fibres and not phantoms, are the themes of this publication of Mr. Parrish, of Philadelphia. He is nearer the mark when he compares the art of preparing leaves to something like what Sydney Smith fancied he would like doing to himself, when he wished to lay aside his too cumbrous flesh during the intense heat of the dog-days, and sit in his bones. By phantom bouquets are meant "skeleton leaves,"—long and familiarly known in Europe, as exhibited at horticultural shows or in shop-windows, and used as drawing-room ornaments and educational appliances. Mr. Parrish is as unfortunate in his second name for the art in question, calling it "skeletonizing"—a term which includes not merely the gratification of the whim of Sydney Smith, but the pursuit in which the most memorable feat was performed by the ants in the Hartz Forest: they prepared the skeleton of the deer which enabled Oken to perceive that the skull is only a developed vertebra. After calling its subject by such over-fine and over-dismal names—skeletonizing and phantom-making—Mr. Parrish affectionately inscribes his book to his wife, as "a pioneer and proficient in the art herein portrayed"; and the inscription is a compliment, however oddly worded.

The art of what we may call Leaf-bleaching has been traditionally known in Europe and Asia for many centuries, but seems to have reached Philadelphia, in America, only just before the civil war. This American druggist writes about it in the enthusiastic strain of the Scottish editor whose descriptions of the British metropolis provoked his readers to say "he seemed to have discovered London." To this circumstance we owe this little book—the first, as far as we know, ever devoted to an art producing very pretty and instructive results, and well worthy the attention of ladies. Skeleton leaves have, for the first time, a little book all about themselves.

Some years ago, Mr. Parrish was attracted by a beautiful vase of prepared leaves and seed-vessels, displaying the delicate veinings of these plant structures, and of such brilliant whiteness as to suggest the idea of perfectly bleached artificial lace-work or exquisite carvings in ivory. Mr. Parrish is so little of a physiological botanist, that he calls the cellular tissue, the seat of the marvels of cell life, the parenchyma, which becomes the germ and the pollen, "the grosser particles":—

"This elegant parlour ornament was brought by returning travellers as a novel and choice trophy of their Transatlantic wanderings; none could be procured in America, and no one to whom the perplexed admirer could appeal was able to give a clue to the process by which such surprising beauty and perfection of detail could be evolved from structures which generally rank among the least admired expansions of the tissue of the plant. That the novelty of this spectacle then constituted one of its chief attractions need not be denied. Yet the

phantom case, now that hundreds of pier-tables and *étagères* in city and country are garnished with its airy forms, and its photographic miniature, under the well-chosen motto of 'Beautiful in Death,' is displayed in almost every stereoscope, still delights with a perennial charm, creating a desire, among all amateurs in matters of taste, to add an ornament so chaste to their household treasures."

Leaf-bleaching has been known traditionally from time immemorial in Europe and Asia by the families in which botanical tastes have been hereditary. It is not, as Mr. Parrish calls it, a lost art revived; and it has neither been forgotten nor restored. In Great Britain and on the continent of Europe, as well as in the United or Disunited States, among the quaint old curiosities to be found in the houses of retired sea-captains and East India traders, Chinese pictures are often to be found, sometimes of considerable beauty and ingenuity, exhibiting flowers, fruit, shells, birds or insects painted in bright colours on veritable skeleton leaves. The process is to be found described in old books published in London in the seventeenth century. It appears to have been introduced into England from Italy, probably in the Elizabethan age, when the Italian mind had so much influence upon the English mind. In 1645, at the time of the civil war, Marcus Aurelius Severinus, Professor of Anatomy and Surgery at Naples, published a figure of a skeleton leaf. Frederick Ruysch, naturalist, published an account of the process of fermentation, by which heat and moisture could be employed to loosen the pulpy from the fibrous parts of the leaf. This fact, so long known in Europe, was circulated as a secret in Philadelphia in 1860! Secrets do not fly so very fast after all.

"The leaf is the plant," say the disciples of Goethe; and there is as much truth in the proposition as can be compressed into a saying. There are air and water, stem and flower, leaves. Botanists divide the tissues of plants into vascular and cellular; and in skeleton leaves the cellular tissue is removed and the vascular retained. The vascular tissue branches through the cellular by what used to be called nerves, and are now called veins. Mr. Parrish, after certain European theorists, calls the leaf the type of the tree, in the sense that the leaf-veins correspond exactly to the branches of the trunks in their angles and curves. The skeleton leaf is its tree, leafless, in miniature. Prior to comparing the leafless tree with the skeleton leaf, the tree ought to be seen in the "gloom"; just as Sir Walter Scott said that, to be seen to advantage, Melrose Abbey must be seen by moonlight. No doubt it is well to compare the leaf-pattern with the tree-pattern; and there is some ground in reality for these fanciful correspondences. The lengths of the stalk and of the trunk are relative to each other—shooting up or sitting low; as, for example, in the poplar and chestnut, beech and oak. Leaf-bleaching, however fanciful these resemblances may be deemed, must promote habits of observation in young people, and cause them to notice the differences of leaves, serrated or entire, ovate, acuminate, cordate, or irregular. Observers of leaves, we may add, will see greater marvels than this book promises them. They may witness the metamorphoses of the leaves, which are quite as wonderful and beautiful as the metamorphoses of the insects, and much less known. The egg, grub and fly in the circle of insect life are not more interesting to watch, as forms passing into each other, than are the seed, leaf, petal, sepal, stamen or pistil, cell and pollen, watched as changes of form in the phases of plant life. Prof. Schleiden and other botanists

who have never mastered Goethe's theory and Geoffroy St.-Hilaire's explanation of monstrosities, have sneered at the discovery of the poet-botanist; but any observer of the leaves of the wild strawberry may easily convince himself that scientific accuracy is not on the side, on this occasion, of certain mere botanists.

Not merely in summer, but nearly all the year round, may leaves be gathered for bleaching. Leaves already prepared are sometimes found in winter and early spring. Leaves macerate best when gathered or picked mature, perfect, unblemished and fresh. The leaves of suckers are large, but not strong. A list of forty plants whose leaves, and twenty more whose seed-vessels, reward bleaching, is appended to this essay. Among the hardy deciduous plants and shrubs are maples, poplars, lindens, magnolias, tulip poplars, willows, beech, ash, hickory, chestnut, horse chestnut, elm, Kentucky coffee-tree, pear, quince, apricot, andromeda, deutzia, spiræa, sassafras, althæa, pomegranate, rose-acacia, rose, medlar, wild cherry, sugar-berry, witch hazel, *Fraxinella dictamnus*, *Gardenia florida*, *Laurestina francisceæ*, *Erythrina cristigalla*, *Virgilia lutea*, white fringe-tree. Among the evergreens are holly, mahonea, barberry, mountain laurel, box, butcher's broom, *Olea fragrans*, *Camellia japonica*, caoutchouc; and among the vines and creepers are ivy, begonia, witsaria, Dutchman's pipe, greenbriars, and wild yam. The seed-vessels, modified leaves, and calyxes, successfully macerated or found naturally prepared, are thorn-apple, poppy, mallows, nican-dra, physalis, henbane, monkshood, wild sage, safflower, canterbury bells, toad flax, skull-cap, figwort, French tonato, wild hydrangea, hydrangea, bladder senna, bladder nut, ptelia, false pennyroyal.

Leaf-macerating is very simple. Mr. Parrish cannot, however, be recommended as a safe guide in the process, for his advice is too vague and his methods are too rough. Nothing can be more misleading than to say a single vessel will suffice for many similar leaves of different kinds; for the leaf-bleachers who succeed best in this country say a separate vessel is necessary for every separate leaf. A few leaves of the same plant are all which ought to be in a single vessel. The leaf-bleacher, in fact, who feels all the difficulties of his art will not, whilst he is but a beginner, simultaneously attempt to macerate and bleach a great variety of different kinds of leaves, but will make the leaves of each species his separate care and study. Each species requires special treatment, either as regards maceration, bleaching, manipulation or time. Beautiful skeleton leaves of the *Camellia japonica*, for instance, are obtained by boiling them with soap.

The tannin in oak-leaves enables them to resist the ordinary process of maceration in a vessel of water in which evaporation is promoted by solar or artificial heat. Oak-leaves are prepared in England by a process repudiated in Philadelphia, by mixing dilute muriatic acid with the macerating water. Beautiful and ready-prepared oak-leaves are found in the fresh-water streams of America. And they are prepared by very singular artists! But we shall allow Mr. Parrish to describe this curious observation in his own way and words:—

"It yet remains to notice in connexion with oak-leaves, what cannot fail to excite the liveliest pleasure in every naturalist who delights to seek the woods and streams on chill autumn days, though all the fragrant epigeas, the delicate bloodroots, the pale spring beauties, the modest 'quaker ladies,' and all their lovely spring companions have so long departed as to diffuse almost a feeling of sadness in visiting the now desolate slopes they rendered so inviting. Let our amateur

note what becomes of the leaves that, having performed their allotted part in the growth of the forest and ceased to be fermented by the life-sustaining sap, have yielded to the blast and now thickly strew the ground, awakening, as stirred by the wind or the foot of the pedestrian, the familiar rustle of the autumnal woods. These are all destined to pass into the earth from which they sprang by a slow but sure decay. The oak-leaves, as would be supposed, longest resist this destiny. Even those that have fallen into yonder stream have not matted themselves into the slimy mass, except by mixing with other and less hardy leaves; and here if the explorer will search closely, he may occasionally find almost perfectly skeletonized oak-leaves. How came they so? Look, provident Nature has found a way to make them, intractable as they are, to subserve a purpose in her wise economy. Thousands of curious little animals called caddice bugs [*sic*], who envelop themselves in a tubular little cocoon [*sic*] of pebbles and sand, are daintily masticating the soft parts of these, leaving all the veinings as perfect as the most captious skeletonizer could desire. It is true that after the rough usage of the running stream upon its pebbled bottom and the thick matrix of twigs, chestnut-burs, acorns, and the like, very few perfect specimens remain, but then, my friend, here is a hint for us. Change these adverse conditions; colonize, by the aid of an exploring kettle, a few hundred caddices with their moveable tents [*sic*] to your own sheltered veranda; give them a shallow dish with a bed of sand in the bottom and a constant trickle of fresh water to resemble their native stream; then supply them with their favourite leaf, and they will clean it for you to perfection. This has been done successfully, and it can be done again."

The insect in question is, no doubt, the larva of a species of *Phryganea*, or caddis-fly, called by anglers cad-bait and water-moth. They may be seen flying over the surface of the water about sundown. The species serviceable in Philadelphia in preparing oak-leaves may not be identical with the species found abundantly in water-cress beds in French and English streams. But no one desirous of repeating and testing the experiment can fail of being rewarded for his pains. The English type of the species (*Phryganea grandis*), if it does not feed upon the parenchyma of oak-leaves, certainly feeds upon cresses. And no more curious animal can be watched in a tank! His pharmaceutical repute considered, it is astonishing that Mr. Parrish should have called this insect a bug, and its tubular abdominal case, or sheath, a cocoon or tent. Entomology, we fear, is not much cultivated in Philadelphia. The species common in Europe may be seen taking the fine white threadlike spongioles of the floating water-cress, and twining them in rings around its body and then glueing the shells of planorbes and other young or tiny mollusks to the tube of rings!

Mr. Parrish mentions some electrical observations made upon skeleton leaves and flowers in glass cases which deserve quotation, although mistakenly stated:—

"In a model phantom-case, arranged by a medical friend, himself a model naturalist, 'humble that he knows no more,' a delicate fern rising to the summit trembles with electric vibrations on every touch of a silk handkerchief to the glass, while a little tuft of hydrangea flowers, loosed from its moorings, rises to the top like a balloon whenever the unseen electric flash is awakened even by dusting the surface of the shade."

Saying nothing about a flash which is not seen, we suspect that the volatile flowers mount by specific gravity, because cold air is admitted at the bottom of the shade by the shaking which follows the dusting. But the statement respecting the handkerchief and the fern-leaves is worth testing.

For bleaching the leaves, solutions of chloride

of soda and chloride of lime are used, and some succeed best in the one and some in the other solution. Mr. Parrish gives up flowers and the leaves of herbs as hopeless, but many of them may be dried and preserved in very fine and very dry sand.

Jurisprudence. By Charles Spencer March Phillipps. (Murray.)

It is to be regretted that, as a rule, every author who produces a work on any of the moral sciences feels himself bound to produce a bran-new definition of the science of which he treats, and to prove that all former writers have been ignorant of the subject. The student is thus asked by each succeeding teacher to begin his studies anew; and the consequence is, that a study which might otherwise be interesting, becomes almost as irksome as that first great trial of childish patience, the learning of the alphabet.

Mr. Phillipps has his new definition, and has something more than the usual amount of contempt for those who have gone before him, which he expresses with something more than the average amount of violence. He talks of the "pedantic stupidity of Tribonian and his colleagues," and characterizes Blackstone's description of the development of property among mankind as "the most astonishing specimen upon record of complacent presumption"; while Blackstone himself is, in another place, spoken of as "a dull and shallow sophist, who never used an idea which he had not borrowed, and who never borrowed an idea which he did not spoil." Nor is the author's disdain wholly expended upon the writers who have preceded him. The occupation of a practising barrister is described as "screwing truth out of rogues in a witness-box, for the purpose of hammering it into fools in a jury-box;" and as being an art "whose greatest masters have been found quite unable to take the lead in an assembly of educated gentlemen." All this appears to us to be in very bad taste.

The writer defines jurisprudence to be "the science which teaches us to analyze and classify the rules of justice"—a definition which in substance differs so little from "the philosophy of positive law," (which, we think, is Mr. Austin's definition,) that it would have been better if Mr. Phillipps had adopted the latter, with which we are familiar. The author wholly rejects the doctrine known as the Utilitarian theory, while, however, he makes the important admission that this theory goes far enough for all purposes of civilized legislation. In his opinion, justice itself is an instinct, and not a science: its principles must be taught by the conscience, not the intellect; and jurisprudence is to justice what language is to thought. It follows, that a perfectly scientific system of jurisprudence may be constructed upon any jurial principles, however wrong these principles may be in themselves. This is true; but such a system could not properly be spoken of as jurisprudence, but would be the jurisprudence of a particular State; for, used without any qualification, the word "jurisprudence" must mean the science of laws as they ought to be, in whatever manner the principles of justice are to be ascertained.

The author divides his work into two books, in the first of which he treats of what he calls "Natural Jurisprudence," or the rights which arise between man and man by the mere fact of their co-existence; and this subject he disposes of in three chapters. In the first of these he considers those obligations which arise irrespective of property or of any peculiar position or status occupied by the parties. In the next

he deals with the effect which may be produced on these personal rights and obligations by the possession of property; and in the third chapter he considers the modifications of these rights by the peculiar status of the parties, arising from the absence of free agency, infancy, marriage, difference of sex, &c. In other words, in the first and second chapters the author deals with questions of natural right as they arise amongst persons in a common status; in the third he considers the modifications of those rights which arise from any peculiarity of status in the parties.

In the second book Mr. Phillipps proceeds to inquire in what manner the natural rights and obligations of mankind are affected by their division into independent states; and this book is divided into four chapters, in which he successively treats of (1.) The jural relations which exist between one independent state and another; (2.) The rights and obligations as regards the state and fellow citizens which arise from citizenship of any particular state; (3.) Territorial rights and obligations; and (4.) Those rights and obligations which arise by the appropriation by the state of unoccupied territory, or by acquisition of a certain right of sovereignty over territory in the occupation of persons who are not citizens of that state.

Mr. Phillipps hints that he may hereafter continue the present work by considering that which he calls "Conventional Jurisprudence,"—by which he means those laws and usages which (whether right or wrong) are generally established; or, as the author expresses it, he proposes to lay down the general principles by which all the conventional usages which are known to have existed, or which can be conceived as existing among mankind, may be divided into classes, and to illustrate each class by the example of some particular usage familiar to every modern lawyer. The object and effect of this analysis are thus set forth by the author:—

"The great object of the system of analysis which I have now briefly described is to reduce the whole science of Jurisprudence to a single expression, by adopting the human individual as the Unit, the determination of whose Status is its final object and from whose various situations the entire series of its problems must arise. We begin by taking the simple fact of his existence and by combining that fact with the subsequent consequences of his volition and with the antecedent peculiarities of his character. We then proceed to consider the effect of these natural circumstances when combined with the fact, whether considered as natural or as artificial, of his Allegiance to a Political community. And we may possibly hereafter conclude by further combining the results of Natural and Civil with those of Conventional Society. I say with the utmost confidence that the human imagination may safely be defied to conceive any possible opposition of interests between two human beings whose causes and consequences may not, according to these principles of analysis, be classified with mathematical precision."

We have small hope of seeing this dream of classification with mathematical precision realized; yet the system pursued by the author appears to us to be natural, and well worthy of the careful consideration of those who turn their attention to this most useful and somewhat neglected branch of moral science.

The execution of the work appears to us to be hardly equal to its conception. There is much of vigour and at least enough of forcible and lively illustration, but there is a certain lack of clearness; and where, as is frequently the case, the consideration of what laws ought to be is illustrated by what the laws of England are, it is not always clear whether the author is speaking of the law as the rules of justice would have it,

or stating what the law of England is. Many of the opinions, moreover, are unpractical and exaggerated; as, for instance, that in war a fortress which is surprised, or a detachment which is surrounded, ought to be shown its danger and offered quarter before fire is opened. Surely the observance of such a rule would in most cases destroy the advantage of the surprise. We have a minor objection, which we feel bound to state. Mr. Phillipps rejects those respectable lay figures of legal illustration, Titius, Gaius and Seius, who have so long done service, and selects as their successors persons no less celebrated than Brown, Jones and Robinson! We have no great respect for Titius and Co., who certainly do not now suggest any very lively idea of humanity; but who can read seriously of Brown, Jones and Robinson in the statement of a legal proposition? *Their status*, as Mr. Phillipps would express it, is too notorious. In a like spirit the author selects Lilliput, Blefuscu and Brobdingnag for the states between which grave questions of international law are supposed to arise.

The Principal Incidents of Goethe's 'Faust,' Dante's 'Divina Commedia,' and Virgil's 'Æneid'—[Die Hauptmomente von Goethe's 'Faust,' &c., von C. Vogel von Vogelstein]. (Munich, Fleischmann; London, Dulau & Co.)

This work, by the Court-painter of Saxony, consists of three large copper-plate engravings, intended as designs for as many painted windows, and a copious explanation in letter-press, which brings the whole within the range of literature, as well as of art.

Each engraving is, of course, divided into several compartments, in the arrangement of which they all three correspond, to a certain extent, with each other. At the top of the 'Faust,' in a circular compartment, is the figure of God the Father, on each side of whom is an angel, one bearing the tables of the Law, the other the scroll of the Gospel. Further to the left of the Deity (the right of the spectator) is Mephistopheles, accompanied by another demon, who appears amid the heavenly host, soliciting permission to tempt the German doctor. In the central compartment, which is by far the largest of all, appears Faust himself, shrinking from the spirit of Earth, which he himself has raised. This compartment terminates in a pointed arch, against the right-hand corner of which is a small compartment, showing the first manifestation of Mephistopheles, who, in the shape of a dog, has put himself in the way of Faust and Wagner. Below this, and against the central picture, is a compartment, likewise terminating in a pointed arch, showing Faust's admiration at the vision of the lovely female in the witch's kitchen; and with this corresponds a similar compartment on the left-hand side of the whole engraving, representing the garden scene, with Faust and Gretchen embracing in the foreground, and Mephistopheles and Martha at the back. The eye, now travelling downwards, lights on two rectangular compartments, respectively representing Gretchen's agony in the church and the death of Valentin. To pursue the story, the spectator must now go to the right hand, and he will find, below the witch's kitchen, an illustration of the orgies in the Blocksberg. Not going straight downwards, but looking directly under the large central division, he will now find a picture representing the ride of Faust and Mephistopheles by the gibbet, adjoining which, on the right, is the prison scene, in which the salvation of Gretchen is assured, while Faust is dragged away by the fiend. All the lower part of the engraving is

now exhausted; and the spectator, soaring to the top, will find on his left hand, close to the Deity, the soul of Margaret accepted by the angelic choir, having passed on his way a small work of supererogation, showing Faust when he was a good little boy, going to church with his mother. This is intended to illustrate the monologue uttered by Faust when he hears the Easter bells.

The subjects above enumerated are, for the most part, the same as those sketched by Retzsch; but the enumeration was necessary to render clear the correspondence of the whole first picture with the second one, which illustrates the 'Divina Commedia.' Here we begin, not at the top, but at the large middle compartment, where we find Dante seated on the grave of Beatrice, and, pen in hand, looking up in an ecstatic state towards the Paradise, which occupies the compartment over his head. The despairing Philosopher evoking the spirit of the Earth, corresponds with the Italian poet beginning a new life, with the aid of contrition and self-knowledge. As Dante ascends when Faust falls, the correspondence is always between a degree of perfection and a degree of descent. Thus where Faust yields himself up to a life of sensuality in the witch's kitchen, Dante has arrived at the gate of Purgatory, and is marked by the angel with the seven P's, denoting the seven deadly sins (*peccata*), which are to be washed away. Where Faust in the garden is tempting Gretchen to stray from the paths of virtue, Dante is passing through the purifying flames that are to qualify him for a meeting with Beatrice. To see the evil consequences of sin the spectator had to go down the Goethe picture, and find the agony of Gretchen in the church and the death of Valentin. On the contrary, he rises from Purgatory to behold the meeting of Dante with Beatrice in the earthly Paradise as a result of purification. Faust drops from the witch's kitchen, first upon the Blocksberg, then into the clutch of the fiend, where Dante attains contemplation of the Deity. So thoroughly has the painter thought over his subjects, that even in the disposition of his pictures there is a meaning.

The respective frames of the 'Faust,' and the 'Divina Commedia' are in harmonious contrast with each. The former is set in a painted Gothic window, in the corner of which are two medallions, containing portraits of the German and the Italian poet, while at the sides are four allegorical figures, three representing the three learned faculties, Theology, Medicine, and Jurisprudence, all of which Faust discovered to be so flat, stale and unprofitable, while the fourth symbolizes Poetry, singing the hapless doctor's fate. 'Faust' is the tragedy of the University. The 'Divina Commedia,' on the other hand, is encased in the façade of a church, terminating in three gables. On the midmost of them is the cross, and on the other two are figures of the Pope and the Emperor, symbolizing the Guelph and Ghibelline parties.

Having thus invited a comparison between Goethe and Dante, with a manifest preference for the latter, Herr Vogel von Vogelstein feels that his work would not be complete without a corresponding illustration of the 'Æneid,' being the great work of the Florentine's instructor and guide.

In this third work, the pious Trojan, with his father on his shoulders, occupies the large central compartment, while over his head, in the place where the most sacred objects of the Christian faith are represented in the other two, is the Olympian heaven, where Venus is imploring Jupiter to bestow his favour upon her son. Two statues of Augustus and Virgil,

which seem to stand before the view of Olympus, divide it into three parts. The one of these to the spectator's left is occupied by Mercury, who is about to descend to earth to secure a favourable reception for the wanderer, and, tracing our way downwards, we come successively to the storm, the scene where Æneas relates his adventures to Dido, and the arrival at Cumæ. Below all these is Æneas with the Sibyl, placed in a compartment corresponding to Dante's first interview with Virgil. The retreat of the Trojan and the queen to the cave, and the death of Dido are in two small compartments, to which nothing corresponds in the other pictures; but to the passage of the Infernal river there is almost an exact pendant. As Dante rises from the 'Inferno' to the 'Paradiso,' so does Æneas attain his apotheosis on the right hand of Olympus, and on his upward passage we find three pictures representing the arming of the hero by his mother Venus, the death of Turnus, and the marriage with Lavinia. The frame of this work appears even more decidedly architectural than those of the others, being in the form of a Roman portal of the Imperial age. Over the central picture are five metopes, in which the entrance of the Trojan horse, the deaths of Laocoon and Cassandra, the discourse with the wounded Polydore, and the visitation of the harpies are severally embodied.

NEW NOVELS.

Rough and Smooth: a Tale of Our Own Time. By Lieut.-Col. R. D. Clephane. (Edinburgh, Elgin & Son.)—This story of adventure is not written by a practised author, but it is written by a gentleman, which gives it a pleasant tone. There is much freshness in the scenes of Spanish life, which read very much like real adventures; they are exceedingly well told; and the book is very entertaining reading, although the plot of the tale is not remarkably clear or probable. One brother has seized wrongfully the estate and title of a brother supposed to be dead, which brother is alive, though, for reasons he has, he keeps up an incognito, and acts as guardian angel to a young man who is the *jeune premier* of the tale. For readers who delight in the novels of Lever and Grant we can recommend Col. Clephane's 'Rough and Smooth,' with the assurance that they will not be disappointed.

The First Temptation; or, Eritis sicut Deus. Translated from the German, by Mrs. William R. Wilde. 3 vols. (Newby.)—This work is extremely well translated, but few readers will have the patience to wade through three thick volumes of German philosophy, and its practical application to the different characters, who live and move only to show the various dangers and difficulties which are the natural consequence of abandoning the old Christian belief and doctrines to lead a life according to the German schools of philosophy and theology. The characters are all lay figures, dressed in accurate philosophic costume; they each act up to their own doctrines, and the logical result is pitilessly enforced. There is a great deal of careful and patient labour in the book; the philosophical arguments and aphorisms are taken from the works of Goethe, Fichte, Kant, Hegel, and others; but the application belongs to the author, and, whether it be that the puppets are perverse or the author unskilled, the result is a fatal concatenation of madness, badness, and general inconvenience,—a universal imbroglio, in which the high philosopher is nearly poisoned, and the chief heroine narrowly escapes being brought to justice for an attempt at murder. There is a great deal of cleverness in the work; but the distracted situations could find a place nowhere except between the boards of a German novel. All the characters go more or less mad, and the reader will find himself inclined to follow their example, and close the book in haste.

A Simple Woman. By the Author of 'Nut Brown Maids.' (Smith, Elder & Co.)—This "simple woman" is a great bore—to the reader at any rate. The author speaks of her throughout in a lack-

a-daisical tone of admiration, wondering at everything she does, and giving epithets of approbation to all she says. The story is told in a faint, fantastic manner; it is without interest, although the author's epithets indicate what the reader is expected to feel. An old man has disinherited his son in a fit of passion and left the estate to another; the daughter of the niece, who will inherit under this will, discovers the injustice, and watches for a gleam of consciousness to induce the old man, who has become imbecile, to revoke the unjust bequest. Told simply and skilfully, this might have been made interesting, but it is not so told; the characters are all introduced as foils to show off the "simple woman," and the story is vague, stupid and unsatisfactory, which is the most provoking as the author has done so much better.

Tried and True: a Tale. By Alton Clyde. (Newby.)—Stories like this show how much authorship has become a knack—a pursuit to be learnt like fancy work, or illuminating, or any elegant occupation—and taken up to beguile time, or lose a little money. The characters and incidents of 'Tried and True' are purely conventional, yet not without a certain degree of theatrical interest. It is, we suspect, a reprint from some of the many illustrated penny journals of the day. The moral is unimpeachable, but the probability is of the very wildest and most shadowy description. The hard-hearted fine lady,—the generous heiress,—the cruel uncle,—the victim heroine, and the unfortunate father have appeared in many romances; and though the circumstances are sometimes painful, for readers like to read of sorrows of the soul, and enjoy difficulties both of love and money, they know well from experience that these veteran actors always emerge at last into bridal happiness and fortune's favours.

Snowed Up. By Mrs. Octavius Freire Owen. 3 vols. (Newby.)—A collection of stories told by a party of travellers who, as the title intimates, are "snowed up" in the midst of a journey, and who afterwards continue the pleasant habit of mutual tale-telling every evening till their routes separate. The stories, connected by this slight link, are not of very great merit; some are highly romantic, and border on the supernatural, and these are more like reality than those which are called stories of real life. They remind us of the tales that used to be so popular in the Annuals of days gone by.

Manxland: a Tale with an Introductory Sketch of Manx Home Missions. By B. Stowell. (Nisbet & Co.)—This "tale" is of the very mildest description; it bears the same relation to the general idea of a story that a milk-bun does to a slice of bride-cake. It is not the topics that are in fault, for we know many very pleasant tales about Sunday schools and their scholars; it is the flat, insipid manner in which this tale of Manxland is told. The introduction gives an account of the spiritual needs of the island, and the provision that has been made to meet them. Manxland is itself such a curious place, with its native race, who belong to another civilization, that an author must be ingeniously unfortunate to avoid telling the reader something to excite his interest, and this talent is certainly evinced in the present work.

Joan Carewe: a Novel. By E. M. O. L. 3 vols. (Newby.)—This is a foolish high-flown novel, with sorrows and difficulties which the simple reader will scarcely comprehend. The heroine of the book, having been won by a worthless man to promise to marry him, in a fit of foolish generosity gives him at his request "a written promise." Discovering afterwards that he is worthless, and that she herself prefers another, she asks him to release her; he candidly tells her that he does not love her, that he is only marrying her for her money, yet he holds her to her promise; and for the sake of escaping some shadowy threats, she fulfils her promise, because it was written, and of course lives miserable, breaks her lover's heart, and dies a martyr. The story is stupid and foolish.

OUR LIBRARY TABLE.

The London Industrial Exhibition of 1862—[Die Londoner Industrie-Ausstellung von 1862, von Lothar Bucher.] (Berlin, Gerschel; London,

Thimm.)—About a year since, Herr Lothar Bucher made himself known by a volume containing 'Pictures from Foreign Lands' ('Bilder aus der Fremde'), in which he uttered several unpopular opinions in a very lively and agreeable manner. In the year 1848, when peoples seemed to rise against governments, he was apparently an extreme Liberal; but since the word "nation" has taken the place of people, and nationalities, instead of resisting their tyrants, are quarrelling with one another, his sympathy with the liberal cause is diminished. Why should he as a German be particularly anxious that Austria, a German power, should lose Venetia for the sake of a foreign potentate? The publisher of the 'Pictures' thought that a description of the International Exhibition of last year would make a good second volume; and hence the book before us was produced. Herr Bucher went through the great building in a merry but somewhat sarcastic mood, convinced that the whole affair would prove a failure; and though he faithfully classified and described the various objects, his conviction was never altered. The circumstance that he had to pay five guineas for his ticket, whereas the members of the British press were admitted free, soured him a little at the beginning; and in his very first chapter he tells his publisher that he expects to be repaid. His readers, flattered that they are thus made the confidants of his business transactions, will, of course, hope that his expectations have been answered, and that he is not five guineas out of pocket. The following scrap may amuse some of our lady readers:—"When in England a mattress is stuffed with what is called horse-hair, only the curly hair of the tails of oxen is used; the genuine article is called in the language of trade 'real horse-hair,' and must be ordered under that name. The French word for the hair of a horse's tail is *crin*, and a texture of cotton and horse-hair interwoven is hence called 'crinolines.' When a certain article of female attire was made of this stuff it was also called a crinoline; but as the stuff was found dear, hoops of wood, whalebone or steel were used instead, and to these likewise the word 'crinoline' was less properly applied. As hoops have become more common than horse-hair, the word has so completely lost its original signification, that in ordinary parlance it denotes the former only, so that ladies who (to their credit) wear horse-hair only, stoutly deny that they wear crinoline. * * The most perfect specimen of the spurious crinoline was exhibited by Mr. Thompson. * * Round this did the ladies impatiently throng, like chickens round a saucer of food, and exclaimed 'Beautiful!' which, in their language, means 'Blessings on the man who made it.' If, however, one of the male sex came near them, they cried 'Shocking!' which, being interpreted, means 'Evil betide him who set it up here.'"—Herr Bucher has a fine ear for the purity of the English tongue. When he was wedged in a crowd on his way to the Guildhall banquet, and amused himself by examining the elaborate head-dress of a lady who stood close before him, she suddenly exclaimed, "Look at them flowers"; and by this ejaculation he was thrown into a state of horror that can only be felt, not described (*der nicht geschildert, nur mit empfunden werden kann*). Do not let our city belles fancy they can talk as they please in the presence of foreigners. On the 18th of July there was a "chiel among them talkin' notes," whose proximity they little suspected. Moreover, the horrid man adds, that they were not nearly so good-looking as the ladies he saw at Chiswick and Hatfield.

Tableau from Geology; and other Poems. By Matthew Brydie. (Hardwicke.)—The author of this book of verse premises that the reader will be tempted to smile when he learns that the writer has been at it for a quarter of a century! We do not see matter for a smile in the confession. On the contrary, we could sooner drop a tear over the frailties of poor humanity and its "last infirmity" of versifying. The 'Tableau from Geology' opens with a regiment of asterisks, all in rank. We are gravely assured that these mark the lapse of an indefinite period of time preceding the commencement of the poem. This time we can smile; and, having glanced at some of the other poems, we have determined to leave the geological poem un-

read until such time shall have elapsed as is represented by the asterisks.

The Real and Ideal: Poems. By Arthur Llewellyn. (Hurst & Blackett).—Adverse criticism is sometimes as distasteful to the critic who pens it as to the author who is the subject of it. The poems before us furnish a case in point. There is so much evidence in them of a mind alive to impressions of moral and mental beauty,—they show such delicate taste and careful labour, that it is with uncommon regret we point out their one fatal defect—the want of power to arrest the reader by a fresh and individual style. We quote the opening verses:—

Spirit, that when the world was young,
Didst wander o'er the plains of Earth,
And waken into tones of mirth
Her dull grey heart; like harp new-strung.
Of land, sea, sky, not one was mute,
Nalads along the rills divine
Laughed lightly, and the happy Nine
Sang to Apollo's silver lute.
Oh, thou wert ever hovering o'er
The minds of mortals, in the days
When cloudlets beamed with Iris' rays,
And Neptune moaned on every shore:—
When Flora streaked the way with flowers,
Though 'neath lurked Hades' gloomy bed;
And hurling thunderbolts o'erhead
Sate Jove august, supreme of powers:—
Imagination dimmed the Real;
And thou wert seen in calm and storm—
No idle tale, but living form;
Man's spirit dwelt in the ideal!

—There is a certain grace in these lines, but no new or striking picture; they afford a fair example of the volume.

Legends of the Lintel and the Ley. By W. C. Dendy. (Bell & Daldy).—We own ourselves incompetent to extract the grain of wheat out of this bushel of chaff. Professing, as the work does, to be a journey through Surrey, with legends of the various localities, it might have been made interesting and instructive; as it stands, it is unintelligible nonsense, written in a fantastic jargon, to which the euphuisms of the days of old were plain speaking.

The Apostle of the Alps: a Tale. By the Author of 'Moravian Life in the Black Forest.' (Hall & Co.).—The Author of 'Moravian Life in the Black Forest' has here told the story of Bernard de Menton in a fashion suited to the tastes of children. Little girls will read the tale with pleasure.

The United States of America in 1863; their Political History, their Mineralogical, Agricultural, Industrial and Commercial Resources, and the Contribution they have made to the Riches and Civilization of the Entire World. By John Bigelow, United States Consul at Paris. (Paris, Hachette & Co.).—Written in French for the benefit of the Emperor Napoleon's subjects, before whom it wishes to place what many Northerners would deem a fair and moderate view of the American question, this historical essay is cautious rather than candid; but it is superior to the ordinary run of political statements put forth with the stamp of semi-official authority. The introductory part of the work is a sketch of the States from the first settlement of the Plantations to President Lincoln's Abolition Proclamation. In this division of the volume there is but little with which English readers are not familiar. The second and concluding section of the book is statistical, its facts being chiefly taken from Appleton's 'New American Annual Cyclopaedia,' which work the author terms "le répertoire le plus riche et le plus authentique de faits relatifs, non seulement à l'Amérique, mais encore à une foule de sujets contemporains."

The Merchant-Prince and his Heir; or, the Triumphs of Duty: a Tale for the World. By the Author of 'Geraldine.' (Duffy).—If this be really a tale for the world, most assuredly we are not worldly, for we have in vain attempted to read it. It is one of those heavy pieces of light literature which are written for the amusement of their authors—and no one else. Sometimes a very bad novel makes very good fun for idle readers, but the folly of 'The Merchant-Prince and his Heir' is not of the sort that creates pleasant laughter.

