"On the 26th April, old style, or 8th May, according to our style, at seven in the evening, and as the snow was fast falling, our little boy was born at the town house, situate on the Gagarines Quay, in St. Petersburg, where we were still staying. A few hours after his birth, his mother, the nurse and I heard for several hours the warbling of a bird as if singing over him. Also that night, and for two or three nights afterwards, a bright star-like light, which was clearly visible from the partial darkness of the room, in which there was only a night lamp burning, appeared several times directly over its head, where it remained for some moments, and then slowly moved in the direction of the door, where it disappeared. This was also seen by each of us at the same time. The light was more condensed than those which have been so often seen in my presence upon previous and subsequent occasions. It was brighter and more distinctly globular. I do not believe that it came through my mediumship, but rather through that of the child, who has manifested on several occasions the presence of the gift. I do not like to allude to such a matter, but as there are more strange things in Heaven and earth than are dreamt of, even in my philosophy, I do not feel myself at liberty to omit stating, that during the latter part of my wife's pregnancy, we thought it better that she should not join in séances, because it was found that whenever the rappings occurred in the room, a simultaneous movement of the child was distinctly felt, perfectly in unison with the sounds. When there were three sounds, three movements were felt, and so on, and when five sounds were heard, which is generally the call for the alphabet, she felt the five internal movements, and she would frequently, when we were mistaken in the letter, correct us from what the child indicated."

We have not quoted the last passage without hesitation: but it is due to the author that the reader should have a clear opportunity of judging him in all the fullness of his delicacy. Mrs. Home and the rapping unborn baby are both dead. While alive they must have enjoyed a busy life, nocturnal as well as diurnal. The following, which fell out after a lecture, at St. John's Wood, by M. Louis Blanc, 'On the Mysterious Persons and Agencies in France towards the End of the Eighteenth Century,' is a sample of similar experiences.—

"On returning home, I found that my wife had retired earlier than usual in consequence of a severe headache. In the course of conversation together, she having asked how I had liked the lecture, I said, 'I have been haunted all the evening by Cagliostro,' on which she exclaimed, 'Pray do not use that word haunted, it sounds so weird-like, and quite frightens me.' I had by this time extinguished the light, and was now in bed, when to my amazement the room became as light as if the sun had for an instant shone fully in at the window. Thinking that this effect might have been only on my spiritual perception, I said, 'Sacha, did you see anything?'—Her reply was, 'No, nor could I, for my face was quite buried in my pillow, the pain in my head is so intense.' I asked her to observe, and I then mentally asked that if the light had been external, it might be reproduced. Almost simultaneously with the thought, came the light again, so distinct, and with such brilliancy, that no noon-day was ever brighter. My wife asked if this was the spirit of Cagliostro, and the affirmative reply was instantly given by three flashes of light, so vivid as almost to be blinding and painful to the sight. Answers were given to various questions in the same wonderful manner, and then in answer to a question asked, came a musical tinkle, as if a silver bell had been touched directly over our heads. In this way our farther answers were now given, and we then heard a footstep on the floor, falling so gently as if it feared to disturb us by its approach. My wife asked that it should come nearer, and it approached us till we felt a form leaning over the bed. In doing this it pressed upon the bed-clothes

just as an actual material presence would have done. We asked him if he had been a medium when on earth, and a distinct voice, audible to both of us, said in answer, 'My power was that of a mesmerist, but all misunderstood by those about me; my biographers have even done me injustice; but I care not for the untruths of earth.' Both my wife and myself were by this time so impressed by such startling and almost terribly real evidence of the presence of one who was in no way related to us, that for a few moments all power of utterance seemed to have left us. We were, however, soon recalled to ourselves by a hand being placed on our heads, and she, seizing my hands in hers, held them up, saying, 'Dear spirit, will you be one of my guardian angels—watch over me with my father, teach me what you would have me do, and make me thankful to God for all his mercies!' Our hands were clasped by a hand, and her left hand was gently separated from mine, and a ring, which was the signet-ring of my father-in-law, was placed on her third finger. This ring was previously in the room, but at a distance of at least twelve feet from where the bed stood. 'Good night, dear ones, and God bless you,' was then audibly spoken, and simultaneously with the sound came three wafts of perfume, so delicious that we both exclaimed, 'How truly wonderful!' Her headache was perfectly cured, and although our nerves had been greatly agitated, we slept soundly. The following day, and indeed for several days afterwards, my wife had occasional proofs of the presence of this spirit, and he remained with her up to the time of her passing from earth, and during the last months of our stay in England she frequently saw him."

By shuddering when coming in contact with a pot of porter at Messrs. Barclay & Perkins's, Mr. Home was acquainted with the decease of his Russian mother-in-law;—long ere the tidings could have arrived in an orderly way.

How Mr. Home floated about in the mansion of a person of distinction, in Hyde Park Terrace, London, and elsewhere, is attested by several persons: for the most part anonymous. This marvel however, almost as common, Mr. Howitt assures us, "as the flying of a bird," is considerably withheld by "the dear spirits" from the light of common day,—and one testifier confesses to having been so bewildered by what took place in these darkened rooms, as not at last to know whether that which he touched was natural or supernatural. But we must leave in all their twilight these exercises of "levitation," as less momentous and surprising than the exhibitions of Leotard, Olmar, and Verrecke, who are not afraid of the flare of gaslight.—Also, we must leave untold a tale of a monstrous branch of a poplar-tree, which would have killed Mr. Home by falling on him, when he was visiting at a country-house in France, had not the "dear spirits" interposed. By way of authentication, a section from this malevolent stick was exhibited to the elect afterwards, in London: when bits of its bark behaved curiously. Mr. and Mrs. Home resided for some time with Mrs. F. C. P., of Cornwall Terrace, in the Regent's Park, who kept a note of what happened. The "dear spirits" seem in Mrs. P.'s house to have been as spiteful in regard "to the gentlemen of the press" as though they had been so many French censors:—

"December 24th. The accordion played in Mr. Home's hand, then five raps asked for the alphabet, and 'Christmas Hymn' was spelled out; again five raps, and 'less earthly light'; we lowered the flame of the four gas jets that were burning over the table; and 'The Manger, the Life, and the passing away,' was spelled out. The accordion played a sweet air appropriate to *childhood*. 'The Life' was represented by the most harmonious strains intermingled with discords at times, as if it were thorny and painful, and the *passing away* died on the air with exquisite tenderness.—January 29th. A séance of eight persons. We had amused ourselves during the time with the article, 'Spirit-

apping made easy,' in the magazine *Once a Week*, which we left on the chiffonier. I saw something pass from the side of the room with great velocity, which vanished under the table. A curious noise was heard like the crumpling of paper, a spirit hand arose, appeared, and placed in the medium's hand a sheet of *Once a Week*, crumpled up and torn. The spirits were at work destroying the magazine—they rubbed it strongly over Mr. Home's shoe, and then placed his foot upon it. The spirits gave each person a bit of the mangled magazine, and the remainder was raised up by a large spirit hand, and placed on a vacant chair, which by invisible power had a short time before been moved from a distance to the table. The table was violently moved up to the centre window, before which stood a piece of the bough of the northern poplar which had been sent from the Château de C—, and which was a part of that, from the fall of which Mr. Home so miraculously escaped. The height of the bough was three feet eight inches, and the circumference three feet. Luminous hands were now and then visible, the table rose gently, and tipped many times against the bough; the spirits threw bits of the torn magazine about it, and placed one piece under it. I asked in Hindostanee, 'Are you making Mr. Novra do *pooja* to the branch?' To which they loudly rapped 'Yes.' The gas-lights from the streets were streaming in, the spirits closed the shutters, and we heard a curious tearing noise, a spirit hand came across my hands, and placed upon them a bit of the bark torn from the poplar, the noise recommenced, and to every one of the circle a bit was given. Invisible power opened the shutters, the trunk of the tree rocked and waved backwards and forwards, and after a time it was lifted up by invisible power and laid upon the table. At this time, 'Oft in the stilly night' was played by the accordion which lay on the floor, untouched by mortal hands. Mr. Home's arms were raised, and he walked to the end of the room, where he was lifted off the ground, and raised until his feet were on a level with the top of the chiffonier, between four and five feet from the ground."

The Spirits were no less violent against the gods of the Hindú mythology:—

"June 2nd. A séance of five persons. As twilight came on, a pleasant dimness fell over the room, and a lady said, 'Is the light the spirits love, like the odylic' to which raps answered, 'More refined.' The spirits moved the table with violence up to the window, near the Hindoo shrine, and the accordion (no human hand touching it) played in the most charming manner, exquisitely and with great power. There was much noise at the Hindoo shrine, the image of Vishnu and the Holy Bull were brought and put on the top of the table, then a large hand, which appeared dark, being between us and the light, put up the accordion entirely above the top of the table, a second hand on the other side took it down again, another hand took a bell off the table and rang it. Mr. Home was raised from his chair erect into the air, and descended on a foot-stool. Then he was drawn to the other end of the room, and raised in the air until his hand was on the top of the door; thence he floated *horizontally* forward, and descended. I saw a bright star constantly flashing forth, the raps died away in the distance, and the séance ended.—June 3rd. A séance of nine persons. I placed a large bouquet of natural flowers on the shoulder of the great marble idol Ganesh. The accordion in Mr. Home's right hand playing most beautifully, harmonized the circle, and the spirit hands touched almost every one present. * * June 11th. *En séance* seven persons. The spirits played beautiful music, and brought to us sprigs which they tore off a sweet-scented verbená which was in the room. They brought the *Deir*, a brass idol holding a mirror, from the shrine, and put it under the table. Mr. Home saw a spirit at the shrine; then they rapped, 'Faith in God, and the change of world will be most glorious, all other—' (the idols which they had placed under the table were rattled violently) 'Gods' were rapped out; again they rapped the idols violently, and beat them against one another with great noise and force, and spelled 'must'; they raised the great

idol *Mahadeo*, and put it on the table. It is the large brass idol overshadowed by the expanded hood of the *cobra di capella*. Then they rapped 'be brought.' They took the idol off the table, and pitched it down violently with a clang and noise, then rapped 'down low before him.' In this manner they elucidated the words they rapped out, 'Faith in God and the change of world will be most glorious; all other Gods must be brought down low before Him.' * * June 22nd. *En séance* seven persons. A spirit hand arose and came to Mrs. Home; it moved about; she was anxious to touch it; a long finger pointed to and motioned her to be quiet. A hand and arm were distinctly seen, and a spirit hand closed the shutters. Flowers were given to some, and were placed on the heads of other persons. My head was twice touched, and twice an arm waved over the table; three times an open hand was strongly pressed on my forehead. A spring-bell from the shutters, used as an alarm, was rung above our heads, and we saw the hand which held it. Mr. Home went into the trance, and said, 'Where the eye ought to be are placed two crosses; the Christian faith will put the eye out. I do not understand what they mean, the spirit is doing it! Hark! hark! don't write.' I ceased writing; we listened, and heard a noise like scratching on the shrine. Mr. Home woke from the trance, and the séance ended. On going to the shrine, we saw on the forehead of the great white marble image of Ganesh two crosses made in pencil by the spirits, just over the centre triple eye of the idol, which denotes its having all-seeing power. This was the noise alluded to by Mr. Home in the trance."

Here is enough, and more than enough, some readers will say, of Mr. Home's revelations, and of the testimonies of his disciples. From first to last there is not a statement in the book so presented as to warrant a sensible man in paying attention to it. To exhibit such a volume is to expose it; and we shall only repeat our first remark—the book contains its own criticism.

The Life of Henry St. John, Viscount Bolingbroke, Secretary of State in the Reign of Queen Anne. By Thomas Macknight. (Chapman & Hall.)

A reader, who is also a judge of literary art, will have no trouble in assigning to Mr. Macknight's *Life of Lord Bolingbroke* its proper rank. He will find that it is not a good book, and that it is not a very bad one. To praise it highly would be a cruel pleasantry; to condemn it harshly would be a cruel injustice. It has the safe merit of mediocrity. The language in which it is written is not bright, and the materials of which it is composed are not new. The old facts are stated in it once again; and we grieve to see many of the old fictions reproduced, without a sign being given that the author is aware how far these fictions have been challenged and exposed. On the whole, in spite of a large pretension in the preface, it can hardly be called a better book than Mr. Wingrove Cooke's '*Life of Bolingbroke*.' Of course, it contains the usual outlines of general history, some parts of which are pretty well done; and it may, therefore, gain an audience from the class which has no knowledge whatever. Such persons are not critical as to details. The commonplace reader loves a commonplace book. To the man who has already some acquaintance with the age of Bolingbroke, and who desires to place his knowledge on a sound basis, it will prove unsatisfactory; conveying to him no distinct image of the shallow, splendid, profligate friend of Swift and Pope, and lacking precision of style and authority of dates even in the statement of mere outward and visible facts in the hero's life.

We use the word "hero" in the storyteller's sense; for in the high meaning of the term

Harry St. John was the very reverse of heroic. Though his qualities were showy and his fortunes romantic, he was a man essentially commonplace and imitative. For a time his excesses were ascribed to a sort of genius run mad; but even his licentiousness had been the work of a sinner more original than himself. Had his uncle Rochester never lived, it is probable that St. John would never have sought renown in the taverns and the stews. Wilnot's notoriety as a wit and profligate inflamed his mind; and he longed to hear it said that he was the wildest fellow in the town. But he imitated everybody whom he admired, or whom he thought the world admired. In his poetry he copied Dryden, in his early politics he followed Marlborough, in his gallantry he rivalled Rochester, in his ambition he emulated Harley, in his perfidies he had the example of Sunderland. As Charles the Second had made love to an orange-girl, so he made love to an orange-girl: his Clara, if we may believe his poetical rhapsodies, being scarcely so respectable a woman as Nell Gwynne. A man so weak in character, however splendid his talent and various his fortunes, is after all but a third-rate subject for literary art; and Mr. Macknight will, perhaps, feel that we pay him a compliment in dealing with the writer rather than with the hero of the tale.

The style of Mr. Macknight may be described as voluminous and correct, but at the same time as wanting in spirit, gaiety and power. It has no sweet surprises. In the seven hundred pages no happy marriage of words delights the ear, no flash of imagery direct from nature lights up the sense. The language, if it has few grammatical defects, has no depths, no mysteries, no beauties. In the main it is of prose most prosy; and where it ventures on poetical forms and secondary meanings, through impersonation, it is modestly content with trying such experiments as long usage has shown to be safe. Thus, if a thing is going to happen in Mr. Macknight's story, we are sure to hear that "the storm is coming," that "the mine is laid," that "the match is lighted," that "the explosion may be expected any moment." If a man has been doing or saying anything—say negotiating a treaty or making a speech in the House of Commons—we are pretty sure to be told that he has borne "the burden and heat of the day." Surely that mine has been laid before, and that match has been lighted at a previous fire. A man of letters would blush to crib jokes from Joe Miller: why should he not equally refrain from using these shreds and patches of poetical jargon? Very little imagery of this familiar kind is enough; and Mr. Macknight gives us a good deal of it. Sometimes his poetical touches are so badly borrowed and so strangely introduced as to become positively comic, like the shreds of finery worn by a Choctaw or a Zulu-Kaffir. For example, when Robert Harley was made a peer, the fact is stated in this wise:—"And so, just as the early summer began, while the fresh-mown hay was pleasantly fragrant in the fields about Chelsea, the boats swam gaily on the river, and the nightingales at Vauxhall were ceasing to sing, Robert Harley was made Earl of Oxford, Earl of Mortimer, and Baron Harley of Wigmore Castle. A few days afterwards he was presented by the Queen with the white wand as Lord Treasurer; and it was whispered through the City that he would shortly have the Garter." In the name of good sense, to which even literary artists have to bend sometimes, what had the fresh-mown hay, the boats on the river, and the nightingales at Vauxhall to do with the intrigues of Abigail Masham and the

success of Harley? This is the misery which comes of indiscreet appropriation. The garment which adorned the white man does not suit the savage; the imagery which brightened verse becomes ludicrous when used at second-hand in prose. The association of times and seasons with outward facts is sometimes close enough to warrant a poet in suggesting a sympathy between them: as, for instance, between May-day and marriage-bells,—between summer-tide and coming of age,—between fogs and suicide,—between singing nightingales and whispering lovers; and those who originally link such natural with human facts do so from a spiritual feeling of the large affinities which connect man and nature. With them the image rises by the side of a genuine fact, and sheds a light upon it. But with the prose writers who, like Mr. Macknight, prey on the poets, these links between man and nature are not original fancies, but acquired properties, of which they have not learnt the use. The African king put the colander on his head, supposing it to be a helmet or a crown.

So, again, with respect to Mr. Macknight's use of critical language: it is all second-hand or tenth-hand, and has the unfitness of literary and other old clothes. Thus, to take only one example out of hundreds, if he has occasion to speak of Dryden's Ode on St. Cecilia's Day, it is introduced to the reader's notice—interesting stranger!—as “the most sublime production of the kind in the language.” Surely ‘St. Cecilia's Day’ needs no certificate from Mr. Macknight, who would probably think it right to present Shakspeare to his reader as “The Swan of Avon” or “The Immortal Bard.” If it were necessary to characterize Dryden's Ode, surely it was possible to describe it in terms more appropriate than those of the bit of borrowed cant, which has no more meaning than any other adjective in a lady's scale, from “magnificent” to “sweetly pretty.”

When we pass from Mr. Macknight's style to his text, the first thing, perhaps, to strike a critical reader will be the number of his errors as to facts of all kinds, minor and major, from the mis-spelling of names—Coningham for Cunningham, Barebones for Barbones; and from mistranslations of French, such as rendering *Je suis ravi*—I am glad—into “St. John was quite ravished,”—up to mistakes about persons and places, and confusions of printed matter of no consequence with manuscripts of great authority and rarity.

One of the most amusing, perhaps, is the mistake of one county for another, as lying on the road from London into France. “While the ships were approaching the river St. Lawrence,” says Mr. Macknight, “and Prior was quietly going down to the house of Sir Thomas Hanmer, to cross over unobserved from the Sussex coast, to confer with Torcy about the conditions of peace, it may be desirable to look a little more closely into the official and private life of the ambitious Secretary.”

A reader will ask, what can this mean? Sir Thomas Hanmer lived in Suffolk, as we suppose Mr. Macknight is aware. How, then, could Prior pass over unobserved from Sussex into France if he went down to Hanmer's house in Suffolk? The reader knows, indeed, that Prior did nothing of the sort, for the facts of this journey became of the utmost consequence to the poet, and to greater men than the poet; and a careful record of them is preserved in the Journals of Parliament. Prior never went down into Suffolk at this time. He went from London direct through Kent, and sailed from Dover in the usual way. All this is matter of official history. Why then, the reader asks, does Mr. Macknight send him into France by

way of Sir Thomas Hanmer's house in Suffolk? Is it an invention, like so many other fictions of biographers? That is not likely. Mr. Macknight is not poetical enough for much invention. We think the confusion in which he has got involved may be explained on very rational and simple grounds.

In one of the multitudinous pamphlets of the hour, called ‘A New Journey to Paris,’ we read that “Prior, having received his instructions from the English court, under pretence of taking a short journey of pleasure, and visiting the Chevalier de H[anmer] in the province of Suffolk, left his house on Sunday night, the 11th of July, N.S., taking none of his servants with him. Monsieur M—e [Arthur Moore], who had already prepared a bark, with all necessaries, in the road of Dover, took Monsieur P. disguised in his chariot. They lay on Monday night, the 12th of July, at the Count de J—y's [Lord Jersey] house in Kent, arrived in good time the next day at Dover, drove directly to the shore, made the sign by waving their hats, which was answered by the vessel, and the boat was immediately sent to take him in, which he entered wrapt in his cloak, and soon got aboard.”

Of this pretence of going down to Sir Thomas Hanmer's, a mere blind on the poet's part to cover his real journey, Mr. Macknight has somewhere read, very carelessly of course, even to the extent of mistaking the pretence for the fact. But how he could have overlooked the parliamentary record is curious, and how he could have dreamt that a house in Suffolk lay in the way of a journey to Paris passes understanding. We must leave this part of the text as we find it.

Let us next take an instance of mistaking printed matter of no particular value for manuscript notes of the greatest interest. At p. 643, in the midst of a chapter on Bolingbroke's relations to Pope, we read: “A genuine letter from Pope to Bolingbroke is itself a curiosity, for it is strange how few of such compositions we possess. This letter, a manuscript copy of which I have found in the library of the British Museum, is one of the most characteristic of Pope's epistles. It exhibits plainly the relation in which Pope and Bolingbroke stood towards each other.” And then follows a letter, with the date of September 3, 1740. Now this very letter was found about forty years ago, and was printed in 1825, in the supplementary volume of Pope's Works. The chief “curiosity” about the thing is that a man who has the courage to write a Life of Lord Bolingbroke should be unaware of such a fact. Nor is this ignorance of Mr. Macknight all. The old copy and the new are both taken from the MS. in the British Museum, and yet they differ in no less than twenty places. Mr. Macknight's text is, indeed, so corrupt as to imply something worse than mere carelessness. Pope wrote to Lord Bolingbroke: “There is so true a fund of all virtues, public and social, within you,”—and Mr. Macknight changes the word *fund* to “friend,” making nonsense of the passage. Where Pope wrote “must” Mr. Macknight reads “might”; where Pope wrote “moral” Mr. Macknight reads “manly.” The new version gives “dignified” instead of “distinguished,” “urged” instead of “tried,” “these” for “those,” “monk and ascetic” for “monks and ascetics,” “may” for “must,” “different” for “deferred,” “take those” for “wake others,” and “the sunny part of” for “under my house.” He inserts some words and omits others which are found in the printed work. In a few instances, he perverts the sense; as where he reads, “Lord Chesterfield despairs as much as ourselves to act,” in place of “Lord Chesterfield despairs as much, but resolves to

act.” Elsewhere he reads, “Be others at home as they will, they cannot be as generous as you,” where Pope really wrote, “Be others as honest as they will,” &c. One obvious error in the printed text, “Erinna” for “Ennius,” Mr. Macknight has avoided; but what are we to say to his reading of the line—

Awful as *Philo's* grove or *Nama's* grove!

The writer adds in a note: “This interesting letter I have given exactly as it remains in the manuscript copy”: words which the reader will now take with a very large grain of salt.

As an example of Mr. Macknight's ignorance of what recent investigation has either overturned or put in doubt, what he says of the Duchess of Marlborough and Pope may be quoted:—“The old Dowager Duchess of Marlborough had of late years been on very friendly terms with Pope, and had given him a thousand pounds to destroy the character of Atossa, which had been handed about, and which she well knew was intended for herself. Though to the last high-spirited and brave, she really dreaded Pope's satire, and had done everything to make him her friend.” The writer does not seem to be aware that this question of—Who was Atossa?—has recently undergone a good deal of exposition. That the poet never meant this hateful character to stand for Sarah Duchess of Marlborough has, we think, been proved. Those who are unconvinced, if there be any such, will allow that a strong case has been established in favour of another original. The friends of Duchess Sarah can at least say that the charge against her is “not proven.” Yet, here comes a gentleman with a Life of Bolingbroke, in which all the old scandals are raked up afresh and given to the world as honest truths, though they have been refuted and set aside in the minds of every competent judge.

We may also refer to an instance of the ease with which Mr. Macknight takes things for granted which admit of profitable inquiry and debate. It is the hostile criticism which he bestows—not once, but many times—on a book called a ‘History of the Four Last Years of the Queen’—that is, of Queen Anne; and presumed to have been written by Dean Swift. Mr. Macknight is very fierce with the Dean for having written this book. One example of his fury will suffice: “Nothing disgusts a discriminating student of those times more than the aspersions which Swift, the greatest literary advocate of this Ministry, constantly casts upon Somers and the Whigs for their tolerant principles. ‘It was the practice,’ wrote the Doctor, ‘of those politicians to introduce such men as were perfectly indifferent to any or no religion, and who were not likely to inherit much loyalty from those to whom they owed their birth:’ as if Harley's ancestors had been remarkable for their loyalty, and as if the author of The Tale of a Tub, and his friend St. John, were most earnest, pious and exemplary members of the Church of England. All this was miserable cant; the men who used it knew it to be miserable cant; and they expected that their readers would be as insincere and shameless as themselves.” Now this is very strong language, and a man who uses it should be certain that he is not attacking one man for the sins of another. What proof has Mr. Macknight that Swift wrote this ‘History of the Four Last Years’? He may answer that he finds it reproduced in the collected editions of Swift's works by Hawkesworth and Scott, and quoted in many common and uncritical works as an authority for a part of the reign of Queen Anne. The fact is so, but it counts for very little; and we are not aware of there being any proof whatever that the work was written by Swift.

What is known with certainty about this curious work may be told in a few words. It was not published by Swift. It was not published during his life. It was not found at his death among his papers. It was not published by a known and responsible friend of the Dean. It contains much that the Dean must have known to be false. No judge of style has ever pretended that it was in his manner or worthy of his pen. All this evidence goes to negative the right of any man, until further proof be adduced, to ascribe the book, abusively, to Swift.

But how, it may be fairly asked, were the two editors of Swift already named persuaded to include this doubtful pamphlet in the collected works? We think that Hawkesworth was careless, and that Scott was hasty. Swift, it was known, had composed a paper on the last four years of Queen Anne; a very stinging pasquinade, which was shown to a few persons, but never published and not preserved. That this paper was destroyed, there is no room for doubt. Our own belief is that it was burnt by Harley, with Swift's consent; but the fact that it was destroyed is clear. Well, many years after the Dean's death, Millar, the publisher, produced a work which he called a 'History of the Four Last Years of the Queen,' under the name of Swift. The story told by Millar, or by Millar's literary hack, of how the manuscript came into his possession was to the last degree suspicious. It was pretended that a gentleman in Ireland, name not given, but described as of great probity and worth, had been entrusted by Swift with a copy of the piece for his opinion; that this person of great probity and worth, being aware that Swift would not publish it, resolved to secrete and retain the copy; and, finally, that on finding either the Dean or his literary executors had destroyed the original, the honest and worthy Irish gentleman parted with his copy to some one, who is not named, so that at last it fell into Millar's hands for publication. The book came out, and this is all the evidence on which it has been ascribed to Swift.

St. Olave's. 3 vols. (Hurst & Blackett.)

THOUGH we do not learn from the title-page the name of the author of this charming novel, it is the work of one who possesses a great talent for writing, as well as some experience and knowledge of the world. 'St. Olave's' can scarcely be the first effort of a young person: the discrimination of character, the depth of thought and felicity of expression forbid any such conjecture. 'St. Olave's' is the work of an artist. The story does not aspire to be a "sensation novel," but it deserves a higher place in the ranks of literature than many works of far greater pretension. The scene is laid in an ancient cathedral city, "a city that had been the cradle and the destiny of kings. And always as you trod the narrow winding little streets, or tracked your path by crumbling gate and ruined postern, you had but to look up and there was the grand, grey, massive old cathedral keeping watch and ward over you. Like the thought of God in the heart of man, facing all his narrow crooked aims and purposes, his crumbling vows and broken resolutions with its front of calm, eternal majesty." The inhabitants of St. Olave's were all rigidly selected, aristocratic, and exclusive, and one of the best characters in the book is a certain Mrs. Scrymgeour, the widow of a late arch-deacon. She is described as "a tall, severe, dignified-looking woman, bristling all over with ecclesiastical propriety, besides which Mrs. Scrymgeour was censor general of the

diocese of St. Olave's, and lady president of the 'Position Committee.'" No one could be received in the society of the Close families unless they had first received the sanction of Mrs. Scrymgeour; and the story opens with a long consultation as to whether it is advisable to leave cards on Miss Bruce, the sister of the new organist at the cathedral.

David Bruce does not possess many of the qualifications usually considered necessary for the character of a hero of romance. We are told that "there was neither style nor fashion about him; nothing but grave, quiet dignity and a certain resolution which could both dare and do great things if need be." His dress is worn and shabby; his bearing awkward and ungainly, and, like the famous M. Paul Emanuel in Miss Brontë's 'Vilette,' David Bruce has nothing in his outward appearance likely to prove attractive to the young ladies of St. Olave's. But when engaged at his work, whether he happens to be composing, or playing on his organ, "David's whole aspect changes. In his music-world he becomes a prince. The wrinkles smooth out from his forehead, his eyes grow full of love and tenderness, his face becomes, as it were, the face of an angel." Janet Bruce, his sister, a neat, methodical old maid, devotes herself to her brother's service, and owns "a quiet face, out of which all that the world calls joy has long ago been quenched, and upon which there rests the benediction that comes when joy has gone—even peace."

The half-page dedicated to Janet's character is worth reading. In a few lines we have the history of a lifetime:—

"Miss Bruce was matter of fact—intensely matter of fact,—that was the very expression to designate her outer life in all its phases and manifestations. Of the inner one no sign was ever given. The springiness and romance of life suddenly wrenched away from her—she buried their memory once and for ever in a grave that no resurrection could open. Instead of weeping over the past, as most do, she turned resolutely away from it; gathered up the countless little cares and duties still remaining, and out of these wove the rest of her life, making it, if not beautiful, at least useful and serviceable. Putting away, as something no longer needed, all hope and longing, she did the best she could to walk worthily in the track placed before her, which was that of a quiet maiden lady."

In contrast with this grave—under less skillful management we might almost have said uninteresting—couple, we have an excitable, haughty lady, full of vehemence and fire, who is apparently on the verge of madness. Mrs. Edenhall comes, through the medium of an advertisement, to lodge with the Bruces, who find it requisite thus to eke out their scanty income; and though an advantage in a pecuniary point of view, Mrs. Edenhall proves no great acquisition to their family circle.

The heroine of the book is a bright, sunny little creature, full of youth and hope, with "a fitful maiden-like freedom in her ways and an unschooled gracefulness in her simple speech." Living with a very old and infirm aunt in the Close, Alice Grey amuses herself in the best way she can, and her favourite pastime, after the Bruces come to St. Olave's, is to hear David playing long overtures and symphonies of his own composing. Janet likes to watch the gay little figure fitting about the quiet, old house; and David is pleased to keep Alice enraptured at his side, "looking up at him, with her young face full of reverence and wonder." He lets "the child" come and sit with him in the organ-loft during service time, and takes her into the dark and dangerous galleries high up almost in the roof of the cathedral, to which he alone has access. Janet is full of praise and admiration for their little

friend. David says nothing, but the thought of Alice is never absent from his mind; and from henceforth the quiet, grey organist has but one aim in life—to distinguish himself, to make money, to become worthy of Alice Grey, to be able to meet her on terms of equality. Little Alice, however, knows nothing of all this. She admires David as the most wonderful man she ever saw, and she likes to be with him, and she considers it an honour to be allowed to kneel beside him and help him to copy out the MS. music for his grand oratorio. She looks forward with impatience to the time when 'Jael' shall be finished, and when it will be performed at the festival at St. Olave's; but while David is long laid up with a fever, Alice "comes out" in the St. Olave's world—is admired and happy, and soon engages herself to be married to Mrs. Scrymgeour's nephew, a rich and fascinating young clergyman; and a very proper marriage it is reckoned in the Close, giving satisfaction even to Mrs. Scrymgeour herself, who has every reason to believe that Mrs. Amiel Grey will settle the whole of her property upon her niece. Alice thinks Cuthbert "very nice and kind" and believes she shall like to be married and live at Grassthorpe Rectory; but the poor Bruces meanwhile are nearly forgotten, and David goes to London to arrange matters about his oratorio, without having heard anything about the Rev. Cuthbert Scrymgeour, and without having told Alice the real end and aim of all his ambitious views.

It would be a pity to unfold the rest of the story, for the whole book is worth reading, and the *finale* is brought about in a happy and unexpected manner.

Supplementary Despatches, Correspondence, and Memoranda of Field-Marshal Arthur Duke of Wellington. Edited by his Son, the Duke of Wellington, K.G. Vol. X. (Murray.)

On fait la guerre en vue d'avoir la paix is rarely so true as Grotius intended it to be, but was never more true than in 1815. Peace was then, if it ever is, the daughter of war, and the Duke of Wellington campaigned as if with the express purpose of shelving himself for life. Few men, of course, came out of the field so luckily. There is little further promotion in this world for a Duke, Field-Marshal, Knight of the Garter and conqueror of Napoleon to strive after. With most others, Waterloo was the drop-scene of an unripe career; with the Duke it was the grand gold and purple glorification which gave him finally to fame, or, as Charles Abbott, Speaker, expressed it, "left the nations of the world no longer in doubt to what name they must thenceforward ascribe the pre-eminence for military genius and unconquerable valour." But there can be no doubt that, irrespective of every personal consideration, he then made war for the simple sake of peace, or that his policy, representing the views of the British Cabinet, was in exact accord with that of Europe generally, Bonaparte not excepted, as some persist in believing. They were all weary of fighting, and the Kings and Emperors especially detested a war with a Revolution at the head of it. What might not the Czar fear, from the effect of example, when an artillery subaltern sat on the throne of France? And yet these monarchs and commanders who exchanged so many and such fervid congratulations after the mighty triumph of Waterloo either mistook the nature of their own work or made an imbecile use of it. Forty years of war procured barely forty years of peace, and how, if the profit and loss were balanced, would the general account stand? Dynastically and politically speaking, Waterloo

was a failure. It failed for France, for Russia, for Austria, for Spain, for the Netherlands, for Belgium, for Greece, for Turkey, for the Old World and the New. It failed in reviving the Bourbons and in stifling the Bonapartes. It secured liberty nowhere, and brought England very doubtful allies. But does it follow that mankind have not benefited by Waterloo? Events are not the less great because followed by other consequences than those which were prophesied in the market-place. The Crimean campaign did not liberate Poland, but it checked Russia; Solferino, while it disappointed Rome, emancipated Lombardy; and Waterloo put down the suicide of France—the restless, fevered, meddling energy of a nation whose history, reduced, if we may so speak, to an average, gives it scarcely ten years of peace to fifty years of war since the coronation of Charlemagne.

Perhaps, however, Waterloo accomplished much in disgusting Europe with war. The sense of relief experienced throughout the civilized world after that day of blood finds utterance through a thousand channels, and must have been in itself indescribable. On all sides it was repeated, that such a war had been closed as should not again be commenced without causes the most mighty and solemn. Nor have the armed powers forgotten their experience of the past century. It has been found impossible, since that 18th of June, to provoke a general contest. The dynasties have sanctioned revolutions rather than go back to the principles of the Coblentz coalition. But, on the other hand, though usurpations have not, on an extended scale, been permitted, each nation has been at war diplomatically, ever since Waterloo, with all the others. Russia, Austria, Prussia, France and Great Britain have had their incessant correspondence—correspondence between governments being nothing less than a bloodless mode of making war; the minor states have had their grievances, appeals, protectorates and mutilations; and France, notwithstanding the defeat of 1815, has played the most winning game of any,—England excepted; because, in spite of the Sepoy Mutiny, the Indian realm of England is larger and richer, and her colonial empire more splendidly developed. France in Africa, Russia in Asia, Austria on the Danube, and Prussia in the North have pursued persistently their separate objects, but all have shrunk from a general war. The German Confederacy quailed before a threat of it in 1849. The same menace was effectual in the Crimea. It was supreme in front of the Quadrilateral. Twice it has privileged the Greeks to take their own independent part. It sacrificed Cracow and consecrated Belgium. The first Waterloo did not accomplish all this. It was the fear of a second, since a great part of what has been done defies the shattered settlements of 1815, prospers in spite of them, repudiates their authority, and exults in a sentiment similar to that of the great Captain, who asked what a treaty was? and answered himself, “A penful of ink.”

These last commentaries of the Duke of Wellington upon the war which ended in 1815 suggest a miscellany of reflections upon the event at Waterloo and the results which flowed from it. There are so many mutual felicitations; there is such thanksgiving and expectancy; all the armies stand at ease; international love is made the subject of a hundred diplomatic essays; and, as we have noted, there has since been no general war. Well and good. But has there been a general peace? By no means. We have had our slaughter by instalments. India, China, Canada, the Crimea, the Baltic, Silistria and Navarino, speak for England; the Czar has not put down a soldier; France is more naval and

military than ever; Austria cannot afford to dispense with a single sentinel or casemate; and Prussia is little better than crowned pipe-clay. So that, from this point of view, war is a mistake—no matter what may be written by jurists about natural rights and the common sense of mankind. But, as a French writer once observed, granted that Waterloo was a failure, what would England or Europe have been without it? That is the question. Doubtless a hundred others, equally pertinent, might be suggested. Suppose France could only be legally governed by queens? The answer comes easily: France would have broken the law and been ruled by a man. France only obeys the laws of Nature because she cannot help doing so; and even in this respect she protests, if she does not revolutionize.

France, setting an example to England, has of late been diverting itself with original accounts of Waterloo. The Duke of Wellington, in these newly-published papers, speaks of himself as the only competent authority upon that topic. Napoleon, unhappily for his own reputation, proved himself incapable of candour; and Blücher's account was necessarily partial. But Napoleon, it may be admitted, took a wider survey than the Duke of the consequences likely to follow such a battle and such a downfall of the French military power. The discussion, however, whether as to the policy or as to the incidents of the campaign, has lately been so warm and so minute that it would be fatiguing to go over the ground again, even with the guidance of Wellington; but this tenth volume of fragments contains, nevertheless, much documentary evidence which is interesting and valuable. It opens with a despatch from the Duke of York to Wellington, signifying his appointment as Commander of the British Forces serving on the Continent of Europe. Several of the subsequent letters exchanged between the Field-Marshal and Ministers at home illustrate a very jealous and quarrelsome state of things among the Allied Powers—particularly as regarded the rival pretensions of Austria and Prussia. Among these, Lord Liverpool's eighteen questions are very important, as bearing on the history of the political mind of England at that period. So are the Duke's notes on the conduct of Metternich and the Austrian Cabinet, which gained so largely by the victory and did so little to help it. “Metternich has, as usual, left us in the lurch,” was a phrase that did not apply only to the day on which it was written—April 9th, 1815.

“I wish to God you had a better army!” wrote General Torrens, on the same day, from Ghent to Brussels; but the Duke was then acting scarcely so much in a military as in a political capacity. On the 11th of April he wrote to Lord Castlereagh:—

“I have since seen Monsieur, who had sent that person to me, having previously informed me that he wished to speak to me; and he told me that the truth was that the Jacobin party in France, and a great proportion of the army, looked to place the Duc d'Orléans on the throne. Monsieur protested repeatedly that he entertained no suspicions of the Duc d'Orléans, but that he was certain the subject had been more than once mentioned to the Duc, and that he could not help thinking that his conduct in absenting himself from the King at the present moment was very extraordinary. I told him that I thought he ought to attribute his conduct to two motives: first, his desire to see his family; and, secondly, his feeling that he was unjustly suspected by the persons about the King, and his desire to keep out of the way on that account. I think it proper to mention this circumstance immediately to you, in order that you may be prepared with a decision, or that at all events you may make me acquainted with the principles on

which you think our language and conduct ought to be guided in regard to it. I entertain no doubt that the Duc d'Orléans is thought of. I heard of such a notion when I was at Paris; and you will observe that the calling the Duc d'Orléans to the throne is the only acceptable middle term between Buonaparte, the army, and the Jacobins, on the one hand, and the King and violent émigrés on the other.”

This is interesting. Not less so the following:

“The Emperor of Russia detests, and is decidedly against the Bourbons. If Buonaparte should be assassinated or killed in battle, or in any other manner put out of the way, he will in my opinion adopt any third person instead of the King; and I know he has gone so far as to think of marrying the Prince Royal of Wurtemberg to his sister, and of making him King of France.”

In those days the Duke thought very ill of the Czar, and said of Cathcart, “the worst of him is that he is disposed to pay great deference to the Emperor of Russia's opinion”; but then he was for cutting all discussions short in view of a sharp campaign, and in the same letter wrote, “I don't want a diplomatist.” Before the month of April closed he reported from Brussels—

“I confess that every day's experience convinces me that there is but little chance of restoring the poor King. Clancarty's last private letter to you speaks volumes upon this subject. In fact, the matter may be stated as arranged. Moutron brought to Talleyrand intelligence of what we know to be the wishes and intentions of the Jacobins and the army; and Talleyrand sent him back with a declaration of the intentions of the Allies upon the same point. I consider the point, therefore, as settled with respect to the King; and it remains to be seen who will be taken instead of him. You see, however, the degree of indifference of the Emperor of Russia, or rather prejudice, against the legitimate Bourbons.”

—“Our object,” he added, “should be, if possible, to restore the King, as the measure most likely to insure the tranquillity of Europe for a short time”—a very hollow basis for a battle of Waterloo! Russia was just then petitioning England for money, and, as the Duke writes, pressing “the King of France in a very urgent manner to take a popular and even Jacobinical line on his arrival in France, to call a National Assembly; and,” Wellington remarks, “it is useless to reason upon these schemes, which are as inconsistent with the wishes of our Government as they are with the wishes and interests of the King.”

On the Battle of Waterloo there are, in this volume, some remarkable additional commentaries by the Duke himself. Of these, one is lengthy; but others present the same points within a narrower compass. The first is dated from Cambrai, April 10th, 1816:—

“The Duke of Wellington presents his compliments to Sir John Sinclair, and is much obliged to him for the account of the defence of Hougoumont. The battle of Waterloo is undoubtedly one of the most interesting events of modern times, but the Duke entertains no hopes of ever seeing an account of all its details which shall be true. The detail even of the defence of Hougoumont is not exactly true; and the Duke begs leave to suggest to Sir John Sinclair that the publication of details of this kind which are not exact cannot be attended with any utility.”

The second is also from Cambrai, and addressed to Sir John Sinclair. It is not a very pleasing letter:—

“I have received your letter of the 20th. The people of England may be entitled to a detailed and accurate account of the battle of Waterloo, and I have no objection to their having it; but I do object to their being misinformed and misled by those novels called ‘Relations,’ ‘Impartial Accounts,’ &c. &c., of that transaction, containing the stories which curious travellers have picked up from peasants, private soldiers, individual officers,

&c. &c., and have published to the world as the truth. Hougoumont was no more fortified than La Haye Sainte; and the latter was not lost for want of fortifications, but by one of those accidents from which human affairs are never entirely exempt. I am really disgusted with and ashamed of all that I have seen of the battle of Waterloo. The number of writings upon it would lead the world to suppose that the British army had never fought a battle before; and there is not one which contains a true representation, or even an idea, of the transaction; and this is because the writers have referred as above quoted instead of to the official sources and reports. It is not true that the British army was unprepared. The story of the Greek is equally unfounded as that of Vandamme having 46,000 men, upon which last point I refer you to Marshal Ney's report, who upon that point must be the best authority."

Mr. W. Mudford fared little better:—

"Upon my return here on the 29th April I received your letter of the 13th April, and the first part of the work which you propose to dedicate to me, and I beg leave to make you my best acknowledgments for this intention. I have long, however, felt myself under the necessity of declining to give my consent that any work should be dedicated to me, with the contents of which I am not previously acquainted; and you will readily believe that I feel this necessity in a stronger degree in regard to a history of the battle of Waterloo than I should do upon any other subject. More accounts have been published of that transaction than of any other that for many years has attracted the public attention; and those who have written them have thought they possessed all the necessary information for the purpose when they have conversed with a peasant of the country, or with an officer or soldier engaged in the battle. Such accounts cannot be true; and I advert to them only to warn you against considering them as any guide to the work which you are about to publish. * * You now desire that I should point out to you where you could receive information on this event, on the truth of which you could rely. In answer to this desire, I can refer you only to my own despatches published in the *London Gazette*. General Alava's report is the nearest to the truth of the other official reports published, but even that report contains some statements not exactly correct. The others that I have seen cannot be relied upon. To some of these may be attributed the source of the falsehoods since circulated through the medium of the unofficial publications with which the press has abounded. Of these a remarkable instance is to be found in the report of a meeting between Marshal Blucher and me at La Belle Alliance; and some have gone so far as to have seen the chair on which I sat down in that farm-house. *It happens that the meeting took place after ten at night, at the village of Genappe*; and anybody who attempts to describe with truth the operations of the different armies will see that it *could not be otherwise*. The other part is not so material; but, in truth, I was not off my horse till I returned to Waterloo between eleven and twelve at night."

Among his earliest reports from the field was one, now for the first time printed, to Lady Frances Webster, dated Brussels, June 19th, 1815, half-past eight in the morning:—

"Lord Mountnorris may remain in Bruxelles in perfect security. I yesterday, after a most severe and bloody contest, gained a complete victory, and pursued the French till after dark. They are in complete confusion; and I have, I believe, 150 pieces of cannon; and Blucher, who continued the pursuit all night, my soldiers being tired to death, sent me word this morning that he had got 60 more. My loss is immense. Lord Uxbridge, Lord FitzRoy Somerset, General Cooke, General Barnes, and Colonel Berkeley are wounded: Colonel De Lancey, Canning, Gordon, General Picton killed. The finger of Providence was upon me, and I escaped unhurt."

He was not yet sure that all was over, for on that day he urged Lord Bathurst to send him "good British infantry," for, he said, "you'll

see how we are reduced. Some of the battalions have not a hundred men."

The military interest of the Duke's career almost ceases with this volume. There remain, we believe, considerable masses of memoranda and correspondence bearing on the political annals of Europe from 1815 down to the latest years of Wellington's life—a very gallant, faithful, soldierly life, but one which neither twenty years of war nor forty years of statesmanship ripened into the life of a politician.

The Bible: its Form and its Substance. By Arthur P. Stanley, D.D. (J. H. & J. Parker.)

Sermons preached before the University of Oxford: Second Series, from 1847 to 1862. By Samuel, Lord Bishop of Oxford. (J. H. & J. Parker.)

WE have here two clergymen who well illustrate a distinction which we have several times had to predict as on its way. First, the Bishop who has announced that he would begin his controversy with heretical clergymen by punishing them, after which he would proceed to give an authoritative announcement of the doctrine of his church. Secondly, the Regius Professor, who pronounces the Greek Church to be "the most orthodox of European Churches," that is—more orthodox than his own.

We have several times said that if the clergy are to be restrained from open discussion of doctrine, if their extra-cathedral writings are to be subjected to a restrictive and castigative censure, the whole body will at once lose their authority with the reasoning laity. Nobody will believe in their apparent uniformity of doctrine; nobody will respect conclusions which he will know the propounder was not free to reject. We see, as plainly as any one can do, the greatness of the evil which arises from clergymen advocating doctrines which are, in appearance at least,—and very likely in reality—opposed to the plain meaning of their subscriptions. But we also see the greater harm which will arise from a general conviction that a clergyman is a doctrine automaton, whose tunes are set on a barrel, of which he is only to turn the handle. Opinion will keep liberty within limits: but opinion will never make slavery respectable.

Dr. Pusey, the head of the declining Neo-Laudian school, who, as our columns have recently shown, still does business as the spiritual director of Protestant nunneries, has, in concert with some—for him—very strange associates, attempted to prosecute Prof. Jewett for heresy in the small-debt Court at Oxford. The Court has refused to act, and is threatened with an appeal to make it act. In the newspapers, the chief promoter has declared that he never held the famous "non-natural" doctrine. Jack Wilkes used in his later days to say, "I never was a Wilkite": we suppose we shall have Dr. Pusey declaring that he never was a Puseyite. Such a little parody on greater things as this small-debt movement is just what was wanted to foreshadow the results of the repressive system, if it were to become general. At the outset, the attempts of Convocation or of the Bishop of Salisbury have a certain grandeur, or at least a certain size. Let them be fully successful, and the small-debt proceedings will come on by the score. The day is past in which a few punishments can keep down thought. The spirit of inquiry is burning throughout the clerical body; and the wind which might blow out the small flame will only fan the large one. Let the thing go on, and all the minor courts in the country will be at work chopping theology, amidst the grins of the merry and the regrets of the wise.

We are compelled to say that one of those paltry prosecutions should be aimed at Dr. Stanley. His very method marks him out for suspicion. In the old schools of divinity, when the orthodox doctor sat as moderator of the disputes, we can easily imagine that he thought *Nego* and *Concedo* were either as orthodox as himself, or in the way to become so. But we cannot help thinking that he looked askance at *Distinguo*, and said to himself, I distrust that fellow. Dr. Stanley *distinguishes*. He lectures to the University upon the "sundry times and divers manners" in which God has spoken, and abandons the orthodox theory of uniform verbal inspiration. He speaks most plainly in his preface. The doctrine of equal and uniform inspiration is called by him "the Helvetic theory," as having been first systematized in the *Formula Helvetica* in 1675. After adverting to the fact that the word "inspiration" is never used in the Book of Common Prayer in other than a general sense, and making large quotations from his contemporaries, he affirms that "The treatment of the Bible, according to a theory of literal inspiration, which would make every theology impossible [so far he is quoting Döllinger] can henceforth be no more imposed on the English Church." He then affirms that the Helvetic theory was not held by Jerome, by Chrysostom, by Erasmus, Luther or Calvin, by the most eminent biblical critics in Germany, France, or England. This is very plain speaking. We have nothing to do with these conclusions, so far as we are journalists: what we have to do with is the free right to discuss such matters, the grave necessity for the discussion, and the folly of those who think that they ought to destroy, or that they can impede, the progress of such discussion.

Illustrated Natural History. By the Rev. J. G. Wood. Vol. III., comprising the *Reptiles, Fishes and Invertebrate Animals*. (Routledge, Warne & Routledge.)

THE author of this work has long devoted himself to the production of a class of books for which there is, happily, in the present day, a large and increasing demand. The people, whether moderately or more highly educated, are awakening to a sense of all that is beautiful and interesting in nature. They are becoming aware that a walk in the country affords something more than mere bodily exercise, and that every step may bring them in contact with some object of interest, some striking example of "the wisdom of God in creation," upon which the mind dwells with the cheerful consciousness that the object of its contemplation is as pure as it is absorbing. Mr. Wood's previous smaller publications are well calculated to excite, and, as far as they go, to satisfy the growing desire for this branch of knowledge. In this object we consider that he has been engaged in a task peculiarly consistent with his sacred calling, and that on opening to the public mind the material volume of God's works, he has been cultivating one phase, and not an unimportant one, of the religion which it is his appointed office to teach.

His more extensive and elaborate work, the concluding portion of which is now before us, has a wider and more ambitious aim; for the 'Illustrated Natural History' includes the whole range of animal organization. It is essentially a popular work. It does not profess to assume the character of a complete scientific *résumé* of the animal kingdom; but it does profess to supply the public at large with general information on all the different classes of animals, and with detailed histories of the most interesting and important species.

The only work in this country with which it can be compared is the large folio of two volumes, published many years since by Mr. Charles Knight. The letter-press of that work is undoubtedly accurate, and, on the whole, satisfactorily written, and most of the illustrations are very beautiful and instructive; but as the work was "got up" for the purpose of utilizing still further the numerous wood engravings which had already been employed in other publications, the text had, in some degree, to be written to the figures, instead of the figures being executed to illustrate the text: and the general design is, consequently, not so entire as it should be. In the present case there was no such difficulty. The subjects for illustration are of the author's own choice, and the spirited publisher has furnished them with unstinted liberality, both as regards number and execution. No one, therefore, but the author himself is amenable for the manner in which the work is executed, either as regards the general arrangement or the selection of examples in each group. Upon the whole, he has well fulfilled his ostensible object, and there are fewer marks of haste than might have been reasonably expected considering the rapidity and the great regularity with which the successive numbers have appeared. The style is free and familiar, as it ought to be in a popular work, and the information is correct and varied; and this is particularly the case in what may be specially termed the history of the animals, their mode of life, their instincts and habits. The following account of the power of fascination commonly attributed to the rattlesnake may be quoted as a fair example of the manner in which a somewhat ambiguous subject is treated:—

"The food of the rattlesnake consists of rats, mice, reptiles and small birds, the latter of which creatures it is said to obtain by the exercise of a mysterious power termed fascination, the victim being held, as it were, by the gaze of its destroyer, and compelled to remain in the same spot until the serpent can approach sufficiently near to seize it. It is even said that the rattlesnake can coil itself at the foot of a tree, and by the mere power of its gaze force a squirrel or bird to descend and fling itself into the open mouth waiting to receive it. These phenomena have been strongly asserted by persons who say that they have seen them, and are violently denied by other persons who have never witnessed the process, and therefore believe that the circumstances could not have happened. For my own part, I certainly incline to the theory of fascination, thinking that the power exists and is occasionally employed, but under peculiar conditions. That any creature may be suddenly paralyzed by fear at the sight of a deadly foe is too well known to require argument; and it is therefore highly probable that a bird or a squirrel, which could easily escape from the serpent's jaws by its superior agility, might be so struck with sudden dread on seeing its worst enemy, that it would be unable to move until the reptile had seized it. * * Thus far there is no difficulty in accepting the theory of fascination; but the idea of a moral compulsion on the part of the snake, and a perforce obedience on the part of its victim, is so strange that it has met with very great incredulity. Still, although strange, it is not quite incredible. We all know how the immediate presence of danger causes a reckless desire to see and do the worst, and heeding only the overpowering impulse that seems to move the body without the volition of the mind. * * Some persons acknowledge the fact that the bird approaches the snake, and is then snapped up, but explain it in a different manner. They say that the bird is engaged in mobbing or threatening the snake, just as it might follow and buffet a hawk, an owl or a raven, and in its eagerness approaches so closely that the snake is able to secure it by a sudden dart. * * But the many descriptions of the fascinating process are too precise to allow of such a supposition in the particular

instances which are mentioned. Even the common snake of England can exercise a similar power. I have seen one of these snakes in chase of a frog, and the intended victim, although a large and powerful specimen of its race, fully able to escape by a succession of leaps such as it would employ if chased by a human being, was only crawling slowly and painfully like a toad, its actions reminding one of those horrid visions of the night when the dreamer finds himself running or fighting for his life, and cannot move faster than a walk or strike a blow that would break a cobweb. * * One of my friends when in Canada saw a little bird lying on the ground, fluttering about as if dusting itself, but in a rather strange manner; and on his nearer approach, a snake glided from the spot, and the bird gathered its wings together, and flew away."

We have said that there are few indications of haste. There are, however, some which we doubt not will strike the author on a re-examination of the work preparatory to any future edition. As an example, we would mention that, at page 29, the dorsal shield of the crocodile is erroneously said to be composed of *horny* plates, whereas just before they had been correctly termed *bony*. The family of the so-called soft turtles is termed "Trionycidæ." Now every one knows that in grammar derivatives are always taken from the genitive case of the primitive, and as the genitive of *ὄνυξ* is *ὄνυχος*, the family name should be *Trionychidæ*.

One of the principal deficiencies in this work is the meagreness, in many instances, of statistical and economical information. In one number, for example, at pages 304, 316 and 319, the statistics of three of our most important species of fish, in a commercial point of view, are very imperfectly treated. The Newfoundland cod-fishery, although constituting one of the most important fisheries in the world, and having, during the long war, furnished the most extensive and effective contingent to the manning of our Navy, is not even alluded to. The details of the herring fishery are very inadequate, and the pilchard is dismissed in half-a-dozen lines.

The illustrations are, almost without exception, excellent. There is a bold but natural character about them which is very striking, and the wood-cutting is worthy of the Brothers Dalziel, by whom all the figures are executed. What, for instance, can be more brilliant and effective than the fire-fish, at page 249, or the harp-shell, at page 337? The value, too, of that portion of the work which is devoted to the Mollusca is greatly enhanced by excellent figures of the animal inhabitants of the various shells.

This publication undoubtedly supplies a want in our Natural History literature. It is comprehensive, generally correct, popular both in its style and in the selection of its subjects, and on the whole is admirably suited for the object at which it aims, that of furnishing the masses with a safe, intelligible and well-written history of animals; whilst its cheapness renders it accessible to thousands who could not afford expensive works in detached departments of the subject.

The Frithiof Saga: a Poem. Translated from the Norwegian, by the Rev. R. Muckleston, M.A. (Bell & Daldy.)

THE present translation is calculated to satisfy, at all events temporarily, a veritable want on the part of the English reader. Few are there, we presume, of those who take any kind of interest in their Scandinavian kindred, who are not acquainted by name at least, with 'The Frithiof Saga,' and all readers of English indeed, have long made acquaintance with one of the most esteemed productions of the

Swedish Bishop, 'The Children of the Lord's Supper,' in the genial version of Longfellow. But the poem itself has been hitherto a sealed book, except for the few students of Swedish among us. Versions of 'The Frithiof Saga,' to the number of two or three, do indeed already exist in English; but their merits have not been sufficient to make the poem in anywise popular, which a really good version would, we imagine, be calculated to do, since the relation of English to Swedish is so intimate, that it would be possible to preserve in translation much more exactly the spirit of the original than that process ordinarily admits of. *Ha attendant*, Mr. Muckleston's is a free and, for the most part, a vigorous rendering; although there are many points against which we shall be constrained to enter a protest.

'The Frithiof Saga' deserves its reputation as, perhaps, the most perfect poem on a large scale which has been based on Scandinavian legend, and the life and manners of the Northern Viking before the introduction of Christianity.

Ewald, indeed, the Danish poet, has left a very fine poem on the death of Balder. Oehlenschläger has splendidly dramatized many heroic and tragic incidents from Norse history, and has, besides, written 'Helgø,'—a fine poem of an epical character, which Tegner has not disdained to declare was, if not the model, at least the moving cause of 'The Frithiof Saga.' But Ewald's poem, although full of the author's usual fire and energy, is not so true as Tegner's to antiquarian research; and Oehlenschläger's production is, among the mass of his compositions, by no means so carefully elaborated or so successful in its form as its Swedish successor.

'The Frithiof Saga' is worked up out of the incidents of the original old Saga of that name, as it comes down to us, in the same way as Tennyson's 'Idylls of the King' are built upon the old Welsh legends of King Arthur. The events of the Saga are supposed to have veritably happened about the beginning of the eighth century of the Christian era; and, as in the case of the 'Saga of Burnt Njal,' translated by Dr. Dasent, there are localities still bearing the same names as those mentioned in the legend, or connected in designation with the names of its personages. The main story of the poem is very brief.—Ingeborg was the daughter of King Belø, who had likewise two sons,—the dark and evil-hearted Helgø and the thoughtless Halfdan. Frithiof was the son of Thorstein, a Bondè, yeoman, or rather free land-owner, just below a Jarl, the true friend and brother-in-arms of Belø, his king, whose kingdom he helped to rule in peace and defend in war. The mothers of Ingeborg and Frithiof, being dead, they were brought up together in the house of Hilding, their foster-father, and consequently became attached to each other. The old King Belø and his friend Thorstein died, recommending their sons, with their last breath, to remain united in friendship. Soon after, Frithiof, in full Thing, or assembly, demands the hand of Ingeborg in marriage of her brothers, the sons of Belø, but is rejected with insult, and Ingeborg is placed under the protection of Balder's temple, to secure her from the visits of Frithiof, who, nevertheless, violates the sanctity of the sacred precincts by forcing his way into them, and betrothing Ingeborg by means of a golden arm-ring curiously carved, one of the heirlooms of his family, which plays a great part in the narrative. Ring, a neighbouring and aged warrior, now makes war on the two brothers, and demands the hand of Ingeborg. Helgø and Halfdan, upon this demand, the service of Frithiof, who is brooding, like a Northern Achilles, over his

wrongs, but on their summons comes once more to the Thing, and offers his assistance in return for Ingeborg's hand; but Helgè again refuses him, not only because he is the son of a Bondè, but because he is hateful to the gods as the desecrater of Balder's temple. He, moreover, banishes him for ever from the land, until he has crossed the sea and brought back the tribute due from Argantyr, Jarl of the Orkney Islands. Frithiof, on the advice of Ingeborg, departs on his mission, and brings back the tribute, but returns only to find his lands laid waste and his house burnt to ashes at the commands of Helgè. The brothers have married Ingeborg to King Ring. Frithiof, full of rage, enters the temple of Balder, where the dark Helgè and the thoughtless Halfdan are sacrificing. Frithiof strode up and stood before Helgè, and hurled the purse full of tribute-money into his face, and laid him senseless (the old Saga says he knocked out two front teeth). He then spied the bracelet he had left with Ingeborg on the arm of the image of the god Balder: in his rage he rushed to seize it, overthrew the statue upon the fire of the altar; and in the confusion which ensued, not only the image of Balder, but the whole temple was consumed to ashes. Frithiof has now the ban of exile upon him, and takes to the life of a Viking for some years; at the end of which time he visits the court of King Ring and Ingeborg in disguise. Ring, who knows all the story of the loves of Ingeborg and Frithiof, recognizes the terrible Viking in the disguise of a herdsman, yet, nevertheless, entertains him hospitably, and puts his life in his power. Finding the good faith and honour of Frithiof proof against all temptation, and his own decaying strength now unequal to the task of government in those wild times, he leaves his wife, child and kingdom to Frithiof, and rips himself up with a sword, after the manner of the old Norsemen. On his death, Frithiof is elected king in his room; he makes atonement to Balder by the erection of a new and splendid temple. One of the brothers, Helgè, the dark and evil-souled, came to a bad end in war against the Finns; but with the other, Halfdan, who was only thoughtless, Frithiof was reconciled, and hero and heroine were united by his hand.

Such is the story, in which Tegner in a few points only has departed from the original. It may be doubted whether, interesting as the romance doubtless is in itself, and sufficient for the purposes of the minor epic, it has real purport and sufficient depth about it to make it suitable for an epic of the larger order. But, waiving this point, the greatest mistake which Tegner made, in our opinion, is in the adoption of the fashion of writing it in a series of ballads of different metres. He has undoubtedly shown great skill in choosing the measures of his ballads, so that they shall be characteristic of the portion of the story under treatment; but the general sweep, current and continuity of the tale is destroyed by this continual break of gauge. The mind in reading a poem gets into an habitual swing adapted to the metre in which it is written, and which seems to belong to it; but every change of rhythm brings with it new associations, and dispels the charm of continuous illusion. Besides this, the poem of Tegner wants sublimity, partly from his ballad-way of treating his subject, and partly by the limitations of his creative faculties: he never, as is the case with all great epic poets, fills a large canvas; he has no descriptions of majestic assemblages, magnificent armies and multitudinous conflicts—no exalting portraiture of any kind, little depth of feeling, small power

of conception of character, and no tragic or dramatic situations, with the exception of the one parting scene between Frithiof and Ingeborg, which, though cold, is very different in both feeling and execution from all the rest of the poem. Nevertheless, the poem has great merits from the clearness and freshness with which every thought and conception are embodied and portrayed, the true poetry and naturalness of its imagery, and the sound and healthy feeling which predominates throughout the whole, and presides over the inevitable combination of some modern sentiments into the feelings and actions of former times, however truly rendered. Some of the most successful portions of 'The Frithiof Saga' are the embodiment of precepts into lines which read with all the terseness and strength of old proverbs: the advice given by the dying King Belè and by Thorstein to their sons is one sample; another is the "Vikingabalk," or the rules of the Viking code, which is rendered as well by Mr. Muckleston as any portion of the poem.—

Then a daring sea-rover he swept o'er the main,
Like a falcon that hunts on the wave;
But stern was the rule he ordain'd for his men;
Wilt thou list to the law that he gave?—
Foes abide in each house, rest thou rather on board;
Unshelter'd on deck shalt thou lie;
On his shield sleeps the Viking, his hand on his sword,
And his tent is the starry blue sky.
In length but an ell is the sharp sword of Frey,
Ehert the hammer of conquering Thor;
Is thy scabbion too short? go thine enemy nigh!
Thou'lt it complain of its shortness no more.
In tempests hoist high on the topmast thy sail,
Hoist it higher the wilder they sweep;
But to strike it disdain in the stormiest gale;
Ere thou strike meet thy grave in the deep.
Seek thy maiden on shore; woo her not on the wave;
Were she Freya herself, yet beware!
For the dimple that lurks in her cheek is a grave,
And her tresses a glittering snare.
Wine's the drink of the gods, and a revel is good,
Yet be sure that thy wit thou retain;
If thou stagger when here, and art lost in the flood,
Thou'lt awake in the chambers of Ran.
Protect thou the merchant that crosses the main,
But his ransom must fairly be told;
Thou art king of the sea, he's the vassal of gain,
And thy steal is as good as his gold.
When the battle is o'er, and thou rest from thy toil,
Cast the dice, and the booty divide;
But the sea-king himself casts no lot for the spoil,
He's content with the glory and pride.
Does a Viking approach? Lo! the charge and the fight,
And warm is the work under shield;
Wouldst thou still bide with us? let thy courage burn bright,
We reject thee one step if thou yield.
Art thou victor? be mild! he for mercy that prays
Bears no sword, is no longer thy foe;
Prayer is Valhalla's child; list the word that he says—
He's a craven that answers him "No."

As an illustration of Tegner's finer poetical diction, the following passage may be cited,—the imagery of which, if it has not been adopted by Tennyson, is quite Tennysonian:—

Oh! what is woman if she rises asunder
The link with which Allfather's will hath bound.
Her helpless being, to the strong one's arm?
Her emblem is the pallid water-lily
Upon the lake, which rooketh to and fro
As the waves urge her; whilst her tender head
Bears the rude shock of each unheeding keel.
If she maintains her station, with her root
Fast-grounded in the sandy depths below,
She keeps her worth; and from the stars above
Borrows her delicate charms; herself a star
In the deep ornament of waters blue.
But if she once break loose, she drives at random,
A wither'd leaf upon the billows wild.

We would, however, by no means mislead our readers to think that there is the slightest similarity of thought or sentiment between Tegner and Tennyson. Tegner is rather a sort of compound between Longfellow and Sir Walter Scott,—uniting the clear and limpid expression and well-defined thought of the one with the deeper love of antiquity and sustained power of romance of the other. Tegner's favourite authors were, indeed, Ariosto and Sir

Walter Scott, whom Byron has finely called the Ariosto of the North. The passion of romance seized Tegner when quite a child: he knew at the earliest age passages of Ossian by heart, and used to talk about declaiming the speeches of Oscar and Morven, wielding and tossing a mock spear and wearing a mock helmet. He had a horror of all German mysticism and obscurity, declaring that dark expressions came from dark conceptions:—

Det dunkelt sagda, är det dunkelt tänkte.

He said the proper image of the Northern-Swedish nature was a cold, clear, but fresh winter day, which steals and braces all the energy of man to contend against an unwilling soil. 'Axel' is perhaps, after all, the most perfect though not the most ambitious of his productions. It is a romance of the Walter Scott order, applied to incidents and characters of the time of Charles the Twelfth.

Mr. Muckleston's translation may be generally characterized as meritorious, although he has permitted himself to step beyond the limits of authority conceded to a translator by endeavouring to improve upon his author and condensing and abbreviating scenes. He has, for instance, omitted the Skating scene, which Tegner purposely put in, in order to fill up his delineation of Northern life. Mr. Muckleston thinks a hero on skates cannot support the dignity of an epic, although he gives us the hero and his friend at chess. It is a misfortune that he has chosen to translate from the Danish version of Foss and Mosen, and not from Tegner's own Swedish. Moreover, we are surprised, considering that the general execution of the translation is good, that a lover of Northern song should make use of such a number of obsolete pseudo-poetic words, of Latin origin or use, such as "beauteous," "beneficent," &c.—to find our extinct friend Sol "beaming" over wastes of Norland snow, and "angelic" ministers in attendance on the heroes of Valhalla. Nevertheless, but for these mishaps, Mr. Muckleston's translation may be read with pleasure.

Wilhelmina Schröder-Devrient: a Contribution to the History of Musical Drama—[*Wilhelmine Schröder-Devrient: ein Beitrag zur Geschichte des musikalischen Drama*, von Alfred Baron von Wolzogen]. (Leipzig, Brockhaus.)

MUSICAL biography here receives an interesting addition in a book carefully made, by an accomplished writer, who has the fullest sympathy with his subject,—the artistic life of Madame Schröder-Devrient. With much in her character to fascinate and engage, a sort of wild, enthusiastic earnestness, which she brought with her from the stage into society, there was, unhappily, in her private history as much to regret; and this, though impossible to be concealed, it was necessary and graceful for her biographer to touch on lightly. She sacrificed her happiness, her career, her life, to the ceaseless indulgence of passion (if it deserve the name). The few friends who were not alienated from her till the last, had to go through a perpetual penance of forgetting and forgiving. Possibly, as a child she had been ill trained; it has been often said so; it is more certain that she was singularly hard to train; that she had no exalted standards of virtue before her, and was thrown by her birth into the cauldron of fever and excitement which seethes in every theatre. Her artistic education was somewhat peculiar, and exercised an influence on her whole after-career. The flexible beauty of her person and the vivacity of her temperament prompted her mother to make of her a mime and dancer, in which characters she first appeared on the

tage. Later came signs of a voice, an inheritance from her father, who was a redoubtable singer (the best *Don Juan*, it has been said, that ever appeared in Germany); and she was then subjected to vocal tuition. But either she was a rebellious scholar, or her teaching was not complete, or the dramatic influence of her mother (the Siddons of Germany) predominated. It is certain, at least, that though her voice was a real powerful *soprano*, sufficient in compass and in quality, it can never have been thoroughly subjugated and smoothed, so as to bring it to a level with those of the Italian opera queens. She was always at the antipodes to Mara, who, on being remonstrated with as lifeless in one of her parts, replied "Would you have me sing with my arms and legs? What I cannot do with my voice I will not do at all." Then, in Germany, even so early as when Wilhelmina Schroeder began her career, times had changed since the days when Graun devised the *bravura* in 'Agrippina' (since so wonderfully revived by Madame Viardot), to display the "nest of nightingales," as Goethe phrased it, in Mara's throat. The antagonism of the instrumental and vocal schools had set in; and with it the one-sided prejudice that one branch of the art must needs be neglected for the sake of another. Hence the incompleteness of Wilhelmina Schroeder—which was to be felt whenever she attempted Italian opera—did not render her less acceptable to her countrymen, who had already begun to pit what they call Nature against the refinements of singing. Compared with some of her predecessors and contemporaries, such as the Milder Hauptmann, who would never sing Italian music—because she could not,—Wilhelmina Schroeder was valuable. All these reasons explain why, on this side of the Channel and in Paris, it was as *Agatha* in 'Der Freischütz,'—as *Leonora* in 'Fidelio,'—as *The Lady* in 'Macbeth' (Chélaré's),—as *Euryanthe*, she pleased;—as *Donna Anna* more moderately,—as *Norma* and *Amina* very little. At home, she was during many years triumphant in German, French and Italian opera. As time went on her want of pure vocal skill, and her habit of intensifying expression to the last point, and "after the last" (as *Milamant* hath it), so as to meet the requirements of national taste, so far impaired her voice as to throw it off the balance which singer and actor should always preserve in musical drama. Her singing did not cease to be strenuous, but her action became too much so. Her style, in brief, was made coarse. She would be seen first and foremost, whether fairly or unfairly. She had recourse to the false effect of speaking certain words of her part written to be sung, by way of giving a semblance of immediate reality to its most poignant passages. She showed herself increasingly mindful of the splendour of her fair, profuse hair,—increasingly willing to display her person, after it had become matronly. These—so many signs of an unsettled brain, an aching heart, a burning exacting desire—may have prefigured the changes in her melancholy private life; each of which marked a descent down that ladder of false steps, which very few women can re-ascend. Her affectionate heart, her quick fancy, her keen appreciation of beauty in art and nobility in character,—precious ingredients for the best happiness which mortals can enjoy,—in her case contributed only so many materials to a mournful wreck. She was—to sum up—a great, perhaps the greatest, modern German operatic singer,—Sontag not counting as such, nor Mdle. Jenny Lind,—a remarkable, if not an unimpeachable actress (her *Leonora* being her best character),—a gifted woman, but as unhappy as richly gifted.

In tracing a career leading through so many whirlpools, and over so many sunken rocks, the Baron Alfred von Wolzogen is to be praised for a union of sincerity with delicacy too rare among biographers. Genially, wholly, German as he is, his appreciation of musical art, as displayed on the stage, is singularly clear of narrowness. He shows what we are bound to think a sound judgment, seeing that his opinions are mostly coincident with those advocated in this journal. Great pains have been taken by him to collect and arrange all the facts of Madame Schroeder-Devrient's professional career. Lastly, the style, in which the story of her stage triumphs, the intimations of her private history, and the criticisms on her art, is conveyed, though national, and insomuch relishing, is singularly clear of those overstrained fantasies and delicacies, which impair English pleasure in too many German biographies of men and—more emphatically still—women of genius.

NEW NOVELS.

True as Steel. By Walter Thornbury. 3 vols. (Hurst & Blackett.)—'True as Steel,' was the motto of the Free Suiabian Knight, the Ritter Goetz von Berlichingen, the Knight of the Iron Hand. He had his own peculiar notions of right and wrong. Some of his enemies called him a robber, because he enforced his own rights of taking toll of merchants and travellers who had to pass through his domains or over his ford of the Neckar, below his castle, in return for which he gave them protection and safe conduct; but he was in other things the soul of honour. He was a brave champion for freedom during the progress of the Reformation in Germany; he headed the Suiabian peasants in their war; but he was the tool of crafty men; for he was single-hearted and straightforward, and had none of the serpent's wisdom. His estates were all confiscated, and he himself thrown into prison, where he died. Goethe has made him familiar to all readers, and the good Knight wrote his own autobiography, and now, in these latter days, Mr. Thornbury has taken what he found most characteristic in both, and gathering up all he could learn from tradition of the times of Charles the Fifth, Luther and Erasmus, or that has been illustrated in contemporary pictures by Holbein and Albert Durer, has made out of these materials an historical novel of a rather old school of literary art. It is no slight praise to say that if 'True as Steel' were given to a boy, it would take hold of his affections; thanks to the character of the hero, and the loving admiration with which Mr. Thornbury has treated him. Mr. Thornbury has skill in writing pictures; there is scarcely a page in which some stirring scene is not thrown into a clear, well-defined shape, briefly set forth in well-chosen words. The story is interesting, and, although it is historical and carefully got up in its details, it is neither tedious nor theatrical.

A Daughter of Eve: a Novel. By Hain Friswell. 2 vols. (Bentley.)—This 'Daughter of Eve' is a Surrey romantic drama. It would cut up into "lengths," and could be put upon the stage much as it stands. The dialogue is of the most conventional type; the characters are all dressed for their parts, and the incidents are exactly such as happen on the stage in romantic drama, and nowhere else. There is a certain fascinating and highly reprehensible Count de La Biche, who seems to have passed his life in going through mock marriages with beautiful young ladies, and leaving them to their fate, which produces complications. He meddles in politics and conspiracies also, and is mixed up with Orsini, whom, however, he betrays. The end of all is a duel on very French principles, with an eye apparently to certain distinguished tragedians. The stage directions are elaborate. There is cleverness in the book, but it is so utterly factitious and unreal, so entirely a story of the footlights, that it is impossible to read it with any pleasure.

Such Things Are. By the Author of 'Recommended to Mercy.' 3 vols. (Saunders, Otley

& Co.)—This old Minerva-press title heads a novel that is entirely unintelligible. It is made up of dark hints—scraps of conversation—characters introduced with the profusion of supernumeraries in a pantomime, who come and go in perplexing inconsequence. They have all done something they should not do—men and women alike; but what it is the reader is never told. The heroine, who opens the story, is living with a ruffian-like man, whom she calls her father, at a sea-side village in Wales. She goes through danger and fatigue in one night enough to have served for the hero of one of Mr. G. P. R. James's novels; being first wrecked in a violent storm, through which she swims towards shore, where she is rescued by a handsome coastguard's man, her father taking no heed of her whatever; she afterwards walks a distance of two miles in the same storm, and narrowly escapes being dashed down a precipice; after which she is married to her preserver: and then the novel goes off to other people, and nothing but hints are ever heard of her again. She, indeed, appears once or twice, but nothing intelligible is told of her, except that she and her husband live unhappily. Allusion is made to some dreadful murder, and she turns pale; and she has an odious maid who domineers over her, taken at her father's request. The novel then rambles into a labyrinth of other things and people, all narrated in the same accidental manner. This maid is recognized as the servant of the house where the murder had been committed; in a rage at something she overhears, this woman denounces her mistress as a depraved woman, and also as the person who had been suspected of having had a hand in the murder; whereupon the husband falls down and breaks a blood-vessel. What the murder was, or who the wife really is, the reader is not told. The author calmly promises to wind up the story in another novel, to be hereafter written. There is a Lord George Annesley, who has worked much woe to the female members of this rambling story. One of them, Constance by name, seems to have sustained worse than a broken heart, and there are mysterious allusions to antecedent portions of her brief history which are never told. A man appears, threatens her vaguely with his vengeance, and declares he will reveal some terrible secret about her; but he dies, poisoned by strychnine, given apparently by the gentle Constance herself; but who or what the man is, the reader is left in ignorance of. Under these circumstances we close the last volume.

Ada Fortescue: a Novel. 3 vols. (Newby.)—'Ada Fortescue' is a wonderfully silly novel: remarkable only for the entire want of any sense of delicacy in the author. The heroine is a very young lady, who, being left by her parents at home for a few days, makes a clandestine marriage with a young man who had been their guest—lives with him in their house until their return—keeps the marriage secret—has a clandestine baby, and not until her husband, proposing to commit suicide, sends the child, then four years old, to its mother, does she inform her parents what she has done; and because her father is extremely indignant at his daughter's folly and treachery there are no bounds to the hard words the author bestows on him. The remainder of the story is too foolish to specify.

A Prodigal Son. By Dutton Cook. 3 vols. (Hurst & Blackett.)—This 'Prodigal Son' begins well. The death-bed of the bitter, imperious father—the interview between him and his longestranged son—the final quarrel and the irreparable separation, are all well and powerfully managed; but this good beginning is soon overclouded, and the story goes off into nonsense and futility. The prodigal son marries a charming girl, and is a happy model husband, with an intimate friend very much inclined to fall in love with his wife; but that is only a testimony to her charms, for he knows it would be of no use to speak, so he holds his tongue. All is as pleasant as possible, when one morning a dreadful French woman calls in the husband's absence, and tells Violet that she is his first and lawful wife, and shows letters which seem confirmation strong. Violet believes her, and, after fainting away, snatches up

her child and rushes away back to her home. Then the story stands still, to give an elaborate account of a pantomime plot and scenery, in which the wicked wife has to enact a good angel, but meets with an accident which nearly kills her. The prodigal son (who deserves his name) really had married her, in a fit of enthusiasm, when he was a boy, but he had believed her to be dead. It turns out that she had a husband at the time. Finally, all is made right; but the reader has lost all interest or belief in the story, which has quite fallen to pieces, and has no more cohesion than the plot of a pantomime; it is altogether inferior to what the author of 'Paul Foster's Daughter' ought to write.

The Mistakes of a Life: a Novel. By Mrs. J. Hubback. 3 vols. (Newby.)—'The Mistakes of a Life' is very dreary reading. A willful young woman is made an heiress by an injudicious relative, who leaves her everything, and the rest of the family nothing,—coupled with foolish restrictions and injunctions, which have the effect of making the fortune a misfortune to her. Mrs. Hubback does not make the story interesting. The reader cares nothing for the heroine, who imprudently marries an Italian, is tyrannized over by his family, and finally thrown off by her husband, and left stranded and miserable, her hopes thwarted and her mistakes irretrievable. The style is not pleasant, and the book is not an agreeable one. Mrs. Hubback has done better things, and will, we hope, do so again.

Christmas at the Cross Keys. By Kenner Deane. (Newby.)—This 'Christmas at the Cross Keys' is a clap-trap story—a distant imitation of the style of Mr. Dickens and Mr. Wilkie Collins. The sentiments are grotesquely exaggerated; the story itself is in strong black and white, with no intermediate shades, and is, on the whole, as foolish a tale as could well be written. The proud family of the Clydes of Clyde Chase has fallen into a confusion of debt and mortgage; the only son is in love with the pretty daughter of the landlady of the Cross Keys, and instead of marrying her, as the hero of a Christmas Pantomime ought to do, he makes love to an ugly heiress, who will not have him. A man disguised in a red wig (who is a returned digger) comes and forecloses the mortgage on the Chase, consoles Rose for her faithless Harlequin, reveals himself, by taking off his wig, as a long-lost brother, who is come back from over sea, worth three hundred thousand pounds. Of course, he embraces his brother, gives him back the family estate, buys another for himself, marries Rose, and the story ends in all happiness and pure love. The style is detestable, as all imitations are and must be.

SCIENTIFIC BOOKS.

Synthetic Division in Arithmetic. By G. Suffield, M.A. (Macmillan & Co.)—Mr. Suffield is the Examiner whom our readers may remember to have got into disgrace at Cambridge for plucking incompetency and admitting fractions with concrete terms. The University has mended on both points; and Mr. Suffield's radicalism has done good. This tract on arithmetic is an ingenious and independent speculation, akin to what has been known as "synthetic division," and leading to great simplification of certain cases of division. We shall set our readers dividing by 9, in a new fashion, as follows: Mr. Suffield simplifies every division in which the divisor ends with nine, or nines.

9) 4 0 3 2 8 6 6 7 9 1 0 2 8
 4 4 8 0 9 6 3 1 0 1 1 4—rem. 2.

Write the first figure (4) in the second place; add it to the one above, and write the sum, or the unit of the sum, in the next place. But whenever the figure about to be written down will, with the one under which it is to be written, make up 9 or more, write down one more. Thus the processes are 4; 4+0=4; 4+8=7, but 7+2=9, write down 8; 8+2=10, write down the 0; 0+8=8, and 8+6 is more than 9, write down 8+1, or 9; 9+6=15, write down not 5, but 6; and so on. The processes for 9, 99, &c. are, we believe, those of what is already known as synthetic division:

Mr. Suffield simplifies 29, 799, &c. After writing the above it struck us that there must be some corresponding mode of dividing by 11; and we soon hit on the following, as very likely others have done before us. Write down the first figure second, then subtract it from the one above (or from ten more, if needful), and write down the result in the next place. Go on in this way, with the following changes—1. when going to write down a figure, if the figure above it be less, write down one less 2. When 0 would be written down, and the lower figure is one which has been reduced by the last rule, write down 9 instead of 0. As follows:—

11) 2 1 3 8 4 9 6 5 7 3 2 9 6 4 6 1
 1 9 4 4 0 8 7 7 9 3 9 0 5 8 7—rem. 4.

We leave the reader to detect for himself a certain variation in one case of the remainder, and wish him all success.