The New Editions on our table include: Vol. I. of *The Poetical Works of Robert Browning* (Chapman & Hall).—*A History of Feudalism, British and Continental*, by Andrew Bell (Longman).—*Autobio-*

graphy of Lutfullah, a Mohamedan Gentleman, edited by Edward B. Eastwick (Smith, Elder & Co.).—*Agnes of Sorrento*, by Harriet Beecher Stowe (Smith, Elder & Co.).—Vol. I. of *Wilson's Tales of the Borders and of Scotland*, revised by Alexander Leighton (Ward & Lock).—The Rev. W. Jones's *Essay on the Church*, and a Complete Edition of Mr. Wilberforce's *Practical View of Christianity* (Edinburgh, Johnstone, Hunter & Co.).—Messrs. Macmillan & Co. have added to their 'Golden Treasury' *The Fairy Book*, by the Author of 'John Halifax, Gentleman.'—*The History of Sandford and Merton*, by Thomas Day, has also been added to Messrs. Longman's 'Entertaining Library.'—The following have also appeared: from 'Fraser's Magazine,' *A First Friendship* (Parker, Son & Bourn).—from 'Bentley's Miscellany,' *A Visit to Russia in the Autumn of 1862*, by Henry Moor (Chapman & Hall).—from the 'Atlantis,' *Some Remarks on a Proto-Morphic Phylotype*, by Dr. Sigerson (Dublin, Fowler).—from the 'Christian Spectator,' *The Customs of the Dissenters* (Stock).—from the 'Nonconformist,' *The Politics of Christianity*, by Edward Miall (Miall).—from the 'City Press,' *London Scenes and London People*, by "Aleph" (Collingridge).—*The Correlation of the Natural History Sciences*, by D. T. Ansted (Macmillan).—*The War in Poland, 1830-31*, by Sir Archibald Alison (Blackwood).—and Dr. Hunt's Address on the *Study of Anthropology* (Trübner).—Our Translations include *The English Constitution*, by Dr. Fischel, translated from the second German Edition, by R. J. Shee (Bosworth & Harrison).—*The American Question*, by Canon De Haerne, translated by T. Ray (Ridgway).—*La Sorcière, the Witch of the Middle Ages*, from the French of M. Michélet, by L. J. Trotter (Simpkin).—*A Short Historical Explanation of the Seals and Trumpets of the Apocalypse*, by the Rev. W. Digby, translated from the French (Dublin, Curry).—We have on our table Second Editions of *Translations*, by Lord Lyttelton and the Right Hon. W. E. Gladstone (Quaritch).—*Recollections of Mrs. Anderson's School*, by Jane W. Hooper (Virtue).—*A Tract on the Doctrine of Baptisms and of Laying on of Hands*, by the Rev. W. A. Vaughan (Parker).—*The Rate of Mortality in Manchester*, by Dr. Whitehead (Simpkin).—*The True Interpretation of the American Civil War and of England's Cotton Difficulty*; or, *Slavery from a Different Point of View, shewing the Relative Responsibilities of America and Great Britain*, by Onesimus Secundus (Trübner).—*Preachers and Preaching, a Critique with Practical Hints*, by "A Dear Hearer" (Freeman).—*Richard Cobden, Roi des Belges*, par un Ex-Colonel de La Garde Civique (Trübner).—Third Editions of *The Causes and Treatment of Imperfect Digestion*, by Dr. Leared (Churchill).—and *Essays and Reviews: a Lecture*, by David Duncan (Bennett).—Fourth Editions of Dr. Lee's *Baths of Germany, France and Switzerland*, and also of his *Watering Places of England* (Churchill).—and a Seventh Edition of *Repentance, its Necessity, Nature, and Aids*, by the Lord Bishop of Lincoln (Skeffington).

LIST OF NEW BOOKS.

- Bede's Handbook for Travellers on the Rhine, royal 18mo. 4/;
- Switzerland, Lakes of North Italy, &c. royal 18mo. 5/6 cl.
- Banister's Gas Manipulation, 8vo. 5/ cl.
- Blaikie's Better Days for Working People, cr. 8vo. 1/8 bds.
- Book of Daniel, translated by Bellamy, 4to. 2/6 cl.
- Brown's Christian Morals, square cr. 8vo. 8/ cl.
- Chaffers's Hall Marks on Gold and Silver Plate, royal 8vo. 3/6 cl.
- Colenso's Pentateuch & Joshua Critically Examined, Pt. 3, 8vo. 8/
- Contanseau's Modern French Grammar, new edit. 18mo. 5/ cl.
- Conversations on the Catechism, Vol. 3, 'Means of Grace,' 8vo. 3/6
- Davis's Tracks of M'Kinlay across Australia, ed. Westgarth, 16 cl.
- Dickens's Child's History of England, new edit. post 8vo. 7/6 cl.
- Footprints of Deod. Translated from German, cr. 8vo. 6/6
- Forbidden Fruit, 2 vols. post 8vo. 3/1 cl.
- Gabrielle Hastings, a Tale, 8vo. 5/ cl.
- Girdlestone's Anatomy of Scepticism, cr. 8vo. 3/ cl.
- Gospel of St. John, with Scripture Illustrations, royal 32mo. 1/8
- Goulburn's The Office of the Holy Communion, 8vo. 10/6 cl.
- Greig's Lectures on Natural History, 2nd edit. 8vo. 3/6 cl.
- Lee's The Family & its Duties, Essays, &c. for Sunday Reading, 6/6
- M'Cauley's Examination of Ep. Colenso's Difficulties, cr. 8vo. 8/ cl.
- Maguire's Miracles of Christ, cr. 8vo. 2/6 cl.
- Meckler's's Songs of Evening, 8vo. 8/ cl.
- Monthly Packet, The, Vol. 25, 8vo. 4/ cl.
- Once a Week, Vol. 8, royal 8vo. 7/8 cl.
- Orr's Unitarianism in the Present Time, post 8vo. 4/6 cl.
- Oxenden's Earnest Communicant, new edit. 18mo. 1/ cl.
- Oxenden's Words of Peace, or the Blessings of Sickness, 8vo. 1/6
- Pages on Surgical Pathology, by Turner, 8vo. 4/ cl.
- Paris, how to See it for Five Guineas, by Illegary Gaze, cr. 8vo. 1/
- Payne's Gossping Guide to Jersey, 2nd edit. royal 18mo. 1/ swd.
- Pigeon Pie, The, by the Author of 'The Heir of Redclyffe,' 18mo. 1/

- Pollard's The First Year of the War, royal 8vo. 10/6 cl.
- Popular Educator, The, Vol. 3, new edit. 4to. 5/ cl.
- Power of Consistency, 8vo. 3/6 cl.
- Fruit's Haunts of the Wild Flowers, coloured illust. 8vo. 3/6 cl.
- Scott's Farmer's Account-Book, 2nd edit. folio, 10/ 1/2 bds.
- Sherman (Rev. James), Memoir of, by Allison, 2nd edit. cr. 8vo. 7/6
- Simmons's Dictionary of Trade and Commercial Terms, 7/6
- Smart's The New Theology, edited by his Wife, 2nd ed. cr. 8vo. 3/6
- Smith's Ambition, or the Oracle, 8vo. 2/ bds.
- Smith's Dreamthorpe, a Book of Essays written in the Country, 3/6
- Strauss's Englishman's Illustrated Pocket Guide to Paris, 1/ bds.
- Synge's Triumph of Grace, 8vo. 3/8 cl.
- Testament, New, for English Readers, by Alfred, Pt. 1, 8vo. 12/ cl.
- Tour in Turan-Land, by Gauthier Bede, post 8vo. 10/6 cl.
- Tupper's Proverbial Philosophy, new edit. 18mo. 3/6 cl.
- Wanostrocht's French Grammar, Key to, by Ventouillac, 12mo. 3/

THE BRITISH MUSEUM.

THE Annual Report of the British Museum—like that of the Post Office—recently examined by us, is a document of great interest; by it we learn the condition and progress of the national centre of science and education, or storehouse of learning, maintained by the empire for present and future use. Although this document appears in the unpretending form of a return to an Order of the House of Commons, it comprises much more than a mere statement of expenditure in dry masses of figures, such as the popular idea associates with Blue-books. It is really the only accessible account and register of additions made to the national collections devoted to so many branches of learning, science and art. All the important acquisitions are mentioned in the Report: such as are of general interest we briefly quote.

By the Department of Printed Books, an Herculean task has been accomplished in cataloguing and arranging alone. 17,000 additional entries have been made in the New General Catalogue of titles and cross-references; 3,736 titles have been transcribed fourfold; 26,751 title-slips have been incorporated into each of the three copies of this Catalogue: to admit of which 37,613 title-slips have been shifted. 52,467 titles and cross-references have been written for the Supplementary Catalogue; 40,365 have been transcribed fourfold; 29,806 title-slips incorporated, and, to admit them, 30,324 titles have been shifted. In the Carbonic Hand Catalogue, 47,000 titles have been mounted of printed books also; 76,466 titles of maps arranged as a carbonic hand catalogue of those productions. The Catalogue of Maps has been increased by 4,697 entries, 6,764 titles transcribed fourfold, 10,626 incorporated, and 5,807 shifted. The Music Catalogue has received great additions. Binding has not been on a less enormous scale; 12,688 volumes being bound, 1,693 repaired, and 761 maps mounted. The number of volumes returned to the shelves of the Library and Reading Room amounts to 1,325,331, or 4,539 a day. The number of readers has been 122,497, averaging 419 a day. Each reader consulted on an average 10 books a day. Of additions we learn that,—including 339 received under the International Copyright Act, and Music, Maps and Newspapers,—the whole number received was 30,362; of these, 22,830 were purchased. 32,020 parts of volumes of all the above classes have been added. Minor items under the above heads form, together, a vast aggregate, not included.

In the Manuscript Department it appears that the Index to the Catalogue of Additions for the years 1846 and 1847 has been completed and sent to press, and progress made in the Catalogues of various collections. The most noteworthy additions are as follows: a fine copy, twelfth century, of the 'Hist. Ecclesiastica' of Bede; William of Newburgh, to the year 1197, fifteenth century; a volume containing the Psalter, Canticles, &c., partially illuminated in the best style of English Art, probably for Alphonsus, second son of Edward the First, in 1284, from the Tenison Library; Apuleius, fourteenth century, Mitford Library; 'La Spera,' of G. Dati, with miniatures and coloured maps, fifteenth century; the curious work of R. Valturio, of Rimini, 'De Re Militari,' fifteenth century, with drawings of war-machines; the original Book of Expenses of Marguerite de Valois, wife of Henry the Fourth of France, from 1612 to 1614; the entire works of Saadi, in Persian, a splendid volume; numerous miniatures and borders, written 976, Libri Collection; original correspondence of Thomas Lord Dacre of Gillesland, Warden of the Marches, 1523 to 1524; a volume of original letters of Philip the Fourth of Spain to

Quiroga, 1629 to 1646, and a volume of Consultas, with annotations in Philip's handwriting, 1643 to 1648; six autograph letters of Bossuet to Madame D'Albret, 1690 to 1698; nine Letters of William the Third to Godolphin, 1691 to 1693; a notarial document relating to the heirs of F. Rousseau, signed by J. B. P. Molière, 1664, &c.

In the Department of Oriental, British and Mediæval Antiquities and Ethnography, progress has been made in the arrangement of many classes of objects. Two table cases in the Assyrian (Basement) Room have been filled with various small objects for public exhibition; the Assyrian collection of ivories has been re-arranged; the foreign collection of stone implements, including the large accessions of this year, has been arranged in a parallel series to the British collection; ninety-six Assyrian ivories have been re-joined; fac-similes of the Hymyaritic inscriptions have been commenced; they are to be published in lithography. The most interesting acquisitions of this Department have been an Egyptian net, found in a tomb at Thebes,—a painter's brush, from another,—four Gnostic amulets, one of them of remarkable character, having figures of a triad of divinities, and being inscribed with an elegiac distich in their honour. Babylonian and Persian: a terra-cotta cylinder, inscribed with the name of Nebuchadnezzar,—a Persian gem of fine work, representing a king on horseback hunting the wild boar. Phœnician and Early Oriental: a Phœnician scarabæus from Gaza, resembling in workmanship those found in Sardinia,—a block of marble from an arch at Tripoli, bearing a bi-lingual inscription, Latin and late Phœnician,—twenty-eight bronze plates, with Hymyaritic inscriptions,—a metal bowl, inscribed within and without with three different characters, apparently of a talismanic nature. British and Mediæval: a large number of flint and stone implements, English, Scottish, Danish, Indian, Peruvian, Canadian, British Columbian and Portuguese,—British urns from Standlake and White Horse Hill,—spear-heads and dagger-blades from the Thames at Ditton, and Headford, co. Galway,—a fine circular bronze shield, two bronze swords and other weapons from the Thames,—a stone mould for casting bronze spear-heads from Lough Cur, Limerick,—a massive gold armet from Hull,—weapons and other remains of Romano-British character from Spetisbury, Dorset,—a Roman leaden coffin found at Bethnal Green,—some fine specimens of Anglo-Saxon jewelry found at Ash, Kent,—a silver sword-pommel, Danish type, from the Seine, Paris,—two iron keys found in the Castle of Dürnstein,—a watch, inscribed with the name of John Milton, and the date, 1631, presumed to have belonged to the poet,—an Oriental quadrant, dated 1334, &c.

The Department of Greek and Roman Antiquities has been active in arranging its treasures. Its important acquisitions have been antiquities from Camiras, Rhodes, obtained from a tomb, the most valuable of which are an amphora, with figures painted in red and opaque white on a black ground—a very interesting item, not only on account of its masterly composition and drawing, but from the fact that its principal subject, the surprise of Thetis by Peleus, may be recognized as the same scene which is represented on the Portland Vase, thus strikingly confirming the theory of Mr. Millingen,—a gold pyxis (casket), about an inch in diameter, ornamented on each side with a figure, exquisitely embossed and chased: on one side, Cupid feeling the point of his arrow; on the other, Thetis, on a dolphin, bringing the armour to Achilles.

The Department of Coins and Medals has acquired 121 gold coins, 762 in silver, and 976 copper, total 1,859; the most remarkable items in which are a very small silver coin of Athens,—an unique *stater* of Bithynia,—a silver coin of Alexander Ægus, struck in Egypt,—a very rare solidus of Alexander the Great,—a very rare coin of Heraclius and his eldest son,—thirteen coins of the rare class of the Visigothic kings of Spain.

The Department of Natural History complains of want of room in every section. That of Zoology has received 13,129 additions. The *Trogodytes vellerosus* (Gray), discovered by Capt. Burton, in

the Cameroon Mountains, is a specimen of the adult male; a new tortoise, *Cyclemys Mouhotii*; a representation of a new genus of lizard, from the Fiji Islands. Two remarkable innocuous snakes have been obtained from Central America; and, from Africa, a viper, living on trees. New Australian Batrachia have been added: 1,911 fishes, mostly entire animals, in spirits; a part of which were new, others in place of mere skins and deteriorated specimens. The assistance of Consul Pethe- rick has been obtained to secure a complete collection of the fishes of the Nile, important to the archaeologist as well as the naturalist. This is in progress. Rare specimens have been received from South Australia, the British North American Boundary Commission, San Francisco, Guatemala, and Vera Paz, including many new species. Fossil specimens of the bones of *Archæopteryx macrurus* (Owen), the most ancient of fossil birds, have been secured, together with many desirable examples from the International Exhibition. The section of Mineralogy is described as being, in general arrange- ment, completed, the work of the officers being devoted to particular animals and the crystallography of the collection. The collection of aërolites has been increased by many specimens. A magni- ficent turquoise, weighing 4 lb. 3 oz., green, from the Summer Palace, Pekin, and other items are reported.

The Department of Botany has received the important additions of the Herbaria collected by Ray, Dale, Rand, and Nicholls, in the seventeenth and eighteenth centuries, from the Apothecaries' Company; that of the late Jasper Lyon, and many hundreds of new specimens.

The Department of Prints and Drawings has acquired important drawings by Donatello, Giorgione, Da Vinci, Correggio, Hollar, Lely, F. Floris, Mieris, Murillo, Goyen, Janet, Cheron, &c., and a very interesting collection of drawings made by the late G. Scharf, Esq., from portions of London, since much altered. The collection of prints and etchings has been equally extended.

The estimate for the year is 90,541*l.* Of this, 45,842*l.* is for salaries to sixteen officers, sixty assistants, twenty-six transcribers, and one hundred and thirty-seven attendants and servants; house expenses are, 2,845*l.*; purchases and acquisitions, 19,335*l.*, of which last, 10,000*l.* is for printed books, 2,000*l.* for MSS.; special purchases, 675*l.*, amongst which the meteorite from Melbourne, which obtained honourable mention in such an unexpectedly humorous manner from a jury of the International Exhibition, figures as costing 300*l.*; book-binding, &c., 10,220*l.*; printing, 1,690*l.*; buildings, furniture, fittings, &c., 14,184*l.* In thousands only, the numbers of visitors have been, January, 43,000; February, 35; March, 38; April, 59; May, 48; June, 103; July, 143; August, 165; September, 87; October, 81; November, 36; December, 56. Including visits to special collec- tions for study, the grand total is 1,024,030.

PRIVATE BILLS IN PARLIAMENT.

THE labours of one of the most important Select Committees of the House of Commons, that on Private Bill Legislation, are drawing to a close. The following resolutions have already been agreed to. That a Bill or Bills founded on the principle of the Clauses Consolidation Acts should be prepared, and if possible passed this session, for the further consolidation of the clauses usually contained in Railway Acts and other classes of Private Acts. That a Bill be prepared and brought in for enabling new and existing railway companies, on compliance with conditions to be contained therein, such compliance to be certified by a department, to make new lines of railway and new railway works, when all parties are consenting, and also for accomplish- ing the following objects: Giving power to two or more companies to enter into mutual arrangements for the working or use of their respective lines for limited periods. Giving extension of time for the sale of superfluous lands by railway companies. Power for raising further capital, with preferential dividends or otherwise, for completion of existing lines, or for additional works, the priority of the rights of exist- ing preference shareholders being secured. That,

considering the large discretion which must necessarily be vested in any tribunal, however consti- tuted, to which may be intrusted the duty of reporting to the House on opposed Private Bills, and the absence of fixed rules for the guidance of such tribunal, it is not expedient that this duty should be performed otherwise than by Committees of the House. That with a view of saving the expense and loss of time now occasioned by the double hearing of contested cases by Com- mittees of each House of Parliament, an ar- rangement ought to be come to by the two Houses by which a single hearing might be made to serve the purpose of the present double inquiry. That opposed Bills having passed through a Com- mittee of the House of Commons, should be dealt with as unopposed Bills in the House of Lords, and *vice versa*; but that each House should, neverthe- less, retain the power of referring any Bill to a Committee, if from special circumstances that course should appear desirable. That it is expedient that the number of Members serving on Private Bill Committees be reduced from five to three. That such Committees be ordered to meet at eleven o'clock. That no Member shall be required to serve on a Private Bill Committee for more than ten sitting days in one Session, except for the pur- pose of closing the hearing of a case already com- menced. That independently of the fees marked on the briefs when delivered to counsel, no further or other fees shall be allowed on taxation than five guineas a day as a refresher for attendance, and two guineas a day for consultation. That the pay- ment of solicitors by means of fees on copies of Minutes of Evidence and other documents, which entail no labour upon them, is improper, and ought to be abolished. That it is expedient that the Minutes of Evidence be printed. That the scale of fees payable upon proceedings connected with Private Legislation ought to be revised, so as to meet, but not exceed, the expenses thrown upon the House by the private business. That the system of charging *ad valorem* fees on a scale proportionate to the capital proposed to be raised by any Private Bill ought to be discontinued, and that there should be charged a uniform fee on all Private Bills in their several stages through the House. That, in cases of Bills in the second class, in lieu of the schedule annexed to notices to owners, lessees and occupiers of lands and houses prescribed by Stand- ing Order 19, and by the form in the Appendix marked A. to the Standing Orders, there be sent with every notice under Standing Order 19 a copy of a portion or portions of the deposited plan and section sufficient to show the property alluded to in the notice, and distinguishing that property by colour. That the notices required to be advertised in metropolitan papers (in addition to local news- papers), except the London, Edinburgh, and Dub- lin Gazettes, should be discontinued. That, with a view of deciding questions arising in Private Bills by a more speedy and less expensive process than an inquiry by a Committee on opposed Bills, it is expedient to empower the Committee of Selection, and the General Committee of Railway and Canal Bills, at any time after the committal of such Bills, with the consent of all parties promoting and opposing, to refer the same wholly, or with refer- ence to particular clauses, to the Chairman of the Committee of Ways and Means, and that such Chairman, together with Members to be appointed in like manner as Members of the Committee of un- opposed Bills, should be empowered to hear the parties promoting and opposing such Bills, or their agents, and to report upon the same to the House. That it is the opinion of this Committee, that com- petition is not a valid ground of opposition to new projects.

NOTES ON THE HISTORY OF PERSPECTIVE.

(No. VII.)

AT the time when I wrote my former notes (1861, Oct. 5, 19, 26; Nov. 9, 16, 30) M. de Mont-aignon had just published—as I learned while my remarks were at press—his historical account of Pelerin, or Viator, the earliest printed writer on the subject. I have lately examined this interesting and able monograph, which, though separately published, is also added to the fac-simile of Viator's

work issued by M. Tross, and produced by the anastatic process of M. Pilinski. I have a criticism to make on a fault for which the writer is not responsible: namely, the want of recognition of Viator's priority. The author is not to be blamed for taking the history of perspective as he found it: it was his business to examine and describe a particular book, and to collect information about its author; and this he has done well. I do not know of any one who, before myself, stated the truth on this point, except Mr. Panizzi, who put it forward under glass in 1851, when he exhibited the Museum Pelerin of 1505, among the other curiosities, to the crowds which the first Exhibition brought to London. Even the Jesuit of perspective, Dubreuil, as I have already explained, puts Viator second. M. de Montaignon puts him equal with the second; he makes the work of Archbishop Peckham to be the earliest, and gives the treatise in the 'Margarita Philosophica' the date 1505, which is that of Viator's first edition. He also refers to the same period a work of which he knows nothing but the author's name, *Hans Fris*. I shall take these points in order.

The Franciscan Peckham is one of the list—containing also Roger Bacon, Alhazen, Vitello, Gauricus, Pacioli, &c.,—who are set down as writers on perspective. This in one sense they were, the word *perspective* meaning *optics*; except only Pacioli, who wrote neither on our perspective nor on optics, but borrowed the talents of Leonardo da Vinci to represent geometrical solids in true drawing. I have examined all these writers, and find no allusion to *artificial* perspective—as Viator called it—in either of them; except only Pacioli's praise of his friend's *optics*. With Peckham I have been familiar for thirty years; his three books are on simple light, on reflected light, on refracted light. I find that Baldi was not so absurd in calling him *Betsan* as I had supposed. His name was actually corrupted into *Pithsanus* in the first printed edition: somebody has Melancthon's copy of this work, bought at Kloss's sale. This edition is described both by Panzer and Hain; it has no date, but is thought to be of Milan, 1480. Hain describes a companion work 'De Oculo Morali,' also by Pithsanus, described as Archbishop of Canterbury. And so much for Peccam, Peccamus, Peckam, Pecham, Peachamus, Pithsanus, Pisanus, Betsan, or Betsan: there is authority for all; but not a word of graphical perspective under any one of the names. Perhaps the good monk felt uneasy under the usual Latin form of his name: what a cluster of irrecoverable jokes must have been launched upon society when Archbishop Peccamus—as he did at once on his accession—convened a synod to mend the morals of the priests! He died in 1292, having held the see thirteen years.

With respect to the 'Margarita Philosophica,' M. de Montaignon announces two editions of 1505, each of which contains the appendix on perspective: and further, that no other edition, before or after, has the same. One of these editions he only knows from the report of a friend who had seen a fragment: as to the other, I cannot make out whether the information comes also from the friend or not. I must suppose that if M. de Montaignon had seen this appendix, he would have read at once either Viator in Reich, or Reich in Viator, in title, text, method and plates. Did two persons, for example, in one and the same year, independently chance to call the art of drawing solids on a plane by the new name of 'Artificial Perspective,' the word 'perspective' having till then meant *optics*? Grant this coincidence, and there remain many others to be explained. The community of the two works is beyond doubt: and I at once decide, and shall be supported by all editors and writers, that it was not the retired Canon of Toul who within the year turned a meagre encyclopædia article into an elaborate folio of many plates, but the active editor of the encyclopædia who cut down the folio into an article. If there were an appendix of 1505, it will be impossible to avoid the conclusion that the Canon must have communicated materials to the editor, even before his own work had appeared.

But was there an edition of 1505? It is said to have been printed by Gruninger, at Strasburg.

Panzer mentions editions by Schott, at Friburg, 1503 and 1504, and at Basle in 1508; by Gruninger at Strasburg in 1504, 1508, 1512, 1515. Of these I know the Schotts, and the Gruningers of 1512 and 1515. The Schotts have not the appendix, but the Gruningers of 1512 and 1515 have it. Since 1515 has the appendix; and since M. de Montaignon speaks of this appendix as wanting in all but 1505, I strongly suspect that his informant has given a wrong date, and that his 1505 should be 1515. The date is not in figures, but in the words "decimo quinto supra mille quingentes": I suspect that "decimo" has been disregarded. I can find no trace of an edition of 1505; and the occurrence of two editions of 1504 renders such a thing unlikely.

It is rather extraordinary that a work published at Toul should have been known at Strasburg even in three years (Viator's second edition being of 1509). But it so chanced that Viator found an actual German translator of his second edition at once. This I missed entirely in my notes, having never seen a copy, and looking only at books, and not at catalogues. Scheibel mentions this translation, knowing it to be such from actual inspection: both Viator and the translation have the asterisk by which he denotes books he has seen. M. Tross saw a copy at Vienna, and his report entirely agrees, and independently; for M. de Montaignon says it has never been stated that the work is a reproduction of Viator, by which it appears that he—and therefore probably M. Tross—did not know of Scheibel's description. The work must be excessively scarce, for Scheibel says that he never saw any notice of it: and Kastner, generally well informed on German works, knows no more of it than of its original. The title, according to Scheibel, is 'Von der Kunst Perspektiva, 1509, Jörg Glogkendon': it was probably published at Nuremberg. This reproduction may easily have been commenced in 1509; the second edition, from which it is certainly taken, having been finished in March, as appears by the last page. The 1509 of the reproduction is on the first or title page: which, at that time, would probably have been the first printed. I suspect that the tract in the Gruninger appendix of 1512 and of 1515 was taken from Glogkendon, or Glockendon, as the French work spells it.

I now come to *Hans Fris*. M. de Montaignon has with great trouble and skill detected most of the persons alluded to in the curious verses which I quoted. Three have baffled him; Martin of Pavia, Paul and Benard. One of the other persons is Hans Fris; and M. Tross remembers having seen a work of the period, on perspective, having the words 'Hans Fris,' in capitals, under a frontispiece portrait. Hence M. de Montaignon infers that a contemporary, perhaps a predecessor, of Viator published on Perspective. The date "of the period" is very vague: the chance recollection of a publisher who sees many old books in every week, he not having any particular reason for dwelling on the book, is not to be relied on. But a strong suspicion may exist that this Hans Fris was a century later. *Hans* is the Dutch for *Jack*, and there was a *John* who wrote on perspective, and who took particular pains to be known as the *Frisian*. This was John Vredman, whose work went through many editions (the first mentioned by Scheibel is of 1604), most of them with portraits, and all described as by Vredman Vrijse, Vredemannus Frisius, Vredemant Vriese, &c. &c., the national appellative never being omitted: hence Vriese is often the name given to him. It may easily be that one of the portraits of this *Frisian Jack* has *Hans Fris* printed under it. We may almost suspect an edition of 15 . . . for the portrait of the first edition known states the author to be then 77 years old, a great age for the first production of a large work. At any rate, here is ample ground of presumption to place against a vague recollection. Looking at all the circumstances together, I regard it as established, until some one shall actually produce a book to the contrary, that Pelerin was the first who printed a book on perspective, and the first who can be certainly known to have possessed a method in which a point is laid down by help of two vanishing

points. At some future time, I hope to give some account of the method which was used in aid of the vanishing point, so long as there was but one, or only two. A. DE MORGAN.

THE ITALIAN FESTIVAL.

Florence, June 10, 1863.

AMONG the popular festivities provided by the municipality last Sunday for the *fiesta dello Statuto*, which celebrates all over Italy, on the first Sunday in June, the consolidation of Victor Emmanuel's kingdom, there was one performance so effective and characteristic that it really deserves a word of notice for its dramatic beauty. This was the execution of Signor Matiozzi's warlike symphony, 'The Battle of Magenta,' at nine in the evening, on the noble old Piazza della Signoria, in the midst of such scenery and decorations as few places in the world can boast. The Symphony was performed by seven military bands and a chorus of a hundred and fifty male voices, with accompaniment of church bells, discharge of musketry near and distant, and mimic cannonading. The music can by no means be said to belong to the highest order of composition, being necessarily a *morceau de circonstance*; but it contained many bursts of fine and powerful harmony, some of pathos, and more than one passage so heartstirring as to call forth shouts of applause from the closely-packed audience, roused by the glorious memories of the fighting days of 1859.

The weather—strange to say at this season in Italy—was cloudy and threatening the whole day, and a little rain fell about sunset; but it soon cleared up, and the Piazza was crammed to overflowing; the very streets leading from it were impassable for the crowd; every window and balcony was filled with heads; and even along the top of the beautiful Loggia d'Orgagna a serried rank of spectators formed a variegated cornice against the purple night-sky. The Palazzo Vecchio, with its lofty tower, was illuminated, as is usual for the *fiesta* of San Giovanni, and wore its matchless holiday-look of pale waxen transparency. The other buildings which inclose the Piazza were also brilliantly illuminated; and the colossal statues on the great fountain, the David and the marble groups under the Loggia glimmered out against their shadowy background with wonderfully picturesque effect.

The Symphony professed to tell the story of that fierce battle in which the united forces of Italy and France forced the strong position of the Austrian army at the little Lombard village of Magenta, and in which the village itself was taken and retaken no less than seven times. The scene opened on the camp of the Allies near the Bridge of Buffalora, at early dawn. Drums beat the *réveille*, mingled with trumpet-calls, and repeated by distant echoes; while a twittering concert of birds, admirably managed, filled up the pauses between the warlike signals. Then the village bells (hanging in the Loggia) tolled out the Morning 'Ave Maria,' and the choir broke out into a stave of a hymn whose broad harmonies wrapped up and hid the shriller sounds, imploring the Most High for victory over the barbarian. As the prayer ended, out broke the sun in his strength, figured by a golden blaze which lit up every corner of the Piazza, putting the lower illuminations to shame, and making the thronged area gleam with colour like a huge flower-bed. Then came the varied noises of the camp, and the mingled national airs of Italy and France, ending in the Royal March, which always tells the coming of the King. Then came more tumultuous crashing, and a sudden outbreak of Matiozzi's own noble war-hymn, 'All'armi! All'armi!' which used to ring through the streets of Florence in 1859, sung by thousands of voices, the same which now again involuntarily joined chorus with the rush of its stormy measure.

After that, the drums beat the *générale* to the tramp of feet and the clash of weapons, the thundering of cannon and the rattle of musket-volleys. For awhile all was confused noise and clanging of *fanfars* and battle-cries of "Savoià! Savoià!" while great cloud-festoons of many-coloured smoke wreathed about the stately arches of the Loggia

and folded and unfolded the statues in most weird fashion.

By degrees the hubbub died away into wailings and sobbings, which, I suppose, were meant to portray the groans of the dying; the Austrian drums retreated further and further, and the Evening 'Ave Maria' bell rang out sadly and sweetly over the reeking battle-field. Of course the end of all was a grand crash of the seven bands, and a blaze of tri-coloured Bengal lights, whose crimson, green and blue fires produced such wondrous effects on the scene that the thousands of spectators literally held their breath for a moment in dead silence, forgetting to applaud. Then came a streaming forth of national banners, a carillon of joy-bells, and a triumphal March sung in the midst of a tempest of *Vivas*. Of course, too, the words of the chorus were not of the category of "immortal verse." Still, the second strophe had something of a rude vigour in it which made the heart leap up and the cheek kindle. God grant its prophecy be not *de circonstance* only! Thus it ran in free translation:—

Still the foe our brethren tramples;
Still but half the deed is done.
Bare your swords once more, brave comrades!
Rome and Venice must be won!
O Ansonia! nurse of heroes,
Calm in strength, arise and see!
If King Victor leads to battle,
Italy shall all be free!

After this the seven bands dispersed, playing the concluding March through the great thoroughfares of the city, pausing in the different piazzas, which were full of holiday-makers till late at night. I suppose, nay, I am pretty sure, that such a performance as I have tried to describe is terribly illegitimate in a musical point of view, and dramatically speaking, not much better. But the effect it produced was wonderfully fine, owing, no doubt, in a great measure, to the *locale* it was performed in, and that was, after all, the result most to be desired, and more than can be said for not a few popular entertainments of far more pretension.

TH. T.

OUR WEEKLY GOSSIP.

THE Duke of Devonshire, the Bishop of London, the Bishop of Worcester, and others, have joined the Shakspeare Committee since the date of our last publication. This committee even now embraces a large representation of our Shakspeare scholars and collectors; and its indefinite extension is only a question of time and of convenience. All the arrangements for Mr. Kean's readings on Friday next have been made and most of the reserved tickets sold. Of the success of that reading there can be little doubt. Meantime, every day which passes shows a larger and deeper interest in the great question of a Shakspeare Celebration next year: part of which, it may be said, displays itself somewhat irregularly, though no doubt with the very best design. Some disputes have arisen at Stratford as to the form and object of the local festival; a majority of the present Committee being in favour of enlarging the Town Grammar School as the first aim of a fund to be raised in the Poet's name; while a large minority, backed by the public, are in favour of a statue. In London, a gentleman, acting apart, as it would seem, has announced a theatrical performance (or, as he pleases to call it, a Grand Mélange Dramatique) at Drury Lane. He announces that the Prince and Princess of Wales will be present; a fact about which we fear he will find himself completely mistaken. The names of Mr. Webster and Mr. Coyne have been mentioned in connexion with this performance; and these gentlemen have both repudiated and withdrawn from the affair. We are sorry to see such things done in the Poet's name; but until a National Committee is charged with the duty of representing and directing the national enthusiasm, we see no remedy for the evil. On Monday next, the Shakspeare Committee will meet to consider the existing state of affairs, and resolve how far it will act in the premises.

The Newcastle Secretaries of the British Association for the Advancement of Science have sent out invitations for the Thirty-third Meeting, to be held at Newcastle-upon-Tyne, August 26, 1863. The attractions stated are "our mines of coal, iron

and lead—manufactures—machinery—chemical products of nearly all descriptions—fire-clay—lead—iron—iron ship-building—and the field of Cleveland ironstone—all of which will be thrown open for the information and inspection of visitors." The date of meeting is retained; the local secretaries being of opinion that the 26th of August is a convenient period for members of our Universities!

An extra Evening Meeting of the Royal Geographical Society will be held at Burlington House on Monday next, the 22nd inst., at 9 P.M., to receive Captains Speke and Grant on their return from Africa.

Dr. Beke has addressed a letter to the President of the Royal Geographical Society, on the subject of "Who Discovered the Sources of the Nile?" He urges his claim to be considered as the theoretical discoverer of the sources of the Nile; and refers to misunderstandings in the Royal Geographical Society which are, unhappily, no secret to the world. "When I returned to England in 1860," he says, "after an absence of several years, I did hope that within the Council of the Society the old leaven of 1848 would have been exhausted. But to my great disappointment I found that when, in 1861, I communicated to the Society my paper 'On the Mountains forming the Eastern Side of the Basin of the Nile,' it was refused insertion in the Society's *Journal*, or even, in abstract, in the *Proceedings*. I was still more grieved in 1862 at the difficulties I experienced in obtaining a hearing for the narrative of my journey to Harran in Padan Aram, and thence over Mount Gilead into the Promised Land, in the footsteps of the Patriarch Jacob; which occasioned my letter to Lord Ashburton, already mentioned. But the climax has been attained now, in 1863, when I have been informed by the President that, in his Anniversary Address, of which the most interesting topic is the Discovery of the Sources of the Nile in accordance with my hypothesis and my plan of exploration of 1848, it was deliberately contemplated either to attribute to me opinions which I do not entertain, or else to ignore me altogether."