Dual Arithmetic: a New Art. By Oliver Byrne. (Bell & Daldy.)—The author has developed, with ingenuity and labour, a method depending on the reduction of any number to the form—

$$a(1.1)^m \times (1.01)^n \times (1.001)^p, \&c.$$

This is all we can say. Our mathematical readers can now judge whether they will investigate the matter. The foundations of the system are not very clearly explained; and the author promises some further explanations in works to come. We have no hope of any general use of this system; but all such attempts are suggestive, and there may be classes of questions which this reduction may suit.

Tables of Compound Interest and Annuities. By A. H. Turnbull. (Edinburgh, Black.)—This is a good set of tables—yearly, as far as 80 years; half-yearly, as far as 40 years; quarterly, as far as 20 years. The rates are 3, 3½, 4, 4½, 5, 6 per cent. yearly; by quarters, from 3 to 5, with 5½, half-yearly; by halves, from 3 to 5½, quarterly. The answers are given in decimals to seven places, and in currency to pence and hundredths. There are subsidiary tables for conversion of stock.

A Systematic Handbook of Volumetric Analysis; or, the Quantitative Estimation of Chemical Substances by Measure. By Francis Sutton. (Churchill & Sons.)—The commercial value of the alkalies, of manganese, of chloride of lime, of indigo, and many other substances, can only be determined by chemical analyses. Practical chemistry has indeed become a thing of general need in technology. To meet the demands made upon the science, it has become necessary to devise new and rapid means of analysis. Under this pressure chemists have developed the volumetric system, "by which a large amount of time, labour, and therefore cost, has been saved, as compared with the older methods of research." It is truly stated by the author of this work, that to make a really reliable use of the volumetric system, "the operator must possess a good knowledge of the laws of chemical combination and decomposition, so as to know where he may apply any of the processes with security." Standard solutions have to be prepared with great accuracy; vessels must be made which will deliver, without error, measured portions of their contents; and the eye must be practised to determine the moment when precipitation ceases, or when any other definite result is obtained in the substance under examination. In the hands of careful and painstaking men, this method of examination is of great value, and may be with confidence relied on as a guide; but, as Mr. Sutton says, "volumetric analysis has had an abundant crop of weeds and rubbish," owing to its having been practised by men who have never learnt the value of minute attention to results. 'The Handbook of Volumetric Analysis' is the result of considerable experience; it is written with evident care, and may be confidently received as a guide by all who are called on to practise this branch of chemistry. Its attentive study will do much to give a higher value to the use of standard solutions than they have hitherto obtained, since nearly every source of error is clearly described, and processes leading to doubtful results are distinctly marked as uncertain, and requiring yet closer examination.

The Year-Book of Facts in Science and Art;

exhibiting the most Important Discoveries and Improvements of the Past Year in Mechanics and the Useful Arts, Natural Philosophy, Electricity, Chemistry, Zoology and Botany, Geology and Mineralogy, Meteorology and Astronomy. By John Timbs. (Lockwood & Co.)—A portrait and memoir of Sir Charles Lyell and a glimpse of the Metropolitan Underground Railway are the embellishments and light literature with which Mr. John Timbs lures readers to a perusal of his 'Year-Book of Facts' for 1862. The author's plan is to collect from newspapers or official reports those accounts of important discoveries, inventions and improvements, which appear to be adapted for purposes of popular instruction, and to publish them as "extracts" from the journals and publications in which they first appeared. Thus the 'Year-Book' is a compilation in which the compiler, as far as possible, abstains from speaking on his own personal authority. Of the facts so treated it is noteworthy what a large proportion of them refer to novel applications of iron, and schemes for the advancement of "the noble art of murdering." About fires Mr. Timbs takes from the Annual Return of the London Fire Brigade some statistics in which London residents will necessarily take interest. "The total number of calls during the year 1861 was 1,409; of these 89 were false alarms, 137 proved to be only chimney alarms, and 1,183 were fires, of which 53 resulted in the total destruction of buildings, &c., 332 in considerable damage, and 798 in slight damage. The fires of 1861, compared with those of 1860, show an increase of 127, and compared with an average of the 28 years during which the establishment has been in existence, the number is 391. This list does not include trifling damages by fires not sufficiently important to require the attendance of firemen; of these no record is anywhere kept, but they may be estimated in round numbers at 4,000. Neither does it include the ordinary calls for chimneys on fire, which may be roughly estimated at 3,000. The "totally destroyed" list, 53, is 25 in excess of the same list for 1861, and 13 in excess of the average proportion for 28 past years. Of the premises burnt, 20 were from 2 to 7 miles distant from the nearest station; 25 were used for the carrying on of hazardous trades, such as cabinet-makers, carpenters, hay and straw salesmen, steam saw-mills, &c." From the foregoing summary an estimate may be made of the exceptional damage caused by the great Tooley Street fire, which occurred in 1861. Mr. Timbs says nothing about fires caused by crinoline. He would do well to gather "facts" on this subject for his next volume.

OUR LIBRARY TABLE.

The Insect-Hunter's Companion. By the Rev. Joseph Greene, M.A. (Van Voorst.)—We had occasion lately to recommend the use of the butterfly-net to intending continental tourists, but the writer of this little volume teaches a much better plan for obtaining fine specimens of butterflies and moths (or rather moths alone) by searching for the chrysalids at the roots of trees, and then rearing the perfect insects from them. This 'Essay on Pupa-digging' is followed by 'Instructions for collecting and preserving Butterflies and Moths,' and may be cited as a useful manual to those commencing the study, although it is needlessly diffuse: thus, for instance, not fewer than nine pages are devoted to the discussion of the important question, whether the fumes of chloroform, ammonia, or bruised laurel-leaves are the most efficacious means of killing specimens for preservation. The following passage on the preference of many of these insects for a northern aspect is curious, as indicating a surprising amount of instinct in caterpillars: "The vast majority of pupæ will be found on that side of the trunk (of the tree) which faces the north. This circumstance I attribute to the fact that in this situation they are less exposed to sun and rain. We all know that exposure to the sun is fatal to pupæ, and therefore an infallible instinct leads the larva to select the shadiest side. I believe that rain or damp is equally injurious to them, and that therefore they choose the northern side as the driest. I

am well aware that some will differ from this opinion; but however doubtful the cause, the effect is certain; and so satisfied am I on this head, that I go first to the northern side, and if it present an unfavourable appearance, I, as a rule, leave the tree. As having some bearing on this point, I may mention that the insects themselves, when at rest on the trunks of trees, are almost always found on the northern side. In the former part of this paper, when speaking of ditches and palpina, I mentioned, as the most likely places for finding the pupa, poplars and willows bordering upon streams, and especially the dry sods formed on the sides facing the stream. It is, however, wholly useless to examine trees in this situation when the roots and trunks are liable to be submerged by the overflowing of the stream. In such cases there is usually a water-mark, below which a pupa never will be found. An unerring instinct seems to persuade the larva of its probable fate should it venture below this water-mark." Non-entomological readers will smile at the statement, that sugar or treacle mixed with a little rum or aniseed, and plastered upon the trunks of trees, form one of the most attractive baits for night-flying moths, which must, however, be sought for after dusk with the aid of a bull's-eye lantern. Some persons may possibly also think that the rum and sugar might be better employed!

Lectures on Horses and Stables. By Lieut.-Col. Fitzwygram, 15th (The King's) Hussars. First and Second Series. (Smith, Elder & Co.)—These Lectures on the management of horses suffer from the want of a preface, stating the circumstances under which they were delivered. If, as we infer was the case, they were originally read to the men of Col. Fitzwygram's regiment, we strongly commend the tone and clearness which render them peculiarly adapted to such auditors. Each of the two series now published, consists of four lectures, the subjects of which eight addresses are "Ventilation and Drainage of Stables," "Watering and Feeding of Horses," "Principles of Grooming," "Shoeing of Horses," "Exercise," "Stable Management," "The Action and Uses of Medicine," and "Infection and Contagion." Horse-keepers would do well to place in the hands of their grooms the concise and intelligent instructions of the cavalry officer who, in his promised continuation, will, we trust, remove the one defect of this first instalment of his collected discourses.

Life in Dixie's Land; or, South in Secession Time. By Edmund Kirke. (Ward & Lock.)—The editor of this volume takes bootless pains to impress on the reader that it "describes actual scenes and events." Whatever Mr. Edmund Kirke may be, whether (as the book represents) a Yankee who travelled southwards just before the outbreak of the American war, or merely a writer who assumes that character for literary purposes, "Life in Dixie's Land" is, for all critical purposes, "a nigger novel." Regarded as such, it falls short of the highly-seasoned literature which Mrs. Stowe and her imitators have for some time past thrown upon the market. It comprises nearly all the properties and "effects" that we have a right to look for in a book of the kind; a proper number of slaves are whipped, or shot down, or killed by cruel taskmasters; a brutal slave-driver, and a hot-tempered proprietor, who has a highly-educated, lady-like, and almost white female slave for his mistress and for mother of his manumitted children, are brought out in strong contrast with the intelligent and heavenly-minded "darkies," who are waiting their opportunity to excite and lead a servile rebellion, and a balance is struck between the characteristics of the slaves and "the white trash," greatly to the disadvantage of the latter; but the general manipulation is so clumsy that the result is a failure. In a chapter entitled "Plantation Discipline," Mr. Kirke, describing the interior of a whipping-house, says, "This was the whipping-mack, and hanging to it were several stout whips with short hickory handles and long triple lashes. I took one down for closer inspection, and found buried into the wood, in large letters, the words 'Moral Suasion.' I questioned the appropriateness of the label, but the Colonel insisted, with great gravity, that the whip

is the only 'moral suasion' a dandy is capable of understanding." Surely the time has gone by for English readers to relish humour of this kind.

Ancient Leaves; or, Translations and Paraphrases from Poets of Greece and Rome. By D'Arcy W. Thompson. (Edmonston & Douglas.)—These translations and paraphrases from classic literature are far superior to the ordinary exercises of the same kind, on which most students of Greek and Latin poets expend not unprofitable labour. Mr. Thompson has clearly read his authors with care and discernment, and a musical ear enables him to reproduce their thoughts with no more than unavoidable loss of melody. The paraphrase of the 'Funus Paseris' of Catullus may be objected to on the score of too great freedom; but it is prettily managed:—

Wee bit birdie's dead and gane,
The pet o' my ain dearie O,
And now is journeyn' all aane
The road so dark and dreary O;
The road that man be trod by all
O' mortal men and birdies O.

Sweet birdie kenn'd his mistress weel,
Her face fra ilkaither O,
As weel as e'er my lassie kenn'd
The face o' her ain mither O;
And nestled in her breast, he'd pipe
And cheep the hour thegither O.

Ah birdie, what for was thy life,
Thy puir bit life see fleetin' O;
Tis for thee my dearie's een
Are red and sair wi' greetin' O;
Tis for thee that bonny een
Are red and sair wi' greetin' O.

Scholars will find pleasures in Mr. Thompson's versions of 'Ancient Leaves.'

Imagine; or, the Flowers and Fruits of Rome: a Metrical Tale. By M. H. (Wertheim & Co.)—To "the younger portion of the community, says the Preface, who in general prefer the imaginative to the didactic," M. H. (probably a lady) offers flowers which are very faded, and fruits reminding us of those exorcising red-cheeked stone pippins which garnish old-fashioned chimney pieces, in order that the aforesaid "younger portion" may smell and taste how wicked is Popery, and how abominable in its workings. It need hardly be told that the *Athenæum* is not among the adherents of the Scarlet Lady; but a weak book like this will not make her robe a single shade less red in the eyes of those who are disposed to be attracted by the gaudy colour thereof. How strange is it that religious controversy and attack, of all subjects perhaps the most difficult, is the one which seems dearest to the family of the *Shallows* when they take pen in hand! The little tales of M. H., showing how wicked Jesuits do what they please with persons whose opinions do not please them,—of priests who are unchaste,—of beautiful girls who are kidnapped and shut up in convents,—all the old threadbare stories, in short,—are told in lengths of something imagined to be blank verse, which would be droll were it not dreary; and these tales are interspersed (possibly, in a fond emulation of 'The Princess') with lyrics of corresponding quality.

Running the Blockade. By Lieut. Warnford, R.N. (Ward & Lock.)—A collection of tales and adventures and hair-breadth escapes of different vessels which have run the blockade during the present American war. Many of them are spun out with the land adventures of the several heroes of the tales, and are interspersed here and there with a full allowance of strong language, which is supposed to be nautical. The author is aware that he is at a disadvantage; for as he is shut out from the exhaustless field of fiction, he is confined to one topic, and the stories must necessarily resemble each other. But he is glad to believe that the incidents which make up the stories save them from the almost inevitable sameness which he speaks of. In the course of the different adventures there occur the names of many American vessels which have become familiar to us through the newspapers, and they serve to make acceptable the tales in which they bear conspicuous parts. The names of the Trent, the Alabama, the Royal Charter, the Sumter, and the Nashville, are pressed into the service; whilst Charleston harbour is in certain cases the scene of operations.

Liber Cantabrigiensis. Part II. By R. Potts, M.A. (Parker, Son & Bourn.)—An account of recent legislation, and many other things, with examination papers, &c. We thought to have ended here, when our eye was caught by two curiosities. The first is a question in a college examination-paper, about the credit due to "the Prince of I and Saakolinian" when they agree in their testimony. These gentlemen—if that name can be given to persons of whom the first speaks truth only once in five times, and the second only twice in seven times—are Chinese, and are known to many readers of Chinese news. The second instance is, we think, the more curiously worded. It is from the statutes of Downing College, the college of our own day, and runs thus: "If a Fellow secede from the Church of England, or be convicted of any crime by a Court of competent jurisdiction, or be guilty of disgraceful conduct rendering him unfit to be a member of the college, he may be deprived of his fellowship, or be subjected to such other punishment as the visitor, in his discretion, shall see fit." Putting these two things together, we smiled once more at the *dat veniens corvis venat castris columbis* character of tests. If the Prince of I and Saakolinian were to be elected Fellows of Downing, there they might stay, these rascals of one truth in five statements and two in seven. But the man of honesty must turn out, unless the "discretion" of the visitor should prefer to punish him otherwise. It is a remarkable thing, however, that though secession is classed with legal crime and disgraceful conduct, the visitor has a power of remission.

Lectures on the Philosophy of the Human Mind. By Samuel Bailey. Third Series. (Longman & Co.)—In this series the author discusses in succession Comte's notion of psychology, identity, causation, evidence, laws of nature, language and moral sentiments. The contents are of a varied character, and cannot be systematically reviewed; but the writer is one who ought to be read. With some difference of opinion, we recommend the lectures on language to attentive consideration. When this collection, now in its third Part, shall come to an end, it will be for Mr. Bailey to give a good summary of results and arguments.

Twenty-nine Years in the West Indies and Central Africa: a Review of the Missionary Work and Adventures, 1829-1858. By the Rev. Hope Masterton Waddell. (Nelson & Sons.)—The author, belonging to the United Presbyterian Church, laboured as missionary, first in Jamaica, and afterwards in Old Calabar, on the West Coast of Africa, and now publishes, in a bulky volume of 681 closely-printed pages, the narrative of his efforts to christianize the negro race. Reduced to about two-thirds of its present size, and freed from pointless dialogues in negro slang, sectarian squabbles, tedious details about new converts, and the phraseology peculiar to missionary writings, the author's materials might have been shaped into a book highly acceptable to the general reader, instead of one suited only to that narrower circle to whom what we regard as defects appear so many merits. The rising of the slaves in Jamaica, the gloomy state of that island previous to emancipation, the suspicion with which all missionaries, especially those of the dissenting bodies, were looked upon by the colonists, and the persecution which they suffered, might have been worked up into very interesting chapters by an expert hand. Again, what a capital peg for a good story Peppel, King of 'Bonny,' would have made,—that noble savage who keeps an English Poet-Laureate to sing his praises!

The Castle-Maiden; and other Stories. By Mrs. R. J. Greene. (Binns & Goodwin.)—Were it not for their exceeding mournfulness of tone, we should warmly commend these fanciful and well-written stories. The intercourse of little Elsie, the Castle-Maiden, with her flowers, is told with pathos and considerable power of imagination; but her career is so sad, that no ordinary child will like to re-peruse its history. 'The Jewelled Bridge' and 'The Oyster Reskin' are less depressing tales.

Mr. Hardwicke has commenced the issue of a new edition of the celebrated *English Botany*, of Sowerby, to appear in monthly numbers. Mr.

Syme, than whom no one is better acquainted with our wild plants, is charged with the science of the work,—Mrs. Lankester with what are called on the title-page "popular descriptions,"—Dr. Lankester with uses and medical properties,—and the three Sowerbys with the illustrations. The specimen number before us is well executed, and, containing, as it does, twenty-four coloured engravings on copper, is one of the cheapest natural-history productions we are acquainted with. Hereafter we may report more fully.

Of publications on the Pentateuch and Bishop Colenso, we have to announce 'The Pentateuch and Bishop Colenso.' Bible Inspiration; What It Is, and What It Is Not: Dr. Colenso's Difficulties Considered and Our Lord's Testimony Enforced, by the Rev. C. Bullock (Wertheim).—Colenso's Objections to the Veracity of the Pentateuch Examined and Answered, by the Rev. B. W. Savile (Freeman).—Some of Bishop Colenso's Objections to the Pentateuch and Book of Joshua Examined, by the Rev. W. Houghton (Masters).—Christ or Colenso? or, a Full Reply to the Objections of the Right Rev. J. W. Colenso to the Pentateuch, by M. Hill (Hamilton).—Bishop Colenso Honestly Answered: Two Sermons, by the Rev. J. Christian (Stoek).—Dr. Colenso's Objections to the Historical Truth of the Pentateuch. Reviewed and Answered, by a Clergyman of the Church of England. (Parker).—Considerations on the Pentateuch, by Isaac Taylor (Jackson, Walford & Hodder).—Moses Right and Colenso Wrong; being Popular Lectures on the Pentateuch, by the Rev. J. Cumming (Shaw).—The Bible in the Workshop: a Refutation of Bishop Colenso's Critical Examination of the Pentateuch and Book of Joshua, by Two Working Men, a Jew and a Gentile (Kant & Co.).—A Few Remarks on some of the More Prominent Errors contained in Bishop Colenso's Book on the Pentateuch, by the Rev. W. G. Cookekley (Upham & Best).—Solutions of Bishop Colenso's Bible Problems, in the Form of an Address to the Protestant Church, by an Unknown Pen (Jarrold & Sons).—Bishop Colenso and the Pentateuch; or, The Bible in the Gospels: a Vindication of the Historical Character of the Old Testament, by Alpha (Wertheim).—Bishop Colenso's Fallacies [Of Parts I. & II.], by Dr. T. de Meschin (Hendon).—Bishop Colenso and the Pentateuch (Part I.), Bishop Colenso and the Descent of Jacob into Egypt: an Analysis, by W. J. Spry (Wertheim).—The Siege of Rome and 'Bishop Colenso's Sling with a Stone: a Complete Refutation of his "Infamous" Work on the Pentateuch, by Figures and Facts, with Proofs alone from the Bible, by a Lancashire Lad (Simpkin).—Is the Pentateuch Historically True? A Handbook to the Second Part of Dr. Colenso's Work on the Pentateuch and other Books of the Old Testament, by J. B. Marsh (Simpkin).—The Family of Judah; being a Thorough Examination into and Refutation of Bishop Colenso's First Objection to the Pentateuch, by a Layman (Freeman).—The Increase of the Israelites in Egypt shown to be probable from the Statistics of Modern Populations; with an Examination of Bishop Colenso's Calculations on the Subject, by the Rev. F. Ashpittel (Parker).—and A Plain Reply to Bishop Colenso; respectfully addressed to the Laymen of England, by Walter Chamberlain, M.A. (Wertheim).

LIST OF NEW BOOKS.

- Baxter's Call to the Unconverted, new edit. 18mo. 1/6.
Becher's Life Thoughts, new edit. 18mo. 1/6.
Benbow's (Dr.) Bishop Colenso's Objections Examined, 8vo. 5/6.
Boston's The Crooked in the Lot, new edit. 18mo. 1/6.
Brown's Memoirs of Paul, and Thoughts on Present Age, 8/6.
Burgyn's Grace Abounding, new edit. 18mo. 1/6.
Cassell's Popular Natural History, V. 4. Reptiles, Fishes, &c. 8/6.
Clemens's 27th Exhibition of the Royal Scottish Academy, 8vo. 1/6.
Dag's The Proverbs of Solomon, a Poetical Commentary, 8vo. 14/6.
Diary of a Hunter from the Punjab to Kara Korum, post 8vo. 10/6.
Dyer's The Famous Times of Christ, new edit. 18mo. 1/6.
Evelina, by the Author of 'Forest Keep,' 3 vols. post 8vo. 3/6.
Graham (Sir James R. G.), Life and Times of, by Torrens, V. 2, 16/6.
Hall's Smashings of the Devoted Soul, new edit. 18mo. 1/6.
Home's (D. D.) Incidents in my Life, or 8vo. 7/6.
Kleper's and Grif's Hand-Atlas der Erde und des Himmels, 64/6.
Lives from our Cyprus and see Oulu, 8vo. 4/6.
M'Culloch's Clinical Memoirs on Diseases of Women, 8vo. 14/6.
Meditations on Our Lord's Passion, from the Arsenal, 22mo. 3/6.
Miller's Stable Secours, or Puffy Dodder, his Sayings, &c. 3/6.
Phillips's Sermons on Old Testament Messianic Texts, 8vo. 5/6.
St. Leonard's Handy Book on Property Law, 7th ed. 8vo. 3/6.
Temple Bar, Vol. 7, 8vo. 5/6.
Thimons's The Princess Alexandra, a Genealogy, fo. 8vo. 1/6.
Wolcott's A. Origin of Consonants in Poetry & Prose, 10/6.
Westrop's Sixty Studies for the Violin, 4to. 1/6.
White's History of the Kings of Judah and Israel, 8vo. 12/6.

BOOKS PUBLISHED BY THE GOVERNMENT.

A public servant, whose opinion will have weight with many persons, appears anxious to make the public pay dearer than at present for some of the publications issued by the Government. Mr. J. R. M'Culloch holds the position of Controller of Her Majesty's Stationery Office. It is his duty to prevent all needless extravagance in the paper, pens, and ink supplied to public departments, to note the cost of Blue Books, Army Lists, Nautical Almanacs, and whatever else is printed by the Government, to indicate how far they pay their expenses, and to suggest the means for making them as remunerative as may be. Accordingly, for some years past, along with the Annual Estimate for the Civil Service, there has appeared a letter from Mr. M'Culloch containing various suggestions for economy and retrenchment, many of which are doubtless valuable, and it appears that some have been tried, and found to work well. Among them, however, occasionally appear remarks, of which, although they profess to aim at economy, it is more than doubtful whether they have such a tendency in practice. To the following, in particular, we desire to direct attention:—

"I may mention," says Mr. M'Culloch, "that not satisfied with having publications sold at or about the cost of their production, we are frequently pressed by the parties interested to sell them at still lower rates. But this, I cannot but think, should very rarely be agreed to. The sale of a work for less than it cost deceives the Government, and is unjust to the publishing trade. The price of all, or nearly all, publications that issue from the different public departments includes nothing for authorship or editing, but merely amounts to the cost of paper, printing, and binding, and not always even to that. Hence the cheapness is, in most cases, quite factitious; but such as it is, it prevents private parties from entering into what might otherwise be an advantageous competition with official publications. A spurious cheapness of this sort is not to be encouraged; and I endeavour, in as far as practicable, to get such a price charged upon our books as will, at all events, cover our outlay upon them."

Thus the case is stated in general terms; and, assuming Mr. M'Culloch's premises, we should think no one would defend the sale of Government publications at a price that will not pay for paper, print, and binding. But Mr. M'Culloch seems to reckon under the head "cost of production" the price paid for authorship or editing, and thinks it unjust to the publishing trade to issue works at a lower price than would pay this charge also. Here we think he reasons on a totally erroneous basis. For, in the first place, there is, or ought to be, no question of competition. What private enterprise can do as well, Government ought not to do at all; but Government does very properly undertake various publications which require the sanction of its authority to give them value, or which could not possibly be remunerative if left to private enterprise. But in such cases it must be considered that the editor or author is paid by the public from the coffers of the State; and it is not right that the purchaser, who has already contributed his quota through the tax-gatherer to the fund out of which such expenses are paid, should be called upon to pay it again in the price of the book.

It would seem that the publications Mr. M'Culloch had chiefly in view in these remarks are those which proceed from the Public Record Office. In his Report of last year he makes the following remarks:—

"The sum charged in the Estimate of 19,620*l.* for Stationery Office publications is nominal only. It is the sum we expend on the production of the Gazette, the Army Lists, and the military books for the War Office, the 'Nautical Almanac,' and other Admiralty books and papers, the Record Office publications, &c. But the sale of these publications, taken as a whole, a good deal more than balances the outlay upon them; and but for the Record publications, the profit would be very large indeed."

This we can very well imagine. The price put upon the Calendars of State Papers looks as if it was intended purposely to prevent their sale. The high utility, and indeed necessity, of these works to the historical student has been generally admitted; but who is to go to the expense of 15*s.* a volume for a series of which it is difficult to calculate the extent? The series of Chronicles is a trifle cheaper: 10*s.* is the sum now charged for a volume—perhaps not very extravagant if it be a book of 700 or 800 pages; but an average volume contains only 400, and some are sold at this price which have little more than 200 pages. And when a comparison is made between Government and the publishing trade, it must be remembered that publishers make their profits by issuing dear editions first, and cheaper afterwards. How is any Government publication to pay its way at the price Messrs. Longman put upon an entertaining book, new from the press, heralded by constant advertisements for months beforehand, and a large part of the impression taken by Mudie with an allowance of 20 per cent. discount? It is quite out of the question. The books lie for years unsold, until they are at last reduced in price, with injustice to former purchasers. Thus it has been with the 'Monumenta Historica Britannica,' originally published at five guineas, now at two; several folio volumes of the old 'Record Commission' are now selling at 10*s.* 6*d.* or 15*s.* each; and the thick quarto volumes of State Papers also sell each at half-a-guinea, being exactly the quarter of their original price. If these prices are not too low, the new Record publications are too high.

The best proof that they are not too low is, that there are cheaper publications still, issued by the Government, which, according to Mr. M'Culloch, yield a profit. The Government publications do, as a whole, far more than pay their expenses; and among them no inconsiderable portion is the great array of Blue Books which sell at a halfpenny a sheet. If in them, however, Mr. M'Culloch were to reckon "payments to authors," which, in such a case, would be expenses of Parliamentary witnesses summoned from great distances, we suspect there would be found to be a very serious loss upon such publications. The 'Nautical Almanac,' a thick octavo of more than 600 pages, is sold for half-a-crown. Mr. M'Culloch surely will not tell us that all the complicated calculations and minute revision necessary to the production of this work, in which the inaccuracy of a single figure might cause shipwrecks at sea, are remunerated by the proceeds of the sale. It is plain, therefore, he judges the productiveness of the Record publications and other Government works by totally different standards, and in the interest of literature it is most desirable that the prices of the former be reduced. We are informed that an offer was lately made to the Government to take the whole impression of one of the recent Calendars of their hands if they would consent to sell it at ten shillings instead of fifteen, but it was not accepted. Yet even ten shillings would have been a high price for it if it had been any other Government publication but a Calendar.

So far, then, from agreeing with Mr. M'Culloch that the prices of the Record publications should be enhanced, we consider that they are already too dear, and greatly exceed those of all other books published by the Government. This is especially to be regretted in the case of the Calendars, as it has the effect, practically, of placing them entirely beyond the reach of the literary student for whose special use they have been compiled.

ENGLISH AND FOREIGN INTERNATIONAL COPYRIGHT IN PHOTOGRAPHS.

Few persons are aware, that although an original photograph be first published in the United Kingdom, the copyright in such photograph may now be secured in France, and vice versa. As photography has grown into a branch of industry, and photographic copyrights are of considerable value, it may be useful to call attention to the existing state of the laws of England and of France affecting such copyrights. Formerly, when any work of literature or of the

fine arts was first published abroad the copyright in it became public property in England. The author was unable to obtain any protection there in respect of such copyright. This manifest injustice has been remedied by certain Acts passed in the reign of her present Majesty, "to amend the law relating to international copyright." These statutes enable the Crown by Order in Council as respects works of literature, music and art (to be defined in such order), and which shall be first published in any foreign country named in that order, to direct that the authors of such works, and their assigns, shall have the privilege of copyright therein to the same extent as allowed by law in respect of any such works first published in the United Kingdom. But no such order is to have any effect unless it states that due protection has been secured by the foreign power named in the order for the benefit of parties interested in works first published in the British dominions similar to those comprised in such order. Besides this, as a condition precedent to the acquisition of any copyright in a work so first published abroad, the statutes render it imperative that the work shall be registered at Stationers' Hall, together with the date and place of first publication thereof abroad. The time within which such registration must be made after that first publication is to be fixed by the Order in Council.

In 1852 an International Copyright Treaty was entered into between England and France, whereby it was agreed that "the authors of works of literature or of art, to which the laws of either of the two countries do now, or may hereafter, give the right of property, or copyright, shall be entitled to exercise that right in the territories of the other of such countries for the same term, and to the same extent, as the author of works of the same nature, if first published in such other country, would therein be entitled to exercise such right." But the treaty expressly stipulates that such international copyright shall not be claimable in either country, "unless the work shall have been registered," viz.:—"1st. If the work be one that has first appeared in France, it must be registered at the Hall of the Company of Stationers in London; 2nd. If the work be one that has first appeared in the dominions of her Britannic Majesty, it must be registered at the Bureau de la Librairie of the Minister of the Interior at Paris." At the time of such registration "one copy of the best edition, or in the best state," must also be deposited;—and "in every case the formality of deposit and registration must be fulfilled within three months after the first publication of the work in the other country." The treaty likewise provides that "a certified copy of the entry in the Register-book of the Company of Stationers in London shall confer within the British dominions the exclusive right of republication until a better right shall have been established by any other party before a court of justice." And that "the certificate given under the laws of France proving the registration of any work in that country shall be valid for the same purpose throughout the territories of France." The charge for registration of a single work "shall not exceed one shilling in England, nor one franc twenty-five centimes in France; and the further charge for a certificate of such registration shall not exceed the sum of five shillings in England, and six francs and twenty-five centimes in France." The ten years term for which this treaty was entered into has expired, but it provides that it shall continue in force "from year to year until the expiration of a year's notice from either party for its termination": an event which in the present advanced state of public opinion respecting international rights generally, and copyright particularly, appears to be most improbable.

In pursuance of this treaty, and of the powers vested in the Crown for that purpose, Her Majesty afterwards made an Order in Council, whereby it was ordered, "that from and after the 17th day of January, 1852, the authors, inventors, designers, engravers, and makers of any of the following works (that is to say): books, prints, articles of sculpture, dramatic works, musical compositions, and any other works of literature and the fine arts, in which the laws of Great Britain give to British

subjects the privilege of copyright, and the executors, &c. of such authors, &c. shall, as respects works first published within the dominions of France after the 17th January, 1852, have the privilege of copyright therein for a period equal to the term of copyright which authors, &c. of the like works respectively first published in the United Kingdom are by law entitled to; provided such books, dramatic pieces, musical compositions, prints, articles of sculpture, or other works of art have been registered, and copies thereof have been delivered according to the requirements of the International Copyright Act (7 Vict. c. 12. s. 6.) within three months after the first publication thereof in any part of the French dominions."

Soon after entering into the above convention the French law was placed upon what seems to us, having regard to the existing state of the law of nations, to be the only just, and, consequently, tenable ground respecting international copyright. Irrespective of any reciprocity a decree was made upon the 28th March, 1852, prohibiting within the dominions of France the piracy of works published in any foreign State; and also the importation or exportation of any pirated copies of such works.

Now with respect to copyright in *photographs*, no such copyright existed according to the law of England prior to the 29th July, 1862, when "The Copyright (Works of Art) Act" came into operation. Since that date the authors of *original* photographs, or the employers of such authors, are entitled to copyright therein for the author's life and seven years after his death; but to acquire the benefits of that statute the work must be registered at Stationers' Hall.

So likewise, according to the decisions of the French Courts, no copyright in *photographs* has until recently been held to exist in France. According to the Code Napoléon, "l'auteur d'un ouvrage de littérature ou de gravure, ou de toute autre production de l'esprit ou de génie qui appartient aux beaux-arts, en aura la propriété exclusive,"—or copyright, during the life of such author, also of his widow, and for thirty years after the death of the survivor of them in favour of their children.

Does a *photograph* come within the above definition of the French law relating to works of fine art? Some of the most eminent French artists have protested against the art of photography being deemed a fine art; and until within the last few months it seems that the French Courts were of the same opinion. But the decisions upon the point have recently been overruled by the supreme court of appeal in France, the Court of Cassation, in a case which arose out of the piracy of a photographic portrait of the late Count Cavour. It was held, that although a mere servile copy of any subject made by means of photography is not absolutely a work of art within the meaning of the Code, yet that a photograph does become a work of art, and is the subject of copyright, when its execution includes artistic conception upon the part of the author.

Practically, therefore, British photographic artists will now be enabled to obtain the benefits of copyright in France for most of their original works. If claimed under the Copyright Convention with France, to which we have alluded, it will, however, be subject to the performance of these conditions:—1st. The work must have been first published in the United Kingdom; 2nd. It must have been registered, and a copy deposited in Paris, within three months after such first publication.

Upon the other hand, it seems, French photographic artists may now secure a British International Copyright in all their original photographs upon these conditions:—1st. The work must have been first published in France; 2nd. It must have been registered, and a copy deposited in London, within three months after such first publication.

Considering the beauty of, and the immense demand for many photographic works produced both in France and England, the existing state of those international relations to which we have called attention seems calculated largely to enhance the value of original productions of that description by French and British artists.

LITERARY HONESTY.

37, Tavistock Place, March 7, 1863.

PERMIT me, in the name of literary honesty, to enter a protest against two practices, occasionally, but seldom, resorted to in book manufacture, of which a recent German publication furnishes a flagrant specimen, viz., taking the subjects of illustration from other works, possibly without due sanction, and certainly without due acknowledgment; and using the same woodblock several times over in the same book, so as to apparently increase the amount of illustration to the casual observer.

The title-page of this work bears such well-known names that it makes the offence all the more reprehensible—it is simply 'Vorschule der Kunstgeschichte, von Dr. Ernst Förster, mit 269 Holzschnitten. Leipzig, T. O. Weigel, 1862.' Unfortunately the work contains but few original illustrations. Cicognara, Gally Knight, and Cressy's Index to Hope, are standard books of reference I at once perceive to have been laid under contribution; and if any useful end could be gained by it, a little trouble would, I think, speedily produce the prototypes from other well-known publications of, I dare say, half the whole series.

Many of the most important illustrations are used twice over in the course of the volume—thus Nos. 183 and 242 are identical; as (amongst many others which have, no doubt, escaped my observation in turning over the pages) are Nos. 105 and 250,—109 and 263,—39 and 191,—196 and 228,—203 and 266,—125 and 229,—85 and 225,—214 and 236,—198 and 235,—202 and 226,—215 and 260,—129 and 194, &c. The most flagrant case is that of a large woodcut of the well-known antique group of the Three Graces, which is made to do duty no less than three times, appearing in the list of illustrations given at the commencement of the volume: firstly, as 106, "Symmetrische Gruppe"; secondly, as 201, "Die Grazien, antike Gruppe"; and, thirdly, as 231, "Die Grazien."

This list of illustrations in no case betrays the repetition of the use of the same block; thus Sansovino's library at Venice is referred to, under different numbers, as "Italienische Renaissance" and "Lebendige Baukunst"; thus Orcagna's Christ from the Pisan Last Judgment appears, firstly, as one of a series of "Gewand Formen"; and, secondly, as "Christus"; thus one of the well-known Herculanean dancing nymphs comes out, firstly, as "Gestalt im Gleichgewicht"; and, secondly, as one of a series of "Motivirte Bewegungen"; thus, a nasty little Faun, from an old bronze, whose presence may be more regretted than his absence would have been missed, figures, firstly, as a "Trunkener Silen"; and, secondly, as a "Humoristische Darstellung,"—and so on.

According to a prospectus prefixed to this book, it is designed to form the first of a series of handbooks intended ultimately to make up "eine kunstwissenschaftliche Encyclopedie"; it becomes urgent, therefore, to denounce *in limine* the system of deception which cheats the buyer, and discredits the author and publisher. Of the two latter I need scarcely say I know nothing, excepting that hitherto both have, to the best of my belief, been respected in the republic of letters. I write simply as an artist, to warn other artists who may, like me, be seduced by the promise of a good book illustrated by "269 Holzschnitten" for a rather low price.

M. DIGBY WYATT.

ANTIQUITY OF MAN.

March 9, 1863.

WHILE the antiquity of man on the globe and the Biblical chronology are exciting much attention, it may be interesting to many of your readers to see the opinion of the late Dr. Prichard, whose scientific researches, especially in ethnology, raised him to the highest eminence in that department. All his investigations tended to one conclusion, viz., the derivation of mankind from one primitive stock. Whatever could illustrate that opinion and make it probable, was collected and placed in a striking light. But a great difficulty connected with it arose from chronology. How could the development of those physical varieties which distinguish the different races of men take place in the brief period allowed by the received chro-

nology! This is the subject of a note on Biblical chronology at the end of the fifth volume of his 'Researches into the Physical History of Man- kind,'—a work now out of print and scarce. Dr. Prichard was not given to speculation on theological subjects. He was conservative in his religious creed. He fully admitted the divine authority and inspiration of the Old Testament. How, then, does he meet the difficulty just stated? He begins with examining the later period of Scripture chronology, viz., that from the building to the destruction of the Temple; thence he ascends to the chronology between the ages of Solomon and Moses, and between Moses and Abraham. In computing the time prior to the call of Abraham, the great longevity of the patriarchs comes in his way, which he disposes of after a fashion of his own. The conclusion at which he arrives is, that there exists no chronology, properly so termed, of the earliest ages, and that no means are to be found for ascertaining the real age of the world or of man's abode upon it. "The Hebrew chronology," he says, "may be computed with accuracy to the era of the building of the Temple, or, at least, to that of the division of the tribes. In the interval between that date and the arrival of Abraham in Palestine, it cannot be ascertained with exactness, but may be computed with a near approximation to truth. Beyond that event we can never know how many centuries, nor even how many *chilids* of years, may have elapsed since the first man of clay received the image of God and the breath of life." These words afford scope enough for the very long period during which the late researches of geologists go to prove that man has existed on the earth. Dr. Prichard, with all his orthodox opinions about the Bible, could see and admit that religion has nothing to do with man's antiquity on the globe; and that the Bible itself allows full latitude to the investigations of science. The way in which he tries to reduce the preternatural length of antediluvian life within bounds compatible with the present constitution of nature is curious; but we need not refute it at present. It may just be mentioned in conclusion, that he believed the abode of the Israelites in Egypt to have been 430 years, as the Hebrew text asserts. This number appears to me to be undoubtedly correct. S. DAVIDSON.

DISCOVERIES AT POMPEII.

Pompeii, Feb. 27, 1863.

ESCAPING from the blind and the lame, and the cracked guitar, and the wretched songster who pester our steps to the very gates of Pompeii, we enter a road, newly arranged and planted with the glowing mesembrianthemum. At the end of it is the ticket-office where we buy our permit, price two francs, and passing through an iron turnstile, which records the number of visitors, we are in the streets of the old city. The order which prevails here is a new feature in this country, and reminds one much of England; of more importance is it to observe that it indicates the action of a new spirit. In every direction there are signs of work; instead of a few lazy and extortionate custodes, and a man or two busy about nothing, there are 200 men, women and girls occupied in the interesting labour of excavating, so that if the same success continues to be displayed, the whole of Pompeii, it is calculated, will be brought to light in twenty years. What secrets will be revealed! What treasures of Art will be given to the world in that time! Along the high mound which now surrounds Pompeii, a tramroad has been laid down, and trains are continually running with the *débris*, which is carried off in the direction of the Amphitheatre. From this mound the visitor looks down on the unburied portion of the city, and forms a good idea of the interior of the houses, which are, of course, roofless. The excavations are being carried on in two spots—near the Temple of Isis, and near the house called that of Abbonanza, but we are more immediately concerned with the former site. Here in a house, in a small street just opened, were found the bodies or skeletons which are now attracting crowds. Falling in a mass of pumice-stone, these unfortunate persons had not become attached to the soil, and it was easy to cut away the ground beneath them; but above, fire,

ashes, and hot water had been rained upon them from the fiery mountain, causing their death, and insuring their preservation for nearly 2,000 years. On removing the *débris*, which consisted of the roof and the ashes which had fallen into the interior of the house, something like a human form was discovered, though nothing but fine powder was visible. It occurred to Cav. Fiorelli that this might be a kind of sarcophagus created by Vesuvius, and that within were the remains of one of the victims of that terrible eruption. But how to remove or preserve them? A happy idea struck him. Plaster of Paris was poured into an aperture,—the interior having been discovered to be hollow, in consequence of the destruction of the flesh,—and mixing with and uniting with the bones, restored to the world a Roman lady of the first century. Further researches led to the discovery of a male body, another woman, and that of a young girl; but that which first awakened the interest of the excavators was the finding of ninety-one pieces of silver money, four ear-rings, a finger-ring, all of gold, together with two iron keys, and evident remains of a linen bag. These interesting relics have been now successfully removed, and are lying in a house not far distant. They are to be preserved in Pompeii, and four bronze tables, of an antique fashion, are being prepared for their reception. I will describe the dry details of their appearance. The first body, so to speak, is that of a woman, who lies on her right side, and from the twisted position of her body had been much convulsed. Her left hand and arm are raised and contorted, and the knuckles are bent in tightly; the right arm is broken, and at each end of the fragments one sees the cellular character of the bones. The form of the head-dress and the hair are distinctly visible. On the bone of the little finger of the left hand are two silver rings, one of which is a guard. The sandals remain, or the soles at least, and iron or nails are unmistakably to be seen. Though the body is much bent, the legs are extended as if under the influence of extreme pain.

By the side of this figure lay the bags of which I have already spoken, with the money, the keys, and the rings, and the cast of it, with all that remains intermingled with or impressed on the plaster is preserved in the same room. Passing on to an inner chamber we found the figure of the young girl lying on its face, resting on its clasped hands and arms; the legs are drawn up, the left lying over the right,—the body is thinly covered over in some parts by the scoriae or the plaster, whilst the skull is visible, highly polished. One hand is partially closed, as if it had grasped something, probably her dress, with which it had covered the head. The finger-bones protrude through the incrustated ashes, and on the surface of the body in various parts is distinctly visible the web of the linen with which it had been covered. There was lying by the side of the child a full-grown woman, the left leg slightly elevated, whilst the right arm is broken; but the left, which is bent, is perfect, and the hand is closed. The little finger has an iron ring; the left ear, which is uppermost, is very conspicuous and stands off from the head. The folds of the drapery, the very web remain, and a nice observer might detect the quality of the dress. The last figure I have to describe is that of a man, a splendid subject, lying on its back, with the legs stretched out to their full length. There is an iron ring on the little finger of the left hand, which, together with the arm, are supported by the elbow. The folds of the dress on the arm and over the whole of the upper part of the body are visible; the sandals are there, and the bones of one foot protrude through what might have been a broken sandal. The hair of the head and beard,—by which I mean, of course, the traces of them,—are there; and the breath of life has only to be inspired into this and the other three figures to restore to the world of the 19th century the Romans of the 1st century. I gazed again and again on these lifeless forms with an interest which I cannot well describe. They might have fallen but yesterday, for were there not still remaining their sandals, their dress, the very tracery of their hair? They were trying to escape from destruction, for the bodies were found at

a short distance one from the other, as if in the act of running. What could have induced them to remain so long it is only permitted to imagine. They were three women who, terror-struck, had been unable, perhaps, to act until aided and urged forward by the man. It may be that with that attachment which binds us all so closely to our native place and our hearth, they still clung to their homes with the hope that the storm would soon pass away. I witnessed some instances of infatuation last year at Torre del Greco, where the poorer inhabitants remained in the lower rooms of their houses, the upper parts of which had fallen or were falling in, when the ground was heaving, and the crash of buildings was heard from time to time; but Vesuvius sent forth its clouds of ashes without intermission until the sun was darkened, and the only safety was in flight. Haste—haste!—fly—by the Stabian Gate, towards the Salerno road! But it was too late; the weakness of woman, or the strength of local attachment, had been too strong, and down they fell, these poor victims, on the very site from which they have now been disinterred, after an undisturbed repose of nearly 2,000 years. The first was the mother and the head of the household, for by her side was the bag of money, the keys, and two silver vases, and a silver hand-mirror, which was found only last Friday. She was of gentle birth too; the delicacy of her arms and legs indicates it; and coiffure too. The hands are closed as if the very nails must have entered into the flesh, and the body is swollen, as are those of the others, as if water had aided the cruel death. The child—perhaps her child—does not appear to have suffered so much, but, child-like, it had thrown itself on the ground, and wrapped its dress about its head, thinking thereby to exclude all danger. I judge so from the marks of the folds of the linen round the arms and on the upper part of the body, and from the partially open hand as if it had grasped something. Poor child! it was not so tenacious of life as the mother, and soon went to sleep. There is the figure of another woman, of a lower class, a servant perhaps, and I thought so from the large projecting ear, and the ring on the finger, which was of iron. She had suffered much evidently, as the right leg is twisted back and uplifted. She lies on her side, and the left hand, which is closed, rests on the ground; but her sufferings were less than those of her mistress, as her sensibility was perhaps less acute. The man, man-like, had struggled longer with the storm which raged around him, for he fell on his back, and fell dead. His limbs are stretched out at their full length, and give no sign of suffering. A more touching story than that which is told by these silent figures I have never read, and if a second Bulwer could describe the last days of Pompeii, nothing more suggestive could be found as a nucleus for his romance than the family group just brought to light. It was with comparatively little interest that I closed this day by visiting the sites where the labourers are actually at work. They are cutting out streets beneath the roots of large trees, and carting off the soil to many feet above them. Walls are coming out to view every moment, and the large red inscriptions and the popular jokes of Pompeiian. Many houses have been completely uncovered, with the exception of two or three feet of sand, which are left on the ground-floor, and cover up the antiquarian wealth which is reserved for the eyes of distinguished visitors. One house I remarked particularly, as it is the largest in Pompeii. There are two large gardens in the interior of the building, and marble fountains, around which were found the figures of a wild boar being pulled down by dogs, and a serpent and other animals, all of bronze. On the walls are elegant fresco paintings, and in one small room, a sleeping chamber, is a mosaic floor, a portion of which was repaired, and that right artistically too, by some old Roman mosaicist. This room is not far from the Temple of Isis, should visitors care to see it; and it will well repay the trouble. Amongst the many changes and improvements which my friend Cav. Fiorelli has introduced, I must not fail to notice the establishment of a museum, in which many objects of great interest are deposited, all discovered in Pompeii.

There are the skeletons of two dogs; and sixty loaves which were baking when Vesuvius burst forth, and which were "drawn" only the other day. There are the great iron doors for the mouth of the oven. There are tallies, too, and hammers, and bill-hooks, and colours, should the artist need them, and medicines for the sick, and pulse for the hungry. Vases and patens of plain and coloured glass, light and elegant in form, are there, and candelabra, so graceful that one longs to grasp them. There, too, are brasiers more ornamented and more useful and elegant than any that modern Italians have made.

H. W.

OUR WEEKLY GOSSIP.

NEARLY all the poets, and some who are not poets, have been singing welcomes to the young lady who is now Princess of Wales. The offerings are of various merit; but no one amongst them has sufficient beauty, emphasis and music to become at once the sole expression of a people's joy. The true welcome of the Princess Alexandra was the inexpressible loyalty and gladness of the public streets; and the great poetic facts of her reception-day made all attempts at utterance pale and weak. Mr. Tompson's "Welcome" is the best:—

Sea-kings' daughter from over the sea,
Alexandra!
Saxon and Norman and Dane are we,
But all of us Danes in our welcome of thee,
Alexandra!
Welcome her, thunders of fort and of fleet!
Welcome her, thundering cheer of the street!
Welcome her, all things youthful and sweet,
Scatter the blossom under her feet!
Break, happy land, into earlier flowers!
Make music, O bird, in the new-budded bowers!
Welcome her, welcome her, all that is ours!
Warble, O bugle, and trumpet, blare!
Flags, flutter out upon turrets and towers!
Flames, on the windy headland flare!
Utter your jubilee, steeple and spire!
Clash, ye bells, in the merry March air!
Flash, ye cities, in rivers of fire!
Welcome her, welcome the land's desire,
Alexandra!
Sea-kings' daughter as happy as fair,
Blissful bride of a blissful heir,
Bride of the heir of the kings of the sea,
O joy to the people and joy to the throne,
O joy to us, love us and make us your own:
For Saxon or Dane or Norman we,
Teuton or Celt, or whatever we be,
We are each all Dane in our welcome of thee,
Alexandra!

—In these laureate lines, the thought is not very happy nor the diction very choice. That theory of the young lady being a Dane, and a daughter of the Sea-Kings, on which the compliment of the piece is made to turn, is not even historically true; the Prince of Wales, as a descendant of Anne of Denmark, being more a Dane than his royal bride.

On Tuesday night the British Museum presented a novel lesson in the art of illumination to those whose visits to it in that behalf have been chiefly for the purpose of studying the illuminated manuscripts. The four pedestals along the line of the front railing in Great Russell Street, which have been waiting so long for their intended statues, were surmounted by Prince of Wales's Feathers in gas, not terminating in quills, but rising from magnificent cushions of the same material, and a series of wreaths enveloping two A's interlaced filled up the intervals between. The effect was not only splendid, but most tasteful and classical. It has been laid down as a canon of criticism, that the best method of illuminating a building in every case is simply to run the architectural lines into lines of light; and the example of the Floral Hall at Covent Garden Theatre on Tuesday was a brilliant illustration of the effect of the arrangement; but the example of the Museum showed that an effect still better is sometimes to be obtained. We have heard that for the design of this display the enlightened public are indebted to Mr. Sydney Smirke and Mr. Winter Jones.

The Directors of the Crystal Palace Art-Union have included, in the series of works offered to the Subscribers, a very pretty copy, in Ceramic ware, of a bust of the Princess of Wales. The Princess has been much ill-used by the photographers; but

the sculptors have done more justice to the delicate beauty of her face. The bust, by M. Felix Miller, has a good deal of natural grace; and there must be many to whom such a work will be an acquisition.

On Tuesday, by order of the Lord Chamberlain, the theatres were thrown open gratuitously to the public in honour of the Prince of Wales's marriage. In addition to the usual performances, at many of the theatres lyrical effusions appropriate to the occasion were delivered. A loyal stanza, written by Mr. George Linley and composed by Mr. Brinley Richards, was sung between the acts of 'Bonnie Dundee,' at Drury Lane. Miss Avonia Jones, at the Adelphi, delivered a long Epithalamium, composed by the Author of 'Whitefriars,' which was aided by the classical costume in which the fair speaker was attired; and Miss M. Oliver, at the Princess's, delivered with much grace a similar effusion. The Lyceum made a demonstration. After 'The Duke's Motto,' an Ode was delivered by Miss Elsworthy, who appeared as *Britannia*; views of Windsor Castle and St. George's Chapel succeeded; while behind the scenes the Chorale composed by Prince Albert was sung by a full choir. Then followed a kind of transformation scene, designed for an allegorical tableau, and exhibiting portraits of the Prince and Princess of Wales. Mr. James Anderson, at the City of London, delivered an Ode, written by Mr. Nelson Lee, junior. The theatres were all well attended; and, owing to the good arrangements made beforehand, there was no confusion either in gaining admission or during the performance. The lyrical demonstrations to which we have alluded were in all places enthusiastically received.

The list of candidates for election into the Royal Society for the present session is closed. The number of names "up" is forty-five.

The Prince Consort memorial statue for Cambridge has been, notwithstanding an earnest speech in favour of bronze by the Master of Trinity, decided to be executed in marble.

The rejection of the Regent Circus Railway Bill, on its second reading, by the House of Commons, will serve as a warning in future to the subscribers for schemes calculated to chop the metropolis into little pieces. Two months ago we called attention to the manner in which the Borough has been crossed near the foot of London Bridge. One of the best openings in the City has been ruined, and St. Saviour's Church buried, not through any necessity, but by indifference to public interest on the part of railway authorities. Further westward, on this same railway, even worse examples may be noticed. Waterloo Road, wide and airy, if not handsome, as it was, and affording a welcome vista, has been cut midway, not by one only, but by two of the ugliest structures it is possible to make out of iron and brick: a pair of monstrous iron boxes, more like coffins than any other things, have been placed on brick piers of commonplace form. Such is the work throughout this line.—The rejection of the plan for taking the new street from Thames Way into St. Paul's Churchyard, whereby a noble view of the Cathedral would have been gained, deprives us of the consolation hoped for, when we learned how the London, Chatham and Dover Railway is intended to cross Ludgate Hill, and shut up the existing but insufficient prospect. This company has got its Bill, but is it even now too late to make some improvement in the plan proposed? Some concession to public opinion will be wise. An Edile to save us from engineers may be—if the Commons' Committee does its duty upon each Bill—rendered needless by the appointment, announced by Mr. Milner Gibson, of an officer of the Board of Trade, to "investigate and report upon the general character of metropolitan railways." We trust this officer will not confine himself to engineering, but, if not an architect himself, be aided by one in dealing with our engineers.

The Royal Literary Fund held its annual meeting on Wednesday, the Bishop of Oxford in the chair. The Report of the General Committee stated that during the past year 1,500*l.* had been granted in the relief of fifty-four applicants. The Permanent

Fund was said to amount to 23,639*l.* 1*0s.* 10*d.*, producing 799*l.* 3*s.* 4*d.* per annum in interest. The Permanent Fund was last year increased by a legacy of 1,139*l.* 1*0s.* 10*d.*, bequeathed to the Society by Mr. Patrick Kernan. Earl Stanhope was elected President of the Society.

The first Education debate of the session will probably come off on the 20th instant, when Mr. Walter will move the following resolutions:—1. That it is the opinion of this House, that the sums annually voted by Parliament for educational purposes ought to be made applicable to all the poorer schools throughout the country (not being private schools, or carried on for profit), in which the attendance and examination of the children exhibit the results required, under the Revised Code, by Her Majesty's Inspectors of Schools. 2. That to require the employment of certificated teachers, or of pupil-teachers, by school managers, as an indispensable condition of their participation in the Capitation Grant, is inexpedient, and unjust to the managers of such schools.

Since our last we have received the following:—
"Maldenhead, March 9, 1863.

"A learned local friend correctly informs me that I have been anticipated regarding the tract illustrative of the 'Yorkshire Tragedy,' by Dr. Whitaker's account of Leeds and its vicinity, published under the title of 'Loicis and Elmets.' Being confined almost to my room by inflamed eyes, I could not at the time consult any works not on my own shelves, and therefore ought not to have spoken so positively on the subject. As, however, Dr. Whitaker has omitted a full third of the tract in question, and does not follow the form, orthography, or even the words, of the original, I intend to reproduce the whole of the rarity, exactly as it stands, for the satisfaction of the members of my Reprinting Club.

"J. PAYNE COLLIER."

Mr. Boucicault has secured the site for his proposed New Metropolitan Theatre. It is in the Haymarket, on the ground occupied by the Anglesey Tavern, with the stables and livery-yard attached. The building will be immediately commenced. This gentleman will now have an opportunity of practically illustrating those theatrical reforms which he has projected, and in which the public seem disposed to assist.

The Polytechnic Institution has become a place of "sensational" entertainment. To his spectre-drama Mr. Pepper has now added another "strange lecture" not less startling. It concerns Crinoline, and the dangers to which its wearers are exposed by fire. His object is to show that the remedies usually proposed are ineffective. Stone fibre of asbestos and tungstate of soda avail little. A lay-figure is attired with an extensive crinoline, protected by these supposed preventives, and the dress is speedily ignited, leaving nothing but the charred and ghastly body of the victim. A living person is then introduced, to demonstrate the value of an invention recommended by Mr. Pepper, namely, an incombustible starch. The lady is fashionably dressed, with a preposterous appendage that sweeps over the flames in various directions with perfect impunity. The lecturer claims the result as a triumphant proof of the value of the preventive recommended.

Under the shed, at the British Museum, which contains the lions of Chersones, Cnidus and Boudrum, is a meteorite that fell at Cambourne, Victoria (Australia): to this, with unexpected humour, the Jurors of Class I. at the International Exhibition, awarded "Honourable Mention"—the card signifying which hangs still, so to say, round the neck of the thing. It is not much of a meteorite to look at, but glows anew under its honours. Was it not worth a medal? or is that distinction reserved for such stones as fell at Ægus Potamos the year Socrates was born, got "honourable mention" in the Chronicle of the Parian Marbles as being a full waggon-load, and of which Humboldt, despite a lapse of nearly twenty-four centuries, did not abandon hope of our finding? May not that which barred the river Narne in the tenth century, and is not yet found, some day come in for a medal? These might have a chance, together with that

monstrous Siberian mass which Pallas investigated so earnestly, or the Monte Videan thunderbolt that perplexed the nations. What would the Jurors of Class I. say to the Palladium itself, if that turned up, and was found to be meteoric iron, as many believe! "Honourable Mention" for aërolites that fall, as Schribers estimated, at the rate of seven hundred in each year, seems a little absurd, but still the thing in question is noteworthy. Whether the air-giants kneaded the Cambourne quoit, and cast it caudant from their hands; whether it be an asteroid, whose race is done, shot out of a lunar volcano, of solar origin, as Diogenes Laertius surmised, native terrestrial iron raised by a hurricane, as Aristotle wildly guessed about that of *Ægos Potamos*; or, strangest of all, proof of the theory of Diogenes of Apollonia, and one of "the stars that are invisible, and, consequently, have no name," no man has yet affirmed.

Mr. Warren De La Rue has exhibited an enlarged photograph of a portion of the moon's surface, with a view to promote that branch of lunar observation included under the term Selenography. The photograph in question, which is, we believe, thirty-six times larger than the original negative, represents one of the rugged ridges of our satellite with admirable definition, and with lights and shades, prominences and hollows, remarkably distinct. Hence arises the utilitarian suggestion, that if the whole of the visible lunar surface were similarly depicted, the photographs might be preserved for the use of coming generations, as with such accurate tests at hand the astronomers of 1963 would be able to compare the aspect of their moon with that of the moon of 1863.

A French naturalist has calculated that the number of birds' eggs and young birds destroyed in France every year by predatory urchins and adults amounts to twenty millions; on which calculation the editor of *Les Mondes* reads a homily which is not without its application in this country. We notice the question in the hope that as the pairing season has commenced, all persons who can exercise influence will do so on behalf of the tenants of our woods, copses and hedgerows. Agriculturists especially should bestir themselves to prevent the wanton destruction of nests and broods which takes place every spring, considering their liability to loss by attacks of insects. It is impossible to calculate the number of grubs, or embryos scarcely visible without a microscope, or insect-devourers generally, which the birds would destroy if let alone. It is true that agriculture owes much to art; but it must not on that account reject the aid of nature. If small crops are to thrive, small birds must be encouraged. Our foreign contemporary cites as praiseworthy the example of Cardinal Donnet, who on all fitting occasions exerts his eloquence in favour of the birds of the air.

Another centenary birthday will be celebrated this month, that of Jean Paul Friedrich Richter, born on the 21st of March, 1763. The name of Richter, the fanciful, humorous, sentimental author of '*Hesperus*,' '*Titan*,' '*Campaner-Thal*,' '*Levana*,' '*Siebenknie*,' &c.,—the idolized poet, the favourite of the women of his time,—has far more penetrated beyond the frontiers of Germany than that of stern, simple-hearted Seume. It is now half a century since Jean Paul's writings created an enthusiasm in Germany hardly equalled, certainly not surpassed, by that which '*Die Sieden des jungen Werther*' and Schiller's '*Räuber*' raised in the hearts of old and young. These times are over. The cool and severe criticism of men like Gervinus and Hillebrand—the utter condemnation of the poet by modern writers of literary history, as Julian Schmidt—seem to take a sort of revenge on the idol of his time and of the women in particular. However, literary justice will be done by and by, and the scales resume a fair balance, after too much fame and too much blame have been thrown in on either side. This centenary birthday, no doubt, will be celebrated warmly; a literary gift for the day has already appeared. The son-in-law of the poet, Herr Ernest Förster, has begun to publish a series

of '*Denkwürdigkeiten aus dem Leben von Jean Paul F. Richter*.' The first part, which has already appeared, shows the poet as friend, by his correspondence with Emanuel Osmund, Friedrich von Oertel and Paul Emil Thieriot; the second part will treat on the poet's relation with women; and the third will lead us into his study and make communications from his books of memoranda. The whole will be a welcome gift to the friends and admirers of the poet.

Will close on the 1st.—SOCIETY OF PAINTERS IN WATER COLOURS.—WINTER EXHIBITION OF SKETCHES AND STUDIES by the MEMBERS, at their Gallery, 5, Pall Mall East. Open from Nine till Dusk.—Admission One Shilling. JOS. J. JENKINS, Secretary.

BRITISH INSTITUTION, Pall Mall.—THE GALLERY, for the EXHIBITION AND SALE of the WORKS of BRITISH ARTISTS, is OPEN DAILY, from Ten till Five.—Admission, 1s.; Catalogue, 6d. GEORGE NICOL, Sec.

'THE RAILWAY STATION.'—This Celebrated Picture, by W. FRITH, Esq., R.A., NOW ON VIEW to the Public, at the FINE-ART GALLERY, 11, Haymarket.—Admission, 1s. Open from Ten to Five. A Descriptive Pamphlet, by Mr. Tom Taylor, M.A., price 4d.

THE ROYAL FAMILIES OF ENGLAND AND DENMARK.—Portraits of Her Majesty, their Royal Highnesses the Prince and Princess of Wales, and the other Members of the Royal Families of England and Denmark, comprising more than Forty Pictures, many of them life-size, all executed by Mr. Gibson from actual sittings, are NOW ON VIEW at the FRENCH GALLERY, 120, Pall Mall (First Floor).—Admission, 1s. N.B.—Every visitor will be presented with a Carte-de-Visite Portrait of the Princess of Wales.

Mr. EDMUND YATES'S INVITATIONS TO EVENING PARTIES and the SEASIDE will be issued at the EGYPTIAN HALL, EVERY EVENING (except Saturday), at Eight o'clock. Mr. HAROLD POWELL will be one of the party. A Morning Performance on Saturday, at Three o'clock.—Stalls, 3s.; Area, 2s.; Gallery, 1s. The Box-Office is open daily, from 11 till 8 o'clock.

SCIENCE

SOCIETIES.

ROYAL.—March 5.—General Sabine, President, in the chair.—The following papers were read: '*On Skew Surfaces, otherwise Scrolls*,' by A. Cayley, Esq.—'*Researches on the Refraction, Dispersion and Sensitiveness of Liquids*,' by Dr. Gladstone and the Rev. T. Dale.—'*On the Change of Form assumed by Wrought Iron and other Metals when Heated and then Cooled by Partial Immersion in Water*,' by Lieut.-Col. H. Clerk.

GEOGRAPHICAL.—March 9.—Sir Roderick I. Murchison, President, in the chair.—D. J. Kennelly, A. H. Barford, H. Bayley, J. Burns, J. D. Campbell, R. R. Carew, S. Chapman, F. P. Dalgety, J. V. F. Foster, F. Gascogne, E. W. Jeffreys, Brigadier-Gen. J. R. A. St. George, C.B., Col. C. Sawyer, G. Scovell, R. B. Sheridan, M.P., G. Stanton, and R. Swinhoe, Esqs., were elected Fellows.—The President informed the meeting that he had received a communication, which gave some hopes that Mr. and Mrs. Petherick might still be alive.—The papers read were, '*Recent Explorations in Australia*': 1, by Mr. McDouall Stuart; 2, by Mr. Landsborough; and 3, by Mr. McKinlay.

GEOLOGICAL.—March 4.—Leonard Horner, Esq., Vice President, in the chair.—F. Drake, Esq., II Commendatore Devincenzi, Cav. C. Perazzi, O. C. Marsh, Esq. and J. Watson, Esq. were elected Fellows.—The following communication was read, '*On the Permian Rocks of North-Eastern Bohemia*,' by Sir Roderick I. Murchison.

SOCIETY OF ANTIQUARIES.—March 5.—The Marquis of Bristol, V.P., in the chair.—A. W. Franks, Director, exhibited a bronze knife found in the Thames, and photographs of the Mortuary Urns found at Stade on the Elbe, and now in the Museum at Hanover, on which Mr. Kemble communicated a paper in the 38th volume of the '*Archæologia*.' The Director called attention to the great interest of these urns, of which more exact representations were now before the Society than those which are found in Mr. Kemble's paper.—J. Williams, Esq. exhibited, by permission of Commander Edge, R.N., some antiquities of a Danish type from the Barra Islands in the Hebrides.—The Director called attention to similar relics which had been found in the Orkney Islands in the spring of 1849.—E. Waterton, Esq. exhibited a very fine specimen of an ass's hoof-ring.—E. Peacock, Esq. exhibited a Manuscript Report

of the Proceedings of the First Session of King Charles the First's Third Parliament, from which the Director read some passages relating to charges against the Rev. Richard Burgess. The exhibition was accompanied by a letter from J. Bruce, Esq., calling attention to the interest of this portion of the manuscript.

SOCIETY OF ARTS.—March 4.—P. Graham, Esq., Member of the Council, in the chair.—The paper read was '*On the Influence of Certain Social Institutions on the Progress of the Fine Arts*,' by Mr. G. B. Burnell.

MEETINGS FOR THE ENSUING WEEK.

- Mon. Asiatic, 2.
- Royal Academy, 8.—Sculpture, Prof. Westmacott.
- Tues. Ethnological, 8.—Notes on Formosa, Mr. Swinhoe; 'Compendium of Races, Western Asia,' Mr. Crawford.
- Royal Institution, 3.—Animal Mechanics, Prof. Marshall.
- Statistical, 8.—Recent Financial and Taxation Statistics, United States, Mr. Walford, Esq.
- Engineers, 8.—'Waters of the Upper Thames,' and 'Lydgate and Buckhorn Weston Rail. Tunnels,' Mr. Frazer.
- Wed. Horticultural, 1.—Camellia Show.
- Meteorological, 7.—Ordinary and Council.
- Geological, 8.—'Inferior Oolite, Middle and South of England,' Mr. Holl; 'Recent Changes in Delta of Ganges,' Mr. Ferguson.
- Society of Arts, 8.—'Geopomion of Pines,' Mr. King.
- Thurs. Royal Institution, 3.—'Chemical Affinity,' Dr. Frankland.
- Royal Academy, 8.—Painting, Prof. Hart.
- Numismatic, 7.
- Chemical, 8.—'Native Coppers,' Prof. Abel; 'Decomposition of Gum-cotton,' Dr. Divers; 'Choline Series,' Mr. Greville Williams; 'Oxamide,' Dr. Astfield.
- Linnean, 8.—'Remarkable Malformations affecting the genus *Lothian*,' Dr. Masters; 'Species of Fossils inhabiting Seas of Japan,' Mr. A. Adams.
- Royal Institution, 3.—'Magnetic Forces,' Mr. Balfour Stewart.
- Fri. Antiquaries, 9.
- Horticultural, 11.—Council. 2.—Election of Fellows.
- Philological, 8.
- Royal Institution, 8.—'Magnetic Forces,' Mr. Balfour Stewart.
- Sat. Royal Institution, 3.—'Science of Language,' Prof. Max Müller.

FINE ARTS

FINE-ART GOSSIP.—The Society of Female Artists' Exhibition will open in the middle of April—later this year than usual—at the new gallery of the Society, No. 48, Pall Mall. Pictures must be sent in on the 7th and 8th of that month, between 10 A.M. and 6 P.M., whether the works of members or of contributors. The latter pay a small fee for hanging pictures, and 5l. per cent. on sales effected. This Society has opened a ladies' school for study of the costume model and from the antique.

The Society of Sculptors has determined to open its First Annual Exhibition on the 26th instant, in conjunction with the Architectural Exhibition, at 8, Conduit Street, Regent Street.

The Society of Wood-Carvers, composed mostly of skilled artisans, such as were the Gothic artists, who have left us such noble works, has voted the sum of 15l., to be awarded to three of the most meritorious works by its members that may be shown at the forthcoming Sculpture Exhibition.

The designs for the Prince Consort's Memorial having been submitted to the Queen, at Windsor, are to be immediately exhibited to the public in the Houses of Parliament, probably in the Royal Gallery, which Mr. Maclise is decorating with water-glass pictures. It does not seem to be generally known that this artist's most important picture, '*The Interview between Wellington and Blücher after Waterloo*,' may be seen on Saturday afternoons, by gratuitous tickets obtainable, for immediate use, on application, at the Lord Chamberlain's Office in the Houses of Parliament. The picture referred to is not alone estimable in the highest degree for its artistic qualities, but as a successful application of the water-glass process. Exteriorly placed blinds now so reduce the coloured light passing through the windows of the hall, that this picture may be seen as well as can be hoped for while the stained-glass remains in its present position.

Mr. Weekes is preparing a statue of Hunter, for the Hunterian Museum, College of Surgeons, London. It is seated, larger than life. Mr. Steele's statue of the Marquis of Dalhousie, for Calcutta, has been recently finished. It is marble, above life-size, in ordinary costume, with a cloak over the shoulders; the right hand pointing across

the body to a map held in the left. The same sculptor is engaged on a statue of the late Mr. Wilson, also for Calcutta.

The now finished exterior of the Guards' Barracks at Chelsea cannot be said to be beautiful. A frontage of about 1,250 feet offers either a great opportunity or a great snare for the architect who has to use it. Mr. G. Morgan, probably influenced by the very extent of ground at command, has trusted for most of his effect upon the eye to the façade's vast length, and not, as he might wisely have done, to grandly massing its forms. Broken by sectional groupings as the frontage and roof-line are, they are not enough to give emphasis to any one feature. Indeed, the parts are symmetrically arranged without gaining dignity or looking so large as they really are. No section is inelegant; some parts are really pleasing, as the central portal and its towers, the main loftier wings, and, above all, the detached structures at each end; yet the straightness of the general plan is such that the building lacks breadth of form as well as of light and shade.

The Church of Ross, well-known as containing the grave of John Kyrle, the "Man of Ross," has been restored and enlarged under the charge of Mr. Buckler, of Oxford. Open seats have been substituted for pews, the floor lowered,—an improvement needful to show the character of this noteworthy edifice,—the organ removed from the tower to a gallery proper to itself,—two ugly galleries taken away, and the space under the tower, where the organ stood, fitted with seats. We do not learn that the spire, the peculiar incurving outline of which has puzzled many a tourist, has been restored to its originally beautiful line; its recent odd shape was given under the care of John Kyrle himself, whose eye for beauty must have been a peculiar one. Slight as is the cavity, its effect, not only upon the edifice but the whole character of the landscape, of which this spire forms so conspicuous a portion, is extraordinary. Nothing could better affirm the original architect's skill than the result produced by meddling with his work; every one sees there is something wrong,—the artist finds it to be the twenty feet added to the spire without keeping to its old outline.

On the subject of mosaic decorations in St. Paul's Cathedral a Correspondent writes as under:—"In the paragraph of last week, wherein reference is made to the project of decorating St. Paul's Cathedral with mosaics, the ornate and rather heavy grandeur of the architecture is urged as ill-suited to that style of embellishment; while the 'later school of mosaic Art,' as exemplified by the 'Navicella' of Giotto in the vestibule of St. Peter's at Rome, is protested against as a bad precedent. Surely St. Peter's at Rome is of the same ornate and heavily-grand style of architecture as St. Paul's at London. If mosaic befits that cathedral, wherefore not *this* one also? And surely St. Peter's at Rome contains later mosaics than the 'Navicella' after Giotto. The Four Evangelists, beneath Michael Angelo's cupola,—the first distinct pictured figures which strike the pilgrim's eye who first paces the nave towards the *baldachino*,—pictures which, when approached near, seem merely so many collections of coarse bits of coloured tile: these offer a fairer precedent, I cannot but think, besides being a more modern example, than the 'Navicella' of the vestibule; and *could* not, it may be added, have been executed otherwise than in mosaic. Y. L. Y."

The Scottish Academicians have for a long time past kept for themselves the privileges of examining and visiting their pictures before the exhibition containing them is open to the public. By way of conciliating the most impatient, or perhaps most influential, of "outsiders," the privilege has this year been conceded to a select number of the latter. This seems to have neither rhyme nor reason in it. There might be reasons shown for excluding every person, for some might justify the old state of the matter; but to modify the rule as now seems a concession to fear rather than justice.

The long-delayed decision of the award in competition for the design of St. Fin Barr's Cathedral, Cork, has been made. Mr. W. Burges, the successful competitor, receives the first prize of 100l.

for his design, from which the cathedral will be built. The second prize, 50l., has been awarded to Mr. T. N. Deane, of Dublin. The award to Mr. Burges has been challenged, on account of the assumption that its execution will exceed the limit of cost.

The *Monde* states that French and Russian architects sent to report on the condition of the Holy Sepulchre declare that all the woodwork is so worm-eaten, that the top of the cupola is in a dangerous state, and might fall in: they suggest to have constructed a temporary roof under which the services might go on. It is further suggested that the cupola, long known to be in a precarious state, should be replaced by one of bronze.

MUSIC AND THE DRAMA

SACRED HARMONIC SOCIETY, Exeter Hall.—Conductor, Mr. COSTA.—FRIDAY NEXT, March 20, Mendelssohn's 'ST. PAUL.' Principal Vocalists:—Madame Rudersdorf, Madame Sainon-Doby, Mr. George Fernan, and Mr. Weiss. The Band and Chorus, on the most extensive scale available in Exeter Hall, will consist of (including 16 double basses, nearly 700 performers)—Tickets, 2s., 5s., and Stalls 10s. 6d. each; at the Society's Office, No. 2, in Exeter Hall.

BETHOVEN ROOMS, 78, Harley Street.—Mdlle. BONDY'S FIRST CONCERT OF CHAMBER MUSIC will take place on March 17, at Eight o'clock. Instrumentalists: Mdlle. Bondy, M. Sainon, M. Pague, Vocalist, Miss Banks. Conductor, Herr William Ganz.—Tickets for the series, One Guinea; Family Tickets, to admit Three, Two Guineas; Single Tickets, Half-a-Guinea each. To be had of Mdlle. Bondy, 11, Duke Street, Portland Place.

MR. HENRY LESLIE'S EVENING HANOVER SQUARE ROOMS, ON WEDNESDAY EVENING, 18.—Programme: Motett, 'Eralitabo Te,' Palustrina; Chorale, 'Sleepers Awake,' Mendelssohn; Anthem, 'Almighty and merciful God, John Goss; Anthem for Advent, 'Blow ye the Trumpet,' Henry Leslie; Anthem, 'O Lord, for thy tender mercy's sake,' Farrant; Duet, for Pianoforte and Clarinet, Weber; Mr. J. G. Colcott and Mr. Lazarus; Motett, 'Ave verum,' Mozart; Motett, 'As pants the hart,' Spohr; Soprano Solo, Miss Annie Cox; Motett for double Choir, 'I wrestle and pray,' Bach; Trio, 'Ti prego,' Curschman (Miss Fisher, Miss Julia Elton and Mr. Walter Selwyn); The 3rd Psalm for an Eight-part Choir, 'Judge me, O Lord,' Mendelssohn; Pianoforte Solo, 'The Harmonious Blacksmith,' Handel (Miss Marian Walsh); Part-Song, 'The deep repose of night,' Mendelssohn; Solo, for Clarinet, Mozart (Mr. Lazarus); Chorus, 'Hallelujah,' Handel. Conductor, Mr. Henry Leslie.—Stalls, 5s.; Area, 2s. 6d.; Admission, 1s. Tickets to be had of Addison & Lucas, 210, Regent Street; Austin's Ticket Office, St. James's Hall, Piccadilly; Keith, Frowse & Co., 48, Cheapside; and at the Hanover Square Rooms.

S. BLUMNER begs to announce that he will give THREE SUBSCRIPTION SOIRÉES at the HANOVER SQUARE ROOMS, on the 21st of March, 5th of April, and 1st of May. Tickets for the Three, One Guinea; Reserved Seats, Single Soirée, 10s. 6d.; Unreserved Seats, 10s. 6d. for the Three; Single Soirée, 5s. To be had of Herr Blumner, 5, Pelham Crescent, Brompton; at the Rooms; and at Messrs. Schott's, 156, Regent Street.

THE ROYAL WEDDING-MUSIC.—Nothing was ever seen more curiously recalling the stage of a great theatre, when a new grand drama is in preparation, than the highway of London,

From low St. James's up to high St. Paul's, last week. The rehearsals (so to say) of scenery, machinery, property, costumes, were attended by a more dense crowd than on any former occasion,—this in part owing to the increased facility of access to the metropolis,—in part to England's increased prosperity,—in part to the splendour of the March weather,—in largest part to the grace and promise of the ceremonial itself. That Music has been "up and doing" to take its due part, may have been gathered from the scattered notices which have been already presented. To speak of the performances as they have passed and gone (the best to be repeated) is not, for the moment, possible, save in a fragmentary fashion.

The Windsor music, in St. George's Chapel, for the august ceremonial was as follows:—'Triumphal March,' Beethoven; March from 'Athalia,' Mendelssohn; March from 'Joseph,' Handel; 'Chorale,' by H.R.H. the late Prince Consort; 'Grand Chant,' Psalm 67, "Hallelujah," Beethoven. The music to be conducted by Dr. Elvey. The selection was a singular one, including, as it does, three German Marches (of these, one a War-march),—the other from 'Joseph,' best known as a Funeral March, it having been thus used in 'Samson,'—and leaving England with only two notes to represent it—those of the 'Grand Chant.'

At the *Crystal Palace* the music consisted of a repetition of the pieces executed at Windsor, and a miscellaneous act, including two new compositions written for the occasion, and both of importance. The first was a festival Overture by Mr. Manns, in which there are many points to the credit of that excellent conductor; if there be also some inexperience in laying out the composition. The *allegro* contains a happy and bold phrase of melody.

The instrumentation is ingenious and well calculated for the limited and somewhat peculiar means at its writer's disposal. The close included 'God save the Queen,' with a couple of new verses, given out by a choir of children, and chorused by the 35,000 joyous holiday people (we are informed that that number were present), with "heart and voice," if ever such things spoke out in company. The composer was enthusiastically cheered; and the *allegro*, with its choral hymn, must needs be repeated. Though out of this special record, the open, hearty, orderly enjoyment of the vast crowd, and the brightness of the framework in point of decoration, are things not to be forgotten by any who were present. Mr. A. Sullivan's March is very good; and, what is more, new. He has had to compete with such composers of festive Marches as Mendelssohn, M. Meyerbeer, M. Gounod in 'La Reine de Saba,' Mr. Benedict in 'Undine,' each differing from each, and all casting their work in the modern mould, which, if less grandiose, is somewhat less formal than the one so superbly filled by Handel. The theme is large and brilliant, relieved by a short and a longer *trio*, both of great sweetness, without languor; the first *trio* happily repeated, with all the force of the orchestra, as a *coda* (published, among *The Prince of Wales's Wedding-Music*, by Messrs. Cramer & Co.). This March deserves to survive the occasion for which it was thrown off; and, we think, will do so.

The production of the week most important in scale was the *Allegorical Masque*, produced at Covent Garden, on Tuesday, 'Freya's Gift,' the words by Mr. Oxenford, the music by Mr. G. A. Macfarren: arranged from the score by E. F. Rimbault. (Lambourn, Cook & Co.) The *Cantata* contains five numbers, three of which are choral. Taken for what it professes to be, the *Masque* is happily devised, and contains some of Mr. Oxenford's most musically-thought words. Mr. Macfarren shows himself in his usual guise, as the possessor of much facility, and sometimes instinct for grace and grandeur, as in the Chorus No. 1, but incomplete in his feeling for vocal elegance, as in the *Solo* No. 1, calculated to exhibit Miss L. Pyne's brilliancy, but which is harassed and uncouth, and is followed by a recitative in which the pen, not the fancy, has rambled—a couple of pages which, were it not for the pernicious humour of publishing works as yet untried,—are well worth the trouble of cancelling if 'Freya's Gift' be meant to last. Then comes the inevitable sugared ballad about "an English home" (not a bad ballad), followed by the most developed portion of the *Cantata*, a chorus "Arouse thee, merrie England," in "the Robin Hood" humour, with more stir than real merriment, the latter being impeded by some gratuitously crude modulations. Mr. Macfarren—like other moderns—forgetting such examples as Handel's "Laughing Chorus" and "Happy we," from 'Acis,'—is nothing when he is not modulating in some out-of-the-way fashion. Lastly comes a choral hymn—once more ingeniously embedding in a movement (common *tempo*) the Danish and the English national airs. The uses to which our own noble tune has been put—from an organ fantasia by Hesse, and subtle Quartett variations by Onslow, to every conceivable choral setting and treatment "happy and glorious"—pure, puerile, pedantic, or pompous—offer matter for a curious monograph. The *Cantata* proves less effective in performance than we had expected from perusal.

Among provincial demonstrations must be mentioned a Serenade, written by Mr. J. A. Langford, and composed by Mr. A. J. Sutton, consisting of *solos*, duet, and choruses, which was performed at Aston Park, Birmingham, on Tuesday last. One quatrain will suffice as a specimen of the words:—

With hurrahs the air we rend,
As the Bridegroom, nobly proud,
On his bride doth gladly tend,
Loved and honoured by the crowd.

Of the music we may speak another day, since it will be published ere long.

As close to this desultory talk concerning a week of remarkable excitement, one or two published utterances may be noticed. The *Album*, by

Messrs. Cramer & Co., the musical portion of which has been amply announced, cannot here be further criticized. The form of publication, however, as magnificent and tasteful in no ordinary degree, is not to be passed over without admiration.

The offering of an English lady—*Alexandra National Song* (Lonsdale), the words by J. J. Lonsdale, the music by Virginia Gabriel—is among the myriad things of "favour and of prettiness" (to quote from an old Danish legend) which our English women have so gracefully lavished in the path of her whom so many hearts have gone forth and waited to greet. The words by Mr. Lonsdale (who writes with great ease and fancy for music, with some propensity to overcrowd his fancies which will cure itself), have feeling, poetry, and nationality. Miss Gabriel has set them well, and more nervously than has been till now her habit. The choral burthen is stout and bold; and the closing phrase of it (a point at which many a strong man has felt his strength dwindle) is happy, large, and in the true English style.

MUSIC IN GERMANY.

Leipzig.

WITH the new year our musical life begins to flow again, after the brief suspension during the Christmas holidays.

The *Gewandhaus* New Year's Concert, of which the first part is always sacred music, opened with a selection from a Mass in A flat by Schubert, hitherto unknown here. The *Kyrie* is beautiful, both in the melodiousness of its themes and in the way they are treated. The other movements gradually decline in interest, and become much too light—I might almost say frivolous—for service music. The *Credo*, which, I am told, is the best movement, was not performed. In the same concert, an orchestral composition by Bach, the "Trumpet" Suite in D, was performed. The Guild of Trumpeters, for whose especial glorification it was written, must have been first-rate performers: for our orchestra, the trumpet parts had to be modified; one movement, "air" for solo violin, was played incomparably by Herr Concertmeister David. Herr Kapellmeister Reinecke also contributed, as a New Year's gift, his setting of Herr Ernst's poem, 'Ave Maria,' for chorus and orchestra; it is a graceful and pleasing composition. In another concert, 'Miriam's Song,' by the same composer, for *soprano* solo, with orchestra, was performed for the first time. The text is Freiligrath's translation of Moore's well-known song. In works of this heroic class Herr Reinecke is not so much at home as in others of a more tender character. Although the song has some good points, it nowhere rises to that grandeur which should mark the triumphant Israelitish maiden. A new *Concertante*, for six violins, re-introduced the veteran composer and violinist, Herr Louis Maurer, of St. Petersburg, who himself took part in the performance. It would have been a greater kindness had the directors not allowed Herr Maurer, who in his day has done good service, to bring his latest work before the public. Herr von Tarzycky, a young Polish pianist, made his first appearance in Leipzig in Henselt's *Pianoforte Concerto*. He has immense strength of finger and brilliant execution; but his playing fails in that clearness without which brilliance has but little value. The choice of his *Concerto* was unfortunate; it is too uninteresting and fragmentary. In some small pieces by Chopin, Herr Tarzycky's rendering of his music was charming. The competition for Herr Davidoff's place has introduced more violoncellists than we usually hear in one season. Herr Krumbholz, a member of the orchestra, and who has filled up the vacancy during the interim, played a *Concerto* by Goltermann, and proved himself an excellent artist in style, tone and execution. A more brilliant performer is Herr Louis Lubeck, from the Hague. In the first movement of Molique's *Concerto*, and in a *Recitativo* and *Adagio* by his father, his playing, at once musical and spirited, won deserved applause. Herr Lubeck is certainly the best of the candidates who have hitherto been heard. His performance in one of the Chamber-Music Con-

certs proves that he is also an excellent *ensemble* player. Another of these Concerts made us acquainted with Herr Lund, of Stockholm, an oboist of the first rank. The good opinion he then inspired was confirmed by a second hearing in the *Euterpe*, where he performed a *Concerto* by Stein. In tone, execution and purity of taste, he leaves nothing to be desired.

In the *Euterpe*, music of the newest school continues to receive a prominent place. Rubinstein's Symphony, No. 3, has been given for the first time in Leipzig. With not a few points of interest, it is, as a whole, the least striking of all the composer's larger orchestral works. Berlioz has been represented by his 'Benvenuto Cellini' Overture, and by the second and third movements of his 'Harold' Symphony. That these works are wonders of orchestration, and that they greatly excite the interest of the hearer, there can be no question; but whether they satisfy it is another matter. A 'Vereinslied' for "Mannerchor," by Lieszt, is an excellent composition, uniting both earnestness and jovial humour. Herr Blassmann, the Kapellmeister of the Society, has played Schumann's *Pianoforte Concerto*. In this, as in a *Concerto* of Handel's, in a former concert, he proved himself a pianist of a very high class: his tone and execution are both good; the only drawback is a certain want of clearness and decision in phrasing: this latter defect is also perceptible in his directing. In a Chamber-Music Concert of the *Euterpe*, the Herren Sielmann, Ackermann, Meinert and Schlick, the Dresden "Court" quartett, presented themselves; they are careful *ensemble* players, but neither in spirit nor in style did they give entire satisfaction.

The Concert of the Pauliner *Gesangverein*, the Students' Choral Society, always excites interest. Schumann's setting of Umland's Ballad "Das Glück von Edenhall" was new to me; this is one of the composer's posthumous works which it would have been better not to have published. Two works by Schubert were also new: 'Widerspruch'—a chorus for male voices with a pianoforte accompaniment, and a double chorus of Knights and Moors from the MS. Opera 'Fierabras.' The latter makes the most pretence, and has some vigour and life, but the former is the more pleasing. A "parting chorus" from Grétry's opera, 'The Two Misers,' was delicious.

The second of Herr von Bülow's *Pianoforte* Concerts commenced with a new "Suite" in D minor, in four movements—Fantasia and Fugue, Gigue with variations, Cavatina, March, by Herr Joachim Raff. There are some clever points in its construction, but, as a whole, to employ a useful German idiom, it is "unbeautiful," and its interest is by no means in proportion to its great length and pretension.

The first volume of a new musical periodical, *Musikalische Jahrbücher*, has been issued by Messrs. Breitkopf & Härtel, and is edited by Dr. Chrysander. This first volume is devoted to theoretical and historical disquisitions. Two articles, on 'Tone' and on 'Temperament,' by Dr. Hauptmann, unite the profundity and humour of that admirable theorist. The other articles are by the Editor; one is devoted to the life and works of our own Carey, and to the origin of 'God save the King.' This has much interesting matter in it, but, like all the works of its writer, is marked by such a contemptuous disdain of those from whom he differs, that even when he is right the impression made upon the reader is very disagreeable. The future volumes, which will appear yearly, will contain papers on modern compositions. Especial attention is also promised to the comparative study and analysis of national songs.

For my last paragraph, I have just received a pleasant piece of news. A second volume of Mendelssohn's Letters is in active preparation. Mendelssohn's eldest son is associated with Herr Paul Mendelssohn in the supervision of the new volume, which will bring down the letters to the time of the writer's death, and will contain a greater proportion of especial musical interest.

A.

MUSICAL AND DRAMATIC GOSSIP.—Mr. C. Halle's Concert-season at Manchester has come to a close; and successfully, we are informed,—a fact remarkable, considering how melancholy the past winter in the town has been. His programmes of the five past years are humiliating to Londoners in their affluence and variety.

We have been told that Mr. Santley, who has entered into a re-engagement with Mr. Mapleson, intends henceforth to devote himself exclusively to Italian opera,—which (if Mr. Mapleson's plans be carried out) means his singing alternately in London and Naples. In the present condition of the English musical theatre, such preference on the part of a singer so valuable as Mr. Santley can excite no surprise; but if the tale be true, we lose (for a time at least) not merely the best opera-baritone, but the best oratorio and classical concert singer, possessing his peculiar voice, who has been heard in this country.—We hear that Mr. Mapleson intends bringing out M. Gounod's 'Faust,' with Miss Kellogg, Signor Giuglini, and (we hope) Mr. Santley in the part of *Valentin*,—'La Forza del Destino,' and 'Fidelio,' among other operas;—and that Mdlle. Piccolomini is to return for two nights,—also, that Signor Belletti is engaged by him.

The *Gazette Musicale* announces that Mr. Gye intends to revive 'L'Etoile du Nord' this year, and to give 'Stradella,'—with which view M. Naudin has been engaged. We are informed, thirdly, that he will produce an Italian version of Nicolai's cheery 'Merry Wives of Windsor.'

Mr. Pittman commenced a series of four Lectures on Comic Opera at the London Institution on Monday evening last.

Mr. Howard Glover gives another aimless monster concert to day, the programme of which will include, among other matters, a *Cantata*, written on the occasion of the Princess Alexandra's departure, by Herr Salomon, the Danish Court-composer. The "run" of miscellaneous entertainments since the year came in, however profitable, has not indicated any progress in Art. We are not so far in advance of our old London Lent concerts, when 'Nid Noddin' shouldered 'The Horse and his Rider,' as we ought to have been.

It is understood that this year's Lower Rhenish Whitsuntide Musical Festival will be held at Düsseldorf, and will, probably, be conducted by Herr Otto Goldschmidt. Among the works named for performance are 'Elijah' and Handel's 'Ode for St. Cecilia's Day.'

The Viennese Society, that opened not long ago a competition to symphonists, has awarded one of its two prizes to Herr Joachim Raff, who has long been known as a meritorious practitioner in the transcendental school of writing. His prize Symphony, 'Germany,' is described as follows:—*Allegro*, "Picture of the German Character: Vaulting Ambition and Deep Reflection, Mildness and Boldness," with like contrasts. *Allegro Molto Vivace*, "In the Open Air, a German Wood: with Horn-Music, and National Songs on the Plain." *Larghetto*, "The Muses and Love at the Hearth." *Allegro Drammatica*, "Disappointed Struggles for German Unity." *Larghetto* and *Allegro Triumfale*, "Mourning, New Exaltation." What next? Cologne Cathedral has been set as a Symphony,—also the French Revolution. Let us recommend "the British Constitution" to any native composer inclined to walk in the clear and natural path of Herr Raff.

M. Victor Massé's new two-act opera, 'La Mule de Pédro,' was the other evening produced at the Grand Opéra of Paris with some success. The principal singers were Madame Guéymard, M. M. Warot and Faure.—The *Gazette Musicale* publishes, on a correspondent's authority, a glowing account of M. Rubinstein's 'Feramor,' just produced at Dresden; with Madame Jauner Krall as *Tulip-Cheek*, and Herr Schnorr von Carolsfeld as the disguised Prince, whose tale-telling propensities did so affront *Paddaden*.

In our last week's notice of Mr. Henry Leslie's concert, "concert-goers" was printed in place of concert-givers.

MISCELLANEA.

Papers from Simancas.—Dr. Bergenroth's interesting calendar of the documents relating to English history which are preserved at Simancas has attracted the attention of historical students to everything that comes from those Archives; and now another contribution serves only to whet our curiosity still more. A volume of papers relating to the reigns of Charles the Fifth and Philip the Second has just been published in Ratisbon, under the superintendence of Dr. Döllinger, the eminent Catholic historian, and with the support of the King of Bavaria. These documents are of a more general nature than the collection of Dr. Bergenroth; but these are as interesting to the students of German history as those to the students of English history. They deal chiefly with religious questions,—with the conclave by which Pius the Fourth was elected, with the Council of Trent, and with the Spanish Inquisition. Still there is no lack of political interest, the more that religion wears a decidedly statesmanlike garment. Charles the Fifth gives accounts of his meeting the Princes of the Empire in Augsburg, states his intentions with regard to the proposed divorce of Henry the Eighth, describes his flight from Innsbruck to escape from Maurice of Saxony, and proposes Philip the Second to be elected Emperor in his room. A long report from the Nuntius Delfino states the grounds of Charles the Fifth's abdication, alluding in the bitterest terms to the hostility of the Germans. The documents relating to the reign of Philip the Second begin with his excommunication by Pope Paul the Fourth, and the orders issued by the King to prevent the entrance of the Bull into his dominions. How well this order was obeyed we may see in the next page, where the Bull itself is given in all its circumstantiality of verbose Latin, stating the crimes of Philip, and depriving him of all his power and kingly authority, releasing all his subjects from their obedience and all his allies from their promises. A short time elapses, and we find Pius the Fourth requesting support from Philip in the matter of the concessions demanded by the German Princes. Reports from the ministers in Rome during the progress of the Council of Trent are followed by fresh instructions from Philip; more than thirty documents announce the publication of the Council and the Pope's approval. We see Philip's steps to have the Council kept clear of all meddling with the Spanish Inquisition. He demands warrants from Rome to authorize the Inquisition to act with greater severity than the Roman Index. The Emperor and the Duke of Bavaria demand the communion in both kinds and the marriage of the clergy; the Emperor threatening that if the latter is not granted, the whole of Germany will adopt the Augsburg Confession. One of Philip's agents writes a detailed account of the characters of all the cardinals who will take part in the election of the next Pope. Another gives a careful sketch of the religious state of Germany in 1571. Another shudders over the danger to which the Roman Empire had been exposed, of a Protestant being elected in 1564. The documents are all published in the original language, with a short abstract preceding. It is almost to be regretted that, as the original language is mostly Spanish, the headings are not somewhat fuller, and that the editor's preface does not go more into detail. The English collections of State Papers might have served for models in this respect. Of the documents Dr. Döllinger has published, thirteen only have appeared before in the Spanish work of Navarrete Barranda and Salva. The present collection was made at Simancas by Dr. Heine, but the publication of it was prevented by his death in 1848. How great the light the papers shed on the history of the time, how many new readings they suggest, and how many secret motives they detect, have been shown in an interesting essay by Prof. Löher, who compares the information they give with that which was found sufficient by Ranke. E. W.

TO CORRESPONDENTS.—W. R.—B. M. A.—D.—R. J. P.—A Yorkshire Gleeman—received.

THE PRINCE OF WALES' WEDDING MUSIC,

DEDICATED, BY SPECIAL PERMISSION, TO

HIS ROYAL HIGHNESS

THE PRINCE OF WALES.

THE PROCESSION MARCH.

By Arthur S. Sullivan.

ARRANGED FOR THE PIANOFORTE.

As performed on the 10th of March by the principal Military and Orchestral Bands throughout the Country.

LITERATURE

The Polish Captivity: an Account of the Present Position of the Poles in the Kingdom of Poland, and in the Polish Provinces of Austria, Prussia and Russia. By Sutherland Edwards. 2 vols. (Allen & Co.)

The Insurrection of Poland. By the Count de Montalembert. (Bentley.)

SOME years ago, Count Andrew Zamoyski presented the Church of the Holy Cross at Warsaw with a piece of sculpture, which is now placed at the entrance to the crypt. It represents Christ bending under the weight of the Cross, but still looking towards heaven; and beneath are written the words "Sursum Cor." When the whole Polish nation was recently plunged into mourning this statue seemed to all who saw it to represent the attitude of the country, borne down to the ground by the heavy yoke of oppression, but "lifting up its heart" unto heaven, and, though tempted to despair, still placing its trust in God. At the commencement of that period of trial the opposition to Russian tyranny was chiefly of a religious character. The voice of the people expressed itself in hymns and litanies, and the feelings to which Sigismund Krasinski, "the anonymous poet of Poland," had long been giving utterance in verse, appeared to animate all hearts. In one of his "Psalms" he asks God to grant, not the death of enemies, nor successes of arms, nor material force, but purity of heart, and heroic patience, and sacrifice of self, and brotherly love. A similar sentiment prevails in the address issued in March, 1861, to the workpeople of Warsaw by the Central Committee. "In all parts of ancient Poland," ran the notification, "mourning will be put on and worn for an indefinite time. . . . For nearly a century our emblem has been the Crown of Thorns! That coronal adorned the coffins of our brethren, and you have all understood its meaning. It signifies patience under suffering, self-sacrifice, pardon and deliverance." When Prince Gortchakoff endeavoured to drive Count Andrew Zamoyski into open resistance, he could not succeed. The Poles were ready to die, but at that time they refused to fight. Now all is changed. The tactics of the revolutionist leaders are altered. Zamoyski and Wielopolski have given place to Langiewicz. The fiery cross has been sent throughout the country, and, tired of passive resistance, the long-oppressed but still unconquered soldier-nation has risen in arms against its foe.

In the lives of these three men lies, as it were, a key to some understanding of the Polish question. Let us glance at them in the order of time.

For many years the hopes of the constitutional party in Poland centred in Count Andrew Zamoyski. Sprung from one of the noblest of the Polish families, he exercised all the influence which an historic name and powerful connexions could add to weight of character, joined with force of intellect and strength of will. One of his ancestors was the Grand-Constable John Zamoyski, who in the sixteenth century endeavoured to constitute a body of inferior nobles, in order to counterbalance the sway of the ruling oligarchy. His grandfather was Chancellor in 1772, but resigned his office rather than affix his seal to the first partition. The traditions of his family strengthened in him the bias towards constitutional government, which was favoured by his own turn of thought, and it was steadily developed by the education he received and the experience he

acquired on entering upon public life. He went through a prolonged course of study in England, in France and in Switzerland, and on returning home he was attached to the Ministry of the Interior as Director of Agriculture and Commerce. When the revolution of 1830 broke out, he became for a short time the Minister of the department, being then thirty years old, but was soon afterwards sent on a diplomatic mission to Vienna. At the same time the Marquis Wielopolski went to London on a similar errand, each of the young negotiators being instructed to attempt to gain a recognition of Poland as an independent country from the Court to which he was accredited.

Zamoyski had to overcome not a few difficulties before he could arrive at his destination. The cholera was raging at that time, and he had to make his way through the two or three sanitary cordons which guarded Austria as well from revolution as from disease. He had to ford the Vistula at night, holding his despatches above his head to secure them from the water, which came up to his neck. Then followed the difficulty of avoiding the police, who were on the alert in Galicia and Hungary; but eventually he made his way into Vienna without being discovered, and contrived to obtain access to Prince Metternich. The old diplomatist received the young envoy kindly, though in secret, admitting him to his house frequently, but generally after dusk, and appearing to take a pleasure in his frank, straightforward method of negotiation. Eventually he arranged a meeting between Count Zamoyski and the Russian ambassador at Vienna, and offered his services to the national government of Poland as a mediator, while he persuaded the Russian minister to direct Prince Paskievitch to suspend hostilities for a time. The necessary despatches were sent, and Zamoyski attended the secretary of legation who conveyed them. But unfortunately they arrived too late. Before they reached the Russian camp Warsaw had fallen, and Count Zamoyski found himself treated as a prisoner by Marshal Paskievitch, who threatened to shoot him. "You have no right to do so," was the characteristic reply of the Count,—a man who throughout all his life has given his whole heart to finding out what is right, and doing it. Paskievitch soon allowed him to return home, and there he lived in comparative seclusion for some time, devoting himself to the task of developing the resources of his country, raising the standard of education among the people, and preparing them by peaceful means for the changes which he foresaw time would bring. He turned his attention to husbandry and commerce, establishing breeding-stables, giving prizes for agricultural improvements, starting a number of commercial enterprises, and above all founding the Agricultural Society, which afterwards played so important a part in the opposition to the Russian government. Years passed away, but he quietly went on labouring, working with no selfish motive, but identifying himself with his country, its fortunes, its interests, and its every-day life. And so at last he became the centre and bond of every effort, the living conscience of the nation, the person whom every one in Poland spoke of with loving familiarity as *Master Andrew*.

But Count Zamoyski's was no easy position. He lived under a despotic government, which watched him with jealous eyes. He stood at the head of a great popular movement, and was often charged with coldness and over-moderation by many of its promoters. He was conscious of the difficulties which beset his path, and a natural sadness of character

must often have thrown a gloom over his prospects, yet he never swerved from the line he had laid down for himself, but with steady courage went on towards the end he had in view. At length came the eventful spring of 1861. Men's minds grew excited, and a number of projects were started, many of which were useless, or worse. Among others, it was proposed that the Agricultural Society should petition the Emperor for a constitution. Count Zamoyski would not listen to this suggestion, and his popularity was shaken for awhile, though it fully recovered its strength after the massacre of the people by the Russian troops, on which occasion the Count acted with a boldness and a resolution which proved that his moderation had nothing in common with timidity. Finally, in August, 1862, the Grand-Duke Constantine having invited the leading Poles to give their advice as to the course he should adopt, a meeting took place under the presidency of Count Zamoyski, at which certain constitutional sentiments were expressed. It afforded an excuse for banishing the Count, and accordingly he was sent to St. Petersburg to give an explanation of his conduct to the Emperor. An interview took place, at the close of which he was ordered to travel abroad. He came to London, and his exile apparently left the ground clear for his rival Wielopolski.

The theory generally adopted by the Poles with regard to the Marquis Wielopolski is a very simple one. He has sold himself to Russia, they say, body and soul, and, looking upon him as a mere renegade, they consider that any means of getting rid of him are allowable. He has been shot at and stabbed. Several attempts have been made to poison him, and his whole family appears to be doomed by the secret tribunals. But we are a little inclined to accept the popular explanation of his conduct, as to excuse the murderous attacks to which he has been subjected. One of the proudest men who ever lived, he is not likely to have stooped to accept a bribe. But self-sufficient and opinionative to a high degree, he is more dangerous to his country in his integrity, than a score of timid and vacillating traitors could be, though they were steeped in the foulest political mire.

Soon after the Revolution of 1830 broke out, and about the time when Zamoyski left Warsaw for Vienna, Wielopolski started for London. Here he struggled bravely, but in vain, to obtain from the English Government the recognition of an independent Poland. Two other envoys from that country were then among us—Count Walewski and the old patriot Niemcewicz. It is interesting to watch the fortunes of the three men, representatives of three very different classes of Poles. Niemcewicz died, a poor and forgotten emigrant, after many years of exile. Wielopolski returned home to take an active part in the Polish revolutionary proceedings, and afterwards to submit to the authorities he had tried to overthrow; now he is the chief Minister of the Grand-Duke Constantine at Warsaw. Walewski, after a short visit to his country, returned to England and France, and has become a Minister of State at Paris. What other changes fortune may have in store for the Marquis Wielopolski it is difficult to foresee. It has been rumoured that he is dead, but he has been so often ineffectually stabbed and poisoned, that we shall not believe in his death until there is perfect proof of it.

There is something very striking in the character of a man who, alone, defies the world, and relying on his own simple opinion runs counter to the feeling of a whole nation which he desires to serve. He is the very type of resistance—all his life he has been fighting with somebody,

or struggling against something. He has always preferred to disagree with other men, and the idea of yielding to the opinion of the majority has never entered his mind. His very title is characteristic of his nature, he being the only marquis in Poland. It is a title which he inherits from a maternal ancestor named Myszkowski, on whom it was bestowed by Pope Clement the Eighth. His appearance is strongly indicative of his character. His eye is bold and commanding, his head massive, and his features well defined and firm. As soon as he came of age he plunged into a number of lawsuits, carrying them on with untiring vigour, pleading many of them himself with eloquence, learning and energy, and acquiring such a habit of litigation that eventually he quarrelled with every one he met. After the failure of the revolution of 1830 he retired into private life, and gave himself up again to the enjoyment of the lawsuits, which his diplomatic employments had interrupted for a time. At length the year 1846 brought with it the terrible massacres in Galicia, when the Austrians incited the peasants to attack the nobles, setting a price on the heads of proprietors, and "suspending the Commandments of God for a fortnight." Then with an outburst of rage Wielopolski wrote his famous 'Letter to Prince Metternich from a Polish Noble,' and out of hatred to the Germans flung himself into the arms of Russia. Ever since that time he has tried with all his might to bring over Poland to his views, and to induce his countrymen to give up their existence as a separate people, and merge it in a great Slavonic nationality of which Russia is to be the head. Finding arguments and entreaties useless, he has finally had recourse to coercion, and being appointed the civil governor of the kingdom under the Grand-Duke Constantine, he has become the man whom the Poles hold in the utmost detestation, while the Russians look on him with mixed feelings of envy and distrust.

Few men have become famous more rapidly than Maryan Langiewicz. Less than three months ago he was in London, a young man of low stature, of bright face, of tried experience, but of unknown fame; now he is the recognized Dictator of revolted Poland, and his movements are watched by the anxious eyes of all Europe. An able administrator, a daring general, a cautious and prudent statesman, he unites in himself every qualification which a leader should possess. At first sight his appearance is, perhaps, not striking, and his figure might seem insignificant to a careless spectator. He is very short, considerably below the middle height, and at present he limps a little in his gait. His head is well formed, and his features animated. His eyes are rather small, full of fire when he is roused, but at other times resembling Garibaldi's in their mild and kindly expression. He has brown hair, and wears an exceedingly long moustache, but no beard or whiskers. He is sparing of his words, sometimes employing only a gesture in giving a command; but when speech is necessary he knows how to use it well, possessing to a great degree the gift of eloquence which can melt the hearts of its hearers and sweep away all opposition before it. The sweetness of his voice adds an additional charm to the influence of his words, and he is said to exert that strange power over all with whom he is brought into contact with which so many men who were born to rule over nations have been endowed. His manners are easy and graceful, and he is as successful in gaining the affections of his troops as in maintaining their discipline. He is now in the very prime of life, being about five-and-thirty years old, and he is as remarkable for

endurance of fatigue as for military talent or personal courage. He is a native of the Grand-Duchy of Posen, the son of a physician who educated him for his own profession. His brother has for some time been practising as a medical man at Breslau, but since the insurrection broke out he has left home, and is now, we believe, in London on the business of his country. At an early age Maryan Langiewicz resolved to devote himself to the service of Poland, and after a course of study at the Universities of Breslau and Prague, where he acquired a complete mastery over the various Slavonic languages, he applied himself to the acquisition of military knowledge. It is said that he passed some time in the Russian army, learning how to fight his most powerful enemies; but we cannot find any good authority for such a fact. In the Prussian army he really served for a considerable period, and distinguished himself as a good artillery officer. He was very popular in his regiment, his industry and ability gaining for him the favour of his superiors, while the charm of his personal character won the hearts of his comrades. But the service was always distasteful to him. No true Pole can ever be attached to the conquerors of his country, whether they be of German or of Russian race, and Langiewicz availed himself of an early opportunity of retiring from an army with which he could have no sympathies. And accordingly, at the time of the campaign in Lombardy, he obtained his discharge from the Prussian service, and transferred his sword to the Italian ranks. Unable to join in the war which was terminated by the treaty of Villafranca, he attached himself to the staff of Garibaldi, and served with him during a considerable part of his campaign in Southern Italy. Garibaldi fully recognized his singular capacity for military tactics, and induced him, after his refusal of a commission in the Royal army, to become one of the professors in the Military School at Cuneo. After its suppression he returned to Poland, and took an active share in the proceedings of the secret societies. There his administrative talents found ample scope for employment; and, whether on the spot or at a distance, he rendered great assistance in maintaining the organization which enabled the conspirators to defy the Russian police and gradually to mature their plans. It became understood among the counsellors of the people that, in case of an appeal to arms, Langiewicz would take the lead, and, accordingly, as soon as the insurrection broke out, he stepped at once into the foremost place. And his successes have more than realized the hopes to which he had given rise. The wonderful influence which he exercises over his troops has enabled him to enforce the strictest discipline. Their entire confidence in him gives him the power of restraining their dangerous ardour and saving them from useless sacrifices. He refuses to accept the services of any but valuable recruits, and will have nothing to do with the inexperienced volunteers who flock to his standard. He has even had the firmness to waive the offer of Garibaldi's sword, replying to the letter of his former chief with affectionate gratitude, but not encouraging him to join the Polish army. The authenticity of the letter published as Garibaldi's in the newspapers appears to be doubtful. Some such greeting the hero of Marsala sent to his old comrade—one of The Thousand,—but not, we think, the *rodomontade* printed as his text. Langiewicz and the other members of the Provisional Government are anxious to avoid all measures that may offend the Austrians or alarm the party of order throughout Europe; and therefore they disclaim all socialist and communistic

theories, and declare that they are fighting only for the independence of the nation. An attempt was made by Mieroslawski to identify their cause with that of the revolutionary party in other countries, but he was met by firm and steady opposition, and was soon obliged to retire from the field.

Mieroslawski is an able general, but he is entirely destitute of many of the qualities requisite to constitute a statesman. His whole life has been spent in fighting, and unfortunately he quarrels with his friends as readily as with his enemies. His father served under Davoust in the army of the Grand-Duchy of Warsaw, and afterwards held a commission in the national army re-organized by Alexander the First. The young Mieroslawski became an ensign in a regiment of Russian infantry in 1830, and took an active part in the Warsaw insurrection of the 29th of November of the same year. On the suppression of the rebellion he retired to Paris, and there devoted himself for many years to literature and science. In 1844 he became a member of the Central Committee of the Polish Democratic Society, and he was chosen as one of the popular leaders when the insurrection of 1846 broke out. But on his way to head-quarters he was arrested in the Duchy of Posen, and after a trial at Berlin which lasted for eighteen months, he was condemned to imprisonment for life. Very soon afterwards occurred the events of 1848, and the successes gained by the insurgents threw open the doors of his prison. Having been placed at the head of the army raised in the Duchy of Posen, he for some time made head against the Prussians, but was at last taken prisoner by General Colomb. Again he was set at liberty and allowed to return to Paris. On the outbreak of the Sicilian revolt he was invited to take the command of the insurgents, and was severely wounded at the storming of Catania by the Neapolitans in April, 1849. Again imprisoned and again set at liberty, he re-appeared after a few months as the commander-in-chief of the army raised by the provisional government of Baden, and gained a series of extraordinary successes during the struggle which ensued with the Prussians. But apparently doomed never to secure the continuance of victory, he was eventually forced to betake himself to flight, and to return to his literary and scholastic pursuits at Paris. There he published a journal called the *Bacznośc*, in which he has violently attacked the more moderate revolutionist party, and recommended a general massacre of all Russians, whether friends or foes, as the only means of restoring liberty to Poland. The progress of so dangerous a leader cannot be viewed without great misgiving, and all who really have the cause of Poland at heart will be glad to see his influence superseded by that of Langiewicz.

Such are the men whose names are most identified with the question of what Mr. Edwards calls the "Polish Captivity," and M. de Montalembert "the Insurrection of Poland."

Mr. Sutherland Edwards visited Poland in the interval between the Warsaw massacres and the breaking out of the insurrection. What he saw he has described simply, but forcibly. Few English writers are so likely as he to form a correct judgment on any matter connected with Russia or Poland. His acquaintance with each of these countries, its people, its language, and its literature, gives him advantages which few other travellers possess. In wandering with him about the streets of Warsaw, we feel that we are in the hands of a trustworthy guide, one who can tell us what the people are chattering about, and who can explain the written mysteries which, under the veil of an unknown

tongue, elude our baffled eyes. His first experiences of Polish manners and customs were not very agreeable. Of the country inns he gives a very unfavourable account, and the picture he draws of the agricultural labourer is far from flattering. Speaking of the country between Breslau and Warsaw, he says—

"I am not going to generalize on the subject of agriculture in Poland from what I saw of it during a day's railway travelling through the country, but I affirm that from half-past six in the morning to five in the afternoon all the labourers I passed were ragged and dirty; that at least four-fifths of them were lying down on the ground; that not one in ten was doing any work; and that the few who seemed to be seriously occupied were employed on the railway. The contrast between the appearance of the Prussian and that of the Polish peasant is most striking. Gradually, as you proceed eastward, the labourer seems to sink lower and lower, and in Poland Proper he appears, indeed, in a most pitiable condition."

He was assured, however, that the men whose appearance on the ground had struck him as expressing the last degree of wretchedness and laziness, were abstaining from labour on high political grounds, and had the best of reasons for doing nothing. In the towns he was better pleased with the appearance of the inhabitants, and he says that whatever exaggerations have been uttered in connexion with Polish affairs, no one has ever exaggerated the grace and beauty of the Polish women. The influence they exercise over their countrymen would be wonderful, were it not accounted for by their remarkable beauty, added to the noble qualities they possess.—

"Many of the Polish women are very like our English women of the slender, delicate type, but with paler complexions, and brighter, and generally darker, eyes. I thought it was impossible to see finer and more varied expression than their faces exhibited; for I saw them at a time when their enthusiasm, their indignation, their sorrow, and all their religious feeling were awakened. I had read, in some book, that they were frivolous and changeable; but they have been constant enough to Poland, and dull persons will always mistake animation, quickness of perception, and a light manner of treating light subjects, for frivolity. In every civilized country, women give the tone to society, and this is particularly the case in Poland, where social gatherings are far more frequent than with us, and where there are no entertainments, no pleasure-parties of any kind, at which women are not present. If, however, the Polish ladies cared only for pleasure, instead of placing patriotism above all other considerations; if the balls and bribes offered to them and to their husbands, could make them forget their suffering country; then the Russians would certainly by this time have made some progress in the way of gaining adherents among the Polish families of the Kingdom, whereas, as it is, they have not advanced a step. The Polish mothers bring up the young Poles as patriots, and the Polish wives exclude from society all whose patriotism is even doubtful."

A year and a half ago the women of Poland made a tacit agreement not to dance, and they have kept their word, painful as the trial must have been: for the Poles are essentially a dancing people; and it was only because a great calamity had befallen them that they gave up their amusements and surrendered themselves to mourning. Not that they supposed that giving up dancing would "lead to anything." The testimonies of sorrow on the part of the inhabitants of all Poland proceeded from emotion, not from calculation. The blow which had been struck at Warsaw called forth a spontaneous expression of grief and pain throughout the length and breadth of the land. And the singing of the National Prayer, Mr. Edwards thinks, was not intended, in the first instance, as a demonstration. He often heard

it in places where it might be thought that none but the Poles themselves and the Heavenly Protector they addressed would hear it,—in the silence of night, before a lonely convent, in a dreary by-street of Cracow, or amid the huts of a distant village, in little remote churches, or among the solitudes of the Carpathian Mountains. When he was in Warsaw, the hymn was sung every Sunday and fête-day in all the churches. The Government used to remonstrate with the Archbishop, but his reply was that he had nothing to do in the matter, and that if the people were wrong the police should interfere. And so the performance went on. No sooner had the priest left the altar after mass than the congregation began their part of the service. An amateur played the organ accompaniment, and the vocal part was sung in unison by all present. Sometimes the leading singers were crossed on the back with a piece of chalk by a spy, and arrested on leaving the church. As to the hymn itself, it consists of "old and new words to a tune which was first sung in 1815, on the occasion of Alexander the First's entry into Warsaw." Here is the literal translation which Mr. Edwards gives of it:—

"1. O Lord, who, for so many centuries, didst surround Poland with the magnificence of power and glory; who didst cover her with the shield of Thy protection when our armies overcame the enemy; at Thy altar raise we our prayer: deign to restore us, O Lord, our free country!"

2. O Lord, who hast been touched by the woes of our injured land, and hast guided the martyrs of our sacred cause; who hast granted to us, among many other nations, the standard of courage, of unblemished honour; at Thy altar we raise our prayer: deign to restore us, O Lord, our free country!"

3. Thou whose eternally-just hand crushes the empty pride of the powerful of the earth; in spite of the enemy vilely murdering and oppressing, breathe hope into every Polish breast! At Thy altar we raise our prayer: deign to restore us, O Lord, our free country!"

4. May the Cross which has been insulted in the hands of Thy ministers give us constant strength under our sufferings! May it inspire us in the day of battle with faith that above us soars the spirit of the Redeemer! At Thy altar we raise our prayer: deign to restore us, O Lord, our free country!"

5. In the name of His Commandments, we all unite as brothers. Hasten, O Lord, the moment of resurrection! Bless with liberty those who now mourn in slavery! At Thy altar we raise our prayer: deign to restore us, O Lord, our free country!"

6. Give back to our Poland her ancient splendour! Look upon our fields soaked with blood! When shall peace and happiness blossom among us? God of wrath, cease to punish us! At Thy altar we raise our prayer: deign to restore us, O Lord, our free country!"

Nothing can be more improbable than the union of Russians and Poles which the Marquis Wielopolski wishes to bring about. Until a very recent period even the democratic party of one country kept jealously aloof from that of the other, and Polish exiles in Siberia would object to associate with their Russian companions in misery. The Warsaw booksellers, Mr. Edwards informs us, refuse to keep Russian books, which can be procured from the grocers only:—

"Russian books, pictures, and music, might be advertised in the Polish newspapers as 'sold in Warsaw by all respectable tea-dealers.' In the interior of one of these literary grocers' you may fancy yourself in Russia; but there are not more than three or four of them in all Warsaw, and as soon as you have left the shop you might, for any signs of Russian civilization that meet your eye, be two thousand miles from Moscow. Worse than that, you see the Russian soldiers at the corner of every

street, and, perhaps, the Lieutenant-Governor's escort of Circassians whipping their way along the great thoroughfare which leads to the castle, and the Lieutenant-Governor himself forcing little schoolboys to salute him, under pain of being arrested and imprisoned."

The Russians certainly have not made themselves popular in Warsaw, and their position must be as disagreeable as that of the Austrians at Venice.

Mr. Edwards has taken great pains to ascertain the extent of the massacres of the 8th of April, 1861. As usual, there is great difficulty in reconciling the various statements. But—

"If the Russians did not commit a massacre, at least the Poles suffered martyrdom. That is to say, the Poles died to attest their devotion to a cause, while the Russians fired upon them not because they desired their death, but because, with their despotic habits, they knew no other mode of dispersing a crowd. I fully believe, from the account given to me by a person who was close to Prince Gortchakoff when he ordered the troops to act and for some time previously, and from another who saw him frequently afterwards and during his last illness, that he would most thankfully have escaped the bloody work in which he found himself engaged, and which he did not know how to avoid."

The number of the killed seems to have amounted to about forty. It is strange that more did not fall, for few attempted to escape:—

"Many went down on their knees, but not to their enemies. In some parts of the crowd the more timid were entreated in the name of their country to remain firm, and these appeals were not without effect. Afterwards, when numbers had been shot down and brute force was beginning to triumph, the most determined and desperate among the crowd still cried out that there must be no retreating, and some were seen to join hands so as to prevent those before them from falling back. The preconcerted plan for capturing the bodies shows plainly that the Russian commanders anticipated a resort to arms; but that Prince Gortchakoff courted the opportunity and deliberately allowed the crowd to assemble, that he might (according to an expression attributed to one of his officers) 'quell the Polish fever by drawing a pint of Polish blood,' I see no ground for believing. The reason assigned for the Russians having taken up the bodies at all is, that they feared they would be carried about the city to inflame the population, and that they would be photographed and the photographs circulated throughout Poland, as doubtless would have been the case had it been possible. It may appear strange that people should be more affected by the counterfeit presentment of a mangled corpse than by the simple statement in writing that such a one has been murdered; but the Russians certainly dreaded the effect of the bodies of their victims being brought before the eyes of their indignant countrymen in all parts of the dismembered kingdom. Besides, what an answer the photographs of the forty dead men or more, with their wounds upon them, would have been to the lying report published in the official journal!"

Mr. Edwards's book will be read with deep interest. It is very well written, and the narratives are well constructed. Count de Montalembert's pamphlet is a fiery protest in behalf of the Catholic Poles against the Greek Russians: a protest which is written for another meridian than that of London. Here it is likely to do more harm to the Poles than good.

Glimpses into Poland. By the Rev. J. G. Wood, M.A. (Bell & Daldy.)

Mr. Whittington and his cat are never likely to be rivalled in popularity by Mr. Wood and his cat,—and yet it is not possible to read this book without astonishment. During a perusal of it the feeling most frequently uppermost in the mind of the reader is an emotion of asto-

nishment that a practised compiler like Mr. J. G. Wood could have written down so many trivialities and published so much inconsequent reasoning; for Mr. J. G. Wood has written many works on natural history. His style, if incorrect and negligent, is plain and flowing, and, like many other writers of the day, he knows how to invest his truisms and platitudes with an air of authority.

"This little book," he says in his Preface, is not a mere collection of anecdotes, but is written with a "motive, and conveys a moral"; and when he leaves generalities, and "condescends upon particulars"—an excellent kind of condescension—he says, "it is written to bring the true character of the cat more prominently before the public." Cats are misunderstood. Cats, he says boldly, are more affectionate than dogs; they display, he says, a loving forethought, of which few animals would be deemed capable, only they are sensitive, nervous, electrical creatures, whose finer chords must not be jarred. If mishaps and misadventures occur in the relations of cats and men, it is not feline but human nature which is in fault; for sympathy can unite men and beasts. All animals love in common food and play; and by feeding them and by playing with them wonders can be done in taming the most unlikely animals; and if mishaps occur, they arise from mistakes in applying these great powers—mistakes committed by the persons who try to wield them.

A perusal of the two hundred and twenty-one pages of this book does not supply the inquirer with a single particle of evidence in support of these eulogies on the cat. Mr. Wood built a brick house in his garden for his pet—making the mason and his neighbours doubtful of his sanity. The cat he called Pret, and the brick house Pret Villa. He says to look after this funny animal is almost one person's business. The cat was so stupid that he was always getting into places from which he could not get out again; and when Mr. Wood, as his cat's attendant, got him out of his scrapes, and supplied him with meat and milk, the cat testified his pleasure by leaving the milk to rub his attendant's knees—an expression of gratitude which brought the moisture into the eyes of the reverend gentleman, and made him piously wish that all mankind would take an example by the cat, and be equally grateful to Heaven! Cats, Mr. Wood maintains, are not treacherous. When they scratch a caressing hand, for example, they only mean play. It is in the nature of the cat to put its claws into anything which is drawn hastily away. A lady whose hand is caught by the claws of her pet cat, and held too tightly, ought not to withdraw her hand, but to throw the cat upon its back, when it will withdraw the claws instantaneously to regain the use of its feet. Mr. Wood reports conversations with his cat. He even makes his cat talk English. An illiterate person visiting France for the first time said it was very clever of the children to talk French so well, but it was a comfort to hear the babies cry in good hearty English; and the English of Mr. Wood's pet cat was like the English of the French babies. Anybody, he says, may easily learn the cat's language by taking an interest in "the graceful and loving creatures." Mr. Wood, however, narrates facts respecting his pet which jar sadly with his eulogies. After covering himself with mud in a fight with a strange cat, Pret cleaned himself by rubbing off the mud between the sheets of his master's or keeper's bed. When he caught a mouse, the graceful and loving creature would carry it up by the tail to the top of the stairs several times, and let it drop from the top to

the bottom. Pret used to rob the larder, getting into it by concealing himself under the servant's dress. He stole a plaice, the cook's dinner, not to eat it, but to hide it among the coals. He was so jealous of the baby that he would not deign to look at the infant if any one was observing him. But the grand feat of the pet cat was the murder of the pet chameleon. He had been left alone in the room with the chameleon day after day, and even when it crawled close to him, he would only stretch out his neck, prick his ears forward, and sniff contemptuously, and then sink back into repose. But one morning the chameleon was found with its tail and fore legs torn off and its ribs and skull utterly crushed; while on the chair sat Pret, the author of the deed, "feeling," says Mr. Wood, giving the reins to his imagination, "as a culprit ought to feel." The murder was not committed from hunger, but from jealousy.

So much for the evidence in favour of the cat. Buffon said the cat was an enemy which we took into our houses to drive away another and a more inconvenient enemy. The pet chameleon was a more interesting animal than this pet cat. Mr. Wood having bought a chameleon, fastened the end of a branch with several forked twigs into a piece of deal board, and fixed it on the wall, so that the branch projected forwards. This branch the chameleon traversed from end to end with movements almost absurdly deliberate. It never lifted one foot unless the other three feet and the tail were firmly fixed, and sometimes it would stand for hours with one foot raised in the air like a pointer when he comes to the scent of game. Disturbed, it would gather its body together, make its ribs swell, and roll its body into a tight spiral. Sometimes, but rarely, it would allow its tail to fall by the side of the branch, and then curl it up like the spring of a watch or the proboscis of a butterfly. On seeing its prey it crawls towards it rather quickly, and when the insect is within range, gapes its mouth, pushes out its cylindrical tongue, which is about the size of an ordinary black-lead pencil, seems to take aim, and with a sudden dab seizes the insect and draws it into the mouth. "The whole action has a wonderful resemblance to the movement of a billiard cue as the player strikes the ball." Like the arboreal serpents, the chameleon has large eyes. One use of the projecting eyes of the chameleon probably, we submit, is to enable the animal to direct simultaneously its tongue and its tail,—one telescopic eye securing its safety, whilst the other is watching its prey. A Dr. Weissenborn seriously affirms that the chameleon sleeps with one eye open,—comparing it to two animals glued together, one of which is sometimes asleep whilst the other is awake. When asleep the chameleon becomes green.

Respecting the changing colours of the chameleon, Mr. Wood says, "Why one mental emotion should straightway cover the chameleon's cheeks and sides with yellow streaks like those of the zebra, or another emotion cause its body to be suddenly spotted with black upon a green ground, is a question that will not be rightly answered until we have vastly extended the field of philosophical inquiry." He criticizes severely the experiments of the French Academicians upon the subject, accusing them of overlooking "what any one in the least practically acquainted with zoology must know." Yet it may be remarked, that for physiologists who are abreast of the present state of science there is nothing mysterious or inexplicable in the changes of the colours of the chameleon.

But the most marvellous and novel narrative

in these 'Glimpses into Petland' is an account of the taming of two butterflies. This story is given in the words of the lady who tamed these lepidopterous insects. Mr. Wood vouches for the truth of it, and makes himself responsible for publishing it:—

"Among the many pets that I have loved and lost, few have endeared themselves more to me than my butterflies, two of which I once kept for the space of a year and a half. They came to me in their chrysalis state, and I not knowing anything of entomology, shut them up for safety in a cabinet having glass doors. The cabinet stood near a small window in my bedroom. I was very unwell that winter, and therefore a fire was kept up in my room night and day. The room was therefore very warm, and I suppose the little butterflies were deceived thereby, and thought or dreamed that summer smiled upon the earth; for a few days after Christmas, to my astonishment and delight, a little yellow butterfly was seen fluttering freely within the cabinet. My attention was first directed to the cabinet by the playful gambols of a pet pussy, who had mounted on a chair, and stood upon its hind legs, pawing at the little creature through the glass. I soon sent pussy away, opened the cabinet, and tried to induce the butterfly to alight upon my hand. But it was either dazzled and bewildered at finding itself in its new and extended sphere of existence, or had already learned the fear of man, for, at the approach of my hand, it flew wildly about, and finally settled down, as if exhausted. I now became most anxious to feed the little thing; but how this was to be achieved I had not the slightest idea, nor could any one in the house advise or help me in this important matter. Moreover, I was loudly ridiculed for the bare idea of trying to tame and feed butterflies. However, I remembered that the poets all agreed in saying that butterflies sipped nectar from the opening flowers, and therefore turned my attention to manufacture a substitute for nectar. Obtaining some honey, which I diluted with rose-water, I put one drop into the centre of the open blossoms of a fairy-rose, and placed the little plant in the cabinet. I soon had the joy of seeing the little thing flutter around the rose, and finally settle upon it. Whether it really drank or not I cannot say. I thought that it must have done so, as it appeared to grow stronger and more lively every day. I fed it in this manner every day for a fortnight; and by the end of that time it became so tame that it would step off the flowers, or anything else on which it might be standing, and appear quite happy and at rest upon my hand. It also appeared to understand that I wished it to come to me when I called it by the name of 'Psyche,' that being the name which I had given to the insect. About three weeks after the advent of Psyche, we were gladdened by the addition of another butterfly to our establishment—a peacock. He was strong and vigorous from the first, and flitted swiftly about like a gleam of prismatic light. I used to fancy that they talked to each other, as he at once fell into the ways and habits of the other; and when I called Psyche he too would come. I gave him another name, but he never seemed to understand that it belonged to him. They lived in this way until the earth had donned her glowing summer robe of lilies and roses, when I was told that their life-power could only extend over a month or two, and that it was cruel to keep them, even as happy prisoners. I was, therefore, induced to give them their liberty. The cabinet was placed with open doors before the window. It was many days before the butterflies ventured to leave the window-sill, and this much to my joy, for I thought it might be affection for me that held them back. However, one day, with many bitter tears, I saw them depart, and join some wild companions; but at night we found them again in the cabinet. On the following morning they left us, and came not back until the cold and stormy September weather set in. Yet, when in the garden, they would come if I called them, and rest for a short time on my hair or hands. At length, on a cold windy day in September, we saw them on the window-sill, and

on our opening the window, they came in and resumed possession of their old quarters, and abode there for the winter. It is true they were but poor-looking objects to what they were when they went forth. The world seemed to have used them somewhat roughly, for the sheen had gone from the rich wings of the peacock butterfly and the soft yellow bloom from Psyche's plumage. Nevertheless, they were welcome guests; and though ragged and wayworn, were not the less loved. We observed that during this winter they slept more than they did formerly. They also manifested pleasure when sung or talked to, and were very fond of being waved about, and danced up and down in the air, while they would sit upon the hand quite calmly. I think that the movement must have reminded them of the nodding flowers and fresh breezes of their summer life. The sun and earth ran their appointed course until they brought us another bright June, and again I bestowed the boon of freedom on our fairy pets, who went forth gaily; but, alas! never to return. One day, after a heavy thunderstorm, we found the inanimate form of a yellow butterfly upon the window-sill. I took it up lovingly, and did my best to revive it, for I believed it to be the material form of my own beautiful Psyche who had sought refuge from the storm, but had found the window closed. Of this I cannot be sure. * * I have since tried to tame other butterflies, but never again was so successful, although I have taught three or four to know me, and to come at my call."

Without the slightest intention to question the veracity of the writer of this extraordinary statement, we submit that it ought to be authenticated by the names and addresses of the witnesses who have put it forth. Anonymous testimony is not proof enough of the marvellous. Mr. J. G. Wood, however, we ought to add, corroborates the statement of the narrator, and says this is not a solitary instance of the taming of lepidopterous insects. The swift and wary humming-bird moth, although it usually darts away like lightning, has, he declares, been tamed enough to bear to be touched.

Narrative of a Mission to the Danish Islands in 1809. By the Rev. James Robertson. Edited from the Author's MS. by his Nephew, Alexander Clinton Fraser. (Longman & Co.)

DESCRIBING the means by which a British squadron rescued the Spanish forces under Romana, whom Napoleon had literally imprisoned in the Danish Islands, under form of military service, Sir William Napier says, "The Spaniards were in Holstein, Sleswig, Jutland, and the islands of Fünen, Zealand and Langeland. Mackenzie, through the medium of one Robertson, a Catholic priest, opened a communication with Romana, and neither the general nor soldiers hesitated. . . . This enterprise was ably conducted, and the readiness of the Spanish soldiery was very honourable, yet the danger was slight to all save Mr. Robertson." The narrative, which is now for the first time published, sets forth the dangers and difficulties successfully encountered by "one Robertson, a Catholic priest," on his way from England to Nyborg, and also on his homeward journey. The story is told with great simplicity and graphic force by the emissary himself, and it is at the same time a valuable addition to authentic secret history, and a tale of adventure which possesses some of the most stirring qualities of romantic fiction. From beginning to end the disclosures are so interesting and important that a brief summary of them will determine readers to peruse them with attention. In his travels through Germany at the close of the last century the Duke of Richmond formed a close acquaintance with the Scotch Benedictines of Ratisbon, of which fraternity Mr. Robertson was a member. Years

elapsed, and in 1807 the Duke of Richmond, who was then acting as Lord Lieutenant of Ireland, received a communication from one of those same Ratisbon Benedictines, who chanced to be at that time in Dublin. The Benedictine was Mr. Robertson, and his application to the Viceroy was for "employment in any public service, consistent with his profession, that might conduce to the general good." The petition received a courteous reply, and after a brief interval the priest was admitted to an interview with the Lord Lieutenant's Chief Secretary, Sir Arthur Wellesley, who soon afterwards returned to London. In the May of the following year, just as Mr. Robertson had taken service in the family of a Catholic peer, he received through the Irish office a request that he would call at Sir Arthur Wellesley's house in Harley Street. The interview in Harley Street was followed by another at the Foreign Office, when the priest was introduced by Sir Arthur to Canning. "Being little accustomed," says the narrator, "to diplomatic or courtly forms, I no doubt made an uncouth appearance when ushered into the presence of the minister. Sir Arthur could not refrain from smiling at my visible embarrassment, and Mr. Canning by his manner, seemed to think me ill fitted for such a mission." He was, however, entrusted with the mission, and on the King's birthday (June 4) he left London on his perilous expedition to inform Romana that if he wished to escape, "British transports would convey him to any country he might name." Going on board at Harwich, the secret envoy in forty-eight hours made the passage to Heligoland, whence he was conveyed up the Weser by a contraband vessel, and landed immediately under a strong fort garrisoned by French soldiers, who fortunately had a private understanding with the smugglers. A friendly merchant conveyed him to Bremen, from which city the adventurer hastened to Hamburg, protected by a false passport, which had been made out for one "Adam Rorauer." Before he could obtain the passport, however, he had to sign his assumed name, in doing which he almost betrayed himself. "Such is the force of habit that I began with the initial letter of my real name, J., which the town-clerk observing, suddenly called out to me,—'How, sir! did you not tell me your name was Adam?' It was really an unpardonable blunder, and might have proved fatal but for one of the luckiest thoughts that ever occurred to me in a moment of difficulty. 'Sir,' I replied (and certainly, with some embarrassment), 'in the palatinate of Bavaria, where I was born, we are in the habit of affixing Johann (John) to every man's baptismal name, as we do Mary to every woman's, so that we do not say George, Peter, Adam, &c., but Hans George, Hans Peter, or Hans Adam.' This is really the case. The explanation had the air of truth, and saved me for this time." Having eluded the vigilance of the French *douaniers* and spies, and learnt that Romana was at Nyborg, in the island of Fünen, and not at Glückstadt, as the English ministry had supposed, the agent started from Hamburg furnished with samples of Havannah cigars and chocolate, and professing to be a traveller for a mercantile house. Cautious and adroit, well disguised, and familiar with the dialects of every district through which he had to pass, he proceeded from Hamburg to Lübeck, and thence to Fünen. Here and there he was assisted by sympathisers with the British policy, who suspected his object; but during his entire journey he imparted his secret to no more than three persons. Every step he took was surrounded with peril. At every post-house a French spy was on the look-out for political agents from England.

Several attempts had previously been made by the London ministry to communicate with Romana, and in each case the messenger had been apprehended and shot. At length Fünen was reached, and Romana was personally addressed by the commercial traveller, who, while he solicited the general to buy his cigars, made known to him the wishes of England. "My message," he said to the Marquis, for whom he had no written credentials, "is merely verbal; be your answer the same. All that I can offer in the way of credentials is the knowledge I have of certain particulars of your personal intercourse with Mr. Frere, whom you will remember as our ambassador in Spain. He desires me to remind your Excellency that the first time he had the pleasure of dining with you was at Toledo. After dinner you withdrew together into a cabinet containing books. In this cabinet there was one picture. That picture was by Mengs, and represented St. Peter and St. John at the gate of the Temple." Satisfied with this proof of the priest's integrity, Romana received his message, gave him two more interviews, and finally accepted the offer of England. The consequences of this decision are affairs of history. Mr. Robertson having contrived to inform his employers of the success of his mission, the English squadron under Sir Richard Keats in due course appeared off Nyborg, and removed Romana, together with the ten thousand soldiers whom the Marquis with admirable caution had managed to concentrate on the island of Fünen, with such secrecy that until his defection was an accomplished fact Bernadotte did not even suspect the plot. The most exciting part of Mr. Robertson's narrative is that which relates his adventurous retreat from Fünen, and his safe return to his native country. Incensed at Romana's escape, which they knew could not have been accomplished unless an English emissary had outwitted them, the French police were bent on apprehending the perpetrator of so much mischief. But their efforts were in vain. After many months of concealment and cautious action the clever fellow, whose brief story contains materials for half-a-dozen novels, gave his pursuers the slip, and returned to England in the spring of 1809; having well earned the liberal remuneration which the Government had promised him in case his mission should prove successful.

Horse-Racing: its History, and Early Records of the Principal and other Race-Meetings. With Anecdotes, &c. (Saunders, Otley & Co.)

It would seem that in some things it were well if authors did not begin at the beginning. Here, for instance, is an historian of the horse, who unnecessarily remarks that "the sacred volume informs us that in the creation of the world the horse claims a prior existence to man": so does the flea, and every other animal. It would have been a more interesting scrap of information if he had recorded that, amid all the handicrafts named in the same volume, that of tailor is not once mentioned; and it would have been as much to the point, seeing that without that handicraftsman the jockey could not well mount, except he rode in buff, like Lady Godiva.

It will satisfy our views to know when horse-racing was first known in this country; and the author "wishes to indicate" that our sires caught the passion from the Romans, but confesses that he is unable to establish the fact. Considering what the British force of charioteers was, their dexterity, the speed of the horses, and the importance attached to this body, there can be little doubt that trials of skill were known here long before the Standard-bearer of the 10th Legion helped Cesar to get a footing on the shore.

Of the early history of the animal and the sport, the author trots over the old course. Henry the Eighth, it is to be observed, made the stealing of horses and mares capital; but the lawyer stepped in to help the thief, who, if he only stole a horse or a mare, was told that he was not liable to the unpleasant penalty: the error was amended by Edward the Sixth.

With kings, it will, perhaps, be found that this writer is less perfectly at home than with horses. Treating of both in the Stuart period, he shows that racing did not prosper under Charles and the Commonwealth, for curious reasons. Charles and the Puritans were at feud, but "he was a good man and an eminently pious Christian; and something similar was the rule and character of Cromwell. But Charles the Second was the exact reverse of either": which seems to us more cunning than instructive, and not exactly logical. However, we have this explained, perhaps, in the notice that Charles the Second's "reign was one scene of roysterousness."

Let us come, however, at once to another royal prince, not undistinguished for his "roysterousness," and who has left to his successor a title and a warning—the Prince of Wales, son of George the Third:—

"The Prince first became an owner of race-horses in 1784, and entering with ardour into turf pursuits, soon had a magnificent racing establishment, and subsequently bred some first-rate horses. In turf matters the Prince was considered to possess good judgment, and yet, despite this—considering also that in the possession of a good racing stud he had the essential material for success; and notwithstanding the advantages which it is not unreasonably supposed would to a certain extent result to a person in his high position, the 'First Gentleman of Europe'—as his admirers and flatterers were pleased to designate him—seems to have been particularly unfortunate in his Turf transactions. Two years after our royal sportsman began his turf career, viz., in 1786, he was compelled, on account of embarrassed circumstances, to dispose of his stud of racers; but another like lapse of time, and we find his debts paid, his income generously increased by Parliament, and the Prince once more upon the turf."

We catch this glimpse of him in good company:—

"In the year 1790, a print was published by J. Bodger, of No. 53, Holborn, being a picturesque view of Newmarket, showing the trains of running horses belonging to different noblemen, &c., taking their exercise. The print contained upwards of 200 figures, and the view was taken from the King's Chair, on Warren Hill. The price of the print was, coloured one guinea, plain 10s. 6d. and 7s. 6d. This print, says *Druid*, was the popular one of the period: 'the Warren Hill is the scene of the afternoon's revel. Quiet little Newmarket just peeps forth in the hollow, in the centre of that restless panorama, and in the far distance the Ely Minster turrets cut the cloudless sky, and struggle manfully for pre-eminence with Highflyer Hall. In the foreground is the Prince, &c., 'standing up in his phaeton, and booking a bet with the shrivelled Duke of Orleans, on horseback at his side. His brother, "York," has alighted, and is gaily pointing out to "a lady"—as the key observes—a long sheeted string, which are, West Australian fashion, cutting down the Warren Hill like a sithe, in the direction of King Charles's cupola chair, &c.'"

Five years subsequently the Prince of Wales figured in an affair, in which the jury of the whole public have never been able to agree on a verdict:—

"It appears that in the October Meeting at Newmarket, 1791, *Escape* was entered, and ran for a race both on the 20th and 21st. In explanation, and exculpation of himself and the Prince of this, at the time, notorious affair, the jockey, old Sam. Chifney, wrote and published his 'Genius Genuine,' a pamphlet of about 40 pages, price 5s. 1d. from which it appears, that in the race of the 20th the Prince had no bets upon the result, and it was

perhaps fortunate that the Prince did not bet, or at least *back* his horse, as *Escape* lost the race. This race was for sixty guineas, Ditch In, and for which four started; the betting was 2 to 1 against *Escape*, 4 to 1 against *Coriander*, and 5 to 1 against *Skylark*, and they came in thus:—Mr. Dawson's *Coriander*, 1,—Lord Grosvenor's *Skylark*, 2,—Lord Clement's *Pipator*, 3,—H.R.H. the Prince of Wales's *Escape*, 4. Previous to starting for this race, the Prince told Chifney to make strong running with *Escape*. Chifney thought doing so would be imprudent, but was unable to acquaint the Prince with his ideas, as the latter left him immediately after giving his orders; but directly after he conveys the orders he had received, and his own ideas respecting them, to Mr. Lake—a gentleman who had the management of the Prince's stud, and whose orders, in running, &c., the Prince had told Chifney, when he engaged him as jockey, he was to obey—and this gentleman, acquiescing in Chifney's opinion, reversed the Prince's orders, and told him *not* to make play, and, in doing so, also told Chifney that he (Mr. Lake) would hold him harmless with the Prince in disobeying his first instructions. Although *Escape* lost the race on the 20th, the Prince informed Chifney he should run him for the race on the 21st, and the latter advised the Prince to back him, as the race *Escape* had just run would greatly improve him, and the horse would run both longer and faster. It does not appear that the Prince was angered at Chifney disobeying the orders he had given him; and again, on the 21st, he told Chifney to make play with *Escape*, but, in this instance, not to do so if strong running was made by any of the rest of the field. For this race—second year of a subscription of five guineas each, Beacon course, twelve subscribers and six starters—the betting was 4 and 5 to 1 against *Escape*, 7 to 4 against *Chanticleer*, 11 to 5 against *Skylark*, and 6 to 1 against *Grey Diomed*. In the running, *Skylark* made play, and Chifney, waiting with *Escape*, won the race. They came in as follows:—H.R.H. the Prince of Wales's *Escape*, 1,—Lord Barrymore's *Chanticleer*, 2,—Lord Grosvenor's *Skylark*, 3,—Duke of Bedford's *Grey Diomed*, 4,—Lord Clermont's *Harpatior*, 5,—Mr. Barton's *Alderman*, 6. Here was a direct reversal of the former day's running; one which the members of the turf could not understand, and which, on the face of it, looked suspicious, and rendered many of them—the losers in particular we presume—indignant. The Jockey Club took the matter up; and, finally, its members—one of which was Sir Charles Bunbury, who, it is said, was the chief and severest of the Prince's accusers—must have decided upon a verdict of guilty, as Sir Charles Bunbury informed the Prince that if he suffered Chifney to ride his horses for the future, no gentleman would start against him. This resolve was simply an acquittal of the Prince upon conditions: the sacrifice of his jockey; but, to the honour of the Prince be it said, he was too generous to accept such terms at the sole expense of poor Chifney, but preferred again retiring from the turf in 1792."

There are some ugly points, not requiring to be indicated in the above account, and others that are explicable. With regard to variations in the running of the same horse:—

"I believe," says Mr. R. Tattersall in his Evidence as given before a Committee of the House of Commons on Gaming in 1814, 'that horses are fit to run to-day and not to-morrow, just as a man is often fit to do any particular exertion to-day and not the next. I think many horses have lost their character merely from being ill; take your own horses or hunters, they are not always fit for any great exertion; no man can go through violent exertion with a head-ache.'"

Some horses run closely enough on the same day. For instance:—

"A very severe race was run over the Doncaster course, September 28, 1797. The race was for 100*l.*, in two-mile heats, for which seven horses started, viz., *Warter*, *Pepper Pot*, *Stamford*, *Cardinal*, *Trumpator*, *Hipswell*, and *Commodore*. The first heat was strongly contested between *Stamford*, *Cardinal*, and *Pepper Pot*; the second was a dead

heat between *Warter* and *Pepper Pot*, *Stamford* being third; the third heat was won by *Pepper Pot*; the fourth by *Warter*; and, astonishing to relate, the fifth was a dead heat again between *Warter* and *Pepper Pot*! These two horses started again, for the sixth time or heat, when *Warter* was the victor. Such an evenly balanced and exciting struggle must have been well worth witnessing; and undoubtedly the animals must have possessed great stamina and gameness."

But others run as uncertainly, or the jockeys shift their humours, as may be seen by this illustration:—

"In the year 1835, a race was run at Goodwood, in which there was something remarkable in the proceedings and result of it. The race we allude to was for the King's Guineas, for which two only started, viz., *Lucifer* and *Rockingham*, the latter horse having won, almost in a canter, the *Cup* on the previous day. Three other horses were also weighed for, and although none of them actually started, this circumstance, as also the uncertainty that existed whether *Rockingham* would start or not, even almost up to the last moment, caused considerable fluctuation in the betting—the odds at one moment being laid against five animals, and then shifting and only quoted against two. *Rockingham* and *Lucifer*, however, were the only two competitors, and when they started the betting was 5 to 1 on the first, and 3 and 4 to 1 against the second. In the race, *Rockingham* led at a moderate pace, but at the distance-post had completely defeated *Lucifer*, who was ten or a dozen lengths behind him; seeing this, and hearing *Forth* call out to the boy who rode *Lucifer*—*Twitcheit*—to pull up, *Robinson* began to ease his horse, under an impression, which was shared in general by those looking on, that he had only to canter up to the post. The rider of *Lucifer*, however, instead of pulling up as ordered, kept his horse going, so that when *Rockingham* reached the stand, there was not half the distance between the two that there was at the distance-post; and *Twitcheit* at this moment making a desperate rush, completely took *Robinson* by surprise within a few yards of the winning-post, and before the latter could get his horse into action, had won the race by two lengths, to the utter astonishment of every person on the course! To show how forlorn the chances of *Lucifer*'s winning appeared at the distance-post, we may state that a bet of 100*l.* to half-a-crown was actually laid on *Rockingham* at the stand. An exactly similar case, as regards result, occurred between *S. Rogers* and *Fordham*, the former on *Wild Rose*, and the latter on *Amy*, at the Newmarket first October meeting of the past year, when the latter was so distressed at his unexpected and unaccountable defeat, that it was some days before all the soothing of his friends could make 'George' himself again. And at Doncaster for the great *St. Leger* of 1822, a race, quite unexpected as to result occurred when Mr. Petre's *Theodore* took it into his head to run quite contrary to the opinions of owner, trainer, jockey, and every body else who entertained an opinion upon the matter. This horse, it appears, had run very well as a two-year old, but his performances just previous to the great race had been so wretched, that *Jackson*, his jockey, was wandering about the course, it is said, almost heartbroken at his miserable chance for the race because Mr. Petre had claimed his right to his services as his first master. Mr. Petre himself, it was also stated, had been fortunate enough to get rid of his betting-book, with a bonus, by handing it over to another gentleman whom he had induced to take it with its risks; and the jockey's spirits were not enlivened by hearing odds of 'a hundred guineas to one' offered and laid against *Theodore*; nor did it in any way increase his faith in hopes of success, when he found that a bet of a hundred guineas to a walking-stick, of the value of one shilling, had actually been laid against the horse he was to ride. In the race itself, however, *Theodore* completely upset all previous calculations, for *Jackson*, managing to get off well at the start, kept his horse going, and finally, amidst a scene of great excitement and astonishment, landed his horse first past the winning-post. These

three cases may be taken as remarkable instances of the uncertainty attending horse-racing."

In his later years the Prince occasionally ran a horse, and they who remember the Boroughbridge harriers of some thirty years ago, may recollect the huntsman on one of George the Fourth's best racers—Chester Billy. In the sport he took some interest to the last; we may say, to the very last, if Nimrod's account be true, that when the Ascot meeting was being held in 1830,—he had attended that of 1829,—“he was on the bed of death, and so strong was the ruling passion in this awful hour,—and His Majesty was well aware his hour was come,—that an express was sent to him *after every race*,” but this may have been an officious, and not a royally-commanded, act.

There are amusing details in this volume, but there are many shortcomings. The history of the great St. Leger is singularly meagre, and will not satisfy Yorkshiremen. There is too much made of others. One would think by this writer's account of the Derby,—for which the Legislature makes holiday in obedience to the unwritten law of Parliament,—that it was a solemn, religious, national assembly; whereas it has become, of late years, a reproach and opprobrium on the national character. The sport is as good, no doubt, as it has ever been; but a most unpleasant change has come entirely over the class of visitors one would most prefer to see on the Downs.

History of Federal Government from the Foundation of the Achaian League to the Disruption of the United States. By Edward A. Freeman, M.A. Vol. I. *General Introduction—History of the Greek Federations.* (Macmillan & Co.)

THE maxim “*qui s'excuse s'accuse*” will occur to readers of the preface, in which Mr. Freeman deprecates the suspicion that his work is due to the excitement of the American war, though he admits that the conflict of North and South has caused him “to write at once what otherwise might have been postponed for some time longer.” But no fair critic will read the author's volume and condemn him as a hasty book-maker. Though it is devoid of original or independent research, it displays enough information and reading to insure for its writer the respect of students. Still it is a faulty work, erring in such a manner that it will fail to secure the cordial approval of either of the two great sections of the educated public, to which it is especially addressed. While ordinary politicians will deem it nothing more than a tedious treatise on the republics of ancient Greece, scholars will be offended by its repeated references to the party warfare of modern Europe, and the indiscreet violence with which the author's political animosities are brought into the field of historical inquiry. For instance, Mr. Freeman is constantly girding and barking at the Emperor of the French, in note or text, by covert insinuation or noisy invective. In one passage he flies away from the seditions of “Korkyra” to the civil conflicts of France and England, with no apparent object except that he may find occasion for saying that “Strafford and Cromwell alike, one might rather say any Englishman of any sort since the days of Stephen, would have shrunk from the crimes of Guise, or Robespierre, or Louis Napoleon Bonaparte.” In the same spirit, our faithful ally is alluded to as “a perfidious magistrate who has military force at his command,” and “a born conspirator”; whilst his crown is sneered at as “pseudo-Imperial.” And elsewhere, in a fanciful but ingenious comparison of “Aratos” and “Antigonos” with

Cavour and “the Tyrant of Paris,” Mr. Freeman says, “The deliverer of the Peloponnésos, the founder of the Achaian League, was also the man who surrendered a great Achaian city into the hands of the greatest enemy of independent Greece. So we have seen a statesman as subtle and as full of resources as Aratos himself, the deliverer of Italy, the founder of the Italian kingdom, surrender two provinces of his native land into the grasp of the common enemy of Italy and mankind!”

Notwithstanding the boyish folly of these and many similar passages, Mr. Freeman takes no narrow view of his subject, and we would commend his sketch of the Amphiktyonic Council and the Achaian League to the attentive study of the popular essayist on Federal Principles, Mr. Spence, whose “utter lack of historical knowledge” the author mentions with deserved severity, where he says, “Mr. Spence, too, is without Hamilton's excuse; if he could not read Polybios, he might at least have read Thirlwall.” His definition of Federalism philosophically comprises “every union of component members, where the degree of union between the members surpasses that of mere alliance, however intimate, and where the degree of independence possessed by each member surpasses anything which can fairly come under the head of merely municipal freedom.” Thus at the outset he avoids the error of many writers, who, with remarkable confusion of ideas, have argued as if federal principles were applicable to none but republican institutions, and have even gone the length of using the words Federal and Republican as though they were in some degree synonymous. So also is he anxious to impress on readers that he has nothing in common with the superficial observers who see in the American rupture a proof that republican institutions have failed, and that Federalism is too weak a tie to bear the strain which must necessarily be put upon it in the practical working of independent commonwealths. While he maintains that republican institutions afford the best chance of prosperity to small states, he cautiously observes that “the experiment of governing a large country as a single republic has been so seldom tried that we are hardly in a position to decide whether it is necessarily a failure or not.” And on the fallacious reasoning that Federalism is to be condemned as an idle experiment, because the American States have found it expedient to dissolve partnership, he reminds his readers that monarchical federations have come to a like end,—that in different ages of European history, Sicily has seceded from Naples, Portugal from Spain, Greece from Turkey, and Belgium from Holland, and that Hungary bids fair ere long to secede from Austria. Indeed, far from using its weakness as an argument against the federal tie, he regards it as a reason why the bond should be employed by independent States, and why in practice,—for instance, as in the United States,—it has been found by no means wanting in durability. People who laugh at the American Union as the bubble of a day, would do well to reflect that it has been contemporary with “a constitutional king of the French, a convention, a directory, a consulate for a term, a consulate for life, an emperor of a republic, an emperor of an empire, a constitutional king of France, an emperor again, a constitutional king of France again, a king of the French, a provisional government, a dictator, a president for four years, a despotic president for ten years, an emperor for what period no one can foretell.”

The passages in which Mr. Freeman compares the small commonwealths of ancient

Greece with the large states of modern Europe are those in which he most signally displays his weakness. Their faults may be divided into those of which the author is guilty through taking a too romantic view of classic life, and those which may be set down to careless observation of modern society. A habit of mind not uncommon with energetic men, who live much in the study and too little in the world of action, leads him to magnify the good of a distant epoch, while it induces him to be distrustful of the present. He is too sensible a man not to admit that there is “a great, indeed an overwhelming balance of gain on the side of the large state”; but the admission is reluctantly made, and in his survey of the city-commonwealths of Greece he insists on the superiority of the average educated Athenian to the average Englishman of the nineteenth century by arguments which, when they are compared with his remarks on the disadvantages of small states, lay him open to a charge of inconsistency. “In a word, it can hardly be doubted,” he says, “that the system of small commonwealths raises the individual citizen to a pitch utterly unknown elsewhere.” This superiority is believed by Mr. Freeman to have consisted in the complete knowledge of public affairs, integrity and fervent patriotism which characterized the average citizen of a state in the Achaian League. Not one word, however, does the eulogist expend on the consideration that political science is a far higher and more difficult science in great than in small states. Surely it is easier to be a good Chairman of Quarter Sessions than a good Lord Chancellor. A man may be a very efficient vestryman who would make an insignificant Prime Minister. In the same way, there are two aspects to that morality with which the Athenian is credited. Mr. Freeman allows that Athens was rife with a kind of bribery unknown amongst ourselves; that her generals and demagogues were bribed to follow this or that line of policy; that any citizen known to be above corruption was deemed a miracle of virtue, and found his reward in the influence his reputation brought him. “But,” he says, “of bribery in the popular courts of justice we hear very little, and of bribery in the Assembly itself we absolutely hear nothing.” Even when we have allowed the author's inference that the bribery did not exist because we do not hear of it, we are not in a position to accept the conclusion which follows on the inference,—namely, that the sterling integrity of the Athenian was superior to that of the average English voter. One important fact altogether escapes the writer's observation. In the city-commonwealth public affairs were not only comparatively few and simple, but every voter had an interest, and a manifest interest, in each of them; and the knowledge of this personal interest would have protected him from voting against it had an agent of corruption proposed to buy him. In the great representative commonwealths of modern Europe the ordinary voter is not thus retained on the side of honesty by selfish considerations. In England, for instance, the corrupt voter is in nine cases out of ten a man who either has no personal interest to be advanced by the policy of either of the candidates who solicit his vote, or is a man who does not see that he has such interest. That such ignorance should be by no means uncommon is a subject for regret rather than wonder. In a great state, public questions are so vast and complicated that the uneducated are powerless to see how they affect each member of the community. To stem the tide of political corruption Mr. Freeman would like to

have voters protected by the ballot and better educated.

History of England, &c., from the Accession of James the First to the Disgrace of Chief-Justice Coke, 1603-1616. By Samuel Rawson Gardiner. 2 vols. (Hurst & Blackett.)

Mr. S. R. Gardiner, who offers these volumes as a contribution towards a 'History of England from the Accession of James the First to the Fall of Chief-Justice Coke,'—is a pupil of the dry old school of historical writing, in which facts stood for ideas and dates for pictures; and in that useful rather than ornamental academy he may occupy one of the vacant chairs. We do not every day meet an author with whom we could so easily agree, if, in reading him, we could only keep awake. Mr. Gardiner's pulse is slow, and his paragraphs long. If he has much to say, he takes an age of time in saying it, never sparing his reader a single argument, or even a single word. He forgets the French epigram which hints that the way to tire an auditor is to tell him all you know: but then, an epigram is, perhaps, the very last form in which a member of the dry old school would be likely to seek a rule of art. A suggestion in a folio might have met with more success.

A reader blessed with a good share of patience, and who comes to his study free from those prejudices which are likely to spring from previous knowledge, would not find much to object against in this History, unless, indeed, his drowsiness should take the form of objecting to the book altogether. Such facts of the period, 1603-16, as Mr. Gardiner could learn he has duly set forth; such beings as he conceives to have then lived in England, he has painted; such unpublished matters as a rapid raid through the British Museum yielded to his search, he has printed at length. The sequence of events is fairly laid down in his pages, and that in a sedate and sober spirit, far removed from the extremes of enthusiasm and vituperation which some recent writers on this particular period have not been ashamed to exhibit. We do not say that his facts are true, his characters human, or his materials fresh. The facts of the case are often very much at fault, and the actors on the scene are depicted in a small, weak way, with the grand outlines and the colour of nature all left out. There is a big book, containing a good many arguments and expositions, composed in a moderate tone, and written in passable English; but the result of this respectable labour is a dry disquisition, not a picture of living men,—a work as hard to read as the London Catalogue, a Calendar of State Papers, or a Dictionary of Dates.

Mr. Gardiner opens his undertaking with a complaint that his theme is wanting in the dramatic interest which may be found elsewhere. This is unfortunate, and, we think, it is also wrong. If it had been true, the writer should have concealed the fact with the utmost art. A reader warned at the outset that the poet himself has found his legend poor, is not likely to pursue the story with ardent zest. We do not find the reign of James the First particularly wanting in dramatic interest; indeed, whether we look at home or abroad, and without touching events which are not obviously the property of an English historian, we should point to those very years which Mr. Gardiner found so barren and left so dull, as pre-eminently abounding in epic and tragic episodes. The first great plague—the fall of Raleigh—the capture of Ostend—the death of Mountjoy—the Gunpowder Plot—the insurrection of the Levellers—the sack of Derry—the rise of the

Corsairs under Ward—the burning of Legate—the divorce of Lord Essex—the contests of Bacon and Coke—the marriage of Arabella Stewart—the murder of Overbury—all these romantic affairs occurred at home and in connexion with the Court. Abroad, yet closely entwined with English affairs, were the Dutch war—the interdict on Venice—the assassination of Henri Quatre—the marriage of Princess Elizabeth—and the foundation of the Protestant League. It was the period of great men, of great movements, and of great books. Bacon and Raleigh, Cecil and Coke, Shakspeare and Jonson, Gilbert and Torporley, Smith and Somers, Napier and Allen, were all alive. It was the period in which the Bible was translated, in which Ulster was reclaimed, in which logarithms were discovered, in which the Institutes were planned, in which Virginia was settled, in which electricity became a science, in which the Instauratio Magna took shape. Nor was it less brilliant in the region of pure literature: for within these dates appeared Raleigh's History of the World, Shakspeare's Lear and Othello, Jonson's Volpone and Alchemist, Drayton's Polyolbion, and hosts of plays and poems which will never die. Wanting in dramatic interest! Why, the very names of men are full of drama.

We have hinted above that the dry old school of historical writers are content to give facts for ideas and dates for pictures. Mr. Gardiner is not strong in his facts, but it is only in his speculations that he becomes amusingly weak. His theories of the English constitution would have made Hallam stare. These theories come out in the very title and conception of his book; for with him the period between the accession of James, in 1603, and the fall of Coke, in 1616, is one of so much importance in our constitutional history as to require a separate and enlarged exposition:—

"Up to the summer of 1616, it was a question what constitutional powers the Crown would be able to assert. At the end of the year the question was, what use would be made by it of the powers of which it had obtained possession. Nor is the date of Coke's deprivation less distinctly marked in other respects as the commencement of the period of the full-blown Stuart royalty. At home, the monopolies, which had hitherto been kept under some kind of restraint, were about to burst forth with the help of the favouritism of Buckingham and the Protectionist theories of Bacon. On the Continent, the French alliance had just been renounced, and James was nibbling at the bait of a Spanish marriage for his son. In Scotland, the future Five Articles of Perth had been recently sent down in a letter from London; and in Ireland the arrival of St. John, as the new Deputy, had convinced the Catholics that all hope of an amelioration of their position must be abandoned for the present."

All this is idle dream. The whole of this period, however much it may attract a reader on other grounds, has so very slight an interest for the constitutional writer that Hallam has dismissed the whole of it in part of one short chapter. The great constitutional writer scarcely notices Coke's disgrace at all; and then in a few cold and contemptuous words, to which he adds in a note: "he was too much affected by his dismissal from office." And Hallam was undoubtedly right in his estimate of Coke's fall:—a purely local and personal fact, of no importance whatever in a political sense, and only interesting from the comedy which it caused to be played between himself and Lady Hatton. No principle of law or practice was at stake in it, for Coke confessed that he was in the wrong, and was willing to give up the point at issue between himself and James. His temporary exclusion from office opened no new

controversy, closed no old discussion. It did not even end his contests with Bacon. After a brief retirement, he returned to the Privy Council the same man he had been before. Nor did the event coincide with other events of magnitude. There was no dissolution of Parliament, no change of ministers, no new treaty of alliance, no great movement in the Church. Scotland was unusually quiet, and Ireland perfectly at rest. The temporary disgrace of Coke was so little of a turning-point in any public affair that Hallam notes it briefly, not at the close of a book, or of a chapter, or even of a period: he records it in the middle of a sentence. Such was the transaction which Mr. Gardiner has made the great crisis in our constitutional life, and to the illustration of which he has devoted a bulky book.

The same want of grasp and largeness which has led him into this error at the outset of his task has attended him through it. The men are only half seen, the ideas only half felt. There is a light on their faces which he cannot see, a spirit in their words which he cannot hear. To him Cecil and James, and Raleigh and Bacon, are pretty much alike. Nobody is very good and nobody very bad. There is a "yet" for the worst and a "but" for the best. Mr. Gardiner can neither praise nor blame with heartiness. He thinks that James was rather a sober fellow than otherwise, and that his moral character stands pretty high. He is inclined, with some doubts however, to believe that Cecil was a highly respectable man; and is very much pained on hearing that this highly respectable man took pensions and bribes from France and Spain.