A General Meeting of the Fellows of the Royal Geographical Society is called for this morning (Saturday), at Burlington House, to consider an alleged breach of certain rules of the Society at the late election of officers. Admiral Sir Edward Belcher stands at the front of the malecontents. Sir Roderick Murchison and the Council have issued a note of explanation to the Fellows; which note admits the breach of rule, but contends that such breach was unimportant and not unusual. It will be for the Fellows to say whether this explanation ought to pass.

At the recent Annual Meeting of the London Library it was announced that the Prince of Wales had consented to become the patron of the Library, in the place of the late Prince Consort. The increase of members during the past year was 7, the total number on the books being 862. 1,200 volumes and 36 pamphlets were added to the Library by purchase since the last anniversary. It was further announced that a new edition of the entire Catalogue, in alphabetical arrangement of the writers, with a concise classified Index of subjects, is nearly ready for the press.

'A History of the Recent Discoveries at Cyrene,' made during the expedition of Lieut. Smith and Commander Porcher, is announced for publication by Messrs. Day & Son. Our readers will remember that the officers named began their researches at their own expense; but being highly successful, the Trustees of the British Museum and the Admiralty gave important aid in their extended prosecution. The marbles recovered are reported to be sufficient to form a gallery in the British Museum, and to be the only known specimens of the art of Cyrene, a city renowned in ancient history. Photographs, by Mr. F. Bedford, will accompany the text, with maps, plans and woodcuts.

According to recent investigations made by Mr. W. Chambers into the character and circulation of the cheap periodicals in the United Kingdom, it appears that the monthly issue of works of a strictly improving tendency is 8,048,500; of works of an exciting nature, but not positively immoral,

1,500,000; and of works of an immoral tendency under 80,000.

With respect to the portrait of Lorenzo Pucci, the property of Lord Abercorn, now at the British Institution, which we questioned, both as representing that prelate and as a work of Raphael, we have been referred to Passavant's 'Life of Raphael.' In the last edition of that work (that of La Croix, page 358), we find the picture classed among "works attributed to Raphael." No clue to the person represented is afforded by the writing on the paper in his hand; the translation just referred to correctly states that it is illegible. In the original edition (vol. 2, page 431), the description is headed 'Lorenzo Pucci (?)' and likewise classed among the supplemental works attributed to Raphael. We gladly add, that the picture was known as a Raphael in the Casali Palace at Bologna, whence it was removed to the Casa de Rossi, in the same city. M. Rossi sold it in England, and we believe the picture was for some time in the possession of Messrs. Graves. Sir Robert Gordon became the purchaser, and at his death, in 1847, Lord Aberdeen, his brother, removed the picture to Scotland. It is now the property of Lord Abercorn. The head-dress alone would deter one from accepting the picture as the portrait of a high dignitary of the church immediately preceding his ordination as Cardinal. The latter event took place in 1513, instead of 1511, as stated in the works above named. We are as far as ever from admitting that it possesses any real claims to be received as a Raphael. Passavant himself admits that the picture has undergone very extensive reparations. Its former locality in Bologna goes far to favour the conjectures we threw out.

"The term *Rappee*," writes a friend, "is taken by some as derived from the action of *rapping* out the grated snuff: as an 'Old Snuff-Taker,' I beg to suggest another derivation (not now a *new one*), namely, from the French verb *rasper*, to rasp. *Tabac rapé* would easily slide, in English parlance, into *rappee*. Is not Le Sage who describes an idle man of fashion, of a certain period, in a lounging morning hour, with a roll of tobacco in his hand, rasping his own snuff?"

We are sorry to hear that the Delegacy appointed to conduct the Oxford Local Examinations are becoming intolerant with regard to what they term "the Rudiments of Faith and Religion." At first they allowed candidates to please themselves about answering questions in this section, assuring them that, in either case, their position in the division-lists would not be affected. They then offered marks for this subject, thus giving members of the Church of England an advantage over others who are not brought up in the use of the Church Catechism and Prayer Book. In the course of the examination which has just closed they went still further, and on the papers gave notice, that no one whose parents have not objected on conscientious grounds to his being examined in the Prayer Book as well as the Bible "can obtain a certificate, without showing some knowledge of each of the two portions, *whatever may be the value of his work in other subjects*." What makes the matter worse is, that no previous notice was given of this extreme severity. In the programme this subject was not classed with those required of all in order to pass. It was indeed stated that "no one can be held to have satisfied the Examiners in the section without both portions," i. e. the parts relating to the Prayer Book as well as the Scripture; but since candidates have been for several years suffered to pass without satisfying the Examiners in this section, it was naturally supposed the same thing would be allowed again; and it was not till they saw the notice prefixed to the paper of questions, that many found they were to be deprived of the fruit of their labour. We trust the Delegacy will at least have the justice to put off the execution of their stern decree till next year, so that all may have timely notice. Even then, we think, it would be much better to adopt the Cambridge plan of putting this part of the examination upon the broad basis of Scripture and the evidences of Christianity, subjects in which members of all communions can combine without offending the conscience of any.

Many complaints have been uttered about theatrical management in Munich. A Correspondent writes, that a reform is about to be introduced by the organization of a new popular theatre, under the direction of eminent men of letters, officials of high standing, &c.; the funds being provided by shares of 100 florins each. At present, the Court Theatre has a virtual monopoly, as the two small theatres that are called popular are only booths, and are restricted to farces and buffooneries. They have not a right to play pieces which are played at the Court Theatre without special permission, and the care with which the Court Theatre preserves its monopoly causes this permission to be very sparingly given. The public has long suffered from the want of competition without making its complaints heard; but the promoters of this new enterprise have evidently a strong faith in the justice of their cause, and are convinced that the public suffering will pay to be redressed.

The sale of the valuable and curious collection of books formed by the late John Adolphus, Esq., and, after his death, by his son, John Leicester Adolphus, Esq., took place at the rooms of Messrs. Sotheby & Wilkinson, during the last and present week. It was remarkable for rare facetiæ, songs, Shakspeariana, trials for crimes, biographies of thieves and other malefactors, last dying speeches and accounts of executions, in addition to the usual run of the best writers in history, topography, belles-lettres, and general literature. Amongst the rarer articles, the following may be cited:—A Collection of Old Ballads, 3 vols., with plates, including that of the Swimming Lady, 7l. 10s.—Byron's Works, with various publications respecting the poet, in 39 vols., 12l. 10s.—Dillon's Account of the Lord Mayor's Visit to Oxford, for its absurdity nicknamed 'Lord Wenables' Voyage to discover the Source of the Thames,' 8l.—D'Urvey's Pills to Purge Melancholy, with the Tury Pills, and Pill for State Melancholy, 7l. 10s.—Marguerite, Reine de Navarre, L'Heptameron, 3 vols., 5l. 5s.—Head's English Rogue, 4 parts, 1l. 16s.—Wilkes's (so called) Essay on Woman, 1l. 5s.—Grose's Slang Dictionary, 1l. 8s.—Burton's Anatomy of Melancholy, Dr. Johnson's copy, with numerous passages marked by him to be quoted in his Dictionary, 1l. 17s.—Grose's Antiquities, 14 vols. 29l.—Harris's Aurelian, or English Moths and Butterflies, painted on vellum, 21l.—Dugdale's Monasticon, 22l.—Retrospective Review, 16 vols. 5l. 7s. 6d.—Shakspeare's Plays, 21 vols., with MS. notes by Mr. Aldophus, 16l. 16s.—Shakspeare's Plays, altered by various Writers, in 63 vols. 14l. 3s.—Capell's Notes to Shakspeare, 2l. 8s.—Remarks on Hamlet (a thin pamphlet), 4l.—Martyn's English Entomologist, the original manuscript, with drawings of insects, 14l. 14s.—Ormerod's History of Cheshire, 3 vols., 38l.—Bachus and Venus: a Collection of Songs, 19s.—Songs sung at the Beef Stake Club, 4l. 8s.—Joanna Southcote's Prophecies, 2l. 11s.—Wilkes's English Liberty, 2 vols., 3l. 13s. 6d.—Lives, Behaviour, and Dying Words of Remarkable Persons convicted of Murder, Treason, Robbery, &c., 5 vols., 2l. 12s. 6d.—Annals of Newgate, 4 vols., 2l. 5s.—Dodd's Memoirs, with Accounts of his Execution, in 5 vols., 3l. 10s.—Johnson's History of Highwaymen, wanting 5 plates, 6l. 2s. 6d.—Old Bailey Trials, in 1678, Scroggs as Judge, and Jeffries as Recorder, 18s.—Perreau's Genuine Memoirs, with other Tracts relating to these unfortunate Forgers, in 8 vols., 3l. 10s.—Life of Jack Sheppard, 1l. 17s.—Trial of the Murderers of Sir J. Dinely Goodere, 1l. 8s.—Trials at the Old Bailey, 8 vols., 4l. 12s.—Tyburn Chronicle, 4 vols., 3l. 7s. 6d.—Lives of Jonathan Wild, 3 vols., 1l. 15s.—Trial of Renwick Williams, 1l. 16s. The entire sale realized 993l. 7s., of which 148l. was for 360 pamphlets, &c., containing accounts of thieves and other convicts.

The READING GIRL is now at 110, REGENT STREET.

The SLEEP OF SORROW and DREAM OF JOY is NOW ON VIEW at the London Stereoscopic and Photographic Company's Establishment, 110, REGENT STREET. This Statue and the 'Reading Girl' are the Originals from the International Exhibition of 1862, and which were purchased by the Company.

ROYAL ACADEMY OF ARTS.—The EXHIBITION of the ROYAL ACADEMY is NOW OPEN.—Admission (from Eight till Seven), 1s.; Catalogue, 1s.
JOHN PRESCOTT KNIGHT, Esq., R.A., Secretary.

ROYAL ACADEMY OF ARTS.—The EVENING EXHIBITION will commence on MONDAY NEXT, the 22nd of June, and continue open every Evening.—Admission (from Half-past Seven till Half-past Ten), 6d.; Catalogue, 6d.
JOHN PRESCOTT KNIGHT, Esq., R.A., Secretary.

SOCIETY OF PAINTERS IN WATER COLOURS.—The FIFTY-NINTH ANNUAL EXHIBITION is NOW OPEN, at their Gallery, 5, Pall Mall East (close to the National Gallery), from Nine till Dusk.—Admission, 1s.; Catalogue, 6d.
JOSEPH J. JENKINS, Secretary.

INSTITUTE OF PAINTERS IN WATER COLOURS (founded in 1831 as the New Society of Painters in Water Colours).—The ANNUAL EXHIBITION is NOW OPEN.—Admission, 1s.—Gallery, 63, Pall Mall, opposite Marlborough House.
JAMES FAHEY, Secretary.

FRENCH GALLERY, 130, Pall Mall.—The TENTH ANNUAL EXHIBITION OF PICTURES, the contributions of Artists of the French and Flemish Schools, is NOW OPEN.—Admission 1s.; Catalogue, 6d.

SCIENCE

SOCIETIES.

ROYAL.—June 11.—Dr. Carpenter, V.P., in the chair.—The Croonian Lecture: 'On the Coagulation of the Blood,' by Prof. J. Lister.

GEOGRAPHICAL.—June 8.—Sir R. I. Murchison in the chair.—Elections: The Count de Paris, the Earl of Belmore, Sir J. P. Boileau, H. Browne, Esq., J. Brunton, Esq., W. Buchanan, Esq., M.P., F. Burdock, Esq., T. F. Callaghan, Esq., the Rev. G. H. Clements, E. Clowes, Esq., S. W. Courtenay, Esq., M.P., Edgworth, Esq., T. F. Hall, Esq., G. F. Heneage, Esq., C. J. Leaf, Esq., Sir T. D. Lloyd, Capt. Lovell, Visc. Milton, W. Winwoode Reade, Esq., R. H. St. A. St. John, Esq., F. Snowden, Esq., Dr. G. E. Spikernell, J. Taylor, Esq., the Hon. H. P. Vereker, H. Waite, Esq., C. N. Welman, Esq., W. O. White, Esq.; also Lieut.-Col. the Chevalier Sonklar von Inatätten as Hon. and Corresponding Member.—The President, in opening the proceedings, stated that he had received a telegram conveying the information that Captains Speke and Grant left Alexandria on the 4th inst., for Southampton, in the Pera.—They are due in England on the 17th, and the Council had decided on having an extra Meeting to receive them.—The paper of the evening was 'On the Malay Archipelago,' by Mr. Wallace.

ASIATIC.—June 15.—The Right Hon. Holt Mackenzie, V.P., in the chair.—Dr. Goldenblum, of Odessa, was elected a Non-Resident Member.—A paper was read by Mr. E. Schlagintweit 'On the Bodily Proportions of Buddhist Idols in Tibet,' and showing from a series of measurements made by his brothers that all images of Buddha in that country preserve the features and proportions of the Aryan type, while those of their saints are moulded on the Bhot or local Turanian modification of the human form.

SOCIETY OF ANTIQUARIES.—June 11.—O. Morgan, Esq. M.P., V.P., in the chair.—S. Bale, Esq. exhibited a circular miniature which was known in the Strawberry Hill Collection as Jane Seymour, and has been engraved by Harding as Catherine of Aragon, but which Mr. Scharf showed to be a portrait of Anne Boleyn.—W. H. Black, Esq., read a paper 'On the Antiquarian of Hieronymus Bononius of Treviso and his Poetical Remains,' including a poem on the revivers of literature in the fifteenth century who were personally known to him. Mr. Black is the fortunate possessor of what was stated to be the original MS. of this most interesting work.—Nothing had been heard of it since the beginning of the seventeenth century. Mr. Black inferred, from various internal evidence, that the author died before the year 1520.—The Secretary read a paper by the Dean of Christ Church 'On Human Sacrifices among the Romans in connexion with a question raised by Lord Stanhope in his Miscellanies.'

BRITISH ARCHEOLOGICAL ASSOCIATION.—June 10.—J. Copland, M.D., V.P., in the chair.—Messrs. T. D. Keighley and J. B. Greenfields were elected Associates.—The Rev. Mr. Hartshorne read a notice respecting Oliver Cromwell's

Mint, and exhibited some dies found at Marston Moor.—Mr. E. Roberts exhibited a stone jug of the sixteenth century.—Mr. Greenfields exhibited a variety of coins, weights, &c., found in Lanarkshire.—Mr. J. L. Irvine exhibited the casts of some ornaments belonging to a tomb in Shetland of the eighth century.—Mr. S. Cuming forwarded some curious leaden objects obtained by the late Mr. Charles Ainslie from the Thames.—Mr. J. Moore reported further discoveries at Chessels, West Coher, Somerset.—Mr. T. Wright described the results of recent excavations made at the Jewry Wall, Leicester.

SYRO-EGYPTIAN.—June 9.—J. Lee, Esq., LL.D., in the chair.—Mr. Sharpe read a paper 'On the Age of the Several Parts of the Pentateuch.'

MEETINGS FOR THE ENSUING WEEK.

Mon. Geographical, 9.—Extra Evening Meeting: to receive Captains Speke and Grant on their return from Africa.
Tues. Zoological, 9.—Placenta of Hæmæ: Prof. Huxley; Placenta of the Kuree: Prof. Rolleston.
Wed. Horticultural.—Promenade.
—Society of Arts, 4.—Annual General.
—Society of Literature, 4.
Fri. Horticultural, 2.—Election of Fellows.
Sat. Horticultural.—Promenade.

FINE ARTS

THE BROMLEY COLLECTION.

THE sale, at Messrs. Christie & Manson's, of the famous Bromley Collection of pictures, mainly by Early Italian masters, took place on Friday and Saturday last. This gallery has long been remarkable for the extreme rarity and high value of many of its items, more than one of which were unique, other examples of the respective artists being unknown. It is not too much to say, that there has not occurred a sale of works of ancient Art for several years which, in importance, can compare with this. Almost free from mere sensational and pretty pictures, such as form the staple of popular galleries, this collection was worthy of a man of genius who understood Art in its highest and most spiritual sense. Several of the most interesting works were acquired for the National Gallery. Many of those works known as *casone* were comprised in the sale, and showed the genius of their artists: among these were several by Pollaiuolo, and evinced that painter's wonderful powers of design. These, from some unexplainable chance, did not seem to be appreciated; one of the best of them, a spirited romance, styled, A Chief surprised by Treachery at a Feast, a work that might have been the glory of a Florentine palace in the best days of the city, sold for 7½ guineas.—An admirable study of a single figure, A Priest Praying, by Zurbaran, coming close upon the merit of Velasquez, and such as is rarely obtainable, fetched only 22 gs.—Alessio Baldovinetti, The Virgin and Child, rare, 25 gs. (Lord Southesk).—Gentile da Fabriano, The Wise Men guided by a Star to Bethlehem, Rogers Coll., 23 gs. (R. Monckton Milnes, M.P.).—V. Pagani di Monte Rubiano, The Annunciation, Feach Coll., 105 gs. (Lord Ashburton).—Pietro Lorenzetti, The Virgin and Child, 50 gs. (Sir W. Farquhar).—Luca Signorelli, a Figure of Joseph, with subjects from his life in the background, 30 gs. (Lord Ashburton).—Pinturicchio, Adoration of the Magi, 35 gs. (Anthony).—Duccio di Buon Insegna, 1282, founder of the Siennese School, The Crucifixion, 250 gs. (same).—Filippo Lippi, The Fable of Cupid and Psyche, 80 gs.—Companion, concluding the subject, 59 gs. (Roe).—Giovanni Bellini, Our Saviour on the Mount of Olives, an infant angel, painted in white, standing in the sky, offering the cup, three apostles asleep in the foreground, a procession of soldiers in the background: the famous picture, comprised in the Manchester Art-Treasures Exhibition, 1857, 600 gs. (National Gallery).—P. Alemanno of Ascoli, The Virgin and Child, with two angels adoring, inscribed "Opus Petri Alemanni, discipuli Maestri Caroli Crivelli, Venet. 1488," 41 gs. (Lord Southesk).—Crivelli, four pictures of Saints, St. George in a rich suit of armour holding the shaft of his spear, 104 gs. (Farrer).—F. Penni, Virgin, Child and St. Elizabeth, under rich architecture, 187 gs. (Holloway).—S. Memmi, St. Ursula, holding two palms, 113 gs. (Baron Maro-

chetti).—The companion, a youthful Saint, with a sword, palm, &c., 81 gs. (Lord Ashburton).—Cosimo Roselli, an altar-piece, The Virgin Enthroned, with the Child on her knee, in the act of blessing an angel holding flowers; on each side, behind, and in front, SS. John the Baptist, Andrew, Bartholomew and Zanobio, exhibited in the Art-Treasures, Manchester, 28 gs. (Solomon).—S. Botticelli, A whole-length figure of Venus, holding a garland of roses, 150 gs. (Lord Somers).—Leonardo da Vinci, The Virgin and Child, backed by a curtain, on each side of which are views of the Lake of Como, &c., 490 gs. (Goldsmith).—Velasquez, The Angels appearing to the Shepherds, 215 gs. (Lord Ashburton).—C. da Conegliano, The Virgin and Child, 50 gs. (Ensom).—Giulio di Amendola, The Virgin with the Infant, seated on a throne, two angels above, SS. Peter and Paul on either side, pronounced to be an unique work. —S. Botticelli, The Virgin and Child, surrounded by five youthful saints, a rose-tree behind and landscape background, exhibited at the British Institution, 1860, 750 gs. (Lord Ashburton).—Sir Antonio More, La Belle Isabella, daughter of Henry the Second of Spain, from the Fesch Collection, 140 gs. (Farrer): there was another portrait by this master, of Mary of Austria which, with the last, was remarkable for his solid and artist-like manner and good colouring. —Palma Vecchio, Divine and Heathen Love, in a splendid landscape, from Louis-Philippe's Collection, 420 gs. (Seymour).—R. Wilson, A Landscape, with a lake, ruins and figures, 295 gs. (Holloway).—Giotto, The Coronation of the Virgin, two angels kneeling on each side; above is the Deity, with the symbol of eternity, exhibited at Manchester, 1857, 195 gs. (T. G. Parry).—Lo Spagna, The Crucifixion, 340 gs. (Seymour).—A. del Sarto, Portrait of Sannazaro contemplating a Skull, inscribed "Tengo la morte in mano perchè con carità e l'amore e il mio," 276 gs. (Holloway).—Il Bramantino, Adoration of the Kings, in a landscape, an unique picture; on the robes are ornaments in relief, 121 gs. (National Gallery).—Palmezzano da Forlì, The Virgin Enthroned, holding the Child, who stands on her lap, St. John on the right, St. Luke on the left, Fesch Collection, 320 gs. (Dublin National Gallery).—A. Bottraffio, The Virgin and Child, the Virgin, in a green dress and crimson bodice, offering her bosom to the Saviour, who turns towards the spectator, a remarkably fine and original picture, not alone for its execution, but the design, and the dignity, beauty and gravity of the Virgin's face, and the intelligence of that of the Saviour, Northwick Collection, 440 gs. (National Gallery).—G. Cotignola, The Ascension of the Virgin, 104 gs. (Lord Ashburton).—B. Pinturicchio, The Trojan Horse brought into the City, represented by Florence, and the companion, The Death of Hector, *cassone*, 110 gs. (Colnaghi).—Filippino Lippi, Portrait of La Simonetta, in a crimson and white dress, with pearls and a veil, Rogers Collection, 466 gs. (Barker).—S. Botticelli, The Virgin and Child surrounded by four angels, circle, Solly Collection, British Institution, 1859, 230 gs. (Martin).—L. da Vinci, The Virgin and Child; the Virgin in a blue dress, kneeling, supports the Saviour, who stands on a red cushion, and holds a bird in his hand; bought by Mr. Bromley, at the Northwick sale, for 15 gs., 140 gs. (Hebeler).—S. Botticelli, Venus, pendant to that purchased by Lord Somers, 100 gs. (Lord Ashburton).—Pesello Peselli, 1380-1457, The Holy Trinity, 2,000 gs. (National Gallery). The second day's sale produced 8,724l. 10s.; total of both days' sales, 13,958l. 5s.

FINE-ART GOSSIP.—The meeting of Members of the Society of Painters in Water Colours, held last week, resulted in the election of Mr. H. Britain Willis from the rank of Associates to that of Member. Although three vacancies existed, only one election was made. Nothing was decided with regard to the vacant Associateships.

The Council of the Royal Academy has determined to repeat the not very successful experiment of last year, and open the Exhibition in the evening from half-past seven o'clock until half-past ten

o'clock: the admission fee to be sixpence. Monday next, the 22nd of June, will be the first day. Lovers of Art to whom this will be a convenience may remember that daylight lasts now, even in-doors, until half-past eight o'clock. Later the rooms are lighted with gas.

The Dean and Chapter of Westminster have recently caused to be covered over with planks a portion of the invaluable mosaic pavement of the Confessor's Chapel in their church. While this protection preserves, it effectually hides the work. The process of destruction by traffic of visitors over the pavement is so rapid, that the portion left uncovered must soon be irretrievably injured; we remember the whole twenty years ago in a much better condition than it is now. Is it not desirable to remove, and set up elsewhere, the whole, where it may not be obnoxious to further injury—say in the Cloisters—and repave the chapel in a fitting manner? As this fine example of *Opus Alexandrinum* is set in large slabs of Purbeck marble, probably no difficulty would be found in removing it. It appears to have been placed where it is in the time of King Edward the First; for, in the payments of Queen Eleanor's executors, was a sum of sixty shillings to William le Pavour, probably, in part at least, for this work, which is presumed, says Mr. Burges, to be of Northern and not Italian execution, as is the more costly *Opus Alexandrinum* by Ordericus in front of the high altar, finished 1263.

The decorations for the Wolsey Chapel, Windsor Castle, will consist of mosaics,—filling the vaulting between the groinings of the roof, which is elaborately covered with fan-tracery,—representing angels, about 100 in number, emerging from clouds. These are at the springing of the tracery from the shafts. At the intersections of the ribs are to be placed heraldic emblems—the *rose en soleil*; the whole to be treated in a conventional, and therefore strictly decorative, unpictorial manner. The windows of the chapel are to be filled with rich glass, designed on the same legitimate decorative principle. The walls are to be covered with splendid decorations and pictures in fresco.

Mr. Leighton is painting in fresco, behind the altar of Lyndhurst Church, Hants, a large picture, in three divisions, representing the history of the Wise and the Foolish Virgins. In a raised centre, seen as issuing from under a baldaquin or canopy, is the figure of Christ; at his left hand an angel repels the Foolish Virgins, one of whom kneels with her hands thrust forth in supplication, a second lies prostrate on the floor, others remain in the background. Behind the scene is a darkening landscape, a desolate forest. On the right hand of Christ a section of the picture shows the Wise Virgins. One, gladly kneeling, offers her well-cared-for lamp to the Saviour; next, a second exultingly raises hers above her head; a third rests a happy rest. An angel assists a diffident virgin, another pours new oil into a lamp. Behind are a bright garden and a springing fountain. The whole of the design is proposed to be inclosed above by a flight of angels forming an arch, treated with due attention to the decorative character of the whole. The design of this picture is exceedingly beautiful; it is admirable in every sense as a work of Art, in composition, drawing and expression. It is incontrovertibly the best work, as yet, of an artist long ago tried in large-scale painting. A splendid stained-glass window has been executed by Messrs. Morris, Marshall & Co., after designs by Mr. E. B. Jones, and placed above Mr. Leighton's altar-piece.

One of the Worcester papers states, the Cathedral of that ancient city has been plundered of one of its bells, weighing 5 cwt.; this must have been done recently, and during the extensive scrapings and "works of restoration" that have been going on.

MUSIC AND THE DRAMA

MUSICAL UNION. — DIRECTOR'S MATINÉE. — TUESDAY, June 23.—Beethoven's and Hummel's Septett; Sonata Pastorale, Beethoven. Solos on the Violin, Violoncello, and Piano-forte. Vocal Music sung by Miss Artôt, Solistella, Leopold Auer (from Pesth), Platt, Halle, and Lubeck. To commence at Three o'clock.—Tickets to be had of Cramer & Co., Chappell & Co., Ollivier & Co., and Ashdown & Parry, Half-a-Guinea each. J. ELLA, Director.

HERR WILHELM GANZ respectfully announces that his ANNUAL GRAND MORNING CONCERT will take place, at the Hanover Square Rooms, on FRIDAY NEXT, June, 26 at Three o'clock.—Artists, Messrs. Favre, Lieberich, Esqueret, Wilkinson, Soldene and Lemaire; Messrs. Reichardt, Irving, Paque, Benedict, Edouard Ganz, and Wilhelm Ganz.—Stalls, 10s. 6d.; Tickets, 5s.; to be obtained of Herr Wilhelm Ganz, 15, Queen Anne Street, W.

MISS EDWARDS'S MATINÉE MUSICALE will take place JUNE 27 (by kind permission), at the Residence of Mrs. Brinsley Sheridan, 48, Grosvenor Place, at Half-past Two o'clock.—Miss Edwards will be assisted by Madame Badia, Signori Solieri and Ferranti, Messrs. Oberthur, Rice, Regondi, Elmer and Campana.—Reserved Seats, Half-a-Guinea, to be had of the principal Musicians, and at 94, Upper Ebury Street, Eaton Square, S.W.

MR. BRINLEY RICHARDS'S CONCERT will take place on WEDNESDAY EVENING, July 1, at the Queen's Concert Rooms, Hanover Square.—Stalls and Tickets, 5s. and 10s.; at the Musicians'; at the Rooms; and of Mr. Brinsley Richards, 4, Torrington Street, Russell Square.—Full particulars will be duly announced.

MADAME LIND-GOLDSCHMIDT. — HANDEL'S CANTATA. St. James's Hall, WEDNESDAY EVENING, July 8.—Second Performance of Handel's Cantata, L'Allegro and Il Penseroso. The Vocal Parts by Madame Lind-Goldschmidt, Madame Lemmens-Sherrington, Miss Lascelles, Mr. T. Montem Smith, and Mr. W. H. Weiss. Band and Chorus of 250 performers. Conductor, Mr. Otto Goldschmidt.—Back Seats (Area and Upper Gallery, 5s.; Reserved Seats (not numbered), Half-a-Guinea.—Stalls (numbered and reserved), One Guinea.—Seats will be appropriated according to priority of application, and Tickets delivered on and after Monday, June 22.—Mitchell's Royal Library, 23, Old Bond Street; Addison & Lucas's, 210, Regent Street; and all Libraries and Musicians.

HER MAJESTY'S THEATRE. — 'Faust.'—In March, 1859, some analysis was offered in the *Athenæum* of M. Gounod's 'Faust'—an opera the triumphant career of which has been, during the four intervening years, uninterrupted and progressive;—without doubt the opera which has most thoroughly satisfied the stage of Europe since 'Les Huguenots' appeared,—an opera which has arrived at its universal acceptance within more limited compass of time than that grand musical tragedy.—On referring to the notes then made, we find not a conviction, not a line, not a fancy, which intimate acquaintance with the music makes it necessary or just for us to cancel or to change. "How large, how frank, how noble, M. Gounod can be in his melodies and their treatment" (so ran the chronicle of impressions), "Faust" shows abundantly in its choruses and in most of its great situations, but it contains many too charming passages, which never may be valued as they deserve, owing to their evanescent brevity." The too frequent changes of scene in the last act were then noted here,—as were the inferiority of the supernatural or "Walpurgis" music to that in M. Gounod's 'La Nonne Sanglante,' and the difficulty imposed on the composer by his having to re-set the song of Margaret at her wheel, set once for all by Schubert. It would appear from the Italian score in its present state as if the above impressions—in our case awakened at the moment—had presented themselves, on reconsideration, to M. Gounod. The opera, as it now stands in London, is not as it then stood in Paris. The original spoken dialogue has been replaced by sung recitative—perhaps too much after the elaborate fashions of the time, which tend towards converting opera into a sung symphony.—The "Walpurgis" music has vanished—the spinning song, too; and in the prison-scene the duet and the trio have been retouched. The scenes of the church and of the combat ending in Valentine's death have changed places—every alteration being for the better.

Though it be only repeating what we have said before, we must call attention to the weary gloom of the opening music, broken by the snatches of sweet rural melody behind the scenes,—to the nobility of tone pervading all the music given to Faust,—to the stir and character, and capital structure of the *Kermesse* Chorus (not forgetting the quaint tune of the old men),—to the captivating vivacity of the waltz, with the charming appearance of *Margaret* as she crosses the stage,—to the garden-scene for the heroine, in which her old ballad and her coquetry and misgiving, on discovering the fatal jewels, are so admirably contrasted,—followed by the quartett; and, later, to the duett,—the *adagio* of which is of itself as sufficient to assure all competent to judge of the power and genius of its maker, as a cherub's head on the frame of an enamel would be to announce to those conversant with other arts that they had to do with a Cellini.—But, regarding the soldiers' chorus in the fourth (here the third) act, the bitter serenade of *Mephistopheles*, with its consequences in the combat betwixt *Faust* and *Valentine*, and the death of *Margaret's* soldier-brother, new praise

must be added to old admiration. There is nothing in the whole range of opera more effective, more impressive than the moment when Death strikes down the fiery, true-hearted victim to Woman's frailty, Man's passion and the "supernatural sollicitings" of Devilry. The musical working of this act cannot be exceeded, and it is much to be able to say that the following final prison-scene enhances every effect. Passion is driven to its wildest limits, but not torn to tatters. There are harmonies and progressions (Gluck had consecutive fifths in his 'Armida') which travel beyond the bounds of established form and order; but so powerful is the harmonizing dramatic sense, so thorough has been the musical training of the composer, that none of these licences afflict the ear, as they do in other stage-music belonging to our day, when destruction is too often mistaken for discovery.—The instrumentation of the opera, from first to last, is first-rate;—sonorous, picturesque, appropriate and rich, up to the requirements of the time,—and still clear of eccentricity. To this we may return. Meanwhile, let us repeat, 'Faust' is the work of an original, vigorous genius,—and by many degrees the best among modern operas. The crowd assembled at Her Majesty's Theatre on Thursday week obviously was aware of the fact. Rarely has a stronger sensation been produced—rarely has a more complete triumph been achieved.

All that Mr. Mapleson can do he has done with wise and liberal preparation to insure success. His orchestra was readier and neater than we have heard it till now; his chorus was correct and forcible. Signor Giuglini (*Faust*) has never (to our thinking) sung so like a great classical artist as in this opera. His first act was excellent. His garden scene was too softly honeyed; but some Italians have the fancy that Love must whisper rather than speak aloud. Mdlle. Titiens could not make herself *Margaret* by anything short of magic stronger than nature. Her great scene in the garden act was not satisfactory. There was no *réverie* in her ballad of 'The King of Thule'—there were no lightness and surprise in the *cabaletta* where the jewels are discovered. A shake, too, is there indispensable, and a shake is not among her possessions. In the exquisite avowal of the girl's love there was not the tender, impassioned, entire confidence suggested by the music. Her scene without the church was better; and, in the climax of the final encounter, her superb voice bore her up through the admirable trio to its close.—M. Gassier's *Mephistophèles* was mediocre, but he gave the song of the Calf of Gold and the Devil's bitter serenade under *Margaret's* window with care and some spirit. The best thing in the cast is Mr. Santley's *Valentine*. Highly as we rate this artist, and aware, as we are, of the progress made by him from part to part, we were not prepared for so admirable a piece of acting and singing as this is. Nothing could be more *gaillard* and soldierly than his appearance and bearing; nothing deeper in feeling than his death-scene.

There remain still many remarks to be made on 'Faust' as on an opera which will keep the stage, and which will make it difficult for any future musician to set the story; but we must stop after having again expressed our pleasure in a success which has outdone all expectation, and which has silenced for ever those who have sneered at M. Gounod as a man whose productions in no respect justified the pretensions and professions of his admirers,—among whom we were the earliest.

'*Medea*.'—In our recollection, as we have said in days gone by, there has been no tragic actress comparable to Madame Ristori. Many, we know, and judges to whom it is a pleasure to defer, have no relish for Italian acting: finding it overstrained, fierce and superficial. To ourselves, one school of national art has always illustrated another. There would be no real liking of Shakspeare if we could not also take to our hearts Molière and Schiller. A Rossini is not spoilt for us because there was a Gluck and a Beethoven. Tried, however, by the rules of Art, which are of no country, we fail to figure to ourselves anything in artist's form which, for beauty, for emotion, for variety, has approached this magnificent actress. Where Rachel had two strings to her lyre, Madame Ristori has twenty.—

On Monday, her *Medea* moved her audience here with as potent a sorcery as in the first hour when it became the rage in Paris. Time has dealt gently with her beauty. Not a note of melody in her wondrous voice has grown dull or harsh since we heard it last. Of the two, her style may have gained some ripeness;—if it may not have been the pleasure, after a lapse of time, of greeting a great queen, and one to whom we owe much gratitude for pleasure—which coloured and toned for us what was always a forcible and grand and expressive performance. To return on the drama is needless; nor can we here point out the rich, noble and delicate beauties of execution, scene by scene—though some of these were new—Madame Ristori being remarkable in nothing more than in an unexpectedness amounting to improvisation (which, by the way, is one characteristic among others of Italian mimic art). While she is in London,—besides her two contrasted performances of Mary Stuart and Elizabeth, the last a Zucchero picture in life and brilliancy and passion,—besides her presentation of the wicked Gothic queen, Rosemond,—she intends, we perceive, to introduce two new characters, a Norma and a Debora; also, to play Adrienne Lecouvreur.

ROYAL ITALIAN OPERA.—M. Obin's *début* as *Bertram* in 'Robert le Diable' is one of no common importance. There can be small doubt that as the representative of the Evil One he is next best to M. Levasseur, who "created" the part. His appearance and stage bearing are excellent;—his voice has that penetrating quality which is demanded by the music,—and it has been schooled as few deep bass voices are schooled now-a-days, when the prevailing idea seems to be that, provided a German gentleman can sing "In diesen heiligen Hallen" slowly enough, and open his mouth sufficiently roundly on the final deep E, he is thereon and therefore fit for all manner of work. M. Obin was slightly nervous in the use of a language strange to him, but this will soon pass with so excellent a musical and dramatic artist. He is a valuable addition to Mr. Gye's company.—Mdlle. Fricci is better in *Alice* than in any former character. It was a disappointment, after having been promised Mdlle. Fioretti for *Princess Isabella*, to be put off with Mdlle. Battu. The former lady, it was said in the theatre, has abruptly left London, without warning to anybody. Can it be that she was startled by having gained an honest popularity here, which has been accorded to her in no other capital? In spite of this substitution, the opera, as a whole, went well. The orchestra, as usual, was superb.

HAYMARKET.—'Easy Shaving' is the title of a new farce, taken from an old French vaudeville, which has been introduced to these boards by Messrs. F. C. Burnand and Montague Williams. It exhibits Miss Louise Keeley in the character of a female barber, named *Ninette*, resident in Islington in the time of Charles the Second, who for her services has obtained a ring from the merry monarch, which she uses in the interest of a young cornet, who is in danger of being cashiered for having overstayed his leave of absence. The brave fellow is foolishly in love with a married woman, and to disabuse him of this unworthy passion, *Ninette* shaves off his ringlets and moustache on one side of his face, which, by making him ridiculous in the eyes of the lady, cures him of his infatuation. *Ninette*, however, consoles him for his loss by accepting him herself for a husband, and thus ensures him the happiness of having a clever and faithful woman for his wife. All, of course, depends on the acting of Miss Louise Keeley, who sustains the part with that arch humour and exquisite finish, to which she is indebted for her rapid rise in the profession.

MUSICAL AND DRAMATIC GOSSIP.—The musical event of the season has, for the moment, so entirely absorbed attention that many excellent and interesting entertainments have passed and must be mentioned with briefer notice than they might have commanded, had not the praise of 'Faust' "filled the town." A line, for instance, must tell

that young M. Lotto's success at the *Crystal Palace*, on Saturday, was what it should be. It would be impossible for any one to be better received. He will make his second appearance there to-day.—Another line must be devoted to M. Thalberg's farewell, and to repeating our earnest and cordial hope that it is not, in final deed and truth, a farewell. If singers, after having taken leave, will return and return again, when no one desires to hear them, why should not a pianist, whom every one wishes to hear, because he is playing his best, follow the fashion?—A line must tell that the harpers, Mr. John Thomas and Mr. Ap-Thomas, have been in the field.—Another, that Mr. Dannreuther made his first appearance at the *Musical Union*, on Tuesday, in Schumann's Piano-forte Quartett in E flat. This is no music for us; nor shall we ever become reconciled to the hardness of ugliness which is therein paraded by way of originality. In this respect, the *Andante Cantabile*, both for idea and treatment, is a veritable curiosity. Mr. Dannreuther did the most for the quartett that could be done; and it says much in praise of his playing, that his excellent tone and thorough command of the instrument made themselves felt by the critical audiences in spite of the uncouthness of the work on which his labour was wasted. He will do well, however, save when presenting himself before a young German audience, to eschew Schumann's music, for that has as small chance of establishing itself in England as it had in 1848, when this very quartett was introduced by Herr Edward Röckel.—Herr Auer confirmed every good impression made by him at his first appearance. As a player of classical music he may become very precious in this country.—On Wednesday *Miss Lascelles* and M. Berger gave a concert in company. The lady was singing her best, and M. Berger brought forward some new compositions which, like all that he writes, are elegant. Further, the singing of Miss Parepa and the setting of some Elizabethan words by M. Blumenthal are not to be passed over.—On Wednesday, also, two very good Italian artists, Signori Pezze and Andreoli, gave their concert, made attractive by the good violoncello of the one, and the very good piano of the other partner.—The *fantasia*, however, by Fumagalli, which Signor Andreoli played so well, was not worth the pains bestowed on it.—The above are about a third, or thereabouts, of the Concerts of the Week.

The revival of 'Zampa' at the Opéra Comique of Paris has not been very happy.—The new opera by M. Gounod, 'Mireille,' is destined for the Théâtre Lyrique, and Madame Miolan-Carvalho.—Here, by the way, as he is the hero of the hour, it may be said that *Twenty Melodies—Vingt Mélodies* (Choudens)—by him have been just published. Some of them are already well known and admired here; most have a distinct beauty, rare in any day. We should have to look long and search far ere we found anything equal in style and character to 'Le Juif Errant,' 'Les Champs,' 'Le Vallon,' and 'Le Printemps,'—anything so tenderly simple as the setting of Béranger's 'Mon Habit,'—each of these excellent to sing, and showing the master-hand as unmistakeably as the garden-scene in 'Faust,' the march from 'La Reine de Saba,' or the Bacchanal from Philemon et Baucis, or the exquisite Molière serenade from 'Le Médecin.'

M. Lebouc, a violoncellist of considerable Parisian renown, is here.—M. Georges Pfeiffer, too, a pianist of pretension.

A new opera, by M. Serow, 'Judith,' has been presented at St. Petersburg. It is described as more orchestral than vocal—in brief, after the pattern of Herr Wagner's bad operas.

At Rostock, there has been a performance of the 'Passions-Musik' of Sebastian Bach, in which all the songs omitted by Mendelssohn, as many as a dozen or more, if memory serve us, were religiously performed. Many of these are tedious and mechanical.—M. Rubinstein's 'Paradise Lost' has been given at the Königsberg Festival.

MISCELLANEA

Antiquity of Man.—It appears to me that the following information has some bearing upon the evidence of human fossil bones. About twelve years

since, some human bones were taken from a fissure in a quarry, worked, I believe, for hematite ore, in the mountain limestone at the Mumbles, Swansea. Of these bones I have one, which is a portion of a lower jaw. It consists of the right ramus only, and contains the three molar teeth, the first and second being considerably more worn than the third. In an ethnological point of view, there is one feature of interest, the third molar is larger than the second, and the second is larger than the first; but this increase is to a certain extent made greater than real in consequence of the first and second being considerably more worn down by mastication than the third. The increase of the size of the teeth posteriorly is characteristic of the New Zealand type, and is the converse of the European normal condition. But the chief object to which I wish to draw attention in this specimen is, that it bears all the appearances of great antiquity. The animal substance is so far removed that the bone will hang to the lip. This, to a less extent, is the case with the teeth also. Being desirous of ascertaining the amount of animal matter still remaining, I placed a fragment of the bone in some hydrochloric acid, and found that there was not the slightest trace of gelatine left in the residue. I also sawed into two pieces one of the teeth. The freshly-cut surface is white and compact, but more opaque than in a recent tooth. I immersed one half in hydrochloric acid, and found that after all the lime had been removed the gelatine remained to a very large extent, showing that but a small portion had yet been extracted. Here, then, we have an instance in which the gelatine is removed from the bone and not from the teeth in the same jaw, therefore demonstrating how much more rapidly the animal substance is removed from one tissue than from another. I have also a jaw of a child about eight or nine years of age, taken, I understand, from the same fissure as the preceding specimen. This appears not to have lost any sensible portion of animal material, and offers little or no peculiarity to distinguish it from any graveyard bone. I have seen the tooth of the hippopotamus, from a limestone cave at Plymouth, so perfect in its histological conditions that it appeared fit for the turner; and I remember some bat's bones that I removed from beneath a thick stalagmitic crust, in Bacon Hole Cave, so perfect that they might readily be mistaken for recent specimens, while all the other bones from the same cave were extremely friable from the loss of the gelatine. I do not bring forward these specimens as evidence of fossil man, but only to show that bones may lose every atom of gelatine and yet the teeth possess the appearance of being recent, while lying under one and the same condition; and, moreover, that bones may, under apparently the same conditions, be differently acted upon, and therefore exhibit different results. I say that I do not offer the specimens as evidence of antiquity. My reason is, that one of the specimens from which the teeth are lost, or another that I have mislaid altogether, exhibited marks on the teeth similar to those we see in the mouths of persons by whom a clay pipe has been much used. This suggests the idea that the bones must have been interred subsequently to the introduction of tobacco into this country, unless we are prepared to show that "antique man" smoked a "calumet,"—a not improbable circumstance when we remember the common practice of savage life, and from whom we receive the modern luxury. If these remarks have any value, they must press against the assertion that because the tooth found at Abbeville contained gelatine, therefore it could not be so old as bones that have lost their gelatine, even if found under similar conditions. There is one circumstance that must strike the least accurate observer, that in these specimens, spurious or antique, it is curious how they differ from the present type of Europeans.

C. SPENCE BATE.

8, Mulgrave Place, Plymouth.

TO CORRESPONDENTS.—G. K.—P. D.—J. D. W.—H. O.—received.

F. S.—An ingenious attempt; of which we have seen the like before. The lines 1, 2, 3, &c. do not all meet in one point, as F. S. supposes. This conclusion is, we suspect, drawing, not demonstration.

UNDER THE ESPECIAL PATRONAGE OF HER MAJESTY THE QUEEN.

On or about the 30th of June, in handsome 4to. elegantly bound, price One Guinea and a Half.

THE BOOK OF THE ROYAL HORTICULTURAL SOCIETY.

By ANDREW MURRAY, Esq. F.L.S. &c.

Assistant-Secretary to the Royal Horticultural Society.

HER MAJESTY has most graciously accorded Her permission for this
Volume to be dedicated to the Illustrious Memory of
THE PRINCE CONSORT.

THE BOOK OF THE ROYAL HORTICULTURAL SOCIETY is printed in the highest style of Art-Typography, in colours, on a toned paper. THE ILLUSTRATIONS comprise numerous highly-finished Borders, Initials, Portraits, Vignettes, &c., from Designs and Drawings by JOHN LEIGHTON, F.S.A., THOMAS SCOTT, and others, engraved by SWAIN. Twelve Photographs of the Gardens, Conservatory, &c., by C. THURSTON THOMPSON. The Illuminated Autographs of Her Majesty and the Prince Consort reproduced (fac-simile) by Chromo-lithography, &c. &c.

CONTENTS.

SONNET, BY SHIRLEY BROOKS. (*Dedication.*)
THE ESTABLISHMENT, EARLY HISTORY, AND PROGRESS OF THE SOCIETY.
THE PRESIDENCY OF THE PRINCE CONSORT, AND THE MEMORIAL OF 1851.

THE SOCIETY IN CONNEXION WITH THE INTERNATIONAL EXHIBITION, 1862.
DESCRIPTION OF THE GARDEN, CONSERVATORY, STATUES, &c.
APPENDIX.

Illustrations on Wood.

Title.
Frontispiece. AUTOGRAPH OF THE QUEEN (*fac-simile*).
" MR. ROSE PRESENTING THE FIRST ENGLISH-GROWN PINE-APPLE TO CHARLES THE SECOND."
VIEW OF CHISWICK HOUSE AND LAWN.
AUTOGRAPH OF THE PRINCE CONSORT (*fac-simile*).

LITERATURE

Despatches from Commodore Wilmot respecting his Visit to the King of Dahomey, in December 1862 and January 1863. (Presented to the House of Commons.)

THESE Despatches throw some new light on that strange region well known as the Garden of Africa, and give a graphic account of its extraordinary sovereign. The King of Dahomey has recently obtained the reputation of being one of the chief promoters of slave traffic; hence English cruisers and English missionaries have been hovering about his territories. Towards the end of last year, Commodore Wilmot, of the *Rattlesnake*, was informed by the Rev. P. W. Bernasko, Wesleyan Missionary in the English fort, that the King of Dahomey was most anxious to see somebody of consideration from England—"a real Englishman"—with whom he might converse on the affairs of his country. Having mentioned this to the Yavogah of Whydah, the latter said, "If you will come back again in seven days, I will send to the King, and let you know if he will see you." He accordingly sent to the King, saying that Mr. Wilmot was a "good and proper person, come out as a messenger from the Queen of England." Before making up his mind to accept the King's invitation, there were many points, Mr. Wilmot tells us, to be considered. It had been said that our late attack on Porto Novo had enraged the King's mind to such an extent that he had expressed a strong desire to lay hands upon an English officer in order to avenge the destruction of that place. Porto Novo belongs to his brother; and the European residents at Whydah had spread the most alarming reports of the disposition of the King towards Englishmen, and his hatred of them. But after mature consideration he resolved to go, and place implicit trust in the King's good faith.

Having made preparations for an absence of fourteen days, he landed on the 22nd of December, in company with Capt. Luce and Dr. Haran, of the *Brisk*, who had volunteered to accompany him. The *Rattlesnake* and the *Brisk* were sent to cruise, and both vessels were ordered to return on the 14th of the next month. The three Englishmen were conveyed in hammocks across the lagoon and through the wet marshy ground, almost impassable in the rainy months, to a large tree at the entrance of Whydah, where certain ceremonies were gone through as a welcome. They were received most cordially by the Yavogah and other officials, with drums beating, colours flying, muskets firing, cabocceers as well as soldiers dancing, and the latter singing warlike songs. "We were also treated," remarks the Commodore, with the simplicity of a man accustomed to strange sights, "to the manoeuvres of a slave-hunt." The Yavogah and chiefs accompanied them to the English fort, where the King's stick was presented, and the healths of the Queen of England and the King of Dahomey were drunk. Having secured hammock-men, carriers for luggage, and guides, and being furnished with a body-guard of soldiers, they started the following afternoon, accompanied by the Rev. Mr. Bernasko and his servants. They arrived at Cannah, eight miles from Abomey, in the evening, when the King was holding his court. At all places on the road the head men turned out with their soldiers, and received the strangers with firing, dancing and the usual presents of water, fowls and goats. Speeches were made expressive of their desire to go to

war and cut off heads for their master. The war-dance was performed by women and children, and motions made with swords as if in the act of decapitating their enemies. This show of war did not interfere with hospitality, for at the villages where they slept, comfortable quarters had been provided, and water furnished. The latter is, however, denounced by the Commodore as very bad, scarce and unwholesome. The King had sent three of his sticks by special messengers to meet them on their way, with inquiries about their health; and at 10 o'clock on the morning of the 10th he summoned them to his reception. They went in full dress, and remained under some large trees, in an open space. After a short time, the chiefs arrived in succession with their followers, according to their rank, and were duly introduced, the same drumming, firing, dancing and singing being carried on as at Whydah. When this, which occupied a considerable time, was over, the Commodore and his companions got into the hammocks and went to the palace, outside of which, in a large square, were assembled all the chiefs with their people, as well as large bodies of the King's soldiers. The gaudy colours of the large umbrellas, the dresses of the headmen, the firing of the muskets, the songs of the people, the beating of the war-drums, the savage gestures of the soldiers, and their ferocious appearance, made the travellers at first a little uncomfortable. All, however, treated them with marked respect, while, according to custom, they were carried three times round the square. After the third time, they got down and entered the palace-gates, passing through a row of chiefs on each side. They found the courtyard of the palace presenting a spectacle not easily forgotten. At the further end was a large building, of some pretensions to beauty in that country, being made of thatch, and supported by columns of wood, roughly cut. In front of this, and close to it, leaving an open space for admission to the King, was placed a large array of variegated umbrellas, to be used only by the sovereign. Near these were congregated his principal chiefs. On either side of him, under the building, were his wives, to the number of about one hundred, gaily dressed, most of them young and exceedingly pretty.

The King was reclining on a raised dais, about three feet high, covered with crimson cloth, smoking his pipe, whilst one of his wives held a glass sugar-basin as a royal spittoon. He was dressed very plainly, the upper part of his body being bare, with only a silver chain holding some fetich charm round his neck, and an unpretending cloth around his waist. The left side of the court-yard was filled with Amazons, from the walls up to the King's presence, all armed with various weapons, such as muskets, swords, gigantic razors for cutting off heads, bows and arrows, and blunderbusses. Their large war-drum was conspicuous, being surrounded with human skulls. The visitors advanced with due form and ceremony to where the King was sitting; and, when close to him, all the respect due to royalty was paid by bowing, which he gracefully acknowledged by bowing himself, and waving his hand. Having sat down close to him, in chairs that had been brought from Whydah, the conversation commenced with the usual compliments. He asked about their health, and how they got on during the journey. He then inquired about the Queen and all her family, asking many questions about the form of government in England. Mr. Wilmot said the Queen sent her compliments to him, and hoped he was quite well, at which he seemed much pleased; but this being only a visit of introduction, nothing political was

entered into. The King then gave orders for his Amazons to perform a variety of movements, which they did most creditably. They loaded and fired quickly, singing songs all the time. In Mr. Wilmot's opinion they are a very fine body of women, and are very active in their movements, being remarkably well limbed and strong. No one is allowed to approach them except the King, who lives amongst them. They are first in honour and importance. All messages are carried by them to and from the King and his chiefs. Every one kneels down while delivering a message, and the men touch the ground with their heads and lips before the King. The women do not kiss the ground nor sprinkle themselves with dust as the men do. When a man appears before the King he is obliged to perform the ceremony of covering his head and upper part of his body with dust before he rises, as much as to say, "I am nothing but dirt before thee!" Though the Commodore admits that this is rather a degrading spectacle, he says, "but, after all, it is only the custom of the country." After the Amazons had finished the manoeuvres, they came to the strangers and gave them their compliments, singing songs in praise of their master, and saying they were ready for war, suiting the action to the word by going through the motions of cutting off heads. The King then introduced all his princes, chiefs, and warriors, in succession, according to rank; then the chiefs and captains of the Amazons; then the princesses, daughters of the late King: in fact, he brought up and named one by one everybody of importance in his kingdom, including the mother of the King and the mothers of his principal chiefs. After each group was introduced, a bottle of rum was given, the usual present after such a ceremony, and a signal that they had permission to retire. To the head chiefs a glassful each was presented, which was drunk by themselves, or given to one of their followers. When once in the King's presence, or in his capital, no one, European or native, can leave without this customary present. After all the presentations, the King called the Amazons again to salute the strangers, and then offered them water and spirits, which he drank with them; and thus terminated the first visit. No one is permitted to see the King drink: all turn their faces away, and a large cloth is held up by his wives while the royal mouth takes in the liquid.

When the visitors were going away the King got up, it being almost dark, and walked side by side with them across the courtyard, through the gates, and nearly half-a-mile on the road towards their house, which was considered a great compliment. The whole court followed, with the exception of the Amazons and the wives, who never join in such processions. The soldiers shouted and sang their war songs, while certain chiefs went in front of the King to clear the road and point out any dirt or inequalities of ground before the feet royal. The sight was imposing, and impressed Mr. Wilmot with the power of the King amongst his people. He seemed much feared as well as much beloved. Indeed, he appears to have produced no small effect on the Commodore himself, who describes him as a very fine-looking man, upwards of six feet high, broad-shouldered, and with a pleasant countenance when he likes. His eyes are blood-shot. He is a great smoker, but does not indulge much in the bottle. His skin is much lighter than that of most of his people, resembling the copper colour of the American Indians. He is very active, and fond of dancing and singing, which he practises in public during the "customs." He is an admirer of the fair sex, of whom he possesses as many as he likes. He is about forty-

three years old. Before leaving the palace, the King saluted the Queen with twenty-one guns, from pieces of all sizes, the largest being a 3-pounder. These guns are, usually, carried on men's heads, and occasionally placed on the ground and fired off. The King also saluted his visitors with nine guns. The number of guns fired was shown by a corresponding number of musket-balls produced in an iron pot.

On arriving at their quarters after this day's ceremony, the Prince, who had accompanied them from Whydah, asked for a present for the soldiers and Amazons. He said he hoped they would not make him ashamed before his people, as he had brought the party up, and was ordered to attend upon them. Mr. Wilmot immediately acquiesced, and made them a handsome present, which was thankfully acknowledged. Whenever strangers meet, they either drink with each other on their first arrival, or when they are about to depart. Of course, our countrymen had always to submit to this, which caused a great drain upon their resources. Next day the King's jesters danced before them. One of the Amazons, in firing, had injured her hand very much by the bursting of the musket, and a messenger arrived from the King with a request that the doctor might be allowed to attend her. This was granted, and Dr. Haran saw her twice a day until the wound was healed and a perfect cure made. The wound was a very severe one, and Mr. Wilmot thinks it was fortunate for the Amazon that the skill of Dr. Haran was called in.

The Commodore has no small opinion of his own tact. He says:—"I have reason to believe that my line of conduct was rewarded by the whole country being laid open before us, and the whole people, King, chiefs, and all, being our friends. The greater part of what we saw I firmly believe was entirely got up for my sake, and certainly no white men ever saw what we did, or were treated with such marked consideration."

While at Cannah the King invited them on the afternoon of two days to witness the firing of his Amazons and soldiers with ball at a mark. They found him about two miles outside the town in a very large open space which had been cleared away, surrounded by his chiefs and people, to the number of several thousand, preparing to practise at a number of goats, which were tied to stakes driven in the ground at intervals of about fifteen yards, under a mud wall of considerable length, and about ten feet high. The King received them very cordially, and told the Prince to place them under his own umbrellas in a convenient place for seeing everything. The firing commenced, and the King's body guard of Amazons distinguished themselves as good shots. The King fired several times himself. The soldiers fired also exceedingly well, and taking into consideration the quality of the flint musket and the iron ball, which is jagged and fits loosely in the barrel, the display they made astonished the strangers. Several goats were killed, and on the second day four of those despatched were sent to Mr. Wilmot as a present. These had been selected by the Amazons as a particular present to the visitors, and until they were killed no other goat was fired at. The firing was very rapid, and the ladies' weapons were well handled. Some heads were cut off during the night, and this appears to be the practice whenever the King returns to his capital. Eight heads were in the doorway of the palace on the following morning, and more of these trophies were inside. Mr. Wilmot and his companions remained in Abomey five weeks, and daily witnessed scenes of a very extraordinary character, such as the dancing of the Amazons, their war-

like songs, the dancing and songs of the soldiers, the distribution of presents to the Princes, chiefs, captains, and head men of the troops, the "passing" of the King's drummers, of the captains of the Amazons, of the King's jesters, and of a variety of other people which appear before the King during the "customs."

Upon the last day but one of the "customs," late in the afternoon, a large body of soldiers, with their attendants carrying their camp equipage, made their appearance from a place about three days' journey in the interior, belonging to the King. These men had been sent to the assistance of a small town belonging to a chief on friendly terms with the King, who had been threatened by the Abbeokutans, and who had applied to Abomey for assistance. The King had granted the assistance required, and despatched two of his head warriors with about 600 men for this purpose. When these men arrived at the town, they found that the Abbeokutans, hearing of their approach, had run away, and hence their return to Abomey. As usual, on their return the King made them a long speech and gave them presents.

On the Saturday, six days after the English party's arrival at Abomey, the King saw them privately in his own palace, and they gave him the presents brought up for the occasion. He was attended by six of his Privy Council, his most trusted friends; also by five of his principal wives. He would only receive the presents from Mr. Wilmot's hands. He gave him first the picture of the Queen, saying that Her Majesty had sent this out to him as a mark of her friendship, and her wish to be on good terms with him. He took it in his hands and admired it very much. In this picture the Queen is represented in her coronation robes, with crown on her head and sceptre in her hand. The frame is very handsome, and the picture is a large one. After looking at it attentively, he asked many questions concerning the dress, and then said, "From henceforth the Queen of England and the King of Dahomey are one. The Queen is the greatest sovereign in Europe and I am King of the blacks. I will hold the head of the Kingdom of Dahomey, and you shall hold the tail." Mr. Wilmot then gave him a few small presents from himself, with which he was very much delighted and grasped him warmly by the hand. His council participated in these feelings, and said, "At last good friends have met." Then commenced the delivery of the message which the Commodore thought it his duty to lay before the King. The first subject was the Slave Trade, on which he argued apparently at great length. He then gave the King an admonition about human sacrifices, and the threatened occupation of Abbeokuta, winding up with the suggestion of an embassy, an extension of trade and missionary schools. The King listened attentively to the message, and made several remarks during its delivery. The usual ceremony of drinking was not forgotten, and he accompanied Mr. Wilmot through the gates of the palace far on the road to his quarters, amidst the cheers of the soldiers and people. They remained a month in Abomey after the delivery of this message, in consequence of the "customs" going on. Nothing could persuade the King to let them go until this was over, as he was most anxious that they should see everything and report it.

They saw the Royal treasures pass round in the interior of the palace, preceded by all the principal ministers, princes, and chiefs, in their Court costume. The captains of the Amazons passed round in the same way. The costume worn, the different colours displayed according to etiquette, the ornaments of silver round the necks, with an occasional skull at the waist-

belt of the Amazons, and the half-savage appearance of all, notwithstanding their good manners and modest behaviour, were peculiarly interesting. It was during the procession of the King's treasures, that the "human sacrifices" came round, after the cowries, cloths, tobacco and rum had passed, which were to be thrown to the people. A long string of live fowls on poles appeared, followed by goats in baskets, then by a bull, and lastly half-a-dozen men with hands and feet tied, and a cloth fastened in a peculiar way round the head.

A day or two after these processions, the King appeared on the first platform: there were four of these platforms, two large and two small. His father never had more than two, but he endeavours to excel him in everything, and to do as much again as he did. If his father gave one sheep as a present, he gives two. The sides of all these platforms were covered with crimson and other coloured cloths, with curious devices, and figures of alligators, elephants and snakes; the large ones are in the form of a square, with a neat building of considerable size, also covered over, running along the whole extent of one side. The ascent was by a rough ladder covered over, and the platform itself was neatly floored with dried grass, and perfectly level. Dispersed all over this were chiefs under the King's umbrellas, sitting down, and at the further end from the entrance the King stood surrounded by a chosen few of his Amazons. In the centre of this side of the platform was a round tower, about thirty feet high, covered with cloths, bearing similar devices as the other parts. This is a new idea of the King's, and from the top of this tower the victims are thrown to the people below. When the King is ready, he commences by throwing cowries to the people in bundles, as well as separately. The scramble begins, and the noise occasioned by the men fighting to catch these is very great. Thousands are assembled with nothing on but a waist-clout, and a small bag for the cowries. Sometimes they fight by companies, one company against the other, according to the King's fancy; and the leaders are mounted on the shoulders of their people. After the cowries, cloths are thrown, occasioning the greatest excitement. While this lasts, the King gives them to understand that if any man is killed, nothing will be done to the man who is the cause of it, as all is supposed to be fair fighting with hands, no weapons being allowed. Then the chiefs are called, and cowries and cloths are given to them. The King begins by throwing away everything himself; then his Amazons take it up for a short time, when the King renews the game, and finishes the sport, changing his position from one place to another along the front part of the platform. When all that the King intends throwing away for the day is expended, a short pause ensues, and, by and by, are seen inside the platform the poles with live fowls (all cocks) at the end of them, in procession towards the round tower. Three men mount to the top, and receive, one by one, all these poles, which are precipitated on the people beneath. A large hole has been prepared, and a rough block of wood ready, upon which the necks of the victims are laid, and their heads chopped off, the blood from the body being allowed to fall into the hole. After the fowls came the goats, then the bull, and, lastly, the men, who are tumbled down in the same way. All the blood is mixed together in the hole, and remains exposed with the block till night. The bodies of the men are dragged along by the feet, and maltreated on the way, by being beaten with sticks, hands in some cases cut off, and large pieces cut out of their bodies,

which are held up. They are then taken to a deep pit and thrown in. The heads alone are preserved by being boiled, so that the skull may be seen in a state of great perfection. The heads of the human victims killed are first placed in baskets and exposed for a short time. This was carried on for two days. Mr. Wilmot would not witness the slaying of these men on the first day, as he was very close to them, and did not think it right to sanction by his presence such sacrifices. He therefore got up and went into a tent, and when all was over returned to his seat. One of the victims was saved:—

"While sitting in the tent a messenger arrived, saying, 'The King calls you.' I went and stood under the platform where he was. Tens of thousands of people were assembled; not a word, not a whisper was heard. I saw one of the victims ready for slaughter on the platform, held by a narrow strip of white cloth under his arms. His face was expressive of the deepest alarm, and much of its blackness had disappeared; there was a whiteness about it most extraordinary. The King said, 'You have come here as my friend, have witnessed all my customs, and shared goodnaturedly in the distribution of my cowries and cloths; I love you as my friend, and you have shown that an Englishman, like you, can bear patience, and have sympathy with the black man. I now give you your share of the victims, and present you with this man, who from henceforth belongs to you, to do as you like with him, to educate him, take him to England, or anything else you choose.' The poor fellow was then lowered down, and the white band placed in my hands. The expression of joy in his countenance cannot be described: it said, 'The bitterness of death, and such a death, is passed, and I cannot comprehend my position.' Not a sound escaped from his lips, but the eye told what the heart felt, and even the King himself participated in his joy. The chiefs and people cheered me as I passed through them with the late intended victim behind me."

The "customs" were concluded by a day of firing, when all the soldiers, under their different leaders, marched past the King in review order. The King danced with his Amazons, and invited the visitors to join. While the "customs" last the King does not transact any public business.

On the afternoon of Friday, the 16th of January, the King asked the Commodore to review his Life Guardsmen and women, and he then made him Colonel over the whole of them, about one thousand strong each—an honour for which the new Colonel had to pay dearly, according to the custom of the country. Speeches were made by the Captains, who were introduced separately, the whole tenor of which was what they would do at Abbeokuta, and the number of heads that would fall to Mr. Wilmot's share. The following day, Saturday the 17th, the King saw them in private, as before, and gave his answer to the message. He commenced by saying how glad he was that a messenger had been sent who by his patience and forbearance had shown himself a friend to the black man. He then entered into a long history of his country in the time of his ancestors, and stated how anxious his father was to be friends with the English. He said that for many years past (he did not know why) the English seemed to be hostile to him, and endeavoured to make all nations in Africa fight against him. He said that the Slave Trade had been carried on in his country for centuries, and that it was his great means of living and paying his people. He did not send slaves away in his own ships, but "white men" came to him for them, and was there any harm in his selling? We ought to prevent the "white men" from coming to him; if they did not come he would not sell. We had seen what a great deal he had to give away every year to his people who were dependent on

him; and that this could not be done by selling palm oil alone. If people came for palm oil he would sell it to them; but he could not carry on his government upon trade alone. If he gave up the Slave Trade, where was he to get money from? It was not his fault that he sold slaves, but those who made his fathers do it, and hence it became an institution of his country. He said, "I cannot stop it all at once: what will my people do? And besides this, I should be in danger of losing my life." Being asked how much money he would take to give it up, he replied, "No money will induce me to do so; I am not like the Kings of Lagos, Porto Novo and Benin. There are only two Kings in Africa, Ashantee and Dahomey; I am the King of all the blacks. Nothing will recompense me for the Slave Trade." He said there were plenty of blacks to sell, and plenty to remain; and that the price of a slave was 80 dollars, with 4 dollars custom on each. On most occasions he is paid before the slaves are taken away, but sometimes he risks the payment, and then he suffers by the capture of the slave-ship. He said, "I must go to Abbeokuta: we are enemies; they insulted my brother, and I must punish them. Let us alone; Why interfere in black man's wars? We do not want 'white men' to fight against us; let every one go out of Abbeokuta, and see who will win. Let the 'white man' stand by and see which are the brave men!" He spoke strongly of Porto Novo, and said, "If my friends the English had sent to me, I would have broke Porto Novo for them." He promised faithfully to spare all the Christians and send them to Whydah, and that his General should have strict orders to that effect. When asked about the Christians at Ishagga, he said, "Who knew they were Christians? The black man says he is a white man, calls himself a Christian, and dresses himself in clothes: it is an insult to the white man. I respect the white man, but these people are impostors, and no better than my own people. Why do they remain in a place when they know that I am coming? If they do so, I suppose they are taking up arms against me, and I am bound to treat them as enemies. If a musket-ball touches the white man at Abbeokuta, am I to blame if they will not go away when they know I am coming?" Mr. Wilmot reasoned with him no longer on this subject, because he thought "his observations so thoroughly just and honest." The next subject was the "human sacrifices." He said, "You have seen that only a few are sacrificed, and not the thousands that wicked men have told the world. If I were to give up this custom at once, my head would be taken off to-morrow. These institutions cannot be stopped in the way you propose. By and by, little by little, much may be done; softly, softly, not by threats. You see how I am placed, and the difficulties in the way: by and by, by and by." As to the Embassy, he said he would send a Prince to England, if Mr. Wilmot came again and gave him the Queen's answer to what he had stated. With regard to the schools at Whydah, the King said, "Any of the mulattoes may send their children."

After the interview, which lasted some time, the King made several presents: namely, for the Queen a large umbrella, made of different coloured velvets, with the devices emblematic of their customs; a large carved stool, which no one but kings are allowed to possess; a pipe-stick and bag; a bag made from the leather of the country, with a lion worked upon it; a very handsome country cloth, and a long stick ornamented with silver, which can only be carried by the king; also two girls, one about twelve, the other sixteen, very pretty and intelligent. These last were left by the Commo-

dore at Whydah, in charge of the coloured missionary's wife there, until the wishes of Her Majesty on the subject can be ascertained. The girls were taken at Ishagga, and seemed to be very interesting.

They found the population very scanty. After they had left Whydah, every soldier in the place went on to Abomey to swell the numbers there. There was not a man to be seen on their return, none but women and children. On the whole, there are far more women than men, probably three to one, which may be the reason why the Kings of Dahomey, who are always at war, are obliged to raise and keep up the Amazons, or "women soldiers," to the extent that they do.

The Amazons are everything in this country. The King lives with them and amongst them; they are only to be found in the royal palaces. When they go out to fetch water, which is every day and nearly all day, the one in the front (for all follow in single line) has a bell round her neck much like a sheep-bell in England, which she strikes whenever any person is seen approaching. Immediately the men run away in all directions, and clear the road by which the Amazons are coming. They then wait till all have passed. The reason for this is, that if an accident were to happen to any one of these women, either by her falling down and breaking the water-jar on her head, or if the water-jar fell off her head, the unfortunate man who happened to be near at the time would be immediately seized, and either imprisoned for life or have his head taken off, as it would be supposed that he was the cause of the accident. No wonder, then, that they get out of the way as quickly as possible. The Commodore and his friends were always obliged to follow this custom, but women are not expected to avoid them in this manner. All day long the sound of this bell is heard, and people are seen flying away. The Amazons seemed to enjoy it, and laughed heartily when the men stepped aside to avoid them.

Whatever may be the object in thus keeping up such a large body of "women soldiers," there is no doubt that they are the mainstay of the kingdom. Mr. Wilmot put down the number at 5,000; and besides these there are numerous women to attend upon them as servants. He saw 4,000 under arms at Abomey, and there are more in other parts of the kingdom residing in the royal palaces. He thinks they are far superior to the men in everything—in appearance, in dress, in figure, in activity, in their performances as soldiers, and in bravery. Their numbers are kept up by young girls of thirteen or fourteen years of age being attached to each company, who learn their duties from them; they dance with them, sing with them, and live with them, but do not go to war with them until they have arrived at a certain age, and can handle a musket. These women seem to be fully aware of the authority they possess, which is seen in their bold and free manner, as well as by a certain swagger in their walk. Most of them are young, well-looking, and have not that ferocity in their expression of countenance which might be expected from their peculiar vocation.

This Report on Dahomey is one of the most curious bits of reading produced during the London season.

Taste versus Fashionable Colours: a Manual for Ladies, on Colour in Dress. By W. and G. Audsley. (Longman & Co.)

LADIES owe thanks to the Messrs. Audsley, who are already known as the producers of several handy-books on Decorative Art, for having spared them the labour of mastering the theories and illustrations of M. Chevreul

and others who have written on the theme in hand in a general and scientific manner.