Indeed, the fundamental vice of this book—as a mere book, apart from the wrong ideas on which it is based,—is the false light in which Cecil is placed. Cecil was the first politician of the time—the man who ruled the King, the Court and country from the day of the King's accession until 1612. It is nearly the whole period covered by this narrative. Yet so far from having formed to himself any clear conceptions of this central figure, Mr. Gardiner maunders from first to last that he cannot make him out, uttering weak regrets that the Simancas papers have not yet been deciphered, and that the private library at Hatfield House has not been open to him. In all our reading we do not recollect a case in which an author has so meekly confessed his inability to grapple with a character which he, nevertheless, undertakes to endow with life and motion as in this of Cecil:—

"The labours which he underwent were enormous. As Secretary, he had to conduct the whole of the civil administration of the kingdom, to keep his eye upon the plots and conspiracies which were bursting out in every direction, to correspond with the Irish Government and to control its policy, and to carry on through the various ambassadors complicated negotiations with every state of importance in Europe. Besides all this, when Parliament was sitting, it was on him that the duty chiefly devolved of making the policy of the Government palatable to the House of Commons, of replying to all objections, and of obtaining the King's consent to the necessary alterations. As if all this were not enough, during the last few years of his life he undertook the office of Treasurer in addition to that of Secretary. Upon him fell all the burden of the attempt which he made to restore to a sound condition the disordered finances, and of mastering the numerous details from which alone he could obtain the knowledge necessary in order to remedy the evil. * * Although there are circumstances in his life which tell against him, it is difficult to read the whole of the letters and documents which have come down to us from his pen, without becoming gradually convinced of his thorough honesty of intention. It cannot be denied that he was satisfied

with the ordinary morality of his time, and that he no more thought it shame to keep a state secret, or to discover a plot by means of a falsehood, than a naval officer in our own day would think his character for truthfulness impaired because he had been known in time of war to have deceived the enemy by hoisting false signals. On one memorable occasion, indeed, he allowed himself to be carried beyond the bounds even of the conventional morality of the time. But in his ordinary conduct, so far as we can perceive, he seems to have been actuated by patriotic motives. He certainly grasped at power as one who took pleasure in the exercise of it; but he appears, in the main, to have used it for what he regarded as the true interests of his King and country."

It is scarcely necessary to point out the omissions in this picture; for, indeed, it is a work with all the Cecil lights and shades left out. Mr. Gardiner omits to say that, besides his many other duties—which he also turned to profit—Cecil was at this time Master of the Wards, one of the most lucrative offices in the kingdom; and that the holding of this office in conjunction with the Secretaryship, was one of the complaints in the celebrated Petition of Grievances presented to the King on his accession, of which famous document we do not see that Mr. Gardiner has ever heard, although it was the parent of a long line of similar papers. Of Cecil's scandalous private life, of his sumptuous lodgings, of his secret orgies, of his intrigues with Lady Suffolk and other frail women, the writer has no conception. But the Calendars of State Papers having showed him, on the authority of Digby, our Ambassador in Spain, that Cecil had a regular pension and occasional bribes of high amount from Philip—and the fact being incompatible with his idea of a respectable person—Mr. Gardiner has to reconcile his theory with the ugly truth, which he does in this odd fashion:—

"In order to explain such facts as these, only two suppositions are possible. Cecil may, no doubt, possessing as he did a considerable fortune, have sold to Spain for a few thousand pounds the secrets which were quite as much his own as his Sovereign's. There is nothing physically impossible in the theory; but, in addition to the difficulties which have been already noticed, there is one which is almost insuperable. Is it possible that a man who had sold himself to betray his master's confidence in this barefaced manner should never once have attempted to obtain money by influencing his master's actions? Would he not have dropped, at least, some word which shewed that he had been won over to the interests of Spain? And yet not only is nothing of the kind on record, but he was universally recognised as the minister who, cautiously indeed, and in no very dignified manner, but yet steadily and successfully, drew England out of the entanglements of a Spanish alliance. There is one other explanation, which would seem incredible to those who do not know the shifts to which diplomacy had recourse in those times, but which is perhaps the most probable explanation of the difficulty. May not Cecil have seen in the offers of the Spanish Government an opportunity of influencing their counsels? There were many things which he could tell them that really happened which it was important for him that they should know from an authority upon which they could depend. If, for instance, and this is a case which really occurred, James had made up his mind to resist Spanish pretensions in any quarter, Cecil would wish to give the earliest information to that Government, in order that they might not attempt to oppose him under the supposition that no real action was intended on the part of England. There may have been, and there probably were, other cases in which he wished to deceive them by false information, and he may have thought that he could do this better by his own mouth than in any other way: he may have hoped in his turn, in the course of their familiar intercourse, to worm some information out of the Spanish Ambassador

himself. With respect to the money which he demanded, he may have thought that far more credit was likely to be given him if he pretended to serve the Spaniards from purely mercenary motive, than if he presented himself in the guise of a disinterested friend of Spain. Nor is it unlikely that he would feel a kind of pleasure in pocketing the gold of which he had thus tricked the enemy of England."

It would be idle to add one word to such a commentary.

Mr. Gardiner is no less puzzled with the story of Raleigh's plot. Indeed, his want of any true insight into Cecil's character causes him to flounder helplessly in the dark through all the public transactions of the reign. In the desire to show Cecil honest and amiable, all the facts of history have been explained cross-wise. Hence Raleigh appears as something very like a fool and a knave, though Mr. Gardiner is good enough to pat him on the back, to call him, nevertheless, a very fine fellow, and to express a regret that he could not see what was best for himself. "If Raleigh," we read, "could have seen it in its true light, those who had cut him off from a courtier's life had in reality rendered him the highest service which lay in their power. . . . If England was not large enough for his genius, his own Virginia would welcome her founder to be the captain, the legislator, and almost the monarch of a new world." Fancy being a King of Virginia in 1603, when there was, in fact, no Virginia, the only spot of ground on which a few struggling colonists were dying being the lonely islet of Roanoke!

This looseness of expression runs through the whole narrative. The very first line of the book—"On the night of the 23rd of March, 1603, Elizabeth, as all England knew, was lying on her deathbed,"—contains three mistakes. The year was 1602, as the time was then kept. She was not lying on her bed, nor did she die on her bed. All England did not know it; indeed, the secret was so well kept that London did not know it.

Shakespeare's Home at New Place, Stratford-upon-Avon. Being a History of the "Great House" built in the Reign of King Henry VII. by Sir Hugh Clopton, Knight, and subsequently the Property of William Shakespeare, Gent., wherein he lived and died. By J. C. M. Bellew. (Virtue, Brothers.)

THERE is some useful and curious matter in this book, but it can hardly be called a History of New Place. It is rather a collection of discursive observations on various facts and traditions respecting Shakespeare, and on families residing within, or in the neighbourhood of, the poet's native town. As to Shakespeare himself, no new facts are elicited, nor do we see that Mr. Bellew avoids the tendency he ascribes to his predecessors, to "fringe an inch of fact with acres of conjecture." With respect to his collections on the families of Clopton, Underhill, Combe and others, there is much that is new and curious. The question is, are they merely valuable in an antiquarian and topographical point of view, or do they really tend to illustrate the biography of the poet? If the first, they are not to be despised; if the latter, they should be doubly and trebly welcome to those who are anxiously listening to every whisper in the breeze that may tell of something new respecting the earthly career of "the greatest of England's authors—the greatest of all authors."

We are far from saying that the results of this kind of discursive research may not turn out in one way or other to be useful to a future biographer, but they appear to us to be chiefly

materials which might fairly be collected for reference by an earnest man who intended to compile a life of the poet,—hardly those which should fill a volume which, according to the title-page, is a History of New Place. In making this observation, we repeat that we do not pass a judgment on the value of the materials themselves. The elaborate pedigrees of the Cloptons and others must have cost Mr. Bellew much labour, and they exhibit a patience in research highly creditable to him, an earnestness in a dreary occupation we should hardly have anticipated from a writer whose attention has heretofore been devoted to a widely different branch of literature. We leave it to others who are inclined to repeat the same arduous task to test their accuracy. But with due submission, and with no desire to throw cold water on a maiden attempt in Shakspearian biography—believing that it is a field of research into which no man of talent can enter without being a labourer of some use—we would ask, where is it all to end if we are to have, in a work on Shakspeare's House, the history of a family from the time of Henry the Second to the close of the last century, merely because some of its members happened at one time to own the poet's estate? We now refer to the Cloptons; but there is one person, who possessed New Place for a few years only, viz., from 1563 to 1567, respecting whom Mr. Bellew runs absolutely wild. The name of this unfortunate individual is *William Bott*. It is one doubtless heard for the first time by our readers, and they will hardly care to hear it again. We call him unfortunate, for Mr. Bellew, on the strength of an adverse affidavit—a poor ground on which to take away a man's posthumous reputation—sets him down as one of the biggest rogues in Stratford, and as getting hold of New Place by a bit of chicanery. For the latter opinion there is literally no ground whatever. It is a gratuitous conjecture, and we hardly wanted to know of the squabbles between Bott and Harper, or to be favoured with the copy of a long indenture between Clopton and Bott, whereby the latter became possessed, not of New Place, but of lands at Hampton, Old Stratford and Shottery. Such matters are, no doubt, useful and interesting to the local antiquary, but they have no relation to the history of Shakespeare, his family or estates. William Bott purchased New Place from Clopton in 1563, and he sold it to Underhill four years afterwards. This is all that need be said of the subject so far as a History of New Place is concerned; and we really cannot sympathize with Mr. Bellew in designating his discovery, at p. 77, of a relationship having existed between the Botts and Cloptons as "most important." It may be so to local pedigree hunters and small antiquaries; but in reference to Shakspearian biography it is of no importance at all.

We turn with pleasure from the notice of these excrescences to the curious and original part of the work,—a dissertation on the disputed autograph of Shakespeare on the fly-leaf of Florio's 'Montaigne,' now in the British Museum. Mr. Bellew, noticing the name of a former possessor of this volume to be one *A. Hales*, has attempted to connect him with the celebrated John Hales, whose well-known advocacy of Shakespeare forms one of the most curious episodes in the history of opinion on the writings of the poet during the seventeenth century. The suggestion is new, and it may turn out to be true. Mr. Bellew has shown a good deal of ingenuity in tracing the story of this volume. It is a curious subject, worthy of further investigation. We do not understand how the fact of John Hales leaving all his Eng-

lish books to Mrs. Dickenson, of Eton, proves that the Florio came after the testator's death to his younger brother Anthony; but if it can be shown that the A. Hales who owned the book belonged to a Warwickshire family, we think that it would be a more important evidence in favour of the authenticity of the volume as a relic of Shakspeare's library than the circumstance of its ownership by the "ever-memorable John."

NEW NOVELS.

Richard Langdon; or, Foreshadowed: a Novel. (Hurst & Blackett.)—The chief merit of 'Richard Langdon' consists in its filling one volume instead of three. Startling incidents succeed each other with electric rapidity. We have a ball, several proposals, a race-course, a murder, an attempted murder, a suicide and two weddings. Surely such matter might have furnished food for a whole circulating-library; and, as a necessary consequence when the incidents are so superabundant, the writing is weak and inferior. The minute descriptions of the toilettes to be found in these pages—the detail and affection with which the distinctions between "tulle" and "tarlatan," "double skirts" and "flounces" are dwelt on—make our thoughts involuntarily turn to a milliner as its possible author. The writer's ideas of life are probably based on the society to be met with in a second-rate country-town, which can boast of possessing a barrack and a garrison. Nothing can be worse than the *ton de garnison* that distinguishes most of the young ladies, who all revere the cavalry and despise the infantry—call the men by their surnames, and describe them as "good fellows" or "elegant young men." The scene opens with a ball at the house of Mr. Vandeleur, and the villain of the book appears on the stage in the person of Mr. Langdon—a clever, rich Sybarite of forty, who has lived much abroad, and who is less trifling and more gentleman-like in feeling than any other character in the book. The heroine, Camilla Beaumont, is an heiress, living with a widowed mother at Castle Beaumont, and is related to Mr. Langdon, who is the next heir of her property in the event of her dying unmarried; she is, of course, lovely, tall, "purely pale," with large eyes, masses of hair, and hands so small that it only required gloves of No. 6 to encase them (a moral impossibility, let it be known). Our heroine is, further, dreamy, unconventional, lady-like, and much imbued with German poetry, and all the wild, weird, unpractical ideas that accompany that train of reading. She has a dream, in which sundry vague presentiments of coming evil at last take a tangible shape in the form of Richard Langdon. Hatred and revenge are depicted on his countenance. She sees him wandering round some invalid's room, with a bottle in his hand labelled POISON, out of which he pours some drops into her cooling draught. At this point Camilla awakes, trembling; and this dream casts a spell over the future life of our morbidly sensitive heroine that gives the title to the book. It need scarcely be told that Mr. Langdon (already much straitened in his finances from his lavish expenditure) indulged the long-cherished hope of marrying Camilla for the sake of her money; and though she had long leant on him as her nearest male relative, and looked up to him for the superiority of his mind and his apparent worth of character, yet since this strange haunting dream she has felt a repugnance to his society and a fear of him, which induced him to withdraw for a time, hoping that absence may effect a change in her feelings. We then see him in his own home, Eaglesdean, which possesses everything that a luxurious, self-indulgent and accomplished man can devise, through the mixture of "Turkish divans, Æolian harps, crystal fountains pouring perfumes, alabaster lamps, marble statues, river nymphs, with goblets, flowers, and cigars." After much preparation, a proposal is made by Richard Langdon to Camilla, in "trisyllabic adjectives," during a walk on a cliff, which is received with the utmost composure by her, and replied to in suitable language; and from the length and unexpressiveness of the words employed, it might have been copied

from 'The Polite Letter-Writer' or some such source. She requires a week to consider her decision, and, perfectly unmoved, the pair of lovers continue their walk. She loses her footing in gathering a flower at the edge of a precipice, and clutching a rose-bush which conveniently grows hard by, hung for some seconds before her enamoured swain could make up his mind whether to save her, or let her fall over, which would cut the Gordian knot of all his difficulties. We are glad to say his better nature prevailed, and he pulled her up and laid her fainting on the grass. Yet she has the heart to refuse him. There is a vast deal of love and crime in the book; the story is clumsily and badly put together, and we find a great want of freshness in the descriptions. We recommend the writer to take more pains in future with the composition and development of his plot, and to content himself with one-half the incidents.

Countess Kate. By the Author of 'The Heir of Redclyffe.' (Mozley.)—Countess Kate is a little girl who at the opening of the story springs to the style and dignity of Countess of Caerwent, from the humble position of plain Kate Umfraville, an orphan dependent for protection and education on her charitable uncle, Mr. Wardour, who is the clergyman of St. James's, Oldburgh. On her elevation to the peerage, Kate is taken from the country parsonage, and brought to London, where she is placed under the charge of two excessively decorous old-maid aunts, Ladies Barbara and Jane Umfraville, who live in Bruton Street, and by the aid of carriage, horses, butler, and lady's-maid, protect their delicate constitutions and patrician tastes from close intercourse with the vulgar. The principal fun of the tale turns on the excruciating torture which these fastidious gentlemen experience in witnessing and vainly endeavouring to correct the hoydenish manners and rustic style of the niece who, in a scarcely intelligible manner, has become the possessor of the family honours. Goaded into fury by Aunt Barbara's incessant reproofs and lectures, Countess Kate seizes an opportunity for escaping from the genteel captivity of Bruton Street, slips on bonnet and cloak, runs to the nearest cab, drives to a railway station, and makes good speed to her old friends at Oldburgh, where she is received with as much surprise as kindness. What more is told of little Kate's adventures we need not indicate. The story will amuse children; and here and there it contains a scrap of good writing and pleasant reading, but upon the whole it deserves more censure than praise. Readers will complain with reason, who buy 'Countess Kate,' trusting that it has some of the good qualities which won deserved popularity for 'The Heir of Redclyffe.'

A Great Mistake. By the Author of 'Palgrave of Sycamore.' (Saunders, Otley & Co.)—The scene opens at a German town, where Mr. Myers is arranging the purchase of a house and property, and preparing manifestly to make a great mistake; for, as his companions said of him, "these foreigners come to places of this sort to sow a plentiful crop of fallacious hopes, and reap a plentiful harvest of disappointment." Mr. Myers was a planter, and his wife and daughter Carmen were natives of Cuba. They soon found the German town unbearably dull, so a sort of companion or governess, Mdlle. Delphine de Lorist, was engaged for Carmen. She is a shrewd, questionable person, and is described as being possessed of "bold black eyes, *nez retroussé*, coral lips, and off-hand manner, with which she quite dazzled and fascinated her new associates." But it being quickly discovered that she was an impostor, Mademoiselle is dismissed, and Carmen is sent to learn manners under the tutelage of Miss Compton. This lady gives her good and sensible advice at times. But the only object in life set before her by her parents was to get married; and as her father says, "when Carmen marries, she marries a coronet." On this subject Miss Compton speaks with more sense than would be looked for in the pages of 'A Great Mistake.' She says: "Never commit the great mistake of marrying purely from ambitious motives. Those only can endure the trials of such a bondage who do not mind a rebuff now and then, but battle on boldly and manfully, constantly struggling for their rights." No doubt

all this was applicable to the heroine of this tale. And Miss Compton adds: "Sham and pretence are the order of the day: every one is striving to be uppermost. But however natural the desire to rise may be, it has often led to the swallowing the gilded hook, whose iron has entered the very soul." This was all good advice in its way; but it would have interfered with the tale if it had been of any use, for Carmen had already conceived an affection for one Harold, a Dane, who turns out to be a count, and she eventually marries him. But it was "a great mistake"; and within a very short time the count commits suicide, and Carmen dies. There is but very little plot in the story, and that little is of an inferior stamp. The characters seem to be, for the most part, taken from a second-rate German watering-place; they are but poorly delineated, and proportionately uninteresting. And upon the whole the tale is very properly entitled 'A Great Mistake.'

Family Troubles: a Story. By Charlotte Hardcastle. 2 vols. (Newby.)—'Family Troubles,' true to its title, commences with a description of a wedding, with an unwilling bridegroom and an ill-advised bride; and a year is hardly passed when welcome Death comes to bring her the "total forgetfulness and unbroken sleep" which she hopes to attain for herself and her infant. The prospect, however, brightens within little more than two years, when Arnold Wilton stands before the altar for the second time, and is united in marriage to Alice Fielding. Her character is very justly drawn as a woman of good sense, warm feelings, quick perceptions, and the utmost delicacy and purity of mind. Hers, although by no means remarkable, is a quiet and well-sustained character throughout the story. This is especially shown in her conscientious care and attachment to Wilton's child by his first wife, no less than to her own son. In fact, upon the whole, matters seem to go so smoothly that the tale hardly can be called a relation of "family troubles" so much as of the vexations and annoyances of certain individuals.

Beatrice Sforza; or, the Progress of Truth. By William Brewer, M.D. 3 vols. (Hurst & Blackett.)—It is, perhaps, rather a recommendation in what may be classed under the head of historical novels, if they are so written that they cannot, by any chance, mislead even a desultory reader of history; and this is more especially desirable when the events are recorded, for the most part, in an entertaining style. 'Beatrice Sforza' is successful in these particulars; for it abounds with a multitude of great historical names, which can only be grouped together in defiance of impossibilities and anachronisms. The tale opens with an entertainment given by Lord Oxford in celebration of the birthday of the sister of King Henry the Eighth. Amongst the company, as the reporter would say, we observed the Duke of Suffolk, Lord Berners, Louis d'Orleans, the Seigneur de Bayard, the Imperial Prince of the House of Hapsburg, Reginald de Comines, King Henry the Eighth, Thomas Wolsey and Katharine of Arragon. These characters taken severally are very fairly drawn, making allowance for whatever bias the author may have with regard to any of them. Amongst the ladies are the sister of King Henry and her attendant, Lady Kate Piercy: the former being betrothed to the King of France, and shortly after our introduction to her she starts on her journey, accompanied by a gorgeous cavalcade, which was to conduct her to the English coast on her way to Abbeville. But there being "many a slip 'twixt cup and lip," her journey was, at the outset, prevented by an untoward accident; and this is the occasion for introducing others of the principal personages in the tale. Amongst them was Henry Herbert, who rescued Lady Kate Piercy when falling from her horse in the procession. Unwittingly, he was in a great measure the cause of the disturbance as well; for he had been the author of some rhymes, which were being sung amongst the waiting crowd, and were considered dangerous by the authorities. Notwithstanding his rescue of the lady, and her speedy revival under the care of Dr. Butts, who was "learned and simple-minded, an honest adviser, and yet a Court physician," he was committed to prison for his disloyal rhymes.

Eventually, he became an equerry to the Princess. But in prison he met with Master Ritznow (one of the best-drawn characters in the book), who, on his first entrance, improves the occasion with several reminiscences in history, both sacred and profane, arising out of the question whether Jerome of Prague was a heretic or not. Shortly we are thrown into a goodly company of such notable men as Erasmus, Gustavus Vasa, Luther, Ignatius Loyola, with a multitude of great personages, both English and French. As the tale proceeds there is less need of the use of a multitude of grand historical characters, whilst those who remain pass through adventures, some startling and some commonplace. Amongst the latter, where personal suffering has to be endured, there is always a physician or a skilled leech ready at hand to render the desired assistance. On one occasion, the heroine needs the skill of an aurist, and the remedies supplied prove perfectly efficacious. But this is not the only good fortune which befell Beatrice Sforza, for she proves to be the daughter of a prince, having been stolen or mislaid in her infancy. She is rescued from heresy by the means of Ritznow, refuses the hand of Lorenzo de' Medici, and eventually becomes the wife of Sir Henry Herbert. The various incidents which occur before arriving at the desired end are recounted in a startling and attractive manner, whilst a number of great personages are only introduced for the sake of their names.

OUR LIBRARY TABLE.

Advertis. How! When! Where! By William Smith. (Routledge, Warne & Routledge.)—The gaudy scarlet and yellow exterior of Mr. Smith's manual on the art of advertising is less to be commended than its amusing pages, which contain many good hints for the guidance of advertising tradesmen, and many curious facts for collectors of stories illustrating London life at the present day. Printed puffs were common in Charles the Second's London,—much more so, indeed, than Mr. Smith seems to be aware of, since he mentions Jonathan Holder, the advertising haberdasher, but does not remark on the hand-bills which the quack doctors and dealers in nostrums (who were Holder's contemporaries) used to distribute amongst the public. In 1679 Jonathan Holder's "Great Novelty" was the neatly printed list of trade articles, with prices annexed, which he used to give to every customer who laid out one guinea at his shop. The paper, from which Mr. Smith obtained his knowledge of Holder's enterprising conduct remarks that "it would be the utter destruction of trade if tradesmen lavished so much of their capital in printing useless bills." But hand-bills of ruder manufacture were well known in London before that date. When Dr. Thomas Saffold ended his long career of not disinterested benevolence in 1691, a satirical broadsheet alluding to his puff-bills called on the world to mourn for the loss of one

So skilled in drugs and verse, 'twas hard to show it,
Whether was best, the doctor or the poet.

With the greater diffusion of education amongst the people, and steadily increasing facilities for advertising, the fashion of seeking customers by means of printed statements has grown more and more general. Mr. Smith maintains that the extreme limit of the system has by no means been reached at present, and urges the public to have more confidence in it than ever. "A man," he says, "is culpable, insane and wilfully blind to his own interest, if, from a penurious or nervous feeling, he neglects to take advantage of the means which advertising offers him of increasing his connexions. * * No trade or calling at the present time can afford not to advertise." And few men can speak with greater authority on the subject than Mr. Smith, who, while 'The Dead Heart' was running at the Adelphi Theatre, sent out in London and the country 10,000,000 adhesive labels, 30,000 small cuts of the Guillotine scene, 5,000 reams of note-paper, 110,000 business envelopes, 60,000 pence envelopes, 2,000 six-sheet cuts of Bastille scene, 5,000,000 hand-bills, 1,000 six-sheet posters, 500 slips, 1,000,000 cards, the shape of a heart, 100 twenty-eight sheet posters, 20,000 folio cards for shop-windows, exclusive of newspaper wrappers,

cards for the performance in several of the Dublin, Edinburgh, America, Peninsular, Oriental and Australian boats; and every Friday and Saturday 1,500 hand-bills folded in various papers that were sent all over the country. Of the 10,000,000 adhesive labels, many were fixed by practical jokers on the clothes of unsuspecting friends, who were thus made to walk about London, doing duty as placard-bearers. "My husband," wrote one indignant wife to Mr. Smith, "went out last evening to a public dinner, and when he returned home at twenty minutes to two, perfectly sober, I found on his best dress-coat a piece of paper pasted on with the words 'The Dead Heart,' and three in the inside of his hat. I am surprised at your sanctioning such proceedings." Amongst other instances of theatrical advertising the author cites the case of Mr. Falconer, who in London alone distributed 3,000,000 of his 'Peep o' Day' cards in the course of twelve months. In 1862, Thomas Holloway, the medicine-seller, spent 40,000*l.* in advertisements. And yet the system has not reached its limit! Some trades, it is maintained, are remarkable for neglecting to puff, and amongst them, in Mr. Smith's opinion, are cabinet-makers, picture-frame makers, coffee-shops, china-shops, floor-cloth manufacturers, bed and mattress warehouses and harness and saddle makers. With good judgment, Mr. Smith observes that costermongers suffer from their unobtrusive temper. "In summer especially they should let their address be known to the buyers of flowers and plants. Many a shilling is lost from the fact that 'the lady of the house' or the 'missis,' has been looking all the morning for her flower-man, and he has not been round when she wants a fuchsia or rose-plant to fill out her stand." Amongst his many specimens of eccentric advertisements Mr. Smith gives none more laughable than the epitaph in a north-country churchyard which runs, "Sacred to the memory of John Roberts, stonemason and tomb-cutter, who died on Saturday, October the 8th, 1800. N.B. the business carried on by the widow, at No. 1, Freshfield Place." The most important of the reforms which Mr. Smith would like to introduce in trade-advertising is one that especially concerns trade-cards. In his opinion every tradesman ought to have "a card" cut in the shape of his "special article of sale." Thus a poulterer, famous for turkeys, ought to have a card cut in the shape of a turkey; the vintner's card ought to resemble a bottle; a tailor should put his address on a card-board paletot or pair of trousers; a fishmonger might have his card cut so as to represent a lobster. Of course there is little originality in a proposal which aims at nothing more than a revival of "sign advertising"; but the suggestion is good as a reminder, and might be turned to profit. In some passages of his treatise the writer's enthusiasm clearly carries him away, and leads him to over-estimate the power of puffery. Thus he concludes an account of a long walk through London, in which he accepted from bill-distributors 250 bills, with saying, "The average number of pedestrians that would pass the bill-deliverers in the route given, from 10 A.M. to 7 P.M. would amount to 40,000 (that is certainly under the mark). If only one-half of the passers-by took half the bills given away, the number distributed would amount, in the nine hours, to 2,300,000." A minute's reflection must satisfy the author that the assumed proportion of receivers to rejectors, on which this calculation is based, is far too high.

The Earl's Choice; and Other Poems. By Sir William à Beckett, late Chief Justice of Victoria. (Smith, Elder & Co.)—No story can be simpler than that of 'The Earl's Choice.' Lord Valmont, a nobleman of refined tastes but aristocratic prejudices, falls in love with Lucille Grantley, the sister of an artist and the daughter of a tradesman. The Earl's pride of birth proving weaker than his passion, he offers his hand to the lady, who, as it happens, has a pride of her own, and objects to enter into a family which might despise her origin. Eventually, however, she yields to the ardour of her suitor; but a new difficulty has to be encountered in the stern resistance of Lady Valmont, the Earl's mother. So intense is the dowager's mortification at her son's choice that a dangerous illness

ensues. At this crisis, Lucille herself repairs in disguise to the sick woman's house, and nurses her during her malady. Touched by the devotion of her unknown attendant, the haughty Lady Valmont becomes deeply attached to her, and, on the discovery of Lucille's true position, is prepared to welcome her as a daughter. There is a vein of romance in this little tale that interests the reader in spite of a diffuse style. But as no attempt has been made to invest the subject with the charm of fancy it would surely have been better to treat of it in prose. The author writes at an unnecessary disadvantage who imposes upon himself the shackles of verse without relieving them by the graces of imagination. So level and unadorned is the present narrative that no extract from it will account for the pleasant impression which it leaves as a whole. This effect is in a great measure due to the fresh and generous feeling which the writer everywhere displays. The following apostrophe to Woman will exemplify both his sound moral tone and his prolixity of manner:—

O sex of which it is the Briton's boast
That, in his land, thy noblest image dwells,
Believing with a fervent faith that there
Woman is dearest, purest, fairest found—
Domestic idol of each lordly home
And lowly cot—what'er thy station be—
Above it, e'er remember is thyself!
The "wheel of fortune neither love nor hate,"
And thou, dear lady, who art placed above
The wants that bow thy humbler sister down,
And tastest joys which she may never know,
Make not the barrier wider than it is
'Twixt her and thee, by apathy or scorn;
Let not the icy breath of Custom chill
Thy woman's heart, nor its imperious tone
Silence the voice of thy diviner mind:
Spite of the bonds in which it strives to hold thee,
And of the worship which the world demands
From all for this its idol; no more respect
Do thou, than may become a gentle heart
And honest mind, accord it; its fit due
Rightly discerning, pay; nay, e'en allow
Occasional exactions—for to yield,
In naught that injures truth or modesty,
Rather than, by resistance, harsh remark
Or misconception risk, were wisdom's part.
But never let its menaces scare thy soul
From off its pedestal, nor there to swerve
Beyond its balance; despot though it be
Of power almost omnipotent, should it dare
Wrong to thyself or others counsel, defy it,
And He, who is Omnipotence entire,
Shall come beside thee with a viewless strength,
And steady thee with his Almighty arm,
Till thou shalt stand more firmly fixed than ever
Against the aim of every hostile shaft
That would detach thee from thy chosen height.

—Some of the remaining poems show traces of the fancy in which 'The Earl's Choice' is deficient. But the chief merit of the volume is its liberal and unconventional spirit. Without adopting all Sir William à Beckett's conclusions, we invariably respect the feelings that prompt them.

Poems. By Frederick G. Tuckerman. (Smith, Elder & Co.)—This volume is rich in the materials of poetry, though they are by no means turned to the best account. In his longer poems, Mr. Tuckerman loves to brood over the mysteries of human life and to trace its developments through the agency of suffering. But the conditions under which he expects us to feel and perceive are so imperfectly made out, that we guess at his meaning rather than apprehend it. His style, moreover, is diffuse as well as vague, and, although kindling at times into force and even brilliancy of expression, the fire smoulders long before it bursts into flame. A few of the poems, founded on anecdote or legend, are free from the prevailing ambiguity; but, unfortunately, when Mr. Tuckerman writes plainly, he ceases to be imaginative, and when he attains to imagination he becomes obscure. The sonnet which we are about to quote combines clearness of idea with poetic imagery to a greater extent than usual:—

As when, down some broad River dropping, we,
Day after day, behold the assuming shores
Sink and grow dim, as the great Water-course
Pushes his banks apart and seeks the sea;
Benches of pines, high shelf and balcony,
To flats of willow and low sycamores
Subsiding, till, where'er the wave we see,
Himself & his horizon utterly:
So fades & he portion of our early world.
Still on the ambient hangs the purple air;
Yet, while we lean to read the secret there,
The stream that by green shore-sides splashed and purled
Expands; the mountains melt to vapors rare,
And life alone circles out flat and bare.

—A painstaking reader may discover in the book many other proofs of fancy and descriptive power; but he will rarely find them connected with that vigorous outline of a whole which gives unity and significance to details.

Poems. By Thomas Wilson. (Glasgow, Murray & Son.)—The chief poem in this collection is a dramatic one, in which murders are planned on the smallest temptations, and frustrated by the sheer folly of the would-be perpetrators. The reader may here learn, if he choose, how Sir Ralph Meredith becomes largely indebted to an insidious lawyer; how that crafty knave, at length, throws off the mask, and, as the price of his forbearance, claims the hand of Sir Ralph's daughter; how Sir Ralph, resenting this demand of his creditor, employs a convenient outlaw to murder him. When this knowledge has been acquired, the student may gain some insight into the means by which guilty schemes are usually baffled or detected. He will find that the rogue who plans a murder generally sends written directions to the rogue who is to execute it; that it is the habit of the latter to carry them on his person; that the proposed victim, shrewdly aware of his danger, commonly provides himself with a pistol to meet contingencies, and in the issue not only slays his aggressor, but extorts from him the document which convicts his accomplice. This dramatic poem abounds in other details no less true to the probabilities of human motive and conduct. Mr. Wilson can write descriptive passages worthy of a less absurd plot; but, as a dramatist, he has the very rudiments of his art to acquire. His men and women are not, as they should be, characters unfolding themselves in action, but mere puppets for the production of events.

Ethnology and Phrenology as an Aid to the Historian. By T. W. Jackson. (Trübner & Co.)—The author is no such phrenologist as those who profess to determine individual character from the minutest preponderances of one part of the brain over another. "Ethnologists," he says, "are beginning to confess, that as the osteology of the foot determines the walk, so that of the cranium indicates the thought. This is all we ask. The principle is granted, and the details, to the minutest shade which the phrenologist could desire, will follow in due course." Though somewhat discursive, we have found this book to abound in striking aspects of thought and points of remark: with some prophecy of a dangerously bold character, its predictions are ingeniously supported. To the large number who have no notion of the extent of the "proper study of mankind," this volume would be an easy and pleasant preliminary to more systematic studies.

The Six Standards of Arithmetic. Standard II. By W. M'Leod. (Longman & Co.)—This second part goes as far as subtraction.

"Essays and Reviews," Their Origin, History, General Character and Significance, Persecution, Prosecution, the Judgment of the Arches Court, —Review of Judgment. By the Rev. R. B. Kennard. (Hardwicke.)—The Essays and Reviews here find an historian, who goes all lengths in his approbation of them. He even stands by their theory of subscription. We are not inclined to place confidence in so thoroughgoing a partisan. The equivocations—for they are nothing better—on the meaning of the subscription are the disgrace of a book which is, we believe, destined to be remembered as having done much good.

An Attempt to Assign the Square Roots of Negative Powers. By F. H. Laing. (Virtue, Brothers.)—Mr. Laing seems to know nothing of the present state of this question, at least he makes no reference to it. His own theory is a wild one: the two factors which compose $-a^2$ are not equal, as he admits.

The Englishman's Illustrated Pocket Guide to Paris and its Neighbourhood. By Fernand Strauss, R.A. (Ward & Lock.)—Mr. Fernand Strauss deserves a faint word of qualified recommendation. To those who "know Paris" his hand-book will appear a sorry piece of workmanship; but to tourists of the humbler classes, visiting the French capital for the first time without letters of introduction, and without initiated travelling compan-

ions, it might prove of greater service than a more complete and expensive manual. From the merits not less than the demerits of Mr. Strauss's hints for spending "Eight Days in Paris," we infer that he is a comparatively inexperienced traveller, who having won new knowledge in a brief first trip to the city on the Seine, wishes to use it for the instruction of others. Anyhow, he opens with a good piece of advice—"Arrival in Paris.—Before leaving the train be careful not to forget anything in it; look after your luggage." In the same spirit the guide at the close of his eighth day says, "Take care of your tickets, and good bye."

Of miscellaneous publications we have to record *Greece: her Past Condition under King Otho, her Present Requirements and Tendencies and Future Prospects: with a few Words about the Movement in favour of Prince Alfred's Election as King of Greece*, by A. J. Koulouriotis (Harrison).—*Greece: its Condition, Prospects, and Resources*, by E. Strickland (Ridgway).—*Seizure by the Japanese of Mr. Moss, and his Treatment by the Consul-General (Ridgway)*.—*Armour-Clad Ships at Shoeburyness; also, a New Principle of Construction*, by J. Jecks (Stanford).—*Guide to the Recovery of Scotch Debts, and Popular Exposition of the Law of Insolvency and Bankruptcy in Scotland*, by J. Murdoch (Blackwood).—*A Few More Words about Gold*, by E. H. Browne (Groombridge).—*Banking in Turkey*, by J. Farley (Wilson).—*Remarks on Mr. G. Peabody's Letter to the Five Trustees of his Munificent Gift of £50,000, for the Use of the Poor of London*, by Congress (Tressider).—*The Consumptive Poor of South London*, by Dr. Ladd (Pigott).—*Earlwood and its Inmates, a Lecture*, by the Rev. E. Sidney (Gray & Warren).—*A Voyage Round the World, under the Facilities afforded for Travel in the Present Day: a Lecture*, by A. Gibson (Brechin, Burns).—*Biography; its Lessons, and the Advantages of its Systematic Study, an Essay*, by "Clement" (Houlston & Wright).—*Four Centuries of Modern Europe*, by T. B. Bishop (Freeman).—*Inaugural Address delivered to the Associated Societies of the University of Edinburgh*, by their President J. Moncreiff (Edmonston & Douglas).—*The Devon County School: its Objects, Cost, and Studies—Letters by Earl Fortescue, Prebendary Brereton, and the Head-Master (Ridgway)*.—*The Social and Political Bearings of the American Disruption*, by A. J. B. Beresford Hope (Ridgway).—*Social Waste and Waste Lands, Flax v. Slave-Grown Cotton*, by Ajax (Simpkin).—*Indian Cotton Supply, the only Effectual and Permanent Measure for Relief to Lancashire*, by A. C. Brice (Smith, Elder & Co.).—*India, China, England's Mission to the East*, by S. Laing (Saunders, Otley & Co.).—*Our Military Administration, Past and Present, considered in a Letter to the Premier*, by W. O. (Stanford).—*The Sugar Duties Discussed*, by Henry Nelson (Smith, Elder & Co.).—*Natal: a Practical Guide to that British Dependency in South-Eastern Africa*, by John Robinson (G. Street).—*English Convicts Before and After their Discharge*, by W. Bayne Ranken (Longman).—*How to Carve and How to Serve a Dinner* (Blake), and *Medical Psychology*, by R. Dunn (Churchill).

LIST OF NEW BOOKS.

Allison's Child's French Friend, 15th ed. 18mo. 2/6 cl.
Anderson (John), Life of, edit. by Tweilretrees, cr. 8vo. 2/6 cl.
Barrère, Les Ecritains Français, leur Vie et leurs Œuvres, 6/6 cl.
Bible in the Workshop, Pt. 2, by Two Working Men, cr. 8vo. 1/6
Blunt's Coincidences of Old and New Testament, 8th ed. 8vo. 6/6
Byron's Poetical Works, illustrated new edit. 12mo. 3/6 cl. 6/6
Campin's Engineer's Pocket Remembrancer, cr. 8vo. 5/6 cl.
Chronica Monasterii S. Albani, edit. by Riley, Vol. 1, 10/6 hf. bd.
Coker's Little Crews, and How to Use them, 16mo. 2/6 cl.
Cotton, and the Want of it, 16mo. 1/6 swd.
Crothwaite's Historical Passages in the Book of Daniel, 12mo. 7/6
Curtis's Chronological Tables, Illustrative of English History, 2/6
Dalgleish's English Composition in Prose and Verse, 18mo. 2/6 cl.
Dana's Seaman's Manual, by Brown, 9th ed. cr. 8vo. 1/6 cl.
Davidson's Introduction to the Old Testament, Vol. 3, 8vo. 14/6 cl.
De Montalembert's The Insurrection of Poland, 8vo. 1/6 swd.
Eokley's Light on Dark Days, or Meditations for Lent, 18mo. 1/6
Fawcett's Manual of Political Economy, cr. 8vo. 12/6 cl.
Federic's Slave Life in Virginia and Kentucky, 8vo. 1/6 cl.
Fruits of Enterprise, Travels of Belzoni, new edit. 18mo. 3/6 cl.
Gardiner's History of England, 1803-1816, 3 vols. 8vo. 30/6 cl.
Gassner (Pastor), His Life, Labours and Persecutions, 8vo. 1/6
Giffard's Deeds of Naval Daring, new edit. 8vo. 3/6 cl.
Goulbourn's Manual of Confirmation, 4th ed. 8vo. 1/6 cl.
Gullistan, The, of Shaikh Sadi of Shiraz, new ed. by Johnson, 15/6
Hamilton's Resources of a Nation, 8vo. 10/6 cl.
Holbrey's Value, its Nature, Kinds, &c., 8vo. 10/6 cl.
Jackson's New Check Journal, 12th ed. 8vo. 5/6 cl.
James's Novels, "The Bazaar," 8vo. 1/6 swd.
Kant's Four Boundaries of Reason, edited by Wood, new edit. 12mo. 3/6
Keats's Poetical Works, with Memoir by Milnes, new edit. 5/6 cl.
Kindly Hints on Woman's Cottage Life, 8vo. 1/6 cl.
Kingley's Hygiene, or New Foes with an Old Face, 4th ed. 6/6 cl.
Landel's Girls' Own Toy-Maker, 3rd ed. roy. 12mo. 2/6 cl.

Lane's My Good-for-Nothing Brother, 2nd ed. post 8vo. 10/6 cl.
Little by Little, Graduated Lessons in Reading Music, 3/6 cl.
London Merchant Shippers' Directory, 3rd Year, 18mo. 1/6 swd.
Lytton's Dramatic Works, new edit. 8vo. 6/6 cl.
M'Cauley's Examination of Sp. Colenso's Difficulties, 2nd edit. cr. 8vo. 5/6 cl.
Macleod's Dictionary of Political Economy, Vol. 1, imp. 8vo. 30/6
Moon's The Pentateuch, Objections of the Bishop of Natal, 8vo. 6/6
Morris's History of British Birds, Vol. 2, cr. 8vo. 7/6 cl.
Observations on the Treatment of Councils in Ireland, 2nd ed. 1/6
Osborne's The South as it is, cr. 8vo. 8/6 cl.
Page's The Protestants of Sp. Colenso Considered, 8vo. 5/6 cl.
Parker's (Theo.) Collected Works, Vol. 3, Sermons, Prayers, 6/6 cl.
Pentateuch (The) and Writings of Moses Defended, 8vo. 1/6 cl.
Ponset's Prince of Wales' First French Book, new ed. 18mo. 1/6 cl.
St. James's Magazine, Vol. 6, 8vo. 5/6 cl.
Scott's Poetical Works, illust. new edit. 18mo. 3/6 cl. 6/6
Shakespeare, Works of, edited by Clark and Glover, Vol. 1, 10/6
Sheriff's Single Entry Book-Keeping, Proof Balance, roy. 5/6
Smith's 'Godwin' The Empire, Letters pub. in Daily News, 1838-9, 6/6
Stanley's Sermons preached before the Prince of Wales, 8vo. 9/6 cl.
Tennyson's Poems, 12th ed. 8vo. 9/6 cl.
Thoughts of the Day, or the World and the Cross, 18mo. 1/6 cl.
Tomlinson's Experimental Essays, 12mo. 1/6 cl.
Turnbull's Tables of Compound Interest and Annuities, 12/6 cl.
Twiden's Elementary Introduction to Practical Mechanics, 10/6
Walkingame's Tutor's Companion, by Butler, new edit. 1/6 cl.
Watson's Theory and Practice of the Art of Weaving, 8vo. 10/6 cl.
Weller's Dictionary, English & French and French & English, 7/6
White's History, Gazetteer and Directory of Essex, 2nd ed. 12/6
Wiseman's Points of Contact between Science and Art, 8vo. 3/6 cl.
Woodfall's Law of Landlord and Tenant, 8th ed. by Cole, 25/6 cl.

MARRIAGE ODES.

March 17, 1863.

AMONG the love-songs and marriage-odes to which the late happy event has given rise, I have been surprised at seeing no allusion to Scott's exquisite song, 'A Danish Maid for Me.' For the benefit of those readers of the *Athenæum* who are not familiar with 'Harold the Dauntless,' the song may, perhaps with advantage be copied here. It will be remarked that the speaker is a Dane; and that the first four lines refer to an English girl, one of the persons of the drama. The description of the Danish maid may be applied without change to the Princess of Wales. A. B. G.

"She may be fair," he sang, "but yet
Far fairer have I seen
Than she, for all her locks of jet,
And eyes so dark and sheen.
Were I a Danish knight in arms,
As one day I may be,
My heart should own no foreign charms,—
A Danish maid for me.

"I love my father's northern land,
Where the dark pine-trees grow,
And the bold Baltic's echoing strand
Looks o'er each grassy sun.
I love to mark the glinging oon
From Denmark loth to go,
And leaving on the billows bright,
To cheer the short-lived summer night,
A path of ruddy glow.

"But most the northern maid I love,
With breast like Denmark's snow,
And form as fair as Denmark's pine,
Who loves with purple health to twine
Her locks of sunny glow;
And sweetly blends that shade of gold
With the cheek's rosy hue;
And Faith might for her mirror hold
That eye of matchless blue.

"'Tis hers, the manly sports to love
That Southern maidens fear;
To bend the bow by stream and grove,
And lift the hunter's spear.
She can her chosen champion's fight
With eye undazzled see,
Clasp him victorious from the strife
Or on his corpse yield up her life,—
A Danish maid for me."

THE CHARACTER OF MRS. SIDDONS.

14, Bachenheimer Anlage, Frankfurt-am-Main,
March 15, 1863.

DURING a sojourn of some three years on the Continent your journal has been the one most constantly attainable by me, and its advertisements of course very interesting—that of Dr. Whalley's 'Memoirs' not least so.

Some weeks ago (on what occasion I forget) the epithet "astute"—applied to my mother, Sarah Siddons, in that journal was irresistibly ludicrous from its grotesque misapplication to a woman known by her friends and intimates as the direct reverse—as one of the simplest, the highest-minded—and the least able to encounter or combat the crooked ways of the world.

The same epithet introduced into the critique of Dr. Whalley's 'Memoirs' in the *Athenæum* of the 7th of March, may reasonably be attributed to the same hand, the word being an unusual one.

However that may be, I prefer appealing to you to reconsider the epithet, and to inform yourself what ground there may be so to designate a character which, thirty years ago, would have found as

many defenders as assaulters, although I may now appear its single champion! I prefer this to holding any communication with the compiler of those Memoirs, who has published the *private* letter of a lady, writing to an intimate friend, and distinctly saying, "This is in confidence; therefore, your finger on your lips, I pray"; and who deliberately puts forth the crude prejudices of a stranger in Ireland as the opinions of one well able to judge of national character.

I could myself have once furnished letters proving that my mother, on subsequent visits to Ireland, appreciated the friendship and hospitality of some of its first and finest children.

With regard to my mother's general character, its virtues and defects still live in the memory and on the pages of many an esteemed authority; but seldom has been classed among them the "astuteness" of a worldly mind. So entirely was the contrary the fact, that some of her descendants might now have been in different positions had she been even ordinarily alert as to her own interests; and as to the flattery of patrons, she was far oftener guilty of risking the *loss* of patrons, by a sincerity which might have been called unnecessary.

Was the woman of whom Mrs. Jameson truly wrote that "she was credulous—simple to an extraordinary degree"—and "heaven is not further from earth than she was from falsehood"—and "in some things Mrs. Siddons was like a child"—was she likely to be distinguished as an "astute" character?

Passing over many other indications of questionable taste as well as authority in this article, I beg respectfully to recommend to the readers of the *Athenæum* to seek for a juster understanding of the character of Sarah Siddons in Mrs. Jameson's *brochure* than is to be found in the letters addressed to Dr. Whalley, if they are all selected with the like judgment which prompted the insertion of those in the above-named paper; and as a refutation (signed "A. P.") of some slanders of the Roman Catholics lately found place in the *Athenæum*, I rely on the same justice being allowed there to the present statement.

CECILIA COMBE.

HISTORICAL STUDY IN GERMANY.

March, 1863.

A report of the proceedings of the Historical Commission of the Munich Academy of Sciences lies before me, and I think it will be interesting to the readers of the *Athenæum* to have a short account of them. The Historical Commission is one of the many undertakings patronized by King Max., and its labours are important to the historian and the student of history. Dealing chiefly with the materials for future historical works,—ransacking archives, collecting letters and documents,—the members who composed the Commission could hardly expect sufficient support from the public, and but for the King's liberality they would have to employ their time in other pursuits than this of historical science. Juvenal's cynical remarks on the historians of his time are still applicable to every one who attempts to be the Columbus of history rather than the Americo Vespucci,—to draw his own materials from the fountain-head instead of making use of the discoveries of others. But the King of Bavaria devotes a considerable sum to forward the investigations of the Historical Commission; the first historians of Germany are members of it, and rising talent is employed in those researches which established fame has not the time to undertake; funds are provided to defray the cost of valuable publications, and prizes are offered for the best work produced on specified subjects. For instance, a prize of 2,000 florins is offered for a Handbook of German Antiquities; prizes amounting to 4,000 florins for various lives of distinguished Germans and distinguished or deserving Bavarians; 3,000 florins for a Critical History of Bavaria down to the Accession of the House of Wittelsbach; and 10,000 florins for a learned Handbook of German History from the first beginnings of historical knowledge down to the nineteenth century. The last-mentioned prize is by far the highest, as the subject proposed is the most important and the most difficult. It may well be

a question how far such an undertaking is likely to succeed. For some time past the historians of Germany have altogether ceased to attempt general histories, and the custom of treating separate periods has become almost universal. Ranke's 'History of France' begins late and ends early; and all his title-pages bear the words "chiefly of the sixteenth and seventeenth centuries." In the list of historical works on Germany given by the chief German book of reference, 'The Conversations-Lexikon,' I find only four general histories amidst a mass of writings on detached periods, and all the names of eminence are among the detached periods. Even the Germans must recognize the necessity of original research being confined within certain bounds, and cannot expect any one man to master the whole field of science. It is thus generally accepted that many men shall work up the materials, and one make a compilation from them. But this is not the object proposed by the Historical Commission; or if a compilation is proposed, it is one of so learned a nature that it needs more study than twenty original histories. "The general course of German history is to be specially observed; but at the same time the territorial development in each epoch must be considered. In the work, as a whole as well as in its separate points, the present state and the results of scientific research must be clearly and decidedly shown. Decisive references are to be given. The work need make no pretensions to artistic presentation; but it must be intelligible and instructive, without losing itself in minuteness of details. The abundant and difficult materials that exist may perhaps be compressed into six volumes. It is evident that several years must be given to the execution of this task; and during those years a learned man in every way competent would have to devote the full force of his energies to it." I transcribe the conditions with wonder. It would hardly be too much to employ the first historian on such a task; and if it were executed so that the public were willing to give the prize, 10,000*l.* would be nearer the mark than 10,000 florins.

The present achievements of the Historical Commission afford some guarantee that such a work will be executed if it is possible. The number of books already published or approaching completion, the light they shed upon points that were dark and baffling, the subjects that are being wrought by so many members, the archives that have been searched and the papers that have been discovered, are the most satisfactory indications of resolution and completeness. In the last sitting of the Commission, which was presided over by Ranke and attended by all the members except Von Sybel, reports were made of the collections of municipal and communal charters, proceedings of the Imperial Diet, chronicles of German towns, popular songs arranged historically, correspondence of Wittelsbach Princes, year-books of German history, researches into German history, records of sciences in Germany. Twenty-two men of scientific eminence are at work on the last division; the eminent jurist Dr. Bluntschli has undertaken the history of Political Science, and M. Döllinger the introduction to the history of Catholic Theology. Jacob Grimm made a report on the publication of the *Weisthümer*—the old collections of municipal laws, which are valued as the spring of all German national privileges, preserving as they do the traditions and usages of the remotest antiquity. For the collection of the proceedings of the Imperial Diet the archives of twenty-nine towns were ransacked, and that of Strasbourg afforded a considerable booty. The time from 1395 to 1411 is tolerably complete; the papers of those years will fill a volume and throw much light on the doings in the Empire during that period. The records of the Hanseatic League are far advanced, under the superintendence of Dr. Lappenberg. The first volume of the 'Chronicles of German Towns' has been published by Prof. Hegel, and contains Nuremberg Chronicles; the second volume is nearly ready, and is said to be still more important, as showing clearly the relations in which the Emperors stood to the Imperial towns. Four volumes in all will take the Nuremberg Chronicles down to the end of the fifteenth century, and very great stress is laid on

the value of the whole collection. The correspondence of the Wittelsbach Princes from 1550 to 1650 is divided into three parts, under the care of Professors Cornelius, Löher and Von Sybel. Prof. Von Sybel undertook the correspondence of the Electors Palatine; and the discoveries made by Sybel's deputy comprised a mass of letters between the Electors Palatine and the other Protestant Princes. These letters were found in the Archives of Munich and Cassel, and pointed to a defensive alliance formed by the Protestant Princes of Europe at the suggestion of Frederick the Second. Of this alliance Heidelberg was the centre point, as Munich was the centre of the league formed in opposition by the Catholic Princes. Prof. Löher, whose journey to Brussels and the Hague has already been mentioned in the *Athenæum*, discovered a great deal of the correspondence of the Catholic Princes in those archives. The letters that passed between the Wittelsbach Princes and Philip the Second, from the time of his accession, are said to be especially notable; and a rich correspondence exists with Alva, during his government of the Netherlands. But there is scarcely an important European personage who is not represented in this mass of material, the publication of which cannot fail to add much to our knowledge of so interesting a time. Prof. Cornelius lighted on a series of papers of the League in the Archives of Wurzburg, and at Bernburg an extensive and well-connected correspondence of Duke Christian of Anhalt. Of the year-books or annals of German history, three volumes have been published,—Prof. Dümmler's 'History of the East Frankish Empire,' vols. 1 and 2, and the first volume of the 'Annals of the German Empire under Henry the Second,' by the late Prof. Hirsch, of Berlin. Prof. Dümmler's two volumes contain the fifty years' reign of Louis the German. The second volume of 'Researches into German History,' under the direction of Prof. Waitz, of Göttingen, is just completed, and contains minor historical works, such as a history of the League of the Swabian towns from 1376 to 1389, the League of the Saxon towns between the Elbe and the Weeser to the end of the middle ages, contributions to the history of German coins and money, and similar dissertations, ending with an Essay, by Prof. Waitz, on the *Principes* in Tacitus's 'Germania.'

Such is the work proceeding in Munich under the auspices of King Maximilian. German diligence and painstaking are well and widely known, and we may expect the best results from them when aided by liberal patronage and guided by the first authorities.

E. W.

OUR WEEKLY GOSSIP.

Dean Trench has done himself honour by his consent to receive into the holy ground of Westminster Abbey, the remains of Sir James Outram. This noble soldier was the true Sydney of our time, and like, his type in the Elizabethan age, has gone to his grave a simple knight. The decision of the Dean and Chapter to allow of a public funeral in the Abbey will give universal satisfaction, both in England and in India; though he was only a Company officer, and the honour of lying in the great Abbey has not hitherto, we think, been accorded to any man holding that position. In the glorious dust beneath that pavement, there is none more typical of heroism and sacrifice than that of James Outram.

The Annual General Meeting of the Paleontographical Society will be held at the apartments of the Geological Society, Somerset House, on Wednesday, the 25th of March, at three o'clock in the afternoon. The volume to be issued for 1860 is said to be nearly completed,—a fact which may perhaps be noticed by those who are in need of their books and do not like to be three years in arrear.

The Annual General Meeting of the Royal Irish Academy was held on the 16th of March, at the Academy's House, Dawson Street, Dublin. The chair was occupied by the President of the Academy. The Report of the Council mentions that the Academy's collection of antiquities and MSS. has been considerably increased during the past year. Among the ten members of the Academy

deceased since the last Annual Meeting were Prof. Eugene O'Curry, the eminent Gaelic scholar, and the Rev. Charles W. Wall, Vice-Provost of Trinity College, Dublin, author of various works on Hebrew and Sanscrit literature. The following were elected Honorary Members of the Academy:—In the department of Science—Baron Giovanni Plansa, Christopher Hansteen, F. G. W. Struve, Louis Agassiz, H. W. Dove; in the department of Polite Literature, Prof. Max Müller, George Grote, Herman Ebel, A. De Lamartine; in the department of Antiquities—Dr. Ferdinand Keller, Zurich, L'Abbé Cochet, Rouen. After the election of the Council for the ensuing year, the following Members of Council were elected as officers of the Academy:—*Treasurer*, Rev. J. Carson, D.D.; *Secretary to the Academy*, Rev. W. Reeves, D.D.; *Secretary to the Council*, J. K. Ingram, LL.D.; *Secretary of Foreign Correspondence*, Rev. S. Butcher, D.D.; *Librarian*, J. T. Gilbert, Esq.

Mr. Newmarch has resigned his function as Honorary Secretary of the Statistical Society, and editor of the Society's *Journal*. Mr. F. Purdy has been elected to succeed him in both those offices.

The death of Thomas M'Nicoll, at the early age of forty-one, cuts off in his prime a man who possessed true power as a critic and a writer, and who, with longer life, might have done things in literature worthy of lasting fame. He was for several years the editor of the *London Quarterly Review*,—the Wesleyan organ in general literature.

Very good photographic portraits of Mr. Carlyle and Mr. Tennyson have been produced by Mr. Jeffrey, an operator already favourably known by his reproductions of sculpture. Photographic portraits mostly fail from want of tact or taste in their producers. Men sit stiffly, or are thoughtlessly posed with regard to the light,—misfortunes the too faithful camera scorns to remedy. Mr. Jeffrey has thoroughly understood what he had to do, and so skilfully posed his sitters, with real feeling for the character of each, that his works, both as portraits and photographs, are worthy of the originals. We can say no more.

At the sale of a portion of the library of the late Mr. William Bird, of Liverpool, by Messrs. Sotheby & Wilkinson, the following lots may be quoted, with the prices at which they were sold:—Bewick's History of British Birds, first edition, on large paper, 5*l.* 12*s.*,—Bunyan's Pilgrim's Progress, eighth edition, 4*l.* 18*s.*,—Dibdin's Decameron, in boards, 8*l.* 15*s.*,—Biographical and Picturesque Tour, 9*l.* 12*s.* 6*d.*,—Hornæ, printed at Seville, by Cronberger, 1537, 8*l.*,—Hornæ, Paris, Tory de Bourges, 1527, 28*l.*,—Book of Thel and Visuns of the Daughters of Albus, with singular designs by Blake, 12*l.* 10*s.*,—a curious Collection of Autograph Letters of Celebrated Bibliomanias, 7*l.* 15*s.*,—Les Songes Drolatiques de Pantagruel, containing a singular series of grotesque figures, 6*l.* 6*s.*,—Ottley's History of Engraving, 5*l.*,—Palgrave's Rise and Fall of the English Commonwealth, 4*l.* 2*s.*,—Shaw's Decorations of the Middle Ages, 10*l.* 10*s.*,—Wood's Athene Oxonienses, by Bliss, 7*l.*,—Ormerod's History of Cheshire, super extra, 38*l.*,—Ottley's Italian School of Design, 5*l.* 12*s.* 6*d.*,—Collection of the Works of George Cruikshank, 8*l.* 8*s.*,—Hornæ Divæ Virginia, Kerver, 1504, 8*l.* 15*s.*,—Lagniet, Recueil des plus Illustres Proverbes, 21*l.* 10*s.*,—Turner's England and Wales, in numbers, 27*l.*,—Whitaker's Richmondshire, 17*l.* 15*s.*

London spreads in all directions with tolerable impartiality. It is not only towards the west that houses have enormously increased; places, a few years since suburban villages, are now in solidarity with the cities. The slimy Isle of Dogs contains a new London over the Border; Stepney has small pretension to rurality; Hackney, with its old mansions, once citizens' paradises, and fine trees, is absorbed, and will soon touch upon the Lea; meanwhile, with Old Ford, it almost incloses Victoria Park in as rigid an embrace as do the mansions and gardens round Regent's Park. Feelers along the roads are grasping at Clapton, Stoke Newington, Highbury; while Islington, erst famous for cows and pastures—see Hogarth's prints—must keep the former in cellars, and has forgotten the colour

of grass. Most people can remember Hoxton as having that scurvy rurality about it which marks the process of absorption. Kentish Town is in this state now; while Hampstead, whereabouts Keats used to roam, is coming unpleasantly near to town. Fetid Bermondsey and much be-docked Rotherhithe have an aspect quite other than that which met the eyes of Defoe's sea-captains. Newington Butts was once quite a smokeless spot; now Walworth has shut it in, and been itself massed with Camberwell, as Denmark Hill and Peckham press upon the last; and New Cross, Sydenham, Norwood, Dulwich and Streatham come after in the heap. Within the last fifteen years more ground has been covered on every other side of London than the western. Yet in this section there are (to say nothing of Kensington and Buckingham Gardens) no less than five parks (Regent's, Hyde, Green, St. James's, Battersea), all paid for and maintained at public expense. Eastward lies solitary Victoria Park. From Lincoln's Inn Fields, which is as nearly as possible the actual centre of the metropolis, it is three crow's miles to the nearest corner of Victoria Park; from the same point to that of St. James's is but half that distance, and to Regent's Park only a mile and a quarter. These facts make it desirable to keep an eye on all possibilities of opening spaces in and near the City, eastwards, and to guard whatever rights of breathing fresh air may be left to us. We are sorry that the Crown has parted with its ancient rights over 2,500 acres of Epping Forest—one of the best recreation grounds of east London. Other large tracts have been squatted on. The forest land is in all about 10,000 acres. The House of Commons has passed, by a large majority, a resolution praying that Her Majesty will direct that no sales to facilitate inclosures be made of Crown lands, or forestal rights, within fifteen miles of the metropolis. This is in plain English an order to stop such proceedings for the future; doubtless it will receive attention after the lesson administered in the Thames Way stoppage affair. Something lies nearer home than Epping Forest, and requires to be done before we inclose it with iron rails. This is a park for Bermondsey and south-east London: which might be made in the still open space between the Old Kent Road and Grand Surrey Canal. Soon it may be too late; wretched houses already spread along the roads traversing this undrained fever-bed. A park there would be nearer, by London Bridge, the proposed Tower Bridge, or the Tunnel, to Finsbury and the stifled heart of the City, than Victoria Park is to St. Paul's.

The Family Bible, as is well known, has long been used as a family register of marriages, births and deaths, especially in the United States, where the practice of introducing a number of ruled leaves, headed "Family Record," between the Old and New Testament, much prevails. To this an enterprising publisher of Philadelphia has now added leaves of cardboard, arranged as in a photographic album, to contain likenesses, so that the Family Bible will now become the family portrait-book.

More and more attention is being paid to meteorology in relation to navigation and geographical science. The Meteorological Department of our own Board of Trade is doing good work in this particular; the Observatory at Paris co-operates; the Netherlands Meteorological Institute, at Utrecht, publishes reports and charts every year, and distributes them freely; and now we have printed at Rome, the *Bullettino Nautico e Geografico*. This work is published under the direction of Signor E. Fabri-Scarpellini: twelve numbers of the first volume have appeared, filled with discussions, notes and statements of all kinds bearing on the subjects included under the title of the work. A part from its usefulness, we welcome this periodical as further evidence of intellectual life in Italy.

A Correspondent writes to us as follows:—"I do not like to point out small blemishes in a work generally so well edited as Miss Williams's 'Letters of John Chamberlain,' not long since printed by the Camden Society. There are, however, two trifling defects in the notes, which it may be worth

while to remedy, merely lest they should be hereafter quoted with the errors. The first occurs on page 9, where Sir Francis Beaumont, the Judge, and father to the dramatist, is represented as the author of the poem of 'Bosworth Field,' and Foss's 'Judges,' v. 456, cited as the authority. I have not Mr. Foss's volumes; but I do not think he is likely to have stated that Sir Francis Beaumont, one of the Justices of the Common Pleas, was the author of 'Bosworth Field,' because it is known to have been written by the Judge's second son, John, who died in 1628, and whose poems were published in the next year. Another mistake is of a similar kind, where the wit, Sir John Davis, who was Attorney General for Ireland, is deprived of one of his best pieces, which is attributed to a very dull writer, distinguished as John Davies of Hereford. The latter was incapable of producing the contest for superiority between a maid, a widow and a wife; and it is inserted with the name at length in a collection, alluded to by Chamberlain, called 'Davison's Poetical Rhapsody,' 1602, 1611, &c. We have no right to complain that Miss Williams has omitted a few notes, when she has inserted so many and to such good purpose; but there is one point of extreme interest which seems to have required an illustration which it has not received. I allude to Chamberlain's account of the performance of Ben Jonson's 'Every Man in his Humour,' which the old news-letter writer mentions as 'a new play of humour,' under date of the 11th of June, 1597. It had, in fact, been first brought out on the 11th of May preceding, as is established by Henslowe's 'Diary.' The 'Verses by Lord Essex when he was in disgrace' are extant, though Miss Williams does not allude to them. 'Dr. Muffett's Silkworm,' of which she could find no trace in the British Museum, is a tract called 'Silkwormes and their Flies,' printed in 1599, and hitherto only known as the work of T. M., though conjectured to be by Moffatt."

We read in a letter written three weeks ago on the other side of the Atlantic:—"New York is very gay this season, socially, and trade is very brisk. Among others, the pianoforte-makers are fairly run down with work. One of them, a customer of ours, whose shops are 7 stories high and 350 feet long, turns out five pianos a day, and sells them as fast as they are made. He thinks nothing of buying 50,000 feet of rosewood at a purchase." Is it not on record that Paris was very gay, and trade lively, at one time during the Revolution,—when assignments were plentiful?

Those who crossed the Simplon last summer will probably remember brigades of workmen, under the command of engineers, clustered in various places, many of which appeared almost inaccessible, while others were waving flags or shouting to those above or below them. The result of their labours has been submitted to the Emperor of the French, at the Tuileries, in the form of a plan for a railway, which is proposed to be carried across this celebrated Pass. It is estimated to be 80 kilometres long, 44 of which will be covered over, 23 carried through tunnels, and 21 in galleries. The execution of the railway, according to the projectors, who belong to the "Italian line," would occupy about five years, and the cost, including the fixed and rolling material, is put down at 72,000,000 francs.

M. de Rochas, who has been long engaged in investigating the formation of coralline reefs and islands, has made a report upon them to the French Academy of Sciences. In this he states that while agreeing with the generally-received opinion that corals cease to build at the level left dry at low water, he disputes that which attributes their subsequent formation and elevation to the mechanical power of the waves, which break and cast up the masses of coral, but rather attributes their elevation to volcanic agency.

Certain French geologists are trying to account for the arrangement of geological strata by referring it either to the earth's annual revolution or daily rotation. In one or the other of these movements they find an explanation of certain phenomena of stratification which are not easy to explain on any other known theory, among which are the appear-

ances of stratification observable in embankments when cut through a few years after their formation.

Ranke, a German physiologist, has published, among the results of his investigations into the phenomena of electric currents in the living muscle, the fact that dead muscle is a much better conductor of electricity than living muscle, because of the presence of certain products of decomposition which do not appear till after death. He concludes, further, that the conducting power of living muscle is three million times weaker than that of mercury, and one hundred and fifteen million times below that of copper.

An autograph letter of the Emperor of Austria conveys the announcement of a Museum for Art and Industry to be founded in Vienna, and to contain objects from the Imperial Palaces, the Arsenal, the University and other public collections. The Belvedere Picture Gallery, the Cabinet of Antiquities, the Ambras collection, the Treasury, &c. are to lend different articles to this Museum, and exchange them from time to time; and the Emperor hopes that the rich inhabitants of Vienna will also make their collections available in the same manner. As the Museum is to be erected for the purpose of study and improvement, it is to be placed under the care of proper authorities, such as the Professor of the History of Art in the University, the Keeper of the Treasury Cabinet and the Cabinet of Antiques, &c. A photographic institution and a collection of plaster casts are to be connected with the Museum, which is to be placed temporarily in the Palace till a suitable building can be erected. As the design of this Museum is one of the first fruits of the International Exhibition, where Austria was so well represented, we are justified in hoping that the industry of Vienna may profit by the stimulus, and that the example of Austria may bear fruit for the rest of Germany.

Franz Dingelstedt, who occupies at Weimar the same post of Theater-Intendant that Goethe filled, writes to the *Allgemeine Zeitung* that Schiller's house has at last become the property of the State, and has been allotted by the Grand-Duke to the *Schiller-stiftung*. He announces also that M. Berlioz's opera, 'Romeo and Juliet,' is to be given at Weimar in April, and as this is the first performance the opera has had in Germany, the composer himself will direct it. Herr Dingelstedt has adapted the historical plays of Shakspeare to the stage; and the whole series is to be given in Weimar, beginning with 'Richard the Second.' This last undertaking is appropriately chosen to celebrate the Jubilee of Shakspeare next year, the three hundredth anniversary of his birth.

*THE RAILWAY STATION.—This Celebrated Picture, by W. FRITH, Esq., R.A., NOW ON VIEW to the Public, at the FINE-ART GALLERY, 11, Haymarket.—Admission, 1s. Open from Ten to Five. A Descriptive Pamphlet, by Mr. Tom Taylor, M.A., price 6d.

MR. GHÉMAR'S EXHIBITION OF THE ROYAL FAMILIES OF ENGLAND AND DENMARK.—Portraits of The Queen, the Prince and Princess of Wales, life-size, comprising Fifty-one Photographic Pictures and Drawings, executed by Mr. Ghémar, from actual sittings, are NOW ON VIEW at the FRENCH GALLERY, 120, Pall Mall (First Floor).—Admission, 1s. N.B.—Each visitor will be presented with a Portrait of the Princess of Wales, carte de visite size.

Mr. EDMUND YATES'S INVITATIONS to EVENING PARTIES and the SEASIDE will be issued at the EGYPTIAN HALL EVERY EVENING (except Saturday), at Eight o'clock. Mr. HAROLD POWER will be one of the party. A Morning Performance on Saturday, at Three o'clock.—Stalls, 3s.; Area, 2s.; Gallery, 1s. The Box-Office is open daily, from 11 till 5 o'clock.

SCIENCE

SOCIETIES.

ROYAL.—March 12.—Dr. W. A. Miller, Treas. and V.P., in the chair.—The following papers were read, 'On the Influence of Temperature on the Electric Conducting Power of Thallium and Iron,' by Dr. Matthiessen and Dr. Vogt.—'On the Amyloid Substance of the Liver and its Ultimate Destination in the Animal Economy,' by Dr. R. M'Donnell.

ASTRONOMICAL.—Feb. 13.—*Annual General Meeting*.—Dr. Lee, President, in the chair.—Rev. S. F. Cresswell, Major M. F. Ward, J. L. Shuter, and W. Esson, Esq. were elected Fellows.—The Report

of Auditors showed the state of the receipts to be 1,069l. 18s. 8d.; and the expenditure, 829l. 10s.; leaving a balance at the bankers' of 240l. 8s. 8d.

—The Society has to regret the loss by death of Prof. Barlow, Dr. Fisher, T. Gibbes, Esq., Capt. Jacob, J. Riddle, Esq., Sir J. C. Ross, J. Walton, Esq., Fellows of the Society; and also of M. Carlini, Prof. O. M. Mitchell, M. C. Rümker, Associates.—The Report reviewed the Proceedings at various Observatories, including the Royal Observatories at Greenwich, Edinburgh, and Cape of Good Hope; also the Radcliffe Observatory, Oxford, the Cambridge Observatory, Liverpool Observatory, Glasgow Observatory, Mr. De La Rue's Observatory, Hartwell Observatory and the Hopewell Observatory, Haddenham.—Address delivered by the President, Dr. Lee, on presenting the Gold Medal of the Society to M. Argelander.—The following Fellows were elected:—President, G. B. Airy, Esq., Astronomer Royal; Vice-Presidents, A. Cayley, W. De La Rue, J. Lee, LL.D. and C. B. Vignoles; Treasurer, S. C. Whitbread; Secretaries, R. Hodgson and the Rev. C. Pritchard; Foreign Secretary, Admiral R. H. Manners; Council, Prof. J. C. Adams, R. C. Carrington, R. Farley, Rev. G. Fisher, C. Frodsham, J. Glaisher, J. R. Hind, Rev. R. Main, Rev. Prof. Selwyn, E. J. Stone, Lieut.-Col. A. Strange and C. V. Walker.

ASIATIC.—March 16.—The Right Hon. Lord Strangford, President, in the chair.—Capt. W. M. Carr was elected a non-resident Member.—A paper by Dr. Kern, 'On Fragments of Aryabhatta, the celebrated Hind Mathemetician,' was read. These Fragments prove conclusively that the sphericity and diurnal rotation of the earth had been correctly apprehended by that early Indian writer, who flourished at an epoch variously estimated by different investigators, but which must have been prior to A.D. 600, and has been placed as far back as B.C. 100.

ROYAL SOCIETY OF LITERATURE.—March 11.—Dr. Guet, in the chair.—J. Gaudwell, Esq., H. Sleath, Esq., and the Rev. Mr. Hitchins were elected Members.—Mr. R. S. Poole read a paper 'On the List of the Confederacy defeated by Thothmes III. before Megiddo.' This document had been already commented upon by M. de Rougé, and Mr. Poole accepted and extended his results. The battle to which the List refers is shown by the Annals of Thothmes III. to have been fought in his 23rd year, according to the common opinion, B.C. cir. 1450. The Annals give the line of march, which proves the city to be the Biblical Megiddo. The List is shown by its title to be an enumeration of the tribes or cities of the confederacy, of which the territories are stated to have extended from Megiddo to Neharena, probably Mesopotamia, certainly a country east or north-east of Palestine. The list is not in geographical order. M. de Rougé had identified the following names of cities:—

1. KETESHU, the great Hittite city on the Orontes. 2. MAKETEE, Megiddo. 6. TEBEKU, Tibhath in Zobah. 11. MARAMA, Merom. 12. TEMSKU, Damascus. 14, 97. AUBERA, Two cities Abel. 15. HEMTU, Hamath. ASTERATU, Ashteroth. 30. RAWEESA, Laish. 31. HETARA (HEZARA), Hazor. 33. KEN-NARATU, Cinnereth. 37. SHENAMA, Shunem. 39. AKSEP, Achsaph. 52, 53. APRA, Two cities Ophrah. 54. KHASHBU, Heshbon(?). 56. NEKBU, Negeb, the south of Palestine. 61. YEPU, Joppa. 79. KERARA, Garar. For the remaining names M. de Rougé offers several probable Hebrew etymologies. No. 100. YAKBA-ARA, which he reads JAAKAV-ARA, he transcribes into the Hebrew יַאֲכָב־אָרָא, "nom au sujet duquel il serait facile de se livrer à des conjectures séduisantes; il est exactement composé comme Israël..... Est-il permis de supposer que ce nom de localité conserve un souvenir d'un des établissements de Jacob en Palestine?" Mr. Poole held that the name as here transcribed would most probably read "God will supplant," consisting of the future form Jacob, with the addition of the name of God, which, in such forms, is almost always the nominative. A name perfectly analogous, YESHAR-ARA, occurs in the List. Mr. Poole would read it יֵשָׁרָא אֱלֹהִים, "God will add," the name Joseph with the nominative ex-

pressed. We have no instance of the Hebrew *samech* being transcribed by the Egyptian SH, but conversely its Egyptian correspondents are used for the Hebrew SHIN. Supposing that the names Jacob and Joseph are preserved in Jacob-el and Joseph-el, such forms may be cited as Nathan, Nathanael, Nathaniah, Jehonathan, Giphthah, Jiphthah-el. Mr. Poole was disposed to recognize other tribe-names in RABANA, Reuben, SHEMANA, possibly Simeon, ASHOSHKHEN, probably Issachar (Hebrew *Issakar*), KAUTA, perhaps Gad. It is to be remarked that the confederacies of the Judge period are, when of Canaanites, of cities, when of Abrahamites, of tribes. Thus a confederacy of Canaanites and Hebrews would have been of cities and tribes. We have no record of any such confederacy in the Bible; but the tribe-names may merely indicate mercenaries, as the number of members is too numerous for individual contingents to have been large. The names Jacob and Joseph are sometimes put for the twelve tribes in the Bible: as Joseph is for Ephraim and Manasseh, Jacob may, in the List of Thothmes, more specially indicate Judah. The majority of the identifications which Mr. Poole proposed might be doubtful; but this of Jacob and Joseph, whether as tribe-names or not, could, he thought, scarcely be controverted. If accepted, it would necessitate the adoption of the earliest date of the Exodus, B.C. cir. 1650. The time would about correspond to the oppression of the Israelites by Jabin, King of Canaan. As the confederacy defeated by Thothmes was apparently headed by the Prince of KETESH, it seems possible that the King of Canaan mentioned in the Bible, whose title never occurs at any other period, was set up by the conqueror, and the Canaanites of the north of Palestine assigned to him.—Mr. Birch and Sir C. Nicholson expressed themselves as favouring the late date of the Exodus in the reign of Men-ptah, B.C. cir. 1300; but they did not consider the question as settled.—Mr. Poole communicated a paper, by Prof. Tagore, 'On the Ethnological Value of the Institutes of Manu.' The writer traced in the names of the military class certain original nations: the Chinas he held to be the Chinese; the Pehlevis, the Persians; the Cambojas, a people on the north-east frontiers of Persia; the Javanas, the Ionians; the Deradaas, the Druids; the Chassas, the Cushites; the Critas, the Cretans, &c. In the statement of Herodotus that Media was colonized by the Arian or Aryans, he found a trace of the direction of the Aryan migration; and in the list of Median tribes given by Herodotus, the originals of tribes mentioned in the Institutes. So also in the Shah-Námeh of Firdúsi, the names of the castes preserve traces of the nomenclature of those of India in the Institutes. Prof. Tagore was disposed to think that some of the names furnished him by Mr. Poole from the List of Thothmes were traceable in those of the military tribes in the Institutes. In any case, he saw in the ethnic character of the tribe-names of the Institutes the formation of castes in their elemental state.—Mr. Vaux read a paper, by Mr. Fox Talbot, containing a translation made by him of the Annals of Esarhaddon, preserved on a clay cylinder in the British Museum. In these Annals the Assyrian King describes his conquests of Sidon, the overthrow of Hazael; the conquest of the Marsh Country of Lower Chaldaea; a war with the Elamites, or people of Susiana; a war with Media; with a notice of the civil administration of his empire; and an account of the magnificent palaces which he built.

BRITISH ARCHAEOLOGICAL ASSOCIATION.—March 11.—Dr. J. Lee, President, in the chair.—E. S. Chandos Pole, Esq. was elected an Associate.—Mr. H. Syer Cuming read a paper on some Bractate Coins that had been presented to Mr. Pettigrew by Mrs. Kerr.

ARCHAEOLOGICAL INSTITUTE.—March 6.—Octavius Morgan, Esq., M.P., V.P., in the chair.—After the announcement of new Members elected during the previous month, a communication was read from R. W. Grey, Esq., inviting attention to the great archeological interest of the explorations of the Basilica of St. Clement, at Rome, during the

Pontificate of Pío Nono. For more than a thousand years all traces of this structure, mentioned by St. Jerome, Zosimus and Gregory the Great, had been lost. In 1857 it was rescued from oblivion; and the excavations that were prosecuted under the direction of the Archæological Commission resulted in the exhumation of three strata of constructions, belonging respectively to three periods in the history of Pagan Rome—the Imperial, the Republican and that of the Kings. A large outlay has been made upon the works; but much remains to be explored, if funds were supplied for an undertaking which may claim the aid of archæologists throughout Christendom.—Mr. J. J. Rogers, M.P., read a memoir describing certain vestiges on the coasts of West Cornwall which appear to indicate occupation by the Romans. On a former occasion Mr. Rogers had brought before the Institute the discoveries he had made on the manor of Carminow, on the shores of Mount's Bay; pottery and relics of Roman character were there disinterred. The present discovery, which is a kind of furnace that appears to have been domed over, is near the site of Mr. Rogers's previous explorations, but there was no evidence to show that it is Roman.—Mr. W. W. E. Wynne, M.P., gave a notice of several valuable Welsh MSS. in the Hengwrt collection, bequeathed to him by the late Sir Robert Vaughan. Of these he brought some for the inspection of the Meeting; one, namely, of the Taliessin Poems, in the handwriting of the 14th century, and supposed to be the earliest existing transcript; another was a history of Scottish Kings; and a third an ancient ceremonial or Service Book of the Use of Sarum.—A short account was read of two sculptured Roman altars and other remains of the same period found at Bisley, in Gloucestershire, by the Rev. H. Lowder. The chairman expressed a hope that these altars, which had been used in early mediæval times, as building materials in the construction of Bisley church tower, might be deposited in the British Museum, where so limited a collection of such relics found in our own country is to be seen.—Mr. Hewitt gave a notice of a good example of the two-hand sword of the 16th century, from the Royal Artillery Museum at Woolwich. The blade of the weapon, which was exhibited by permission of Col. Lefroy, is curiously engraved with figures of St. George and St. Barbara, accompanied by an heraldic bearing, and is fashioned precisely like that of certain swords represented in the 'Triumph of the Emperor Maximilian,' engraved by Hans Burgmaier.—The attention of the Society was called by the Rev. H. M. Scarth, Prebendary of Wells, to curious discoveries lately made in barrows on a tract of wild common between Snape and Aldborough, in Suffolk. Amongst the objects brought for exhibition were part of a Roman mirror found in Essex, by Mr. Ashurst Majendie; a fine terra-cotta tragic mask, from Torre del Greco, from Mr. Fortnum's collection; a Sassanian signet and an Etruscan gold ring, brought by Mr. R. H. Smith; a collection of enamelled Chinese vases of various styles of decoration, together with a rare vase of tortoiseshell inlaid with gold, contributed by Mr. H. G. Bohn; three small cups of gold of early Delhi work, covered with small rubies, sent by Mr. W. Stuart; a large bronze vase with singular ornamentation, brought by Mr. R. Phillips: it was obtained from the Japanese collection in the International Exhibition.—The Rev. J. Beck, M.A., contributed a beautiful collection of gold rings, chiefly rings of betrothal or nuptial tokens; also a series of penannular African rings similar to the torque rings alleged to be frequently found in Ireland. He brought besides several Battersea enamels, with subjects printed in black from engravings of rural fashionable life in the style of Hogarth.—A valuable archæological map of Belgium, lately issued at Brussels, was sent by Messrs. Letts.—Mr. Blaauw placed on the table, by permission of the Sussex Archæological Society, a fine collection of bronze weapons from their museum at Lewes Castle.