When a gentle reader has made up her mind that she is a Fair or a Ruddy Blonde, a Pale or a Florid Brunette, all she has to do with this book is to turn to the sections of advice it contains, and be informed as to what colours are properly applicable to her condition. That a lady should treat herself as a work of Art, and dress with skill is surely desirable. To invoke intelligence to the toilette and give something of science to the labour of those hours, which men believe to be spent before the mirror in endless experiments and the exercise of a mere empiricism, would go far, to one portion of the female sex at least, to induce cultivation of a subject that is really of grave importance. "Taste" is the title given to those glimmerings of science, sometimes instructive, but never deep, which distinguish able milliners from their dull compeers. How they obtain even these lights has been for ages a mystery to artists; let it suffice that they do attain true knowledge of certain rules, of an empirical kind, which generally save these persons from committing egregious blunders, and not unfrequently aid in producing those elegant effects in costume which are recognized by the cultivated eye on the instant, and are, even by the male sex, gratefully enjoyed. The object of the work before us is rather the extension of these empirical rules, by adding to the number of maxims at a lady's command, than to effect that which we think more important and of great service as a branch of education,—i. e., the inculcation of scientific knowledge of the laws of beauty in colour. The deeper-seated laws of form, which determine what is beautiful in line and shape, are beside the view of the subject taken by the Messrs. Audsley; therefore, they are not to be blamed for silence on that subtle branch of Art.

Upon form depend not only the arrangement of masses of drapery about the wearer's person, the height, projection and curve of her bonnet's edge, the balance of her shawl's gatherings about the shoulders, bust and hips, length of the shawl itself, and, under present domination, the relative expanse of crinoline, or even its entire absence,—but the cunning adjustment, or perhaps we should say *choice*, of pattern appropriate to the natural proportions and "shape" of the subject to be arrayed. How many are the blunders, how few the successes of the *modistes* in this matter of form, let every man's memory attest who has seen the results of their ignorance on pretty heads in the shape of hats—the most beautiful as well as the most useful of head-dresses: the round hat where an oval one should be, the high one in a low one's place, or, worst of all, in those ugly constructions that rise high like a cocked-hat above the ear, droop in deep peaks at the back and front, show a flat crown and roll their brims in a badly-designed fold on each side. No creature with a grain of "taste" would have invented the monstrosity in question, which lacks the essential of a cocked-hat in omitting its high-vaulting curve at the apex. Again, as to form; let us say, on the matter of the choice of patterns, that although in stripes are the most admirable dispositions of masses of colour—so we pointed out a few weeks since (*Athen.* No. 1855),—it is not given to every one to wear stripes with success. A knowledge of form alone will decide whether these or other patterns are fittest to given cases.

Upon this knowledge would depend the wearer's adherence to and practice of certain customs long since most earnestly and even pathetically condemned by physicians, ridi-

culed by artists, and abhorred by men. Under this head are the painful attempts of milliners and their victims to destroy the natural shape of the body by ligatures of any kind, whether under the name of corsets, belts, or the often-disowned "stays," which last are now only supposed to be worn in the kitchen. The use of high-heeled boots, no less than the marvellous endurance of pain from tight boots, by whatever names they may be known, attests the popular ignorance of form and contempt of nature when they invariably cause a rolling, feeble gait instead of the light poise of natural motion. The arrangement of the hair—woman's truest ornament, and rightly her peculiar pride—depends no less upon a feeling for, if not a knowledge of, form. How ludicrous are the errors of ignorance or thoughtlessness in this direction! The idle instinct of imitation rules in this matter more strongly than in any other. Women, until quite recently, adopted the method of *coiffure* proper to the Empress Eugénie without the slightest heed of nature's intentions in moulding their faces. The height of the wearer, no less than the size of her head and its shape—as to the angle of the forehead and form of nose and jaw—should determine the *coiffure*.

We commend to the student of the art of dress attention to a subject which Messrs. Audsley leave untouched. This is the *chiaroscuro* of the art; its study aims at a knowledge of the effects of textures upon tints of fabrics, and is of importance in the adaptation of materials to costume. For instance, white is not always white. The white of muslin or tulle is grey compared with that of lawn, as lawn is grey in relation to linen, silk, satin or velvet. The effects of lace also might be treated with significant force, although the use of that fabric, to our minds, should be considered as analogous to that of jewelry, apart from colour. Apart from colour, or in unison with it, the scientific disposition of fabrics, varying in tint as they vary in substance and texture, should be entered on with heed and forethought.

The distinctions of tone, to be cunningly studied in costume, are hardly less important than those indicated as existing in the other sections of the art of dress, above named. To know what part of the dress—taking the wearer as a "composition," in the painter's sense of the phrase—should be emphasized or brought out by local colour, or even the addition of jewelry, is not the true work of the lady's-maid, or the *modiste*, but of the lady herself.

The third part of Messrs. Audsley's book, on 'The Expression of Colour,' is written with a higher aim and in a more complete manner than the sections that precede it. Although a little sentimental in feeling, there is much that is worthy of attention in the author's remarks upon the fit times and places for adoption of certain styles of costume. The art of dress is a noble art, worthy of deeper attention than has been given to it. Why does not the Art Department employ some able lecturer to demonstrate what is right and what is wrong in its modern practice? The subject would fill the benches of the theatre at South Kensington.

Lectures on the History of England. By William Longman. Vol. I. (Lectures I.—V.) *From the Earliest Times to the Death of Edward II.* With Maps and Illustrations. (Longman & Co.)

THE matter contained in this volume has been already partly and favourably known to the public as a series of Lectures, delivered by Mr. Longman to the labouring population of a rural district in the county of Hertford. We can

think of no better service to the labouring classes of our community than to give them that sort of information on the history of their country which a gentleman well acquainted with the subject may do in a series of popular lectures,—and every body must have welcomed the example set by Mr. Longman, in the village of Chorleywood, when he made English history his subject. Mr. William Longman's zeal not only carried him in a right direction, but led him to perform his task in a most satisfactory manner. He has been successful in adapting his style to the capacity of his hearers, to whom it was requisite to tell the main truths of history at no great length and in very plain language. The manner in which English history is here treated is indeed well suited to the purpose of such lectures, and the auditors must have gone away from them improved in mind and enlarged in understanding; but it may, perhaps, be doubted whether such a style is equally well adapted to a handsome volume in 8vo. In writing in this manner for a very imperfectly educated audience, we are apt to forget the precision of language which history requires. Thus in talking of Queen Boadicea, Mr. Longman says:—

"Notwithstanding all their success, the Romans were very far from having conquered the country, and the Britons were not disposed to allow them to remain quiet; they therefore took the field, under the command of Queen Boadicea. A great battle was fought, near where St. Albans now stands; the Britons were defeated, and Queen Boadicea killed herself in despair. But the Britons had other enemies besides the Romans. They were frequently attacked by the inhabitants of Scotland, called Picts and Scots, and to defend themselves from these internal foes, they were glad to avail themselves of the help of the Romans. To protect themselves and the Britons against these enemies, the Romans built two great walls, defended with many forts or castles, &c."

A careless reader might go from the perusal of this passage with the impression that the conquest of Britain by the Romans had been facilitated by the attacks of the Picts and Scots on the native population; whereas the Picts and Scots belong to a much later period of the Roman history. It was not, of course, the author's intention that such a construction should be put upon it, any more than he intends, in the following passage (p. 54), to say that Geoffrey Plantagenet was a King of England, who reigned three hundred years:—

"I must tell you the name of the husband of Matilda, who fought for the crown with Stephen, as he was the founder of a long line of English kings. It was Geoffrey Plantagenet, the ancestor of the Plantagenet race, who sat on the throne of England for three hundred years."

Defects, even of this slight kind, are few, and in no great degree detract from the merit of Mr. Longman's attempt to make the labouring classes of England better acquainted with the history of their country. These two quotations, moreover, are taken from the first, and, as he states himself, the least finished of his Lectures. Five lectures compose the first volume, of which the first takes the whole range of English history previous to the death of King John. Under these circumstances, the subject is necessarily treated with brevity. This lecture, too, embraces the periods on which modern research and discoveries have thrown more new light than on any others, and yet they present innumerable questions which are still obscure, and on which there exists much difference of opinion. Nevertheless, we have here an account sufficiently clear to be understood by the class of hearers to whom the lecture was addressed, of the influence of the Roman dominion in the formation of society in our island, of the character which that society

subsequently assumed, of the effects of the government and acts of the great Alfred, and of the influence of the Danish invasions. The history of the great ecclesiastical revolution of the tenth century, in which men like Dunstan appeared on the stage, and which contributed so much to the course of subsequent events, is passed over in silence—one of the consequences of condensing. The subsequent lectures do not labour under this defect, but offer sufficient summaries of English history for a class of readers considerably above the ordinary level of an agricultural population.

The second lecture forms a sort of intermediate chapter, interrupting the course of historical events, in order to explain the origin and development of the laws and government of England, and the forms and spirit in which they were administered, the knowledge of which is absolutely necessary to enable us to understand history itself; and it is desirable no doubt that this knowledge should be placed within the reach of all classes of society, and no less of the labouring classes than of the others; for, even if it produced no other profit, it would at least leave them more capable of appreciating the advantages they enjoy under the present state of things by comparing with it the condition of their forefathers. In this lecture we think that Mr. Longman has executed his task as well as it could be expected to be done within so limited a space, and that he has placed within the comprehension even of the lowest class of readers a series of important facts with which they have hitherto had hardly any acquaintance. Thus he explains the origin of property in land, the various forms of tenure it went through, and the rise and development of the feudal system. Feudalism never existed in this country with the same force as on the continent of Europe; but it influenced all English life from the arrival of the Normans, in the eleventh century, at least till the beginning of the sixteenth, and its forms, if not its spirit, may still be traced. There are also many of our national institutions older than feudalism, or which have sprung up independently of it, and with the history of which it is desirable that all Englishmen should be made acquainted. Mr. Longman, therefore, did a good service when he conveyed this knowledge, briefly yet plainly and in sufficient detail, first to his audience of Hertfordshire agriculturists, and afterwards to the readers of his book, explaining to them the ancient division of society into classes, and the particular condition of each class, and pointing out to them how a very large portion of their ancestors, the whole class in fact to which they would have belonged, was held in the Middle Ages in the most degrading slavery. It must interest all those to whom these Lectures are addressed to be informed, in a similar popular style, of the origin and history of the laws under which they live, of our national parliament, and of the different courts of justice by which those laws are enforced. It need hardly be remarked, that our legal and constitutional antiquities present many obscure questions, in the solution of which antiquaries themselves disagree; and we are not sure that we should always adopt the view taken by our zealous lecturer. But these are generally matters of secondary interest to ordinary readers, and are here only slightly touched upon, if introduced at all. For instance, we are not inclined fully to indorse his views of the origin of feudalism; but on the more substantial questions of its form and character, and of its influence on mediæval society, there can hardly be a difference of opinion, and that opinion is very well explained by Mr. Longman. We are inclined, too, to think that the pictorial illustrations are

not always well chosen—there is one at least, in the lecture of which we are speaking, in which William the Conqueror and his barons are represented in the armour of the fifteenth century, with large rowel-spurs on their heels, and which we could wish omitted, for it only tends to give confused and erroneous notions where accuracy and truth are always desirable. The rowel-spur was not in use till the fourteenth century.

In the three other lectures in this volume the history of Henry the Third and the first and second Edward is taken, reign by reign, each reign furnishing the subject of a lecture; but we need hardly speak of them further than in general terms. We need no better proof of the difference of treatment of the subject in the first lecture and in those that follow than the fact that, in the former, the reign of King John occupies five pages, while that of Henry the Third, made the subject of an entire lecture, extends through ninety-two pages. From this time English history takes its due development in Mr. Longman's hands, and he has treated it, in regard to itself and to the especial audience to which he addressed himself, with judgment and success. The picture he gives of Henry's weaknesses and tyranny, the great struggle between English independence and the usurpations of foreigners, the baronial war, and the conduct and fate of Simon de Montfort, and the final influence of this war on English society and the English constitution, is fair and truthful, and just such as we could wish to be placed before Englishmen in general. The reigns of Edward the First, justly regarded by Mr. Longman as the greatest of our Plantagenet monarchs, and of his weak and unfortunate son, are equally well handled. We wish that gentlemen in other parts of the country were moved by the same zeal, and enabled by the same knowledge, to instruct in the truths of English history their less highly-educated neighbours.

Recollections and Anecdotes: being a Second Series of Reminiscences of the Camp, the Court and the Clubs. By Capt. R. H. Gronow. (Smith, Elder & Co.)

The proverb which condemns all sequels and continuations as so much labour wasted will find a new illustration in the Second Series of Capt. Gronow's 'Recollections and Anecdotes.' The 'Reminiscences' were lively enough to amuse an idle hour—a rainy morning at the sea-side, or the interval between the ride and the dressing-bell at a country house. The old Guardsman had fought at Waterloo—had staked his napoleons at Parisian tables—had haunted clubs, hells and *coulisses*—had chatted with eminent men and dined with literary lions; in fact, he had seen the world and had some stories to tell of it. When he had told his little anecdotes he should have put the pen down for ever. The spirit of the wine evaporated when the cork was drawn; and what is now produced from the bottle has the flatness of yesterday's champagne. In the whole 232 pages we have only marked three or four little anecdotes as either new or good; and the reader may judge the quality of the volume by these, its finest specimens:—

"*Captain Curzon.*—Among the many episodes of a battle field, there are none so touching as the last moments of a brave soldier. Capt. Curzon, son of Lord Scarsdale, was on the staff, and received a mortal wound towards the end of the battle, and lay bleeding to death by the side of his favourite charger, one of whose legs had been shattered by a cannon ball. As Lord March was passing by, Curzon had just strength to call to him, 'Get me help, my dear March, for I fear it is all over with me.' Lord March hastened to look for a surgeon,

and found one belonging to the first battalion of our regiment, who went to the poor fellow's assistance; but, alas! life was extinct before the doctor arrived. The doctor, in relating this event to us afterwards, said, 'I found poor Curzon dead, leaning his head upon the neck of his favourite horse, who seemed to be aware of the death of his master, so quiet did it remain, as if afraid to disturb his last sleep. As I approached, it neighed feebly, and looked at me as if it wanted relief from the pain of its shattered limb, so I told a soldier to shoot it through the head to put it out of its pain. The horse as well as its master were both old acquaintances of mine, and I was quite upset by the sight of them lying dead together.' This tribute of sympathy and feeling was the more remarkable as coming from the doctor, who was one of the hardest and roughest diamonds I ever remember to have known; but on this occasion something moved him, and he had tears in his eyes as he related the incident."

"*The Duke's Razors.*—My friend, George Smythe, the late Lord Strangford, once told me that, staying at Walmer Castle with the Duke of Wellington, the Duke informed him, one morning at breakfast, that he was obliged to go up to London immediately, as all his razors required setting, but he would be back to dinner. Lord Strangford very naturally offered to lend the Duke his razors, which, luckily for the Duke, he did not accept; for Lord S., who was somewhat careless about his personal appearance, shaved with razors something like miniature saws, which made one shudder to look at. Lord S. then offered to take the razors to Dover, but the Duke replied—'The man who always sharpens my razors has sharpened them for many years: I would not trust them with any one else. He lives in Jermyn Street, and there they must go. So you see, Strangford, every man has a weak point, and my weak point is about the sharpening of my razors. Perhaps you are not aware that I shave myself, and brush my own clothes: I regret that I cannot clean my own boots; for men-servants bore me, and the presence of a crowd of idle fellows annoys me more than I can tell you.'"

"*Eugène Sue.*—Eugène Sue was the very reverse of Balzac, both in appearance and manner. Nothing could have been more correct and scrupulously neat than his dress, which was rather dandified, but in good taste, according to the notions of twenty or thirty years ago. He wore always a very broad-brimmed hat, of glossy newness, and remarkably tight, light-coloured trousers: which, by-the-by, were not particularly becoming to a man built in a stout mould; but a Frenchman who cannot diminish the rotundity of his abdomen, generally revenges himself upon his legs, which he circumscribes in the smallest possible compass, giving himself very much the appearance of what we Englishmen are taught to believe to be his national characteristic and prototype—a frog. * * He was remarkable for the beauty of his horses; his cab was one of the best-appointed in Paris; his house in the Rue de la Pépinière (now an asylum) was a perfect 'bonbonnière,' and his dinners were renowned for their excellence. He was supposed (and to my knowledge with considerable reason) to lead a very Sardanapalian life. Strange stories are told of his castle in Sologne, where he was waited on by a number of beautiful women, of all countries, and of all shades of colour."

Grave readers would not thank us for quoting more of this very small talk. Idle gossips may find more of it in Capt. Gronow's book.

A Tour in Tartan-Land. By Cuthbert Bede. (Bentley.)

It is unfortunate for the author, who adopts as his *nom de plume* the names of two historical ecclesiastics, that he started as a funny writer, for his early habit clings to him and mars endeavours that are, doubtless, meant as improvements upon his first appearances in print. A number of small jokes scattered through the present volume lead us to believe that the habit has become chronic; that Mr. Cuthbert Bede must try to be funny at all events,—mistaking, apparently, the reader's smile of pity for

one of sympathy. He remarks, for example, after giving up his intention of lodging at the *George Hotel*, in Glasgow, in favour of the *Queen's*, on the persuasion of a porter, "that the porter's recommendation had proceeded from very satisfactory premises, and had conducted him to premises equally satisfactory". Edinburgh should have a temple to Æolus, because "it is not only the city of the Wynds but of the Winds also"; a stiff sou'-wester blowing in the same city is described as "Boreas"; the Tweed, at Melrose, "murmurs musically on its way," or, as we are informed in a note, "if it does not, it ought to do, for the water at Melrose now belongs to the Messrs. Broadwood of pianoforte renown"; and speaking of the extensive view commanded by the summit of the Eildons (which, by the way, he did not take the trouble to see for himself) Mr. Bede tells us it is plainly stated in *black and white*, that is, in Black's 'Picturesque Tourist' and Mr. Walter White's 'Northumberland and the Border.'

If, from these specimens, the reader should infer the general character of the book, he will come to a safe conclusion. The 'Tour in Tartan-land' occupies more than four hundred pages, descriptive, historical and critical, fortified by quotations from Scott and Tytler, Robert Chambers and Wordsworth, N. P. Willis and Mrs. Stowe; and the Tartan-land thus treated of includes those well-known haunts of tourists, Edinburgh and Roslin, Glasgow and Greenock, Loch Lomond and the Trosachs, and Melrose and Abbotsford. Territory so familiar demands special qualifications on the part of the traveller who undertakes to describe it or to print the impressions it has made on his mind. These qualifications, if possessed, are not exhibited by the author in the present volume, for many of his details are trivial and threadbare.

Then we must protest against being told the same thing two or three times over. "This same carriage will run all the way from King's Cross to Glasgow," exclaims Mr. Bede on starting. "In eleven and a half hours you will have travelled 400 miles," he says, on passing through Edinburgh; and, in the next page, on his arrival at Glasgow, we find, "in the last thirteen hours and a half we have travelled nearly 450 miles, without so much as a change of carriage or the slightest anxiety respecting luggage, for here it all is, in the very same luggage-van that brought it from King's Cross this morning." And was there any need to tell the reader four times in two pages, directly and indirectly, that the rock of Dumbarton is better seen from the railway than from a steamboat on the river?

Six chapters of the book are given to Glasgow, with comments on art and architecture as exemplified by the sculptures and buildings of that busy city. The statement that the Broomie-law Bridge, being wider than London Bridge, is the "widest in the world," was, we should think, written before the present Westminster Bridge was built. Mr. Bede recommends the erection of a statue to a Glasgow worthy named Flakefield, whose claims to notice are thus stated:—

"His proper name was Wilson, but when he and his father and brother settled in Glasgow, towards the close of the seventeenth century, William was commonly called Flakefield (from the place where he had lived, in the parish of East Kilbride), in order to distinguish him from his brother. He joined the Scottish Guards, and went to the continent, where the object that most fascinated him was a German handkerchief, woven in blue and white chequers. He had been brought up as a weaver, and he could appreciate its excellence. He determined to weave one like it—if he could—when the time and opportunity offered. They came in the year 1700, when he had returned to Glasgow,

and changed his sword for a shuttle. He had brought with him his cherished chequered handkerchief, and after overcoming many obstacles, succeeded in making one like it. Soon he had a dozen ready for sale. They were the first of the kind ever woven in Great Britain. They were at once successful; looms rapidly increased; and in a few years, Glasgow had become famous for this new branch of the linen-trade. It proved most lucrative to everyone but its inventor and introducer, who died in poverty, occupying the position of town drummer. Such, briefly, is the history of one of the benefactors of the city. The question is, shall William Flakefield have a statue? Glasgow is liberal of statues to her worthiest sons. Let her remember with honour this too-long forgotten weaver; but when she raises a monument to his memory, let not one of the bas-reliefs that may possibly ornament the pedestal of the statue represent William Flakefield in his decadence as the town drummer."

For squalor, vice and drunkenness, Glasgow appears to maintain its pre-eminence among the cities of the empire. "The filthy hotbed for their rapid development," writes Cuthbert Bede, "is a singular combination of St. Giles's, Rag Fair, Billingsgate, Monmouth Street, and the Seven Dials, with bad additions peculiar to the locality." The pages in which the author describes these localities are among the best in the book.

The western end of Loch Katrine, if deficient in the picturesque, has a compensation in the mechanical, which to some tourists is more than an equivalent:—

"This is the entrance to the tunnel of the Glasgow Waterworks, a tunnel 8 feet in diameter, 2,325 yards in length, and 600 feet below the summit of the mountain under which it passes, and the first of a series of seventy distinct tunnels, having an aggregate of thirteen miles, which assist in conveying the water of Loch Katrine, by an aqueduct thirty-four miles long, to the city of Glasgow. This is one of the most gigantic engineering works of modern times, and surpasses the greatest of the nine famous aqueducts which fed the city of Rome. It has also the special peculiarity of being a tunnel for nearly half its length. To cross the rugged district of thirty-four miles that intervenes between Loch Katrine and Glasgow, difficulties of no ordinary nature had to be overcome. Successive ridges of obdurate rock, separated by deep wild glens and mountain torrents, had to be traversed. The hard schistose groups, the old red sandstone, and the compact clay slate which constitute the geological character of the Highland mountains were bored, blasted, and perforated to form a subterranean passage to the stream which was destined to cool the parched throat of the great city. The very blasting materials cost, on the average, about 2,000*l.* a mile; the expense of the works was something near 800,000*l.*, and the entire expense (with compensation for land, &c.) 1,500,000*l.* Loch Katrine was selected as the fountain head, not only from the well-known purity of its water, but also from its elevation (360 feet above the sea), and from its being fed by a large amount of annual rainfall. The purity of its water is so great that Glasgow is probably supplied with a nearer approach to distilled water than any other city in Great Britain."

There was talk a few years ago of bringing the water of the Lake of Bala to London in a similar way. Will the feat ever be accomplished?

Eleven chapters are devoted to Edinburgh, Roslin and Hawthornden. Mr. Bede tried to discover a Christie Johnstone among the New-haven fishwives, but was unsuccessful. He, however, did not fail to recognize the merits of Edinburgh, and leaves it to be inferred that he agrees with those who regard the northern metropolis as the handsomest city in Europe. Among the gossip on its archaeological features, we notice John Knox's denunciation of the

organ as "a kist fu' of whistles," which we have an impression of having seen before.

The chief defect of the book is its want of local colour. Change the names of the places, and it would do as well for any other country as for Tartan-land. And yet what a series of real Scottish pictures and what touches of Scottish character might an observant tourist have discovered in that region!—a region which comprehends scenery fraught with the highest beauty and the most interesting associations, and with peculiar achievements of industry. We, who have walked all through that country, and across the district of the great lochs to the western sea, and noted the earnest character of the people, their ways of living, and their industrial and moral resources, as well as the land which they cultivate and inhabit, hoped for a revival of our impressions by perusal of Mr. Bede's book, but to our regret, we have been disappointed.

The New Testament for English Readers: containing the Authorized Version, with Marginal Corrections of Readings and Renderings; Marginal References; and a Critical and Explanatory Commentary. By Henry Alford, D.D., Dean of Canterbury. Vol. I. Part I.—The Three First Gospels. (Livingtons.)

THIS work is not meant to be a popular edition of the New Testament. It is adapted to the use of persons who have had some cultivation of mind, such as the majority of the mercantile classes and Christian women in the middle-ranks of life. The notes are chiefly an abridgment and modification of those in the author's edition of the Greek Testament. They are not very numerous, though sometimes lengthened out on obscure passages. The Dean's continued studies in the Greek Testament have familiarized him with the contents of that volume; and nothing else could be expected from his pen than a commentary replete with evidences of good sense, judgment and ability. His general competence for the task might be assumed; and the notes justify the assumption, being pertinent, useful and properly exegetical, well suited to the comprehension of intelligent readers. We have perused many of them with conscious approval. Yet we disagree with the author's opinions in not a few places. The Dean has availed himself of the labours of German scholars, without fear of being tainted with their supposed dangerous notions. Had not De Wette and Meyer written commentaries, the English theologian could not have produced his Testament in its present state. From these "rationalistic" sources, as he would call them, he has drawn very freely, as well as from the more "evangelical" works of Olshausen and Stier.

In turning to the difficult places of the three Gospels to examine the notes upon them we have been disappointed. They are not cleared up to the satisfaction of thinkers, however much they may satisfy readers who never penetrate below the surface. The author has no key to the right interpretation of many phenomena in the Gospels, nor does he appear to follow throughout a primary principle of interpretation, viz., that the words of Scripture have one sense only,—that single sense intended by the sacred writers themselves. Like many others, Dr. Alford puts a variety of senses into the same words of the Old Testament, and violates a fundamental rule which every sound exegete faithfully follows. It is plain also that the commentator is no Hebraist; and therefore quotations from the Old Testament, as well as allusions and references to it in the Gospels, are imperfectly or erroneously apprehended.

In these cases he should follow the great masters of Hebrew criticism, instead of leaning upon his own knowledge, which is superficial and often incorrect.

As long as the author holds to the Greek original of Matthew he will never explain aright many parts of that Gospel. Hence we are not surprised to find the twenty-fourth chapter badly interpreted.

It is painful to observe occasional manifestations of a dogmatical and intolerant spirit unworthy of an ecclesiastical dignitary, but, unhappily, not infrequent in the present day. Thus in a long note on "dæmoniacal possessions," he writes:—

"This remarkable narrative brings before us the whole question of DEMONIACAL POSSESSIONS in the Gospels, which I shall treat here once for all, and refer to this note hereafter. I would then remark in general (I. 1), that the Gospel narratives are distinctly pledged to the historic truth of these occurrences. Either they are true, or the Gospels are false. For they do not stand in the same, or a similar position, with the discrepancies in detail, so frequent between the Evangelists: but they form part of that general groundwork in which all agree. (2.) Nor can it be said that they represent the opinion of the time, and use words in accordance with it. This might have been difficult to answer, but that they not only give such expressions as *possessed with devils, demonized* (Mark v. 16; Luke viii. 36), and other like ones, but relate to us words spoken by the Lord Jesus, in which the personality and presence of the demons is distinctly implied. See especially Luke xi. 17-26. Now either our Lord spoke these words, or He did not. If He did not, then we must at once set aside the concurrent testimony of the Evangelists to a plain matter of fact; in other words, establish a principle which will overthrow equally every fact related in the Gospels."

Dogmatism like this on such a point will strike good critics with amazement. The whole note is laboured. In the same style is the following, though it is hardly so offensive:—

"The whole is undoubtedly an objective historical narrative, recording an actual conflict between our Redeemer and the Power of Evil."

Here is a worse specimen of intolerance thrust into a place with which it has no proper connexion:—

"I say this, because it is always in contempt and setting aside of the O. T. that rationalism has begun. First, its historical truth—then its theocratic dispensation and the types and prophecies connected with it, are swept away; so that Christ came to fulfil nothing, and becomes only a teacher or a martyr: and thus the way is paved for a similar rejection of the N. T.;—beginning with the narratives of the birth and infancy, as theocratic myths—advancing to the denial of His miracles—then attacking the truthfulness of His own sayings which are grounded on the O. T. as a revelation from God—and so finally leaving us nothing in the Scriptures but, as a German writer of this school has expressed it, 'a mythology not so attractive as that of Greece.' That this is the course which unbelief has run in Germany, should be a pregnant warning to the decriers of the O. T. among ourselves. It should be a maxim for every expositor and every student, that Scripture is a whole, and stands or falls together. That this is now beginning to be deeply felt in Germany, we have cheering testimonies in the later editions of their best commentators, and in the valuable work of Stier on the discourses of Our Lord. [Since however these words were first written, we have had lamentable proof in England, that their warnings were not unneeded. The course of unbelief which has issued in the publication of the volume entitled 'Essays and Reviews,' has been in character and progress, exactly that above described: and owing to the injudicious treatment which has multiplied tenfold the circulation of that otherwise contemptible work, its fallacies are now in the hands and mouths of thousands, who, from the low standard of intelligent Scriptural knowledge among us, will never

have the means of answering them. 1862. To this it may now be added, that even a Bishop of the Church of England has come before the world as a champion of that unbelief, in its first phase as described above. We may hope that his work, judging from the blunders already detected in the renderings of Hebrew words on which his arguments are founded, will soon be added to the catalogue of attacks by which the enemies of our holy faith have damaged nothing save their own reputation and influence. 1863.]"

Dr. Alford ought to know that first-rate critics, actuated by as strong love of truth as himself, explain the greater part of the first two chapters of Matthew's Gospel as unhistorical. They may be wrong in doing so; but he has no reason for asserting that they wish to undermine the foundations of Christianity. Perhaps he is not aware that the greatest master of dogmatic theology now living, Richard Rothe, holds the accounts of the infancy of Jesus in Matthew and Luke to be legendary.

The writer avows that he is a believer in what is called "plenary inspiration"; which serves to account for the air with which he takes the New Testament under his protection. He admits discrepancies in the Gospels—real discrepancies,—but believes that they arise from our imperfect acquaintance with all the details, and from the fragmentary character of the Gospels themselves. They would cease to exist had the inspired writers been led to write full accounts of all the sayings and doings of Jesus and his disciples.

With all the commentator's strivings after consistency, he has not observed it in every case. A free idea sometimes escapes from his pen: thus he says, that "the apostles regarded the coming of the Lord as near, and conceived the possibility of their living to behold it." In another place he speaks of "expressions which occur in the earlier of Paul's epistles, and seem to indicate expectation of His almost immediate coming, being gradually modified and replaced by others speaking in a very different strain." Hence the apostles believed and wrote differently at different times; while they "testified that which was true. The Spirit of Truth dwelt in them specially for this purpose." "The men were full of the Holy Ghost, the books are the pouring out of that fullness through the men, the conservation of the treasure in earthen vessels." Yet "the men full of the Holy Ghost" wrote at one time in the belief that they might live to see the second coming of the Lord; at another, expressions of this kind were replaced by others in a very different strain. So says the Dean. "The reader will find in my Commentary no sympathy whatever with the rationalistic school." "If I understand plenary inspiration rightly, I hold it to the utmost." Is it not opposed to these asseverations to affirm, that the apostles believed and wrote differently at different times about the coming of the Lord?

Dean Alford has yet much to learn respecting the criticism and meaning of the New Testament. Hence his tone should be different. It is unbecoming to speak of Meyer and others in the language he employs. Many of the notes in his volume are founded on a very imperfect acquaintance with the results of the highest criticism.

NEW NOVELS.

Respectable Sinners. By Mrs. Brotherton. 3 vols. (Hurst & Blackett.)

'Respectable Sinners' is very clever; the title is a happy one,—the style is bright and lively,—and the characters, with one exception, are human beings. The exception is the hero, Edward Hartley, who is "two single gentlemen rolled into one"—morally, not personally, for

in person he is tall, straight and handsome, as a hero should be; but the Edward Hartley who begins the story is not and never could have become the Edward Hartley who ends it. A selfish, artful, lazy, unfeeling man, full of vanity and sentimentality, would have required a stronger influence than the mere sight of the fatal consequence of jealousy inspired by him in the heart of a worthy husband, to transform him into a faithful, hardworking friend and a loving husband to his own wife. This is how the mischief and the miracle both come about. Mrs. Ashton, a spoiled but loving little woman, is left a widow at the beginning of the story. Coming home from India with her only child, a little girl, Mrs. Ashton is still a beauty, and had been an heiress, till she chose to run away with her military lover and aggravate her papa, a remorseless Turk of the parental species. Contrary to the general run of experience, the match turned out a happy one: the husband was an excellent man, who set himself to prevent her ever feeling the worldly sacrifice she had made; so she had all the pleasure of feeling herself a magnanimous heroine—the wife of a poor man—without having to feel the pinch of poverty. A brother of her husband, who is the good genius of their lives and of the story, had enabled them to live thus pleasantly. After the death of the husband he continues to be the good genius of the wife. The character of Mr. Ashton is beautiful, and the reader regrets that he appears so seldom in person, though his influence pervades the story. A Mr. Hartley, of Hartley Hall, appears on the scene: he is the respectable sinner *en chef*. He persuades the dear little widow to marry him,—who has reason to repent it once, which is always; but the way in which she manages her destiny is very clever, and does not oppress the reader in the least. She is a sensible woman in the main, and not the least of a victim. But the respectable sinner has a son, who falls in love with the widow's daughter, and it is the relation of their love and married life which forms the staple of the story. We are sorry to say that Edward Hartley is much more natural as the unreclaimed husband, qualified for an appearance before Sir Cresswell, than as the reformed model husband he subsequently becomes, in a fit of remorse at the sight of his own mischief; but our readers must consult the original for themselves.

Some of the accessory characters are excellent. Robert Hartley, the excommunicated half-brother of the respectable sinner, is very touching, though his fate is unnecessarily severe. The silly, vain, unfeeling beauty, Mrs. Drewe, the *pseudo*-"Madonna," is extremely clever; her letter, which forms the crisis of the story, is very like a real epistle. All the crop of subordinate characters have each some sharp, incisive trait of individuality; and although the story is not well put together, and the final machinery by which wrong is made right and the "ancestral hall" comes back to its rightful owner, is a time-honoured expedient which happens nowhere so often as in novels,—still, seeing that it is always crowned with success, and the right individuals always profit by it, a reader would be unreasonable to object; and the novel is, with all the faults to which a critic might object, a readable, entertaining book.

Chesterford, and some of its People. By the Author of 'A Bad Beginning.' (Smith, Elder & Co.)

'Chesterford' begins well: the first volume is as clever and pleasant as a novel need be; but it falls off most provokingly at the beginning of the second volume, and does not rally

again. The interest crumbles away, and the characters along with it: there is not breadth of incident for three volumes. The characters are well sketched and set on their feet; but when it comes to the question of whither they are to go, the author keeps them dawdling about, turning down long passages that seem destined to lead to pleasant places; but they "lead to nothing," and the writer, and the reader, and the characters have to try back to something else. There are two young ladies, rivals: the one preferred by John Parkholme, the hero, has a foolish way of laughing and being amused by the weak jokes of very inferior young men, which, though only "pretty Fanny's way," is a source of torment and misapprehension to her very umbrageous lover. When a child, Parkholme had kept company with a relative, a young curate, who had been jilted by the lady of his love, she having married a rich merchant instead of him. This young curate has so possessed the ear and prejudiced the imagination of his relative of tender age, that he has grown up a confirmed woman-hater, believing that all feminine charms and virtues were so many cruel wiles to lure men to misery. He has consequently very little faith and less insight to help him to find his way through the perplexities of a first love affair. The cousin of his lady-love, a very unprincipled and reprehensible young woman, becomes spontaneously enamoured of Mr. Parkholme, and endeavours to make mischief and to divert the course of true love from its lawful channel, by telling falsehoods, suppressing letters, and finally by a passionate declaration of her own attachment, which Parkholme has strength of mind to resist, but he has not enough to believe in the true affection of Katherine Lyndon. So he compromises matters,—he rejects the cousin, sets Katherine free from her engagement to him, and resolves to go out to India, having previously lost all his property in a way rather awkward and not cleverly managed by the author. At last, however, when he has taken every foolish precaution to make himself and Katherine miserable, one of those accidents which depend on the opening of a door or the ringing of a bell, changes the face of his prospects; poor Katherine is allowed a voice in the decision, and she convinces him how ill he has used her, and how little he deserves her, though she herself believes him perfect and takes all blame to herself; so they come to a final understanding and are married out of the way of further mischief-making. This is the main plot of the story; there are many loose threads of incidental and independent narrative, which might all be separate stories, so little relation do they bear to the chief story. The history of Polly Peacock and the young Farmer Alston promises some interest, but, in spite of the fatal accident that causes his death,—it ends in nothing. The author does not know how to bind a story together. The sketches of individual character are good and spirited, but then the people do not act after they have been created; they talk, but it all leads to nothing,—and we are sorry to say that, with a great deal of cleverness, 'Chesterford' is by no means a satisfactory story.

Victor Hugo, told by a Witness of his Life, &c.
—[Victor Hugo, raconté par un Témoin de sa Vie. Avec Œuvres inédites de Victor Hugo; entre autres, un Drame en Trois Actes, 'Iñez de Castro'.] Vols. I. and II. (Brussels, Lacroix & Co.; London, Barthes & Lowell.)

THE story of such a life as M. Victor Hugo's, told by a Witness, can hardly fail to be a tale which will make Europe sit still to listen. But

there is some insincerity in the invitation. Why should it not have been frankly announced that the book is, to all intents and purposes, an Autobiography? The Witness knows all about M. Hugo's ancestry; and in heaping together all manner of anecdotes of his childhood, says, "This is what Victor remembers"—this impression was made by such a ruin, or such an historical event, or such a book read, or such a tinsel tragedy seen, on the apprehensive mind of a boy marked by Genius for a grand destiny. What is more, those familiar with the writings of the author of 'Notre Dame,' 'Le Rhin,' and 'Lucrèce Borgia' must be satisfied without being unduly speculative, that it is his hand which has wrought up descriptions, given to paragraphs their final sting, and, with true theatrical art, adjusted the red and the white, and the black eyebrows, and the hair stream-

like a meteor on the troubled air,

employed to deck the figure of the hero. These affectations surprise no one. They are part and parcel of the man; they betoken that consciousness which keeps him a cubit below the stature of the mighty ones of Europe—a consciousness, it is true, which has urged many a first-class author at the beginning of his career, but which falls away from most as Life goes on, and shows them other worlds of sin and of suffering and of sympathy than their own. On the other hand, M. Hugo's egotism has grown upon him. He is no longer the man who wrote 'Le Dernier Jour,'—who told so exquisitely the story of Paquette de la Chantefleurie in his 'Notre Dame'; and his pompous self-occupation is to be felt in every line of the book before us.

M. Victor Hugo's father, Joseph Léopold Sigisbert, born in 1774, was one of eight sons, most, if not all, of whom were devoted to military service, and five of whom fell in the wars. Three years after his entry into the army, he was promoted; and some remembrance of his passage through the shade and shine of an eventful period in France is still preserved by the Witness of his third son's life. Louis the Sixteenth was recollected by him as a coarse, hobbling, ill-dressed man, whose silk stockings were kept round his legs by red worsted garters; the Queen—Walpole's and Burke's Marie-Antoinette—as a woman with her hair grizzled by care, ere she passed through the well-known night which has become a point in history; and who, by smiling at the Guards as she passed, showed that her teeth were decaying. Léopold Hugo married the daughter of an armourer of Nantes, and, the Witness tells us, "children did not keep the pair waiting." Two sons having been born, the parents longed for the variety of a daughter; but Victorine failed in making her appearance, as perversely as did *Betsy Trotwood* in the well-known novel. Instead came Victor; but he was so small a baby that the medical man declared he could not live. Such prophecies are as old as births or deaths. The Witness of M. Hugo's life dwells with peculiar complacency on the bad shape and scarcely human look of this third Hugo baby. He remembers for himself, among the first things, a well and a willow-tree in the Rue de Clichy of Paris, his going to school, and his playing in private theatricals with the daughter of his schoolmaster, Mlle. Rose, as the child in 'Geneviève de Brabant.' He was dressed in tights and a sheepskin, with a metal claw; and he remembers too, how, with the same, he picked at the legs of Mlle. Rose.

Let us pass these puerilities—such as befit the babblings of a Genlis, of a George Sand even, but not a Witness of the life of a great man, who drapes himself according to the fashion of a modern Marius, and as such gives

out oracles. The first volume is too largely made up of trifles of this kind, intermixed with more showy historical episodes, such as the other day broke the thread of the tale of 'Les Misérables.' Suffice it to say, that the Hugo family followed their father and the fortunes of the army, went into Spain, and that this picture was seen by the author of 'Ernani' in embryo—on the road:—

Ernani is a village with a single street—a very large and fine one. This street is pebbled with a kind of pointed and glittering stone. When the sun is up, one might fancy one's-self walking on spangles. All the inhabitants are nobles, whence all the houses have arms sculptured on the stones of their pediments. These escutcheons, for the most part of the fifteenth century, are of a fine character, and give a grand air to Ernani. These seigniorial houses are, nevertheless, rustic ones,—and their feudal pediments do not suit ill with their rude wooden balconies. For they wear their coarse carpentry as proudly as they do their armorial bearings—like the Castilian shepherds, in whose hands a crook has the air of a sceptre.

There is no mistaking the paternity of this paragraph,—nor of that a page or two later, which tells how ominously unlucky Victor was in his favourite playmates,—once having had his finger bitten by a dog, once his knee wounded by a schoolfellow. "He has preserved the scars," tells the Witness,—"*for everything disappears, except wounds.*" Much is remembered by him about the commissariat of Spain,—how the Hugo children loathed the wine and oil. This, too, may be commended as the autobiography in which occurs the largest number of stories about omelettes. Then, there is an anecdote about a regiment surprised by Queen Julia, "in the *entr'acte* of its shirts," and another of Victor's "first encounter with the scaffold" at Burgos, where a man was garrotted,—which assign this book to its real parent. On returning to Paris, Madame Hugo's boys went to school. We next have a list "of the stupidities which Victor committed before he was born."—in other words, of his early attempts at authorship. These were "odes, satires, epistles, poems, tragedies, elegies, idyls, imitations of Oasian" (just then the fashion in France), "translations of Virgil, Horace, Lucan, Ausonius, Martial; romances, fables, tales, epigrams, madrigals, logogriphes, acrostics, charades, enigmas, impromptus." He even wrote a comic opera;—also a poem of five hundred lines, entitled 'The Deluge,' of which there were twenty bad ones, thirty-two good, fifteen very good, five passable, and one weak one. Of the other four hundred lines the Witness can give no account. It has been thought worth while to exhume some of these "stupidities," which prove not so promising as

the duck
Which Samuel Johnson trod on.

More worthy, perhaps, is the melo-drama in three acts, and two interludes on that untenable Spanish story, which, nevertheless, has tempted many dramatists, our own Miss Mitford and Leigh Hunt among the number,—the sad fate and ghastly coronation after death of Iñez de Castro. In this may be distinctly traced that passion for frightful effects, and withal that epigrammatic command of language, which made (so to say) an epoch on the day when the "theatre" of M. Hugo was opened, by the impossible 'Cromwell,' with its preface, adopted as a declaration of war betwixt Classicism and Romanticism,—and later, by the contested success of his first violent assault of the French stage, the drama of 'Ernani.'

The world is apprised by the Witness that Victor was an eccentric scholar, who could have distinguished himself in any and in every branch of study, had it pleased him so to do:—

In the year of special mathematics he was remarked for his application by the Professor of the morning class, M. Laran. But one day that Professor, a lean and a tall man, raised himself suddenly in his chair, leaned forward, and thrust out his neck, which could develop itself like an opera-glass. Then he saw that the thing over which Victor was busying himself so conscientiously, yet without absence of mind, which was nailing his eyes to the table, was a volume of the 'Génie du Christianisme,' adroitly hidden away behind a barricade, consisting of his inkstand, his class-books and his cap. The book was confiscated, and the pupil was threatened with being expelled on the next occasion of reading anything short of a mathematical book. So that Victor had no resource save with penknife to cut his name on the table, with date, comment and decoration.

In the second volume we arrive at matters containing something more of substance than the affected triflings we have represented. The young ode-writer began to make some sensation in the Royalist circles of Paris. De Chateaubriand called him "a sublime youth," and attested his admiration for the poet who put into rhyme the Duc de Berri's murder by offering to him some condescending objections. The young author was as keenly alive to the made-up sublimities of the elder one as if he knew nothing about attitudinizing in his own person and poetry:—

De Chateaubriand (says he) affected a military appearance. The man of the pen could not forget the man of the sword. His throat was stiffened by a black stock, which concealed the collar of his shirt:—a black frock-coat, buttoned to the chin, straightened his little, stooping body. What was fine about him was his head, which was in disproportion with his figure, and was noble and grave. The nose was firm and imperious in line, the eye proud, the smile charming—but the smile was a mere flash, and the mouth soon resumed its severe and haughty expression.

The young poet was but indifferently contented with his reception and with the praises, spiced with criticisms, doled out to him. M. Hugo's mother, however, like a true mother, felt that De Chateaubriand was not an acquaintance to be neglected by a young man of letters, and insisted on his repeating his visit to the Rue Saint-Dominique:—

The same servant opened the door. This time M. de Chateaubriand received him in his room. In passing through the *salon* he ran against Madame de Chateaubriand, who, though the hour was early, was going out, in one of those tight bonnets which were then the fashion in the Faubourg St. Germain. Victor, who at his first visit had seen her imperfectly, because she then had her back to the light, and the evening was already falling, now saw a great, lean woman, with a dry face, marked with the small-pox. She did not stop for the sake of the little young man, but condescended to make him a slight bow. When Victor entered, M. de Chateaubriand, in his shirt-sleeves, and with a silk handkerchief tied round his head, was seated at a table, with his back turned to the door. He was busy among his papers, and turned round with cordiality. "Ah! good-day, Monsieur Victor Hugo; I expected you. Sit down. Well, have you been at work since I saw you?"—"Yes; have not you?"—"Have you made many verses?"—"Victor replied that he was always at work a little."—"Quite right in so doing. Verses are literature of a high class. You are on a level higher than mine. The true writer is the poet. I, too, used to make verses, and regret that I have not gone on with them. My verses were worth more than my prose. Do you know, I have written a tragedy. Stop, I must read you a scene. Pilorge, come here, I want you."—An individual, red-haired, red-whiskered, red-faced, appeared.—"Go and find me the manuscript of 'Moïse.'" Pilorge was M. de Chateaubriand's secretary, and had not a sinecure place of it. Without making any account of manuscripts, correspondence alone took up an enormous amount of his time; because, besides the original letters which

he wrote, and which M. de Chateaubriand signed, Pilorge had to make a duplicate for a register, in which the illustrious writer, attentive to posterity, preciously preserved his smallest notes. Pilorge had, also, the duty of classing and numbering all the letters received at the house. The secretary brought in the manuscript called for. The author of 'Réné' then read with pomp and conviction a dialogue and then a chorus imitated from the choruses of 'Athalie' and 'Esther,' which did not prove to his listener that M. de Chateaubriand had reason for preferring his verse to his prose. Victor tried to find it very fine, and arrived at admiring this line of the chorus—

Et souvent la douleur s'apaise par des chants, to which he clung as to a plank which saved him from the wreck. The domestic who had opened the door now brought in an immense tub full of water. M. de Chateaubriand untied his handkerchief, and took off his green morocco slippers. Victor would have taken leave, but the host kept him, and went on coolly to undress himself, to take off his grey trousers, shirt, flannel waistcoat, and got into the tub, where his servant washed and rubbed him. After he was dried and dressed again, he made the toilette of his teeth, which were very fine, and for which he had a dentist's whole apparatus. Freshened up by his evolutions in the tub, he began to converse eagerly, cleaning his teeth the while. * * It was not without a secret joy that Victor learned that M. de Chateaubriand was appointed Ambassador at Berlin. He went to offer his congratulations and to say good-bye.—"How good-bye?" said the Ambassador; "why, you are going with me." Victor's eyes opened wide. "Yes," replied the master; "I have had you attached to the Embassy, without asking your leave, and I shall carry you off." Victor thanked him cordially for his good intention, but replied that he could not leave his mother. "Is your mother the only obstacle?" was M. de Chateaubriand's question, with a smile.—"Well, you are free. But I am sorry the thing cannot be. It would have been honourable to both of us."—Madame de Chateaubriand came into her husband's study. She had never spoken to Victor, and never seemed to know him. He was, therefore, surprised to see her come up to him, smiling. "M. Hugo," said she, "I count on you, and you must help me to do a good deed. I have an infirmary for poor old priests, which costs me more money than I have; but then I have a manufactory of chocolate. I sell it rather dear, but then it is excellent. Would you like a pound?"—"Madame," said Victor, who had on his mind the high and mighty airs of Madame de Chateaubriand, and who felt the necessity of extinguishing her, "I will take three pounds."—Madame de Chateaubriand was extinguished—but Victor had not a sou left.

As we go on we get glimpses revealed to us, no less artfully, of Lamennais, who, for awhile, was M. Hugo's confessor, and of other more heterodox lions and lionesses. M. Soumet introduced him to two declining Dalilahs, Mdles. Duchesnois and Leverd, and the pure youth was shocked to hear how M. Soumet *thee'd* and *thou'd* them; and to see how old they were, and what naked necks and bare backs they displayed at the theatre, where they took the youth and set him between them, and fought for him. He confessed this vast *peccadillo* to Lamennais, and had not a hard penance, therefore, enjoined on him.

The account of his literary struggles into daylight has more pith and value than these coquetries with recollection. His odes had announced him as a poet, Monsieur de Chateaubriand had authenticated them; and, yet more, the lively interest and admiration of the young men of Paris also, who during that period were fermenting not merely with the desire of throwing off the trammels of all schools of Art, but partaking of the generic semi-political, semi-sensual French passion of enjoying an orgie. It may have been already inferred, even by those who have followed our cursory notice so far, that M. Hugo, from

his early days, in his choice of subjects, oscillated between tender domestic affections and an appetite for monstrosities. At all events, his novels, 'Han d'Islande' and 'Bug-Jargal,' would support such an inference. In 'Le Dernier Jour d'un Condamné,' a nobler and more generous side of the rising author's character is to be seen. His "introduction to the scaffold" rooted in his mind from the first the convictions that Death is a punishment which man has no right to award to man,—that Life is a blessing, so long as a second of it endures,—and that want is a justification of crime. The pity is, that M. Hugo, with all his fine feelings and associations, could not reproduce the rueful, luckless victim of society,—real in the streets, real in the police-offices, real at the gallows' foot, for whom our English novelist, greater in his mastery over the human heart, has pleaded so forcibly. M. Hugo's criminal, in 'Le Dernier Jour,' is what M. Hugo, a man of education, recollection, memories and disappointments, might himself have been. *Fagin*, in 'Oliver Twist,' is much more of the real vagabond, and *Jo*, in 'Bleak House,' much more of the terrible waif and stray, whose appearance is so inconvenient to all established regulators of ranks, classes and usages.

It is curious to remark the small account that the Witness makes of 'Notre Dame de Paris,' as of a five-months' task, got through in fulfilment of an agreement with a publisher, Gosselin; whose wife, who had translated many romances by Sir Walter Scott, on reading the French manuscript, found Quasimodo droll, and Frolo dull, and Esmeralda improper. Here, however, we are told once for all, that 'Le Quiquengrogne,' a feudal romance, which M. Hugo promised as a sequel to 'Notre Dame,' is merely a name; and that of the novel, about which there has been so much speculation and inquiry, not a first line has been put on paper.

Another chapter "shows up" M. de Lamartine's house and housekeeping, as completely as the one which finished off Madame de Chateaubriand, with her tight bonnet and her charitable chocolate. M. de Lamartine received M. Victor Hugo and his wife, in a modern house at Macon, after having described the dwelling in an ode (ode-writers will promise and prophesy), as a heap of ruins and machicolations. Madame de Lamartine, being an English lady, sat down to dinner in full dress, as publicly unveiled as Mdles. Duchesnois and Leverd had been. But the larger portion of the second volume is devoted to the testimony of the Witness regarding the dramas of M. Victor Hugo, showing how the theatrical managers did not want, yet could not dispense with, the same. It tells how Mdle. Mars behaved ill in rehearsal and preparation, but admirably on the stage;—how Madame Dorval (whose portraiture is one of the few good things in Madame George Sand's autobiography) did the reverse;—how excellent were the plays, in themselves; how untowardly they were treated. The story told by the Witness of M. Hugo's determination to fight a success for his 'Ernani' is curious. He assembled his myrmidons, and they dressed for the occasion in fancy costumes, "camped out" in the theatre, with all the necessities of "camping out" here coarsely explained, and they fought to the death—for his play. M. Joanny's notes, those of an old *sociétaire* to the Théâtre Français (which we have been told are one day to be published), may throw more light on the story. At all events, the matter is one full of anecdote, character and comedy.

The dramas of M. Victor Hugo present a strange compound of vile and noble qualities.

The silver lining to every cloud of crime and cruelty is exposed to public gaze. For heroines, Marion de Lorme, Mary Tudor, Lucrezia Borgia, Thibie the courtesan, are not a promising quartet. Our Shakespeare could make a *Jubel*, an *Imogen*, a *Cordelia*, a *Portia*, the pillars of four dramas—central, however slight in seeming; whereas a Hugo must wallow in the abyss to find an evil and luckless woman, and to set her forth as the heroine and the divinity, into the adoration of whom his public was to be constrained by his dramatic power as an advocate. A wretched and perverse ambition does this seem!—justifying Goethe's epithet which called it "a literature of despair." On the other hand, the structure of these dramas by M. Hugo is admirable for skill; and the use of the French language in them is sharp, vigorous, enlarging,—breaking the accepted academical boundaries, without the slightest entrance into the empire of jargon. M. Hugo's manner, as a poet, disqualifies him for any succession to Corneille, Racine, or even Voltaire; but there are words in his prose plays which draw blood, as well as thoughts that breathe. Them, in power of construction, he could meet, and outdo in the meeting, such a rival French dramatist as Scribe; but he had not the same success.

Why should a man so strong as he is talk nonsense so weak as he talks here, in telling over awkward and out-worn tales about his plays? Why express a devouring desire to prove that the world was against him, and that politics did him harm?—(yet M. Victor Hugo must bear to be reminded that he has changed from Ultra-Royalism to Red Republicanism). It is clear that his tragedies never held the public, however high their merit.

There are more volumes to come, written, no doubt, by the Witness,—of which, it may be, we shall speak as they appear.

OUR LIBRARY TABLE.

An Errand to the South in the Summer of 1862. By the Rev. William Wyndham Malet. (Bentley).—Mr. William Wyndham Malet is a well-meaning but far from wise man. The affectations of his book are harmless, but very laughable, and his statements about life and manners in the Confederate States are pervaded by simplicity and ignorance of the world that are truly astonishing. With an amusing consciousness of his descent from a baron who enjoyed the favour of William the Conqueror, he speaks of the English as "the great Anglo-Saxon-Norman race," and he pays many compliments to the Anglo-Catholic Church, which he hopes will become the model of a new State-Church system in the Southern Confederacy. "The want of system," observes the clerical tourist, "both in the ministry and services of the other 'churches' not requiring a belief in Apostolical succession, was very evident. The order and decency essential to the Anglo-Catholic church would be hailed by many in those villages and farms as a great spiritual comfort, and from the spirit of toleration which exists, no hostility would be raised. The fields are white to the harvest, and there is a noble opening for the ministry of the church." It appears that President Davis and his subordinate agents deemed it politic to encourage this view. When Mr. Malet was in Richmond, Mrs. Davis asked him to breakfast and "consult with her clergyman, Dr. Minnegröde, about organizing some system for divine service in the hospitals." The entertainment passed off much to the visitor's delight, the Presidential Chaplain playing his part with admirable tact. "Dr. Minnegröde, at breakfast," says the author, "spoke strongly and ably in favour of a National Church connected with the Government. The Church in England was too much secularized, and so much State interference was bad. The Church should appoint her own bishops, the State as a 'nursing father,' consenting thereto. The

bishops should not vote in secular parliaments, and livings should not be conferred for political purposes or for money; but these abuses were not essential for the happy union of the 'Church and State,' which was the only way to maintain a religious system in the world." Naturally, Mr. Malet left Dr. Minnegröde on the best possible terms, and said "farewell" to the South in high good humour with her intentions and institutions. Of the enslaved negroes,—or "able descendants of Canaan," as they are euphoniously designated in these mellifluous pages,—the writer has nothing to say but that their lot is truly blessed. Slavery is an embarrassment to wealthy proprietors, but a source of incalculable happiness to the bondmen. "Slavery," observes Mr. Malet, settling the question of Abolition for ever, "is a curse to the white, but a blessing to the black man." The discipline of slaves on the plantations of South Carolina is less severe than the control to which children submit in an English lady's nursery. "Each plantation has its hospital and a good woman nurse, strong and healthy, instructed in medicine and the treatment of wounds. The common punishment on plantations is shutting up for a certain time; but generally it is shortened on expression of contrition: whipping is only resorted to for theft, and then with clothes on." The fun of this statement, made with equal gravity and simplicity, calls to mind the parody of poor Monk Lewis's gentle enactments for the government of his slaves, in which he is represented as deciding that "any slave who committed murder should have his head shaved, and be confined for three days and nights in a dark room." His earnest arguments for immediate recognition of the South by England Mr. Malet concludes with words taken from a Southern officer's lips. "Two brothers," observed the officer to the English traveller, "are fighting in a field; a relation sees them: should he not interfere? should he not, unbiassed, recognize each one's right?" To the first of these questions, it may be replied, in the language of Hudibras, that—

They who in quarrels interpose
Must often wipe a bloody nose!

As to the second, it will appear to most readers that England's strict and unbiassed neutrality is a recognition of each belligerent's right to self-government. One piece of literary gossip Mr. Malet heard in the South, which deserves to be repeated as an illustration of what unfriendly tongues say of Mrs. Beecher Stowe and her best known book. "Judge Howe," observes the writer, "was there, and a Mr. Hall was at Prospect Place, near White Hill. These gentlemen were friends of the family of Mrs. Beecher Stowe, who was left badly off. This lady had travelled in the South, where few Northerners ever go, except it be to settle there; she had written notes about the slaves. Judge Howe concluded, as an abolitionist and universalist, to make out a book, and employed Hall, a clever hand, to write it. He called it 'Uncle Tom's Cabin,' a fiction on the said notes; it was agreed to bring it out under Mrs. Beecher Stowe's name. Hall was to be paid for the writing, and Judge Howe was to give Mrs. Beecher Stowe part of the profits, which immensely exceeded all their expectations, and proved fortunes to them both."

Sir Aberdour; or, the Sceptic: a Romance. By Walter P. J. Purcell, Esq., of the Inner Temple. Cantos III. and IV. (Pickering).—In the concluding Cantos of this "Romance," the struggle between doubt and belief in the breast of the hero is described, and the triumph of the latter principle recorded. Of the process by which this result was gained we have, however, no very distinct idea, and can only say that the conversion of sceptics must be an easy task if it can be accomplished by such means as are here employed. There is nothing in Mr. Purcell's reasoning that would repay examination, and, were it far more cogent than it is, a narrative poem would still be a very inappropriate form for its development. Poetry is so unfit a vehicle for abstract metaphysics that, even when imagination and logic co-exist, each neutralizes the effect of the other. Of the former quality the present writer has not a gleam. His arguments, though neither new nor profound, might have been readable in a prose essay,—disguised and encumbered

by the trammels of verse, they baffle attention and exhaust patience.

A Description of certain Dry Processes in Photography. By George Kemp, M.D. (Davies).—This pamphlet must be regarded as the record of a research instituted for the purpose of investigating the nature of the molecular changes which "occur in some of the more obscure departments of photography." The changes induced by the solar rays, during an instantaneous exposure of the iodide of silver, producing, indeed, no visible change, but placing that salt in such a condition as to admit of the breaking up of its physical structure, in the dark, by the application of a suitable agent, called a "developer," are the subjects of this inquiry. The question has been carefully examined by Dr. Kemp, and he has been led to adopt certain precautions in relation to dry collodion processes which should be carefully studied by all who deem it important to possess some means for obtaining photographic pictures when travelling, on plates which have been rendered sensitive at home. In a 'Supplementary Notice of Plans useful to the Scientific Traveller and Missionary,' Dr. Kemp attempts to simplify photography to the utmost. The extent to which he proposes to carry this may be judged of by his concluding paragraph:—"From the above remarks, then, it will be seen that the materials required for photographic representations, under the difficult circumstances we have supposed, are few in number, light, and occupy but inconsiderable space. As to the manipulations, any person, with far less handiness than those to whom our observations are applicable, may become an adept after a few days' practice; and, as to apparatus, the objective of the travelling telescope may be used for a lens, and a few pieces of thick paste-board be easily converted into a dark box. Many other hints suggest themselves, but time and space prohibit further details." We have printed the last paragraph in italics to indicate the defect of this treatise. The author commences by saying that he has been "compelled to hurry on the publication"; in the body of the book, "want of time prevents the writer referring" to a work for a quotation relating to an important process, and the concluding paragraph is given above. Surely if the author thought he had any useful matter to communicate, he might have bestowed the necessary time to have written with more care the eighty-four pages in which it is comprehended.

Among miscellaneous publications, we must announce the *Report of the Council of the Royal Society of Literature on some of the Mayer Papyri and the Palimpsest MS. of Uranus, belonging to M. Simonides; with Letters from M.M. Pertz, Ehrenberg and Dindorf* (Murray).—*Vergili Opera*, by John Conington, being Vol. II. of 'Bibliotheca Classica,' edited by George Long (Whittaker).—*Miscellaneous, Historical and Biographical; being a Second Series of Essays, Lectures and Reviews*, by W. S. Gibson (Longman).—Part XIII. of *The Dictionary of Architecture* (Richards).—*Parson and People; or, Incidents in Every-Day Life of a Clergyman*, by the Rev. E. Spooner (Seeley).—Vol. II. of Mr. Burn's *Outlines of Modern Farming* (Virtus Brothers & Co.).—Messrs. Miall & Carrington's *Flora of the West Riding* (Pamplin).—*The Shakespeare Treasury; or, Subject Quotations—Synonymously Indexed*, by W. Hoo (Lockwood).—*Beiträge zur Geo-Physik und Klimatographie*, von A. Mühlry (Williams & Norgate).—*Diplomata Quadragesima ex Archætypis*, edidit Philippus Jaffé (Nutt).—*Flora of Edinburgh: a List of Plants found in the Vicinity of Edinburgh*, by Dr. Balfour, assisted by J. Sadler (Black).—*Natural Phenomena, the Genetic Record, and the Sciences Harmonically Arranged and Compared*, by Alexander M'Donald (Longman).—*A History of the Origin of the Mysteries and Doctrines of Baptism and the Eucharist* (Bennett).—*The Ordinances of Spiritual Worship: their History, Meaning and End, Considered in a Series of Essays from the Writings of the Rev. E. T. M. Phillips*, selected and edited by his Daughter (Longman).—*My Mothers' Meetings; being Familiar Conversations with my Cottage Neighbours*, by Elizabeth Bennett (Bennett).—*Results of Victor Emmanuel's Rule*, by an Eye-Witness (Harrison).—*An Essay on the Improvement of Time, and other*

Literary Remains, by John Foster, with a Preface by John Sheppard, edited by J. E. Ryland (Jackson, Walford & Hodder).—*The Comic Guide to the Royal Academy*, by G. A. and A. W. & Beckett (Routledge).—*The Crystal Palace Penny Guide* (Burt).—Part I. of the cheap edition of the *Works of Professor Wilson—Notes Ambrosiane* (Blackwood).—Vol. I. *Third Series of the Homilist*, conducted by the Rev. Dr. D. Thomas (Kent).—*A Visit to Daisy Nook; or, a Londoner's Glance at Lancashire Life*, by a Member of the Savage Club (Simpkin).—*Congrès International de Bienfaisance de Londres, Session de 1862* (Trübner).—*Mr. Kinglake and the Quarterly*, by an Old Reviewer (Harrison).—*Sorrows and Joys: Tales of Quiet Life*, by W. M. (Freeman).—*Annual of Scientific Discovery*, edited by D. A. Wells (Trübner).—*Essai d'un Dictionnaire des Homonymes Français*, par E. Zlatogorski (Nutt).—*Oratio Procuratoria Ozonii coram Ven. Domo Concoctionis*, à John Riddell (Parker).—and from Mr. Partridge we have *Domestic Addresses and Scraps of Experience*, by G. Mogridge. —*Little Jane; or, the Boat Accident*, by A. Mills. —*Dick and His Donkey; or, How to Pay the Rent*, by C. E. B. —and *The Royal Marriage, and the Christian Kingdom, with Brief Reminiscences of the Prince of Wales*, by the Rev. J. H. Wilson.

SHAKESPEARE CELEBRATION.

At length we are in a position to say that something definite and satisfactory is being done with respect to the proposed Shakespeare Celebration, in 1864. The desire to do honour to the Poet had taken possession of so many minds at the same time, and so many projects had been started in the Poet's name—some local, others metropolitan—some individual, others corporate—that a reasonable fear was entertained lest the difficulty of bringing even the more important of these bodies and individuals into a common scheme would be insurmountable. We are glad to hear that this is not likely to be the case. On the contrary, a very good feeling seems to exist on every side. It was no sooner whispered about that the special Shakespeare Committee, of which the Duke of Newcastle is chairman, were disposed to offer their services as mediators between the several bodies, than assurances were sent to them of a desire for conciliation and co-operation. It appeared only necessary for that Committee to call a meeting, consider the

position of affairs, and place itself, by a distinct series of resolutions, at the service of the cause, in order to combine the best elements of all existing bodies into a National Shakespeare Committee.

A Meeting of the Shakespeare Committee was accordingly held at the apartments of the Royal Society of Literature, on Monday last, the 22nd inst. The Duke of Manchester, who, in the absence of the Duke of Newcastle, occupied the chair, proposed the first resolution in the following words:—"That a National Celebration of the Three Hundredth Birthday of Shakespeare should be held on the 23rd of April, 1864, and commemorated by the erection of a Monument in a conspicuous part of London."

This resolution was seconded by W. Hepworth Dixon, Esq., and was carried unanimously. The argument in favour of a statue or memorial group to which the Committee has pledged itself, needs very little exposition. In the Committee there was no difference of opinion, and in the country we believe there is very little. The only competing projects which show any vigour of life are the Warwickshire plan of enlarging the Stratford Grammar School and founding Shakespearean scholarships at Oxford; and the project of a Shakespearean fête for the benefit of the Dramatic College. But the design of a memorial statue, to be placed in some appropriate and conspicuous part of London, found no warmer advocates at the Meeting on Monday than Sir Robert Hamilton, the originator of the Warwickshire scheme, and Mr. Benjamin Webster, Master of the Dramatic College. To this first idea of the Committee we believe the whole country has already, by way of anticipation, delivered its assent. What the world requires is a celebration of the three hundredth birthday, and after it a visible witness of that act of national homage, to be set up in the most available public place in London.

The general idea of a celebration and a memorial being adopted, a second resolution was proposed by Sir Robert Hamilton, Bart., seconded by Benjamin Webster, Esq. —

"That to be worthy of Shakespeare and of the country, this National Celebration should be conducted under the patronage of Her Majesty, and the presidency of His Royal Highness the Prince of Wales, with the aid of all classes of the Poet's countrymen and admirers, residing in the United Kingdom, the British Colonies, and in foreign countries."

This resolution may be said, in the present stage of the business, to represent ideas rather than facts. But we are glad to see these ideas put forward early and strongly. Of course, we cannot pretend to speak for Her Majesty or for the Prince of Wales; it is, however, no very close secret that the late Prince Consort, among many admirable projects for the good of this nation, had thought of such a celebration as the one now proposed. The plan may therefore reckon on the royal sympathy, and, we should hope, on its formal sanction.

Starting from this strong position, that if anything is done for Shakespeare, it should be done under the guidance of our highest and best, a third resolution, proposed by Sir Charles Nicholson, Bart., and seconded by C. H. Bracebridge, Esq., declared:—

"That with a view to combine in a National Shakespeare Committee the representative men of all classes, this Shakespeare Committee, consisting of the following noblemen and gentlemen—The Duke of Newcastle, K.G., the Duke of Devonshire, K.G., the Duke of Manchester, the Earl of Carlisle, K.G., Earl Granville, K.G., the Earl of Northampton, the Earl Howe, the Earl Russell, the Earl of Shrewsbury, the Lord Bishop of London, the Lord Bishop of Worcester, Lord de L'Isle and Dudley, Lord Talbot de Malahide, Lord Londesborough, Lord Vernon, Lord John Manners, Lord Lindsay, the Lord Chief Baron Pollock, the Right Hon. Lord Justice Knight Bruce, General Sabine, President of the Royal Society, the Lord Mayor of London, M.P., the Right Hon. Sir E. Bulwer Lytton, Bart., M.P., Sir C. H. Rouse Boughton, Bart., Sir C. Wentworth Dilke, Bart., General Sir John Burgoyne, Bart., G.C.B., Sir R. Hamilton, Bart., Sir C. Nicholson, Bart., Sir Fitzroy Kelly, M.P., Q.C., Sir R. G. MacDonnell, C.B., the Right

Hon. S. H. Walpole, M.P., Sir James Prior, T. Bazley, Esq., M.P., B. Bond Cabell, Esq., M.P., W. Ewart, Esq., M.P., R. S. Holford, Esq., M.P., R. Monckton Milnes, Esq., M.P., C. N. Newdegate, Esq., M.P., H. B. Sheridan, Esq., M.P., William Tite, Esq., M.P., B. F. Flower, Esq., Mayor of Stratford-on-Avon, C. H. Bracebridge, Esq., Herman Merivale, Esq., Daniel Maclise, Esq., R.A., David Roberts, Esq., R.A., E. M. Ward, Esq., R.A., W. Hepworth Dixon, Esq., Alfred Tennyson, Esq., Poet-Laureate, Tom Taylor, Esq., F. W. Gibbs, Esq., James Dugdale, Esq., the Rev. Alexander Dyce, W. C. Macready, Esq., Benjamin Webster, Esq., J. P. Collier, Esq., the Rev. William Harness, Henry Johnson, Esq., John Wilkinson, Esq., Thomas Wright, Esq., F. W. Cozens, Esq., Frederick Haines, Esq., J. O. Halliwell, Esq.—undertake to invite the co-operation of all local and special bodies, and of eminent personages, whether in the United Kingdom or elsewhere, having Shakespearean objects in view."

This third resolution, in point of fact, constituted a National Shakespeare Committee, with power to add to their number, and to seek counsel and strength from every available quarter.

A fourth resolution, proposed by Sir Richard MacDonnell, seconded by Thomas Wright, Esq., ran as follows:—

"That the Governors of Her Majesty's Colonies and Indian Possessions be invited to make known the objects of this Committee within their respective Provinces, and to enlist the sympathy and support of Her Majesty's subjects throughout the British Dependencies in aid of the Erection of the contemplated National Shakespearean Monument."

The National Shakespeare Committee, pledged to conduct the Ter-centenary Celebration in April next year, and to raise a memorial statue of the Poet in some appropriate part of London, is therefore before the world. The nobleness of the work to be done will depend on the amount of support which the Committee shall receive.

THE MYSTERY OF THE NILE.

On Monday evening, at the Royal Geographical Society, on Tuesday evening at the Royal Institution, Capt. Speke told the wonderful tale of his travels and his discoveries. In both places his companion in peril and in glory, Capt. Grant, was present, and we think the living heroes of adventures were more interesting to the brilliant crowds who came to hear their story than all the mysteries of the Blue and the White Niles. On the second evening, the Prince of Wales was present.