STATISTICAL.—*March 14.—Anniversary Meeting.*—The Right Hon. Sir J. S. Pakington, Bart., M.P., President, in the chair.—The Honorary Secretaries read the Report of the Council and of the Auditors,

and the abstract of receipts and payments. The Report stated that the number of Fellows now on the List is 365, against 374 last year. Of these 67 are Life-Members. During the twelve months the new elections had been 26; the losses by death, resignation and default, 35. The income of the year (omitting the balance of 226*l.* from 1861) had been 770*l.*, against 734*l.* in the previous year; and the expenditure had been 763*l.*, against 744*l.* in 1861. The balance brought forward to 1863 was 233*l.* The surplus of assets in favour of the Society was 1,720*l.*, after providing for all liabilities. The Council regretted the death of the Marquis of Lansdowne, one of the Founders of the Society and its first President.—A Medallion of H.R.H. the Prince Consort, the late Patron of the Society, had been placed in the Library.—A Ballot having been taken for the President, Council and Officers for the ensuing twelve months, the following was declared to be the List—the names in *italics* being those of the new Members:—*President*, Col. W. H. Sykes, M.P.; *Council*, C. Babbage, J. Bird, M.D., Sir J. Boileau, Bart., S. Boulton, S. Brown, W. Camps, M.D., W. Farr, M.D., *Right Hon.* Earl Fortescue, H. W. Freland, M.P., Sir F. H. Goldsmid, Bart., W. A. Guy, J. T. Hammick, F. Hendrika, J. Heywood, Sir R. Hill, W. B. Hodge, C. Jellicoe, L. Levi, W. G. Lumley, Right Hon. H. Mackenzie, M. H. Marsh, *Right Hon.* Lord Montagu, W. Newmarch, Right Hon. Sir J. S. Pakington, Bart., F. Purdy, Right Hon. Lord Stanley, M.P., Col. W. H. Sykes, M.P., *Majr-General* Sir A. M. Tulloch, R. Valpy, C. Walford, *Rev. W. Wheelwright*, Treasurer, W. Farr, M.D.; *Honorary Secretaries*, W. A. Guy, W. G. Lumley and F. Purdy.

SOCIETY OF ARTS.—*March 11.*—Sir Thomas Phillips, Chairman of Council, in the chair.—The paper read was 'On an International Transit Route through Nicaragua,' by Commander Pim.

SYRO-EGYPTIAN.—*March 9.*—W. H. Black in the chair.—Mr. Bonomi exhibited drawings and impressions from some objects in the Egyptian Museum of His Grace the Duke of Northumberland, in Alnwick Castle, among which were some funeral tablets of great interest and antiquity, in which was distinctly set forth a kind of ancestral worship like that practised in China at the present time.

MEETINGS FOR THE ENSUING WEEK.

- MOR.** Architects, 8.—'Artificial Stone,' Prof. Kerr.
Geographical, 8.—'March from Kurrahee to Gwadur, 1861,' Major Goldsmid; 'Harbour of Sedashagur,' Dr. Macpherson.
TUES. Engineers, 8.—'Lydgate Railway Tunnel,' Mr. Frazer; 'Public Works, Pernambuco,' Mr. Peniston.
Royal Institution, 8.—'Animal Mechanics,' Prof. Marshall.
Zoological, 9.—'New Muskrat, British Columbia,' Mr. Lord; 'Anatomy of Sea-Otter and Humming-bird,' Dr. Crisp; 'New Species of Birds from China,' Mr. Swinhoe.
WED. Society of Literature, 4.
Society of Arts, 8.—'Present Sources of Quinine, with Reference to India,' Mr. Markham.
Archæological Association, 8.—'Thuribles,' Mr. Pettigrew; 'Ancient Snuffers,' Mr. Cumming.
THURS. Royal Institution, 8.—'Chemical Affinity,' Dr. Frankland.
Royal, 8.
—Antiquaries, 8.
FRI. Royal Institution, 8.—'Thallium,' Mr. Crookes.
SAT. Royal Institution, 8.—'Science of Language,' Prof. Max Müller.

FINE ARTS

FINE-ART GOSSIP.—The Professor of Sculpture in the Royal Academy, R. Westmacott, R.A., delivered a lecture, on Tuesday, at Cambridge, on Sculpture, the Vice-Chancellor in the chair. It was not a technical or historical lecture, but on the character of the employment of sculpture in modern times, the influences to which its origin and former power might be traced, and to those which have affected its subsequent condition,—on Pagan and Christian Art,—and on the present state of sculpture in Italy, Germany, France and England. This is doing good service. What is wanting is an educated public. There can be no high Art until there is a public capable of appreciating it,—no high or ennobling motive in the artist unless he is sure of a fit audience. We said years since that the Royal Academy could do no better service than by giving public lectures on Art, with especial reference to the more celebrated works in our National

Gallery, so that the audience might pass at once from the lecture to the illustration, and there test or acquire knowledge.

The Winter Exhibition closes to-day (Saturday). Mr. Wallis, the promoter, states, that, in consequence of the success which has attended it, he intends to offer two prizes in the next Exhibition, one, of 100*l.*, for the best figure picture, and a second of 50*l.*, for the best landscape.

Mr. Gibson is modelling a 'Dancing Girl,' said to reproduce several studies from Cerito, made during her visits to Rome. Report speaks highly of the spirit of this design. We should, however, have thought a professional dancer, even Cerito, the worst possible model for a sculptor's design or form.

The Society of Arts has appointed a Committee to consider and report what prizes it should offer for the encouragement of Art-workmanship applicable to manufactures. The Committee desire to keep in view the special object of improving workmanship *per se*, that is, execution as distinct from design, in the strictest sense. For this end, it recommends that prizes shall be offered for the best works in the following classes. The Society will furnish competitors, at a trifling price, with photographs, from excellent works of Art, to be reproduced by the several processes, otherwise casts when indispensable:—1. Modelling, in terra-cotta, plaster or wax, the human figure and ornament;—2. Repoussé work, in any metal, the same;—3. Repoussé, or hammered work, as distinct from the ordinary repoussé in iron, brass, or copper, the same;—4. Carving in ivory, the figure;—5. Chasing in metal, the same;—6. Enamel-painting, on metal, copper or gold, the figure and ornament;—7. Painting on porcelain, the same;—8. Inlaying in wood, marquetry or buhl, with ivory or metal;—9. Engraving on glass, the figure and ornament;—10. Embroidery, ornament. We hope to furnish further details soon; but may add, the Committee suggest that the Society's medal, in addition to the prizes, should be awarded for peculiarly excellent works. The models have been carefully selected to furnish saleable reproductions after the competition; a most important point for consideration, seeing that even unrewarded works may be so excellent as to remunerate their producers by a ready sale. The results will be exhibited to the public. Every manufacturer must feel more the want of skilled artisans than ingenious artists as a serious obstacle to advance in the practice of Art.

The obituary of last week states the death of Mr. John Tibbets Willmore, Associate-Engraver of the Royal Academy, and most honourably known by the excellence of his works. Mr. Willmore was born about 1800, at Erdington, in Staffordshire; he was a pupil of the late W. Radcliffe, of Birmingham, with whom he served seven years. About 1822 he came to London, and commenced his professional career in the studio of the late Mr. Charles Heath, whence many excellent engravers have issued. Mr. Willmore was elected an Associate-Engraver of the Royal Academy in 1842, in the place vacated by the death of W. Bromley; he was a very constant contributor to the Academy Exhibition, especially of late years. His health had been for some time past exceedingly precarious.

With regard to the proposed decorations for St. Paul's, a Correspondent replies to "Y. L. Y.":—"Mosaic is objectionable whenever the decoration proposed does not consist of arabesques, diapers, or figures of a simply architectonic or decorative character—figures in which the general aspect of form and colour is the important point, especially when such decorations are not considerably removed from the eye—and this because in every other case fresco, or water-glass, would achieve more. Further, that in the former cases mosaic may be fitted by any intelligent hand to any style of architecture, and that in the latter it is suitable to none. The subject offered to the artists competing for the St. Paul's decorations, 'The Transfiguration,' falls distinctly under the second head: it cannot be considered as simply decorative; subtle and pathetic expression is peremptorily called for in the countenances, a quality which, it is needless

to say, mosaic cannot attain. This, then, is the dilemma: if mosaic is insisted on as called for by the darkness and gloom of the spaces to be filled (a valid argument enough), then a subject should be chosen within the reach of the material; if, on the other hand, the subject is paramount, then a material is required capable of carrying it out. The parallel proposed by 'Y. L. Y.' between the works suggested and the 'Evangelists' in the pendentives of St. Peter's is an unfair one, inasmuch as the last are far larger and removed to a much greater distance from the eye than those for St. Paul's would be. Mosaic will hardly avoid being far more costly than painting; moreover, we have not the skilled workmen the ancient artists employed upon St. Peter's."

M. Gallait is working on two pictures, of a somewhat smaller size, but continuing the historical series of which the 'Brussels Archers at the Bier of Counts Egmont and Horn,' and 'The Last Hours of Egmont,' that were so much admired at the International Exhibition, formed parts. The new works represent—1. The Oath of Vargas to Alba, that he would destroy all heretics, even if amongst them he found his own mother. 2. Reading the Sentence to Egmont. The figures are cut off beyond the canvas, just below the knees.

Among the many creditable additions to London architecture are the Schools and Baptistery of S. Francis of Assisi, Notting Vale; built, from the designs of Mr. Bentley, of Southampton Street, Covent Garden, of yellow and black bricks, the last set in horizontal bands, effectively yet not pretentiously relieving the surfaces, and carved stone in the bell-gable, corbels and mullions. Broadly speaking, the buildings form three sides of an open court; its fourth is divided from the road by a screen wall and portal with four openings formed by piers that carry a beam of brick horizontally across them. One-third of this court being built over, gives a covered playground; above are apartments. The school forms one side of the court, the priest's house and kitchen another; at right angles on the other is the church, opening from the court. Much effect is given by boldly massing these elements, and richness is gained, at little cost, by their varied surfaces. The bell-gable rises at the angle formed by the schools with the covered playground; another angle is chamfered off by the residence, the windows of which look diagonally across the court; above these runs a low turret, still further enriching the whole and breaking its plain forms. The church interior, although a little archaic in aspect, is skillfully composed, and is decorated in water-glass by Mr. Westlake.

A decision with regard to the competition for a new façade to the Duomo at Florence has been made; the Committee decline to award the first three premiums, and have given the three minor ones to designs 1, No. 42, by Signor C. del Conte L. Cappi, of Turin; 2, No. 25, by Signor M. Falcini, of Florence; 3, No. 38, by M. W. Petersen, of Denmark. Nos. 28, 29, 34; 22, 31, 37, have obtained honourable mention. When the designers of these last have consented, their names will be made public. The judges consider the competitive designs to be failures; but propose a future competition in the hope of a worthier result.

In our recent article upon Mr. Maclise's picture of 'The Death of Nelson,' by a slip of the pen, we said, the Admiral's death-wound is represented in his right shoulder; for "right" read left.—The picture is 12 feet long. We may add, that the midshipman who shot the Admiral's slayer, shown as watching for his man, is now Lieutenant Pollard, such promotion having fallen to his lot since 1805! He resides at Greenwich, and gave the artist many particulars of the battle.

MUSIC AND THE DRAMA

EWER & CO. beg to announce, that they will give TWO MORNING CONCERTS, at the Hanover Square Rooms, on TUESDAYS, May 5 and June 2, in order to introduce to the subscribers of their Musical Library the latest and most important Compositions of Chamber Music. Subscribers will receive invitations. —Tickets to Non-Subscribers, Half-a-Guinea each. Programmes will be shortly published. —Ewer & Co.'s Musical Library, 87, Regent Street, London.

NEW PUBLICATIONS.

Beatrice, &c.—[*Beatrice et Bénédicte, &c.*] For Pianoforte and Voice. The Words and Music by Hector Berlioz. (Paris, Brandus & Dufour.)—Clearly is to be seen in this published music the want which debars M. Berlioz from the recognition due to a great composer: not of ideas, but the power of arranging them;—not of originality, but taste. This opera of 'Beatrice and Benedict' contains, as has been said in this journal, one real gem—but much besides that may be likened to stones of valuable quality, clouded, specked, and flawed; most *bizarre* too in their setting. Some account of the work was given last year, when it was produced at Baden-Baden. Now, therefore, a few general remarks may be offered. The fixed idea of M. Berlioz to disappoint expectation, from which confusion must result, is oddly evident throughout the opera. If his theme begin naturally in either a square or a triple tempo, he rarely permits half-a-dozen bars to go forward without mystifying the measure by some far-fetched division of the notes, by some disturbance in the accompaniment, which, however ingenious it be, is at variance with ease and probability. This peculiarity is turned to good account in the fantastic and piquant little *allegretto*, befittingly opening the prelude to a tale in which two capricious lovers figure. But in its *allegro* the phrase is twisted, turned, hunted into a maze which we defy the most practical ear to unthread at first hearing. Now it is fatal to an overture that it should require to be heard thrice before it is comprehended, seeing that a second hearing of that which has failed in its effect the first time may never come to pass. The happy medium has been hit, in the charming 'Duo Nocturne' (No. 8); but then the words demand a certain whispering vagueness in the accompaniment, and the vocal phrases are more distinctly shaped and persistently followed out than is usual with M. Berlioz. Nothing more dreary can be devised than the spasmodic interruptions of rhythm in the opening chorus. The 'Nuptial March' (No. 13) is not allowed to go the simple, honest way of such Marches as Glick, Mozart, Weber, Beethoven, and Mendelssohn condescended to write. The periods may be complete, but the ear does not find out the fact easily. Uncouthness of modulation can hardly be pushed further than in the drinking chorus, No. 9, where the trick of versification,

Agéilas!
Hélas! &c.

is employed, it may be presumed with festive intentions. But such quips and quiddities as our author delights in, when writing words, have nothing to do with music. M. Berlioz is not happy in his operatic sarcasms. His "grotesque Epithalamium" is, musically, a dull attempt at the madrigal style. Two numbers, if we mistake not, have been added to the score since the opera was produced: No. 11, an important *trio* for female voices; and the subsequent chorus behind the scenes. The opening and close of the first are in our author's simplest and best manner: so is the second. Why should he make himself disagreeable on system, when he can prove himself the possessor of powers to please equal to those of any other man? This is one of the most perverse riddles that the voluminous annals of music contain.

Twenty-four Choral Songs, composed by the late Robert Lucas de Pearsall, Esq., of Willsbridge House, County of Gloucester, and of the Castle of Wartensee, St. Gall, Switzerland, with an ad lib. Accompaniment for the Pianoforte added, by John Hullah. (Novello & Co.)—Have we here a satire on pedigree and dedication? It is next to impossible to treat this book seriously. Every one of these two dozen choral songs is headed in the following style: "Dedicated to Owen Davies, Esq., of the House of Gwynsanneby, by Mrs. John (sometimes Philippa Swinnerton) Hughes—*née* de Pearsall." We remember no collection of good music made so absurd by perpetual reference to the Herald's College as this. The editress of the writings of her father, a more than ordinarily skilled amateur, surely can intend them to be sung by folk no less aristocratic than "Fitzes," and "O's," and "Macs," and "Vons"—by Italian princes (some of whom

let lodgings), and by counts of the Holy Roman Empire (some of whom have been known to advertise for rich English wives). Why have made a handsome and interesting volume of music ridiculous? Why have put affection into trappings no more sublime than the *Rouge* and *Azur* of Gog and Magog? The *Athenæum* has long known Mr. Pearsall, of Willsbridge, as an amateur who carried skill in the difficult art of part-writing to a very fair point of excellence. Sometimes his ingenuity was misapplied, as when he set 'Sir Patrick Spens,' that grand old ballad, in ten real parts. He was crotchety, too, when he devoted his talent to setting verses of his own, lamenting (as Miss Catherine Fanshawe did, in her bright poem) the extinction of the Minnet. But our pleasant recollections of his real talent ought not to have been depreciated by the pedigree finery of one "*née*" his daughter.

Thalberg's Art of Singing applied to the Pianoforte. (Boosey & Sons.)—This, which forms No. 1. of 'The Amateur's Library,' is a continuation of M. Thalberg's ingenious former work, regarding which our opinions were fully expressed on its publication. We cannot but in some measure consider the central principle a curious mistake. The "art of pianoforte-playing applied to singing" would not, we apprehend, yield any satisfactory results. We have never become wholly reconciled to 'Rode's Air' or the 'Carnaval,' in which instrumental variations have been allotted to the voice; and however ingeniously the favourite opera *adagio* or *barcarolle* of the hour may be decorated with rich accompaniments, the labour of the decorator and of the player had been better bestowed on some composition more exclusively within their own conditions. It is the fashion to consider the pompous and intellectual music of such special writers as Hummel and Prof. Moscheles gone by. For us they are not one-half as much exhausted as the "transcript" style carried out in such perfect richness by M. Thalberg, with so much picturesque audacity by Dr. Liszt. The wonderful two hands of the former player, the splendour of his tone, and the faultless composure of his mechanism, are such as to reconcile us to that which, rendered less perfectly, is perceived to be so much ingenious mediocrity. An instance presents itself in the last example here offered to us—"The Willow Song," from 'Otello.' The ornaments here contrived for that deliciously mournful melody (already ornamented in a delicate fashion by its composer) are so elaborate, that to maintain the pathetic simplicity of the song is next to impossible, we dare assert, to any amateur, so needless and so disturbing is the amount of difficulty.

DRURY LANE.—A change of performance took place on Monday, and Mr. Falconer's energetic comedy of 'Extremes' was reproduced, Mr. Lorraine taking the character of Hawthorn. The play was well received, and goes as smartly as ever. During the last week, a re-action has manifested itself in theatrical affairs, and, with an exception or two, the houses have been thinly attended.

PRINCESS'S.—Miss Braddon's novel of 'Aurora Floyd' has been dramatized by Mr. Cheltnam for this theatre. Miss Amy Sedgwick was the heroine, and acted the character of *Aurora Floyd* with determination and judgment. In many respects, also, she was fitted for the part, which requires strength of impulse and decision of outline. But there is an essential weakness in the character itself, as a dramatic representation. Aurora is neither thoroughly good, nor thoroughly bad; but faulty from want of purpose: and, having suffered from one impolitic marriage, is only too anxious to encounter similar perils again. Believing her first husband to be dead, she is willing to accept a second in a man who ultimately rejects her, and then transfers herself to a third candidate for her hand with a readiness that is not a little surprising. Though wanting in depth, her love for Mr. Mellish (Mr. H. Vezin) is fervent, and she is really solicitous for his happiness, as she contemplates the probable necessity for their separation. Much credit is due to Mr. Vezin for the warm-hearted manner in which he supported an unthankful part. Nor were the ma-

terials of the story so thoroughly adapted to stage exigencies as they might have been; and the first two acts were comparatively inefficient, if not tedious. The second act had introduced *Stephen Hargreaves, alias "Softy,"* the stable-help, in company with *James Conyers*. Both characters fell into hands capable of doing them justice. Mr. Roxby, as Conyers, was finely discriminating and suggestive, and awakened the dullest to the perception of the lady's danger from a man of so much resolution and fearlessness. Mr. Belmore, as "Softy," soon evinced that he meant something, and scene by scene grew into importance, until, in the last two acts, he thoroughly fascinated the audience into attention, and finally achieved a success which left no doubt that, in its low comedian, the theatre possessed an actor capable of great efforts. Another part, too, though but a sketch, was hit off with singular felicity,—that of *Matthew Harrison*, the dog-fancier, which was capitally well played by Mr. Charles Seyton. The curtain fell to a great demonstration. The houses have since been well attended, and there is reason to believe that Mr. Belmore will henceforth occupy an elevated position as a skilful delineator of what are called character-parts. His make-up for the occasion was decidedly effective; but the final impression which he produced was due to the exceedingly natural tones in which he gave utterance to the despair and supplications of the half-witted murderer, who thought by a ready confession to conciliate justice in his favour. We have rarely seen a powerful situation more powerfully realized.

MUSICAL AND DRAMATIC GOSSIP.—We were much pleased with the new Royal Wedding Anthem by Mr. Hopkins, which was duly and well performed at the Temple Church on Sunday morning last—the only sacred music that we have heard of as written expressly for the occasion. The Anthem could not well be sounder as music; yet it is sound without being dry. The choruses are good specimens of that legitimate school of ecclesiastical writing, which is untainted by the fopperies of simulated antiquarianism. There is good melody in both of the songs—one for a tenor, the other for a bass voice. There is a certain English humour in the cast of the composition which makes it welcome. Mr. Hopkins, like Mr. Goos, whose Wedding Anthem has been in request everywhere, is one of those valuable members of our musical profession the form of whose lives and services may be said to keep them in a retirement behind their deserts. His handling of the organ, as we were reminded on Sunday last, is, in every sense of the word, superior.

Prof. Edward Taylor, known some thirty years ago as an oratorio and concert singer,—as a translator who wrought in busy and admiring co-operation with Spohr,—as a critic in the *Spectator*,—and who for many years past has lived exclusively within the circle of his duties as Gresham Lecturer,—died a few days since in his seventy-ninth year. Belonging to a family of remarkable intellectual distinction, he had originally devoted himself to other pursuits than that of music. His education as an artist had thus been irregular and incomplete; and when, in middle life, he entered the profession as a bass singer, he brought with him those decided preferences and antipathies which so frequently characterize the amateur. He sang correctly, but without charm. His criticisms were well penned, but were not liberal enough to last. To instance—binding himself up, as he did, heart and soul, in the career of Spohr, his indifference to and his disparagement of Mendelssohn were as eager and as angry as if Germany had not been wide enough for both composers. In brief, he was a man possessing more than average intelligence and general culture; but as a musician, and teacher through the press or by word of mouth, of no great value.

Many candidates for the succession to Prof. Taylor are in the field:—Dr. Wylde, Messrs. Hopkins, Lincoln, and Salaman, Prof. Hullah, and the Rev. Mr. Cox. The appointment, as it has long stood, has been one of formal duty and private emolument, rather than of any living importance.

Mr. Mapleson's programme for the coming season

of Italian Opera is showy. The new operas which he intends to give have been advertised: these being Signor Verdi's last, the production of which Signor Verdi is personally to superintend,—M. Gounod's 'Faust,' under the same conditions,—M. von Flotow's 'Stradella,' ditto,—and Signor Schira's 'Niccolò de Lapi.'—In addition to Mr. Mapleson's known company, the name of Mdlle. Artot makes a hopeful figure; Signor Delle Sedie returns to it; and several gentlemen less known to fame are to be tried from Italy. Madame Alboni is the only Italian lady left. "The chorus," we are told, "has been selected with great care and discrimination from the Italian Operas of Paris, Barcelona, Turin and Naples." We had fondly conceived that there were choristers enough, and to spare, in London. Signor Arditì is to conduct. The three principal dancing ladies are to be Mdlls. Ferraris, Beretta and Pochini; and Signor Rota is to come to superintend the production of his ballet, 'I Bianchi e Neri.'

Mr. Gye, we are told in the *Gazette Musicale*, has engaged that excellent and intelligent French *basso profundo* and actor, M. Obin, for his season. His programme is to be issued next week.

At Monday's *Popular Concert*, Mr. Halle played Beethoven's brilliant *Walstein Sonata*, to replace Madame Arabella Goddard, who had been announced to play Hummel's rich and brilliant *sola Sonata* in D major—a composition capitally adapted to powers which are brilliant rather than expressive.—Mdlle. Bondy has commenced a series of chamber concerts.—A new Cantata, 'Harvest Home,' by Mr. Allen, was performed at a concert of the *Vocal Association* on Tuesday.—A very excellent concert, of the right kind, was given by Mr. Henry Leslie's *Choir*, on Wednesday. We can speak in terms of commendation of a new Advent Anthem, by himself; the execution of two Collect anthems by Farrant and Mr. Goos; of a double Motett by Bach; of a Psalm by Spohr, "As pants the hart" (new to us and a pleasing specimen of his manner); and of Mozart's lovely 'Ave Verum,' which was encored and left little to desire. A concert like this is among the best things which London has to offer in music.—Among yesterday's events were a performance by the *Glee and Madrigal Union*, the dinner of the *Royal Society of Musicians*, and the *Sacred Harmonic Society's* rendering of 'St. Paul.'

The Symphonies at the next concert of the Philharmonic Society are to be Haydn's in E flat, No. 10, and Beethoven's in C minor. Mr. Blagrove is to play Spohr's *Concerto* in C minor; Weber's 'Preciosa' Overture and Mendelssohn's 'Wedding March' are to be given, and Miss L. Pyne is to sing.—We are sorry that the Musical Society will disappoint the curiosity of many by bringing forward only the Overture to Schumann's 'Manfred,' and not the entire music, as was to be hoped.

The operetta, 'Blonde or Brunette,' by M. Meyer Lutz, is to be performed to-day at the Crystal Palace.

The Royal English Opera season will close to-night, with a performance of M. Auber's 'Black Domino,' for Miss Louisa Pyne's benefit.

M. Thalberg announces six *Matinées* as among the attractions of the season.—Mr. Halle will repeat his Beethoven performances, and this year, we believe, diversify them by selecting from that treasury of beautiful things which is made up by the composer's minor pieces—his *rombos*, airs with variations, bagatelles, and the like. There is hardly one of these where the fairy foot hath not been.

It gives us pleasure to learn that the new oratorio selected for this year's Norwich Festival is one by M. E. Silas, whose hearing-time seems to have at last come.

A new tenor, M. Villaret, is about to be tried at the Grand Opéra of Paris.

Mdlle. Anna Molioue, to whose intelligence and execution as a pianist we have more than once testified, is playing at concerts in South Germany, with success.

Mr. Benedict's 'Rose of Erin' is making a profitable tour of the German opera-houses.

It is said that the opera 'Piccarda Donati,' by Signor Moscuza, has been intensely successful at the Pergola Theatre, Florence. The principal parts were taken by Madame and Signor Tiberini.

MISCELLANEA

Economical Statistics of France.—One of the most interesting results of the new Commercial Treaty with France has been the publication by the French Government of various statistical returns, under the heads of Population, Production, Commerce, Navigation, Mines, &c. These returns are drawn up on the same plan as returns of a similar nature compiled by our Board of Trade, and are thus additionally interesting, as we are enabled to institute a comparison between the two countries. We proceed to give a few of the leading and most interesting features. The population of France in 1861 was 37,382,000 persons, which, according to the present area of that country, including Savoy and Nice, making a total of 209,420 square miles, gives a mean population of 179 persons to the square mile. The population returns show a decennial increase of only 2·23 per cent., while the increase in England and Wales between 1851 and 1861 was 12 per cent., the density of population being 344 persons to the square mile. Under the head of Agriculture we find (excluding, however, Nice and Savoy) that the following is the per-centage distribution of the soil throughout France:—grain crops, 28·80; other miscellaneous cereals, 5·00; artificial meadows, 5·00; fallow, 10·80; natural fields, 9·50; vineyards, 4·10; orchards, chestnut forests, olive and mulberry groves, &c., 0·20; pasture and waste lands, 13·50; forests, rivers and lakes, roads, houses, and uncultivated, 23·60. Under the head of wheat, we find that the total quantity raised in 1861 (still excluding Nice and Savoy) was 25½ million quarters. This quantity is far below the average produce, the quantity of wheat produced in 1857 being 37½ million quarters. Indeed, during a period of fifteen years the highest yield was in 1857, and the lowest in 1861. The total number of live stock in 1861 was as follows:—horses, 3,000,000; donkeys, 400,000; mules, 330,000; horned cattle, 10,094,000; calves, 4,104,000; sheep and lambs, 35,000,000; goats and kids, 1,400,000; swine, including sucking pigs and wild boars, 5,400,000. Few facts in these returns are more striking than those exhibiting, on the one hand, the vast extent of uncultivated country in France, and on the other, the great number of cattle imported for food. During the years from 1856 to 1860 these averaged in France 528,200, while during the same period in England they only averaged 308,500. Under the head of wine, the mean annual production, taking the average of fifteen years, is 1,089,000,000 gallons; of which 67 per cent. is consumed in the country, and 33 per cent. exported. The production of silk has greatly diminished. The average production from 1846 to 1852 was 53 million lb., while from 1858 to 1861 it was only 26¼ million lb. The quantity of coal raised in 1861 was about eight million tons, and the average price 10s. 1d. per ton. Coal has risen in price in France 31 per cent. since 1847. The total quantity of iron and steel produced was 1,595,000 tons. The increase in steam-power is very remarkable. In 1847 this was represented by a total horse-power of 145,807, while in 1859 it was 513,092. The tonnage of steam-vessels has increased in the same period from 21,134 tons in 1847 to 33,690 tons in 1859; but the latter figures contrasted with our steam-ship returns dwindle to absolute insignificance, and thus present another remarkable proof of the undeveloped resources of France. The railways at the latter end of 1861 extended to 6,269 miles, and the number of letters conveyed by the Post Office has more than doubled between 1847 and 1861. There is a great increase in the quantity of tobacco manufactured by the French Government, amounting, as compared with 1847, to no less than 22 million lb. Other articles of home consumption, such as sugar, salt, &c., also exhibit a large increase; but the result of all the returns is, that while the resources of France are almost inexhaustible, they remain most imperfectly developed.

LITERATURE

Introduction to the Study of the Foraminifera.

By William B. Carpenter, M.D.; assisted by William K. Parker, Esq. and T. Rupert Jones, Esq. (Hardwicke.)

WATER, containing earth in solution or suspension, gives to the atoms of such earth a freedom of moving according to the impulse of the pervading polaric forces. These may be affected by the reaction of the earthy atoms themselves as aggregation proceeds; and both the course of motion and the resultant form of the crystal or other aggregate may be modified according to the nature of the fluid field of such aggregation. This fact has been lucidly demonstrated by Rainey's beautiful experiments on the artificial production of organic conditions of aggregation of carbonate of lime, inducing the same departure from crystalline shape as when the atoms aggregate in the vital production of shell and coral.

When the fluid is pure water the atoms of the earth are aggregated, under polaric guidance, into crystalline forms, distinct for each chemical kind of earth, and affording, by the angles and other properties of the crystal, characters of the "species" of the mineralogist. When the fluid is slimy, the operation of the polarizing force is modified, and apparently, though not really, impeded, and the character of a crystal is proportionally lost: the modification of, and departure from, angular or crystalline forms being greater as the slime is thicker; and especially when the atoms of such are in the condition, through condensation, to act and react upon the surrounding slime-suspending fluid, so as to attract or draw in outside atoms of slime, and to be attracted by or drawn out to such particles of assimilable slime.

The exuviations, ejections, and decay of organisms of all kinds and grades now supply to seas, lakes, rivers and other aggregates of water, the raw material for the re-commencement of those modes of action of the all-pervading force which are termed "vital."

This raw material abounds in, and indeed partly gives its character to, the kind of bed of sea or lake which is called ooze or "mud," the nature and varieties of which are manifold. At whatever depth of the ocean such "mud-bed" has been reached, the contained slime has been observed, when duly scrutinized, to be manifesting the vital form of force, and modifying the shapes in which the atoms of earth,—flinty or limy,—may be aggregated within the vitally acting slime.

The bulk of the present folio of 319 pages is devoted to the description, and its 22 plates and 47 woodcuts to the delineation, of the various leading forms in which the particles of carbonate of lime are aggregated and arranged within the portions of slimy matter, called, according to the prevalent character of their lime-aggregates, "Foraminifera." The organic basis or field of those aggregates has not been distinguished from that in which particles of silic may be precipitated, either in the form of fine needles, as in sponges, or of delicate cases, as in Polycystina; nor from that substance in which, probably from the want of the raw material in the fluid field of its existence, neither flint nor chalk is deposited, as e.g. in Actinophrys and Amœba; and such common organic basis has received the name of "sarcode" or rudimentary flesh, and of "protoplasm" as being that "in which every form of animal" (and plant?) "structure has its origin, and from which it is evolved by a process of gradual

differentiation." Under the latter term the author defines this substance as being "composed of an albuminoid base, with oil particles in a state of very fine division diffused through it; it is tenacious, extensible and contractile; it is diaphanous, reflecting light more than water, but less than oil; and it is dissolved by alkalis, rendered transparent by acetic acid, and dyed brown by iodine. In the midst of this substance are usually to be seen *vacuoles*, or cavities containing a thinner fluid, which is often coloured; these are extremely variable, both in number and size, and their deficiency in any definite limiting walls is rendered obvious by their not unfrequent coalescence" (p. 13).

Under what modification or combination of the general polarizing force, the slime of mud or ooze is first condensed into a protoplasmic centre of such low vital force is still undetermined; but, once begun, and growing as such, it successively puts forth other portions or centres; and the "Foraminifera afford one of the best examples which the animal kingdom can present of that 'vegetative' or 'irrelative' repetition which is an essential feature of all low grades of organization." The primitive protoplasmic centre of a potential foraminifer, however, contains lime-water in much greater proportion than either of the substances defined by the author as composing it; it combines the calcium of such water with carbonic acid, and precipitates it on its exterior as a thin porous crust. The sarcode or protoplasmic matter can extend itself, like threads, from the pores of the crust or shell, and hence the name "foraminifer." It is an "organism" without organs; and manifests life at its lowest grade. Budding out a second protoplasmic centre, this forms a second calcareous porous case, which may or may not be detached from the first; most commonly it is not, and the manifold variety of the Foraminifera depends upon the direction of the budding-forth, and the shape of the buds or "sarcode" centres; whilst their beauty is mainly due to the repetition of the same structure on a regular plan. Some have a rectilinear, more have a curvilinear axis of growth; and the latter, being spiral, may be either flat, like the shell of the nautilus, or may coil round a lengthened axis, like that of a whelk. But between the rectilinear and curvilinear forms there is a complete gradation.

When the varying conditions of the ocean-beds, which are the seat of the foraminiferous mode of resumption of vital force, are considered,—either in regard to distance from the surface, decreasing from depths exceeding two miles, as reached by the soundings of the Atlantic Telegraph Company, and of 1,600 fathoms as plumbed by Wallich between Cape Farewell and the Island of Rockall, to the shallows of tidal shores,—or in respect of the constituents of the sands and muds in which the slime-elements become aggregated into protoplasmic centres,—corresponding modifications of the forms of deposit of carbonate of lime in and upon such centres might be expected,—are, indeed, inevitable under such low conditions of a centre of vital power, with corresponding weakness of resistance of surrounding influences. Accordingly, a result of the summary of the observed forms of foraminiferous shells in Dr. Carpenter's "Introduction" is, that a definition of a species is impossible, in the terms at least to which organisms with definite organs lend themselves; and that the like "ordinary method of definition" of the genus is "impracticable." Upwards of twenty pages are, nevertheless, devoted to the attempt to classify the zoologically unclassifiable Forami-

fera. The efforts of the mineralogist towards a like systematic end are painful enough, and meet with as inadequate a reward; but the conditions of the aggregation of mineral atoms, under the guidance of polar force, in the purer fresh waters, are more definite and less varied than those in the complex solution which forms the ocean.

We have supplemented the author's definition of the protoplasmic base or seat of the chalk-precipitate by the quantity of "lime-water" which fills out the delicate, filmy, albuminous lime. Our meaning is this: every river pours a solution of lime into the sea; but pure water only evaporates from its surface. All sea-water, therefore, holds (with many other salts) a proportion of lime in solution; and if this caustic earth were not disposed of, the effect of evaporation would, in time, unfit the sea for the purposes or as a medium of life. Amongst the instruments by which the soluble caustic lime is precipitated in the condition of a mild, insoluble carbonate of lime, the Foraminifera are the most active and the most widely diffused. In the deep-sea soundings to which reference has been made "the surface layer of the ooze was formed of living shells; whilst its principal mass consisted of the exuvia of preceding generations."

To Ehrenberg we are indebted for the capital discovery of the large proportion in which the shells of Foraminifera enter, either entire or comminuted, into the formation of chalk ('Ueber die Bildung der Kreidefelsen und der Kreidemergel durch unsichtbare Organismen,' in the *Transactions of the Royal Academy of Berlin for 1838*; and 'Ueber noch jetzt zahlreich lebende Thierarten der Kreidelbildung und den Organismen der Polythalamien,' *Ibid.* 1839). When this constitution of the downs and more notable cliffs of Albion is duly examined, it is found to bear a close resemblance to that of the mud which has been dredged up from a great tract of the bed of the Atlantic, and which was composed of little else than the calcareous shells of Globigerinæ and other foraminiferous forms, with the silicious shields of the allied Polycystinæ.

If the finer part of a portion of chalk be washed away, the remaining sediment consists almost entirely of foraminiferous shells. They have also been found in similarly upheaved beds of older oceans, down to the Lower Silurian, in the instances of calcareous rocks of a consistency to be washed; and even in hard limestones and marbles foraminiferous shells can be detected, by the microscope, in polished sections and in thin slices laid upon glass.

Another kind of evidence of the share taken by the polythalamous Foraminifera in the formation of the earth's crust has been made known to us also by the original and persevering labours of the great micrographer of Berlin, in his discovery that their shells occasionally become infiltrated by a solution of silicate of iron, which fills by precipitation not only the chambers, but the pores and co-extended canals, even to their minutest ramifications; so that when a shell thus infiltrated undergoes decomposition, a perfect internal cast of the original protoplasm and its root-like extensions remains:—

"Of such casts it has been shown by Prof. Ehrenberg that the green-sands which present themselves in various geological formations, from the Silurian system upwards, are in great part composed; and his discovery has a two-fold value, as, on the one hand, it places before us far more exact representations of the configuration of the animal body, and of the connexions of its different parts, than we could obtain even from living specimens by dissolving away their shells with acid

(its several portions being disposed to heap themselves together in a mass when they lose the support of the calcareous skeleton), whilst it also enables us to identify with great certainty the types of Foraminifera by which these casts were originally formed, notwithstanding the entire destruction of the shells."

The meaning which the author attaches to the term "type" may be illustrated by his characters of the family of Lagenidæ. The shell "substance" is hyaline or vitreous, and very hard, perforated by tubes of extreme fineness. The "septal" aperture is small, circular and central, more or less prominent, sometimes produced into a siphon-like tube.

The generic name Lagenæ is retained for the Foraminifera which form a single-chambered shell, globose, with a prolonged neck and terminal aperture. But from such "typical" Lagenæ the deviations are numerous—*e. g.*, into an ovate form, pointed at the hinder end, or so narrowed as to become "fusiform," &c., or with involution of the flask-shaped neck, which then gives occasion for another generic name—*e. g.*, Entosalenia, &c.

If the protoplasm, operating under the conditions which lead it to precipitate its chalk in the texture and form of Lagenæ, be so favourably placed in regard to the acquisition and assimilation of fresh slime as to bud out successive portions thereof, an elongated vitreous shell is formed of a series of segments joined end to end in a straight line, sometimes with progressive increase, giving the entire shell a conical form.—

"From the rectilinear *Nodosaria*, through the gently-curved *Dentalina* and the more strongly-curved *Marginula*, we are led, in a series so perfectly gradational as to forbid lines of demarcation from being anywhere drawn across it to the spiral *Cristallaria*, which may be regarded as the highest manifestation of the lagenoid type. From this central stem we find a set of offsets more or less divergent, presenting modifications of the typical characters on which generic distinctions have been founded, but which we cannot recognize as of higher than varietal importance."

Nevertheless—and, indeed, of necessity in respect to finite capacities of comprehending the manifold results of the conditions of creative force—the author proceeds to arrange about a "type form" a second group of genera, forming the family *Globigerinida*; and a third group around another "type," forming the family *Nummulinida*.

This latter includes the largest and most highly-developed kinds of Foraminifera, the existing members of which are almost exclusively confined to tropical or sub-tropical regions. Under analogous influences must have been produced those giants among Foraminifera which multiplied during that early tertiary period which has been called, after them, "nummulitic." Their shells form, literally, mountain masses, once in the depths of ocean, now upraised to the surface. The "nummulitic" limestones are mere aggregates of such organic products, the interspaces of the entire shells being occupied by smaller specimens of the same kinds or by fragments of the larger ones. These rocks occur in Southern Europe, Northern Africa, India, Jamaica. The "Great Pyramid" of Egypt is built of the stone formed of the kind of Foraminifer called *Nummulites nummularia*, from its resemblance to a coin.

The above-recited three "types" or "families" of Foraminifera are grouped together under the "sub-order" *Perforata*, the shell having the tubular apertures for the exit of the filaments of protoplasm called "pseudopodia." They may be regarded as the "typical" Foraminifera. All the kinds have calcareous shells, and are marine.

Aggregates of slime, snot, or "protoplasm," however, occur, which, putting forth their pseudopodial extensions at one point only of the surface, cover the rest with a case which is imperforate. In the *Miliolida*, which are and were marine, the shell is of porcellanous texture. In the *Lituolida*, some kinds of which live in shallow seas or brackish water, the shell is "arenaceous," or composed of foreign particles cemented together upon the outside of the protoplasm. In the *Gromida*, of which many inhabit fresh water, the shell is membranous or "chitinoïd."

The freshwater *Amœbidæ* resemble the protoplasmal basis of the "perforate" Foraminifera; but the conditions for obtaining the lime are poor or absent in the sphere of their existence. The truly vital essential part of all these minute and beautiful organisms is alike. Since the great step which Dujardin ('Observations sur les Rhizopodes et les Infusoires,' *Comptes Rendus de l'Acad. des Sciences*, 1835) made in the right appreciation of their nature, observers have progressively concurred in interpreting the results of their scrutiny more or less in accordance with the following expressions of our author:—

"The physiologist has here a case in which those vital operations which he is accustomed to see carried on by an elaborate apparatus are performed without any special instruments whatever,—a little particle of apparently homogeneous jelly changing itself into a greater variety of forms than the fabled Proteus; laying hold of its food without members, swallowing it without a mouth, appropriating its nutritious material without absorbent vessels or a circulating system, moving from place to place without muscles, feeling (if it has any power to do so) without nerves, propagating itself without genital apparatus; and not only this, but in many instances forming shelly coverings of a symmetry and complexity not surpassed by those of any testaceous animals." (p. vii.)

The large experience of the Foraminifera which Dr. Carpenter has accumulated from his own studies, derivative and direct, and from those of his coadjutors in the present work, Messrs. Parker and Rupert Jones, has led him to the conclusion that—

"the ordinary notion of *species* as assemblages of individuals marked out from each other by definite characters that have been genetically transmitted from original prototypes similarly distinguished is quite inapplicable to this group. * * The only natural classification of the vast aggregate of diversified forms which this group contains, will be one which ranges them according to their direction and degree of divergence from a small number of principal family-types. * * The subordinate groupings of genera and species which may be adopted for the convenience of description and nomenclature, must be regarded merely as assemblages of forms characterized by the nature and degree of the modifications of the original type, which they may have respectively acquired in the course of genetic descent from a common ancestry. * * Even in regard to these family types, it may fairly be questioned whether analogical evidence does not rather favour the idea of their derivation from a common original than that of their primitive distinctness." (p. xi.)

We here discern the influence of Mr. Darwin's volume, 'On the Origin of Species,' on the mind of the writer, the essentially distinctive character of which work is the attribution of all animal species, as descendants "from at most only four or five progenitors, and plants from an equal or lesser number,"—the author adding—"Analogy would lead me one step further, namely, to the belief that all animals and plants have descended from some one prototype." The resemblance is so close between the terms in which Dr. Carpenter repeats his main conclusion as to the origin of the acrite

Foraminifera, and those in which Mr. Darwin expresses his conclusions in regard to the origin of all the living beings of this planet, that we are led to question whether a like influence may not have affected Dr. Carpenter's conclusions and expressions as to the nature of the species and genera of antecedent investigators and classifiers of the Foraminifera.

With regard to the highly interesting and instructive facts, of the identity of some (Ehrenberg determined it in ten) of the so regarded species of fossil Foraminifera of the chalk with still existing species, and of the identity of more of the Foraminiferous *Nodosariæ* of the Triassic, Permian and Carboniferous strata, with existing forms, Dr. Carpenter explains it, agreeably with the Darwinian hypothesis, as a case "of the genetic continuity between the Foraminifera of successive geological periods; graduating backward to the period when they began to descend from a common original," or, to use the Master's words, "from some one primordial form, into which life was first breathed." (*Darwin*, p. 484.)

According to this hypothesis we are compelled to conceive, or try to conceive, a period in our planet's history in which the conditions of life, or the circumstances tending to change the modes of operation of all-pervading force in the vital direction, were uniform, or at least that the uniformity which led to the impossibility of the existence of more than one "original form" had only been broken so far as to allow of the variation of such form into those of a few progenitors of succeeding classes of beings; the grade of differentiation of such progenitors from the primordial one being such as might be manifested by an *Amœba* or whatever Dr. Carpenter may conceive to have been the original "father of all Foraminifera."

The inevitable corollary of the Darwinian hypothesis seems to us to demonstrate its weakness; and to show by contrast the superiority of the Lamarckian principle of the heterogenous production of the primitive types of organisms. Agreeably with this principle, we conceive that "particles of apparently homogeneous jelly" are now, as of old, being aggregated through the operation of existing interchangeable modes of force, under special conditions, capable of causing, for example, the special characters of the Foraminifera.

The difference of atomic condition between a speck of jelly exercising the attraction of cohesion and one supplementing such attraction by the force of more intimate atomic union, call it incorporation or assimilation, may not be greater than the difference of atomic condition in a non-magnetic and a magnetic piece of iron: it is certainly very analogous to it. The latter draws to itself contiguous pieces of iron, which stick to the hard surface and cannot get in; the looser suspended atoms of the jelly-speck, under the assimilative or organic state of force, allow the attracted particles to permeate the mass, there to adhere atomically to their like, in short to be assimilated; the unassimilatable particles give way and are pushed out.

Every observer of the movements of such a sarcodal aggregate as *Amœba*, or *Actinophrys*, may recognize enough of the above-indicated correspondence with magnetic attraction and repulsion to place afresh before his judgment, for unbiassed consideration, the question whether such properties of the jelly-mass compel the invocation of a miraculous "inbreathing of life" for their initiation, and of generation exclusively for their continued display. Analogy of the phenomena of convertible modes of operation of polaric force leads us to conclude that the difference between snot and sarcode, between passive and active states of mucus, is due to a conversion of attractive or other mode of polar force

into the mode called "assimilative," "organic," or "vital." We believe, to use Darwin's common expression, that such conversion occurs under the conditions favouring it; that such conditions exist now as of old, and that they have operated in the production of Foraminifera in the ooze or mud of sea-beds from the Silurian period, or the remotest one for the possibility of such conditions of vivifying jelly-specks, to the present day.

Dr. Carpenter's studies of the porous chalk-deposits in and on these jelly-specks appear, however, to have induced him to adopt a different conclusion; to assign the beginning of such organism to an occult cause, to an operation of force or to a concurrence of forces which have now no place in Nature,—a creative force in fact, which Darwin could only express in Pentateuchal terms as the primordial form "into which life was first breathed"! Such primordial form of Foraminifera, once created, with its power of growing by assimilative atomic attraction and of propagating by pushing out and detaching particles of its substance, increased and multiplied. The foraminiferous offspring in time spread into positions and fell under conditions which, by reaction on the primordial organic properties, modified diversely the resultant conditions of the foraminiferous body and shell. The "Foraminifera of successive geological periods" have all descended from the first-created little particle of homogeneous jelly, having the properties above quoted from p. vii; they are related thereto by genetic continuity; in the author's words and type, they are "the direct lineal descendants of the Foraminifera of very ancient geological periods." The evidence of this astounding assumption he regards to be "as complete as the nature of the case admits," that is to say, as it possibly can be, or, in fewer words, to be demonstrated! Accordingly, we find writers who accept the dictum, and *in verba magistri* use the language of the Darwinian hypothesis, remarking, "not without astonishment, that scarcely any of the species of Foraminifera met with in the secondary strata have become extinct." "Nodosaria of the trias have transmitted descendants without loss of any of their essentially specific features to the present day." (*Phil. Trans.*, 1860, p. 582.)

Observation has, however, some value, though it may, or rather must, in natural objects, fall short of the extent and perfection of its subject. For example, the earliest or oldest strata with evidence of life present such evidence under a rather considerable variety of grades and conditions, agreeing, however, in a general way with the variety of states arising from different chemical constitutions of sedimentary rocks, from different depths in the sea, and other conditions likely to influence the state and form of the co-existing organisms of the period. The uniform condition of the surface of the earth at the period when the organic form of force was first capable of energizing upon such surface, which uniformity must be assumed at the period when the Darwinian primordial form of all organisms, and the Carpenterian primordial form of all Foraminifera existed in solitary state, is a condition of the earth's surface of which no geological observations whatever afford the slightest foundation or reason for assuming.

As, according to John Mill, the aim of the physical philosopher is to determine "what are the fewest and simplest assumptions, which being granted, the whole existing order of nature would result" (*Logic*, 3rd edit., vol. i., p. 327); so we hold, that the aim of the philosophic naturalist is to determine what are the assumptions having the best ground of accept-

ability from observation and analogy, on which organic forms and conditions, through known natural powers, might arise, propagating modifiable offspring concurrently with the continued operation of heterogenous productive force, which would people the globe, in the long course of its life-periods, with the various grades and forms constituting its present Fauna and Flora. We hold it to be contrary to the spirit of Mill, and of every searcher after truth, to prepose to the mind any quality of "number of primitive types," whether small or large, as a guiding idea in this high aim.

Reverting, then, to the question of the origin, or coming into existence, of a "particle of seemingly homogeneous jelly," with the powers above cited from p. vii. of the work under review: the assumption of an occult, miraculous, creative cause operating once for all, with the inevitable corollary of uniformity of vital conditions of existence during the hypothetical, uniform, primitive and primordial state of the earth's inhabitants, appears to us to be a less "simple assumption" than the following, viz., that at the period when life became possible on the earth's surface the conditions were sufficiently varied to permit the conversion of the general polaric into a special organic mode of force to operate under circumstances resulting in a variety of the simplest forms of life, such as "monad," "mucor," "ameeba," "lichen-spore," &c., and that such conditions have continued to operate in the heterogenous production of "organisms without organs" to the present day.

The atoms, attracting and attracted, causing the pushing out and drawing in of the "sarcode," intus-suscepted at any part of the surface and assimilated, augment the mass, which buds out; in some the bud falls off, in others it coheres, and may form a polythalamous or dendritic whole. So in the crystalline salt, the atoms, attracted to the surface, cohere according to the law of its crystallization and form, sometimes as beautiful dendritic wholes, as in Infusoria, zoophytes and plants. In all these cases the single cell and the primitive crystal continue to be independently and "heterogeneously" brought into being.

When observation shows that a particular form of Foraminifer occurs in fossiliferous rocks of all ascertained geological periods, we deduce from the fact that the conditions of the heterogenous creation of such form have been the same. Instead of concluding that the particular form or kind of Nodosaria of to-day is the great-&c.-grandchild of the Nodosaria of the carboniferous period, itself the lineal offspring of the occultly-created primordial Foraminifer, we deem it the "simpler" assumption, that the conditions of the "ooze" which led to the "fusuline" form Nodosaria coming into being when coal-plants flourished, operate in like manner in producing that particular form of shell-making jelly at the present day. In like manner we regard the valuable labours of Messrs. Parker and Rupert Jones 'On the Nomenclature of the Foraminifera' as a suggestive body of proof of the degree in which uniform conditions of the development of Foraminifera, characterized and named "specifically," have operated during long geological periods on this planet.

Agreeably with this "heterogenous" hypothesis is the great and significant fact of there having been "no advance in the foraminiferous type from the Palæozoic period to the present time." Most adverse is this fact to the hypothesis that one primordial form was first, and once for all, created, with a power of producing progeny susceptible of variation and improvement to the illimitable degree postulated by

Darwin. It is expressly admitted by his disciple, the author of the work under notice, that "there is no indication of any tendency to elevation towards a higher type" in the foraminiferous Fauna of any period; but the significance of this fact seems to be lost on Dr. Carpenter in reference to the most important, indeed supreme, deduction from the numerous particulars which he has ably and instructively set forth in his 'Introduction to the Study of the Foraminifera.'

In regard to the history of these most interesting and beautiful, though for the most part minute, forms of Protozoa, the salient features which, in zoology, will be remembered gratefully and with admiration of the originality, acuteness and perseverance of the observers, are—the determination of the true nature of the Foraminifera and their kinship to Amœba and other freshwater rhizopods by Dujardin,—and the discovery of their antiquity and important share in forming the earth's crust by Ehrenberg.

To the general reader there is no work on the Foraminifera which will prove more instructive and satisfactory than the richly-illustrated volume which Dr. Carpenter has brought out, with the aid of Messrs. Parker and Rupert Jones, under the auspices of the Ray Society. To the scientific reader, especially looking to the bearing of the recorded facts and observations on the generalizations of highest interest at the present phase of his science, the result, we regret to state, is such as the author himself seems to recognize when, with becoming modesty, he confesses that "he cannot venture to anticipate that his work will prove altogether satisfactory."

Live It Down: a Story of the Light Lands. By J. C. Jeaffreson. 3 vols. (Hurst & Blackett.)

THE title of this work is in itself a novel, and suggests half-a-dozen stories at once. The story that Mr. Jeaffreson has selected will, however, satisfy most readers; it is full, well considered, and well worked out. The interest is solid, and depends more on the delineation of inner life and character than on the accidents of a critical moment. The plot is broad, and the interest goes on increasing to the last page. The story is extremely well constructed; it is by far the best work of fiction Mr. Jeaffreson has yet written, and in great measure realizes the promise of excellence given in his former novels.

The story turns on the traditional "skeleton" said to haunt everybody's closet, and Mr. Jeaffreson gives his notion as to the best way of dealing with it. Everybody has some secret that he would not willingly impart to the world; and an authentic history of somebody else's "skeleton" has an attraction for every reader.

Mr. Jeaffreson's maxim for all secret sorrows is—"to live them down." There are different fashions of living things down: to keep any action or event absolutely secret is a wild hope—"tôt ou tard tout se sait," wrote Madame de Maintenon. Bluebeard's key was but the type of human experience. Scour out an event so that you destroy all traces of it in one place, and it breaks out visibly in another. All the characters in Mr. Jeaffreson's story have their own Secret, and they act and re-act on each other partly in blindness and partly from design. An old family, in a county town in "the light lands of Suffolk," hold themselves in retirement and dignified seclusion—their neighbours set it down to pride: alas! they have a wretched secret to live down. The old squire and the gentle, almost perfect woman, his daughter Adelaide, live together in the old manor-house, with the youth who is said to be the son of

a deceased brother. Edgar Turrett, the boy, is the hero of the story—a fine, high-spirited youth, addicted overmuch to field sports and steeple-chases, but withal a thorough gentleman in all his works and ways. There is a certain Miss Carry Broomhead, whose father, being a Dissenter and rich tradesman, causes a two-fold obstacle to her taking rank amongst the aristocracy of Merton Piggott. The shades of society, as society existed in county towns in the early part of this century and the close of the last, are well touched in, and are admirable as a picture of a time now almost passed away from living memory. The “assemblies” were, of course, the great display of beauty, fashion and exclusiveness in the world of Merton Piggott; to a place there Caroline Broomhead could not by right aspire, but she is let into the paradise by grace and favour. She captivates Edgar Turrett, and, after a slight show of opposition, the consent of their parents is obtained, and everything looks promising for their happiness. But there is the terrible Secret connected with the family of the Turretts of Castle Hollow—the Secret which the old man and his daughter have doomed themselves to hide. It is discovered in a very artfully contrived, but perfectly artistic and legitimate manner. A lady, the niece of a provincial manager and strolling player, meets with an accident; all the ladies in the town are kind to her, but she, too, has her Secret; she is married, though none knows of it; Alec Barber, her husband, being a blackleg, ruffian and betting-man on the turf. This brings him in contact with Edgar, for whom he rides a steeple-chase. Alec Barber discovers the secret, and this secures his hold on Edgar. A respectable man appears on the scene as a book-seller; Aunt Adelaide Turrett gives him all her savings to set him up in his shop, and there is a mysterious connexion between them of which Alec Barber discovers the key; also he finds out that John Braddock is a returned convict, not guilty however, having been convicted on circumstantial evidence. He plots to get Edgar still more into his power, brings him into difficulties, and considers that he has found a mine of wealth. The young man, when told of the Secret concerning himself, buys the silence of the wretch for the sake of preserving the few years that remain to his grandfather and aunt from annoyance. This is made to bear a most questionable aspect to the world; the contrast between what the reader knows and what the world thinks, is good. Carry, who has become impressed with religious sentiment, breaks off her engagement with Edgar from an imperious sense of duty. All this is told in a very unbackneyed and effective manner. There is a silent contest going on betwixt all the characters which the reader finds exciting. At last, Alec Barber is found murdered, and circumstantial evidence points to Edgar. This part of the story is managed by a man who knows how to do it. Edgar is acquitted; but though set at liberty, he is not restored to the good opinion of the world. He determines to “live down” suspicion, which he does nobly and naturally; he goes out as a physician and missionary to the people of the wild marsh districts of his own county; he lives amongst them and bears his sorrows bravely, until at last the real murderer confesses. We cannot spoil the reader's interest by revealing the Secret: indeed, telling it would give no indication of the excitement of the gradual development and the influence of every character on the plot of the story, which is managed with great ability. Edgar and his wife (for of course he marries Carry) agree to take up the burden and shame

of the Past, and not to try to conceal it, neither fearing nor defying disclosure, but taking the Past as a lot appointed to them, resolved to “live down” what is in it of disgrace.

The moral worked out from the story is, that men may not refuse any burden which is sent to them in God's providence, whether it be disgrace from the conduct of relations, or the consequences of some long-past sin of their own; that an humble trust in God is better than any scheming to escape or to hide the consequences of a wrong action. Such is the theme of this story; but the great charm lies in the working out of phases of inner life and character. This work contains knowledge which can only be learnt by having lived and suffered, and no one can read it without feeling helped and strengthened as by the words of a friend. The scenes are too much interwoven with each other to bear detaching, but there are several highly dramatic situations. The interview between Alec Barber and John Braddock, the returned convict, when the former goes to threaten him in order to extort money, is like seeing a fencing-match between two skilful swordsmen; the episode of “Little Fan,” the physician's daughter, may take its place beside little Dombey for its pathos. The story is interesting throughout; the characters stand well on their feet, and are real human beings marked with individual character; and we recommend our readers to make acquaintance with them for themselves. Mr. Jeaffreson has it in him to do still better things than his present work, and we hope he will live up to his capabilities.

Yedo and Peking: a Narrative of a Journey to the Capitals of Japan and China. With Notices of the Natural Productions, Agriculture, Horticulture, and Trade of those Countries, and other Things met with by the Way. By Robert Fortune. Map and Illustrations. (Murray.)

Mr. Robert Fortune's travels in the flowery land of the far East are known wherever tea is relished and gardens are cultivated. On these wanderings he has written more than one popular and pleasant book. Unlike the common tourist, Mr. Fortune has a speciality of object and of knowledge. He goes to China, to Japan, to India, in search of plants and flowers; he takes along with him a perfect knowledge of what has been done already in the line of his inquiries; and he has for purpose, not only to report on what he may find, but to bring it away with him in evidence. Thus, his labours have a practical, as well as a scientific end. They are undertaken in the cause of commerce and of domestic use. When he succeeds in his search, science is enriched, and our landscapes are beautified. To give only one example out of hundreds—should you hear of a new oak tree (*Quercus Sinensis*) being found on the slopes of the mountain range beyond Peking, a valuable tree, of which the acorns yield a dye, you hear at the same time that many acorns from this oak have been brought home, and are now growing very well in Mr. Standish's nursery-ground at Bagshot.

Mr. Fortune is, perhaps, the best-known Englishman in the Eastern world. For eighteen years he has lived in China, India and Japan; speaking the languages of the people, visiting them in their homes, and entering into their peculiarities of character. More, perhaps, than any other, he has helped to make the name of Englishman respected in those regions. Nor is this the only service he has done. To him, almost exclusively, belongs the credit of successfully introducing the tea-plant into the

gardens of the Himalayas,—a change which promises to do for the cool provinces of Upper India what tobacco has done for Virginia and cotton for Louisiana. To the exertions which he has made in behalf of our home gardens and landscapes there are in this country thousands of witnesses, and we need not dwell upon them. It is not strange to hear that this useful servant of science has met from our public officers abroad with every attention and every sympathy, and most of all, from those gentlemen who stand highest in the service and in the public regard. But there has been one ridiculous and mortifying exception, to which, in the cause of science, we are bound to draw attention.

Mr. Fortune made his first visit to Yeddo in company with Sir Rutherford Alcock, whose admirable book on the ‘Capital of the Tycoon’ we recently reviewed. In the Minister's company all went well: Mr. Fortune made his little social sketches; poked about in the tiny gardens; saw the tubs of Salamanders for sale; examined the Japanese principle of dwarfing plants; expressed an opinion on the comparative moralities of a Yeddo bath and an English ball-room; and made a collection of such novelties as could be found in that climate in the wintry months. Mr. Fortune then left Yeddo for a while, to explore some other parts of the coast; but when the spring came round he was anxious to return and complete his collections. By an article of the treaty no foreigner was allowed to proceed to Yeddo except on the invitation of his Minister at the Court of the Tycoon; and Sir Rutherford Alcock had gone to Europe. What was to be done? Mr. Fortune did not like to ask a permit from the person left in charge, because he thought that person would be unable to comply and unwilling to refuse. So, to save inconvenience and delay, he accepted an hospitable invitation from Mr. Harris, the American Minister at Yeddo. Mr. Harris was perfectly well aware of the importance of Mr. Fortune's labours, not only to England but to the whole civilized world, and he was proud to give our countryman help. We venture to thank the American Minister for having acted in this matter like a gentleman; we know no higher praise, or we would give it.

We undertake to say that our readers will be as much surprised as Mr. Harris was, when one day, as they sat at dinner, his guest received the following note from the person whom Sir Rutherford had unhappily left in charge of our affairs at Yeddo:—

“As no British subject can visit Yedo without an invitation from, or the sanction of, Her Britannic Majesty's Minister, or, in his absence, the officer in charge of Her Majesty's Legation, from neither of whom you have received such invitation or sanction, I have to request you will take your departure from Yedo without delay.—I have, &c.,
“F. G. MYBURGH.”

To this formal request for his instant departure, Mr. Fortune replied—

“I had the honour to receive your letter of yesterday's date, upon which I beg to make the following observations. I returned to Japan a short time ago for the purpose of examining the natural productions of the country during the spring months, hoping to make some discoveries which might prove useful at home. For this purpose it was of great importance that I should be able to visit the gardens about Yedo. Unfortunately on my arrival at Kanagawa I found Her Majesty's Minister absent from Yedo, and I was given to understand that I could not obtain permission from the officer in charge of the Legation to visit the city. His Excellency Mr. Alcock has always shown every disposition to forward my views, and had he been here I have no doubt he would willingly have granted the permission I

required. Under the circumstances I wrote to his Excellency the American Minister, and asked him to grant me that permission which I am sure I would have received from Her Majesty's representative had he been in Yedo. Mr. Harris, in the kindest manner, invited me to his house as his guest, in order to enable me to accomplish the objects I had in view. With this explanation I trust you will not insist on my leaving Yedo for a few days, as it might be a matter of public regret should I be prevented from adding to our home collection some new trees or other plants of much interest."

But the party in office, neither calmed by the moderate tone of Mr. Fortune's note, nor warned by any nimble sense of the ludicrousness of his position, insisted on his immediate departure. If Mr. Punch were quizzing some irate official in the East, no doubt the master of polite mocking would be able to dramatically "write him down an ass." But could the profound satirist conjure up a more grotesque picture of a Jack-in-office than that suggested by the following words, actually written by the man whose signature they bear?—

"I beg to acknowledge the receipt of your letter of to-day, and regret that you have placed me under the necessity of again writing to you. I care not to be informed now for what object you have come to Japan, or that Her Majesty's Minister would have granted you permission to visit Yedo had he been here—I only know that you are a private individual in a private capacity in this country, and that you have not asked for nor received the requisite sanction from the British authority here to come up to Yedo. It is of no consequence to me now what you were given to understand at Kanagawa; but you must have been well aware that the American Minister has not the power to grant you, or any other British subject, permission to visit Yedo. It was your duty to have communicated with me on the subject, but this you had not the common courtesy to do; and you actually came up to Yedo without even my knowledge. I think I have said enough to show you that you have acted in a very improper manner. Whether it would be a matter of public regret or not your being unable to accomplish your private ends, is not a question for me to consider. I am only performing my public duty when I call upon you a second time to quit Yedo at once. To allow you to remain would be to establish a dangerous precedent.—I have, &c.,

"F. G. MYBURGH."

For an instant this polite and sensible person was the wielder of Her Majesty's authority at Yedo; and the man of science, for not having kissed the said person's shoe, was compelled to quit the scene of his honourable and useful toil, his task but half accomplished! It is not for us to apply the only comment proper to such an act.

We have referred to Mr. Fortune's studies at Yeddo, both social and botanical. Every reader of Sir Rutherford Alcock's book will remember the illustrations of the Japanese bath, and the opinion of our Minister on the indecency of that institution. Mr. Fortune takes a rather more favourable view of it, though he is not blind to its licentious side:—

"In one of the villages through which we passed we observed what appeared to be a family bathing-room. The baths at the time were full of persons of both sexes, old and young, apparently of three or four generations, and all were perfectly naked. This was a curious exhibition to a foreigner, but the reader must remember we are now in Japan. Bathing-houses or rooms, both public and private, are found in all parts of the Japanese Empire—in the midst of crowded cities, or, as we here see, in country villages. The bath is one of the institutions of the country; it is as indispensable to a Japanese as tea is to a Chinaman. In the afternoon, in the evening, and up to a late hour at night, the bath is in full operation. Those who can afford it have baths in their own

houses for the use of themselves and their families; the poorer classes, for a very small sum, can enjoy themselves at the public baths. After coming in from a long journey, or when tired with the labours of the day, the Japanese consider a bath to be particularly refreshing and enjoyable; and it is probably on this account, as well as for cleanliness, that it is so universally employed. The stern moralist of Western countries will no doubt condemn the system of promiscuous bathing, as it is contrary to all his ideas of decency; on the other hand, there are those who tell us that the custom only shows simplicity and innocence such as that which existed in the Garden of Eden before the fall of man. All I can say is, that it is the custom of the country to bathe in this way; and that, if appealed to on the subject, the Japanese would probably tell us that many of the customs amongst ourselves—such, for example, as our mode of dressing and dancing—are much more likely to lead to immorality than bathing, and are not so useful nor so healthy; at any rate, the practice cannot be attributed to habits of primitive innocence in this case, as no people in the world are more licentious in their behaviour than the Japanese."

On the art of dwarfing plants—an art which is beginning to find much favour in our own greenhouses—he is a more confident and competent authority. Many readers will like to learn the lesson from the original source—the more so as they can do so in a passage variously suggestive:—

"The art of dwarfing trees, as commonly practised both in China and Japan, is in reality very simple and easily understood. It is based upon one of the commonest principles of vegetable physiology. Anything which has a tendency to check or retard the flow of the sap in trees, also prevents, to a certain extent, the formation of wood and leaves. This may be done by grafting, by confining the roots in a small space, by withholding water, by bending the branches, and in a hundred other ways, which all proceed upon the same principle. This principle is perfectly understood by the Japanese, and they take advantage of it to make nature subservient to this particular whim of theirs. They are said to select the smallest seeds from the smallest plants, which I think is not at all unlikely. I have frequently seen Chinese gardeners selecting suckers for this purpose from the plants of their gardens. Stunted varieties were generally chosen, particularly if they had the side branches opposite or regular, for much depends upon this: a one-sided dwarf-tree is of no value in the eyes of the Chinese or Japanese. The main stem was then, in most cases, twisted in a zigzag form, which process checked the flow of the sap, and at the same time encouraged the production of side-branches at those parts of the stem where they were most desired. The pots in which they were planted were narrow and shallow, so that they held but a small quantity of soil compared with the wants of the plants, and no more water was given than was actually necessary to keep them alive. When new branches were in the act of formation they were tied down and twisted in various ways; the points of the leaders and strong-growing ones were generally nipped out, and every means were taken to discourage the production of young shoots possessing any degree of vigour. Nature generally struggles against this treatment for a while, until her powers seem to be in a great measure exhausted, when she quietly yields to the power of Art. The artist, however, must be ever on the watch; for should the roots of his plants get through the pots into the ground, or happen to receive a liberal supply of moisture, or should the young shoots be allowed to grow in their natural position for a time, the vigour of the plant, which has so long been lost, will be restored, and the fairest specimens of Oriental dwarfing destroyed. It is a curious fact that when plants, from any cause, become stunted or unhealthy, they almost invariably produce flowers and fruit, and thus endeavour to propagate and perpetuate their kind. This principle is of great value in dwarfing trees. Flowering trees—such, for example, as peaches and plums—produce their blossoms most profusely

under the treatment I have described; and as they expend their energies in this way, they have little inclination to make vigorous growth."

The book is full of gossip about trees, plants and flowers, and which gossip is interspersed, as we have seen, with remarks on the social and moral condition of those who cultivate them. It is a thoroughly useful and pleasant volume.

The Story of Queen Isabel, and other Verses.
By M. S. (Bell & Daldy.)

IN 'The Story of Queen Isabel' we have one more reflection of the Laureate's influence. It is impossible to read this tale of the young bride whom John of England stole from her betrothed without recalling the sentiment that pervades the 'Morte d'Arthur' and the 'Idylls of the King.'

This being said, we may add that M. S. is among the best of Mr. Tennyson's followers. The resemblance which we here detect springs from no servile imitation. It is a response—not an echo; it reveals itself in spirit still more than in manner, and by analogy rather than by reproduction. The writer's imagination has been moulded, but not enslaved, by a higher one. His pages often show real insight into feeling and character, and a power to express both by touches as subtle as they are true. He has qualities, in short, which admiration may colour and bias, but which it cannot bestow.

At the opening of the story Isabel, the future queen, is affianced to Hugh de Lusignan. She is so mere a girl that love is still dormant in her heart, which makes no reply to the devotion of Lusignan. Vain of her beauty, dazzled by the state of a royal suitor, and beguiled by his flatteries, she breaks her troth to Lusignan and marries Prince John. This event is quickly followed by the death of Cœur-de-Lion and John's accession to the throne. The base nature of her husband is soon apparent, and Isabel learns in time to appreciate by contrast the noble heart which she has forsaken. In the war with France, Lusignan is taken captive, but Isabel effects his release. At length, after a series of persecutions and indignities from her jealous husband, she is released from him by his death. She then seeks out Lusignan, to whom her daughter has been confided, confesses her error, and obtains his forgiveness. All this is told, in the main, with clearness and effect. We must except, however, to the mode in which Lusignan regains his liberty. Warders are bribed and prison-doors thrown open with an ease that taxes the credulity of the reader. Again, Lusignan has obtained the custody of Isabel's daughter under a promise of marrying her; but we are left in doubt as to whether this promise was serious or a mere desire to win back the mother.

It is in the nice perception of motive and in the unfolding of character that our new poet is at his best. Lusignan, gay, stately and reserved,—Isabel, with her nature shallow at first, but gradually deepening into moral apprehension,—John, veiling his cowardice with levity, and his cruelty with sinister courtesy—stand before us in life-like distinctness. Few glimpses into the untried and trusting heart of girlhood can be truer than those which we are about to instance. Isabel and John are in full flight from Lusignan, and already the evil bias of the Prince betrays itself:—

A day and night
They rode together, each swift hour more rich
In tender thought and wonder than the last;
Her dreams had all been vague; and now she dream'd
This bright reality should teach her all.
For she knew nothing—judged not—but received.
He smiled, and "So," she thought, "a hero smiles."
He spoke, she listen'd greedily, to learn

The way in which a model knight made love;
He swore a little when his courser tripp'd,
And "This," she thought, "is done by angry kings,
I must not heed it." So she question'd not,
Mild not, expected not, but still received;
Till once his bold eyes burn'd upon her face
So fiercely, that she shrank and dropp'd her veil,
And trembled inwardly a little while.
Then to herself said, chiding, "This is love.
I have been told I am too young for love;
When I am older, I shall bear it better."

Our next extract winds up a tragic episode. It refers to a certain knight whom Isabel's beauty and suffering have inspired with loyal devotion. The heart of the desolate lady turns for support to this one friend, and the King's suspicions are aroused:—

One summer's day she rode to join the King
At his new palace, where he summon'd her;
And, wearily dismounting, to resume
The chains a little while laid by, she read
Such truth and pity in those loyal eyes,
That her stray hand fell lightly on his brow
Bent to her stirrup, and she spake and sigh'd,—
"Friend, pray for me, I need it!" All in tears
He turn'd away; and she, with tears, went in
Watch'd from a window by her lord, who show'd
The gesture to his train, and bade them mark;
Then greeted her so gaily, that she knew
He had some bitter purpose in his soul.

Beside her at the banquet, still he show'd
Unwanted homage, but her shuddering looks
Could nowhere find a substance for their fear;
(She noted not the absence of her knight.)
She waited till the long carouse was done,
Then, at his signal, rose. "Your cheeks are pale,
My queen," he said, "sleep must their springtide prove,
To make them bloom anew. Give me your hand,
I'll see you to your chamber." So they went
Together, with a train to marshal them.
The chamber was a blaze of light; the King
Stood still a moment by the curtain'd couch,
Holding her hand, and looking in her face,
As a wolf eyes the fawn before he springs,
Then dropp'd her hand, and drew the curtain back,
And hiss'd into her ear, "Your rest be soft!"
—This is no bed; it is an open tomb.
Upon the pillow lies the dumb despair
Of a familiar face without a soul,
A loyal breast, uncover'd and transfix'd,
And under the close dagger-hilt a stain
Slow spreading while they gazed.

This relation, so full of graphic details that appeal to the eye no less than to the mind, deserves high praise. We are made to feel, with the Queen, the ill omen of her husband's mirth; we tremble at the pomp which precedes her to her chamber, and shrink at the door from the mocking blaze. Not less powerfully drawn is the feline malignity of John, as he toys with the victim he is about to crush. The point of tragic terror is here reached—and without straining.

The foregoing examples show a dramatic faculty rather than a reflective one. At times, however, both are combined, and we meet with passages remarkable alike for their general truth, for the light shed upon characters, and for happiness of expression. Here is an instance:—

There is a day in Spring
When under all the earth the secret germs
Begin to stir and glow before they bud;
The wealth and festal pomps of Midsummer
Lie in the heart of that inglorious day,
Which no man names with blessing, though its work
Is blest by all the world. Such days there are
In the slow story of the growth of souls,
And such a day was this for Isabel.

This portrait of Lusignan, too, has real individuality:—

Under the curve
Of the dark portal, on his steed, Sir Hugh
Sate like a picture, half his calm face light,
Half shadow, framed in azure sheens of steel,
And crown'd with plumes that scarcely moved, he sate
So still; but in his eyes the shadow fix'd,
And seem'd the symbol of an inward gloom;
For he had pour'd his heart in one farewell,
Going to war, and on its flood a frost
Had fallen—I know not how—a look, a tone,
A touch, a silence—life is full of such,
Full till it overflows, and drops itself
At last into the tranquil depths of death.
You would have wonder'd at his face, it seem'd
Too grand to be so troubled; but a rock,
Scorning the strokes of ocean, will grow dark
Under the passage of an April cloud.

Isabel in her early wifhood meets with a proof of John's cowardice:—

The queen stood still
Like one who hath been struck, who knows not yet
Where is the blow, or what the pain, but feels
A certain chillness in the heart and brain,
As if life paused a little while and doubted
Whether it should resume its course. But then,
As a branch stoops with over-weight of snow,
Lets down its burden, and starts back again
Noiselessly and unwounded to its place,
She dropp'd the cold oppression from her heart,
And rose, and seem'd unscathed.

We have quoted enough to show that, if the work before us be that of a young man, there is much to be hoped from him. He has already the power to feel and observe on his own account, though within limits determined by another's influence. He must now learn to regard man and nature from his own standpoint, and in obedience to his own impulses. And there is one more counsel that we would offer to him. Some of the minor poems in this volume are not less healthy than sweet; but in others we find a sentimentalism that cannot be too early resisted. To indulge in vain laments may be a luxury for the young, whose very glow of life seeks to temper itself with a fictitious gloom. But the habit is as enervating as it is seductive. Faith and courage are vital elements of poetic genius; and, although in life's chequered scene, grief and doubt must at times intrude, he alone is worth hearing who can make the lessons of grief an antidote for doubt.

Town and Borough of Leominster; with Illustrations of its Ancient and Modern History.
By the Rev. G. F. Townsend, M.A.; and a Chapter on the Parish Church and Priory, by E. A. Freeman. (Leominster, Partridge; London, Hall & Co.)

Of the above pleasant Hertfordshire town—its old-world traditions, its historical legends, its church history, its political troubles, its progress in the manufacture of gloves and hats, and the preparation of leather,—of these and many other subjects relative to them, Mr. Townsend discourses unpretendingly, agreeably, and profitably. Over such a stage many a group of great personages pass and re-pass; but there is one especially who attracts our attention, for his name is familiar to us all, and his history known to few—that name is Coningsby.—

The House impeach him, Coningsby harangues,
The Court forsake him, and Sir Balaam hangs.

This Pope's Coningsby is the man who is conspicuous in this account of Leominster, of which he was one of the representatives in Parliament. Mr. Townsend publishes some few details of Coningsby not hitherto known; but he might have gone much further, had he only been aware in what direction the materials lay.

Coningsby was of a good house. Leicester knighted his great-grandfather at the siege of Rouen in 1591, for valiant carriage there. His family held land in Ireland, but Coningsby himself was born in England, where his early life was a wild one, without culture or control, and marred by a forced marriage with the daughter of his guardian, Barbara Gorges. Young Coningsby was member for Leominster during fourteen parliaments, previous to his being raised to the Peerage; and was always elected free of expense, by a town which was so full of dissenters, that he used to call it "Little Amsterdam."

He became a landed proprietor thereabout; and in the last years of Charles the Second was a fine gentleman, keeping a jester, one Thomas Williams, who was called "the pleasant fool of Hampton Court," but whose true designation, we think, was "of Hampton Wafer." With his colleague, Mr. Colt, he was a bitter adversary of James, both as Duke of York and as King, and was a Revolutionist before the Revolution. Mr. Townsend notices his presence by the side of William at the Boyne, when the latter was

wounded. A portion of the King's coat, drawn from the wound, and presented to Coningsby as a remembrance, was enshrined by him in a locket. The relic probably still exists; at all events, at fashionable parties in the last century, Mrs. Walsingham used to exhibit it to all her particular friends.

Coningsby was at Aghrim as well as at the Boyne, and was so useful in executing the Treaty of Limerick, that for this and other services William created him Lord Coningsby of Clanbrassil. Mr. Townsend is mistaken in thinking Lord Coningsby "retired from all public duties" during the reign of Queen Anne; he was in office throughout nearly the whole of it. If Mr. Townsend would wish to see the quality of my lord illustrated by his drawing-up of a state-paper, we recommend to him a perusal of his lordship's account of parties in the reign of the Queen, which he drew up for the enlightenment of George the First. It is among the Lansdowne MSS., but it is also printed in the last volume of the 'Archæologia.' If George the First was enlightened by it, he must have been a clever fellow, for the paper is the finest heap of confusion, of conclusions having nothing to do with premises, all in the circumbendibus style, wending away from all meaning, that can be imagined. However, George the First, in gratitude perhaps for having survived the perusal, made the Irish Baron an English Earl, a title which, at Coningsby's particular desire, was limited not to his then children, but to the eldest of any he might have by a future marriage. Of this strange limitation Mr. Townsend does not seem to be aware.

Coningsby hated his powerful neighbour and triumphant rival, Harley, and Harley despised Coningsby. When Walpole impeached Bolingbroke, Coningsby angrily exclaimed, "The worthy member has impeached the hand, but I impeach the head; he has impeached the clerk, but I the Justice; he has impeached the scholar, but I the master";—and Robert Harley, Earl of Oxford and Mortimer, was designed to come to grief, from which both he and Bolingbroke escaped. Our readers already know Oxford's killing retort when he was told Coningsby was determined to have his head—"I wouldn't have his at a gift!"

He "got it" as severely from Atterbury, in a debate on what Mr. Townsend calls "a certain bill"; it was the most important Conformity Bill. The author mars the story, too. Coningsby rebuked Atterbury for playing the prophet, and compared him to Balaam, who drove so furiously that the ass opened his mouth to reprove him. Atterbury, demure and calm, accepted the application of the prophet Balaam to himself, as he was a priest; and as Lord Coningsby was the only one who had rebuked him, he supposed his Lordship was the ass! Coningsby was ever afterwards known as "Atterbury's pad." In the only complete edition of Samuel Wesley's poems, that by the late James Nichols, there is a smart little poem on this incident. Samuel, the orthodox brother of heterodox John, loved Atterbury; and his verses, rattling at the greater ass of the two—not the one "that was smote before speech made," but the second, "just after what was said"—thus conclude:—

O Coningsby, learn wisdom hence,
And give the prophets no offence,
For Levi's tribes best know the art
How to make Issachars to smart.

The limitation noticed above in Coningsby's peerage had a romantic foundation. Of his first, and to him distasteful, marriage, there was issue. By his second and dearly-loved wife, daughter of the Earl of Ranelagh, he had one little son, whose early death, through swallow-

ing a cherry, tore the father's very heart-strings. Both mother and son were dead when Coningsby was made an English peer, from succession to which he barred his son by his first wife, and formally allowed it to sons never likely to be born; and, failing them, the patent, to gratify him, awarded inheritance of the title to his daughter, Margaret, by his second wife. The Irish title passed to the heir by the first marriage; but that has been long extinct; and the daughter of Coningsby, who bore the title of Countess from 1729 to 1761, died childless, and all the English honours died with her. The story connected with this peerage is illustrative of the character of the man. Mr. Townsend defends him, while he shows that Coningsby, as a Whig, was an insulting and vulgar tyrant over his neighbours who had Jacobite tendencies; and, as a lord of the manor, was a ridiculous and pompous personage, claiming the exercise of almost regal rights, and wasting his revenue in attempts to win the law to support him. Mr. Townsend is altogether wrong in supposing him to be (in 1683) the last nobleman who kept a house-fool. Shadwell, in his 'Woman Captain,' does indeed say (*temp.* 1690), "It is out of fashion now for great men to keep fools"; but Jeffrey had one with him at Taunton, where he rewarded his mimicry by tossing to him the pardon of a convicted prisoner; Swift joked with Lord Suffolk's fool, Dicky Pearce; Hilton Castle, Durham, had its official buffoon as late as 1746; Jack Hafod was the waged fun-maker at Squire Bartlett's, Castlemorton, Worcestershire, still later; and in the first quarter of the present century there were persons living who remembered Robin Rush, the licensed fool of Lord Bussy Mansel.

The Employments of Women: a Cyclopædia of Woman's Work. By Virginia Penny. (Boston, U.S., Walker, Wise & Co.)