The following written paper was read by Capt. Speke:—

"In attempting to describe the extent and character of this great river, compared with its tributaries within the limits of actual inspection by myself, I will first treat of its head, the Victoria Nyanza, from its southern extremity, which I found by astronomical observation, in 1858, to be close on 3° S. of the Equator, and gradually bring it down to its point of *débouchement* in the Mediterranean sea, 31° N. of the Equator, by which it will be seen that the Nile represents, considering it lies almost in one direct line from south to north, a total in round numbers of 2,000 geographical miles in length, and is therefore nearly one-tenth of the circumference of the globe. It must be borne in mind, however, that my observations respecting this great river are not the result of one expedition, but of two; that I have not actually followed its banks from head to foot, but have tracked it down, occasionally touching on it, and even navigating it as occasion offered, for the barbarous nature of the African lakes forbids the traveller doing as he likes; therefore, to give full weight to any inferences I may draw, deduced from what I have only seen in part, I will blend native information with my own experiences, and in doing so shall hope to teach others what I know, and, beyond that, what I believe myself. In the year 1858, when I discovered the Victoria Nyanza, which is the great reservoir of the Nile, I found it a large sheet of sweet water, lying on the main level, or from 3,000 to 4,000 feet above the sea level of the great

interior of Equatorial Africa, looking for all the world like the source of some great river; so much so indeed, that I at once felt certain in my own mind it was the source of the Nile, and noted it accordingly. To add to this impression, the natives, who there only know it by the name of the Nyanza, which equally means lake, pond, and river, described its extension in this confused manner to the northward as being boundless, whilst its breadth really—in fact, its circumference—was enormous; greater, if anything, on the east than on its western side, for the negro informants knew the names of all the countries surrounding the lake, and must, had they understood the value of geographical definitions, have been able to separate the river Nile from the Nyanza, and to reduce their explorations to any common understanding. Other informants, Arab merchants, and their slaves, residents of Zanzibar, who penetrate Africa in quest of ivory, and who had completed the whole circuit of the Nyanza, not individually, but separately, some on one side and some on the other, assured me that the Nyanza was the source of some great river—they knew not what, though they had heard confused accounts from the natives living on the Equator, of the European ivory-merchants who frequented the Nile in vessels at 5° N. latitude, and had further heard, through the same channel, that, with the rising of the Nile, and consequently the violence of its waters, islands were floated down its surface, which really is the case, not composed of earth and stone, but tangled roots of trees, rushes and grass, with even sometimes huts upon them, which, otherwise undisturbed, are torn away by the violence of the stream and carried down, perfect floating islands. Then again, these men described the territory between the Nile and Asua rivers as an island on the one side and the land composing the ancient kingdom of Kittara, according to their acceptance of the word as an island, also being nearly circumscribed by the Kitangulú and Luta Nzigé rivers, in conjunction with the Nyanza and the Nile. No merchants, however, had crossed the first parallel of north latitude: none understood geography. They heard what the natives said, but could not fully comprehend them, and thus it was that a doubt still existed in everybody's mind but my own as to the origin of the Nile, which no one would believe until I went again and traced the river down from head to mouth. Had I been all alone in the first expedition I should have settled the Nile in 1859, by travelling from Unyanymbi to Uganda with an Indian merchant, Musor Mzuri, who was prepared to go there, but my proposal having been negatived by the chief of the expedition, who was sick at the time, and tired of the journey, I returned to England, and, to my inexpressible delight, the very first day after my arrival here, found in Sir Roderick Impy Murchison a warm advocate, and proposed to the Royal Geographical Society to complete what I had before begun, and, as may be imagined, I could not rest satisfied until the world accepted my own views, happily now verified by indisputable means of actual inspection and astronomical observation, that the Victoria Nyanza is the great reservoir of the Nile. Suffice it now to say, after returning to Unyanymbi (the old point), 3° south of the lake, in 1861, I struck upon a new route, which I imagined, from the unsophisticated depositions of the ivory-merchants, would lead me to a creek on the westerly flank of the Nyanza, situated on the southern boundary of Karagwé. Geographical definitions were here, again, found wanting, for, instead of the creek to the great lake appearing, a new lake was found, Lake of Uzige, which formerly appeared to have contained a considerable amount of water, but is now fast drying up. Its head lies in Urundi, and, circling round the south and east flanks of Karagwé, in form a mountain valley, is subsequently drained by the Kitangulú River into the Nyanza, but not in sufficient quantity to make any sensible impression on the perennial contents of the Nyanza basin. It is to the west and south of Karagwé that the lake receives its greatest terrestrial supply of water, through the medium of the Kitangulú River, which, in draining the aforesaid Luero-lo-Uzige, drains off the superfluous waters of many minor

lakes, as the Akenyard in Urundi; the Luckurow, which is the second of a chain with the Akenyard; the Ingerzi and Karagimé; and the little Winandermere, which in Karagwé lies below the capital on its south-eastern corner. None of these lakes are large—mere puddles in comparison to the great Victoria Nyanza; but still the Kitangulú River, after receiving all their contributions, is a noble river, low sunk like a huge canal, about eighty yards across, with the velocity of about four miles an hour, which appears equal to the Nile itself as soon as it issues from the lake by the Ripon Falls. The question naturally suggests itself, What forms these lakes?—whence originate their waters? It is simply this: the Mountains of the Moon, in which they lie encircling the northern end and the Tanganyika Lake, are exposed to the influences of the rainy zone, where I observed, in 1862, no less than 238 days out of the year were more or less wet days. Mashondé, in the upper portion of Uganda, is the first place where, in this second expedition, I obtained a view of the Victoria Lake. * * In a southerly direction the Woganda boatmen go as far as the island of Ukerewé, which I saw on my first journey to Muanza, at the southern extremity of the lake; and to the eastward beyond the escape of the Nile, to the north-eastern corner of Victoria Lake, where by a strait they gain access to another lake in quest of salt, possibly the Baringo of Dr. Krapf, which he, from information gained through the natives, called Salt Lake, most likely because there are salt islands on it, which reasoning I deduce from the fact that on my former expedition, when the Arabs first spoke to me of the Little Luta Nzigé, they described it as a salt lake belonging to the Great Nyanza; yet not belonging to it, when further pressed upon the subject. The Great Nyanza waters were purely fresh and sweet. They (the Arabs), like Dr. Krapf, merely narrated what they heard. As salt islands were visited by the natives in search of that mineral the surrounding waters naturally were considered salt by them, deprived as they were of its connecting links, which included the whole area of ground under consideration within the limits of the drainage system of the Nile. The Arabs, who it is now very clear had heard of everything in connexion with the science of philosophical geography, were enabled to connect what they had gleaned in detached fragments from it. Dr. Krapf further tells us of a river tending from the river Newey by Mount Kenia towards the Nile. If such is the case, it must be a feeder to the Baringo, whose waters pass off by the Asua River into the Nile, for the whole country immediately on the eastern side of the Victoria Nyanza is said by the Arabs, who have traversed it for ivory, to be covered with low rolling hills, intersected only by simple streaks and nullahs from this point in Muanza to the side streak, which is situated on the Equator on the northern boundary of the Victoria Nyanza. Turning now again to Mashondé, and proceeding north along the boundary coast of Nyanza to the valley of Katonga, which, from its position on the lake, is constantly in view, the land above the lake is beautiful, composed of low sandstone hills, streaked down by small streams,—the effect of constant rains—grown all over by gigantic grass, except where the numerous villagers have supplanted it by cultivation, or on the deltas where mighty trees, tall and straight as the blue gums of Australia, usurp the right of vegetation. The bed of the Nyanza has shrunk from its original dimensions, as we saw in the case of the Uzige lake; and the moorlands immediately surrounding are covered with a network of large rush drains, with boggy bottoms, as many as one to every mile, even counting at one period a much fuller stream than at the present day, when the old bed was on the present surface of the water, and its breadth was double that which now exists. The Mountains of the Moon are wearing down, and so is Africa. Crossing over the Equator, altogether the conformation of the land appeared much the same, but increased in beauty; the drainage system was found the opposite, clearly showing where in the north slope of Africa one stream, the Mworango, of moderate dimensions, said to arise in the lake, flowed north and joined the Nile in the kingdom of Uniuro, where its

name is changed to Kari. Far on another stream, the Luajeré, followed its example, and then still further on from the centre of the coast of the Nyanza issued the parent of the Nile flowing over rocks of igneous character twelve feet high, which the natives and also some Arabs designate by the simple name of stones. I have done myself the honour to christen it the Ripon Falls, after his Lordship, who was the President of the Royal Geographical Society when the expedition was set on foot. Now, proceeding down the Nile from the Ripon Falls, the river first bisects the sandstone-continued hills which extend into Usoga above the coast-line of the lake, and rushes along north with mountain-torrent beauty, and then, having passed these hills, of no great extent, it turned through long flats more like a lake than a river, where, in Uniuro, it was increased by the contribution of the Kafu and the Luajeré, and continued in this navigable form to the Karuma Falls in Chopi, where again, the land dropping suddenly to the westward, we saw the river rushing along with boisterous violence; but could not follow it, owing to the war which lay upon the track. It was, indeed, a pity, for not sixty miles from where we stood, by common report, the Little Luta Nzigé, which I had taken so much trouble in tracing down its course from the Lunse Montes with its salt islands in it, joined the Nile. The old river was next met with in the Madi country, due north of the Karuma Falls, where it still bore the unmistakable character of the Nile—long flats, long rapids. The southern half of the Madi was a flat, extending, we believe, to the junction of the Little Luta Nzigé, the northern, a rapid extending down to the navigable Nile—that is to say, the Nile which is navigable its entire length during the period of its flooding; and here the Asua river, of which we have heard, draining from the north-east corner of the Victoria Lake, joins—in a rainy season an important feeder, but when low, fordable. The first great affluent, which, indeed, is the only one worthy of remark on the left of the Nile, is the Bahr el Ghazal. It joins on, with the appearance of a diminutive lake at the sharp elbow of the Nile, without any visible stream of its own, whilst the great river winds round with considerable velocity, carrying, as I have said, the palm with it. The second affluent in order of position, which, with all the others, is on the right of the Nile, is the Gerafee river, swirling with considerable stream and graceful round into the parent Nile. Its magnitude and general appearance is like that of a first-class canal, inferior to the Kitangulú River, although not so much so as to equal in quantity of fluid one-third of the Nile at its point of junction. It is navigable to a great distance south, but where it comes from, nobody knows. It cannot be called a mountain river, as we found similar substances floating on its surface as on the Nile, evidently showing that both the trunk and the branch are subjugated to the same effects of sluggish flats and rapids. The third is the Southern Sobat River, which was full and navigable—in breadth it is greater than the Gerafee River, but less in rapidity, so that we may infer their perennial contents are much the same. Unfortunately, the Northern Sobat was passed without our knowledge, which also being navigable, would make the Upper Sobat, that is to say, the Sobat above the Delta, of far greater magnitude than the Gerafee, unless, indeed, the three streams may be one river still further south, when in its combination the comparison would have to be drawn with the Nile above it, and would very nearly equal it, for the Nile, with these additions, has scarcely doubled its importance, considered as it was seen from above entering the Bahr el Ghazal. The Blue River was long assumed to be the Nile only because its perennial powers were never tested. It appears to be a mountain stream emanating in the country without the rainy zone, but subject to the influence of tropical rains and droughts, at one time full, and empty at another, so shallow as to be fordable. The suspicion, therefore, that it was the Nile must of itself appear absurd, for its waters, during the droughty seasons, would be absorbed long before they reached the sea. But apart from this feature of the amount of

the Blue River, the Nile runs like a sluice in its wonted course, whilst the Blue River, conjoining with the Gerafee and Sobat, describes a graceful sweep. The Alhara, which is the last, is in all respects like the Blue, only small. With one more remark I will conclude. In the height of the dry season in the White River, the Blue is freely navigated, owing to the great accessions of the Gerafee and Sobat Rivers, but below the Blue and Alhara Rivers, to the sea, the sandbanks obstruct further passage. There is one thing that I have left unstated, and that is the fact that on my return the first Englishman I met was Mr. Baker, with whose name you were already acquainted, who came up for the purpose of helping us out of a scrape if we had got into one. Mr. Baker hearing that there was one branch of the river that I had not explored, went on for the purpose of searching for it, and I trust that before another year is out we shall see him back to tell us all about it. Another remarkable fact was that three ladies came up to meet me, but one having been taken ill, Miss Tinney and her mother went up the river to satisfy their desire for geographical knowledge. I endeavoured to persuade them to return, and subsequently wrote them a letter entreating them to give up their journey, with what result remains to be shown. If the remaining branch is not explored by these parties, I shall have to do the work myself."

THE EXHIBITION BUILDINGS.

ACCORDING to Mr. Hunt's Report the brick building in Cromwell Road, used during the Exhibition in 1862 as a gallery for pictures, is a substantial structure. The roof, however, requires to be repaired and the skylights replaced with others of a stronger character glazed with sheet-glass. It is proposed also to lay new wrought floor-boards over those now existing, and to render the whole of the gallery fire-proof by the adoption of Fox and Barrett's principle, which has been found efficient, or by the construction of brick arches on iron girders under the present floor.

The remainder of the buildings are partly permanent and partly temporary in their construction. The iron columns and girders, and the iron trusses of the roofs, will remain permanently with some adjustments and modifications. The timbers of the roofs, as well as the skylights, are, with the exception of the roofs over the nave and transepts, of a temporary character, and it is proposed to remove them, substituting new timbers with a covering of slate or marine metal. The skylights will be entirely new, and the glass in them will be of the quality known as the 21-ounce sheet. The roofs over the nave and transepts will be slated. All the gutters throughout will be lined with lead; and the skylight, frames, ridges and hips, will be covered with lead. The joists and floor-boards of the galleries will be removed, and substantial new floors will be substituted. The whole of the ground floors throughout the entire building will be removed. A layer of concrete twelve inches thick will then be laid over the whole surface, and a new floor constructed, with new materials. The joists will be of the best fir timber; the sleepers will be of oak, on proper brick walls, built on the concrete platform before described, and the floor-boards will be 1½ inch thick, planed, and put together with iron tongues. All the ceilings throughout, except the nave and transept, will be plastered, as will also all the brick walls within the building.

A complete system of drainage was constructed when the buildings were erected. This will, however, require to be repaired, and in parts re-laid.

With regard to the domes, it is proposed to build piers of brickwork upon solid concrete foundation, and to construct brick arches, springing from these piers. The lower portion of the domes will then be filled in with brickwork, covered externally with lead, and the upper portion will be glazed with thick glass. The interior parts of the brickwork, including the piers and arches, will be plastered. It is not proposed to remove the ironwork, but to build it in with the brickwork.

As respects the completion architecturally of the exterior of the building on its three sides, Mr. Hunt proposes that the existing outlines should be

preserved, and such an amount of decoration introduced as may be consistent with the purposes to which the building is to be applied. The material to be employed will be Portland cement. Mr. Hunt thinks it would be an unnecessary expense to face the building with stone, especially as all the surrounding mansions and buildings are of the less expensive material.

These are the more important works contemplated; but there are others of a minor description, which are fully set forth in the first specification and estimate.

OUR WEEKLY GOSSIP.

General Sabine made a few observations from the chair at the winding-up Meeting of the Royal Society last week, which merit more attention than they are likely to receive, if we may judge from past experience. Twenty-five papers were read at the Meeting, and of course very imperfectly; of some the titles only were mentioned, and most were dismissed with brief abstracts. As the President remarked, the Society thereby lost the hearing of some very important papers, and the discussions to which they would have given rise; and he pointed out that it would be to the advantage of all concerned, if the Fellows and other authors would send in their papers at the beginning instead of at the end of the session.

The Royal Society have elected two Foreign Members.—Prof. Kummer, of Berlin, for his discoveries in the theory of numbers, and in particular for the conception and development of ideal numbers; and Prof. Steenstrup, of Copenhagen, the well-known naturalist, whose works on the Alternation of Generations, and other zoological and archaeological subjects connected with the history of man, are greatly esteemed by naturalists. The list of fifty Foreign Members is thus once more complete.

The Academy of Sciences of Berlin, through the official intervention of the King, have conferred upon Sir Charles Lyell the honour of Chevalier of the Order of Merit in Science and Art. The number of foreign knights of this Order is limited to thirty; and among our countrymen, previously elected, Sir Charles Lyell will find Sir John Herschel, the Astronomer-Royal, Prof. Faraday, Prof. Owen, Sir David Brewster, Sir Henry Rawlinson and General Sabine.

It will be seen from our report of the sale of the Bromley pictures that the nation has acquired several additions to the National Gallery, viz., Gio. Bellini's Saviour on the Mount of Olives, well remembered at the Manchester Art-Treasures Exhibition,—Il Bramantino's Adoration of the Kings,—Palmezzano da Forlì, The Virgin Enthroned (the Dublin National Gallery),—A. Bottraffio, The Virgin and Child,—Pesello Peselli, The Holy Trinity.

At the special meeting of the Royal Geographical Society, called to consider the protest of Sir Edward Belcher and his friends against the illegality of the late elections, three hundred members were present; after some debate, a large majority decided that no cause had been shown for taking counsel's opinion as to the breach of rules. The elections, therefore, stand good; except in the case of Dr. Rae, who has voluntarily retired from the Council, in accordance with the laws.

The Rev. Francis Trench suggests, as a means of saving trouble and expense to collectors, the establishment of a Book-exchange Bazaar. Many persons, Mr. Trench thinks, are in possession of books which, for various reasons, they would gladly exchange for others. Such persons do not like to sell their volumes, though they would, he fancies, be willing enough to barter them away for other volumes. He proposes, therefore, to establish a dépôt or bazaar, in a convenient part of London, at which books for exchange might be delivered by the possessors, to be there taken up at a fair price by those who might need them. Mr. Trench proposes to maintain his Exchange by charging a sum on all books received into it; also a percentage on all sales. He says nothing about rent. Mr. Trench is of opinion that the collector and publisher would alike gain by the foundation of his Exchange.

If of books there will be no end, we may say that the same prospect applies to paper. A plant, the *Sida retusa*, which grows in prodigious quantities at Brisbane in East Australia, is found to possess a most valuable fibre which will, after being worked up into textile fabrics, render it peculiarly adapted for paper.

The concluding evening meeting of the present session of the London, Middlesex and Surrey Archaeological Societies will be held on Wednesday next, July 1, at 7, St. Mildred's Court, Poultry, when Charles Baily, Esq., will read a paper 'On the Mode of Roofing Buildings in the Middle Ages, with a view to ascertain the Style of Roof originally placed over the Guildhall of London, and to consider the Proposed Restoration.'

The Second Annual Meeting of the Devon Association for the Advancement of Science, Literature and Art, will be held at Plymouth, on Wednesday, the 29th of July, and the two following days, under the presidency of Mr. Spence Bate. The Mayor of Plymouth, Sir John Bowring, and Sir W. Snow Harris are among the Vice-Presidents. The Rev. W. Harpley, of Plymouth, and Mr. H. S. Ellis, of Exeter, are the Honorary Secretaries.

On Monday next a meeting will be held at Willis's Rooms, under the Presidency of the Earl of Shaftesbury, "to consider the various questions connected with Domestic Service." This was one of Prince Albert's reforms, and it still remains one of Mr. Leech's subjects. In its serious and in its comic aspects it is alike interesting to us all. We have not heard Lord Shaftesbury's points; but there is one question connected with Domestic Service which very often forces itself on our attention—namely, the extraordinary powers, in connexion with Domestic Service, of the Cat. In the kitchen, in the larder, and even in the study, the Cat develops peculiarities unknown to Buffon. We have a black Tom, which, in connexion with our domestic service, ate two pounds of rump-steak when it was only a kitten of nineteen ounces, and which, in the same connexion, has since then smoked cabanas, broken bottles and lapped up claret, carried off kid gloves to unknown fairy tabbies, and burned or mislaid papers of a confidential kind: in fact, has exhibited all the powers and propensities which might have been ignorantly ascribed to a friendly policeman or a cousin in the Guards. If Lord Shaftesbury could resolve this question of the cat, he would be going a very considerable way towards understanding one of "the questions connected with Domestic Service."

In the library of the late N. C. Mognie, Esq., sold by Messrs. Puttick & Simpson, of Leicester Square, this week, there occurred a copy of the second edition of Coverdale's Bible, 1537. The book, from its imperfect state, was not of much importance, but it contained the left-hand half of the woodcut map belonging to the first edition of the same Bible, which fragment constituted the main value of the "lot," and it sold, after an active competition, for 45l.

A writer, dating from Ballymoney, in Ulster, says, in reference to the discoveries reported by Capt. Sayer in the Gibraltar Cavern:—"Mr. Sayer, amongst other objects there found, enumerates 'an oblong slab of sandstone, with one surface much worn and polished as if by friction,' and he seems to be of opinion that the very perfect pestle which he describes and which was found within a few feet of the sandstone slab was an adjunct of the same, and was probably used for grinding cereals or breaking nuts. I wish to observe that similar oblong slabs of granite or sandstone have been occasionally found in Ireland—in Ulster, at least; that they are generally found in pairs, are called in popular language 'rub-stones,' and that the peasantry assign a very high antiquity to them. Indeed, I believe the best authorities on the subject are agreed that they were anterior to the querns or hand-mills (which are comparatively common, whilst these are rare),—that they were used for grinding cereals,—in short, that they were the very first, as they were undoubtedly the very rudest, inventions for grinding purposes yet discovered. In the Museum here (Ballymoney County,

Antrim) we have two pairs of these rub-stones; in both pairs the under or lying stone is about 22 inches long and 12 broad at the centre, narrowing to about 9 inches at the ends. This stone is convex at the back, and was most probably fixed in the ground at somewhat of an angle, as being the position best adapted for clearing the stones of the ground grain; the face of this stone is a good deal hollowed by use, both ends standing up some inches higher than the centre. The upper or moving stone possesses the peculiarity of having a slight projection or ear on its side, through which there is a hole of about half-an-inch in diameter, the sides of the hole being nicely bevelled,—evidently intended for a string or more probably a withe to pass through, and thus assist the horizontal motion. This stone is quite flat, about 6 inches thick, and not by any means so large as the lyer; it is 16 inches long by 9 broad. I am inclined to think the pestle described had no connexion with the rub-stone; further excavations will probably reveal the mortar. In Ireland, stone pestles and mortars of undoubted antiquity are frequently found. A specimen just now before me has on each of its projecting ears concavities for three fingers to raise it by. In the concluding portion of Mr. Sayer's letter, after a second visit to the cavern, he notices the discovery of another slab of sandstone similar to the first. This doubtless will prove to be its counterpart. It would be very desirable to have an exact description, so as to know how far these Gibraltar rub-stones resemble those found occasionally in Ireland.

"DAVID WILSON."

The monument to Tyndale, on Knibley Knoll, Gloucester, in the parish of his birth, has been commenced, from the designs of Mr. Teulon. It consists of a tower 111 feet high, with a terminal proposed to be a reflector; the whole is to be broken in stages, diminishing from 23 feet square at the base to 14 feet at the summit, where will be a machiolated cornice. Within will be a staircase; at the entrance a recess to contain a Bible chained to a book-rest, in the manner we still see in some ancient churches, that at Bridlington, for instance.

Another volume of Mendelssohn's Letters is announced to appear in August next: it will contain the letters written during the years 1833 to 1847.

'Goethe's Correspondence with the Grand-Duke of Weimar,' so long looked for and so often promised, is at length in the press, and the publication is promised for the beginning of July. The two volumes will contain about 600 letters, and among them a great number that have not only never been published, but the perusal of which has never been permitted beyond the family of the Grand-Duke. They will embrace the letters of the Grand-Duke on the Campaign in the Palatinate, Goethe's letters to his patron from Italy, and will, no doubt, form one of the most interesting of the collections of letters connected with Goethe that have yet been published.

Baedeker, whose Travellers' Handbooks are as common with German travellers as Murray's are with our own countrymen, has just issued an English translation of his useful Guide to Switzerland. He published last year an English Guide to the Rhine, founded upon his German work, the first of his series of Guide-Books, which has reached a twelfth edition.

The Salzburg mountains are about to be furnished with a system of guides, modelled, apparently, on that existing in Switzerland. The guides are to be examined and licensed, are to have a book in which employers may write complaints or recommendations, and are bound to carry twenty pounds of luggage. A list of guides in each place and of the tariffs for each excursion is to be put up in the hotels. This measure has been introduced, we hear, by the Austrian Alpine Club, and we have no doubt it will have an effect in making the Salzburg district more accessible to our own countrymen.

The estimates for the present year include the sum of 45,243*l.*, for maintenance and repair of Royal Palaces, an increase of 11,660*l.* on last year: of this, 19,433*l.* is for Palaces in the occupation of the Queen, of which Windsor alone takes 11,000*l.*; Palaces partly occupied by the Queen, 10,300*l.*; Palaces not so occupied, 15,243*l.*—Public Build-

ings, 117,781*l.*, increase 4,268*l.*—Parks and Pleasure Gardens used by the public.—Battersea, Bushey, Greenwich, Hampton Court, Holyrood, Kensington, Kew Botanic and Pleasure Grounds, Regent's, St. James's, Hyde, Green and Victoria Parks, all, 97,952*l.* These were the sums voted for the whole of the above, after deducting the surplus, about 30,000*l.*, remaining of former grants.—The Houses of Parliament take 46,444*l.*, of which 4,570*l.* is for completion of buildings; 4,229*l.* warming, lighting and ventilating; cost of works connected with—5,490*l.* gas; 2,300*l.* fuel; 1,000*l.* salary of officer in charge of warming and ventilating arrangements; 40,000*l.* New Foreign Office Buildings; 137,773*l.* further estimate for their completion; Public Record Depository, 20,000*l.*; National Gallery, Dublin, Building, 988*l.*; Franklin Monument, 800*l.*, re-vote.

ROYAL ACADEMY OF ARTS.—THE EXHIBITION OF THE ROYAL ACADEMY IS OPEN.—IN THE DAY, from Eight till Seven o'clock. Admission, 1*l.*; Catalogue, 1*l.*—IN THE EVENING, from Half-past Seven till Half-past Ten. Admission, 6*d.*; Catalogue, 6*d.* JOHN PRESCOTT KNIGHT, R.A., Secretary.

SOCIETY OF PAINTERS IN WATER COLOURS.—THE FIFTY-NINTH ANNUAL EXHIBITION IS NOW OPEN, at their Gallery, 5, Pall Mall East (close to the National Gallery), from Nine till Dusk.—Admission, 1*l.*; Catalogue, 6*d.* JOSEPH J. JENKINS, Secretary.

INSTITUTE OF PAINTERS IN WATER COLOURS (founded in 1881 as the New Society of Painters in Water Colours).—THE ANNUAL EXHIBITION IS NOW OPEN.—Admission, 1*l.*—Gallery, 53, Pall Mall, opposite Marlborough House. JAMES FAHEY, Secretary.

BRITISH INSTITUTION, Pall Mall.—The Gallery, with a Collection of Pictures by Ancient Masters and deceased British Artists, is OPEN DAILY, from Ten to Six.—Admission, 1*l.*; Catalogue, 6*d.* GEORGE NICOL.

FRENCH GALLERY, 130, Pall Mall.—THE TENTH ANNUAL EXHIBITION OF PICTURES, the contributions of Artists of the French and Flemish Schools, is NOW OPEN.—Admission, 1*l.*; Catalogue, 6*d.*

MR. CHURCH'S NEW PICTURE, THE ICEBERGS. Painted from Studies made in the Northern Sea in the Summer of 1859.—German Gallery, 108, New Bond Street, W.—Admission, 1*l.*

SCIENCE

SOCIETIES.

ROYAL.—June 18.—Major-General Sabine, President, in the chair.—Prof. Ernst Eduard Kummer and Prof. J. J. Smith Steenstrup were elected Foreign Members.—The following papers were read:—'On the Molecular Mobility of Gases,' by T. Graham, Esq.—'On the Magnetic Disturbance which took place on the 14th of December 1862,' by B. Stewart, Esq.—'Results of the Magnetic Observations at the Kew Observatory from 1857 to 1862 inclusive, Nos. 1 and 2,' by Major-General Sabine.—'On the Electro-muscular Conductibility of Healthy and Paralyzed Muscles,' by H. Lobb, Esq.—'Notes of Researches on the Polyammonias, No. 24, On Isomeric Diamines,' by Dr. Hofmann.—'On the Degree and Weight of a Resultant of a Multipartite System of Equations,' by Prof. Sylvester.—'Contributions towards the History of the Colouring Matters derived from Aniline,' by Dr. Hofmann.—'Further Observations in favour of the View that Nerve Fibres never end in Voluntary Muscles,' by Dr. Beale.—'Explorations in Spitzbergen, undertaken by the Swedish Expedition in 1861, with the View of ascertaining the Practicability of the Measurement of an Arc of Latitude,' by Dr. Torrell.—'Contributions towards the History of the Colouring Matters derived from Coal Tar,' by Dr. Hofmann.—'On the Influence of Temperature on the Electric Conducting Power of Alloys,' by Dr. Matthiessen and C. Vogt, Esq.—'On the Measurement of the Chemical Brightness of various Portions of the Sun's Disc,' by Prof. Roscoe.—'Experiments on the Vibrations occasioned by Railway Trains passing through a Tunnel made at Watford,' by Sir J. South.—'On the Peroxides of the Radicals of the Organic Acids,' by Sir B. C. Brodie.—'Account of Observations of Atmospheric Electricity taken at Windsor, Nova Scotia,' by J. D. Everett, Esq.—'Note on the Minute Structure of the Grey Matter of the Convulsions of the Brain of Man, the Sheep, Cat and Dog,' by Dr. Beale.—'On the Absorption and Radiation of Heat by Gaseous, &c. Liquid Matter, 4th Me-

moir,' by Prof. Tyndall.—'Preliminary Notice of an Examination of *Rubia Munjista*, the East Indian Madder or Munejet of Commerce,' by Dr. Stenhouse.—'On Fermat's Theorem of Polygonal Numbers,' by the Lord Chief Baron.—'An Account of Experiments on the Change of the Elastic Force of a Constant Volume of Atmospheric Air between 32° F. and 212° F., and also on the Temperature of the Melting Point of Mercury,' by B. Stewart, Esq.—'On the Brain of a Bushwoman, and on the Brains of two Idiots of European Descent,' by J. Marshall, Esq.—The Society adjourned over the long vacation.

GEOLOGICAL.—June 17.—Prof. A. C. Ramsay, President, in the chair.—F. G. Finch, Esq. was elected a Fellow.—M. Boucher de Perthes, Dr. M. Hörnes, M. N. von Kocksharow, M. S. Lovén, General della Marmora, F. A. Graf Marschall von Burgholzhausen, M. H. Nyström, Dr. F. A. Quenstedt, Dr. F. Seufft, Prof. E. Suess, Dr. B. F. Shumard, and the Marquis de Vibraye, were elected Foreign Correspondents.—The following communications were read:—'On the Relations of the Cromarty Sandstones containing Reptilian Footprints,' by the Rev. G. Gordon, LL.D., and the Rev. J. M. Joass, with an Introduction by Sir R. I. Murchison, K.C.B.—'On some Tertiary Shells from Jamaica,' by J. C. Moore, Esq., with a Note on the Corals, by P. Martin Duncan, and a Notice of some Foraminifera,' by Prof. T. R. Jones.—'On the Geology and Mineralogy of a part of Borneo,' by M. Cornelius de Groot.—'Description of a new Fossil Thecidium from the Miocene Beds of Malta,' by J. Denis Macdonald, Esq.—'On the Sandstones and Shales of the Oolites of Scarborough, with descriptions of new species of Fossil Plants,' by J. Leckenby, Esq.—'A Monograph of the Ammonites of the Cambridge Greensand,' by H. Seeley, Esq.—'On a new Crustacean from the Glasgow Coal-field,' by J. W. Salter, Esq.—'On the Occurrence of a Bituminous Substance near Mount-Gerald, Scotland,' by Dr. G. Anderson.—'On the Occurrence of Albertite at Mount-Gerald, Scotland,' by A. C. Mackenzie, Esq.—'On the Occurrence of Rocks of Upper Cretaceous Age in Eastern Bengal,' by Dr. T. Oldham.

ROYAL SOCIETY OF LITERATURE.—June 10.—Sir Charles Nicholson, Bart., in the chair.—Mr. Deutsch read a paper 'On a Trilingual Inscription, Latin, Greek and Phœnician,' which has been recently discovered in Sardinia, in which he pointed out its great value as an ancient monument of a people of whom we have few records. It announces the fact that an altar had been dedicated to Ashmam or Æsculapius by one Gleon, a salt-farmer.—Mr. Vaux read a paper in which he traced the knowledge which the ancients possessed of Abyssinia and the head-waters of the Nile, from the time of Æschylus, in the fifth century B.C., to that of the geographer Ptolemy, in the second century A.D.

NUMISMATIC.—Anniversary Meeting.—June 18. W. S. W. Vaux, Esq., President, in the chair.—E. Burns, Esq., W. H. D. Longstaffe, Esq., Mrs. Strickland and G. S. Veitch, Esq. were elected Members.—The Report of the Council and the President's Address were read, and the Meeting proceeded to ballot for officers for the ensuing session of 1863-1864, when the following gentlemen were elected:—President, W. S. W. Vaux, Esq.; Vice-Presidents, J. B. Berne, Esq. and J. Lee, Esq., LL.D.; Treasurer, G. H. Virtue, Esq.; Secretaries, J. Evans, Esq. and F. W. Madden, Esq.; Foreign Secretary, J. Y. Akerman, Esq.; Librarian, J. Williams, Esq.; Members of the Council, T. J. Arnold, Esq., W. Boyne, Esq., the Earl of Enniskillen, F. W. Fairholt, Esq., W. Freudenthal, Esq., J. G. Grenfell, Esq., Rev. F. K. Harford, Rev. Asheton Pownall, H. W. Rolfe, Esq. and R. Whitbourn, Esq.

STATISTICAL.—June 16.—Col. Sykes, President, in the chair.—The following gentlemen were elected Fellows:—J. Beddoe, M.D., W. Ewart and J. G. P. Child, Esqs.—Dr. W. A. Gray, Medical Superintendent of Millbank Prison, read a paper 'On

Sufficient and Insufficient Diets, with Special Reference to the Diets of Prisoners."

ROYAL INSTITUTE OF BRITISH ARCHITECTS.—*June 15.*—Prof. Donaldson, President, in the chair.—Mr. Purdie read a paper entitled 'The Stereochromic and other Technical Processes of Painting, considered with Reference to their Employment in Mural Decoration.'

ROYAL INSTITUTION.—*May 15.*—Sir Henry Holland, Bart., V.P., in the chair.—'On the Molecule of Water,' by W. Odling, Esq.

MEETINGS FOR THE ENSUING WEEK.

Wed. Horticultural, 1.—Great Exhibition.
Fri. Archaeological Institute, 4.
Sat. Horticultural.—Promenade.

FINE ARTS

MR. CHURCH'S 'ICEBERGS.'

Mr. Church's idea in the choice of subjects—that each one shall present an impressive and suggestive incident in nature—is an excellent one. Independent of Art, there is in such subjects as the Falls of Niagara, the Heart of the Andes, and the work before us, enough to interest the student. To appreciate them as works of Art we must separate their mere subjects from their execution, and not endow the artist or his picture with the glories of the theme, but give to him his proper honour alone. American landscape art promises to be a noble one when divested of tendencies to opacity and paintiness which, while they indicate the strength and health of a nascent and original school, prove that its professors have not yet mastered the whole of the mysteries of the colour-box and the brush. At present Transatlantic landscape painting is materialistic; seeking its means of expression in translation of literal facts—poetic and grand in themselves, rather than in their mental associations.

Mr. Church has been happy in choice of a subject for his latest picture: Niagara is hackneyed; the Heart of the Andes drew its interest from a knowledge of Nature not common amongst the people; but the floating crystal islands, the terror and admiration of ages, had never been attempted by even moderately skilled artists,—the theme was, therefore, striking in itself, original and veiled in mysterious grandeur. The sunlight that falls on the surface of the island lights it with a pure, ice-cold glittering that, when we look close, shows myriads of hues, pierces deep into the purer parts of the mass, and seems lost beyond the power of reflexion; elsewhere light has reached the roofs of caves the sea has worn by beating, so that we have it tinging the water in them with a colour that makes the emerald look crude. It is green fire where thus transmitted unabsorbed and unreflected. Light on the berg is thus blue from reflexion of the sky, golden where flashed back to our eyes by the fractured and splintered surfaces, and enriched with every hue by diverse circumstances of position, form and transparency. We look in wonder at this vast rock of ice, seemingly fast anchored in the sea, yet with every moment telling its tale of dissolution by the wreaths of flying mist, by huge, yawning crevices, by the eating sea that lapses fatally at the base, has bared caverns, split long shelves, and made deep scars at every point. A scoop of sheer descent on one side of a mountain tells another secret cause of ruin; so large is it, that a mile-long shadow seems to lie in scarp: yet, vast as it is, the mere expansion of air has rent and slid off the great scale into the sea.

The effect of such a slide is marked where we should least expect it; the whole poise of the berg has thus been altered; the side near to us, becoming tight, has risen and changed the line that the sea beat upon for a lower one, placed obliquely to the first. Twice this has happened, for there are two sea-worn lines at the mountain's base. We look from an ice-plain above the level of the sea into a bay worn in the berg, and made shallower by the successive up-risings or losses of balance above indicated; over this bay the wavelets ripple in tender curves, one behind the other; the shifted

beaches are on the distant side, and reach almost to the removed horn of the bay, upon whose uttermost promontory the water breaks lazily and of a pure but rather ashy green. One side of the bay shows us the vista of a mountain valley; one of the cliffs is bored with the emerald cave, upon the roof of which rests an enormous boulder, torn away from the rocky arctic home of the berg, and thus floated far to south to find an ocean bed, when the whole fabric is wracked. Such ice-borne boulders are said to be the originals of our enormous stones that, grouped by some forgotten people to serve priestly rites, are named Druidic temples or tombs. The stone, deeply tinged with iron, has stained with red and russet streaks the pure snow and ice of its bed.

PICTURE SALE.

THE late Mr. Allnutt's collection of pictures and drawings has been sold by Messrs. Christie & Manson. Here are the names of the most important items and the prices they obtained. First day's sale—Drawings only: G. Barrett, A Lake Scene, Sunset, 105*l.* (Cox),—D. Cox, A Landscape, with peasants and cattle, evening, 71 *gs.* (E. White),—Bonington, A Sea-piece, fishing-boats in a breeze, 70*l.* (Agnew),—G. Barrett, a landscape, with a team of horses, sunset, 70*l.* (Sale),—D. Cox, Windsor Castle, from Virginia Water, 165 *gs.* (Agnew),—The Farm, sheep passing through a gate, under some pine-trees, 53 *gs.* (same),—Sea-piece, a Dutch galliot in a breeze, 50*l.* (Pennell),—Bonington, Scene on the French Coast, with fishing-boats, 103*l.* (Cox),—C. Fielding, Distant View of Bolsover Castle, sunset, 63*l.* (Agnew),—A River Scene, a fisherman, with eel-baskets, in a punt, storm passing off, 110 *gs.* (same),—J. M. W. Turner, A River, crossed by a Bridge, hills on either side, cows in shallow water, evening; stated to be the painter's work on admission as A.R.A. (1799), which can only mean that it was exhibited in that year; and is probably that given in Rodd's list as "Abergavenny Bridge, Monmouthshire—clearing up after a showery day," No. 326 in Royal Academy Catalogue, 385 *gs.* (Lord Ashburton). This work was also at the Art-Treasures Exhibition, under the title of 'Bridge at Abergavenny.'—G. Barrett, A Classical Bay Scene, with ruined temples and other buildings, sunset, 95 *gs.* (Agnew),—D. Cox, Malvern Hills, from near Hereford, effect of passing showers, 145 *gs.* (same),—J. M. W. Turner, Leeds, engraved in the England and Wales, 320 *gs.* (Vokins). The first day's sale brought 3,200*l.* Second day's sale: D. Cox, Fish-Market on the Beach at Hastings, 106 *gs.* (Vokins),—The Tivoli, copy from the famous picture by Turner, by D. Cox; the original and the copy both painted for Mr. Allnutt, 150 *gs.* (N. Wallis),—S. Prout, a Grand Sea-piece, an East-Indian under repair on the sands, other vessels and numerous figures, 215 *gs.* (Pocock),—D. Cox, Windsor Castle from the Thames, cattle on the bank of the river, 245 *gs.* (Agnew),—The Building of Carthage, Æneas and Achates, classical bay scene, with buildings, figures and trees, 260 *gs.* (Moore),—P. De Wint, A River in Devonshire, 125 *gs.* (Webb),—G. F. Robson, View of Durham Castle, Cathedral and City, cows and figures in the foreground, evening, 270 *gs.* (Farrer),—D. Cox, A view over an extensive valley, a stream crossed by a bridge, wooded foreground, upright, 105 *gs.* (Agnew),—P. De Wint, another River Scene, a rainbow spanning the centre, craft near the bank to the right of picture, smooth water, 325 *gs.* (Cox),—G. Barrett, Classical Landscape, valley opening to the sea, Grecian temples on either side, afternoon, 110 *gs.* (Crofts),—D. Cox, A Landscape, extensive valley, sheep feeding near the bank of a river, hilly distance, figures in front, 410 *gs.* (Agnew),—J. M. W. Turner, Distant view of Fonthill Abbey, the lake below, wooded foreground, morning, 260 *gs.* (Webb),—The companion, the same, sheep feeding, stream in front, evening, 100 *gs.* (Cox),—R. R. Reinagle, Neapolitan Fishermen dragging a net on shore in the Bay of Salerno, evening; shown at the International Exhibition, No. 889, 425 *gs.* (Atkins),—G. Barrett, Solitude, No. 852, at the International Exhibition, 420 *gs.* (Cox),—A River Scene, Embarkation of George the

Fourth at Greenwich, 210 *gs.* (same),—G. Barrett, Classical Landscape, sunset, 250 *gs.* (same),—J. M. W. Turner, Tivoli, 1,800 *gs.* (Lord Ashburton), the engraving from the same, by Goodall, copper-plate and 465 impressions, many of them proofs before letters, executed for Mr. Allnutt, 420*l.* (Agnew). The drawing was No. 1,033 at the International Exhibition. It appears to have been exhibited at the Royal Academy in 1818, No. 474, and was at the Art-Treasures Exhibition, No. 309, then the property of W. Wilson, Esq. Second day's sale, 7,920*l.* The third day's sale took place on Saturday last. Mr. F. R. Lee, A Landscape, road across a common, wooden bridge over pool, 120 *gs.* (Cox),—W. Müller, Tivoli, another copy of the famous Turner above named, to compare which with D. Cox's rendering of the original was interesting, 470 *gs.* (same),—Callcott, Open Landscape, sheep grazing on broken ground, man, woman and dog in front, early morning, 310 *gs.* (same),—Constable, A Landscape, mass of trees in centre, meadows in mid-distance, man ploughing in front, showery, 103*l.* (same),—J. Burnet, The Salmon Weir, 155 *gs.* (J. Atkins),—Gainsborough, Woody Landscape, cottages among trees, sportsman talking with peasant, dogs in front, a picture painted in fortunate rivalry with Teniers; as might be expected, it is larger, bolder, in a style more solid, and very warm and rich in effect, 225 *gs.* (same),—Giroux, Ferry-boat in a storm, 125 *gs.* (Cox); the work of an artist not often represented in English sales,—Wilson, Celandon and Amelia, in landscape, figures by Mortimer, engraved by Woollett, 210*l.* (same),—Wilkie, Sheep-washing, engraved, 120 *gs.* (Rought),—J. M. W. Turner, The Pass of the Simplon, 103*l.* (Webb),—Reynolds, Contemplation, Portrait of Mrs. Stanhope, No. 103 at the International Exhibition, 1,000 *gs.* (Lord Normanton),—Holland, Richmond Hill, No. 168 at the International Exhibition, 205 *gs.* (J. Allnutt),—Reynolds, Ino, seated on the ground, squeezing the juice of the grape into the mouth of Bacchus, 265 *gs.* (Mainwaring),—Murillo, The Virgin seated, the Infant Christ standing on her knee, a rosary in his right hand, 780 *gs.* (F. Nieuwenhuys, of Paris),—Rembrandt, A Lady in a black dress edged with fur, and a white ruff, seated in an arm-chair, a double eye-glass in her hand, a Bible, with hand-strings, on her knee, a nearly perfect example of Rembrandt's best period, 640 *gs.* (same),—Giorgione, a Venetian Knight, in a striped dress, with spear and sword, standing in an attitude of meditation before a beautiful woman who reclines at the foot of a tree, two children near her, 465 *gs.* (Colnaghi),—Vandyck, The Virgin in Glory, the Saviour standing on the globe, angels playing the violin, 160 *gs.* (Cockburn). Total of the third day's sale, 8,175*l.*; of the three, 19,295*l.* This sale included several works of great artistic value, which fetched comparatively small prices; among these, several pictures by Stothard, a sketch of Sancho and the Duchesse, by Leslie, two portraits by Maes, two groups of flowers by Moisl, a fine classical landscape by G. Poussin, two pictures by Hogarth,—1. The Interior of a Studio, an artist drawing with white chalk, a lady standing behind him; 2. A View of Charing Cross, wild geese flying over the statue, the humours of a market going on, a fellow with the Cap of Liberty, or red nightcap on a pole, donkeys, pigs, &c.,—a Study, by Reynolds, for the portrait of the Marquis of Granby, &c.

FINE-ART GOSSIP.—One of the happiest applications of Gothic architecture, and a complete refutation of the outcry that it could not be revived for modern civic uses, may be found in the beautiful Market Hall, recently erected at Berkhamstead, by Mr. E. B. Lamb. In this work, variety and simplicity of design are cleverly combined with convenient adaptation, and obtained, it would seem, at moderate cost. For 2,000*l.*, the town in question has a market-hall, lecture-room, reading-room and other apartments, in an honest piece of building, without stucco, without pediments or bow-headed windows, sham pilasters or a portico,—useless exteriorly and darkening the rooms within. Its decorative features honestly suggest the chief use of the structure as a

market-house, and comprise carvings of vegetables, fruit, &c., not gods and goddesses, satyrs, tragic masks and what else.

Messrs. Woollams, of Manchester and London, paper-stainers, have shown us a large collection of designs, made by Mr. G. T. Robinson, architect, of Leamington. These, with great pleasure we highly commend; they are generally designed upon the true principles of decorative Art, and do not affect anything like imitation of natural objects. Conventionalized patterns, often displaying great beauty of form and intense variety, characterize the examples sent to us. The examples are of all classes, including the most costly paperings intended for ecclesiastical purposes, such as the backs of altars and walls of vestries. To the former of these applications of a merely manufactured article we object, believing that there is no apology for the use of anything but good Art direct from the artist, or good handicraft. Those for domestic use, in drawing, dining and sleeping rooms, are based mainly on natural foliage, the hawthorn, buttercup, shamrock, passion-flower, ivy, &c. The general principle of many of these works is Gothic in feeling; others are conventional and suited for all kinds of uses. The same manufacturers, we learn, are about to produce a similar series based upon Greek design. With a few exceptions, the colouring of the specimens sent to us is commendable; in many, it is worthy of the highest praise.

Many practitioners of the mechanical art of photography suffer under the hallucination that all they produce is of value to artists; hence we have speculator after speculator publishing photographic "studies," so called, of the most wretched models, male and female, posed in commonplace ways, farcical to artists—who know that what is valuable to themselves in life-model studies is not the things, but the practice of making them—delusive to the public and their producers. The ugliest compositions of cattle, of still-life, and what not, are thrust in artists' faces by patriotic photographers with the zeal of those boys who insist on selling moribund periodicals at half-price. Once for all, the "profession" may take our word, that, unless composed with the most subtle art (art of which photography has, as yet, not the dimmest idea), its "compositions" are abominable to painters. No artist, who is worth the chair he sits in, will, even if he could, paint from such things. As pleasant memoranda of things seen and enjoyed, as suggestions of the unseen substantialities of the earth, but in no way of the idea of the grandest works of Art—for we doubt if any one feels awed by a photograph of the Pyramids—photographs are handy. Details of architecture come out well by the process; but even in this application we must be on our guard against its weaknesses. Art-value does not lie in the production of the minutest details of an object, unless into it is imported, by the genius of the artist, something of human interest. As yet photographers have not succeeded in putting brains and hearts into their cameras; so that, unless they themselves bring those essential items of humanity to bear upon their productions, such works as that before us, published by Brunellière & Fischer, and styled 'Adjutor,' are good for nothing. What amount of intelligent feeling its producers have our readers will guess when we say, that the best plate represents a "study" of dead fish, which, to suit the convenience of the camera, have been nailed against an upright board!

Mr. G. F. Bodley is engaged upon a church in course of erection at Cambridge, for All Souls' parish, near the College, which promises well in the spirit, grace and loftiness of its design. This has a nave, and but one aisle, on the south, divided by a five-arched arcade of octagonal columns and moulded cups; the chancel placed under the tower, and a vestry at the south-east angle. The interior of the nave and aisle will be lighted by geometrically-traceried windows; the tower-arch will be high in spring and elegantly proportioned, in the character of the edifice—that of the fourteenth century.

MUSIC AND THE DRAMA

MUSICAL UNION.—LAST MATINÉE OF THE SEASON.—TUESDAY July 7. Pianoforte, Lubock, from Paris; Violinist, Auer (from Pesth); Violoncellist, Fiatti, &c. J. ELLA, Director.

MR. BRINLEY RICHARDS'S CONCERT.—WEDNESDAY EVENING, July 1.—The Programme will consist chiefly of a Selection from Mr. Brinley Richards's Compositions and of Works not previously known.—Milles, Parepa, Stabback and Edith Wynne; Mr. Sims Reeves and Lewis Thomas; Messrs. John Thomas, Balist Chatterton, Engel and Payne; Messrs. Benedict, Sullivan, Archer, Pearce and Harjitt.—Mr. Sims Reeves will sing a new Song with Chorus, 'The White Cross of Denmark,' and 'God Bless the Prince of Wales.'—Stalls and Tickets, 10s. 6d. and 5s.; at Messrs. Coombs; and of Mr. Brinley Richards, 4, Torrington Street, Russell Square.

NEW PUBLICATIONS.

VOCAL MUSIC.

It is impossible to class the songs before us, and not easy to find anything new to say concerning a pile of music in which there is so little novelty. It would seem as if the power of producing such sweet, natural English melodies as Arne, and Shield, and Bishop wrote is a lost secret. In their days our music had a character which is now too sparingly to be met with. Our composers attend to modulation and accompaniment more than did their forefathers, but "where (as the Irish lady said of the *torso*), are the features?" We may have paid too dear for our intercourse with foreign parts if we have lost our individuality. Air (to use the old term) is too much neglected and disdained. With this may be mentioned again another cause of depreciation in the English song, the carelessness of our writers as to the words.

Mr. Henry Smart is a liberal contributor to the collection here to be catalogued. "The pure in heart shall meet again," words by W. Guernsey, and "Priez pour elle," the words by W. H. Bellamy, are for a contralto voice. "The magic of the flower," "Bright be her dreams," "Waiting for the Spring" (contralto again), and "Floating leaves," are to words by Frederick Enoch. "Thinking of thee" and "Sir Brian the bold" (the latter a dramatic ballad) bring us back into Mr. Bellamy's company. "Paguita" is by Augustus Greville, Esq. (The above are published by Cramer, Beale & Wood.) There is a level merit in this collection of songs, rising, if not very far, above common-place, and they are neatly finished; but there is more poetry and genius in the few simple notes written to be sung and varied in Beethoven's 'Choral Fantasia' than in the entire eight songs here before us.—The *Bells*, duett (words by E. Poe), and a *Farewell* (words by Tennyson), by Frederick C. Atkinson (Jewell) have some touches of fancy in them—German, rather than English, fancy, however.—"Come hither, come hither," Moore's voluptuous lyric from 'Lalla Rookh,' with its musically sibilant burthen, "It is this, it is this," has been oftentimes set, possibly never in better spirit than here by M. Schulthes (Lonsdale).—*Craigie Burn*, by Rosetta O'Leary Vinning (Ewer & Co.), hardly merits the honours of print.—"Adieu, Adieu!" by Edgar Musgrave (Chappell & Co.), appears under peculiar circumstances. Its writer, we are instructed, is one of the many in whom loss of sight has quickened the musical sense. A certain timidity, distinct from poverty, may be discerned in this song, which is not without its sad grace, but the rhythm is too monotonous.—Mr. Deacon's "Too Late" (Duncan, Davison & Co.) is an ambitious and impassioned setting of the Laureate's lyric of 'The Foolish Virgins.' Despair and entreaty are in it, but it is too fragmentary;—and the word "feet" should not be set to three notes, the middle one being the most strongly accented of the three.—"When loving ones are parted" is a *Romance* by Herr Kucken, and not one of his best; the English words are by Mr. Linley (Cocks & Co.).

Some Part-songs may now be enumerated. In "Evening now soft rapture brings" (six parts), by Joseph F. Duggan (Foster & King), the attempt is more obvious than the success.—Of "Y Tylwyth Teg" (*The Fairies*), by Mr. John Thomas (Addison & Co.), we have spoken elsewhere: another song and chorus from the same hand (same publishers), "Geolad Y telynor a'r Bardd" (*Land of the Min-*

stral Bard), has a good, bold burthen. Mr. Thomas has also harmonized the *Polish National Hymn*, "Boze cos Polake" (same publishers), to English words by Mr. Darby Griffith. The cause is better than the patriotic tune.—"Sir Knight! Sir Knight," *Sintram's Song*, and "The Wounded Cupid," words by Herrick, are by Miss Macirone (Novello & Co.). We have again to commend this young lady as managing voices with ease, cleverness in construction, and a due regard to the grouping of sounds, without which there is no part-writing.—Miss Macirone has been less well advised in her "Henri de Lagardère" (Chappell & Co.), natural and tempting though the admiration be of M. Fichter's acting, which has prompted her to write it. It is a poor and tormented song, *alla Polacca*.—Mrs. Groom contributes *A Patriotic Song* (Lonsdale & Co.) to the Fund for the Spitalfields weavers. It is not equal to her "Over the sea."

"My heart is sair for somebody," and "Blow, blow, thou winter's wind," by Agnes Zimmermann (Ewer & Co.), go far to justify the reputation gained by this young lady in the Royal Academy.—There is a certain ungraciousness of character in the Shakspeare song, referable, no doubt, to the words, but be it right, be it wrong, we prefer Arne's reading. The mixture of melancholy, melody and freshness in his setting is almost unparagoned, in the library of Shakspeare songs.—"Hail! beautiful blossom, fair exotic flower," by T. Walstein (Jewell), written for the recent royal nuptials, contains four lines the mystical charm of which is irresistible.—

Thy fragrance shall the Briton's heart replete
With balmy perfume growing o'er more sweet.
Each opening leaf a mother's joy shall prove
And drink the dew-drops of a nation's love.

It would beat the science of a Bach to mate the above words worthily with music.—"My Mary with the curling hair," by Charles Ball (Addison & Co.), is worth the life.—Four songs, "The green grass covers all," "Yes, loving hearts," "These things can never die," and "Do not call on me," by Henry Fasse (Williams & Co.), merit no better character.—*The Royal Wedding Serenata*, by W. G. Cusins (Lambourn, Cock & Co.), produced, as was duly mentioned, at Her Majesty's Theatre, will not strengthen the reputation of its composer. It may have been a hasty work, but feature and freshness are wanting to it.—*A Book of Music*, by W. Borrows (Metzler & Co.), containing three part and two single ones,—also, a *Réverie* (for the pianoforte alone),—is an amateur's contribution to the finishing of the tower of St. Stephen's Church, Higham Green.—*Serenade*, written for Birmingham by J. A. Langford, the music by A. J. Sutton (Augener & Co.), has been already mentioned in reference to its words. We cannot wonder that in some of the movements of this rather ambitious *Cantata* (as, for instance, the florid *Polacca*, No. 4) the composer has entirely disregarded the sense, and tried to weave a chain of sounds in themselves lively and attractive. The Introduction is one of the best numbers—perhaps because the form of it recalls the Introduction of Mendelssohn's 'Lauda Sion.' There has been worse wedding-music than that of this *Cantata*.—*A Set of Six Songs*, Op. 5, however, shows Mr. Sutton in a more favourable light. They are above rather than below the average.—So also are "To the Muse," Serenade by Coleridge,—"*The Chimes*," "*The Harp and the Poet*," by Joseph M'Kewan (Cramer & Co.).

Lastly, Messrs. Lonsdale & Co. continue active in the reprint or re-issue of *Handel's Songs*, those from 'L'Allegro' being among the last put forth. The couplets, "Hide me from Day's garish eye," are twenty times over worth the entire assemblage of songs, from which we are well content to part.

CONCERTS.—He who has, by the aid of pen, to keep pace with the music of this London June, is very much in the plight of the visitor to the gathering of part-singers at Cologne in the 'Elijah' year, who, before a three-hours long dinner was well off the table, had to grapple with a two-hours long supper of an amateur society, three hotels distant. "Music mad" is the motto of the month; and one may be well forgiven for looking forward to that

saner period when there shall be only four concerts a day, or thereabouts. Be it remembered, that three series of orchestral concerts (exclusive of choral societies) have been going on,—the merciful indulgence and want of enterprise among their directors alone having absolved us from the necessity of following their course in detail. Our chamber-concert givers have been far livelier and worthier—yet, with regard to their doings, simple enumeration must, of necessity, be largely resorted to, howsoever desirous the recorder be to neglect no worthy thing.—We must be contented with stating that the *Matinée of Signori Piatti and Arditi* took place; also that of *Herr Goldberg*;—that the *Pianoforte Quartett Association* has given a new *Pianoforte Quartett* by Herr Molique, of which we shall hear more, and which it would have been wise in the composer not to have withheld from his own concert (now also over), since there it would have benefited by the able support of his daughter, Mdlle. Anna.—In noticing the concert of Miss Lascelles last week, we should not have passed the singing of Mr. Redfearn, whose tenor voice is not unpleasing.—*Master Willie Pape's Matinée* must not pass without a word. He is a child of real musical genius—already a pianist of considerable accomplishment and most tenacious and comprehensive memory,—one to be much praised and not a little grieved over, seeing that he is presented to the world as a prodigy. How sad we hold such a mistake to be, need not be again told—the sadness in proportion to the promise.—*Mr. Deacon* has given his last *Matinée*, at which he followed the humour of the year in attempting to reconcile our public to Schumann's *Pianoforte Quintett*—a humour only bespeaking dearth in that form of chamber-music. Wherefore are not the works of Ries ransacked, and why should not Dr. Bennett, or Mr. Wallace, or Mr. Sullivan do something in relief of the famine—though that, we trust, will never drive our sufferers to enjoy unwholesome food? Of a new song by Mr. Deacon, 'Too Late,' very finely sung by Madame Sainton-Dolby, mention will be found elsewhere.—*M. Halle's Recital* yesterday week was the most interesting one of his series, so far as it has gone. The masterly and fanciful *Sonata* by Schubert, in B flat, one of his later works, belonging to a set of three grand compositions—such as the great German writers were rich enough to give out as a single *opus*—was of itself worth the price of a concert-ticket. How delicious are the melodies of the *allegro*! how bold its transitions!—how well the interest kept up, long as is the movement!—how noble is the *adagio* in F sharp minor, in its nobility next among *adagios* to those of Beethoven!—how simply beautiful the *minuet*!—how quaintly audacious the *finale*! This *Sonata* was our event of the week—being played as only M. Halle can play it. Besides this, he gave Clementi's interesting *Fantasia* in F major, Bach's *Fantasia Cromatica*, with other music; not forgetting three charming trifles by M. Heller, one of which must needs be repeated.—Then there have been concerts by *Herr Blummer*,—and *M. Georges Pfeiffer*, the adopted (as he advertises) "of the *Conservatoire de Paris*," at which himself and M. Lebonc appeared, and where he performed a new *Concerto*, of which report speaks highly. Miss Gabriel's *Cantata*, 'Dreamland,' was repeated,—this time with orchestra.—The above paragraph sketches, we do not say completely, the proceedings of two concert-days in London.

There were some noticeable things at the *Crystal Palace Concert* of Saturday last—of its kind, an excellent one, though less interesting to us than such less showy meetings as are devoted to music rather than to musicians. Herr Habelmann is a German tenor, with an agreeable voice, which would be more agreeable were his vocal skill greater and were his ideas of musical expression more just. His song from 'Martha' will not be tolerated so long as Signor Mario is in the kingdom. M. Lotto is, already, one of the greatest wonder-players on the violin. His tone is not large; but his tune is perfect and his execution is apparently limitless. In expression he is outdone by his contemporary, M. Auer. Meanwhile, the dash and difficulty of his *pizzicati*,—of his scales rapid as lightning, but with every note as

distinct as diamonds on a string,—of his sure and audacious double stops—transport his audiences as rapturously as did the more measured marvels of Herr Joachim's versions of more sterling music. The clever variations by M. Leonard to Haydn's 'God preserve the Emperor,' which M. Lotto played, must be mentioned as a new *solo* of considerable effect and value. The success of this capital executant has led to the wise measure of his having a daily engagement this week at Sydenham; and lovers of violin-wonders must have found the journey thither to hear him well worth taking. Madame Lemmens-Sherrington is in excellent voice, and every month seems to add to the certainty of her execution; but her bird-song from 'Acis and Galatea' might have been read in a less knowing and deliberate fashion. Handel says enough for himself, without the indiscretion of over-emphasis being added to his clearly-marked periods. M. de Vroye (a Belgian, we believe) is a voluble flute-player, with a modest amount of tone. Mdlle. Artôt is finished and warm in M. Gounod's exquisite *Serenade* (which, however, wants the accompaniment not of flute, but of harmonium), and her song and herself narrowly escaped an *encore*. But her tendency to *sforzati* effects, in unconscious imitation of Madame Viardot, must be amended,—as false and second-hand in her case, whereas in that of the original it belongs to resistless natural impulse.

Mr. Benedict's Concert was, as usual, a *cento* of good, bad and indifferent things. In the first category must be placed his own compositions—an *andante* with orchestra, which is, we hope, part of a *Concerto*—being, as it is certainly, one of the most unaffectedly beautiful things we have heard since the year came in, and not marked by any tinge of that dryness which is to be felt in other of its composer's instrumental works.—A very good Italian *scena* by him was very well sung by Madame Lemmens-Sherrington;—and the great scene of parade, composed for Mdlle. Parepa, was given to perfection by that lady, who has of late gained in every respect as a vocalist, and is now among the best singers in Europe.—A *duettino*, by Mr. Benedict's school-mate, from Weber's unfinished 'Three Pintos,' has in it some lively touches of the author of 'Preciosa'—how incomparable among modern Germans as a melodist! Well might Mendelssohn say, "His tunes do so flatter the ear."—It is obviously impossible to go further in the details of Mr. Benedict's stupendous programme.

The reader must not yet be released till he has been told that *Herr Wilhelm Ganz* has received his friends,—that a concert has been given conjointly by Mdlle. *Elvira Behrens* and that pleasing *Lied*-writer, *Herr Abt*,—till he has been reminded of the pleasing talent of *Mr. George Russell*, one of the many young English gentlemen who now do a credit to music, whose concert was given on Monday. We may, possibly, speak of *Signor Vera's Concert*, his music, and the singing of his sister, Madame Vera-Lorini, on Saturday next.

HER MAJESTY'S THEATRE.—'Elisabetta.'—A wild fancy which would make its way the other night, may be forgiven, perhaps, as breaking the monotony of mere report. What would the Shade of England's glorious Virgin Queen—she who loved plays and players, and held the cards against Dons that approached her with Latin addresses— and finished Raleigh's soliloquy with a second line,—and would only be painted "in a garden light" where no shadows could disturb the beauty of her face,—she who discomfited the hosts of the Armada,—who signed away the life of "the Scots Queen,"—and whose glory vanished from earth amid the mournful gloom of heart-ache, remorse and mistrust of those who, perforce, were to wield the sceptre, when her pride was no more,—what (we repeat) would her Shade have felt and thought could it have witnessed Elizabeth's life mirrored to-day in the broken glass of a tawdry Italian playwright—in order that an Italian actress might present her, in her pomp and pride, and coquetry, and wrath, and heroism, and cruelty and weary death—before the eyes of another English Queen's subjects! In truth, the personation is a strange

triumph of genius, as evoking a character of the past out of a few shreds and tatters and doubtful stories and memories. The worse the play, the more wondrous the artist;—and she seemed to us, the other evening, more wondrous than ever,—more imperious, more subtle, more regal in her magnificence, more awful in her solitary decline and death.—Signor Giacometti's drama is school-boy work; Madame Ristori's personation is one of those masterpieces of power which must remain in recollection, after the first amazement and delight and thrill have subsided, so long as life and reason last. It subdued her public more than on any former exhibition of it; and to have seen it again is good for those who are anxious, when weighing and comparing, to keep clear of exaggerating the past at the expense of the present.

On Monday, those who love the gentler graces of romance in the life and sorrows of *Mary Stuart* had their satisfaction. It is impossible to carry further the expression laid out by the dramatist than is done by the actress; and, visibly inspired by the delight of her audience, who seem to relish her performances as they have never till now done, she can never have given more subtlety and power to the encounter between the rival Queens—never have drawn more tears than in the scene of *Mary's* leave-taking of life. The pathos of this last is resistless; the contrast betwixt it and the performance just mentioned marvellous, and beyond the reach of any other actress.

PRINCESS'S.—Mr. Walter Montgomery appeared at this house, on Saturday, in the character of *Othello*. Some interest attached to his appearance, consequent on his having been engaged by Mr. Fechter, and announced on his bills for the last six months; but owing to the success of 'The Duke's Motto,' no room has yet been found for him on the Lyceum stage. Impatient for a London appearance, Mr. Montgomery made terms with Mr. George Vining for his *début* at this theatre; whereupon Mr. Fechter applied to Chancery to prevent Mr. Montgomery acting, but the Court decided in favour of the latter. Mr. Montgomery has a figure suited for the stage, and a good voice;—he has also disciplined himself in gesture, attitude and utterance, his elocution being particularly correct. We had reason, however, to doubt his physical power, as in the third act his vocal energy became exhausted, and it was with difficulty that the actor continued his declamation. He struggled, indeed, manfully against difficulties, and in the end produced a favourable impression. Much allowance is to be made for Mr. Montgomery's anxiety in regard to the Chancery process, which had only just terminated in his favour, and which had temporarily affected his state of health; and though we cannot at present arrive at a decided decision, we shall watch his progress with interest.

NEW ADELPHI.—The applicability of Prof. Pepper's apparatus for the production of apparitional illusions to the purposes of the stage has at length been perceived by a West-end manager, and on Saturday a dramatic version of Mr. Charles Dickens's 'Haunted Man' was placed on these boards. Mr. Webster has certainly improved both on the Polytechnic and the Hoxton displays, and nothing can be more effectively managed than the ghostly appearances at this theatre. The story is not very well made out in the accompanying drama; but Mr. Toole and Miss Woolgar, as *Mr.* and *Mrs. Tetterby*, have an opportunity for domestic acting of which they avail themselves in a remarkable manner. The irritability produced by narrow circumstances was never better indicated, and was interpreted in a style that implied a peculiar genius for such stage-portraiture in both lady and gentleman. Should the ghosts prove popular, this *Tetterby* scene will add greatly to the reputation of these performers.

MUSICAL AND DRAMATIC GOSSIP.—A new *Cantata* by Dr. Bennett was announced for the inauguration of the new building at Slough for the British Orphan Asylum, which took place

on Wednesday last. His 'May Queen' is to be performed on Friday next, at a Grand Concert of the "National Association for the Encouragement of Music," conducted by Mr. H. Leslie.

The run of M. Gounod's noble opera at Her Majesty's Theatre has not broken beyond anything of the kind in our English experiences, and might, we are satisfied, go on profitably to the end of the season were the theatre not a subscription theatre, the frequenters of which require change of performances. It is said that Mr. Sims Reeves is studying the part, with a view of replacing Signor Giuglini at the termination of that gentleman's engagement. We hear, too, that the opera is to be tried in the provinces in its English version. It is advertised at Covent Garden Theatre on Tuesday next.

From the *Journal des Débats* we learn that Mlle. Agar has taken revenge on Fortune by making a successful appearance at the Théâtre Français as *Phèdre*. But while we read this, heartily hoping that the news is true, we must not forget that M. Janin, the chronicler, is a strange guide in the case of tragic actresses. Even as he writes to-day about Mlle. Agar, he wrote years ago about Mlle. Maxime, urging her claims as a rival to Rachel, and then tiring of his advocacy and enthusiasm, with a suddenness and total change of note which must have bewildered his poor client, to say the least of it. She passed into immediate and final obscurity.—M. Jules Lecombe has been giving a one-act piece at the same theatre, 'Une Loge d'Opéra.'

MISCELLANEA

Recovery of Waste Places.—Nichol Street, New Nichol Street, Half-Nichol Street, Nichol Row, Turvil Street, comprising within the same area numerous blind courts and alleys, form a densely crowded district in Bethnal Green. Among its inhabitants may be found street vendors of every kind of produce, travellers to fairs, tramps, dog-fanciers, dog-stealers, men and women sharpers, shoplifters and pickpockets. It abounds with the young Arabs of the streets, and its outward moral degradation is at once apparent to any one who passes that way. Here the police are certain to be found, day and night, their presence being required to quell riots and to preserve decency. Sunday is a day much devoted to pet pigeons and to bird-singing clubs: prizes are given to such as excel in nets, and a ready sale follows each award. Time thus employed was formerly devoted to cock-fighting. In this locality, twenty-five years ago, an employer of labour, Mr. Jonathan Duthoit, made an attempt to influence the people for good by the hire of a room for meeting purposes. The first attendance consisted of one person. Persistent efforts were, however, made; other rooms have from time to time been taken and enlarged; numerous friends of progress have devoted themselves to the benefit of the people; and two years ago a favourable site was obtained on which to erect a spacious hall, in which 500 adults and 1,100 children are constantly collected and brought under unsectarian Christian instruction. Illustrated Lectures are delivered; a Loan Library has been established, also a Clothing Club and Penny Bank, and Training Classes for industrial purposes. The people have commenced voluntary offerings as an expression of their acknowledgment of the benefits received:—during the last year, 30*l.* was thus contributed. So far encouraged, the friends of the Institution, under the presidency of the Rev. Henry Allon, of Islington, have determined upon a further effort. A second piece of land has been obtained, at a cost of 625*l.*, and suitable buildings will forthwith be erected for the accommodation of 1,000 children for educational purposes. The New Buildings, with the purchase of land, will cost 2,150*l.*; towards this sum, 900*l.* has been contributed within the last few days.

HISTORY of ENGLAND DURING THE

REIGN of GEORGE THE THIRD. By JOHN

GEORGE PHILLIMORE, Q.C.

"This volume gives promise of a work which will deserve to be

read... In intention, the book is good; in execution, very good; in

execution, perhaps, to the bigot of all parties, but acceptable to

every man who may be glad to know what an honest thinker and

a rough but able writer has to say about the times of George the

Third."—*Athenæum.*

Virtue Brothers & Co. 1, Amen-corner.

This day, price 6*s.*

THE HARMONY of REVELATION and

SCIENCE: a SERIES of ESSAYS on THEOLOGICAL

QUESTIONS of the DAY.

Christian Religion regarded Practically, Intellectually, and

Devotionally. In Three Sermons preached before the University

of Cambridge. Fcap. 8vo. 2*s.* 6*d.* [Now ready.]

"Both on account of the time when, the place where, and the

persons by whom, these discourses were delivered, they form, in

our opinion, one of the most sensible, able, temperate, and suc-

cessful defenses of the Faith which has ever come under our

notice."—*Clerical Journal.*

Cambridge: Deighton, Bell & Co.; Bell & Daldy, London.

This day is published, in 1 vol. 8vo. price 10*s.* 6*d.*