It is a vast relief to women, from the laundress upwards, to talk it over. The topic is of slight importance; but there should in mercy be a topic. One woman's work is to talk over the employments of other women, and it appears that in America there is a great deal to talk about in that respect; for by reason of the war many thousands of men have been drawn away to the battle-field, and the women are driven to their own exertions for support. This fact leads our author to conjecture some amount of consolation in the future position which women are destined to fill: although she says that "no mathematical nicety can be brought to bear on the subject, for it is one not capable of data." At the same time, she cannot conceal the satisfaction of which she is conscious in the high position which women have always held in the social scale. A great advance is foretold for them, which is good news for "those who earn a mere pittance, scarce enough to keep body and soul together," or to destitute single women and widows. Not that these would be precisely the kind of persons who would care to reverse, or correct, the state of things which, as the author says, have existed since the creation of the world. Nevertheless, she prophesies that the change is to be brought about by the superior mechanical skill of the United States. This certainly is no compliment to her countrymen, yet it implies, to say the least of it, a contented mind at the thoughts of the men destroying one another's lives like the Killenny cats, and leaving the women to conduct a Republic of their own. It is some consolation, too, that woman will not necessarily lose "that softness and gentleness that render her so lovely." Our charming author seems to forget that in her ideal state of society there would

be less opportunity of cultivating those graces, and fewer admirers to be ensnared. But laying aside those lofty aims, nothing can be more praiseworthy than the desire to attain to a suitable independence. "What destitute but industrious woman would not be glad to earn for herself a snug little cottage, to which she may resort in her old age, from the cares and conflicts of life; to enjoy the independence of a competency, earned by remunerative and well-applied labour?" This may be done without resorting to any unusual occupation.

To those who are seeking "occupations which pertain to civilized life" this 'Cyclopædia of Woman's Work' may possibly be of some use; whilst at the same time it contains little more information than would ordinarily occur during the search. It gives advice as to the kind of employment which certain women should seek, recommends them to inquire whether the demand is steady and healthy; and especially warns them to be sure of their ability to purchase the necessary implements.

Under the head of Professions open to women, is that of "lawyer." And here, no doubt, there occurred to the writer's thoughts a bright luminary of the law like to the "Sally Brass" of the old country. For she thinks that "the noisy scenes now witnessed in a court-room are scarcely compatible with the reserve, quietude and gentleness that characterize a woman of refinement." Musicians are classed with artists, and we find recorded the encouraging example of "a lady drummer who has received a diploma for her skill."

There is one remarkable occupation which seems by her account to have been followed in Paris, but has not as yet come into vogue across the Atlantic, and that is "horse-fariery"! In the medical profession but one "dentist" is mentioned, and she practised for a short time only. Miss Penny thinks it very desirable that females should be employed, because ladies "would not feel the same hesitancy in going alone at any time to a dentist of their own sex."

Reasons are given why women should practise as surgeons, whilst the difficulties are not concealed. One very laudable object is, that from the study of medicine "she can promote the well-being and preserve the health of herself and children." The knowledge of midwifery and the treatment of female complaints is, no doubt, most desirable, and is cultivated considerably in Philadelphia, whilst there are some engaged in practice in New York and some in Boston. But it appears that it is almost impossible for a lady to get a good medical education without going to Europe, whilst Philadelphia or Boston will give the legal right to practise medicine.

Under the head of "preachers" there is the bright example given us of Ann Lee, the founder of the Shakers; and Mrs. Jenkins, who was remarkable for her "mild, ladylike and amiable deportment, which made her quite beloved." It must have been very charming to sit under such a preacher!

It cannot be denied, indeed, that we have here many curious statistics. The greater number of them give information about the occupations that are usually followed by women only, or about those in which they render a becoming assistance to men.

The Book of Days: a Miscellany of Popular Antiquities in connection with the Calendar; including Anecdotes, Biography and History, Curiosities of Literature, and Oddities of Human Life and Character. Edited by R. Chambers. Vol. I. (Chambers.)

The gentleman who declared that he would

rather write ballads than make laws, thought he was giving a preference to the easier if not the more dignified task. Ballad-making, however, is no easy matter, though it is more so than book-making; but when all is done, perhaps the most difficult task of the whole is the selection of what is most likely to amuse, and the most fitted to instruct.

This has, nevertheless, been successfully accomplished in the present volume. In 'The Book of Days' there is, besides judicious selection, able condensation and original articles of great ability. The mythic individual who is described as dangerous to meet, and who is known as the "man of one book," would prove but a poor antagonist to him who, in digesting and growing strong on this volume of days, might be really characterized as the man of a thousand books. The essence of probably more than a thousand has gone to the building up of this record.

It was the opinion of Voltaire that by reading books like the present men learned to converse well. Madame de Nanteuil thought it mattered little what people read, so long as they abstained from medical and devotional works, which she considered equally dangerous. Sir Robert Walpole loved history, because, as it was not true, it amused him in his hours of relaxation; and the Abbé Gaume has boldly laid down the maxim, that for interest, instruction, enlightenment and amusing variety, a man need go no further than read over and over again the pastorals of Popes, Cardinals and Bishops!

But there is a natural thirst for something more attractive; and it is pleasant to remember how the gravest Fathers of the Church were addicted to the study of gay pagan authors, as a relief from severer pursuits; just as the Scottish minister in one of Galt's novels was wont to read Scott's romances in a cover which gave to the book in hand the appearance of a volume of sermons! The great feature of a work like 'The Book of Days' is its infinite variety and its particular purpose. The latter, as in the case of Hone's 'Every Day Book,' is to give under each day some information particularly pertaining to that especial period. Thus, if we take St. Valentine's Day, the 14th of February, we shall find how that day is illustrated, and in what way "Chambers" differs from "Hone." The latter gives us the names of the saints who share the day with St. Valentine, and who, we may add, have quite as much claim on the regard of lovers as the Valentine who was martyred at Rome six hundred years ago. The pictorial illustration is cleverly satirical,—Cupid, as a postboy, dashing through a village on an ass; Love carried away by rampant Stupidity! A rather long-winded history of Valentines, with samples for the curious, follows. Then, as Blackstone died on the 14th of February, there ensues as long disquisitions on matters of law as there had before been on matters of love, terminating with the rattling trio between the lawyers and Giovanni "in London," to the old tune of "Soldier gave me one pound, soldier gave me two!"

In "Chambers" there is a difference, with improvement. There is not only a list of saints who are honoured on that day in various parts of the world, but of kings and dames, and heroes greater than kings, and of sages and benefactors of their kind who are greater than heroes, who first saw light or drew their last breath on that day.

Of biographies of individuals thus connected with the day, we have one of Capt. Cook, who was born in 1729, and whose neat and loquacious little widow many now living remember to have seen little more than a quarter of a century ago. Cook was killed on Valentine's

Day, on which anniversary was born the heroine of the biographical article which follows that on the great navigator, the last surviving of whose ships, by the way, reduced to a floating police-court,—was only withdrawn the other day from its station between Waterloo Bridge and Blackfriars.

The biography of Lady Sarah Lennox is extremely appropriate; for young Prince George, afterwards third king of that name, had her, if not for his Valentine, for a May morning love, as he saw her, on trotting by from Kew to London, making hay in the meadows which no longer exist at Kensington. The story of the love-passages in the life of this young couple is better told here than we have found it elsewhere; the whole of the facts being skillfully brought together.

The illustrations to the life of St. Valentine himself consist of a well-designed initial letter which is being appropriately decorated by a couple of Cupids, and of a figure of Love in a shower of valentines, against which he spreads in vain an ordinary umbrella.

The above description of one day, as illustrated in "Hone" and in "Chambers," will afford a good idea of the merits and method of each, and in what way the one differs from the other. In "Chambers" there is more matter, and much of it newer; but see how matter accumulates! Since this volume was published, it has been pretty well ascertained that our word "valentine," like many another erotic importation, comes to us from the Normans, with whom *valantin* and *galantin* implied an admirer. The like may be said of other articles; and the "Supplementary Chapter on the History of Court Fools," might be followed up by another quite as long, and without exhausting that motley subject.

This volume, however, seems to be as perfect as zeal and ability could make it. In between eight and nine hundred pages there are at least ten times that number of facts; which circumstance alone will show something of the scope, and something too of the value, of the book. There is abundance of anecdote, biography and chronology; disquisitions, essays and facetiæ; geography, history and illustrations; jurisprudence; knowledge for all classes, and love-tales for some; musical matters, "notions," opera-reminders, poetry, quotations, romance, statistics, treatises; variety yet uniformity; wit, excellence of selection and treatment; yarns of ancient and modern times, and a zest of novelty in everything narrated. To such a collection might very appropriately have been affixed the motto—

Huc undique Cassa
Congeritur.

Histoire de la Réformation en Europe au Temps de Calvin. Par J. H. Merle D'Aubigné. Tomes I. et II. (Paris, Lévy; London, Dulau & Co.)

History of the Reformation in Europe in the Time of Calvin. By J. H. Merle D'Aubigné, D.D. Vols. I. and II. (Longman & Co.)

Calvin: sa Vie, son Œuvre, et ses Écrits. Par Félix Bungener. (Paris, Cherbuliez; London, Dulau & Co.)

Calvin: his Life, his Labours, and his Writings. Translated from the French of Félix Bungener. (Edinburgh, Clark.)

GENEVA is not one of those places which are happy in having no history. Like the Confederated Cantons of which it, at last, became a part, it is as one of those calm, heroic-looking men who have lived through the most stirring of lives. Geneva has given name to a church, just as one canton has given name to the whole

country. The people of that country have been as sleeping lions, whom it was not wise to awake, and absolute folly to provoke.

They acknowledged a dependence on the old Germanic Empire, but when Albert of Austria would have made them slaves rather than dependents, the three revolted cantons taught him a severe lesson; and the first successful battle gained on the side of liberty, in Schweitz, gave to the whole land an honoured name.

In fifty battles for liberty, that name acquired increase of glory, but Geneva had no share therein. Martyred between its prince-bishops and its earls, or counts, it had to achieve its own freedom. Weary of priest-kings, it turned to its counts, and, fearful of another absolutism, looked back at its episcopal lords. The Pope pressed them hard on one side, the House of Savoy on the other. The Republic was founded in 1512. The Pope deprived the Genevans of the right of electing their bishop, and Savoy took possession of the territory long coveted by its dukes. From the yoke of Savoy it freed itself in 1526, but it was not till towards the close of the same century that it became united to the Swiss cantons, with which it has since remained, periods of revolution excepted.

M. Merle D'Aubigné's volumes are portions of a work to be hereafter completed. The two volumes now before us include a period extending from 1512 to 1528. The introductory portion is written with unwonted spirit and picturesque power. In every chapter there is a drama, a discussion and a *tableau*; and when we arrive at one close of a series of struggles in 1526,—when we find Geneva in alliance with Switzerland, the bishop fleeing in one direction and the ducal party and the canons in all, while the jubilant people are in the front in a condition of ecstasy,—the curtain descends amid the booming of cannon and the *fanfare* of clarions; and so closes a prologue which occupies, but does not encumber, three-fourths of these volumes.

With the enjoyment of liberty came the conviction that it should be a religious as well as a political liberty. France was troubled by its Reformers, who found protection and support in Marguerite, sister of Francis the First, and subsequently to this period wife of the King of Navarre. Who would be the successful Reformer of France? and would the Reformation cross the Rhine? These were important questions in those important times—unsettled times for Geneva, as for all places where revolution has just been triumphantly established.

The man suited for Geneva and its difficulties does not appear till towards the final chapters of these introductory volumes; but we feel at once that he is, if not the *deus ex machina*, at least the man best suited for the times, and the task they enjoin on the missionaries of a reformed religion. It is Calvin. We have but a few glimpses of him, but enough to show that, as Francis the First is turning from toleration to that indiscriminate persecution which makes heroes and martyrs, Calvin will choose that course which must gain for him the rank of hero, and may win for him the crown of martyrdom.

These two volumes, brilliant in style as they are calm in argument, bold in assertion as they are courteous in meeting the assertions of adversaries, form in fact the groundwork on which the great statue of Calvin is to rest. They are complete in themselves, as all such groundwork should be; and Calvin, with his idea, not of Calvinism but of one universal church according to his own idea, will not be understood fully unless these preparatory

pages be read and considered. The reading will be found pleasant and the digestion easy, for the work is popularly written; it abounds in happy, serious thoughts, and is alive with incidents.

Awaiting the continuation of the work and the raising of the figure of Calvin on the pedestal now fixed, let us contemplate the sketch of the figure of the great reformer as drawn by M. Bungener.

A study of the life and character of Calvin by the author of the 'History of the Council of Trent,' and of various romances which serve to illustrate the eventful story of the Church of the Reformation abroad, is rather like the pleading of young Bellario, who has something dearer than a friend for a client. M. Bungener is aware that his task is delicate, but he has succeeded in effecting it with a just impartiality. Calvin is a hero, prophet, priest, teacher, spiritual sovereign; but also a part of erring humanity, and therefore fallible,—at least in small matters.

One charm of this book lies in its clearness and brevity. The Berlin Doctor Henry wrote a life of the Reformer who planted his standard in Switzerland, and who made its folds extend to England and Scotland. That biography was on an exceedingly large and heavy scale; in bulk it surpassed Dr. Tomlinson's Refutation of Calvinism, and was almost as ponderous and learned. In fewer words, Bungener tells us more than Henry told; and though he is as zealous an advocate of the Reformer of whom Picardy is not so proud as she might be, the Swiss writer displays more of the foibles or peculiarities of Calvin than the Berliner, with his serried ranks of words and wondrous brigades of chapters.

He who would understand Calvin must place himself in Calvin's time, and be conversant with the modes of thinking which then prevailed. When this is understood, his persecutors will cease to appear as monsters; and he who demanded liberty for himself and denied it to others will no longer seem to be inconsistent.

The pagan villager who was first told that the much-trusted goddess of his sparkling fountain was a delusion in which he must never again have faith, probably cudgelled his teacher. The one could not surrender the belief in a beautiful idea; the other derided such belief, denounced the priest and emperor who sanctioned it, and, refusing to fling a pinch of incense on the flaming altar before the imperial effigy, heard himself condemned to be flung to the lions, with a "Laus Deo!"

The walls of the new church were strengthened by the blood of such martyrs; but the time came when men began to doubt the traditions that were told over the very shrine of truth, and the hearers were as much startled at the new revelation as the pagan villager when asked to curse the nymph from whose fountain he had daily drawn a gift of water. When Calvin sought to perfect the task begun by the earlier Reformers, we can easily imagine how, in those days, some to whom he addressed himself, men and women full of tender human sympathies, looked upon him, through their orthodoxy, as a destroyer of the old true and the ancient beautiful. He, however, established what he felt to be the only truth and the one and indescribable beauty, from which time he conscientiously had no touch of mercy for him who would go beyond or fall short of the Reformer's task. The pile at which Servetus was slowly burnt is proof demonstrative of this. To this fact Calvin's enemies in the Church of Rome have pointed with exultation, branding him as a sanguinary persecutor. They quite forget that if the officials of the Church of Rome had not burnt that

half-mad but earnest Spaniard, it was only because he contrived to escape from between the executioner's fingers. Unluckily for him, he dropped thence into the hands of the Swiss Church Councils, and these, Calvin aiding in his earnestness too, condemned Servetus to death.

The manner of his death has raised Servetus to a level with heroes and with truer martyrs than he was. Nature was shaken in this man as the face of death drew closer to him, but he soared above such infirmity. He shook off his fears, expressed his own conviction that in the main he was right; and as the smoke swept towards and the flames gradually crept about him, and the brimstone shook down from the wreath about his brow, to aid in suffocating him, he calmly looked upwards and exclaimed, "Jesus, thou son of the eternal God, have mercy upon me!" Had he only said "eternal Son of the eternal God," he might have been saved from that death of agony on the hill of Champel. But what could save a man who had called the Athanasian Creed "the *Sathanasian Creed*"?

The great interest of M. Bungener's book cumulates round Calvin and Servetus, and he treats the subject very fully, impartially,—justifying Calvin's share in the matter, but passing from phase to phase of the gloomy details with a tone of sorrow in which we heartily sympathize.

In other respects, there is something lacking. Is Collier's assertion true, that Calvin approved the "absolution" of the English Church, and would have introduced it at Geneva but for fear of his opponents there? It is certain that, despite his affection towards the young King Edward and his regard for Cranmer, he was no great admirer of the English Reformation, in which he said, we "had done like a woman who cleans her house, but sweeps the filth into a heap at her threshold." Perhaps this was said after Cranmer, who "knew his man" according to Heylin, declined the offer of Calvin to promote the work in England, and heeded not his expressed willingness to have Bishops in the superintendence of the Church in Geneva. It was at a subsequent period that Calvin proposed to Parker a general assembly of Protestant divines, a proposal which came to nothing through Calvin's death.

It was Garasse who summarily described the Genevese Reformer as having merely hatched the eggs which Rabelais had laid. In a certain sense, this is perhaps true; but Calvin was destined for other work than that, and yet he was not always certain of his convictions, for he once acknowledged that in his view of Predestination there was something "horrible." It is a singular fact, that he found an admirer, or a quasi admirer, in Bolingbroke, whom a dignitary of the Church of England once came upon, so Madan tells the tale, reading the famous "Institutes." Bolingbroke passed the volume to him, and asked what he thought of work and author?—"We do not think upon such topics," said the Rev. Poco Curante; "we teach the plain doctrines of virtue and morality, and have long laid aside those abstruse points about grace."—"Look you, Doctor," said Bolingbroke; "you know I don't believe the Bible to be a divine revelation, but they who do can never defend it on any principle but the doctrine of grace. To say truth, I have at times been almost persuaded to believe it upon this view of things; and there is one argument which has gone very far with me, which is, that the belief of it now exists upon earth, when it is committed to the care of such as you, who pretend to believe it, and yet deny the only principle on which it is defensible." There is something curious in this aspect of Bolingbroke

discerning the value of the Calvinistic doctrine of grace.

MEDICAL BOOKS.

A Treatise on the Continued Fevers of Great Britain. By Charles Murchison, M.D. (Parker, Son & Bourn.)—Of all diseases that affect humanity, there are none of deeper interest than those which go by the name of Fever. The diseases which are known by this name in Great Britain carry off from 40 to 50,000 of the population annually, and are almost exclusively confined to those who are of adult age. Their greatest ravages are amongst the fathers and mothers of families, and they consequently produce more wretchedness and pauperism than any other form of disease. There is also this feature amongst them, that they are all more or less preventible. At one time these diseases were grouped under the name of continued fever, and many old practitioners cannot now see their way clearly to the distinctions which those who have deeply studied them have recently made, and of which this work by Dr. Murchison is a most masterly exposition. The French physicians were the first to indicate a difference between what they called gastric fever and the typhus fever so prevalent in England. Dr. Jenner was one of the first English physicians who maintained and pointed out the difference between these two diseases. Dr. Stewart was one of the earliest to draw attention to the difference between famine fever, or relapsing fever, and the other two. There is also a slight form of fever not confined to adults, which is easily recognized and known by the name of "Febricula." Dr. Murchison has studied these diseases not only at the bedside, but in the writings of those who have preceded him, and fully confirms the views of those who believe that under the name of fever we have in the British Islands four forms of disease:—1. Simple fever; 2. Typhus fever; 3. Gastric fever; and 4. Relapsing fever. Into the history, symptoms, causes, and treatment of these fevers, he has entered in this volume with great care and research. Nor is Dr. Murchison's volume to be regarded as a compilation. He has studied these diseases, suffered from them, and contributed many original observations, especially with regard to their origin. He has pointed out especially the different circumstances under which gastric and typhus fevers originate. He has shown that whilst gastric fever arises from neglected drains, gullies and cesspools, typhus is especially a disease of contagion. That whilst the one singles out individual victims amongst the rich and the poor, the other dwells amongst the overcrowded population of our cities and towns. A knowledge of the causes of these fevers is not only important to the medical man but to all those who would improve the condition of our working classes. It is only when the whole community is alive to the causes of these diseases that they will cease to ravage our population and spread desolation throughout the land. This work of Dr. Murchison will form a new era in our knowledge of fevers, and will largely contribute to that spread of definite information by the aid of which we may one day hope to see even these plagues stayed amongst us.

China from a Medical Point of View. By Charles Alexander Gordon, M.D. (Churchill.)—This work consists of notes, observations, and the results of reading by a medical officer attached to the expedition to China in 1860. Dr. Gordon is a well-informed, intelligent medical man, and has not at all in this work confined himself to medical points. In fact he has been wrongly advised in attaching his purely medical observations to a work which could not have failed to have been of interest to the general reader, but who may be deterred from consulting his volume from fear of purely professional subjects. The great bulk of the work is devoted to observations made on the social habits of the people, the topography, climatology and medical history of Tien-tsin. A more abominable city, we should think, it never fell to the lot of a traveller to dwell in or to write about. It is nevertheless of considerable interest to the English as the locality to which their troops were so long confined during the last expedition to China. Dr. Gordon gives a

particular account of the diseases which affected our troops at Tien-tsin during the time he was there, and comes to the conclusion that, though the mortality was high, that is, ten per cent. per annum, this mortality is not so high as in many other stations in which our troops are placed. On his return from China he visited Nagasaki, of which he gives a very favourable account as a station for convalescents.

OUR LIBRARY TABLE.

The Greek Christian Poets, and the English Poets. By Elizabeth Barrett Browning. (Chapman & Hall.)—It may be recalled that in this journal attention was first drawn to the remarkable originality of Mrs. Browning's genius—which, appearing as it did a quarter of a century ago, like other utterances in advance of its time, bewildered more persons than it bewitched. The public had been somewhat enervated by the easier pleasures which other muses had afforded. The flowing and pathetic sweetness (consistent with a certain high-hearted enthusiasm) of Mrs. Hemans was then in all the fullness of a charm which, though diminished in its force, has not yet died out. Miss Landon, too, who had been thrust into a fame beyond her deserts by self-interested friends, had her votaries—a race well nigh extinct. Therefore, a music so fearless, so new, and so deep, as that of the minstrel of 'The Romaunt of Margret' had to "bide its time." It is a pleasure to recollect that from the first sound of it the *Athenæum* was convinced that such time was sure to come for such music ere long. For this journal, moreover, the contents of the volume before us were written in the year 1842. It was their author's purpose, Mr. Browning thinks, to revise and amplify them. As they stand, they are only too rich in allusion, definition and epithet. With their writer, where her view was the clearest, image suggested image, distinction distinction, even within the compass of a sentence. This was singularly evidenced in her literary correspondence—a large and varied one—which it may be hoped will be arranged for publication, if not published, while those are alive and in vigour who have the right, the sympathy, and the taste to examine, to select, and to sanction with a view of publication. Only a part of Mrs. Browning's life was expressed in her poetry. Into that, as time passed on, there entered something of mannerism, something of experiment betokening a consciousness born of strong will, attended by great and deserved success. She indulged herself in licences which involved the confusion of the styles of prose and verse. Her prose, on the other hand, was from first to last always the richer for her poetry. There are many passages in these essays which could be set to music, so loftily lyrical are they; a few are flawed by conceits referable to the seclusion in which, it is no treason to say, many of their writer's years were passed, and to the recondite and peculiar nature of her studies. This volume, however, is one of remarkable and abiding interest: whether it be accepted as illustrating a personality of genius, rare in one of her sex—not over-common in the history of Poetry,—or whether it be considered with regard, solely, to its instructions and suggestions,—so many quaintly-set precious stones, in a strong and lasting casket.

An Essay on Greek Federal Coinage. By the Hon. J. Leicester Warren, M.A. (Macmillan & Co.)—Although its chief object is to illustrate the first volume of Mr. Freeman's 'History of Federal Government,' this brief sketch of Greek Federal Coinage may be commended to the notice of numismatic students, who do not intend to read "the history." At the close of his essay the writer acknowledges his obligations to Col. Leake's 'Numismata Hellenica,' to Mr. Waddington's paper in the 'Revue Numismatique,' and to Mr. Poole's article on 'Numismatics' in the *Encyclopædia Britannica*. Mr. Leicester Warren is so intelligent a student that we regret he has not produced an independent work, instead of modestly acting the part of torch-bearer to another writer.

Stable Secrets; or, Puffy Doodles, his Sayings and Sympathies. By John Mills. (Ward & Lock.)—The sayings of Puffy Doodles are not worthy of

repetition; but as his sympathies, stable-boy and jockey though he is, are in favour of honest men and actions, he is a character to be admired and imitated. A simple, truthful lad, bent on doing his duty thoroughly, and burning to distinguish himself on the turf, Puffy Doodles wins the goodwill of readers. The story contains other skillfully-sketched characters. Mr. James Sloper, the wily proprietor of the Great Stable of the North, is a portrait of unusual artistic merit. George Spindles, the "head lad" of the Great Stable of the North, is less distinct; but the few touches with which he is put on the canvas are so suggestive, that we regret more care was not expended on the details of his character. 'Stable Secrets' is a slight tale, but it will give satisfaction to Mr. Mill's sport-loving admirers. For ourselves, we should have been better pleased with the conclusion of the story, if it had left "Puffy Doodles" in the exercise of his profession. "The desire of his heart was gratified," says the last page, "and in an arbour, with scarlet-beans growing and climbing luxuriantly over it, he may yet be seen, the freeholder of a cottage, adjacent to a plantation, sitting of a summer's night, smoking his pipe, and riding the Leger o'er and o'er again." Such inglorious indolence ought not to satisfy such a hero as Robert Top's "best lad."

Labourers' Cottages in the Agricultural Districts of England; or, the Crowded and Defective Condition of the Dwellings of the Poor: showing the Evil—its Causes—the Remedy. Being the Essay to which was awarded the Prize of Fifty Guineas, offered by H. Tucker, Esq. (Jarrold & Sons).—When will simple people, who are more benevolent than wise, discontinue the foolish custom of offering rewards for essays on questions of social science and humanitarian enterprise? In the spring of last year, a certain Mr. Tucker offered a prize of fifty guineas for the best essay on the dwellings of Farm Labourers: the consequences of which well-meant offer have been much bootless labour, much cruel disappointment, and this wretched little pamphlet, by which no human creature will be made better or happier. Mr. Walter, M.P., was appointed to examine the manuscripts of the competitors, and decide which of them ought to bear away the money. How many papers were sent in for the judge's perusal we are not informed; but experience in the evil effects of the "prize system" warrants us in saying that they were numerous. Inspired by the hope of snatching fifty guineas, hundreds of poor people are induced by every such offer to expend on the production of unreadable themes time and energy which might be employed in other ways with a certainty of achieving good results. Nor are the wasted powers of inferior amateur writers the sole grounds of objection to a system which, while it invites incapable scribblers, repels intelligent persons from competition. No writer, able to use a pen with profit, ever thinks of entering the lists. He would as soon purchase a ticket in a lottery, containing hundreds of blanks and but one prize—the value of the said solitary prize being less than the price of a ticket. How bad the unsuccessful articles may be, it is needless to inquire; but of the actual worthlessness of the prize essays that are from time to time sent forth with a spurious trade-mark of merit upon them, the public cannot be too frequently reminded. The present treatise forms no exception to what may be regarded as a rule. At the present date, when proprietors are improving the dwellings of the poor in every part of the country, Mr. Tucker's prize essayist should have set forth, with critical comments, what has been done, and what is being done for the reform he has at heart. By such a survey of past labours and present operations he might have aided a good cause,—which cannot just now be promoted by quotations from Goldsmith and Crabbe, Sydney Smith and the Earl of Shaftesbury.

The Yelverton Correspondence. With an Introduction and Connecting Narrative. By the Hon. Theresa Yelverton. With Portraits Lithographed from Drawings by Major and Mrs. Yelverton. (Laurie).—The world has for many a month been heartily weary of Miss Theresa Longworth, *alias* the Honourable Mrs. Yelverton, and of the noise which she will continue to make till the highest tribunal of the country shall have decided whether she

became Major Yelverton's mistress on honourable, or his wife on dishonourable terms. An Anglo-Indian editor some years since created wide sensation and universal applause by wishing all evil to the Gorham Controversy in a brief, emphatic article, containing but four words, the first of which was a monosyllable that is never uttered in the drawing-rooms of ladies. The public would fain dismiss the Yelverton case in the same summary fashion. It is now felt by those who, on the occasion of the Irish trial, were her warmest friends, that enough attention has been paid to her questionable grievance, and that even if she were to establish her legal right to call Major Yelverton her husband she would still be no fit object for public sympathy. The lady's present publication is free from the gravest faults of the novelette in which she recently laid bare the secrets of her pure and guileless breast; but it will fail to achieve its object of awakening general interest. The 'Correspondence' consists of the letters, already made public by the Irish and Scotch suits, and in her Introduction the victim of misplaced affection says, "These letters were written in blissful ignorance of law proceedings, and without any conception on my part of the possibility of a marriage being other than a marriage. I had learnt in my Catechism that marriage is a sacrament,—nothing else. They were conceived in that earnest truthfulness which sheds the brightest halo round the dawn of life in the guileless unconsciousness of the very evils which they have been distorted to suggest. * * Hence amidst a hornet's nest of commentators, friendly bunglers, crotchety and one-idea'd interpreters, and foul insinulators, and hoary-headed malignants—desecration and stupidity have done their utmost. * * I stand alone with the wild, pitiless waves of all that is evil dashing around me, while only a single plank divides me from the bottomless gulf of utter desolation and shame; but the one slender plank is truth, and my help is conscious recitance."

The Prairie Traveller: a Hand-Book for Overland Expeditions, with Illustrations and Itineraries of the Principal Routes between the Mississippi and the Pacific; and a Map. By Randolph B. Marcy. Edited, with Notes, by Richard F. Burton. (Trübner & Co.).—This is a new edition of a book, published many years ago, from which Mr. Francis Galton derived much of the information which figured in his 'Notes on Travel,'—and of which, we may add, a new edition is before us, from the press of Messrs. Low & Co. Here, the American author borrows, in turn, from the English one, though far more sparingly; and Capt. Burton sets both to rights by notes, some of which are not so much additions to, as corrections of, the text. The book is a useful one, and as readable as useful, both in the original form, as it came from Mr. Marcy's pen, and in Capt. Burton's reproduction of it; especially at this time of the year, when spring's approach stirs up the mortal corruption of restlessness in us, and makes us think wistfully of foreign travel, whether the same be rough or smooth.

A Handy Book of the New Law of Joint-Stock Companies, 25 & 26 Vict. c. 89; with Directions for forming a Company. By James Walter Smith, Esq., LL.D., Barrister-at-Law. (Wilson).—The present time will be remembered as the age of companies—they are born—they marry, or are amalgamated,—and alas! they die and are wound up. Should the present state of things continue we shall have lists of births, marriages and deaths of companies in our daily papers; for it will be impossible to chronicle these events in any less formal and concise manner. A handy book on this subject was therefore wanted; and the present will afford some assistance towards acquiring a knowledge of the provisions of the late Act.

Mary McNeill; or, The Word Remembered: a Story of Human Life. By J. W. C. (Johnstone, Hunter & Co.).—Mary McNeill, a Highland lassie, quits her father's cottage, and enters domestic service in London, where vanity and evil companions bring her to trouble, from which she is extricated (just as she is about to throw herself into the Thames) by remembering a text of Scripture. The story is weak in conception, and ridiculous in its details.

Maid-servants might perhaps find amusement in its pages; but they would derive more harm than good from descriptions, the moral influence of which is not likely to prove as healthy as the author's intention is amiable.

The White House at St.-Réal; a Story for School-boys. From the French of Madame E. De Prepenal. Authorized Translation. (Seeley, Jackson & Halliday).—The mildness and insipidity which ordinarily pervade the moral tales of French writers are the leading characteristics of 'The White House at St.-Réal.' In its original form it may be recommended as a story for children who are learning French; but little can be said on behalf of the English version, except that it has been carefully executed.

Our list of Reprints includes, Mr. Anthony Trollope's *Tales of all Countries* (Chapman & Hall),—Cardinal Wiseman's *Lecture, Points of Contact between Science and Art* (Hurst & Blackett),—Mr. Woolley's *Lectures delivered in Australia* (Macmillan & Co.),—Vols. XXIV. and XXV. of the Reprint of *Punch* (Bradbury & Evans),—*Prof. Owen's Inaugural Address at the Leeds Philosophical Hall* (Longman).—Mr. Lever's *Tom Burke of "Ours,"* has been added to Messrs. Chapman & Hall's "Select Library,"—*What is Sabbath breaking? a Discussion occasioned by the Proposal to open the Edinburgh Botanical Gardens on Sunday Afternoons.*—Dr. Ballard on *the Convulsive Diseases of Infants* (Churchill),—*The Imagination, a Lecture* by the Rev. E. Whately (Hodges, Smith & Co.),—*The Character of Hamlet, a Lecture* by the Rev. E. W. Whately (Wertheim),—*The American Church in the Disruption* (Mozley),—*Waste, a Lecture* by Dr. Symonds (Bell & Daldy),—*Life and Death of the Irish Parliament,* being the substance of two Lectures, by the Right Hon. J. Whiteside, reviewed and corrected by the Rev. S. Malone (Dublin, Fowler),—and from Messrs. Moxon, a New Edition of *The Poems of Samuel Taylor Coleridge.* Mr. Bohn has added to his "Classical Library" *The Orations of Demosthenes,* translated by C. R. Kennedy (Bohn). Among other translations, we have *Martial Fragments of Tyrtæus,* translated into English Verse, with a *Martial Elegy on the Demise of H. R. H. Prince Albert,* by J. W. Bailey (Harrison),—*The Holy Bible, containing the Old and New Testaments, literally and idiomatically translated out of the Original Languages,* by R. Young (Fullarton). We have before us second editions of Mr. Weisse's *Grammar of the German Language* (Williams & Norgate),—and *The Duty of the Church of England to her own Children in Foreign Parts, a Sermon* by the Rev. A. J. D. D'Orsey (Bell & Daldy); a third edition of *The Two Babylons; or, the Papal Worship proved to be the Worship of Ninrod and his Wife,* by the Rev. A. Hislop (Houlston & Wright); and a sixth edition of *Deafness Practically Illustrated,* by Dr. Yearley (Churchill & Sons).

LIST OF NEW BOOKS.

SHAKESPEARE'S AUTOGRAPH.

March 25, 1863.

In your notice last week of my book on 'Shakespeare's Home' you were good enough to allude to the discovery I believed I had made regarding the copy of Florio's 'Montaigne' (in the British Museum), which contains the autograph of Shakespeare. I am glad to inform you that, through the courtesy of the authorities at Eton College, I have been enabled to inspect the Eton Register, and also the Bursar's Accounts during the time that the "ever-memorable John Hales" was connected with Eton, i.e., 1613 to 1656. In these volumes I have found a number of his autographs, and taken tracings of them. Having also taken tracings of the Marginal Notes, &c., in the Museum copy of Florio, I have thus been enabled to compare the two hand-writings, and am glad to report that the result has fulfilled my anxious hopes. I think I may affirm with the greatest confidence that the marginal notes in Florio's 'Montaigne' are in the handwriting of John Hales, of Eton.

To every Shakesperian scholar this discovery will prove interesting, because it strengthens the credit given to the authenticity of the Poet's autograph; inasmuch as it may now be assumed, that, after Shakespeare's death, John Hales sought and gained possession of the volume on account of its having belonged to him and containing his autograph. Hence Hales's own marginal notes and classical quotations, in a volume which, for Shakespeare's sake, he prized.

I propose shortly to publish fac-similes of the handwritings in the Eton Registers and Florio's 'Montaigne,' for the satisfaction of those who are interested in this subject. J. M. BELLEV.

MOSAIC DECORATION OF ST. PAUL'S CATHEDRAL.

4, Claverton Street, Pimlico.

I can scarcely believe that your Correspondent can be aware of the revival of the Mosaic Art by Chevalier Antonio Salviati, of Venice, whose remarkable productions were exhibited in the Italian Court of the International Exhibition last year. Your Correspondent says, that "Mosaics are objectionable whenever the decoration proposed does not consist of arabesques, diapers, or figures of a simply architectonic or decorative character." I will not do your Correspondent the injustice to suppose that he is ignorant of the mosaic pictures in the Cathedral of Monreale, where the most gorgeous effects of colour are produced without either diapers or arabesques, and where every great event recorded in Old Testament history is portrayed in mosaics. I must differ from your Correspondent in his statement that subtle and pathetic expression cannot be attained by mosaic decoration. This may be the case in a small building, but where the area is so vast as is afforded by the metropolitan Cathedral, no system of decoration can be suggested which would be so perfectly adapted to its requirements as mosaics.

Mosaic decoration is permanent: what system of painting can be pointed out which possesses this desideratum? Again, the combination of small pieces, of which a mosaic picture is composed, produces an effect of scintillation which would be of the greatest advantage in a building like St. Paul's, from the play of light which would be caused.

As to there not being mosaicists in these days capable of carrying out the artist's ideas, I think your Correspondent must have spoken hastily. Not

to mention the Russian mosaicists, there exists in Venice an establishment employing nearly 400 persons, under the management of Chevalier Salviati, where the most perfect mosaics are being continually produced, and to the care of the distinguished proprietor has recently been entrusted by Mr. Gilbert Scott, R.A., with the sanction of Her Majesty, the carrying out in mosaic of an entire ceiling for Cardinal Wolsey's Chapel at Windsor Castle. I will venture to say, that the execution of this work will remove all doubt of the eminent manner in which mosaics are adapted for decoration in England; and I further believe that Dr. Salviati's productions are in most of their qualities equal, and in many superior, to the productions of the mediæval mosaicists.

I regret that Dr. Salviati is at this time absent from England; but I am in possession of the works exhibited by him at Kensington, together with examples of his mosaics in all stages of their manufacture, and it would afford me much pleasure to show these either to yourself or to any of your correspondents who may feel an interest in the matter. ARTHUR B. THOMPSON.

THE PALIMPSEST OF URANIUS.

West Derby.

SEVERAL of my friends have written to me, inquiring whether I could clear up the question of the alleged removal of the modern Greek phrase *κατ' ἐμὴν ἰδέαν* from the MS. of Uranius, and the substitution of the phrase *ὡς μοι δοκεῖ*. I shall be glad if you can spare space for a few words on the subject in your next number.

The uncial writing is in many places so faint that it will not appear when the developing solution is applied; and this is the case in the line where the doubtful phrase is supposed to occur. The MS. is at present in my hands; and I have made this morning a careful drawing of the line, enlarged to about three-and-a-half times its real size, so as to render the letters more distinct.

I shall be glad if you will allow any gentlemen who are interested in the matter to examine it at your Office. It will be seen that the modern Greek reading has arisen from an ignorant or careless filling up of the spaces left blank by the fading of the uncial character. *There is no foundation whatever for the statement that an erasure has been made and other letters substituted*; on the contrary, careful microscopical investigation shows that this part of the text is in the same state as the rest. For the sake of your numerous readers, who will not be able to examine the drawing, I subjoin an approximation to the arrangement of the letters; imperfect, of course, from the impossibility of representing uncial writing with ordinary type. The small letters stand for those which are partially illegible in the original.—

Reading of Lycurgus.

Text.

Α \ \ ω Ν Ω Σ Ε Μ ο Ι Δ . κ Ε Ι Σ Π Ο Υ

Reading of Simonides.

ΑΑΑΩΝΩΣΕΜΟΙΔΟΚΕΙΣΠΟΥ

I regret that Sir F. Madden declined the responsibility of the custody and examination of the MS., which might have thrown fresh light on the subject.

JOHN ELIOT HODGKIN.

THE LATE GRESHAM PROFESSOR.

Fairseat, Wrotham, March 24, 1863.

PERMIT me to supply an omission in your last number, as a small tribute of respect for the dead. The late Prof. Taylor, whom we have just lost, in his 79th year, has these claims to honourable mention and public gratitude:—

1. He was the first advocate (and a very efficient one) within the present century of music as a branch of popular education. Early efforts of mine in the same direction, I trace to an impulse derived from his lectures. Mainzer, Hullah, Curwen, Martin, and others who have laboured in the same field, found a way cleared for them in which Mr. Edward Taylor had been the chief pioneer.

2. He was the first public man to denounce, and

practically to check, the diversion of ecclesiastical funds, belonging to singing Canons, to other than the musical services of the Church.

3. He was the first in this country to organize choral societies, with purely popular elements, on a large and an efficient scale.

4. He was the first to revive a taste for the old madrigals of the time of Elizabeth, and to recover from the past many treasures of vocal harmony, which but for his exertions (not forgetting those of his friend Mr. Oliphant) would have been wholly lost, and which have since given delight to thousands.

5. He was the first to render attractive, as well as instructive, a course of lectures at Gresham College,—an institution which I remember in my boyhood as one of the sinecure foundations of the goddess Dullness, for sleepy essayists.

The benefits resulting from these labours we owe perhaps, in part, to the very fact mentioned in your notice, that Mr. Edward Taylor did not enter the profession till middle life; for he brought with him popular sympathies, and an enthusiasm for his art, which, in the trained musician, we see too often deadened by a wearying daily round of monotonous duties. This circumstance, however, (as in the case of Sir John Hawkins, the historian,) exposed Mr. Edward Taylor to more than his fair share of professional opposition. It led to rival criticisms, the merits of which we will not discuss by his grave.

One has gone from us, known to me, not as a self-seeker, but as an honest worker for public objects. A man of rare qualifications for the chair he filled, and of great private worth.

W. E. HICKSON.

EMANUEL GEIBEL.

March 24, 1863.

THE charge of inaccuracy brought by Mr. Wilberforce against my statements with regard to that storm in a glass of water, the Geibel-Bodenstedt controversy, has induced me to make fresh inquiries into the subject, the result of which is a letter addressed to me by Geibel himself. The following is a faithful (although accidentally somewhat delayed) translation of this letter:—

"Munich, March 6, 1863.

"Dear Friend,—Your letter and the accompanying numbers of the *Athenæum* inform me that my name is, at this moment, subjected in the London press to various violent imputations. If these attacks were directed against my literary character, I should certainly allow them to pass without taking any notice; as they are, however, aimed at my personal character, I am forced to justify myself, even at the risk of again opening wounds which I would rather see healed. I authorize you, therefore, to make every use of the following lines which you may think proper.

"The many accusations and statements made against me by the Munich Correspondent of the *Athenæum* render it necessary for me to go somewhat far back, and to give, before all things, a full and clear account of the institution and the rules of the Maximilian Order.

"This order was founded by our King, about ten years ago, with the view to confer a special distinction on prominent productions in the different provinces of Science and Art. It consists of two sections, the one for Science and the other for Art, both of them enjoying equal rights. The order, to be sure, entitles its members to appear at certain solemnities of the Court; but this circumstance has been so little foremost in the original idea of the foundation, that we do not even find it mentioned in its statutes.

"The number of the members is not to exceed a hundred. At present it amounts to about seventy. However, from the very beginning the usage has been established that places in the order are, unless in quite exceptional cases, only given away when a seat has become vacant by death. The nomination of new members takes place by royal decree,—mostly according to the proposals of the Chapter, sometimes without them.

"The Chapter meets every year, late in autumn, for the purpose of submitting to the King its opinion on the filling up of vacancies which have arisen,

or of proposing to him the nomination of new members. It consists of from seven to nine members, who represent the different branches of Science and Art. At this moment, natural philosophy, political economy, jurisprudence, architecture, painting, music, and *belles lettres* are represented in it: the seats for history and philology are vacant. It is the natural consequence of such a constitution of the Chapter that proposals for the succession to vacant seats should emanate from those members to whose scientific and artistic province the deceased member belonged, and that the votes of these members at the election should have more weight than those of others who are generally less competent judges of the peculiar claims and merits of candidates in a province not their own. This regulation, which throws the responsibility almost always on the shoulders of a single person, may not be desirable, but is at any rate the existing mode of proceeding.

In the course of last year, the places of the two poets Zedlitz and Kerner had become vacant. As I was not present at Munich in the beginning of November, the head of the Chapter wrote to me, shortly before the usual time of the Chapter meetings, that he expected my proposals; at the same time mentioning Mörike as having been already notified by me, and suggesting Bodenstedt. This letter, however, came much later into my hands, as I had then already started for Munich.

On my arrival, I felt uncertain whether I had, this time, one or two proposals to make: for this reason, that at the last election there had been, exceptionally and from particular reasons, two new members, Hebbel and Freytag, named in the department of poetry, although only one vacancy had occurred. Yet I was prepared for both cases, and had determined, after ripe deliberation, to propose the Austrian Halm in the place of the Austrian Zedlitz, and the Suabian Mörike in the place of the Suabian Kerner. I may mention here that Mörike, among the living lyrical poets of Germany, occupies in my judgment one of the first places, if not the very first. (See Vischer's excellent article on Mörike, in the 'Kritische Gänge'.)

I then went to the head of the Chapter, to have a preliminary conversation with him on the subject. Having communicated to him my proposals, I learned from him that, owing to my absence, a proposal in favour of Bodenstedt had been made to him from another quarter. With this proposal I could not agree, as it appeared to me that others had better founded claims on the order. I declared this openly; but, desirous of avoiding personal conflicts, easily to be foreseen, and perceiving that there could be but little doubt of Halm's election, I proposed, in consideration of the double nomination of last year, to restrict the election this time to one poet only. The head of the Chapter, however, declared himself bound by a promise to submit the proposal in favour of Bodenstedt to the Chapter. Thus I had to leave the matter for discussion in the Chapter.

I should hesitate to speak of the meeting of the Chapter, if the indiscretion of others had not spoken of it before. It took place on the following day. After my recommendation of Halm had met with general approval, the head of the Chapter proposed Bodenstedt. He was warmly supported by one of the members, while I opposed in favour of Mörike. Bodenstedt's literary labours embrace three distinct fields. He is the author of comprehensive works of travel, the translator of English and Slavish poetry, and the writer of original poetical works, lyrical, epic and dramatic. As to the first field, I do not allow myself a judgment, being but imperfectly acquainted with this class of his works, not belonging to my special province; in the second, I have always highly esteemed him; but in the third, which principally came into consideration here, he appears to me decidedly inferior to more than one contemporary poet. And this was the reason which made me oppose him on an occasion when it was important to point out the most worthy among all the German poets of the present time who did not yet belong to the order. Not to be unjust, however, I declared that I should willingly assent if, in consideration of his ethnographic works, and his unde-

nable merits in the interpretation of foreign literature, he were proposed for the scientific class of the order,—just as Baron Schack, known by his 'History of the Spanish Drama,' and his excellent translations of Spanish and Oriental poetry, had been received a few years ago in the same section. This, however, did not suit my colleagues, who, as the place of a poet was to be filled up, desired that place, and no other, for Bodenstedt. I therefore had no choice left but also to insist upon my opinion, viz., that to a poet's place Mörike was more entitled than the chairman's candidate, however much the latter, because living at Munich, was the better known of the two to most of the members.

At the voting, a positive majority for Bodenstedt was the result. Those members who had been undecided till then, joined the majority, one of them with the remark, 'I am glad, however, that Mörike's name has been mentioned once more on this occasion.' Nothing remained to me under these circumstances than to repeat the conviction I had pronounced and defended in the Chapter, in a short declaration, which was added as a *separat votum* to the minutes of the meeting.

The result, namely, that the King decided in favour of Mörike, is known.

These are the facts of the case. Acting as I did, I have nowhere transgressed the boundaries of my authority. I have taken no illegal step to win the King over to my opinion; on the contrary, I have fulfilled a duty, and, indeed, a very unpleasant one, in openly expressing and maintaining my conviction.

But if my motives are suspected, as if I had not acted after a conscientious examination of the case, but from spite or personal ill-feeling, I certainly cannot produce mathematical proof of the purity of my intentions, but I can refer such critics to my whole life, which, at least in Germany, is pretty well known, as well as to an unblemished literary career of more than twenty years, during which, with all the interest in my power, I have smoothed the path of a considerable number of able men, and have never stood in the way of merit in others.

The assertion that I had not read a syllable of Bodenstedt's works bears so evidently the stamp of words escaped in a momentary excitement that a refutation seems hardly necessary. That I know Bodenstedt's works of travel only partly I have mentioned above. But I am very familiar with his translations of Russian and English poetry; and as to his original poetical productions, I know his 'Lieder des Mirza-Schaffy,' and his poems 'Aus der Heimat und Fremde,' fully as well as most of his tales in verse. His dramas, 'Demetrius' and 'Authari's Brautfahrt,' I have not only read, but seen represented on the Munich stage. I was likewise present at the representation of his 'Festspiel,' written for the Schiller Festival. This, I should think, is sufficient to form a fair judgment of the general character of the poet, as well as of the extent of his talents.

As to the words which the Correspondent mentions as having been spoken by me, I must partly deny having used them altogether, partly must say that they are incorrect, disfigured, and torn from the context. They are full of gross contradictions, and contain truth and falsehood, exaggerations and misunderstandings, just as it will happen but too often, at a time and in circles where party-feeling runs high, in telling and re-telling words and events.

May these lines settle finally this most disagreeable affair! Being an enemy of everything like scandal, I have purposely tried to make them as mild and as free from any bitterness as possible, utterly disdaining the use of arms which have been freely employed against me. At all events, this is my first and my last word in the matter.

EMANUEL GEIBEL.

I have nothing to add to the above, except joining in the poet's wish that a quarrel which must have been distasteful to all parties concerned may end here. Let me hope, besides, that it may not entirely estrange two highly estimable men.

A GERMAN FRIEND, RESIDING IN LONDON.

OUR WEEKLY GOSSIP.

THE National Portrait Gallery, 29, Great George Street, Westminster, will be open to the public on Easter Monday, Tuesday and Wednesday, from Ten to Five o'clock.

Messrs. Hunt & Roskell have published a fine bronze medal in commemoration of the marriage of the Prince of Wales and the Princess Alexandra of Denmark. The die is by Mr. L. C. Wyon, to whom the Prince gave several sittings. The portrait of the Princess is from a photograph taken in Denmark. As a work of Art, the medal has many merits, including the capital necessity of likeness. When seen in profile and repose, the two faces have an extraordinary resemblance to each other.

The Duke of Sutherland, who has spent a considerable part of the winter in Southern Italy, has purchased a beautiful production of Signor Genaro Cali's chisel, called by him 'Hecate.' The history of the design—itsself a poem—is poetical. The artist, who was spending his summer in Torre dell' Annunziata some years since, was struck one night with the beauty of the crescent moon, and imagined the goddess sleeping within it. In 1855, the Count of Aquila, the uncle of the ex-King Francesco, visited London, and on his return went to the artist's studio. Struck by the composition of this Diana, His Royal Highness immediately ordered it to be executed in marble, agreeing to pay for it 3,000 ducats; and so pleased was he with the novelty and the grace of the design, that he announced his intention of presenting it to Her Majesty Queen Victoria. Political embarrassments, however, arising between England and Naples, and the relations between the two Courts being interrupted, the Count broke off his bargain with the sculptor. The Duke of Sutherland, who visited his studio a few days since, was so struck with the poetry and the beauty of the work, that he immediately purchased it, and it is now en route to England. The goddess reposes in deep sleep in the crescent moon, with her right arm and head reposing on one of the horns, whilst the left arm in a state of abandonment represents Night marking the hours. The artist has well preserved the character of the chaste Diana. Signor Cali, it will not be forgotten, is the artist who sent to the Exhibition last year a group in marble representing Pieta, which belongs to the city of Naples.

The Ordnance Department has recently published, under the direction of Sir Henry James, two thin catalogues, which by their cheapness and contents will be valuable to all who ever have occasion to consult maps. The one comprises a list of the Maps, Plans and other Publications of the Ordnance Survey of England and Wales, the other a similar list of the Survey of Scotland. Both are brought down to the end of the year 1862.

Mr. Le Neve Foster, the Secretary of the Society of Arts, has been appointed a Corresponding Member of the Société d'Encouragement pour l'Industrie Nationale, an honour only conferred under special circumstances.

A meeting of the committee appointed last year to consider the best means of restoring the Chapter House, Westminster, was called for yesterday—Friday—at the Jerusalem Chamber. The public will be glad to find that this good work has not been dropped.

A commission has been appointed by the Committee of Privy Council, to inquire and report upon the best method of arresting decay in furniture, and the policy of inclosing furniture in glass cases. The members are the Master of the Mint, Messrs. Crace, Graham, Henry Rogers, J. C. Robinson and Wallis, the last being Secretary. No doubt, this subject is well worth consideration. Want of ventilation is injurious to wood-work; the roof of Lower Tooting Church, having been ingeniously and hermetically sealed so as to retain the hot air of the stoves and that breathed by the congregation, has undergone an extraordinarily rapid decay; worms having attacked the beams so as to render the whole structure dangerous. One of the queen-posts was completely eaten up at the foot.

A very creditable façade to a pile of warehouses

has been erected in Bow Churchyard, for Messrs. Copestake, Moore & Crampton, from designs by Messrs. Vries & Chamberlain. These consist of three floors under a high roof with dormer windows in it. The characteristic of the designs is the exceedingly large space given to the windows, consequently the interior's lightness. The ground tier of windows has round-arched heads; they are divided by slender columns, with carved caps, resting on pedestals, between which are open-worked iron screens before the windows, lighting the basement; this part of the design is very poor. The second tier has flat-headed windows, their angles only being rounded off, with a moulding at the top and sides; the lights are divided here by wall spaces, broad enough to give the look of strength. The same form of head is found in the third as in the second tier; little columns here rest upon a stringcourse, and are emphasized by the recessing of the windows: a not inelegant cornice rises above this to break the façade. The angle of the building is formed by a pilaster, whose capital is part of the cornice. The dormers are four in number, with iron ornaments. Ridge ornaments of iron surmount the roof. The windows are symmetrical throughout; the door is elsewhere.

The Benchers of the Inner Temple are about to restore the conical roof to the "round" or more ancient portion of the Temple Church.

The late Mr. Samuel Beltz's library, which has been disposed of by Messrs. Sotheby & Wilkinson, contained some books from the Garrick Collection, and some privately-printed works worthy of note. Addison's Remarks on Several Parts of Italy, being a present from the author to Dr. Sacheverell, and from the library of David Garrick, 4l. 4s.—Catalogue of the Hoare Library at Stourhead, privately printed, 6l. 5s.—Catalogue of Garrick's Library, on large paper, 1l. 9s.—Hoare's Pedigrees and Memoirs of the Families of Hore, privately printed, 8l.—Moore's Fables for the Female Sex, from David Garrick's library, 2l.—The Scrope and Grosvenor Roll, 14l.—Palgrave's Rise and Progress of the English Commonweal, 4l. 8s.—Roll of Arms of the Sovereign and Peers who sat in Parliament 5 Feb., 6 Henry VIII., 3l. 15s. Among the books in general literature were the following:—Lord Bacon's Works, by Basil Montagu, 7l. 12s. 6d.—Bayle, Dictionnaire Historique, 5l. 2s. 6d.—Works of Bewick, 5 vols., Newcastle, 1804-24, 8l. 10s.—Aldine Edition of the British Poets, 43 vols., 6l. 10s.—Hallam's Works, 10 vols., 5l.—Hoare's Hungerfordiana, 2l.—Ben Jonson's Works, by Gifford, 9 vols., 5l. 5s.—Publications of the Camden Society, 82 vols., 8l. 15s.—Leland's Itinerary and Collectanea, by Hearne, 5l. 8s.—Walton and Cotton's Angler, by Nicolas, 3l. 11s.—Wilson and Buonaparte's American Ornithology, 4l. 14s.—Hoare's Monastic Remains, 3l. 8s.

Mr. Samuel Bache, Unitarian Minister of Birmingham, assures us that the "Amicable Correspondence relative to some Popular Tenets," is a genuine correspondence—not merely a dramatic form of polemical composition.

It is gravely proposed, in interested quarters, to increase the peals of church bells in London. Let us protest that in old days, when things went on slowly, silently and smoothly, when the streets of a city such as London were not filled with the terrible roar that now rises from daily traffic and labour, the noise of a peal of bells may have been not unwelcome as giving some sort of jubilant climax to the day's sounds. Very few knew much of music, so even the loud clash of metal upon metal, out of time and tune as bell-ringing too often is, was not a nuisance. Ill or well performed, the so-called art of bell-ringing is best honoured now-a-days by neglect. The deafening uproar that afflicts the students of the Royal Academy when the bells of St. Martin's are rung for the leg of mutton said to have been bequeathed by Nell Gwynne does not lead them to bless her memory. We are putting down organ-grinding, and why not the noise of steeples? Any working man, literary or other, living within the din of bells, ought not to suffer by them: how much less the sick? We cannot afford to have our evening rest to overwrought minds broken by the performance of

"Campanologian youths." No greater nuisance is known to victims than that in question, and it would have been long ago stopped but for the limited number of churches where peals exist, or, it may be, parochial authorities allow their abuse. Any man who goes along the Strand when the bells of St. Clement's, which still ring oranges and laments, are in full action may believe what an intolerable affliction such a noise would be if extended to other localities. In every part of London there are hundreds of workers, either labouring or at rest, to whom such silence as London has is an inestimable treasure. In the country, nothing is sweeter than the rise and cadency, the sound-swaying or the merriment of church-bells,—in town, nothing jars the ear more cruelly. On this matter we cannot give a warning too soon, lest folks find "peals of eight three-and-twenty-hundredweight-tenors" thundering and clashing where and when they least expect them. Let Campanologian youths go out of town; there are many churches in the Essex marshes where they might not be unwelcome; and probably, if put to the vote, not a few London parishes would gladly present the uproarious peals now in use, together with a proper quantity of beer, to get rid of them.

With the embankment that is to support our new Thames Way in actual progress, we may ask, what is to become of a beautiful architectural relic of the Stuart period that still exists? Few men who know anything about old London, and very few who pass up and down the river, are ignorant of the existence of the Water-Gate, originally built for the famous York House of George Villiers, Duke of Buckingham, that still stands at the foot of Buckingham Street. Is this structure to be inclosed in the higher level of the embankment and have a little pond of its own, or puddle, as we might rather say? Is it to be buried in or pulled down for old materials? Would it not be better to remove and re-erect it in some locality where its original use as a water-gate may be fulfilled again? Why not set it up again at Hampton Court? it would be in tolerable keeping with the buildings there if so placed. This gate has been commonly attributed to Inigo Jones, but it appears, from a book in the Soane Library, that Nicholas Stone designed it, built it, and himself carved the right hand lion (west) on its front, while "Mr. Kearne, a Jarman, his brother by marrying his sister, did y^e Shee Lion."

Animal and vegetable acclimatization seems to be highly successful at Melbourne, Victoria (Australia). In the Botanical Garden, *Acanthus mollis*, a delicately coloured Grecian shrub, and *Gloriosa plantii*, thrive in the open air. Under glass, *Pastiflora odorata*, or scented passion-flower, is in full growth. English birds, turned loose in the aviary, are rapidly increasing in number: among them are linnets, canaries, and finches. In the bushes so inclosed the nests of these birds are to be seen. Little canaries, with woolly-looking feathers, are perched all about; some of the old hens having reared two or three lots; little linnets are also to be observed. The numerous Rockhampton finches have paired off, and some beautiful white doves been reared. The landrails are breeding; so have deer and white swans, the first hatched in the colony. Wild ducks increase. Of fish, gold-fish, bream, tench and perch breed rapidly.

A Society has been formed at Halifax, Nova Scotia, under the title of the Nova Scotian Institute of Natural Science. It commences under favourable auspices, at a time when the public mind is attracted to the great mineral wealth of that colony, which appears until lately to have existed unknown even to the inhabitants of the country itself. Within the last year or two the colonists have exerted themselves in a laudable endeavour to develop the resources which nature appears to have lavishly afforded them; and in the general desire towards advancement, a few gentlemen, possessed of some scientific knowledge, have organized the society in question, under a firm belief that in the meeting together for the reading of papers and discussing matters pertaining to the natural history of the province, much good may arise, and many facts relating to that

branch of science, which would otherwise be lost to the general stock of useful knowledge, be made known to the public of other lands through the medium of a volume of *Transactions*, which it is proposed to publish at the close of each year. The Institute does not intend to confine its operations within the limits of its own particular province, but, under a sense of the importance of the object it desires to promote, will extend its observations to those portions of British North America which, in the north, include Prince Edward Island, Newfoundland, and the adjacent continent of Labrador; while to the southward, the Bermudas, which, from the singularity of their formation and their isolated character, present many features worthy of investigation. Ichthyology will naturally form an important branch of study; for from the vast extent of the fisheries in that quarter, which, commencing in Hudson's Straits, include the Gulf of St. Lawrence and the greatest fishing-ground in the world, the banks of Newfoundland, a field of vast extent is presented for the labours of the ichthyologist, who, by judiciously combining scientific with practical knowledge, might be the means of collecting a store of information which would be of the utmost value not only to science, but to the governments which have control over those fisheries; for by extending the knowledge of the habits of fish, a better judgment may be formed regarding the damage sustained at present from the various modes of "catching" resorted to by the crews of vessels frequenting the localities in question. The Institute commenced its first session with the present year under the patronage of the Lieutenant-Governor, the Earl of Mulgrave.

A private letter from Hamburg mentions that an Aquarium is in progress of construction in the Zoological Gardens of that city, which will be at least three times as large as any now in existence, and its efficiency for scientific observation will be, it is believed, in the same proportion. It has been erected under the superintendence of our enthusiastic countryman, Mr. Lloyd, who is to be curator. In answer to the question of a countryman as to how he liked Hamburg, and his employment there, "Why, sir," he replied, "I think sometimes of the pleasant prospect of old London on a summer evening from Waterloo Bridge, and should like occasionally to hear the mid-day roar of the Strand; but as for the employment, if I were a man of independent property, I should just follow as an amusement what I now pursue for a living."

Two years ago, the only surviving daughter of Schiller, at the request of many friends, began the publication of a selection from the letters of her mother. Prof. Urlichs, of Würzburg, had been intrusted by her with the arrangement and editing of the undertaking, and it was everywhere warmly received. The second volume of this collection has appeared, containing letters from Schiller's mother-in-law, his sister-in-law (Caroline von Wolzogen), of her husband (Wilhelm von Wolzogen), from the Princess of Weimar, General von Wolzogen, and Wilhelm von Humboldt. The second part is filled by letters from the Erfurt and Weimar friends,—from Captain Henry Heron, Karoline von Dacheröden (afterwards wife to Wilhelm von Humboldt), Frau von Kalb, Goethe, and Frau von Stein. Then follows the Danish circle, with letters from Count and Countess Schimmelmann, Baggesen's wife and Ida Brem. Altogether, the contents of this volume may be called highly interesting and important for the knowledge and better appreciation of the Weimar circle, and in particular for that of the noble character of Schiller's gifted wife. But the greatest interest is concentrated in the letters from Frau von Stein, in which this rare woman, who more than any other influenced the great poet's life, pours out her bitter grief and mortification at the separation from Goethe, of which she herself was yet moody to blame. She once writes, "Goethe's farewell had made her fire-proof against all sorrows the world might have in store for her; she could suffer anything now, and forgive anything." It took more than ten years to quiet her deep displeasure with Goethe; she never got quite over it, and expresses herself still in 1799 as one mortally wounded. Another, a third volume, which will contain letters

from Adlerskron, Fischenich, Grass, Knebel, Körner, Niethammer, Paulus, Heinrich and Ernestine Voss, and many others, is announced, and will be expected with impatience.

The excavations at Pompeii, conducted by the enlightened and energetic director Cav. Fiorelli, are daily bringing forth fresh marvels. Two or three days since, near the Porta Oriente was found an object perfectly unique, and which has no parallel in any museum in Europe. It is a large lucerna of gold, with two lights, and must, as Fiorelli thinks, have formed a part of the treasures of some temple. The gold is of the finest quality, and as the lucerna weighs upwards of 3 lb., its value exceeds 10,000 *lire*. This wonderful object has been deposited in the museum, and may be seen in the "Raccolta degli Oggetti preziosi."

'THE RAILWAY STATION.'—This Celebrated Picture, by W. FRITH, Esq. R.A. NOW ON VIEW to the Public, at the FINE-ART GALLERY, 11, Haymarket.—Admission, 1s. Open from Ten to Five. A Descriptive Pamphlet, by Mr. Tom Taylor, M.A., price 6d.

MR. GHÉMAR'S EXHIBITION OF THE ROYAL FAMILIES OF ENGLAND AND DENMARK.—Portraits of The Queen, the Prince and Princess of Wales, life-size, comprising Fifty-one Photographic Pictures and Drawings, executed by Mr. Ghémard, from actual sittings, are NOW ON VIEW at the FRENCH GALLERY, 120, Pall Mall (First Floor).—Admission, 1s. N.B.—Each visitor will be presented with a Portrait of the Princess of Wales, carte de visite size.

MR. EDMUND YATES'S INVITATIONS TO EVENING PARTIES and the SEASIDE will be issued at the EGYPTIAN HALL, EVERY EVENING (except Saturday), at Eight o'clock. Mr. HAROLD POWER will be one of the party. A Morning Performance on Saturday, at Three o'clock.—Stalls, 3s.; Area, 2s.; Gallery, 1s. The Box-Office is open daily, from 11 till 6 o'clock.

MRS. FANNY KEMBLE.—Readings of Shakespeare.—Dudley Gallery, Egyptian Hall, Piccadilly.—Mr. MITCHELL respectfully announces that Mrs. FANNY KEMBLE, after an absence from London of six years, will RESUME her READINGS OF SHAKESPEARE on EASTER MONDAY, April 6, at the above Rooms, commencing at Eight o'clock precisely. The Series will be commenced in the following order:—Monday Evening, April 6, 'As You Like It'; Wednesday, April 8, 'Merry Wives of Windsor'; Friday, April 10, 'Hamlet'; Monday, April 13, 'Merchant of Venice'; Wednesday, April 15, 'Twelfth Night'; Friday, April 17, 'Othello'. Successive Arrangements will be duly announced.—Stalls, numbered and reserved, 5s.; Unreserved Seats, 3s.; a few Fauteuils, 7s. each, may be secured at Mr. Mitchell's Royal Library, 33, Old Bond Street, W.

SCIENCE

SOCIETIES.

ROYAL.—*March 19.*—General Sabine, President, in the chair.—The following papers were read: 'On Peculiar Appearances Exhibited by Blood Corpuscles under the Influence of Solutions of Magenta and Tannin,' by Dr. W. Roberts.—'On Quinidine and some Double Tartrates of the Organic Bases,' by Dr. Stenhouse.

GEOGRAPHICAL.—*March 23.*—Sir Roderick I. Murchison, K.C.B., President, in the chair.—Messrs. P. Anstruther, C. N. Bagot, G. C. Brodrick, Capt. H. T. Burgoyne, the Hon. J. Carnegie, J. H. Challis, Rev. R. Greaves, E. H. Leveaux, R. J. More, Lieut. C. J. F. Smith, Rev. H. F. Tozer, and T. Turner were elected Fellows.—'Exploration from Kurrachee to Gwadâr, along the Mekram Coast,' by Major F. Goldsmid.—'On the Harbour of Sedashagur,' by Dr. D. Macpherson.

GEOLOGICAL.—*March 18.*—J. C. Moore, Esq. in the chair.—Messrs. S. Baines, H. Bauerman, R. Mushett and F. M'Clean, were elected Fellows.—The following communications were read:—'On the Correlation of the several Subdivisions of the Inferior Oolite of the Middle and South of England,' by H. B. Holl, M.D.—'On the Occurrence of Large Quantities of Drifted Wood in the Oxford Clay, near Peterborough,' by H. Porter, M.D.—'On a New Macrurous Crustacean from the Lias of Lyme Regis,' by H. Woodward, Esq.

SOETY OF ANTIQUARIES.—*March 19.*—W. Tite, Esq. M.P., V.P., in the chair.—Notice was given of a motion to be laid before the Society on the Anniversary meeting on April 23rd, to the following effect, viz.—that the ordinary meetings be held at 8 P.M. instead of 8.30 P.M. as at present, and that the ballot be closed at 9.30 P.M. instead of 10 P.M.—The following were elected: Messrs. W. Munk, B. Ferrey, A. Dalrymple, M. H. Bloxam, G. Worms, Dr. F. Bock and T. Lewin.

NUMISMATIC.—*March 19.*—W. S. W. Vaux, Esq., President, in the chair.—C. Golding, Esq.

was elected a Member.—Mr. Evans read a communication from G. Sim, Esq., 'On a Find of Coins in the Town of Ayr.'—Mr. Evans read a communication from M. F. Calori Cesis, of Modena, written in Latin, and describing a rare coin of Offa, with the legend OFFA REX MEROR and s. PETRVS. M. Cesis wished to know something about it, stating that the only English numismatic work at Modena was the *Numismatic Chronicle*.—Mr. Evans read a paper 'On a Full-faced Brass Coin of Constantius the First.' The full-faced coins are of rare occurrence, and are usually of gold, there being only one of Maxentius in silver, and one of Carausius in third brass. M. Cohen quotes a similar coin from the Musée Tiepold. Mr. Evans discovered this rare coin in the collection of coins belonging to the Bodleian Library.—Mr. Madden read a paper, communicated by E. J. Powell, Esq., 'On Marking, not Milling.'

INSTITUTE OF BRITISH ARCHITECTS.—*March 9.*—W. Tite, M.P., President, in the chair.—The Rev. Dr. Whewell read a paper, 'On some Analogies between Architecture and the other Fine Arts.' Having noticed Sculpture, Painting and Music, the three imitative arts, he went on to consider whether Architecture could be called also an imitative art; and showed how that even in matters of construction, after the first idea of arrangement of parts had been conceived, the actual carrying out of these arrangements was more or less imitative. Thus a set of shafts around a central one in the pier of a Gothic building, carrying up the eye to some other series of lines, either more shafts to carry the vaulting, or the vaulting ribs themselves, and these again sub-divided into a variety of branches, are constructive in idea, but really nothing more than decorative:—for each shaft or rib is composed of stones, small or large, with their jointing lines entirely concealed or showing themselves in a directly contrary direction to the leading lines of this ideal construction. So the idea, not the reality, of constructive art governs the forms of architecture; the work being "representative imitation," from the ground to the utmost pinnacle. As the constructive framework is thus represented in cut masonry, the Art itself may be called imitative. It cannot be considered a fault that the small shafts at King's College Chapel, Cambridge, are too slender to carry the burden which would fall upon them if they were not actually a proportion of the masonry of the wall, any more than it is a fault that the marble legs of a statue, duly proportioned to the figure, would alone be too slender to bear the weight of the marble body. In this latter case the difficulty of construction is surmounted by adding a stump of a tree or of drapery: in the former the masonry contradicts the actual work of ideal construction. And these remarks hold good in all states, for all good architecture is organic, so that from one stone (the base of a pier) a pile of architecture can be often put together, in the same way as an animal form may be with certainty built up from a single bone.—The learned Doctor then traced the analogy of Architecture with Music, and compared the intervals of a colonnade or arcade to the bars of music; and showed further that not only rhythm, but also something analogous to melody and harmony was to be found in all good works of architecture. In two fronts of a building seen together, and in perspective, the increasing and decreasing forms as the lines advanced or receded from the eye had a relation like harmony, and produce a good effect, one much more pleasing at any rate than any mere elevation could be. It might not be too fanciful to compare the interior of a Gothic cathedral, with its two rows of columns, and the outer walls forming the aisles, to a psalm-tune to which treble, tenor, alto and bass were harmoniously joined. Architecture, therefore, is an art distinct in itself, and not a mere framework for sculpture or painting; and its works are even most pure when these are absent. Yet, though no carving may be necessary to the complete idea of a column, a capital for instance, yet it cannot be said to be an *impure* addition, but it should be introduced in the right place. If foliage is used, it should follow the rule of veget-

able growth, and be most luxuriant at the highest points. In Classic Art, statuary as a crowning feature seems appropriate; but if applied, as in Milan Cathedral, to Gothic pinnacles without niches, it is objectionable. But though in each successive style this general idea of construction is conceived, then imitated in masonry, and so wrought out, the constructive reality does not agree with this decorative idea. Thus Sir Walter Scott, speaking of the tracery of Melrose, says:—

Thou wouldst have thought some fairy's hand
Twixt poplars straight the oster wand
In many a freakish knot had twined;
Then framed a spell when the work was done,
And changed the willow wreaths to stone.

Here is described the idea of the mind on seeing this example of decorative ideal construction, which differs of course from the actual constructive masonry, and may be called the magic of Art.

March 16.—*Special General Meeting.*—W. Tite, M.P., President, in the chair.—The Royal Gold Medal for the year 1862 was awarded to Mr. A. Salvin,—to Mr. T. Hardy, for his essay 'On the Application of Coloured Bricks and Terra-cotta to Modern Architecture,' the Institute Medal,—to Mr. T. Morris, for his essay 'On the Application of Timber-work in England, Constructively and Artistically, from the Year 1400 to the Present Time,' the Medal of Merit,—to Mr. G. T. Mocacey, for a set of thirteen drawings and description of St. Mary's Church, Maxey, Northamptonshire, the Silver Medal of the Institute with five guineas,—to Mr. G. A. Scappa, for a set of six drawings and description of a design for a church to contain 1,500 persons, without any detached columns or piers, the Soane Medallion. The successful competitor, if he go abroad within three years after receiving the Medallion, will be entitled to the sum of 50*l.* at the end of one year's absence, on sending satisfactory evidence of his progress and studies. The competition for the Soane Medallion is open to all members of the profession under the age of thirty years,—to Mr. R. P. Spiers, for a set of three drawings of a design for a sculpture gallery, the President Mr. Tite's prize of ten guineas; to this the Institute has added a Medal of Merit,—to Mr. T. H. Watson, for a set of three drawings of a design for an isacoustic music-hall to hold 3,000 persons, the Institute has awarded a Medal of Merit; to this the President, Mr. Tite, has added the sum of five guineas,—to Mr. R. H. Carpenter, for a set of six drawings of a design for a railway-station, F. E. Scott's prize of ten guineas.

STATISTICAL.—*March 17.*—J. Heywood, Esq. in the chair.—J. Lambert, Esq. was elected a Fellow.—Mr. Walford read a paper 'On the Recent Financial and Taxation Statistics of the United States.' After alluding to the wonderful progress of the United States during the eighty years of its existence, Mr. Walford proceeded to an examination of some of the statistical proofs of that remarkable development of material greatness. In 1790, the population of the United States consisted of 3,929,827 persons; in 1860, they contained a population of 31,429,891. This was an increase of about 28,000,000, or more than double that of Great Britain in the same period of time. The increase in the population of the United States is not so much the result of immigration as is generally believed. During the last forty years the total migration to the States was 4,908,321; the increase in the population, in the same period, was 21,000,000. The annual value of the manufactures in 1790 was 1,120,000*l.*; in 1860, their value had increased to 400,000,000*l.* Eighty years ago, the tonnage of the United States was under 200,000 tons; in 1860, it was upwards of 5,000,000 tons. The annual value of the imports into the United States increased from 4,600,000*l.* in 1790 to 72,432,000*l.* in 1860; the exports, from 4,000,000*l.* in the former year to 80,000,000*l.* in the latter. The three great staples of the United States export trade are bread-stuffs, cotton and tobacco. Of these the first increased in value from 2,468,000*l.* in 1821 to 9,000,000*l.* in 1860, and to 18,970,000*l.* in 1861; cotton, from 4,000,000*l.* in 1821 to 38,361,000*l.* in 1860, with a decline to 6,800,000*l.* in 1861; and tobacco, from 1,000,000*l.* in 1821 to 3,000,000*l.* in 1860, with a fall to 2,750,000*l.*

in 1861. Eighty years ago, the banking capital was less than 600,000*l.* In 1860, there were 1,601 banks in the United States, with an aggregate paid-up capital of 203,172,000*l.* The note circulation of the United States banks in 1861 was 40,401,000*l.*; that of the United Kingdom in the same year was 38,861,000*l.* The total amount of the precious metals coined at the United States Mint in seventy-nine years was—gold, 133,730,000*l.*; silver, 25,627,000*l.*; total, 159,358,000*l.* sterling. Mr. Walford also detailed the remarkable progress of the United States in real and personal property, in agriculture, in railway and postal communication, and in the development of the electric telegraph. This concluded the first section of Mr. Walford's paper. The second section was devoted to the financial history of the United States, and the third to a critical examination of its present financial legislation and policy. The total income of the United States in 1792 was 1,748,000*l.*, of which 733,000*l.* was revenue, the rest being raised by loans. In 1860, the total income was 15,368,000*l.*, of which upwards of 11,000,000*l.* was revenue. The sources of revenue are officially classed as follows: 1, Customs; 2, Sales of Public Lands; 3, Miscellaneous. The first Customs tariff came into operation on the 4th of July, 1789, since which date it has constantly varied. The revenue from Customs has advanced from 688,000*l.* in 1792 to upwards of 10,000,000*l.* in 1860. The principal articles upon which duties are levied are woolen, cotton and hempen goods, iron and iron manufactures, sugar, hemp, salt and coals. In 1785 the price of the public lands was fixed at a dollar an acre; but this price was increased to two dollars in 1796, in which year the revenue from land sales was only 967*l.* In the year 1840 the receipts from this source were 658,000*l.*, in 1861 they were 174,000*l.* In a period of sixty-six years the total receipts from land sales were 35,000,000*l.* The number of acres sold down to the end of 1860 was 153,928,547. The land remaining unsold at that time comprised upwards of 1,000,000,000 of acres, or eleven times the area of Great Britain. The miscellaneous revenue of which no details are given varied from 45,000*l.* in 1792 to 219,700*l.* in 1860. The public expenditure of the United States is classified under the heads of Civil List, Department of the Interior, War Department, Navy Department and the Public Debt. The total expenditure in 1792 was 375,580*l.*, in 1861 it was 12,071,000*l.* The Civil List expenditure was 1,298,000*l.* in 1841, in 1860 it was 6,385,000*l.*, in 1861, 4,637,000*l.* Passing over the expenditure of the interior, which amounted to 752,000*l.* in the year 1860-61, Mr. Walford stated that the War Department expenditure does not appear to have been officially published until 1841. In that year the sum of 2,740,000*l.* was allotted to the War Department, in 1860, 3,281,000*l.*, and in 1861, 4,596,000*l.* A summary of the War Department expenditure by Presidential periods gave some instructive results. In the period 1841-4 under President Harrison, the actual expenditure of the War Department was 7,056,000*l.*; in 1845-8, under Polk, it was 18,442,000*l.*; in 1849-52, under Taylor, it fell to 11,000,000*l.*; in 1853-6, under Pierce, it rose to 13,908,000*l.*; in 1857-60, under Buchanan, to 20,112,000*l.*; and in the two years 1861-3, under Lincoln, to 228,345,000*l.* sterling. The records of the Navy, which also appear to commence in 1841, show an expenditure of 1,200,000*l.* in that year, with a gradual increase to 2,485,700*l.* in the year 1861. Some of the details of the Navy expenditure for this latter year are very curious. Amongst them are the following items:—"For six steam frigates 38,568*l.* (or 6,426*l.* each), for five sloops of war 25,649*l.* (or 5,129*l.* each), for seven steam screw sloops and one side-wheel steamer, 12,602*l.* (or 1,575*l.* each), and for seven steam sloops of war, second class, 5,116*l.* (or 730*l.* each)."

ZOOLOGICAL.—*March 24.*—W. H. Flower, Esq., in the chair.—Mr. J. K. Lord pointed out the character of a new Musk Rat, and of a new species of *Lagomys* from British Columbia. For these animals he proposed the names *Fiber oojooensis* and *Lagomys minimus*.—A communication was read from Mr. R. Swinhoe, 'On some New Birds

from China,' being chiefly Eastern representatives of various genera of Insectores belonging to the Fauna of Europe.—A paper was read by Mr. G. Kroft, 'On a New Snake of the genus *Hoplocephalus*, from the neighbourhood of Sydney, Australia,' for which he proposed the name *Hoplocephalus carinatus*, from its having keeled scales.—Mr. F. Buckland made a further Report on the progress of the development of the fishes hatched in the tanks at the Society's Gardens.—Dr. P. L. Sclater pointed out the characters of the different known species of the American Spine-tailed Swifts of the genus *Chaetura*, and exhibited on behalf of Mr. B. Leadbeater the Head of a Musk-ox, *Oribos moschatus*.—Dr. J. E. Gray gave a notice of a new species of Chameleon from Chartoum, discovered by Mr. J. Petherick, for which he proposed the name *Chamaleo levigatus*, and of the so-called Chauco or Golden Wolf of Chinese Tartary, which he considered as probably undescribed.—Col. P. Stewart made some remarks on a species of Goat and Sheep met with by him during his travels through Persia.—Mr. A. R. Wallace made some observations on a Hornbill living in the Society's Gardens, which he believed to be a species of (*Buceros*) *Hydrocissa pica*, artificially coloured.

INSTITUTION OF CIVIL ENGINEERS.—*Feb. 17.*—J. Hawkshaw, Esq., President, in the chair.—The discussion upon the two papers, 'On the Drainage of Dundee,' by Mr. J. Fulton, and 'On the Sewerage of Newport, Monmouthshire,' by Mr. A. Williams, occupied the whole of the evening.

March 24.—J. Hawkshaw, Esq., President, in the chair.—'Description of the Lydgate and of the Buckhorn Weston Railway Tunnels,' by Mr. J. G. Fraser.—'Public Works in Pernambuco, in the Empire of Brazil,' by Mr. W. M. Peniston.

SOCIETY OF ARTS.—*March 18.*—T. Hankey, Esq., in the chair.—The paper read was 'On the Suppression and Extinction of Fires,' by Mr. C. B. King.

MEETINGS FOR THE ENSUING WEEK.

- MON. Actuaries, 7.—'Carlisle, Government, Registrar-General's and other Tables of Mortality,' Mr. Jardine Henry.
- TUES. Horticultural, 12.—'Floral Committee.'
- WED. Engineers, 8.—'Structures on the Sea, &c.,' Mr. Miller.
- THURS. Geological, 8.—'Recent Changes in Delta of Ganges,' Mr. Ferguson.
- FRIDAY. Linnæan, 8.—'Physiology of Spiders,' Mr. Blackwall; 'Nidulidæ,' Mr. Murray; 'Monstrosity in Passiflora,' Dr. Sailer.
- SAT. Chemical, 8.
- SUN. Philological, 8.

FINE ARTS

ARCHITECTURAL EXHIBITION.

GOthic works predominate in this year's collection. There is the massive and economical Gothic in brick, with sparingly employed stone dressings and sparse carvings, that eschews lofty steeples and flying buttresses, that delights in round-headed windows, splayed openings, semi-circular apses and plate tracery. The most able producer of examples of this character is Mr. G. E. Street, whom we may congratulate upon having set something like a fashion. Many reproduce the elementary thoughts of the architect named, but others are evidently free and powerful in the same path of Art. A good deal of the character referred to as marking this collection is derived from the presence of several designs submitted for the *Cathedral of St. Finn Bar, Cork*, in competition, and for which the sum of 15,000*l.* was expected to produce a full-blown cathedral, with chapter-house, towers and all appurtenances to match, being rather less than a fourth of the cost of the *lantern* (octagon) of Ely in 1342. Under these circumstances, no wonder the competitors took that style which promised to give most for their money. Nevertheless, the successful design by Mr. Burgee, which is a remarkably noble and valuable work, does not so strictly comply with the conditions of the style in question. It must be highly gratifying to lovers of Art to see so many fine designs as are here shown for works of this class, *i. e.* large churches of grand and grave character suited for modern uses. Of about a dozen not one but has more or less excellence; some are

indeed admirable, and need not shame their authors because neglected for the work of Mr. Burgee.

Among the few designs here that have not a Gothic character, the best, and on the whole one of the best Italian works we have seen of modern production, is that for the great *Langham Hotel*, by Mr. J. Giles (34); a very grand and nobly massed composition of two piles of building, parallelograms in plan, standing at right angles to each other, and so that the interval between them in plan is filled by a minor square mass, carried loftier than their roofs, and emphasized so as to become a tower of great size and dignity. The surface of this design which is to be carried out, is well broken yet not at all frittered away by useless ornamentation or costly sculpture. As a work of Art, this is as far superior to the *Grosvenor Hotel* as that is to Buckingham Palace. Its light and shade dispositions are admirable. *The Restoration of Breamore House* (16), by Mr. A. Smith, an Elizabethan structure, or it may be Jacobian of the best time, has been very happy. This shows, however, how rigidly the beauty and dignity of these great country-houses depend and depended upon their whole structure being organic, so to say, the masses forming on the preconceived functions of the edifice, and not, as in modern imitations, being disposed for insignificant effect only. Effect should come, and not be made.

We find here a good many examples of the industry of our travelled students and architects, in collections of careful sketches and studies. Very noteworthy are those by Mr. F. T. Rogers (124), made in Normandy and elsewhere,—see those particularly from *St. Etienne, at Caen*, and at *Lisieux*. Note also those made on the spot at home by Mr. W. Paris, from *St. Mary Overie*, (St. Saviour's) *Southwark*. Of original designs for minor matters, especially those domestic, let us commend the many examples sent by Mr. E. B. Lamb (160, &c.), for cottages, stables, houses, &c. These are exceedingly good in their way,—a very valuable way: the stables, in No. 160, with their broad-eaved roof and louvres above the centre of its pyramid, is capital; the massing of the cottages, in the same frame, is commendable. Best of these is the Rectory House, which has simple yet varied surfaces and breadth of treatment not often given.

The series of photographs (160), from Mr. G. G. Scott's details for *Kelham Hall*, show ornament judiciously applied. The recessed and shafted windows and arched courtyard are excellent, and characteristic of the architect's style. The caps on the polished marble shafts of the first, which are coupled, do not seem in a good style; the string-course, richly carved, which accompanies these, is beautiful, although a minor feature. Mr. Lamb's study from the beautiful *Porch of West Hartlepool Church* (174) shows a most admirable work neglected, but worthy of deep consideration in its simple, solid, grave richness. Its separated thin lines of mouldings, splendidly wrought, carried to the ground are perfectly placed. This example reminds the student in many points of that very valuable branch of Gothic Art which prevailed in Scotland at the end of the fourteenth century. A *Ball-room*, by the same, for *Knole House, Kent* (175), with an open timber roof, very flat, is noteworthy for successful treatment in Jacobian manner, or like it. The wall decorations do not please us; as somewhat out of keeping.

In frame 221 is a series of works by Mr. G. Truefitt, comprising shops, schools, temporary lecture-halls of great size, churches, obelisks, lamp-posts, tombs, coffers, and what not, constructed in various parts of England. Nearly all of these are commendable, more so than a badly-executed drawing would suggest. Near it is Mr. T. E. Knight's very creditable *West Ham Schools* (304),—also (277) sixteen studies of Medieval architecture in Italy and Sicily, by Mr. M. D. Wyatt, excellently drawn and chosen. Mr. G. Jones's *Garden Front of No. 3, Kensington Palace Gardens* (333) very narrowly misses, owing to extra flatness, being an exceedingly fine work by its quiet elegance and grace of proportion.

FINE-ART GOSSIP.—Mr. Foley's model for the statue to the late Sir C. Barry is completed, and

represents him holding, with the left hand, a drawing-board nearly upright upon his knee, the right hand has a pencil loosely grasped, and hangs down easily.

Mr. Woolner has been commissioned to execute a colossal statue in bronze of the late W. Godley, founder of the Canterbury Settlement, New Zealand; to be erected in the centre of the Cathedral Square, Christchurch, New Zealand.

At the French Gallery, Pall Mall, will be found a collection of photographic portraits and other subjects, which from their great size, in the former class that of life and in some cases larger, are of extraordinary interest. The producer and exhibitor of these is M. Ghémar, photographic artist to the King of the Belgians. They represent an application of photography whereby examples have been enlarged from *cartes de visite*, &c., with perfect success and remarkably good effect. One of King Leopold, life-size and to the knees, is really astonishing in reproduction of character and expression. Others represent Queen Victoria, the Princess of Wales, a charming portrait, the same and the Prince of Wales in different poses, the Princes and Princesses of the English, Danish, and Belgian Royal Families. Also, a few studies of domestic character, agricultural and architectural views. Of the last, the Cathedral of Tournay is given on paper or canvas, about the size of a kit-cat, without the slightest deviation in perspective, the vertical lines of the towers being perfectly true, which has, we believe, never before been done on a large scale in photography. M. Ghémar produces faint impressions, of any size, of such examples as the above upon paper, canvas, or other substance, suitable for painting by hand, either in oil or water, so that a portrait of unquestionable accuracy is obtained. Several specimens of this class, finished by hand in chalk, are equal to the finest drawings we have seen.

At No. 68, Newman Street, Oxford Street, will be found an exhibition of small models in coloured clay, illustrating life and costumes in Mexico. Many years ago, such draped statuettes as these were rife, but we do not remember to have seen such of late. As representations of national peculiarities, these things are not without interest.

The Exhibition of the Institute of Painters in Water Colours,—such being the title by which the late New Society of Painters in Water Colours is to be known in future,—will open on Monday, the 20th of April. The private view will be on the 18th. Pictures are to be sent in on Tuesday, the 7th of that month, such being the works of Members and Associates only.

Mr. Hook will probably contribute to the Royal Academy some pictures, the subjects of which have been studied amongst the Scilly Islanders. One is styled 'Low Tide,' representing sailors mending their nets and their boat, that lies upon the beach. A woman, the wife of one of the men, approaches, bearing a basket of provisions—knits as she walks, but has left off doing so to attend to a child who has fallen beside her. Another work is styled 'The Sailor's Wedding'; the scene is the sea-shore; a steep bank rises up therefrom; the bride and bridegroom are walking together; an old man is creeping up the bank; about, are seen preparations for a holiday. A boy slinging stones is another subject.

Mr. Leighton will probably contribute to the Royal Academy the following pictures:—1. A Lady, upon a garden terrace, feeding peacocks, two of which, white and green, stand, gloriously feathered, by her side and at her feet.—2. A Cross-bowman, standing with his hands upon the arc of his weapon; his costume is that of Italy in the fourteenth century; he may be imagined one of the defenders of the city who has the death of one he loved to revenge: this is suggested by a perished human hand nailed to the wall behind him, and his stern countenance.—3. Herod's Daughter, dancing, a young girl performing one of those Oriental dances, the slow motions and voluptuous grace of which are and have been so powerful to fascinate; she has raised herself upon her feet, and, with arms elegantly waved above her sideway-lolling head, bends her lithe form with a slowly-

swaying motion, that seems like floating in air. Behind, a dark female musician clashes the time upon cymbals.—4. A Samian Girl, bearing upon her head a basket, of Ionian shape, filled with fruit; the effect is broad, soft sunlight casting delicate shadows upon her face and form: a study of facial beauty, colour and light.—5. A very large picture, representing Ahab and Jezebel meeting Elijah at the door of Naboth's vineyard; the prophet stands in the doorway, the King and Queen recoil before him.

The Sessional Papers of the Institute of British Architects, now before us, contain some valuable contributions to our architectural library, the most remarkable being Mr. Street's account of the singular Church of St. Michael, Penkevel, Cornwall. Also a paper by Mr. M. Walcott on the Conventual Arrangements of Canterbury; this is a very interesting contribution, containing many curious illustrations of manners, and an acutely studied disquisition on the cathedral and monastic buildings. Mr. Walcott has engraved the plan, or bird's-eye view, of the buildings made by Eadwyn the Monk before the fire in 1174—a curious treasure. Mr. Parker's paper 'On the Abbey Churches at Caen' has claims to interest. We should suggest to Messrs. Parker and Walcott some of our minor cathedrals as excellent subjects; for instance, by and by, when Worcester Cathedral has been pulled down or "scraped" away, the Dean and Chapter will be grateful to them for relating when the Deanery Hall went, how the Guesten Hall was fought for in vain, where stood the School Hall or Refectory, where were Wulstan's crypt, the choir, the tombs, the tower.—We are glad to see these excellent papers published in a suitable manner, so that they are made generally accessible.

A statue to the memory of King William the Fourth of Prussia is to be placed on the bridge over the Rhine at Cologne. It is to be of bronze, equestrian, of extraordinary size, from the designs of Prof. Blaser, of Berlin, and to form a pendant to that of the present King of Prussia, now preparing by Prof. Drake.

The pictures of the Belgian School, which so nobly sustained the historical glory of Flanders in Art, at the International Exhibition, have been re-exhibited as a whole, at Brussels.

MUSIC AND THE DRAMA

SACRED HARMONIC SOCIETY, Exeter Hall.—Conductor, Mr. COSTA.—ON WEDNESDAY NEXT, April 1, the usual Passion Week performance of Handel's 'MESSIAH.' Principal Vocalists:—Miss Louisa Pyne, Madame Sainton-Dolby, Mr. Henry Haigh, and Mr. Weiss. The Band and Chorus, on the most extensive scale available in Exeter Hall, will consist of (including 16 double basses) nearly 700 performers.—Tickets, 3s., 5s., and 10s. 6d. each. The Offices of the Society are at No. 4, Exeter Hall.

ST. JAMES'S HALL.—Mr. WILBYE COOPER'S GRAND CONCERT, WEDNESDAY EVENING, April 8.—Vocalists: Mdlle. Parepa, Madame Weiss, Miss Marian Moss, Miss Clara Fraser, Miss Messout, Mdlle. Lancin, Miss Eleonora Wilkinson, Miss Poole, Mrs. Lockey, Madame Baxter, Miss Palmer, Madame Sainton-Dolby; Mr. Sims Reeves, Mr. Wilbye Cooper, Mr. George Perren, Mr. John Morgan, Mr. Santley, Mr. Wynn, Mr. Weiss, Mr. Lewis Thomas. The West London Glee and Madrigal Society and the Orpheus Glee Union. Solo Instrumentalists: M. Sainton, Signor Giulio Regondi, Signor Pezze, Mr. Lazarus, The Brothers Booth, Mr. Apollonias, Signor Andreoli, Mdlle. Michelin (Conservatoire de Paris). Conductors: Mr. Benedict, Herr Wilhelm Gann, Mr. J. L. Hatton, Mr. Hargitt, Mr. Frank Mori, Mr. G. B. Allen.—Stalls, 10s. 6d. and 5s.; Balcony, 3s.; Area, 2s.; Admission, 1s.—Tickets at Addison & Lucas's, 210, Regent Street; Lonsdale's, 28, Old Bond Street; Austin's, 38, Piccadilly; and all Music-sellers.

MR. DEACON begs to announce that he will give THREE SÉANCES OF CLASSICAL INSTRUMENTAL MUSIC, at 16, Grosvenor Street (by the kind permission of Messrs. Collard), on MONDAYS, April 7th, May 11th, and June 8th, to commence at Three o'clock. Full particulars will be duly announced.—77, Welbeck Street, Cavendish Square.

EWER & CO. beg to announce, that they will give TWO MORNING CONCERTS, at the Hanover Square Rooms, on TUESDAYS, May 5 and June 2, in order to introduce to the Subscribers of their Musical Library the latest and most important Compositions of Chamber Music. Subscribers will receive invitations.—Tickets to Non-Subscribers, Half-Guinea each. Programmes will be shortly published.—Ewer & Co.'s Musical Library, 87, Regent Street, London.

CONCERTS OF THE WEEK.—'St. Paul,' given yesterday week, as announced, was the four hundred and thirty-ninth sign of prosperity shown by the Sacred Harmonic Society, now, in the essentials of execution, confessedly the leading body of its kind in Europe. The Oratorio itself stands less high in our favour than most other of Mendelssohn's sacred works. In spite of the celestial burial chorus,

and the airs 'Jerusalem' and 'Be thou faithful unto death'—we too rarely escape from the impression of scientific solicitude, showing that the writer had not altogether thrown off the trammels of scholarship. Till this can be done, there will be always too much chance of elaboration superseding idea. 'St. Paul' is eminently a transition work. This opinion is distasteful, we are aware, to Mendelssohn's congregation, who had become fickle and disposed to worship at new shrines before he died, and who, therefore, defend their inconstancy by maintaining, that the early works of a man whose genius ripened hour by hour were the best. We repeat this conviction and its illustrations for more than one purpose. The duty, however, which is most pressing is to represent to the *Sacred Harmonic Society* that in thus going the round of a few composers, it is not merely discouraging anything like new attempts among artists, not merely encouraging bigotry to go hand-in-hand with taste among its audiences, but sowing within its own borders the seeds of decay. Is there no example to be learnt from the proceedings of the once-famed *Philharmonic Society*, and the manner in which it has slidden out of European consideration? The truth cannot be disguised, that the difficulties in finding great *solo* singers become greater and greater—the more need is there, then, for trying by the administering of fresh interest to turn the attention of the public into unfamiliar channels. Mr. G. Perren, who is at last getting his chance (and not before it has been deserved, as every one acquainted with his singing in Roman Catholic choirs must attest), was the tenor; the schism betwixt the Society and Mr. Sims Reeves being obviously for the hour complete. Mr. Weiss was the *basso*: the *soprano* was Madame Rudersdorff, the *contralto* Madame Sainton-Dolby.

The charm of Mozart's name filled St. James's Hall at Monday's *Popular Concert*. The pieces selected were the Clarinet Quintet in A major,—what might be fancifully called the trumpet *solo Sonata* in D major,—a Pianoforte and Violin Duett in A major,—and the Clarinet, Viola and Pianoforte Trio in E major. The principal performers were M. Halle, Sainton, Piatti, and Mr. Lazarus. Surely on works so lovely and well-known, played by artists so notoriously excellent, no criticism is needed, save from those whose office it is to write primers for the rising generation. Miss Robertine Henderson gave a song by Schubert extremely firmly and well: her phrasing is better than that of the generality of ladies so comparatively inexperienced. Mr. Wilbye Cooper sang a mountain song by M. Meyerbeer, with clarinet *obbligato*, showing his good qualities of grace and ingenuity in combination, and his less good quality of harassed modulations—and later (with an *encore*) an elegant ballad "The Shades of Evening close around," by our young amateur composer Mr. F. Clay. Nothing better of its kind has been given out during the past twelve months.

Signor Nappi gave a benefit concert in the Italian style on Tuesday evening.

NEW ADELPHI.—A second version of Miss Braddon's 'Aurora Floyd' has been produced here. The compilation and arrangement of the materials have been accomplished by Mr. Benjamin Webster, jun., who has bestowed on his task an extraordinary amount of thought and skill. According to stage-exigency, he has both followed and altered the story, and modified or combined the characters. His purpose was to construct out of the novel one of those colossal dramas known as Adelphi pieces, with the striking effects to which Adelphi audiences have been long accustomed. The result is a powerful drama covering an indefinite extent of time, and occupying nearly four hours in the performance. It is divided into four parts,—that is, a prologue and three acts. What most strikes us in the prologue is, that we have the dog-fancier identified with the stable-help, and the simple idea of the latter, as a man with a soft brain and limited experience, associated with a natural cunning, converted into a complex characterization, which includes the notion of a returned convict entering into a compact with the jockey, James Conyers, to

take advantage of the peculiar situation of Aurora Floyd. Of this mere arbitrary stage-combination, Mr. Webster constructs an elaborate part, full of minute details, illustrative of the class of life to which *Steeve Hargreaves*, according to this modified view, is supposed to belong. It is a piece of character—unlike, high above anything in the novel,—and wholly a creation of Mr. Webster's brain. There are few things on the stage to compare with this strange creation. In the remaining three acts, the character that becomes prominent is that of *John Mellish*, which is realized by Mr. Billington in a style so effective that this eccentric individual becomes the legitimate hero of the drama. We use the word "individual" purposely:—for the part is, by the actor, and in the intention of the adapter, *individualized* in the strictest sense of the term; and the uxorious Yorkshire squire, not only fond, but proud of being hen-pecked by a wife who possesses the business habits in which he is deficient, is drawn with a fidelity to nature that does credit to the author and the actor. *Aurora Floyd* herself is rather boisterously represented by Miss Avonia Jones; but she is distinctly and dramatically delineated. The secret that preys upon her acts as an irritant, and displays itself in violent moods and occasional ill temper, indicative of a disturbed mental state. She is made to horse-whip *Steeve* on the stage, and to rate *Mrs. Powell* (a character well conceived and executed by Mrs. Billington) with a characteristic disregard of prudence. To her, also, the adapter has appropriated the final tableau; for it is she who struggles with the murderer, and, at the peril of her life, regains the notes that prove the villain's guilt. We have now, we think, given the reader a notion of the outline of the piece. In the filling-up there are faults. The dialogue is too abundant; but the piece has also the merit of presenting to the eye some details which are better seen than heard of, and which are too frequently, in modern drama, kept in the background. The scenic illustrations, too, are many, and very complete; and of the general excellence of the acting there can be no doubt.

OLYMPIC.—'Taming the Truant' is the title of a new drama produced here, by Mr. Horace Wigan, who refers us to the 'Papillon' of M. Victorien Sardou as the original, which he has thus adapted to the English stage. The incidents are little in accordance with our manners, and the success of the piece is in a great measure due to the actors, who take great pains in the performance. The "Truant" is a husband whose rakish disposition is "tamed" by the operation of cold and hunger, and who is taught, by the want of a dinner, the advantage of being faithful to his marital obligations. *Mr. Flutter* (Mr. H. Neville) has suffered his wife (Miss Latimer) to reside in a cottage *ornée* at Great Marlow, without having once visited the place; meanwhile amusing himself with looking from the window of his Club at the fair women in the streets. One of these attracts him, and he follows her in a cab to the railway, and enters the carriage with her, believing her to be an Italian Countess. Here he makes the acquaintance of her supposed lady's maid, but who is really his wife's aunt, and who pretends to make an assignation for her mistress with him in an avenue of poplars where he is to await her arrival. The avenue is, in fact, the approach to his wife's villa, and here the supposed Countess's attendant meets him, but insists on his being blindfolded before she will conduct him to her mistress. By leading him from room to room several times, she causes him to believe that he has traversed a considerable distance; but at length he grasps the hand of a lady, who is his wife, but whom he supposes to be the Countess. An appeal is then made to his conscience, by the suggestion that his own wife may be granting a similar interview to a stranger; and he is further troubled by the arrival of the Italian lady's supposed Corsican husband. He is glad to take refuge again in the avenue; and, as the season is winter, he suffers unpleasantly from the severity of the weather, as well as of hunger. In due time, he is re-admitted, and the whole affair explained to him, when he acknowledges the justness of his correction and promises reform. Mr. Neville and

Miss Hughes, as the husband and aunt, performed their parts with peculiar brilliancy and vivacity, and thus won the approbation of the audience to the new drama.

HAYMARKET.—Mr. Sothorn has appeared in a new character,—that of *Captain Walter Maydenblush* in 'The Little Treasure,' which has been selected for the *début* of Miss Ellen Terry in the character of *Gertrude*. The lady, who is young, but intelligent and pretty, was successful; and Mr. Sothorn threw so much eccentric humour into his delineation of the modest Captain, that the house was provoked into more than ordinary merriment by his peculiar manner of acting the part. Mr. Sothorn's engagement will terminate next Wednesday, when his benefit is announced to take place.

MUSICAL AND DRAMATIC GOSSIP.—Mr. Gye's programme is not one to be briefly dismissed, as being voluminous; and if somewhat strange, as times go, possibly as satisfactory as could be expected. The principal operas undertaken for are Signor Verdi's 'La Forza del Destino' (in which there may be matter of dispute with his rival),—'Fra Diavolo,' for Signor Mario and Mdlle. Patti, whose recent Continental triumphs are announced in too florid a fashion for good taste,—also, for her, 'La Figlia,' and 'La Gazza Ladra,'—'L'Elisir,'—'Roberto,' to introduce M. Obin as *Bertram*,—'Don Pasquale,' with Signor Ronconi,—'Stradella,' in which, as has been mentioned, M. Naudin will appear,—'Guillaume Tell' (with Signor Caffieri, a new tenor, as *Arnoldo*),—'Lucia' (with Signor Feresini, another new tenor),—'Otello' (with Signora Elvira Demi)—the last-named three announcements equivalent to trial of three strangers aspiring to first class honours,—'Orfeo,' with Madame Didiée,—'Les Huguenots,' with Mdlle. Pauline Lucca as *Valentine*,—and a revival of 'L'Étoile' (the run of which was interrupted by the burning of the old theatre), with Madame Miolan-Carvalho as the heroine. Mdlle. Fioretti is to make her *début* in 'I Puritani.' Madame Penco does not return, at which we are not afflicted; neither, we are happy to say, Madame Csillag. Mdlle. Fricki does; and will adventure herself in the arduous part of *Norma*. Mdlle. Battu returns, and Madame Rudersdorff, whose available value is considerable. Another new lady or two are announced. We have named three new principal tenors who will appear, besides the known favourites, Signori Mario and Tamberlik. Signori Ronconi and Graziani return, that excellent artist, M. Faure; and in addition to M. Obin, Herr Formes (!), Signor Tagliafico, M. Zelger and Signor Ciampi. The above list is liberal enough as to quantity, it will be owned; though not rich in the *contralto* department. Let us hope that some of the new comers will strengthen a company, already including so many excellent artists, by giving us a new tragic lady.

The prospectus of a new vocal society has been laid before us. It is to consist exclusively of male singers, and to be conducted by Herr Meyer Lütz. The number intended to be gathered is fourscore. There are to be constant rehearsals, and three public concerts late in the season, with objects which the promoters themselves shall state:—"Among the musical societies of London, there is at present no one that devotes undivided attention to music for male voices alone. There are many very beautiful compositions of this description, both native and foreign, yet the masterpieces of the English glee writers, it is believed, have never before been interpreted by so large a body of trained voices as is here proposed, neither have the part-songs of Germany ever been similarly presented to a London audience, except by the Cologne Choir; and from the scope thus to be afforded excellent results are anticipated." In the above there appears some want of precision in view and in statement. The analogy between the male English glee and the German part-song is not close. The first was rarely intended to be sung by numbers, the latter always so. The English counter-tenor voice, of late years largely replaced by the female *contralto*, is not wholly equal to the duties demanded of a German first

tenor; the former being, of necessity, delicate, affected, and deficient in power; whereas the latter, on the contrary, is nothing if not robust. Each of the two styles of music thus expresses a nationality of its own, and with it a physical inequality in the distribution of executive powers which can only be evaded, at best concealed—by those not possessing them never heartily and thoroughly overcome. Wishing well to every enterprise honourably undertaken, with the view of widening our musical pleasures, we submit the above remarks as so many counsels and cautions, not discouragements.

In the address circulated at the close of the English Opera season this day week, it was announced that the next will be the last season of Miss L. Pyne and Mr. Harrison's lesseeship of Covent Garden Theatre.

Miss Augusta Thomson, who has been for some time missing, having disappeared from London at the moment when she was beginning to be of value and to excite interest, has "turned up," we perceive, at the *Bouffes Parisiens* in Paris;—by which it would seem as if she intends to work out her career in foreign opera.

The *Gazette Musicale* states that M. Villaret, the new tenor mentioned last week, was entirely successful on his first appearance at the Grand Opéra, as *Arnold* in 'Guillaume Tell.'—M. Léon Duprez is forthwith to appear at the Théâtre Lyrique, in the French arrangement of Mozart's 'Così.'

It is understood that Herr Joachim has abandoned his known intention of resigning his Concert-Mastership at Hanover, which he will retain, with liberal permission to travel.—That excellent musician and meritorious singer, M. Jules Stockhausen, has been appointed Director of the Philharmonic Concerts of Hamburg.

The one positive satisfactory piece of operatic news which arrives from Germany is the effect produced at Carlsruhe by Herr Abert's 'King Enzo,' a work we hope to meet abroad, if not at home.—Herr Wagner is going, we read, to St. Petersburg; so that his 'Tristan und Isolde' would seem to have met the same fate at Vienna as elsewhere—that of having a run of some months, as the 'Prova d'un Opera Seria'—of rehearsals behind the curtain—not to be followed by any performance.

'Beatrice di Portogallo,' a new opera by M. Novaynko, has been given at Oporto, with immense success.

A new comic operetta, 'The Sergeant of Ouis-treham,' with music by M. Caron, has been produced at Rouen.

The world makes progress in delicacy. One Signor Dasti has been giving a comedy at Turin with the title 'Rosini a Napoli.' Are we next to have 'Mdlle. Lind in America,' or 'Liszt (with his sword by his side) in Hungary'?

"In the *Allgemeine Musikalische Zeitung*," writes our Leipzig Correspondent, "is a communication by Herr Jahn, in which he alludes to the tale, brought forward in connexion with the 'Requiem' (since the first history of its mysterious origin had somewhat fallen into discredit), of a certain gentleman having attempted to murder his wife, and afterwards having committed suicide in a fit of furious jealousy, caused by a supposed intimacy between his wife and Mozart. A document has been found in the Registry of the *Landesgericht* at Vienna, from which it appears that Herr Franz Hofdemel, the gentleman in question, *Kanzlist* in the Imperial Supreme *Justizstelle*, destroyed himself in his dwelling on the 10th of December, 1791. There is also the nurse's receipt for 120 florins, for attendance upon Frau 'Hofdemelin'; and, further, a petition from the widow for compensation from her husband's heirs on account of the permanent injury and disfigurement she had suffered. She claimed 1,000 florins, but received 550. She went to Brinn, and on the 10th of May was delivered of a son. Whether there were any grounds for Hofdemel's suspicions it is now impossible to decide, but the fact that the attempted murder and the suicide did not occur till five days after Mozart's death is not in their favour. It is remarkable that Beethoven, as Czerny related to Jahn, had refused to play before Frau Hofdemel on account of her alleged 'affair' with Mozart. That

there was an acquaintance between Mozart and Hofdemel is proved by a promissory note for 100 florins, dated the 2nd of April, 1789, drawn by the former in favour of the latter.—Though I have more to detail ere I wind up my reports of our Leipzig musical doings for the season, I will not wait to tell that the last *Gewandhaus* Concert was very interesting. All French music—Catel, Lully, Rode, Rameau, Boieldieu, Méhul, Grétry, Berlioz, Lesueur, were represented; and, besides, there were two most charming popular songs of the seventeenth century. A.—Here, again, is matter for regret; since, we fear, there is small present hope of its being considered as matter of imitation. The *Allgemeine Musikalische Zeitung* confirms the testimony of our Correspondent as to the great interest of this French Orchestral Concert; and this journal testified to the delicate and rare pleasure which English ears have found in the pianoforte pieces of Rameau, Couperin, Mondonville, when the same are artistically handled by Herren Halle and Pauer,—in Lulli's sublime *Medusa* song, and the old-world "Brunettes" given with such power, elegance and archness by Madame Viardot. Why should little Leipzig do more than large London? What would our audiences make of a *suite* of French concerts, properly provided for, and prepared, say, by such a capital conductor as Herr Manns, who has an orchestra ready to hand? Would they stay away or cry "*Pshaw!*" and ask for 'Don Juan,' and the 'Jupiter Symphony,' and Mendelssohn's *Concerto* in G minor, and Beethoven's 'Moonlight *Sonata*'? Possibly not. The hint is, at all events, worth throwing out.

MISCELLANEA

Cathedral at Sydney.—A Correspondent at Sydney informs us that St. Andrew's Cathedral in that place—the first to be founded of English Colonial cathedrals, we believe—is not so far from completion as has been reported in this country. It is true, he says, that it was commenced twenty-five years ago; but that the walls and roof, excepting those of the tower, are not completed, is untrue. The interior fittings and the windows are not yet, however, wholly decided on; so the structure cannot have been brought into use, although a quarter of a century has elapsed since it was begun. Twenty-one years seem to have passed before the roof was put on. This long delay is averred not to have arisen through any supineness on the part of members of the Church of England in the colony, "but from the nature of the work itself requiring for those engaged upon the designs, and in the execution of them, careful study and ample time." This deliberation, although excessive, may be commended to subscribers for the "restorations" carried on at home. Here energetic architects and contractors undertake to scrape a whole cathedral inside and out, to rebuild, to pull down, to tear up and take away, to re-cut the carvings, re-glaze the windows, and add no end of gilding, brass-work and tiles, in one, or at most two years. At home, the subscriber soon gets his money's worth of this sort of work, and may soon walk into the old building made so smart that he hardly knows it again, and cannot find the seat where his own mother prayed. Such is British energy, that we have got a score of cathedrals "as good as new," while these benighted Antipodeans of ours deliberate about putting their roof on. More than 3,000l. have been provided for windows to St. Andrew's; these are to be mostly of the Memorial class. The east window, a memorial to Bishop Broughton, will contain the Passion, from the Last Supper to the Entombment, of Christ; the next window, the Apostles and their fellow-labourers: in the north choir-aisle, subjects from the birth and infancy of Our Lord; in the south choir-aisle, from the Ministry and after his Resurrection: in the nave, the Parables on one side, the Miracles on the other; in the north transept, the life of St. Andrew. The clerestory windows are left to be hereafter filled by individuals.

TO CORRESPONDENTS.—M. M.—M. R.—C. M.—J. R.—F. W. C.—received.

CRAMER, BEALE & WOOD'S
PIANOFORTE GALLERY, 207 and 208, Regent-street.

The largest in Europe.
Every Instrument may be relied on as at least equal to the description given of it. Inferior Instruments are carefully excluded from the stock.

Pianofortes by all the eminent English, Continental, and American Manufacturers, for Sale or Hire.

CRAMER'S ENGLISH PIANETTE,

29 Guineas.—Cramer & Co. manufacture this capital small instrument. It has all the requisites of the best Pianoforte check action, solid touch, agreeable tone. The case is of polished Ash or Pine. In practising on this Pianoforte the fingers of the player will be strengthened much more rapidly than on an old instrument, loose in the key, and worn in the hammer. In Rosewood, 36 Guineas; in Walnut, 24 Guineas.

Purchasers are particularly requested to observe that this Instrument has not the common or single action, but the double or check action; and that Cramer & Co. are the only manufacturers of it in England.

CRAMER'S DRAWING-ROOM COT-

TAGE.—Cramer & Co. manufacture a Cottage Pianoforte of the medium size, and of the very best description. The tone is full, pure, and vocal. The touch is agreeable, rapid, and effective. This beautiful Instrument has been produced with an elegance of design, quality of wood, and general substantiality which have gained for it universal approbation. No better Pianoforte of this class can possibly be made. In Rosewood, 38 Guineas; Walnut, 42 Guineas. 207 and 208, Regent-street.

CRAMER'S FULL-SIZED COTTAGE.

—Those who prefer an Instrument of larger appearance than the Drawing-room Cottage will find this a most desirable Pianoforte. The tone is very full and powerful, being equal to that of the smaller Erards. Price 60 Guineas in Rosewood; 65 Guineas, Walnut. 207 and 208, Regent-street.

CRAMER'S INDIAN PIANOFORTE.

—A superior COTTAGE PIANOFORTE, in solid Mahogany, with metallic bracing, and all other appliances necessary to resist the effect of extreme climates. Nothing has been left solely to the gluttony of the mechanism of the Instrument as well as the case has been secured throughout by screws. Unusual skill and attention have been bestowed upon the manufacture, and they have obtained the highest commendations for their excellent quality of tone as well as their durability.

Cramer & Co. deliver these Instruments f.o.b., packed in cases lined with zinc, at any home port, for 50 Guineas. Size: height, 3 feet 11 inches; width, 4 feet 4 inches; depth, 2 feet 14 inches. Pianoforte Gallery, 207 and 208, Regent-street, London.

CRAMER'S PIANO MÉCANIQUE,

manufactured by the inventor, M. Debain, of Paris, is an Instrument entitled to rank foremost among the triumphs achieved in the mechanical arts. Any one can play upon it. Price 55 Guineas. If with a Keyboard, enabling it to be used by a pianist like an ordinary pianoforte, 90 Guineas. The Instrument is very strongly made, and warranted to stand any change of climate. 207 and 208, Regent-street.

CRAMER'S HARMONIUMS, as manu-

factured by the inventor of the instrument, M. Debain, of Paris, received the Prize Medal and the very highest commendation. Their superiority has been incontestably maintained.

CRAMER, BEALE & WOOD.

CRAMER'S CHURCH HARMO-

NIUMS, with two rows of keys, as manufactured by M. Debain, the inventor of the Harmonium. Nothing can surpass these delightful instruments, either as regards solidity of workmanship or extreme beauty of tone. When united to the new Pedaller few organs of any ordinary size produce finer effects. Prices in Oak or Rosewood Cases, with knee action, 17 stops, 34 guineas; 21 stops, 38 guineas; 25 stops, percussion action, 41 guineas. 201, Regent-street, London.

CRAMER'S HARMONIUM PEDAL-

IER fitted for any instrument.—M. DEBAIN, the inventor of the Harmonium, has recently constructed a set of Pedals, producing a quality of tone similar to the Pedal Pipes of a large Organ. It is admirably adapted for the practice of Fugues, as well as general Organ Music of a high class. The compass is 3 octaves (C to E); there are three sets of vibrators and two stops—viz. Basse, 8 feet C, and Centre-basse, 16 and 32 feet C; price 37 guineas.

CRAMER'S CHEAPEST HARMO-

NIUM is DEBAIN'S beautiful small instrument in a Polished Oak Case, Price Six Guineas. Admirable tone, combined with the very best workmanship.—201, Regent-street, London.

CRAMER'S ANTIPHONEL, or Sub-

stitute for an organist or harmonium player (invented by M. Debain, of Paris), by which any one, even without a knowledge of music, can play by ear six tunes, psalms and chants. It is also adapted for the performance of overtures, quadrilles, waltzes, &c. It can easily be fitted to almost any existing organ or harmonium, and is not liable to derangement. Price Twelve Guineas. 207 and 208, Regent-street, London.

CRAMER'S CONCERTINAS.—PRIZE

MEDAL. Prices—2, 3, 4, 5, 6, 8, 10, 12, 16 and 18 guineas. 201, Regent-street.

CRAMER'S CORNETS, manufactured

by F. BESSON, the receiver of twenty-three medals. Cramer & Co. are now the sole Agents in London for the sale of F. Besson's well-known Brass Instruments. Estimates for Bands furnished. 201, Regent-street.

PROFESSOR HUXLEY'S NEW WORK.

Price 6s. 8vo. cloth, with 25 Woodcut Illustrations.

EVIDENCE as to MAN'S PLACE in NATURE; or, Essays on—

- I. THE NATURAL HISTORY OF THE MAN-LIKE APE.
- II. THE RELATIONS OF MAN TO THE LOWER ANIMALS.
- III. ON SOME FOSSIL REMAINS OF MAN.

By THOMAS HENRY HUXLEY, F.R.S.
Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

DR. DAVIDSON ON THE OLD TESTAMENT.

Now complete, in 2 vols. 8vo. with Index, price Two Guineas.

AN INTRODUCTION TO THE OLD TESTAMENT, Critical, Historical, and Theological; containing a Discussion of the most important Questions belonging to the several Books.

By SAMUEL DAVIDSON, D.D. LL.D.
"The conclusions at which he has arrived are the matured judgments of a vigorous, well-stored and unbiassed mind, anxious only to ascertain and declare the truth."—*Athenæum*.

"The most able work which has yet appeared in England on the subject of Biblical criticism."
Bishop Colenso on the Pentateuch.

THE BIBLICAL EVIDENCES OF THE ANTIQUITY OF MAN—NOT AGAINST IYELL.

Second Edition, crown 8vo. cloth, price 6s.

THE GENESIS OF THE EARTH and of MAN; or, the History of Creation, and the Antiquity and Races of Mankind, considered on Biblical and other Grounds. Edited by R. STUART POOLE, M.R.S.L., &c., of the British Museum. Second Edition, revised and enlarged.

"A work which deserves the attentive consideration of Biblical students."—*Quarterly Review*.

"It has been ably argued in a recent work, 'The Genesis of the Earth and of Man,' that the existence of a pre-Adamic race of human beings is not inconsistent with the sacred narrative of the birth of Adam and the history of his descendants."
Kitt's Cyclopaedia, 3rd edit., Art. 'Creation.'

BOPP'S COMPARATIVE GRAMMAR OF THE

Sanscrit, Zend, Greek, Latin, Lithuanian, Gothic, German, and Slavonic Languages. Translated by E. B. EASTWICK, Esq.

Complete, 2 vols. bound in 1, 8vo. cloth, price 15s.

WRIGHT'S ARABIC GRAMMAR, founded

on the German Work of CASPARI, and Edited, with numerous Additions and Corrections, by WILLIAM WRIGHT, M.S.S. Department, British Museum.

Vol. II., containing the SYNTAX, and Introduction to Prosody, may be had separately, bound in cloth, price 7s. 6d.

MÜLLER (MAX).—ANCIENT SANSCRIT

LITERATURE and the Primitive Religion of the Brahmans. A History of Ancient Sanscrit Literature as far as it illustrates the Primitive Religion of the Brahmans. By MAX MÜLLER, M.A., Fellow of All Souls' College, Oxford.

INDIAN CIVIL SERVICE EXAMINATION.

Price 6s. post 8vo. Second Edition.

MACNAGHTEN'S PRINCIPLES OF HINDU

and MOHAMMADAN LAW. Republished from the Principles and Precedents of the same, by the late Sir WILLIAM MACNAGHTEN. Edited, with an Introduction, by Dr. H. H. WILSON, Boden Professor of Sanskrit, Oxford.

This work is required as a Text-book for the Indian Civil Service Examinations.

MORLEY'S LAW OF INDIA.—THE

ADMINISTRATION OF JUSTICE IN BRITISH INDIA: its Past History and Present State, comprising an Account of the Laws peculiar to India. By WILLIAM H. MORLEY, Esq., Barrister-at-Law.

COLEBROOKE'S ESSAYS.—ESSAYS ON

the RELIGION and PHILOSOPHY OF THE INDUS. By the late H. T. COLEBROOK, Esq. 8vo. cloth, 10s. 6d.

HARDY'S EASTERN MONACHISM: AN

Account of the Origin, Laws, Discipline, Sacred Writings, &c. of the Order of Mendicants, founded by Götama Buddha. With references throughout to the kindred Usages and Institutions of the Western Fraternities and other Ascetics. By the Rev. R. SPENCE HARDY.

A MANUAL OF BUDDHISM IN ITS MODERN

DEVELOPMENT. Translated from Singalese MSS. (Pub. 13s.) 8vo. cloth, reduced to 7s. 6d.

WILLIAMS & NORGATE, 14, Henrietta-street, Covent-garden, London; 20, South Frederick-street, Edinburgh.

LONDON, SATURDAY, APRIL 4, 1863.

LITERATURE

Tropical Fibres: their Production and Economic Extraction. By E. G. Squier, formerly Minister of the United States in Central America, &c. (Madden.)

Mr. Squier's book on 'Tropical Fibres' has an interest for every one who desires to help in feeding the population of Lancashire, and who has no objection to make a fortune by the process.

The traveller in the Tropics, who has come from northern latitudes, is not merely delighted with the light and feathery grace which agaves, pine-apples, plantains and palms impart to the landscape, but he is astonished by their manifold applications to the supply of human wants. Food, oil and drink are not only furnished by them, but they supply fibres, equally remarkable for strength and delicacy, and adapted for making various kinds of articles—ropes and paper, cloth and bags, tents and handkerchiefs. The wild pine-apple, which he sees everywhere forming hedges and inclosures, furnished the material, almost as soft and fine as silk, for the netting of the hammock in which he reclines. By the side of almost every hut he observes a small patch of agaves, and learns that the fibres of their green and fleshy leaves are manufactured into a superior kind of cordage and rigging for the native boats. The traveller in Mexico derives from one and the same plant liquor which is drunk instead of our beer, cider and whisky, and the surpassingly tough and durable paper of his passport. In the East Indies, the leaves of the pine-apple which he eats at dessert supply the fibres for handkerchiefs rivalling the gossamer web. The traveller finds almost every path and byroad in Manilla overshadowed by plantain forests, and he is informed that their leaves supply the ships of all nations with cargoes of fibres which he mistakes for hemp and flax. In a word, he sees fibres everywhere rotting in tropical countries which, if prepared, and sent to Europe, would supply raw materials for the manufacturing industry of millions of people, and produce innumerable useful and comfortable fabrics for many nations. There are, then, raw materials lying waste in hot latitudes, whilst here there are hundreds of thousands of hands idle for the want of them; and the nobly borne distress in the cotton districts of Great Britain, with the inscrutable prospects of the future in the Southern States of North America, invest the subject of Tropical Fibres with incalculable interest and importance. Of course, it is well to stimulate the cultivation of cotton in every suitable climate, and to emancipate European industry for ever from slavery to the sources of supply which have dried up so disastrously; but for this end there is something more to be done than growing cotton. It is desirable to explore the immense riches of the vegetable world for raw materials which may be advantageously used instead of cotton, and to replace or to supplant the capsular hairs of the Gossypium group by the hairs or fibres of plants belonging to other botanical families.

Mr. Squier does not write for botanists, and, indeed, has little or nothing to tell them. The students of tropical vegetation, while they willingly allow their minds to be absorbed by the wonders of plant life, know well that there are mines of neglected wealth in the fibres of the tropical plants. They know, when pursuing fame, where other men, if they choose, may find fortune. But Mr. Squier writes for men of enterprising industry; he tells them how for-

tunes may be made; and, undoubtedly, this class of men need greatly the information which he submits to them.

When resident in Tropical America the mind of Mr. Squier was much impressed with the question why the fibres were not turned to account. There is no necessity for adding, that the present condition of the cotton-spinners of France, England and Scotland gives this query a peculiar and impressive interest. But the question did not recur after he came to learn the rude, imperfect and laborious processes by which the relatively small quantity of fibres produced for local use and export is extracted:

"I saw (he says) the native labourers at their work slowly removing the pulpy and vascular portions of the agaves or *henequins* with a triangular scraper or a blunted knife, leaf by leaf, and ascertained that a few pounds of fibres, imperfectly cleaned, formed the total reward of a long day's toil. I turned away from the patient Indian labourer, with a smile, half of pity, half of contempt, and asked my friend, the American merchant and planter, who had lived for many years in the country, 'Why don't you import proper machinery for doing this simple work, and thus make a fortune out of tropical fibres?'—'Because,' was his answer, 'there is no such machinery to be had. I long ago sent to the United States, to England and France, and even to the Philippine Islands, where ten millions of dollars worth of plantain fibres are extracted annually, and found that no machinery suited to the purpose has been yet invented. Everywhere, as far as I can learn, throughout Tropical America, and the East Indies as well, the process of extracting these kinds of fibres is substantially that which you see practised by yonder Indian.'"

On his return to the United States Mr. Squier found that the assertion of his friend was in accordance with the fact. A machine has, however, been recently invented for the extraction of fibres which costs only one hundred dollars, and by combining crushing, scraping, hackling and washing in one operation enables an expert hand to extract more fibre and better fibre from henniquin (*Agave sisilana*) than a hundred men can extract with blunted knives. It is applicable as well to the fibres of the exogenous as to the fibres of endogenous plants. But whatever may be the merits or the demerits of the machine in question, the facts which Mr. Squier collected during ten years' residence in the Tropics merit attention during the present dearth of cotton.

Thirty years ago Dr. Henry Perrine, United States Consul at Yucatan, became deeply impressed with the value of the fibrous plants of the Tropics. Becoming, during a long residence at Campeachy, acquainted with the nature of these plants, their manner of growth, the modes of cultivating them, and the means of extracting their fibres, he made strenuous efforts to introduce them into the Southern States of North America. In 1837 he petitioned Congress for aid in carrying out his scheme upon a grand scale, and Congress, in compliance with his wishes, passed a bill giving the Tropical Fibre Company the pre-emption right to thirty-six sections of land situated in East Florida, below the parallel of 26° north latitude. Small plantations were immediately commenced at Cape Florida. The plants cultivated were the maguey or pulque agave, the cochineal cactus, the paper mulberry, the date-palm, and three or four species of agaves, including the kind which produces the seil hemp. And the enterprise was successful, until the Seminole war broke out, and the hostilities of the Indians forced the planters to abandon the plantations. Dr. Perrine, eager to resume his undertaking, returned too soon, and was killed by the savages. Many of the plants were then destroyed, and all of them neglected; but those

that were left have flourished ever since. Dr. Perrine, however, had not laboured in vain, for his experiment established the fact that nearly all, if not all, of the fibrous plants of Central America flourish freely in the peninsula of Florida. We commend this fact to the practical consideration of British colonists established in corresponding latitudes.

A notion of the importance of tropical fibres to British industry may be gathered from the fact that the estimated real value of those imported in 1855 was 4,730,875 dollars. Yet considerable as this importation is, it is nothing compared with what it might be if machinery could be found to separate the fibres cheaply from the salts and gums. At present, only six pounds of seil hemp are obtained per day by a man scraping and rubbing by hand; and similar quantities of Manilla hemp are obtained by pounding and hackling, and of New Zealand hemp by beating with mallets and then macerating, drying and hackling. Dr. G. T. Schæffer has remarked that, to obtain soft and delicate fibres, it is necessary to gather the leaves before the plants attain their full maturity. Nearly all the fibres of the vegetable world are white. It is the gum in the fibres which, when dried in them, makes them harsh and brittle. The fault of the paper made from Manilla hemp is this roughness, a fault which ought to be easily remedied. The buff, brown or green colours left in certain fibres have been fixed in them by premature drying.

Textile fabrics are either foliaceous, cortical, or capsular. The inside-growing (endogenous or monocotyledonous) plants yield the foliaceous fibres. Represented in temperate climates by herbs such as the grasses, the lily and the cat-briar, in the Tropics they form the forests of yuccas, agaves, plantains and palms. Seil hemp and Manilla hemp are formed of the fibres of the green leaves of inside-growing plants.

Cortical fibres are obtained from the bark or bast of outside-growing (exogenous or dicotyledonous) plants. The linden (bastwood), the nettle, the flax, and the bean which supplies the Sun or Bengal hemp, are examples of this class of plants. The object in preparing these fibres is to remove the woody core from its fibrous sheath by dissolving the peculiar gum which unites them.

Capsular fibres are really not fibres, but hairs obtained from the pods or capsules of the plants, the function of the hairs being to shelter and protect and regulate the temperature of the seeds.

The fibres extracted from the agaves are often confounded with those extracted from the bromelias. Clavigero, in his History of Mexico, describes the uses of the various kinds of agaves:—

"Some species furnish protecting inclosures, and afford impassable hedges to other objects of cultivation. From the juice of others are extracted honey, sugar, vinegar, *pulque* and ardent spirits. From the trunk and the thickest parts of the leaves, roasted in the earth, an agreeable food is obtained. The flowing stalks serve as beams, and the leaves as roofs for houses. The thorns answer for lances, awls, needles, arrow-heads, and other cutting and penetrating instruments. But the fibrous substance of the leaves is the most important gift of the agaves to Mexico. According to the species the fibre varies in quality from the coarsest hemp to the finest flax, and may be employed as a superior substitute for both. From it the ancient Mexicans fabricated their thread and cordage, mats and bagging, shoes and clothing, and webs equivalent to cambric and canvas; the hammocks in which they are born, repose and die; the paper on which they painted their histories, and with which they adorned

and adorned their gods. The value of the agaves is enhanced by their indifference to soil, climate and season, by the simplicity of their cultivation, and by the facility of extracting and preparing their products. It is not, therefore, surprising that the ancient Mexicans used some part or preparation of these plants in their civil, military and religious ceremonies, at marriages and deaths, nor that they perpetuated an allusion to their properties in the name of their capital."

Dr. Perrine states that the fibres of the Yashqui henniquin, strong, light and durable, extracted from the fresh leaves by simple scraping, are immediately converted into cheap cloth for bagging without spinning, twisting, or any intermediate preparation or fabrication whatever. They are used instead of hair for sieves, instead of withes for baskets, instead of leather and wood for valises and trunks; and even as curious substitutes for glass and clay in the shape of bottles, bowls, cups and saucers. Hence he believed that, if introduced into the United States, the fibres of the henniquin would speedily be converted into a thousand forms of ornament and utility, all combining cheapness, strength, lightness and durability.

The plants of the pine-apple family (*Bromelia*) alone, in the three British colonies of Jamaica, Honduras and Guiana, have been said to be capable of producing fibres of the annual value of more than half a million sterling. Humboldt estimates the produce of a single acre of the plants of the banana family, which are grown for food, to be equal to the produce of forty-four acres of potatoes. After the fruit is gathered the plant is cut down, and thus for little or no cost the fibres of millions of plants might be obtained, to be converted into cordage, cloth or paper. It is from *Musa textilis*, a variety of banana, that Manilla hemp is extracted, which fetches a higher price than the finest Russian hemp. Of the "abaca" of the Philippines, a very peculiar banana, a French botanist says in a recent work, that the coarse fibres make ropes of great tenacity, and the finer fibres muslins of great beauty. He had a number of shirts made from this muslin which lasted him a very long time, and were cool and agreeable in the use. In France, tissues of this material are made of the greatest beauty. They receive all colours with equal perfection. The abaca fibres are wrought into shirts, vests and pantaloons for men; whilst for the fair sex they are made into very beautiful, very costly and wonderfully durable veils, crapes, neckchiefs and hats.

No one can read this very interesting volume without being impressed with a deeper sense than he had before of the importance of tropical fibres to the industry and commerce of the whole world; and to the class it addresses, men of business on the outlook for new and profitable fields of enterprise, we deem it our duty to recommend it.

Diary of an Austrian Secretary of Legation at the Court of Czar Peter the Great. Translated from the Original Latin, and Edited by the Count Mac Donnell. 2 vols. (Bradbury & Evans.)

In the year 1698, the Emperor of Germany, Leopold, sent the most noble Ignatius Christopher, Lord of Guarient and Rall, on a mission to the Court of Peter the Great at Moscow. At that period Peter had been for nine years sole Czar (he had previously reigned seven years with his brother Ivan), and it was ten years more before he exchanged the barbaric title of Czar for the more civilized one of Emperor. Von Guarient carried with him a secretary of legation named Korb, and this Korb, about the year 1700, published a Diary of the mission and the inci-

dents connected therewith in very loose and slovenly Latin.

Fifteen years later, this Diary had become so rare that it was only known in a few public libraries; a rarity owing to the displeasure it excited in the breast of Peter himself, especially on account of the circumstantial information about the tragic execution of the Strelitzes. The Austrian Court, to whom indignant representations were made, caused the unsold copies to be destroyed.

A stray copy, picked up in an Italian village, has been brought to light by Count Mac Donnell, who has also found that there is another copy in the public library of Wolfenbüttel, so highly prized that it is shown under a glass case. A third is in the Imperial Library in Vienna; a fourth in the British Museum. This copy, formerly belonging to George the Third, we have examined. It is a large quarto, profusely illustrated. The copy which the Count met with belonged to the Stuart Library, its last possessor of that family being Cardinal York, at whose old house, in his old bishopric of Frascati, the Count first saw it "a few summers ago."

Such is the tale of the book. This is the history of the mission. The Czar Peter had proposed to the Kaiser Leopold a league against the Turks. Leopold, having "especial care of the advantage of Christendom," readily acceded, and held communication thereupon with "the most renowned King of Poland." The latter potentate, the well-known and not very Christian-like King, Frederick Augustus, readily enrolled himself a member of the league; and the most serene republic of Venice, being then in high wrath "against the foes of the Cross," eagerly joined hands with the other confederates.

These, each and severally, were bound to war against and exterminate Turk and Tartar; and none could make peace with the infidel, without sanction of the rest of the allied brotherhood. Whoever smote the Paynims was to receive aid from his allies, on offence being given or not; and the agreement was to stand good for three years. Leopold not only ratified all the articles of the treaty, but despatched an envoy, Von Guarient, to the Court of Moscow, in order to be safely and speedily informed, by careful and exact reports, of whatever schemes might be on foot there.

So much for the mission. The missionary or envoy was qualified for his task by experience in business, courage in carrying it out, knowledge gained in foreign travel, perils incurred, and services "with exceeding pains and fidelity rendered to the commonweal of Christendom during the siege of Vienna, when, amidst the Mohammedan camp, he craftily detected, day by day, every design of the Moslems, and at the hourly peril of his life revealed them in a regular written correspondence with the Imperial capital." In plain words, Von Guarient had been a first-rate spy in the enemy's quarters; and as envoys are but spies of a better condition and a more decent name, Leopold despatched him to St. Petersburg, thence to inform his sovereign "of whatever schemes might be on foot there." It was true and good work for such an accomplished Austrian official as Von Guarient.

Thus far, we have the matter clearly before us, and what follows is not less intelligible. In January, 1699, the Ambassador departed from Vienna with a princely retinue.

Issuing from the gates of Vienna on the 11th of January, my "Lord Envoy," before whom all difficulties were smoothed, and who enjoyed a little sacred music and occasionally attended mass on the way, reached the frontier of Poland

on the 31st. The honest Polish "toll-keeper" suspected the high and mighty personages of being smugglers as well as official individuals, so enormous was their baggage, and he would have put them to their oaths, but the "personages" laughed at the knave, and passed haughtily on. They passed through the ancient kingdom with the conviction that it was a den of thieves, against whose devices they kept watch and ward; and they thanked their stars and all protecting powers when they found themselves in comfortable quarters at the Green Meadow, in Dantzic.

The then frontier-fortress of Russia, Smolensko, was not reached till the 9th of April, after travel, compared with which a journey in the footsteps of M. Huc, from China to Thibet, would seem a luxury. They struggled on under a world of difficulties happily and graphically told,—sometimes encountering comic incidents, at others horrors indescribable,—and finally reaching Moscow and obtaining an audience of the Czar, all ferocious touching the Strelitz rebellion, on the 13th of September; nearly nine months after they first set out from the Austrian capital.

He was a weary man with long travel, and an angry man at this moment,—between this rebellion of his Strelitzes, his hatred of his wife, and his detestation of beards and beardwearers. No man dared enter the Czar's presence with a beard on his chin. However solemn the moment or august the occasion, when such a one entered the barbaric presence, he was immediately seized by Peter's own shaver, who lathered the offender, took him by the nose, and forthwith swept his chin clean of all incumbrance. No such man was spared save the Grand Archimandrite (out of respect to that person and old priestly fashion), and an aged noble or two, whose prejudices in this matter Peter himself refrained from violating.

The audience which the Envoy had of the Czar passed off without any exhibition on the part of Peter of his peculiarly unpleasant characteristics. He was so mild in speech and decent in behaviour that the account of the interview has no salient points of interest in it. But as there was a Philip drunk and Philip sober, so was there a Peter sane and a Peter mad. Here is the august King entertaining the Lord Envoy and other foreign ministers, with nobles of his own court, at dinner:—

"His Majesty, during dinner, addressing the company, was painting the wretchedness of Poland in terms like the following:—'At Vienna I was getting fat with good cheer, but hungry Poland made me quite slender again.' The Polish minister said that he was surprised that should have happened to His Majesty the Czar; that for his own part he had been brought up there, and had come hither through that country, and yet had managed to get fat; and fat he was. The Czar answered, 'It was not there, but here in Moscow that you crammed yourself;'—alluding to the free maintenance at the Czar's cost upon which he was supported. Dinner was not yet over, when His Majesty left the room in a rage with his general-in-chief, Schahin, with whom he had been warmly disputing; and nobody knew what he was going to do. It was known later that he had gone to question the soldiers, to learn from them how many colonels and other regimental officers that general-in-chief had made without reference to merit, merely for money. In a short time, when he came back, his wrath had grown to such a pitch that he drew his sword, and facing the general-in-chief, horrified the guests with this threat: 'By striking thus, I will mar thy mal-government.' Boiling over with well-grounded anger, he appealed to Prince Romadonowski, and to Dumnoi Mikitium Mosciwicz; but finding them excuse the general-in-chief, he grew so hot that he startled all the guests by striking right and left, he knew not

where, with his drawn sword. Knes Romadonowski had to complain of a cut finger, and another of a slight wound on the head. Mikitim Mosciwicz was hurt in the hand as the sword was returning from a stroke. A blow far more deadly was aimed at the general-in-chief, who beyond a doubt would have been stretched in his gore by the Czar's right hand, had not General Lefort (who was almost the only one that might have ventured it), catching the Czar in his arms, drawn back his hand from the stroke. But the Czar, taking it ill that any person should dare to hinder him from sating his most just wrath, wheeled round upon the spot, and struck his unwelcome impeder a hard blow on the back. He is the only one that knew what remedy to apply; none of the Muscovites is more beloved by the Czar than he. They say he has been raised up from the lowest condition to this envied pinnacle of authority. This man so mitigated his ire, that threatening only, he abstained from murder. Merriment followed this dire tempest: the Czar, with a face full of smiles, was present at the dancing; and, to show his mirth, commanded the musicians to play the tunes to which (so he said) he had danced at his most beloved lord and brother's, when that most august host was entertaining exalted guests. Two young ladies departing by stealth were, at an order of the Czar, brought back by soldiers."

The rebellion of the Strelitzes, which had well-nigh cost Peter his throne, if not his life, turns up constantly in this narrative—a recurring horror amid noisy gaiety. The details of the penalty paid by men and women connected with this attempt at revolution, caused by the long absence of Peter from his capital, and his unworthy favouritism, are simply sickening. Over and over again we meet with these criminals under the knout; then in the flames half-burnt; then under the knout again; and, finally, on the wheel to be broken, or into the fire, where they were consumed. Poor women disappear—they are buried alive. To some, whom Peter tortures by his own hands, he can be merciful; that is, he cuts off their ears and noses and sends them thus "stigmatized" into Siberia. The Lord Envoy from Austria rather admires the wholesome severity of such discipline, which, of course, is for the good and quiet of the holy land of Russia generally. Next to Histories of the Inquisition and Books of Martyrs, this part of Korb's Diary stands supreme for narratives of horrors and atrocities. We find better amusement in attending the Czar to supper:—

"The banquet was remarkable for the sumptuous cookery and the costly and precious wines which the well-stored cellar brought forth: for there was Tokay, red Buda, dry Spanish, Rhenish, red French, another as well as that they call Muscatel, a great variety of hydromel, and beer of various descriptions, and that complement which is not the least prized by the Muscovites—brandy (*Vinum adustum*). Boyar Golowin has, from his cradle, a natural horror of salad and vinegar: so the Czar directing Colonel Chambers to hold him tight, forced salad and vinegar into his mouth and nostrils, until the blood flowing from his nose succeeded his violent coughing. Shortly after, a kind of cold derangement of the stomach seized the Czar, and a sudden spasm running through his limbs, struck him with great terror that something was wrong. General Lefort, anxious, like everybody else, for the Sovereign's health, directed Doctor Carbonari de Bisenezz to find a vein, who, saying that this faint chill would speedily pass, asked for the most generous Tokay wine that was to be had. Most pleasing to the Czar was this quick-witted remedy, nor did he long delay to take such wholesome physic. He inquired of the doctor why he meant to sell his wife: and the physician, with a quiet laugh, answered boldly, 'Because you delay paying my yearly salary.' It happens that Carbonari had some days before, after explaining his wants to Prince Romadonowski, solicited his salary; and the Prince answering that he was

ready to lend money at interest, he replied, without hesitating, that except his wife he had no other pledge to offer; but if the Prince was resolved to lend money, that he was ready either to pawn or sell her. In other respects his Majesty all through, with a perfectly open countenance, gave evidence of his internal gaiety."

But we find it impossible to avoid this Strelitz affair altogether, so illustrative is it of the times, the people, and their master. In reading the next extract, it is only necessary to remember that the Alexasca there mentioned is the pastrycook's boy whom Peter converted into Prince Menschikoff, and that Peter's strong-minded sister Sophia was shut up in a nunnery under suspicion of having aimed at placing herself on Peter's vacant throne, had the revolt been successful:—

"All the Boyars and Magnates that were present at the Council by which the fate of the rebel Strelitz was decreed, this day were summoned to a new tribunal. A criminal was set before each, and each had to carry out with the axe the sentence which had passed. Prince Romadonowski, who was chief of four regiments of Strelitz before their revolt, laid four Strelitz low with the same weapon—His Majesty urging him to it. The more cruel Alexasca went boasting of twenty heads that he had chopped off. Galizin was unhappy at having greatly increased the criminal's sufferings by striking ill. Three hundred and thirty that were all led out together to the axe's fatal stroke impurpled the plain far and wide with civil—'tis true—but impious blood. General Lefort and Baron de Blumberg were invited also to this hangman's office, but were excused on alleging that it was foreign from the manners of the countries they came from. The Czar himself, sitting in his saddle, looked on with dry eyes at the whole tragedy—at this frightful butchery of such a multitude of men—being only irate that several of the Boyars had performed this unaccustomed function with trembling hands—for that no fatter victim could be immolated to God than a wicked man. To-day took place the execution of the popes—that is to say, of such of them as carrying images of the Blessed Virgin and Saint Nicholas to draw the common people to the side of the mutineers, had, with the customary prayers at the altar, invoked the help of God for the happy success of the impious plot. One was hung on a gibbet in front of the church of the Most Sacred Trinity; another beheaded, and set upon the wheel to remain a lasting spectacle. Two brothers, guilty of the treason, after having their extremities broken by the hangman, were tied alive upon the wheel, and enviously beheld a third brother of theirs, among twenty others who had suffered by the axe and were smeared with their gore, complaining with indignant murmurings that he should be removed from them by a swifter death, whom Nature in the first place, and Crime in the second, had joined in love. Not far from the Monastery of the Nuns there were raised thirty gibbets in the shape of a square, where the halter received 230 head of Strelitz who were deserving of a more cruel fate. But three ringleaders of this perilous mutiny, who had presented a petition inviting Sophia to take the helm of the State, were hanged over against the walls of the said monastery, close to the window of Sophia's room, and he that hangs in the middle holds a paper, folded like a petition, tied in his dead hands; perhaps in order that remorse for the past may gnaw Sophia with perpetual grief."

In giving an account of the organization of the Russian army, the Secretary of Legation, in a few words, describes the exact *status* of that renowned portion of the infantry called the Strelitz:—

"The Strelitz were all musqueteers, under the name of javelin-men, and were the same to the Muscovites as the Janissaries are to the Turks. The number of them in pay varied from 12,000 to 20,000. They were the most dexterous of the Muscovites, and for that reason the Czar's body-guard; and the guards of his capital were chosen from them. They prided themselves on the signal

privileges and great immunities that had been conferred upon them, which were nearly as great as those of the old Roman soldier. Their annual pay was seven roubles and shekels and twelve measures of oats; but by the commerce which they were allowed to exercise they often attained great and envied riches. In Moscow their houses occupied a vast space in the Czar's own capital; but after the late rebellion had led to the condemnation of many thousands of Strelitz to death, even these houses, lest they should remain a memorial of this impious faction, were, by the Czar's commands, uprooted from the foundations and broken to pieces. When all the Strelitz had been put to death or exiled, he substituted in their stead four regiments, after the system of the German armies, as regards officers and their rank. It is forbidden to call them Strelitz, as if, by inheriting the name, they might become also the heirs of the crimes that were perpetrated by those who bore it."

Barbarous as the Russians appear by the testimony of this book, unwittingly given, there was some scintillation of good common sense in the old stock, and of the old days when Gospel reading was preferred to Gospel expounding:—

"The Russians, up to the present, have always condemned the function of preachers, saying that professed preachers affect rather a useless elegance of language than earnestness in proclaiming the word of God. Yet in the present age the practice of expounding the Gospel has met with the approval of the Russians. For there are even some to be found among them who, confident of their own learning, are not content with merely reading the Gospel or holy Scripture aloud in the church (which was the old fashion), but prefer a polished and rhetorically laboured discourse of their own composition."

Korb allows that the whole race were slaves. A man dared not sign his own name to a petition to the Czar. He was compelled to use a diminutive, and if he were James he became as a petitioner "little James." That so rude and ill-educated a people made a nation of liars, seems a logical consequence to the diarist. And yet, in one sense, they were a clean people, that is, fond of the bath; but it was after a fashion compared with which that of the modern Japanese is modest and innocent. Count Mac Donnell has discreetly refrained from translating this portion of the Latin Diary. Such enduring fellows—acquired most submissive wives, under these preparatory circumstances:—

"When the promise of marriage has been given, the father summons his daughter, who comes covered with a linen veil into his presence; and asking her whether she is still minded to marry, he takes up a new rod, which has been kept ready for the purpose, and strikes his daughter lightly once or twice, saying, 'Lo! my darling daughter, this is the last that shall admonish thee of thy father's authority, beneath whose rule thou hast lived until now. Now thou art free from me. Remember that thou hast not so much escaped from away, as rather passed beneath that of another. Shouldst thou behave not as thou oughtest towards thy husband, he in my stead shall admonish thee with this rod.' With this the father, concluding his speech, stretches at the same time the whip to the bridegroom, who, excusing himself briefly, according to custom, says that he believes he shall have no need of this whip; but he is bound to accept it, and put it up under his belt, like a valuable present."

Of after-ceremonies, which are many, we will only say with modest Korb himself, that to allude to them "non patitur temporis nostri castitas."

The two volumes will be read with avidity, and we may add that those persons who have perused with horror the accounts of the atrocities committed by the Russians in Poland,—particularly that of "trampling" and then murdering the wounded foe,—will be ready to

account for it after closing this Diary, which describes manners and customs influencing the national character even in these later days.

Waiting for the Verdict: an Autobiography.
Edited by B. Aikin. (Saunders, Otley & Co.)

Is it murder to steal by night into the house of a personal enemy, creep to his private room, and stab him to the heart as he lies asleep? Such is the question which Mr. Aikin confesses himself unable to answer, and to which he begs his readers to reply Yea or Nay. Until their decision has been given, the author, like his book, is "waiting for the verdict." The tale which sets forth this doubtful and very nice case of law and morals is told by its hero, Ernest Clarkson, a hideously ugly genius, "a man in stature, in face a Caliban," who at the outset of his story creates a sensation by observing, "Man that readest this brief chronicle, have patience with thy fellow-worm! . . . thou mayst yet be as I am, a mur— Great God, I cannot write the word—I cannot write it—each letter would stalk forth from the paper, like an accusing ghost, to confront me." Having thus startled his fellow-worm, Mr. Ernest Clarkson proceeds to unfold how it was that he became a sharer of "Cain's c—." The son of a poor Wiltshire curate, his boyhood was spent in poverty and mental trouble. His pious father could neither educate nor feed him liberally; his Calvinistic mother, not without reason, regarded him as destined for perdition, and persevered in telling him so. In order that he might add to the wretched pittance flung to him by an evangelical rector who wore rich raiment and fared sumptuously on three thousand a year, the curate advertised in the *Times* for "a very limited number of young gentlemen to educate with his own sons," in consequence of which advertisement a mysterious gentleman named Pattens appeared at the pastor's cottage, and left as a pupil his only child, Helen Pattens, aged ten years. True, Helen was not a young gentleman, but as Mr. Pattens promised to pay forty pounds per annum for her board and education the Rev. Ernest Clarkson made no objection to her sex. The bargain struck, Mr. Pattens took his departure, and never troubled himself to make the stipulated payments or even inquire about his little girl, who from that time till she became a woman was brought up in the poor pastor's family. After an interval another pupil was added to the family circle, in the person of Charles Forester, the villain of the drama. Years passed on. Charley Forester never went home for holidays. Helen Pattens grew to be a charming girl; and Ernest Clarkson, three years her senior, fell in love with her. She vowed to be true; Ernest vowed never to be false. He undertook to earn money by his poetic genius; Helen Pattens engaged to spend it for him. Affairs had reached this crisis when death came upon the scene, killed five little Clarksons by typhus fever, and removed the curate by a malady which the author does not describe or christen.

The scene now changes to London, and events crowd quickly upon each other; but notwithstanding the rapidity of their succession the end of the tale puts the reader much nearer 1870 than the arbitrary regulations of calendars permit. Ernest, aged twenty, brother Jack, sister Charlotte, Helen Pattens, the curate's miserable widow, and a humble friend of the family, named Gemmel Pummel, are spending their last coins in wretched lodgings. Ernest and Jack cannot get work. They have been educated to no calling; and the wolf of starvation is heard near their garret-door. Neither as clerk nor shopman can Ernest find employ-

ment. Under these circumstances, Helen Pattens ceases to love and begins to despise him. As he cannot forthwith achieve fame and win wealth, in accordance with promises made in Wiltshire, it is clear to her that she has been mistaken in him. Moreover, the Clarksons are in such a pitiful condition, she thinks it would be best for her to break off her connexion with them. So the young lady coolly tells her lover that she has had enough of his society, and has resolved not to marry him. A final rupture takes place just as Ernest gets employment in a lawyer's office. Helen quits the family party, and in the character of a wife *minus* the marriage ceremony accepts the protection of Charles Forester, who, by some mysterious process, has become an accomplished libertine and the possessor of immense wealth. On the day of her flight Ernest is "rocked to and fro, as in a storm-beaten ship," and, with a proper perception of what is due to such a sensation, gets very drunk on bad gin. "That day," he makes confession, "I had a little money in my pocket, money that my master had advanced to me. Did I take it home to buy bread for the rest? No. I rushed into a gin-palace, all glitter of marble and gilding. I swallowed glass after glass of liquid fire; for hours I was a crowned king, then woke, wallowing in my vice and misery." As soon as he has recovered from the debauch, he sets to work hard and sharp at writing poetry, and speedily becomes famous. He yearns for distinction, in order that Helen Pattens may repent her folly in casting him off; and animated by this noble ambition he at length does justice to his mighty powers. His poems make him talked about; his first novel makes him a "star," a "lion"; and as such he enters fashionable society, which he finds crowded with "tailors' blocks perfectly well dressed, and effigies of women that have walked straight out of the Paris fashions." For the literary ladies, to whom he is introduced, he expresses supreme contempt, but makes an exception in favour of "Anna Maria Hall, at whose feet any man might learn lessons of wisdom and virtue." Of the men whom he encountered in the year 1859, the only person fortunate enough to please him is Mr. George Francis Train, who is said to have "Hyperion curls," almost "the front of Jove himself," and "a face of wonderful beauty." "Such," observes Mr. Aikin, "was George Francis Train in 1859; an altered and a sadder being is George Francis Train, the wild political agitator of 1862! Yet he is still a study for poet, sculptor or painter." Leaving the year 1859 to take care of itself, Mr. Ernest Clarkson *continues to write books*. "I went on writing books, and writing them with a certain energy which supplied the place of enthusiasm." As the reader is for a few important chapters expected to measure time by the events narrated, he may fairly assign two years to this literary manufacture and the incidents concurrent therewith. At the close of the time so allotted, Ernest loses his mother; and somewhere about the same time, *i. e.* the autumn of 1861, he "fails as an author," the public having grown weary of his poems and novels, because he will not condescend to imitate "sensation" writers. At this loss of popularity he is deeply chagrined. It makes him fear that after all he will not be able to bring repentance to the faithless Helen Pattens, and wring her bosom! In the spring of 1862 he turns player, and, notwithstanding his hideous face, becomes the most admired actor of the town. Under these circumstances he determines to write plays, and expends an entire year in carrying out his resolve. In the September of 1863 the drama is put upon the stage. 'Jealousy' is the name of the play;

and its success on the first night of presentation, when the author acts the part of the principal character, is complete. Sitting in a private box, arrayed in satin, and glittering with diamonds, Helen Pattens sees her discarded lover's triumph. The play over, Ernest, without laying aside his actor's dress, hastens to the door of the theatre, and arrives there in time to see the hated Charles Forester put Helen in her carriage, and seat himself by her side. "I rushed to the spot like the maniac that I was; she saw me, she stretched out her arms to me. I swear she did; but Forester called to the coachman, and the horses went like the wind. 'Found! found and lost!' I roared, like a wild beast." Having roared out these words, after the fashion usual with wild beasts when they speak the English language, he springs upon the carriage, and, clinging to the back of it, also "goes like the wind" through the streets of London to the gates of the great mansion where Helen and her paramour dwell. The guilty lovers enter the house. At a later hour of the same night, the pursuer also crosses the threshold. "A scoffing servant," says the teller of the story, "who took me, perhaps, in my tawdry robes, for a mountebank or an escaped lunatic, told me that his master and mistress had retired. I knew the power of gold; I pushed some into his hand and penetrated to their private rooms, thirsting like a panther for blood. . . . I came upon the man sleeping, fresh from the wine-cup, sleeping in a royal-looking couch, with all the wondrous beauty of his youth still glowing in his face. . . . The silver lamp shone down upon him with a subdued light; I lifted the playhouse dagger that I still clutched and sent his soul to hell. Ha! ha! I did it well! Was it murder? . . . I had slain a man. Was it murder? I am waiting for your verdict!" The story, however, has not yet come to an end. In the summer of 1864, the hero lays Helen Pattens in her grave. "Lady Helen lies in her velvet-covered coffin, adorned with shining coronets." The exaltation of Helen Pattens into Lady Helen is thus accounted for. Shortly before her death she discovered the mystery of her birth, succeeded to great estates, became a peeress in her own right, and dying in the odour of sanctity bequeathed all her wealth to Ernest;—who, in the summer of 1865, makes the joyful discovery that after all he neither murdered nor attempted to murder his enemy. Brain fever, which has helped novelists into and out of more difficulties than either the "mad bull" or "runaway horse" of fictitious literature, is represented as having somehow or other made him the victim of a delusion. Such is the sensation novel about which Mr. Aikin is waiting for the world's verdict.

Dante's Divina Commedia. Translated into English, in the Metre and Triple Rhyme of the Original, with Notes, by Mrs. Ramsay.—*Inferno and Purgatorio.* (Tinsley Brothers.)

Dante's Divina Commedia.—The Inferno. Translated by W. P. Wilkie, Advocate. (Edinburgh, Edmonston & Douglas.)

A translation of the 'Divina Commedia,' for the first time from the pen of a lady, may be regarded as an event in the history of Italian literature worthy of admiration. We therefore welcome these modest and unpretending volumes with satisfaction, and at the same time feel a becoming pride when we reflect on the fact that it is an Englishwoman who has done this thing, and boldly and bravely entered her name in a most difficult enterprise, where complete success

can scarcely be hoped for, and where failure is worse than defeat.

The author, however, happily possessed those acquirements and advantages which more especially fitted her for this undertaking. The Italian language had for years been as familiar to her as her own; she had long lived in Italy, and had received much advice and encouragement from some of the most distinguished Italian students of the poet. Her translation was made, as she tells us in her short and interesting preface, "during a long residence in the land of Dante, in the very scenes where he lived and wrote, beneath the shadow of the Tuscan hills, on the shores of the Bay of Naples, among the ruins of Old Rome." Pleasant reminiscences indeed are these, and it is well to lay up in early life a store of such, that we may have the advantage ever after of drawing upon them when we need, to balance, by contrast and the force of the imagination, the impressions produced by our softer and greener countryside.

The translation shows how thoroughly the author has imbibed the spirit and harmony of the original. There are many passages that might be quoted as the most successful and agreeable of all the attempts in triple rhyme version that we have read. Take, for instance, the opening *terzine* of the third canto, the Descent to Hell:—

Through me ye pass the mournful city's door;
Through me ye go to never-ending woe;
Through me are with the lost for evermore:
By justice moved, my Maker willed it so,
When I was form'd by the Supreme Mind,
From whom all love, and power, and wisdom flow.
Before me, no created thing ye find,
If not eternal; ever I endure:
O ye who enter here leave hope behind.

Where Dante describes the souls of the wicked as they come before Minos to be judged, and then are tumbled down to hell, to the place prepared for them, the poet suits the measure and sound of his words to the solemnity of the occasion; when their doom is fixed, a few monosyllables express the catastrophe. The version of Mrs. Ramsay well bears out the same adaptation:—

Alway before him stands a mournful row:
Slowly in turn they come unto their fate:
They speak, and hear, and sink unto their woe.

It is true the words of Dante in the last verse,

Dicono, ed odono, e poi son giù volte,

intimate rather rough usage in the souls being precipitated *sans façon* below, while the above version of the passage is a more lady-like way of getting rid of them; but the verbal cadences, thus to speak, are as well adapted to the occasion. So, also, in the *bufera infernale*,—that terrible wind which hurls and dashes together those wretched souls who have been lost through love, and is characteristic of unbridled passion,—here, again, her perfect mastery of the subject is obvious:—

And then I knew that to this torment dire
Those guilty ones were brought by carnal sin;
In life their reason bowed before desire.
And, as the starlings, borne upon the wing,
Fly in large flocks in the cold winter air,
Thus did the blast those wretched spirits fling
Through all that dreary clime, now here, now there;
And never may they hope for happier day
Of rest, or even a lesser pain to bear.
As cranes that fly, and, singing still their lay,
Stretch out their lengthen'd line against the sky,
Thus did I see this shadowy array,
Borne onward ever with a mournful cry.

Occasionally we think a verse here and there might be improved, and in some few places a closer rendering given, though not in more poetical language. In all passages of tenderness and kindly feeling Mrs. Ramsay's translation is unequalled. Take that exquisite scene between Virgil and the virtuous Cato, in the first canto of the 'Purgatory,' where, as a final argument to move the old man's favour, Virgil alludes to his beloved Marcia,—

"This man hath mortal life;
And I am of that region of the dead
Where she, who was on earth thy loving wife,
Still loves thee in the land of shadowy woe:
For her sake, then, befriend us in our strife.
Let us throughout thy sevenfold kingdom go:
To her I will take back a good report,
If thou wouldst be remember'd there below."
"Marcia to me such gladness did impart
On earth," he said, "that, whatsoe'er she would,
I did: so dear was she unto my heart.
Now that she dwells beyond the evil flood,
She cannot move me more; by that decree
Made when my soul forth issued with my blood."

It will be seen by this how completely the author has made the subject her own. In the last verse we have a new reading of the text, possibly a suggestion from some Italian friend. It expresses one of the physiological dicta received and held by Dante (*Purg.*, V. 75). At the end of each volume are some fifty pages of well-selected notes in reference to those subjects, persons and places mentioned by the poet, about which the English reader may be supposed to require some information. Mrs. Ramsay, in keeping to the received text, has produced a readable book; her style is free, flowing, elegant and chaste; no debatable questions have been allowed to encumber her pages with irrelevant lore: so that we have here an English Dante, such as the most fastidious may take up with pleasure, and we think her volumes will become deservedly popular.

And now a few words touching the second work we are called upon to notice—Mr. Wilkie's 'Inferno.' The author, in a Preface of three and a half lines, says, "I have occasionally taken a view of Dante's meaning for which none of his editors are responsible." He might have added—nor even Dante himself. We suspect that the manner of the translation is as original as the matter of it. See the opening of the third canto—

Through me unto the land of woe.
Through me unto eternal pain.
Through me unto the souls accur'd.
By justice was my Maker moved.
By power divine my fabric rose,
By wisdom high and primal love.
All who before me were create
Immortals were; and I eternal am.
Abandon hope who enters here.

If this be not original, we know not what is. The author is not ignorant of Italian; but it was needless to let the world know that he had no real feeling for Dante. In so irregular a version as this of the 'Divina Commedia,' there was no excuse for not being more literal, and keeping close to the text throughout.

Perils among the Heathen; or, Incidents of Missionary Life. With a Preface. By the Rev. Joseph Ridgway, M.A. (Seeley & Co.)

It is almost a truism to say that one great work of the Church is to propagate far and wide the knowledge of the Gospel; and moreover, it cannot be said that this age has failed in its duty in that respect, whilst the numberless volumes of reports and statements of missionaries bear witness to the fact. Indeed, it would seem as if the very fact of reports being so full and numerous rather encouraged people in abstaining from their perusal. For that reason, such a work as the present is welcome. It embraces the touching incidents and fragmentary notices of the experiences of many who counted not their lives dear that they might testify the Gospel. So far it may quicken the interest in their work, and induce those who read it to pursue their studies further.

The division of the subject is under the heads of the varied perils which St. Paul underwent; and it is difficult to say which will most arouse the sympathy of the reader. Not least of

them are "the journeyings" of Henry Martyn, and his "perils in the wilderness." Having with much labour translated the Gospels into Persian, he found to his great disappointment that it was too full of Arabian idioms to be of general use. For that reason he determined himself to journey into Persia, to gather the opinions of learned natives, and, if need be, to begin a new translation. Amongst the narratives there are notices of six missions to New Zealand, and of these one relates the "persecutions" which were endured by native Christians. In another, wherein the "perils in the sea" are told of, we are forcibly reminded of the ship wrecked on the coast of Melita. In both cases, after great hardships, and with exhortations from the messenger of God to take courage, it came to pass that they all got safe to land. The vessel was called the Southern Cross; and in it were embarked the Rev. B. J. Ashwell, with the Rev. J. C. Paterson, Mr. Dudley, and thirty-seven boys belonging to various Melanesian islands. They transacted the business of the voyage, and the vessel returned with only the crew, Mr. Ashwell, Mr. Kerr, and two natives. But the voyage was not accomplished before they encountered a gale and a shipwreck, from which a deliverance was given to them beyond any human anticipation. On the afternoon of one Sunday the wind increased to a gale, with very thick weather and rain.—

"At ten at night they were startled to find land on the lee bow, and only by press of sail contrived to escape foundering on an islet called the East Chicken. In about half an hour they again saw land on the lee bow, being the Southern head of Ugunuru Bay. Standing on, the vessel made the islet at the north head of that bay, but the weather was thick, and the hills not visible. Thinking they had accomplished their purpose, the ship's head was put to the North, and she soon took the ground on a spot somewhat sheltered from the full violence of the sea. Nothing could be seen beyond the breakers. When she struck the sailors exclaimed, 'We are lost; good bye, sir!' In a quarter of an hour the cuddy was filled, and the missionaries were up to their waists in water. The main cabin was soon filled also, the lights extinguished, and the missionaries were driven on deck, over which the sea was sweeping every moment. They took refuge for a while under the lee of the anchor, but were soon obliged to climb into the rigging. In less than half an hour the surf completely filled the vessel, and the boats were swept away, so that no way of getting ashore remained. From two o'clock in the morning until daylight all remained clinging to the masts and rigging. Mr. Ashwell and Mr. Kerr both spoke to the sailors, repeating hymns to them, though it was with difficulty that they retained their hold of the rigging. How welcome was the morning light! They then found that they were in a bay, and had been driven nearly up to high-mark of its sandy beach. There were also houses within sight. By nine o'clock the tide had so far fallen that one of the sailors and one of the natives succeeded in swimming ashore with a line, and thus, through the mercy of God, all, after seven hours of clinging to the rigging, were drawn through the surf safely to land."

This is one of the many incidents in the perils of missionary labour.

Calendar of State Papers. Colonial Series. East Indies, China and Japan, 1513-1616. Edited by N. Noel Sainsbury, Esq. (Longman & Co.)

Few are aware that Arctic discovery has ever been connected with the formation of the East India Company; yet such is a fact. The great commerce of the Portuguese in the eastern seas excited the envy and stimulated the enterprise of the English; while at the same time the difficulties and length of a voyage round the Cape of Good Hope damped their ardour.

The only chance of successful rivalry seemed then to lie in the discovery of a north-west or north-east passage, by which means easy access would be opened to the rich empire of Cataya, as China was then called. After many unavailing attempts by Gilbert, Frobisher and others, it appears to have been admitted that the idea was almost impracticable. These failures were, however, indirectly productive of advantage. Men's minds had been so constantly and eagerly directed to the object of an eastern trade that, foiled in one quarter, they turned resolutely to another. In 1579, while endeavours were still being made to reach India by the north-east or north-west, a voyage was accomplished to the southward by Thomas Stevens, who claims the honour of being the first English navigator of eastern waters. The following year Francis Drake arrived at Deptford. He had made the complete circuit of the globe, and amongst other places visited several islands in the Indian Archipelago.

Elizabeth was a great supporter of enterprise. On one occasion she subscribed 500*l.* towards the expenses of an Arctic voyage. She now went on board Drake's ship, and on his own quarter-deck knighted the successful explorer. In 1582 certain speculators, amongst them Lords Leicester and Burleigh, Sir Christopher Hatton and Sir Francis Drake, despatched Capt. Fenton in command of two ships, with orders to endeavour to reach India by a southern course. The expedition failed, but it was evident that with better arrangements the event might have been different. The following year Ralph Fitch, and in 1586 Cavendish met with greater success, the latter proceeding by the Straits of Magellan. In 1591 a body of English merchants sent out a fleet of five ships, under Capt. George Raymond. The vessels were scattered by a storm, he himself was never heard of again, and only Capt. Lancaster reached India. Five years later Capt. Wood, with three ships, chiefly fitted out by Dudley, sailed, bearing a letter from Queen Elizabeth to the Emperor of China. Of those who went on this voyage not one returned. Whatever the object of these expeditions, the result had been merely an increase to geographical knowledge. Yet those who came back brought accounts of a vast storehouse of wealth, with doors standing open to receive any one bold and skilful enough to reach the threshold. No wonder if the merchants of London were dazzled by the prize, and thought more of a few partial successes than of the numerous absolute failures. On the 22nd of September, 1599, Sir Stephen Soame, the then Lord Mayor of London, with 108 others, chiefly aldermen, merchants and tradesmen, formed themselves into an association for trading to the East Indies. The sums subscribed varied from 200*l.* to 1,000*l.*, the total amounting to 30,133*l.* 6*s.* 8*d.* The members resolved to petition the Queen for "her royal assent," certain privileges, and freedom of Custom for six voyages. Fifteen persons were appointed to manage affairs, with the titles of Committees or Directors. The adventurers, having determined on the undertaking, proceeded to carry it out with the utmost energy.

The first fleet sailed from Gravesend at the end of February, 1601, under the command of Capt. James Lancaster. He took with him several letters from Queen Elizabeth to the Kings of Sumatra and other countries, and a cargo consisting of iron, tin, lead, broadcloth, Devonshire kersies, Norwich stuffs, and numerous articles for presents, the whole being valued at the small sum of 545*l.*

In June, 1603, the joyful news was brought by Mr. Middleton to the Directors that Capt.

Lancaster in the Ascension had arrived off Plymouth, whereat they were so delighted that they gave the bearer 5*l.*, a large sum in those days. The voyage had been successful. Not only had Lancaster—soon after knighted for his exploit—brought back a rich cargo of pepper, cloves, cinnamon and gum lacquer, as well as some prize-money, but he had also obtained privileges of trade from the Kings of Acheen and Sumatra. From the former he likewise brought a letter, a ring, and two suits of gold embroidery for Queen Elizabeth. Trade now began in earnest.

At the beginning of 1613 Paul Canninge, one of the Company's factors, was despatched to Agra with a letter and present from James, with orders to officiate as Resident at the Court of Jehangire. On his arrival he had an interview with the Emperor, but met with no very satisfactory reception. Neither the present of which he was the bearer, nor the virginals given by Lawes, attached to the mission, pleased Jehangire's fancy. The Jesuits, who had great influence at court, took advantage of this circumstance to injure the English in his estimation. They told him that it was not the King of England who sent him anything, but only some merchants anxious for trade. Trully, who played before the Emperor on the cornet, was more fortunate. Jehangire was delighted, and said to one of his chief musicians, to whom Trully gave lessons, "If thou canst learn this I will make thee a great man." The real object of Canninge's visit altogether fell to the ground. Jehangire asked him "nothing but idle, trivial questions, not touching on business at all." In May Canninge died of dysentery.

We read in the letters of Sir Thomas Roe about the far-famed Nourmahal. With true British disregard of orthography, he calls her Nourmah. Nourmahal, which being interpreted is the Light of the Harem, how much romance is attached to her name! Beautiful, clever, brave, she was the favourite wife of Jehangire, who was accustomed to spend in her society every moment he could spare from public affairs. On her relations he heaped places of trust, and she herself was consulted on every important matter. As an imperishable monument of her charms and his love, he at her request and during her lifetime, erected the world-famed tomb, known as the Taj. She well deserved this affection, for when he was taken prisoner by the rebel forces, commanded by his son Prince Kharrum, afterwards the Emperor Shah Jehan, she raised an army and contrived to procure her husband's escape. It is sad to read that this heroine was not insensible to bribes. Sir Thomas Roe informs us that great presents were expected by both Nourmahal and her father. We find that Prince Kharrum—he is called here Coronne—was at first opposed to the English interests. Subsequently Roe succeeded in winning him over, and speaks highly of his courtesy. At that time he combined with Nourmahal and her father, Asaph Khan, to maintain an overpowering influence at court. In later years, he took up arms against both his father and Nourmahal. Jehangire, rich and powerful as he was, yet showed certain symptoms of that half-civilized childishness so often met with in Oriental despots. Sir Thomas Roe relates how delighted he was with the coach, scarf and sword he presented him with. He lost no time in causing himself to be drawn about in the coach, and as to the sword and scarf, having sent for a servant to tie them on in the English fashion, he was so proud of his weapon "that he marched up and down drawing and flourishing it, and since hath never been seen without it."

Edwardes also gives us an instance of the Emperor's vanity. He had brought him a rich cloak, which so pleased Jehangire that he hurried off to show it to Nourmahal. Of all the gifts he received, the Emperor seems to have been most delighted with an English mastiff. This gallant animal successively fought with and killed a leopard and a bear, which some dogs sent by the Shah of Persia would not face. The Great Mogul was an ardent sportsman, and cross-bows are suggested to the Directors as acceptable presents. Regarding his administration, Sir Thomas Roe did not entertain a very exalted opinion: "religions infinite; laws none; in this confusion what can be expected?" We have been shown how slightly the Emperor treated Canninge, whom he looked on as a mere merchant. Profiting by experience, Edwardes assumed the position of messenger from the King of England, and was consequently better received. Sir Thomas Roe arriving as regularly appointed "Lord Ambassador," and being a man of rank in his own country, was still more successful. Indeed, under the circumstances, the object of the embassy may be considered to have been attained as completely as could have been expected.

There is a curious passage in the Court Minutes of the Company respecting a proposition to send some of "our people" overland by way of Aden or Camboya, and thence by the Caspian Sea to England. We wonder if Lieut. Waghorn ever saw this?

A good deal of valuable historical information about Japan, Siam, Java, and other countries is to be met with in this book. During the present search for cotton to supply the gap caused by the American war, it is interesting to know that at the beginning of the seventeenth century Japan produced that commodity in abundance. The name of William Addames occurs very frequently in Mr. Sainsbury's book. This man is the hero of a romance more strange and exciting than any sensation novel. Employed by the Dutch, in 1598, as pilot-major, the ship he was in arrived, after much suffering, at Japan. Addames was at first put in prison, and the Jesuits and Portuguese did their best to have him put to death. Their efforts were fruitless. Addames was freed from prison, and granted an allowance of two pounds of rice a day and twelve ducats a year. Being employed to build a ship of eighty tons for the Emperor, and to teach him mathematics, he grew into such favour that he received "a living like unto a lordship in England, with eighty or ninety husbandmen that be as his slaves or servants." Hearing that English traders had arrived in Indian waters, Addames wrote a letter on chance, addressed to "My unknown friends and countrymen." In it he gives an account of his adventures and of Japan, concluding with a request that any into whose hands this letter might fall would do their best to let his wife and children hear of him.

This communication was the cause of trade being opened with Japan, Addames himself being shortly after taken into the Company's service.

A curious incident occurred at a meeting of the Directors in 1614. The King of Sumatra had expressed a desire to have an Englishwoman for a wife. "A gentleman of honourable parentage proposes his daughter," setting forth her charms with the minuteness of an auctioneer. He describes her as "of most excellent parts for music, her needle and good discourse, as also very beautiful and personable." On this a debate took place as to whether it would be productive of advantage

to the Company that she should go, but not a word was uttered of any higher grounds. Ultimately the matter was referred for consideration. When the clergy came to hear of the proposition they at once objected. The Directors met them on their own grounds, proving, to their own satisfaction at least, that it was not forbidden by Scriptura. A further objection was urged, that the King of Sumatra's other wives might poison his English bride if she became a favourite. This the ambitious and unnatural father answered himself. It does not appear that, after all, the lady was ever sent.

In concluding our notice of this valuable addition to the materials for writing a history of the East India Company, we cannot but express our regret that this body should have displayed at an early period of its existence so much carelessness respecting its records. From this cause, many important documents have been lost. Mr. Sainsbury has done his best to fill up the gap thus created, and deserves the thanks of the literary world for the able manner in which he has discovered, arranged and calendared all available papers bearing on a very interesting subject.

The Nationalities of Europe. By R. G. Latham, M.A. M.D. 2 vols. (Allen & Co.)

IN these substantial volumes, in which considerable masses of hard reading are relieved by light epitomes of romances, poems and legends, Dr. Latham endeavours to establish no set or symmetrical theory. His work is investigatory, critical, illustrative. It is offered, as the writer avows, as a contribution, partly to biological science, and partly to practical politics,—on the whole, to Political Ethnology. An Englishman, or perhaps a Russian, he thinks, is the only person who could treat the questions here discussed in a spirit of philosophical impartiality; though why the Russian is thus brought into a parallel with the Englishman is not explained, and, possibly, could not be explained to the satisfaction of many among those who represent in Europe what are called the Nationalities. This word "nationality," alternately so popular and so proscribed, is taken by Dr. Latham, at the opening of his voluminous argument, to mean anything exceptional to the predominating feeling and constituent elements in certain political aggregates,—a definition not a little indefinite. While working out his inquiry upon Europe as a basis, he follows, from the European empires, lines extending far into other continents,—from Russia through Siberia, and from Constantinople, through Syria, into Asia, Africa and America. At the same time, Englishmen, Welshmen, Irishmen, Scotchmen, Manxmen and Channel Islanders are excluded from the survey, on the questionable ground that they are supposed to know as much concerning themselves as any student can tell them. The Jews, also, are left out of sight, the author not having examined sufficiently the details of their dispersion and diffusion. Hence, the empires, kingdoms, and commonwealths treated of are Russia, which occupies a massive volume,—Turkey, Italy, France, Spain, Germany, the Low Countries, the Northern States and Austria.

Dr. Latham's method of dissertation may be illustrated by a phrase or two from his Preface: "Able—very able—men," he observes, "have written about the antagonism of the Asiatic and European families of mankind. But what if the Turks have always been in Europe? What if countries so far west as Lower Austria and Bavaria were once to a great extent Turk?" Again, "Able men, too, have written on what

may be called the missions of certain populations, e. g. the Slavonic. The Slaves have done little hitherto in history; therefore, they have a great part to play in the future. What if a thousand years ago they had done much? What if half Germany be Slavonic?" Having started with these suggestions, Dr. Latham proceeds to write down, though evasively, the national sentiments and movements which, ever since he compiled his book, have so deeply agitated Europe, and then inaugurates the treatise with a review of the remoter Polish annals, pausing now and then to correct a popular error. Russia is regarded as a great representative power, Greek in religion, Slavonic in ethnology, with forty millions of pure and proper Russians and heterogeneous elements, first and foremost among which come the kingdom of Poland and the Grand-Duchy of Lithuania. What formidable discussions are involved may be imagined from such passages as that which chokes the original fountains of the Yatsvng history,—setting forth how the Yatsvngs have been variously styled Jacuite, Jatuitæ, Gzeczwesii, Terra Gzeczwesia, Gzetzvintzite, Getvintziti, Getwezite, Jetwesen, Jazuingi, Jasuingi, Jacuingi, Jaczwingi, Jacwingi, Yatwyagi, Yatwyazhi, Yatwyagove, Getæ, and Jazyges. Lovers of plain reading must expect an immense accumulation of what was once called dictionary grit in these erudite chapters. But in the account of Lithuanian Poetry and Fairy Mythology, Dr. Latham has a softer subject to handle. This Lithuanian literature is peculiarly pagan. It celebrates not the Virgin, the Miracles, or the Saints. Neither does it sing of heroes, warriors or marauders; of kings, captains, or dauntless borderers; of Achilles or of Robin Hood, of Hercules or the Black Knight of the Forest. It is pastoral, sentimental, and picturesque. Yet the Lithuanians, in their early wars, were always a brave, and often a victorious people. From them, Dr. Latham turns to the chronicles of Poland as an elective monarchy, to the Partitions, dating from the annexation of Courland, to Polish history as bearing on that of the Turks, to Courland and Livonia generally, and to the Esthonians, the third of the Baltic or German provinces of Russia. Esthonia is "the Land of the Rahwas," and "some of the purest blood in Europe must be to be found amongst the southern, the eastern, and the central Rahwas"; who are a nation of harp-players, but their ancient class of minstrels has faded out, the last having died in the year 1813, and with him, in great part, the wizard yet graceful sort of poetry he was accustomed to chaunt in villages and at homestead doors, of which several curious specimens are translated by Dr. Latham. Even these poems, however, are scarcely so simple as those of the Vod. They sing, concerning a bad wife,—

I had a wife without a head:
She threw away my shoes,
She buried the linen in the snow,
She set the bath-room in a blaze,
She burnt half the linen—
Two pairs of stockings:
More's the pity!

Poetry was never more primitive, and yet the bath-room, the linen and the stockings betoken a certain degree of civilization. Dr. Latham has also an interesting chapter on the worth of Finland. From Russian Lapland he brings many characteristic sketches,—among others from the Murmans, a mixed race of fishers, who possess an indigenous code of laws. In the first place, their Lycurgus has ordained that "he who brings no wood to the fire shall sit away from the fire"; then, that he who makes bread-soup shall give way to him who makes fish-soup; that the woman shall give way to the man, the child to the woman, and the

hireling to the master. Advancing into the wildernesses, Dr. Latham has a picture, along and beyond the Ural ridge, of the Voguls and Ostiaks, the Samoyeds, the Yeniseians and Yukahiri, with other barbarian tribes. His next chapters are on the Turks and Tartars, of whom he remarks that all Tartars are Turks, and all Kalmuks Mongols, it being a common misnomer to speak of a Tartar as a Mongol, and of a Turk as a Kalmuk. Allied with them are the Tungús, among whom prevails the happy idea that any man possessing twelve dogs is rich and worshipful in the land. The Russian volume, as it may be termed, deals also with Russian America, with its singular tribes,—among others the Konægi, whose maidens are compelled, when approaching maturity, to occupy for six months a cabin in which they can neither stand nor lie, but must crouch with bent back and knees drawn up. After this probation, the walls are heightened and the floors lengthened, and the lonely virgin endures another half year of bodily discipline. The Caucasus and Transcaucasia, including the very remarkable Iron population, a sect who pray to God, St. Gregory, Michael, Gabriel, the Bussab-seli and the Georgian Churches, are ethnologically described, and with particular minuteness. The true Russians come almost last in the category, leading to the Kosaks, and to a general survey of Little, White, Black, Red and Great Russia, and All the Russias as they figure on the surface of the globe.

In his second volume, Dr. Latham has more variety. It begins with the Ottoman Empire, second in rank in the number and complexity of its elements to Russia, "in many respects the parallel, in many the contrast, to the empire of the Czar." Dismissing Albania as a special topic in a few pages, the author asks "How far are the modern descendants of the ancient Greeks?" Constantine Porphyrogeneta avers that all Greece was Slavonized, and became Barbarian. Fallermayer urges that the Greeks of our days are only Russians, Servians, or Bulgarians, who speak Greek. Against this doctrine the Greeks themselves naturally, though not on that account logically, protest; but, as Dr. Latham says, "That the modern Greeks are inclined to make capital of the ancient ones no one who knows their aspirations will deny." He then proceeds to denominate the mixed elements—Slavonic, Valachian, Norman, Frank, Italian, Spanish, Catalan, Albanian and Island, and, without exactly answering the inquiry with which he started, goes on to the Greek Revolution. Following these speculations and abridgments are others on Bulgaria,—the Turks in Europe and Asia Minor,—the Druzes Ismaeliyeh and Wahabis,—Serbia, Valachia, Moldavia and Montenegro; whence the patient reader will pass, with satisfaction, into Italy, which is sprinkled with alien populations. There are French in the Val d'Aosta, Germans in the Tyrol, probably Slavonians in the Val de Rescia, Albanians in Calabria and Sicily, Greeks in Calabria, and Catalonians in Sardinia. France, Dr. Latham proceeds to show, contains elements other than French—in the north of French Flanders, the southern part of Brittany, in the east of Lorraine and north of Alsace, in Savoy, Nice, Monaco, and in the Basques; while, beyond France, the French language is only popular in Belgium and the Channel Islands. When Germany falls under review, Dr. Latham separates from it, ethnologically, the Baltic provinces, which are Russian,—Holland, with its separate nationality and independent history,—the Flemish part of Belgium, and Lorraine and Alsatia. "The great divisions within the empire itself, so far as they are not simply territorial and dynastic,

are those of religion and language. The south is Catholic and High German, the north, Low German and Protestant. The literary language is High German. The blood varies with the district. In Hesse-Cassel, Nassau, the Sauerland, on the Lower Rhine, and in Westphalia, it is comparatively pure. Elsewhere, if we suppose that the German conquests were attended with any intermixture or fusion at all, it is largely Slavonic."

Upon Switzerland Dr. Latham remarks,— "What Switzerland more especially exhibits is the extent to which, under certain favourable circumstances, a mere political bond can stand in the place of a natural one. No two Cantons are exactly alike. Many of them are inordinately unlike. Yet languages as different as the German and the French, and creeds as different as Calvinism and Roman Catholicism, exist side by side." But he makes no attempt—and it might not be a very difficult attempt—to explain what superficially seems a paradox. Geography, perhaps, more than ethnology, would determine the question. Dr. Latham's purpose, however, may be best illustrated by his preliminary notice of Austria:—

"As a power, the position of Austria is peculiar. Austria is in nowise a representative power in the way of creed. Turkey is not only Mahometan, but it is a Mahometan power. (?) It gives a sort of Kalifat. Russia is not only a Greek Church power, but the Greek Church power. It is (materially, at least,) a patriarchate. Austria is simply one Catholic power out of several, and by no means the representative one. German Catholicism, however, she does represent. Austria is in nowise a representative power in the way of race. Austria is neither German as Russia is Slavonic, German as Turkey is Turk, nor German as France is (after a manner) Latin. It is scarcely a representative in the way of political ideas. It is Conservative, no doubt; but it is Conservative in association with Russia and Prussia. It is anti-revolutionary, but other states are this. Is it German? It is and it is not. It is German so far as it is the Empire, and so far as the Empire is German; but it is not German in respect to the purely Austrian elements of its prerogative. In diplomacy, it is an essentially representative power; indeed, in diplomacy, it represents many things at once. It represents Germany as the representative of the Empire. It represents anything that is anti-French as opposed to anything that is French."

The reader has in this passage a fair example, in all respects, of Dr. Latham's style as exhibited in this new, laborious, and somewhat desultory work—of his wordiness, dogmatism, and aptitude for high-sounding phrases. At the same time, it must not be inferred that the book is neither valuable nor interesting. On the contrary, it has been constructed with great care, if rather discursively, from materials found in volumes which, to most persons in England, are of difficult access. Dr. Latham is colder as a politician than as an ethnologist; but he gives weight to the expressed wishes of the nationalities he has analyzed; and though so elaborate a disquisition does not recommend itself to other than readers of a phlegmatic spirit, and is far from solving the many problems it suggests, it does considerable honour to the writer's learning, patience and sagacity.

Cups and their Customs. (Van Voorst.)

FROM the hollow of the hand to the bowl of Diogenes was a first step in Art; yet the philosopher went back to first principles when he saw the thirsty man stoop to the stream and slake his thirst even as the birds. But there are more artificial beverages which cannot be seemingly quaffed in this wise; and then what a step was made by Art between the Cynic of

Sinope and the cups and vases and urns of the early carvers:—

What leaf-fringed legends haunt about their shapes
Of detrites or mortals, or of both,
In Tempe or the dales of Arcady.

The horn would seem to have been the original drinking-cup of the hunting races; an enemy's skull that of the more savage and fiercer drinking tribes. Samian earthenware and beechwood supplied the earlier Romans. Later, a wonderful artist invented the cup made from the elder-tree, which had this work of magic in it, that it allowed only the pure wine to pass the quaffer's lips, retaining in the wood all the water that had been mixed with it! The older crystal cups were wonders, too, at least of workmanship, and a slave could clean them without the fear of being cowhided, for no fall could break them. The inventor, however, was as ill rewarded as any inventor of modern times, and that, too, by that Tiberius who, from being so often in his cups, was named Biberius. When he saw that the crystal cup could not be broken even by dashing it on a marble floor, and that any bruise it might sustain could be hammered straight again, he ordered the artist to be put to death, lest by the practice of his art he should render the Imperial collection of drinking-vases of a very depreciated value. After all, the cups of brittle crystal *did* become more costly than those of the precious metals; but still more costly were those fragile murrhine vases of mother-of-pearl or transparent agate, first seen in the triumph of Pompey on his return from Asia. These were said to have been worth, or rather to have been sold for, prices varying from six to twenty thousand pounds; but if this be true, they must have been different from the murrhine cups noticed by Propertius—the "Murrheaque in Parthis pocula cocta focis." The workmanship lavished on some of these productions rendered their value incalculable. "Materiæ non cedit opus," as Martial informs us.

It is difficult to say who were and who were not the great drinkers of former days. The Scythians are ordinarily looked upon as having been inordinate toppers, but Herodotus expressly asserts that they refused to worship the joyous divinity who caused his followers to become intoxicated. On the other hand, individuals have been pitied for sufferings when they, perhaps, might have been envied for enjoyments. We condole with Ariadne, abandoned by the faithless Theseus; but when we hear that the lady found companionship and solace with Bacchus, we very well know what that means. On the other hand, there was Cranaus, king of Athens, who first quaffed cup in which he had mixed water with his wine; and see what came of that moderating of enjoyment—the gods inundated Greece and washed him off his throne! The lesson has not been lost upon mankind.

Greece itself is said to have owed "rosy wine" to an importation from Egypt; but there was certainly a time when Egypt knew of nothing stronger than beer, which beverage Xenophon, on his famous Retreat, found an Eastern tribe of mountaineers drinking through straws, as was lately done in this Western Europe with sherry cobbler. Psammethicus taught the Egyptians better things, and had a nation's gratitude for his pains.

Nestor, it will be remembered, was famous for his wisdom, and it is upon record that his own private cup, out of which he daily drank, was of such weight and capacity that a strong young man could hardly lift it; whereas the venerable sage could not only raise it to his lips with ease, but could empty it with enjoyment, though that fine old son of Neleus, and

sole survivor of a dozen brothers, had some pleasant difficulty afterwards in finding his own tent. To great men great weaknesses: the younger Dionysius drank himself blind; Macedonian Philip tumbled himself into fevers and ill temper; and his greater son, Alexander, going beyond his sire in all extravagances, had fits of drunkenness of such great length that he required a sleep of forty-eight hours uninterrupted before young Ammon was able to address himself to his cups again. For such abusers of great powers and great gifts must have been especially designed such drinking-cups as those found at Herculaneum, which take the form of a pig's, a ram's or a boar's head. It was only through the enchantment of the cup that Circe could turn the thirsty fellows of Ulysses into swine.

On the other hand, physicians recommended, philosophers praised, and poets extolled, wine, and instigated to the drinking of it liberally. Generally speaking, the Greeks who cumulated this three-piled commendation were but sorry fellows in their liquor. They lost their tempers, flung the contents of the dishes at each other, and ended by maudlin. Your Greek heroes at the end of a feast are almost invariably represented as being "crying drunk." The Romans, on the contrary, were strong-headed. The man who could carry a large amount of wine discreetly was a man to be respected and was worthy of preferment. Such an one Tiberius made Quæstor, solely for his might in drinking. In later times, as Pfarrius tells us, the Rheingraf gave the village of Hufflesheim to Boos von Waldeck, for doing what none other of his knights could do—drinking at a draught an old jack-boot full of wine. To be sure it was Rhenish! What was that to the seven "bottles of red," the last quaffed at a breath, by which Craighdarroch won the renowned "Whistle," whereon "uprose our bard like a prophet in drink," and foretold the future glories of the victor race?

The motto on the renowned old Trivulli cup is "BIBE, VIVAS MULTIS ANNIS!" The best we can remember is the one on the cup presented to the German professor by his countrymen after his release from tyrannical oppression. The tale is told at length in Russell's "Tour." The motto was "Wermuth war dir geboten; trinke Wein!"—*Wormwood was proffered to you; now drink Wine!*

But leaving our own small reminiscences, and examining the volume before us, we soon discover that this subject of "cups" is one too heavy for the anonymous writer of this book to handle. There is an affected jollity in him which reminds us of a melancholy actor trying to extract joviality out of the part of a tipsy gentleman. He alludes to health being best derived from "a firm adhesion to the pigskin and a rattling galopade to the music of the twanging horn,"—a cockney's idea of hunting, in which anything more lugubrious than the sound of the horn, never used but as a short, sharp signal to the hounds, cannot well be conceived. In folk-lore he is equally enlightened, and he takes the hanging out of a broom to imply the same as the hanging out of a briar—namely, that good wine was sold under it. He is enthusiastic on Burns's sentimental song, 'Auld Lang Syne,' as the holy spring of modern good fellowship in cups!—quite forgetting that it contains the most abominable idea of fellowship that man ever conceived; for of the two worthies there meeting, one does not order in the liquor to hallow the moment, but he frankly cries to the other,—

An' surely you'll be your pint stoup,
An' surely I'll be mine;

the shabby fellow not having the spirit to pay the score. Steele and Goldsmith our author then reckons among the "men of far-seeing and prudent philosophy"; and being as weak on topography as on other sciences, he places the "Heaven" tavern in Fleet Street, instead of opposite Westminster Hall, where it stood in opposition with the less dainty drinking-rooms at the "Hell."

A sprig of borage is recommended by this writer as a good flavourer of "cup," but he does not say which of the three varieties is the essential one to be chosen; and, indeed, his account is altogether so confused that it is difficult to learn from him whether borage has a peculiar flavour or not, or whether a slip of cucumber does not afford a better. For instance:

"This Borage is a plant having a small blue flower, and growing luxuriantly in most gardens; by placing a sprig or two of it in any cool drink, it communicates a peculiar refreshing flavour which cannot be imitated by any other means. When, however, Borage cannot be procured, a thin slice of cucumber-peel forms a very good substitute; but care must be taken to use but one slice, or the cup will be too much impregnated with the flavour to be palatable. A small piece from the outer rind of the stalk is considered by some to contain superior excellence. We have made many experiments to extract this peculiar flavouring from Borage, in all of which we have been totally unsuccessful; nor do we imagine it possible to separate it from the plant, in order to gain these peculiar properties."

Occasionally this author's candour may be commended, for he cites "the illustrious Billy Dawson (though we have not the least idea who he was) whose illustriousness (*sic*) consisted in his being the only man who could brew punch." Poor Dawson, such is fame! His idea touching punch, however, is worth quoting:—

"The man who sees, does, or thinks of anything while he is making Punch, may as well look for the North-west Passage on Mutton Hill. A man can never make good Punch unless he is satisfied, nay positive, that no man breathing can make better. I can and do make good Punch, because I do nothing else; and this is my way of doing it. I retire to a solitary corner, with my ingredients ready sorted; they are as follows; and I mix them in the order they are here written. Sugar, twelve tolerable lumps; hot water, one pint; lemons, two, the juice and peel; old Jamaica rum, two gills; brandy, one gill; porter or stout, half a gill; arrack, a slight dash. I allow myself five minutes to make a bowl on the foregoing proportions, carefully stirring the mixture as I furnish the ingredients until it actually foams; and then, Kangaroos! how beautiful it is!"

The author subsequently notices the old compound of roasted apples, ale and sugar, which our ancestors knew as "Lamb's Wool," "which derived its name," he says, "from the 1st of November." The words *La Mas Ubal*, not "*La Mas-ubal*," are good Irish, signifying the Feast, or day, of the Apple, and, pronounced *Lamasool*, soon passed into Lamb's Wool. The mixture was drunk on the evening of the above day, which was supposed to be presided over by the guardian angel of fruits and seeds.

We cannot part with this subject without noticing that in England here the "dear and precious drinking-cup" was more frequently an heirloom than a possession which the owner selfishly carried with him to the grave. The ballad-king of Thule, when he could quaff no more, foolishly flung his golden beaker into the sea, and dead pagan chiefs bore theirs in their unconscious hands ready to drink again at the first awaking in the halls of Odin. There were, however, better examples than these. Wittaf, the merrily-named king of Mercia, bequeathed the horn of his table to the monks of Croyland that they might drink from it on festivals, and

with thanksgiving remember the soul of the donor. So, to the Abbey of Ramsay, the Lady Ethelgiva left two silver cups for the refectory table, and expressed a wish that the good monks would think of her when the cups were served brimming round to them. Honest King! Excellent Lady! bright, practical samples of the "good old times."

Thematic and Chronological Catalogue of Mozart's Works—[*Chronologisch-thematische Verzeichniss sämmtlicher Ton Werke, W. A. Mozarts, von Dr. Ludwig Ritter von Köchel*]. (Leipzig, Breitkopf & Co.; London, Ewer & Co.)

THE musician of any age or country, be his object what it will, may well regard this thick volume with admiration and reverence, as one of the holy books of his art. Five hundred and more pages are devoted to the titles of the creations of one who did not attain middle age, and whose life was largely devoted to active exhibition; among which works are a 'Don Juan,' a 'Figaro,' a Jupiter Symphony! We are not of the company of the idolaters, who can see no fault, no inequality, who will admit no mannerism in the works of Mozart. We hold, with a judgment stated a few years ago in print, that he produced nothing which has not been of its class exceeded by some other master of music: an assertion which, however startling it seems, can be sustained by fact. Taking, however, Mozart's works as a whole, the union of form and beauty, of skill, of spontaneous geniality presented in them, has never been exceeded, if ever approached. Their evenness of quality is wonderful. There is probably no one musician who has given such vast and lasting delight; and this, not to the learned and refined only, but to the enormous public, that cares merely for passing sensations of pleasure. Then, we are somehow never tired of hearing about the man. Book comes after book, life after life,—each more tedious than the last (Dr. Jahn's being, let us hope, final in point of heaviness),—yet they are not to be parted with when once taken in hand. In brief, he possessed genius in all the fullness of most exquisite charm, and was even more loveable than highly-gifted; as we remember anew while lingering over this list of treasures, just as if a large portion of it was not known to us by heart! Is it complete, even now, splendid as it is in its length? We fancy not; and that some of the slighter pieces, which were flung off by him to please his Viennese comrades, or to make the starched men of science at Leipzig stare, are not here included. On the other hand, it is possible that pieces have crept in which are not from his pen—doubts having been thrown on the authenticity of many of the remains sold by his widow after his decease. Complete or incomplete, however, the collection is unique as an example of fecundity, of beauty, of variety. Admirable, too, is the absence of an arrogant and pedantic spirit; and the willingness to be helpful, without thought of self-assertion. Mozart would throw off occasional songs for other men's operas, and additional accompaniments to other men's oratorios. He scored such music of Bach as hit his fancy. He played with the flute or the horn, when some merry and good-for-little boon companion wanted a *concerto*. He wrote dances (there are many waltzes, by the way, passing under his name that are not here). In brief, like all men of real genius, he was abundant, gracious and versatile: and thus to be ranged with the Michael Angelos, the Cellinis, the Shakespeares of Art, who know themselves to be too great, and feel themselves to be too generous, to be pinched by any narrow fears of compromising themselves, let them condescend as they please.

Probably, in all this wonderful accumulation of music, its least precious portion consists of the orchestral masses and the organ pieces. The former fall short in the devotional spirit, which breathes with such a mighty and earnest pathos in his 'Confutatis,' from the Requiem,—in his 'Ave Verum.' His English worshippers will learn with surprise, that the service so hackneyed in this country, and known as his Twelfth Mass—in Germany as No. 7—does not figure in this Catalogue;

or if so—for here is a Mass No. 7 in the same key, and in the same rhythm—with different phrases by way of opening. The organ music, though written for Germany, is apparently slighter than Handel's, which was written for England in days when the German pedals were next to unknown, without the occasional pompous grandeur of phrase so distinctive of Handel.

An unusually large portion of the six hundred and twenty-six works here indexed are in autograph manuscript. For one who notoriously took life so lightly, and wrought so hastily, Mozart's manuscript is not bad; clear, comparatively, if compared with Beethoven's. A well-known varied *Andante* in G major, for four hands, is before us, from which that fresh and genial composition has been played. It tells, as does Madame Viardot's famous possession—the manuscript of 'Don Juan'—that hasty as he was, and careless, Mozart was not too hasty and careless to reconsider himself;—whether he was pouring out such a burning utterance of passion as "Or sai che l'onore," or merely throwing off a trifle for the amateurs and the shops. To-day, we have lived to see, as rule, the temerity of publishing new works on the largest scale simultaneously with their performance,—works, it may be added, not by Mozarts, nor yet, even, by Mendelssohn. This manuscript tells its tale of the "midnight oil," or else of the midnight punch, which Mozart's *Stanerl* used to brew for him, when he was busy, in the drops which spot the time-discoloured paper. It is here and there smeared, too, as if the diligent author who left his works behind him in Somebody's Luggage had been over the page, to correct it.—But enough of these notes on a Catalogue, wanting which no musician's library of reference can be henceforth rated as complete. We should add, in conclusion, that Dr. Von Köchel's notes and annotations are sensible, to the purpose, and not over-prolix.

OUR LIBRARY TABLE.

Leaves from our Cypress and our Oak. (Macmillan & Co.)—These poems have been written as a tribute to the virtues of the late Prince Consort, and as a token of sympathy with an august mourner. The admiration and the sorrow here recorded have been felt by the nation as by one man. In the general expression of these sentiments all readers would concur, but the particular direction here given to them will find little approval. We cannot encourage an attempt to raise the veil from a living grief,—to picture it surrounded by memories of an irrevocable past and to furnish it by proxy with gesture and articulation. Such an attempt, however leniently viewed, must be pronounced a mistake—a mistake which the best intentions can scarcely excuse. Of the intentions themselves we have no doubt. The writer's sincerity is obvious, and it is fair to grant that his error has been confined to his design, the intrusiveness of which is not heightened by coarseness of treatment. Regarded as poems, these 'Leaves' have the merit of earnest feeling, and their happier passages show some grace of manner. But there is no depth of thought; the style lacks vigour and precision, the simplest meaning being often conveyed in strained and inconsistent metaphors. The confused images of "star" and "sun" in the following extract make a case in point. Otherwise, the lines are both a just tribute to the memory of Albert the Good and a favourable specimen of the volume:—

THE SILENT GOOD.

Who moves our grief must first our love have won:
He oped our hearts, yet with no master key,
His modest youth the "Open sesame";
His after charm, the *How* his good was done;
For, like a star that hides beyond the sun,
Behind his deed of radiance mute he lay,
And but in colours spake, like purpling day—
In deeds alone! Applause he seemed to shun,
And rather chose our thanks to win than wear
Their rightful meed—to his love-labours due—
A silent good, he met us here and there,
And light and beauty 'mongst the peoples threw!
Oh, for his loss, that plucks our hopes so bare,
How meet the Nation's grief—yes, her despair!

In the concluding poems sorrow yields to bright anticipations,—the auspicious event which England has just witnessed having special commemoration. The book is elegantly got up. It is almost

a pity, indeed, that so fair a tablet should have been used for an inscription which, as a whole, is faint and infelicitous.

Christianity and its Evidences. By John Macnaught, M.A. (Longman & Co.)—Mr. Macnaught retired in 1861 from his benefice, St. Chrysostom's, Liverpool, giving some special reasons, but leaving other points vague. He now informs his late congregation, first, that "the Incarnation, the Atonement, the Resurrection, and all the miracles had become matters of scepticism, if not of positive unbelief"; secondly, that further thought has restored belief and destroyed scepticism, and left him able to resume clerical duties. To this is added the book itself, a little treatise on the Evidences. As the work of a person who returns in honest conviction after having sacrificed income and position to conscientious doubt, the book will have interest; but we really cannot find any peculiarity about it, in argument or production of fact. It is a little Paley: and the big Paley itself would have been all the more remarkable if its author had passed through a renunciation of income arising out of doubt acting upon conscience. At this some will smile; because, so little was Paley himself likely to have acted as Mr. Macnaught has done, that rumour fixes on him the remark that he "could not afford to keep a conscience." In all probability, he said no such thing: but the rumour shows that he was generally considered as likely to have wide practical notions on the subject; and his chapter on subscription shows that he had no narrow theoretical ones. It is said that such works as Paley's 'Evidences' never made a convert: if so, it is remarkable that Mr. Macnaught, whose return is no doubt as honest as his departure, should present as his process of mind a system so like that of the old evidence books in its general character. It may be, that the very arguments which were suspicious when they tended incomerwards—if we may invent such a word—gained force when there was nothing to suggest fear of bias.

Our Feathered Families: Game and Water Birds, being an Anecdotal and Descriptive Account of the Feathered Game and Wild Fowl, with their Allied Species, found in Great Britain: to which is added, a Practical Chapter on Doves and Pigeons. By H. G. Adams. (Hogg & Sons.)—Mr. H. G. Adams has completed his three volumes on the feathered families of the British Islands. The first volume was on the 'Birds of Song,' the second on the 'Birds of Prey,' and the present volume is on the 'Game and Water Birds.' He says he found a difficulty in classifying the Birds into three distinct groups, which the plan of publication required. The difficulty might surely have been got over better than by an arrangement which brings the doves and pigeons in at the end of this volume after the sea-swallows. According to Macgillivray, as Mr. H. G. Adams reminds us, there are 143 species of residents, 44 species of summer, with 36 of winter visitors, and 97 species of stragglers, making in all 320 species of British birds. And the number has somewhat increased since Macgillivray rendered his great services to ornithological science. Now, if Mr. H. G. Adams had but described 107 species in each of his volumes he would have made a better division of the bird-world than he has done in the present work. Students desirous of obtaining certificates from the Science and Art Department of the Committee of Council on Education are requested to study birds under the types—Falcon, Corvus, Columba, Picus, Phasianus, Ardea, Struthio and Anser; or as Hawks, Crows, Doves, Wood-peckers, Pheasants, Herons, Ostriches and Ducks; and if prior to undertaking to write three volumes on birds Mr. H. G. Adams had studied them sufficiently to pass an examination for an elementary certificate of his knowledge of them he would have been able to conquer the difficulty of grouping them into three volumes. But he appears to have had no such preparation for his task. He seems to have been acquainted with the most popular poems in the English language on birds, and desirous of writing imitations of them: and he apparently saw in his enterprise an opportunity for indulging a propensity for tawdry declamations. The conse-

quence is, that a good, cheap and popular introduction to the study of British birds is still a demand which has not been supplied. Extracts from Gould, Yarrell, Macgillivray and others; poetical quotations from Bishop Mant's 'British Months'; well-known poems, such as Delta's 'Lines on a Wounded Ptarmigan,' Bryant's 'Stanzas to a Water-fowl,' and Gerald Griffen's 'Address to a Sea Gull,' and declamations in verse and prose by the bookmaker himself, form the bulk of these three volumes on "our feathered families."

Independency: a Deduction from the Laws of the Universe. By Evan Lewis, B.A. (Stoek).—This is an argument in favour of "independency and religious freedom": but by independency special reference seems intended to the system of the Dissenters called "Independents." We shall not enter into the argument, nor attempt to show how physical and mathematical facts—such as the structure of nerves and the algebraical view of the passage of an ellipse into a parabola—help to prove the point. The truth is, that we are not very clear how it is made out. Setting this aside, we have a short attack on the Church of Rome, a fierce, detailed, and effective attack on the Subscriptions in the Church of England, and a gentle and friendly reproof of the "system of hierarchical despotism" of the Wesleyans. The play would have been more effective if the part of Hamlet had been omitted; for really the physics and mathematics do not tell upon the conclusions given more than upon any others.

The Battle Won: an Epic Poem. By a Carthusian. (Saunders, Odley & Co.)—The design of this poem embraces the chief events of Scripture story from the Patriarchs to Christ. With such a plan, unity of narrative is of course impossible. An ideal unity is therefore sought in the development of one Providential Aim through the entire series of results. So much toil and patience have evidently been bestowed upon this work, that we sincerely regret their misapplication. The author's verse, though laboured, is correct, and his command of sonorous and involved periods at times suggests to us the style of Milton. But his poem is deficient in imagination. It has something, so to speak, of the royal trappings of epic song; nothing of its inner life. The following lines, describing the Fall of Jericho, will show the obscurity into which the writer plunges when imitating his great model:—

Down as the withered bulrush prostrate falls
On Orinoco's or La Plata's banks,—
Of Neptune's realm those tributaries vast,
Both onward rolling their gigantic floods,
In whirling eddies, with the ocean's waves
Confused till in commingled grandeur lost,—
Snapped by the fury of tempestuous squalls,
From Antea's summit hurled, or cloud-veiled peak
Of Chimborazo; fast with icy bonds
Enchained, the torrid zone's lutescent heat
Whose strength defies; the vertical sun's rays
Whose robe of snow resists,—the sport of winds
Amongst the sedge it lies; so—If with such
Display of natural laws comparison
Be not irreverent, a presumptuous thought,—
Before the breath of God's displeasure fell
Devoted Jericho, with ruin dire
Dejected headlong: not in fragments torn,
But prostrate lay her walls, one huge, flat mass,
A straight path spread for Israel's ransomed feet.

—It is fair to add, that the book is more readable in its less ambitious passages. These are at times fluent and pictorial.

Ballads from Scottish History. By Norval Clyne. (Edmonston & Douglas).—It is really sad to think how many good men have turned into bad poets. Here is one, estimable for aught we know, in all the relationships of life, and yet he cannot resist the common failing. He makes the mistake, very common with the Scottish people, of confounding patriotic with poetic feeling. Patriotism is an element of poetry, but a feeling for patriotic subjects will not, of necessity, produce poetry. A great deal of their admiration for the verse of Walter Scott springs from patriotic rather than from poetic feeling. So is it with the present author. Each of the subjects chosen by him for a ballad-theme undoubtedly contains the germ of a poem, but in his hands it is killed in the first four lines. Instead of the alchemy which brightens all its touches and transmutes the leaden facts of history with fire from heaven into the gold of poetry, he only makes

the lead duller and heavier. It is curious to watch the process. Attached to the ballads are prose descriptions of the events to be sung. These are often brief, simple and sufficing. Then to see them "sorted," as the Scotch say, into lines of eight and six syllables! It is a sorry spectacle.

Mildred's Last Night; or, The Franklyns. (Bell & Daldy).—The first part of this story's title has but little to do with the book. 'The Franklyns' is its right name. Chief amongst these is the Rev. Charles Franklyn, rather a stern, thin-natured clerical specimen of a well-known type that was once noble but has been worn until the features are somewhat effaced, like those on a much-used coin. There is firmness in every line of his character, from the top of his head, where the phrenologists say it lies, to the heel which rings on the pavement for all to hear. This firmness is brought to bear very unyieldingly on his children and pupils, taking the spring out of more than one life. He is more than once engaged in a struggle to overcome Nature, and once, at least, we rejoice to say, is completely beaten. Yet Mr. Franklyn is not a mere despot; his character softens and sweetens in suffering. The fault of the story is that it goes over too much ground—too large a canvas is spread. The author would do better by limiting the space to pre-Raphaelite proportions and filling it all in with affectionate fidelity. Else it is quietly written, with a glance of genuine insight, and a touch of real tenderness.

Hellas: Her Monuments and Scenery. By Thomas Chase, M.A. (Siever & Francis).—Mr. Chase informs his readers that he commenced the present volume in the "hollow calm of the last Presidency, but that when the Federation of which he was a citizen was rudely broken asunder, he threw down his pen, for he had no heart to dwell on other themes" than his country's sorrow. But, after a lapse of twelve months, reflecting that it was "the part even of patriotism for those who are devoted to letters and arts to pursue their calling with no less vigour than before, he resumed his task." The work thus laid aside and completed at the prompting of patriotic emotion, is a brief and loosely-written journal of a trip to Greece, made in the May of 1853. One of the author's travelling companions was Prof. Blackie, of Edinburgh, whose pen enriched Mr. Chase's note-book with thirteen stanzas, descriptive of the ascent of Parnassus. It does not appear whether the poem was intended for general criticism; but its quality is such that if we had not before us the memory of some metrical eccentricities, with which Mr. Blackie amused his enemies in time past, we should not hesitate to declare its publication a breach of confidence. The 'Song of Parnassus' represents the learned Professor as seated on a mule; and each of the thirteen stanzas concludes with

Parnasso!
Ho! Ho! Ho!
Ho! Ho! Ho!
The lofty Parnasso!

This chorus is scarcely in keeping with the verses, which are neither comical nor diabolical.

Organization, Composition, and Strength of the Army of Great Britain. Compiled by Capt. Martin Petrie. (Parker, Son & Bourn.)—In a preface to this synopsis of the Army of Great Britain, Col. Henry James says, "We are now printing returns of the entire equipment of the British Army, with the weight, cost, and place of storage of each article, the forms of demand for them, &c. The series will consist of seven parts, viz.:—1. Cavalry; 2. Artillery; 3. Engineers; 4. Military Train; 5. Infantry; 6. Commissariat; 7. Hospital Service. Each part will be accompanied by drawings; the illustrations will thus comprise the articles issued from every branch of the military service."

Records of 1862. By Edward West. (West.)—The author's method of perpetuating past events is to state them, like so many texts, in prose headings, and to append to them a few verses by way of homily. The texts have doubtless an interest of their own, but it is sadly impaired by the dullness of the sermons.

Four concluding volumes of Mr. J. S. Laurie's "Standard Series of Elementary Reading Books"

(Longman) have made their appearance:—*The Third "Standard" Reader, or Stories of Animals, —The Fourth "Standard" Reader, or Fables and Parables, —The Fifth "Standard" Reader, or Poetry and Adventure, —and The Sixth "Standard" Reader, or Descriptive Sketches.* The contents are agreeably varied, and explanations are given of difficult words. — Messrs. Chambers have issued *Book III., adapted to Standard III. of their Narrative Series of Standard Reading Books*, which we have previously described as especially deserving of a favourable reception. — M. De Porquet's *Fables Parlantes, or Speaking Fables in French* (Simpkin) is a collection of short fables in French, with questions and answers in the same language upon the subject matter of each fable, and vocabularies explaining the meanings of the words. — M. C. Rühle has collected a number of *French Examination Papers* (D. Nutt) from those set at the Military colleges, the Oxford and Cambridge Local Examinations, the University of London Examinations, and those for the Civil Service in India. — *Questions for Examination on Miss Sewell's Child's History of Rome*, arranged by Fanny Parkhurst (Longman), is a smaller publication requiring no further description. — *An Index to Familiar Quotations, selected principally from British Authors, with Parallel Passages from various Writers, Ancient and Modern*, by J. C. Grocott (E. Howell, Liverpool), also speaks for itself. We may, however, observe, that the quotations being arranged under headings of single words occurring in them, which have rarely anything to do with the main thought expressed, are not easily available for reference, nor are they, as a general rule, well chosen. — Another work of doubtful value is *A Hand Book of School Management and Methods of Teaching*, by P. W. Joyce, A.B., M.R.I.A. (Simpkin). — *A Practical Greek Accidence, with Progressive Exercises*, by C. Matheson, M.A. (Longman), is an attempt to reduce the various inflections under general principles. The exercises would have been better if they had consisted of complete sentences instead of isolated phrases. On the whole, we doubt whether the book will be found to work so well as an ordinary grammar and delectus.

LIST OF NEW BOOKS.

Baker's North Yorkshire, Studies in Botany, Geology, &c., 8vo. 15/6
 Bates's The Naturalist on the River Amazon, 2 vols. post 8vo. 25/
 Baynes's Canterbury Cyclopedia, 24mo. 1/6 cl.
 Beale's The Stomach Medically and Morally Considered, 8vo. 1/
 Brigantiae, The, a Story of the Sea, 2 vols. post 8vo. 31/6 cl.
 Day's Common Law Procedure Acts, 2nd edit. roy. 12mo. 15/6 cl.
 Diary of an Austrian Secretary of Legation at the Court of Casar
 Peter the Great, trans. and ed. by Count M'Donnell, 2 vols. 21/
 Down in a Mine, or Buried Alive, 12mo. 1/6 cl.
 Gaskell's Sylvia's Lovers, 2nd edit. 3 vols. post 8vo. 31/6 cl.
 Gibson's Present Truths in Theology, 3 vols. 8vo. 21/6 cl.
 Grewell's Objections in Pt. 1. of Colenso's Pentateuch Consid. 5/6 cl.
 Hall's Law of Impersonation as Applied to Abstract Ideas, 3ed. 4/6
 Heron, Pa. Philosophers of the Middle Ages, 2 vols. 21/6 cl.
 Heywood's Vacation Tour at the Antipodes, post 8vo. 7/6 cl.
 Horace's Odes & Carmen Seculare, transl. by Conington, 5/6 hf. bd.
 Horace's Works, new edit. Vol. 5, 8vo. 5/6 cl.
 Jameson's Legends of the Monastic Orders, 3rd edit. or. 8vo. 21/6 cl.
 Jessy's Wedding-Rings and other Poems, 8vo. 8/6 cl.
 Kinglake's Invasion of the Crimea, V. 1 & 2, 3rd edit. 8vo. 32/6 cl.
 Lectures delivered before the Young Men's Christian Assoc. 4/6 cl.
 Light's Natural Laws of Husbandry, ed. by Blyth, 8vo. 10/6 cl.
 Life's Work, its Preparation and Retrospect, 8vo. 1/6 cl.
 Listings from Low Latitudes, etc. 21/6 half morocco.
 Lovers's Grammar of English Grammars, 12mo. 3/6 cl.
 Macfarlane's The Railway, in Six Lectures, 12mo. 1/6 cl.
 Macmillan's Magazine, Vol. 7, 8vo. 7/6 cl.
 Old Commodore, The, by Author of "Rattlin the Reeler," 8vo. 1/
 Phear's Elementary Hydrostatics, 3rd edit. 8vo. 5/6 cl.
 Platt's Grace of Glenholme, 3 vols. post 8vo. 31/6 cl.
 Princes of Wales, The, her People and Country, &c. 8vo. 1/6 wd.
 Punch, Kc-issue, Vol. 25, etc. 5/6 bds.
 Punsdon's Life Thoughts, 32mo. 1/6 cl.
 Rühle's French Examination Papers, or. 8vo. 5/6 cl.
 Scott's Waverley Novels, cheap ed.: Quentin Durward, 8vo. 1/
 Sherman (Rev. James), Memoir of, by Alison, post. 7/6 cl.
 Smith on Human Entozoa, 8vo. 8/6 cl.
 Smith's Key to Arithmetic for Schools, 3rd edit. cr. 8vo. 3/6 cl.
 Standard Novel Lib.: "The Young Doctor," 8vo. 3/6 cl.
 Story of Elizabeth, post 8vo. 2/6 cl.
 Story's Roba di Roma, 2nd edit. 2 vols. post 8vo. 21/6 cl.
 Sue's The Rival Races, or the Sons of Joel, 3 vols. post 8vo. 31/6 cl.
 Thomson's Spring, by M'Leod, 12mo. 2/6 cl.
 Townsend's Town and Borough of Leominster, 8vo. 10/6 cl.
 Wordsworth on the Inspiration of the Bible, 2nd edit. 8vo. 1/
 Wrasall's Remarkable Adventures and Unrevealed Mysteries, 21/6

PRIMEVAL MAN.—WHAT LED TO THE QUESTION?
 Athenæum Club, March 21, 1863.

THE whole question of the antiquity of the human race in Europe hinges upon the exact determination of the geological age of the cave deposits, ossiferous breccia, and quaternary alluvia, in which, alone, human relics have, hitherto, been met with. The difference of *pre-glacial* and *post-glacial*, in these cases, involves a difference of a vast lapse of time. It is therefore of essential

importance to know how, and by whom, the age of the boundary lines, and the proof of the other facts, have been established. Two eminent English geologists, Mr. Godwin-Austen and Mr. Prestwich, have devoted themselves, with great success, to the study of the superficial quaternary or post-pliocene deposits, the former in the south of England, the latter in the valley of the Thames and other river valleys of the same geological age in the south-east of England, generally. The following remarks refer especially to the researches of Mr. Prestwich. The geological age of the quaternary gravels and brick-earths of the valley of the Thames, whether *pre-glacial* or *post-glacial*, has for thirty years been the subject of great difference of opinion among geologists, from the circumstance that nowhere could a section be found, showing them in contact, or in order of superposition with the "boulder clay." The palæontological evidence was regarded as indicating the former age, while the "general physical phenomena" led Prestwich, Morris and Joshua Trimmer to consider them as being *newer* than the "boulder clay." This opinion was expressed by Mr. Prestwich, in the *Quarterly Journal of the Geological Society*, for 1855, p. 110; in that for 1856, p. 133; in his 'Clapham Lectures,' 1857, p. 30; and in 1861 he proved it stratigraphically by the "Kelsey Section" (*Quarterly Journal*, p. 446), where beds containing *Cyrena fluminalis* are in direct superposition to the "boulder clay." In 1854, he had satisfied himself, from the "special physical phenomena," that the valley of the Ouse, near Bedford, was flanked by, and excavated in the boulder clay, and that the "valley gravel," with mammalian remains, there contained *débris* of the "boulder clay," proving it to be newer than the latter. In 1858, he heard of the discovery of numerous mammalian remains in the railway cutting at Bedford, and went there with his friend, Mr. Evans, and identified bones of elephant, rhinoceros, hippopotamus, bos, equus and cervus, in a collection made by Mr. Reade, from the railway cuttings. On Mr. Prestwich's return from his first visit to Abbeville and Amiens, in company with Mr. Evans, in 1859, they fixed on Bedford as a place likely to yield flint-implements similar to those of the valley of the Somme. Mr. Prestwich was unable to go, but Mr. Evans went, and found, for the first time, land and freshwater shells in the Biddenham pit. He directed Mr. Wyatt's attention to these Bedford gravels as likely to yield flint-implements. These circumstances, combined with the experience acquired by a visit to Amiens, in 1860, induced Mr. Wyatt to turn his particular attention to the Biddenham pit, where he was at last rewarded by the discovery of two well-formed flint-implements (Prestwich, *Quarterly Journal of the Geological Society*, vol. xvii. 1861, p. 366). Hearing of this, Mr. Prestwich and Mr. Evans arranged to pay an immediate visit to Bedford, accompanied by Sir Charles Lyell, "to whom Mr. Prestwich pointed out on the spot the relation which the fossiliferous gravels bore to the 'boulder clay,' and their post-glacial origin, which he afterwards illustrated by a section of the valley of the Ouse, in the paper just referred to."

In the 'Antiquity of Man,' p. 164, Sir Charles Lyell gives an account of the visit, leading off thus: "I examined these" (Biddenham) "pits, in 1861, in company with Messrs. Prestwich, Evans and Wyatt, and we collected ten species of shells," &c. He then describes the valley of the Ouse, from a section, cut 23, which is copied from Mr. Prestwich, but inadvertently unacknowledged,—and concludes with the following paragraph:

"One step at least we gain by the Bedford sections, which those of Amiens and Abbeville had not enabled us to make. They teach us that the fabricators of the antique tools and the extinct animals coeval with them were all post-glacial, or, in other words, posterior to the grand submergence of central England beneath the waters of the glacial sea." (p. 166.)

The general reader might be led to believe, as I find many have, that the important conclusions here stated were original results arrived at by the author; but Mr. Prestwich objects that the language of the whole account is not sufficiently

guarded to express the fact, that the post-glacial age of the beds in question, or their relations to the "boulder clay" which involve the rest, were points not determined by Sir Charles Lyell. To arrive at the final results occupied Mr. Prestwich several years: the joint trip was despatched in a day.

Again, in the remarks on the chronology of the fluviatile deposits of the valley of the Thames, 'Antiquity of Man,' p. 160, the following passage occurs:—"Although no fragments washed out of these older and upland drifts (glacial) have been found in the gravel of the Thames containing elephants' bones, it is fair to presume that the glacial formation is the older of the two, for reasons given before at p. 130, and that it originated, as we shall see in a future chapter, when the greater part of England was submerged beneath the sea. In short, we must suppose that the basin of the Thames and its fluviatile deposits are post-glacial, in the modified sense of that term, i. e. that they were subsequent to the marine drift of the central and northern counties, and to the period of its emergence above the level of the sea." For aught that is said here, the reader might suppose that these were original inferences of the author. Mr. Prestwich dissents from the above statement, and claims to have brought forward these opinions in his published papers, at a time when Sir Charles Lyell still contended for the pre-glacial character of these deposits. There are other cases to which Mr. Prestwich makes similar objection, and which he will discuss elsewhere.

Next, as regards the ossiferous caves, in some of which human relics of remote antiquity occur. The question of the precise geological age of their mammalian fossil contents, whether pre-glacial or post-glacial, was in the same unsettled state as that of the "drift gravels," just discussed. Prof. J. Phillips in his 'Manual' of 1855, distinctly refers to the pre-glacial era "the greater number of ossiferous caves and fissures containing elephant, hippopotamus, hyæna, &c. (op. cit. p. 411). The late Joshua Trimmer, an observer of weight in all that concerns our quaternary deposits, also referred to the pre-glacial period "the mammalian crag, and the remains of the bone-caverns in general" (*Quarterly Journal of the Geological Society*, 1850, vol. vii. p. 25). Sir Charles Lyell, in the fifth edition of his 'Manual,' takes a similar view, and classes them among the "Newer Pliocene Formations" below the boulder clay; while in the Supplement to that fifth edition, published in 1859, he states that they may be of any age, from the "Norwich crag" (pliocene) to the post-glacial era, embracing an enormous lapse of time (op. cit. p. 8). In May, 1860, after several years' study of the question, in all the cave districts of England, and in numerous caves abroad, I communicated to the Geological Society a Memoir on the "Gower Caves," in which, after balancing the different classes of evidence, and instituting a comparison between the Welsh caves and those of the other cave-districts in England in particular, and of Europe in general, the following conclusions were arrived at:—"1. That the Gower Caves have probably been filled up with their mammalian remains since the deposition of the boulder clay.—2. That there are no mammalian remains found elsewhere in the ossiferous caves in England and Wales referable to a Fauna of a more ancient geological date.—3. That *Elephas (Loxodon) meridionalis* and *Rhinoceros Etruscus*, which occur in, and are characteristic of, the "sub-marine forest bed" that immediately underlies the boulder clay on the Norfolk coast, have nowhere been met with in the British caverns.—4. That *Elephas antiquus* with *Rhinoceros hemitachus*, and *E. primigenius* with *Rh. tichorhinus*, though respectively characterizing the earlier and later portions of one period, were probably contemporary animals; and that they certainly were companions of the cave-bears, cave-lions, cave-hyænas, &c., and of some at least of the existing mammalia."—*Quarterly Journal of the Geological Society*, 1860, 13th June.

These inferences were at least definite, in making the ossiferous caves of England and Wales to be "post-glacial": they met with lively opposition in discussion, when communicated, but they have not since been impugned; and they have now been

accepted by Sir Charles Lyell, as being in harmony with the extinct Fauna of the valley of the Ouse, and with the post-glacial age of the latter, which I have shown above was, solely, established by Mr. Prestwich's researches. I may add, that *Elephas antiquus*, Falc., and *Rhinoceros hemitachius*, Falc., which are now employed as criteria to test the antiquity of man in Europe, were first shown by me to belong to the cave Fauna, and to occur together in the valley deposits of Clacton and Northampton.

The "Gower Caves" have yielded human bones,—"Paviland" to Dr. Buckland; "Spritsail Tor" and the "Mewslade" fissure to my friend Col. Wood, besides abundance of flint-knives and bone-weapons. Early in my cave investigation, I became familiar with them all. In the spring of 1858, I made an excursion to the cave districts of the Mendips, Devon, and South Wales. At Torquay, when examining "Kent's Hole," Mr. Everest and myself heard of the discovery of a new cave at Brixham. We proceeded thither on the 17th of April. The cave was then intact: we examined it, and made overtures to the owner about an arrangement to explore it. On the 12th of May, 1858, I read to the Council of the Geological Society a communication, describing the cave, the promise which it held out of important results, and the cave-discoveries which I had already made. I urged the necessity of a "combined effort among geologists to organize operations for having it satisfactorily explored, before mischief is done by untutored zeal and desultory work." The Geological Society warmly espoused my recommendation, and forwarded it to the Royal Society, which, on the 13th of May, gave a grant of 100*l.* for the object. So hearty was the co-operation of men of science on this occasion, that within little more than twenty-four hours after the case was brought forward, the means were provided to meet it. Miss Burdett Coutts, with characteristic munificence, contributed a large donation. A committee was appointed to co-operate with me in London, Sir Charles Lyell being a member; I had the sole charge of laying down the plan, and giving the instructions upon which the exploration was to be conducted by Mr. Pengelly, of whom I am bound to say, that never, I believe, was an inquiry of the kind carried out with greater care, zeal and ability than by him. Mr. Prestwich took charge of the financial and business details, and the investigation of some of the physical phenomena. When sufficient progress had been made, Prof. Ramsay and myself proceeded to Torquay, early in September, to examine the evidence. Mr. Pengelly produced excellent and trustworthy data. I identified the fossil bones, determined the flint-implements, and drew up the preliminary Report, in which it was announced that human industrial remains occurred in the Brixham cave, indiscriminately mixed with bones of rhinoceros, hyæna, and other extinct forms, in the undisturbed ochreous cave-earth, and that we had failed to discover that they had been introduced by different agencies or at different times. That Report, dated the 9th of September, 1858, was adopted by the Geological Society, and passed on to the Royal Society, which, on the strength of the results arrived at, gave another grant of 100*l.* to prosecute the researches. The facts became generally known to the Fellows of the Royal and Geological Societies during the month of October, 1858, and excited lively interest; and from that period dates the wane of scepticism among scientific men in England respecting the geological evidence of the antiquity of man as the cotemporary of extinct animals. The documents are filed in the Geological Society which prove that, from first to last, I was the prime mover in everything connected with the exploration of the Brixham cave, except the superintendence of the excavations. The exploration was taken up solely at my suggestion in connexion with my cave researches, and for a specific object, of which the settlement of the question of the age of the human relics found in the "Gower Caves" formed a part. The account given in the 'Antiquity of Man' is such a grave mis-statement of the case that the only excuse for it is that Sir Charles Lyell may never have taken the pains to consult the

original documents, or those from whom they emanated. He abstained from applying to me on the subject, and he does not indicate the sources whence his information was derived. Mr. Prestwich declines the position assigned to him by Sir Charles Lyell on the occasion. Now, as the re-agitation of the question of the antiquity of primeval man, and the establishment of the proof, from the cave evidence by myself, and from the stratigraphical evidence by Mr. Prestwich, arose immediately out of the Brixham cave exploration, it is but right that the facts of the case should be accurately known. From the Brixham cave I proceeded to Sicily, to explore the caves there, after visiting my friend M. Boucher de Perthes, at Abbeville, by previous arrangement; and near Carini I discovered the "Grotta di Maccagnone," in which fresh proofs of the great antiquity of primeval man turned up under very remarkable conditions (*Quarterly Journal of the Geological Society*, 1859, vol. xvi. p. 101). Here, again, Sir Charles Lyell opens his account of it with an untenable remark:—"Geologists have been long aware," &c. (op. cit. p. 174). I invite him to show in what geological works the familiar knowledge which he there asserts is to be found before the statement of the fact by me.

After the communication of the "Maccagnone" memoir on the 4th of May and 22nd of June, 1859, and of Mr. Prestwich's celebrated "Somme Valley" memoir, in the *Philosophical Transactions* on the 26th of May, the case of primeval man was established by two distinct lines of evidence. What has been done since has been merely that confirmation of the facts by other observers which constitutes the touchstone by which the truths of science are verified. The area of the field of observation has, also, been largely extended, but nothing has been brought out to invalidate the original conclusions.

The above is the case which I have to put forward. The two fundamental points were, to fix the precise geological ages of the quaternary deposits, and of the ossiferous caves in which human relics are found. They were both involved in great obscurity. Mr. Prestwich was mainly instrumental in settling the first: the second was determined by me. In the events which led to the re-agitation and proof of the question of primeval man, I brought to light the cave evidence; he followed it up by the investigation of the deposits containing flint-implements in the valley of the Somme. The reader of the 'Antiquity of Man' would have difficulty in arriving at a just idea of these facts from a perusal of that work. Some of the errors and omissions which its author has committed may be attributed to the circumstance that he had not acquired that intimate knowledge of the history of the subject which was requisite to qualify him for narrating what others had done. But it is much to be regretted that Sir Charles Lyell should not have been sufficiently careful to avoid using language liable to the misconception that he was mistaking the observations and generalizations of other geologists for his own. There should never be the slightest ambiguity of expression in such cases. The world at large is under obligation to those philosophers who, like Sir Charles Lyell, communicate the new results of science to the educated public, but they are expected to give an impartial narrative; and it cannot be permitted that the broad line of demarcation which separates their peculiar labours from the researches of original observers should ever be confounded. Sir Charles Lyell struck in with the set of the current, to take up the question when it was launched as a proved case in 1859, and while Mr. Prestwich and myself were still occupied in following up our inquiries. This alone should have made him scrupulously careful in his statements. He has written a work of 500 pages on the "antiquity of man." I have shown in what manner he has dealt in it with the labours of those who were concerned most in starting the question. I now invite Sir Charles Lyell, or any one else on his behalf, to point out a single new fact, or one solitary special observation, which he has contributed bearing on the immediate subject of the *proofs* of the "antiquity of man." There may be many such: I am curious to know what they are, and where they

are to be found. I exclude from the *cartel* the parallel roads of Glenroy, Greenland icebergs, New Zealand earthquakes, Archæopteryx, Himalayan Mud, and other outlying topics which he has employed, with such consummate skill, to throw light on the question.

I need hardly add, that I have been authorized by my friend, Mr. Prestwich, to make those statements contained in the above remarks which have reference to him.

H. FALCONER, M.D.

March 24.

P.S. I observe that at pp. 216-217 Sir Charles Lyell gives a list of the fossil mammalia of the pre-glacial "Forest and Lignite Beds" of the Norfolk coast between Cromer and Happisburgh, where he couples my name with the identifications: "Named by Dr. Falconer and other geologists." That list was never submitted to me: it has been published without my authority or cognizance; and, as a whole, it is either so erroneous or imperfect that I object to my name being connected with it.

H. F.

MR. TROLLOPE'S TESTIMONY.

Florence, March 21, 1863.

I have not seen Mr. Home's book entitled 'Incidents in my Life,' but having read, in the *Athenæum* for March 14, that I am named as one of "the godfathers who appear in these pages to accredit his proceedings," and considering that this leaves me and the readers of the *Athenæum* in uncertainty as to what the facts are to which I am called to bear evidence, I think it well to state, with the utmost possible brevity, what I can testify, and the limits to which I wish to confine my testimony.

I have been present at very many "sittings" of Mr. Home in England, many in my own house in Florence, some in the house of a friend in Florence. I should have been present at other sittings in the house of that friend had it not been that I was requested by Mr. Home to withdraw and absent myself for the future, in consequence of having expressed doubt and incredulity respecting a certain "manifestation," the details of which are curious, and would be worth giving were it not that they would occupy too much space to be permissible in this letter.

I divide, for brevity sake, all the phenomena into *physical* and *metaphysical*,—a division which, if not strictly philosophical, will be sufficiently understood by those who have been present at any of these or similar sittings.

My testimony then is this. I have seen and felt physical facts wholly and utterly inexplicable, as I believe, by any known and generally received physical laws. I unhesitatingly reject the theory which considers such facts to be produced by means familiar to the best professors of legerdemain. I have witnessed also many *very surprising and extraordinary* metaphysical manifestations. But I cannot say that any of these have been such as *wholly* to exclude the possibility of their being deceptive,—and indeed, to use the honest word required by the circumstances, fraudulent.

This is my testimony reduced to its briefest possible expression.

If it be asked what impression, on the whole, has been left on my mind by all that I have witnessed in this matter, I answer one of perplexed doubt, shaping itself into only one conviction that deserves the name of an opinion, namely, that quite sufficient cause has been shown to demand further patient and careful inquiry from those who have the opportunity and the qualifications needed for prosecuting it; that the facts alleged and the number and character of the persons testifying to them are such that real seekers for truth cannot satisfy themselves by merely pooh-poohing them.

T. ADOLPHUS TROLLOPE.

P.S. I may add, to prevent erroneous inferences, that I never saw anything of what, for brevity, may be termed professedly supernatural (so to speak) substances, such as "hands," or the like, but only professedly supernatural movements of natural substances.

THE PALIMPSEST OF URANIUS.

55, Upper Berkeley Street, March 31, 1863.

I do not think that Mr. Eliot Hodgkin's letter, in your last paper, throws any light upon the dispute about the present or former passage in the so-called Palimpsest of Uranius. On the contrary, it only makes the statements of M. Simonides and his friends more unintelligible, if possible, than they were before. For what are the various readings which we now have on authority? They are the following:—

1. Lycurgus's reading (whence I do not know)—
ΑΛΛΟΝΚΑΤΕΜΗΝΙΑΔΕΑΝΣΠΟΥ.

2. The text, according to Mr. Hodgkin—
ΑΛΛΩΝΩΣΕΜΟΙΑΔΕΑΙΣΠΟΥ.

3. The same text as read by Simonides (on Mr. Hodgkin's authority)—
ΑΛΛΩΝΩΣΕΜΟΙΑΔΟΚΕΙΣΠΟΥ.

4. The text as read by Simonides in the *Memnon*, "an antiquarian journal of which Simonides is editor, published at Munich, in Greek and German"—

Ε[Ν]ΤΡ[Ι]Σ[Ι] ΣΥΝ[Ε]ΡΡΑ[Ψ]Α ΒΙΒΑΟ[Ι]Σ
ΚΑΙ [Ο]Σ ΕΜ[Ο]Ι Δ[Ο]Κ[Ε]Ι[Σ]

"The words in the original are, it is stated, so nearly obliterated by age that only a few of the letters (in that passage) are clearly legible."

5. The text as it appears in Dindorf's (suppressed) edition, which Simonides asserts to have been an intentional mis-reading on the part of the German scholar, but which we know was edited by Dindorf from a copy supplied to him by Simonides himself—

Τὰς μὲν τῶν βασιλέων ἀναγραφὰς εἰς τρεῖς συνώψισα βιβλούς, τὰς δὲ τῶν ἀρχιερίων καὶ τὰ τούτων νόμιμα εἰς πέντε, τὰς δὲ τῶν Αἰγύπτων οἰκήσεις, τὰς καὶ μᾶλλον τῶν ἄλλων κατ' ἔμην ἰδίαν σπουδαίας, εἰς ἕξ.

I leave scholars to judge whether the above passage could have been edited from any such fragments as Simonides now describes; and ordinary readers to draw the natural inference from the various modifications of the text above stated. I will only add, that it does not appear when "the *Memnon* version" was first made public.

W. S. W. VAUX.

DR. CARPENTER AND HIS REVIEWER.

University of London, March 30, 1863.

WHILST thanking you for the honour conferred upon my 'Introduction to the Study of the Foraminifera' by the elaborate review of it contained in your last number, I must beg to be allowed to correct some misapprehensions into which the author of that article has fallen.—

1. After quoting my general conclusions as to the probable derivation of all the divergent forms of Foraminifera from a few family types, and the possible derivation even of these from a common original, your reviewer remarks: "We here discern the influence of Mr. Darwin's volume on the mind of the writer"; and he is further "led to question whether a like influence may not have affected Dr. C.'s conclusions and expressions as to the nature of the species and genera of antecedent investigators and classifiers of Foraminifera." So far is this from being the fact, that these conclusions had been arrived at by my coadjutors and myself before the publication of Mr. Darwin's 'Origin of Species,' and in utter ignorance of his views; and any one who may take trouble to refer to my Address as President of the Microscopical Society in 1855, and to the first of my memoirs on this group in the *Philosophical Transactions* for 1856, will see that even at that period I was far on the road to them. The question of the variability of species is one to which my attention was very early directed by Dr. Fritchard; during more than a quarter of a century I have taken every opportunity of gaining information in regard to it from zoologists, botanists and palæontologists; and the expectation of finding in the group of Foraminifera an entirely new and valuable body of material for the prosecution of this inquiry, was one of my chief reasons for applying myself to the systematic study of it.

2. In the succeeding paragraph your reviewer

cites me as representing the identity in the forms of certain fossil and existing Foraminifera, "agreeably with the Darwinian hypothesis, as a case of the genetic continuity between the Foraminifera of successive geological periods, graduating backwards to the period when they began to descend from a common original." I should be glad to be informed of the page of my book from which this professed citation is taken; I am unable to identify it with anything I have written. That I do regard the repetition of identical forms through a succession of geological epochs as indicative of continuous genetic descent is most true; and I have always understood this, so far from being "an astounding hypothesis," to be the doctrine current among our most esteemed palæontologists. Surely the derivation of a certain number of the Mollusks at present inhabiting the Mediterranean, by direct continuity of descent from the identical types whose shells are entombed in the Tertiary formations of its shores, is a fact as well established as the derivation of the existing races of Men from those which peopled the globe during the pre-historic period. And I am at a loss to see what other evidence of genetic connexion Palæontology can ever supply, than that afforded by continuity, either of identical forms, or of forms undergoing a modification so gradational as to exclude the idea of new specific creations. If your reviewer prefers to suppose that new types of Foraminifera originate from time to time out of the "ooze," under the influence of "polar forces," he has, of course, a right to his opinion; though by most naturalists such "spontaneous generation" of rotalines and nummulites will be regarded as a far more "astounding hypothesis" than the one for which it is offered as a substitute. But I hold that mine is the more scientific, as being conformable to the fact that Foraminifera do propagate their kind with more or less of modification; whilst his is not supported by any evidence that rotalines or nummulites ever originate spontaneously, either in "ooze" or anywhere else.

3. Under the influence of his foregone conclusion that I have accepted Mr. Darwin as my master and his hypothesis as my guide, your reviewer represents me as blind to the significance of the general fact stated by me, that "there has been no advance in the foraminiferous type from the paleozoic period to the present time." But for such a foregone conclusion, he would have recognized in this statement the expression of my conviction that the present state of scientific evidence, instead of sanctioning the idea that the descendants of the primitive type or types of Foraminifera can ever rise to any higher grade, justifies the *anti-Darwinian* inference, that however widely they diverge from each other and from their originals, they still remain Foraminifera.

I cannot but regret that in his anxiety to warn your readers against the heterodox tendencies of my treatise, your reviewer should have passed by the question whether the classification proposed by my coadjutors and myself as a substitute for the artificial system of M. D'Orbigny, previously in vogue, is really founded on natural principles. The fact that the Royal Society has honoured my individual labours in this field by the award of one of the royal medals in 1861, might have been expected to secure for them a trial before any scientific tribunal upon some fairer issue than their supposed tendency to Darwinism.

WILLIAM B. CARPENTER.

OUR WEEKLY GOSSIP.

THE Trustees of the National Gallery have recently come into possession of Mr. Lewis's bequest of 10,000*l.* The will was a little singular. Mr. Lewis left a portrait of his father, "Gentleman Lewis," the well-known comedian, a crony of George the Fourth, to the nation, and on condition of its acceptance by the Trustees, he bequeathed the 10,000*l.* in money, to be applied in the first instance in taking due care of the picture, and afterwards as the authorities shall agree. The money, we understand, has been funded, and the proceeds of it, about 300*l.* a year, will be applied generally for the good of the collection.

Mr. Frith (having been relieved from Mr. Gambart's three great pictures of London Life) is now free to proceed at once with Her Majesty's commission. The price to be paid by the Queen for this marriage picture is 3,000*l.* Mr. Flatou, proprietor of 'The Railway Station,' by the same artist, has purchased the right to engrave the wedding picture for the large sum of 5,000*l.* Such prices are quite sensational,—are certainly without example in the artistic world.

Messrs. Marion & Co., of Soho Square, have published a whole-length photographic portrait of the Queen, in state robes of black *moire-antique*, and diademed. This study was taken shortly before Her Majesty's bereavement by the late Mr. Clifford, of Madrid, photographer to the Queen of Spain—who specially sent him to execute it. The likeness is highly characteristic, and the *pose* of the figure dignified. This photograph has been reproduced by Messrs. Cundall & Co. as a visiting-card portrait.

Mr. Mitchell, of Bond Street, has produced two timely engravings of the Prince and Princess of Wales. The work is by Mr. William Holl, after photographs by Mr. Mayall. Produced in a hurry to catch the market,—the plates bear the date of Osborne, March 14, 1863,—they are bold, bright, and effective in a high degree. Mr. Mitchell, we may add, has been appointed Bookseller and Publisher to the Prince and Princess of Wales.

Mr. Bennett's design for the Casket in which the Freedom of the City is to be presented to the Prince of Wales, and for which 250*l.* has been voted by the Corporation, is in the cinque-cento style, to be executed in gold of various tints and enamel of the proper colours. The front is divided into three panels, on the centre of which, on a ground of royal blue enamel, are shields bearing the arms of the Prince and Princess of Wales; above this appears the Prince's Crown of State in gold enamel and jewels. The right-hand panel contains the arms of the City of London, that on the left the arms of Rose, Lord Mayor. The casket is supported by four sea-horses, above which appear masks of Neptune. The whole is surmounted by a figure of Britannia with her trident, guarded by the lion and unicorn. The back will also be divided into three panels, the centre to contain an appropriate inscription, and those on each side the monogram (A. E. A.) of the Prince and Princess of Wales. The work, we believe, cannot be executed for the sum named; but Mr. Bennett is willing to forego profit for the sake of producing a creditable work of Art.

Mr Winwood Reade has arrived in London from the Gaboon. The traveller has brought back a large collection of notes and experiences, which he is preparing for the press.

That a man of letters should succeed to the vacant chair of the Museum Trust will appear to all men of letters right and fitting; no one, therefore, will be surprised to hear that Mr. Disraeli has been elected in the place of Lord Lansdowne. It is more important, perhaps, to notice the charity which in this case has induced politicians to forget that Mr. Disraeli is a Tory, and that Lord Lansdowne was a Whig.

Mr. Beresford Hope, President of the Architectural Museum, inaugurated the new session of that body, on Tuesday week, by an address in which he reviewed the "Condition and Prospects of Architectural Art." The address was extremely interesting, especially to admirers of Gothic work, which the audience at South Kensington unquestionably were. Mr Hope announced that no prizes would be given this summer; the comparisons of the International Exhibition having shown the serious deficiencies of our students in some branches of culture; but the prize funds will be allowed to increase, and a higher range of prizes will be given next year for superior work. The reasons adduced made this step appear a wise one. Next Tuesday evening, Mr. G. J. Wigley, a gentleman who is considered an authority on everything relating to architecture in Jerusalem, will lecture 'On Medieval Studies in Palestine.'

From Mr. Hyde Clarke, of whom our readers last heard as opening a railway to Ephesus, we have

news of the discovery, at Samos, of the foundations of the famous Temple of Juno. Excavations have been conducted on the spot by Prof. Strack, for the Berlin Museum. Nothing of value turned up for the Prussian collection, but the diggings laid bare a great number of columns of the Heraeum, renowned in ancient time as one of the Seven Wonders, so as to develop to a large extent the form, size and character of the temple. The bases of the columns are found about twelve feet below the surface; they are numerous and of gigantic size. For the present, we hear that these interesting works are stopped, awaiting instructions and funds from Prof. Strack.

Mr. Glaisher has commenced the balloon ascents for which a sum of money was appropriated last year by the British Association.

The collection of the National Portrait Gallery—which is to be thrown open to the public on Monday next—continues to increase notwithstanding the difficulties that seem to beset it. Since the period of our last record the Trustees have purchased several authentic portraits of distinguished men; but only two or three of the number deserve notice as works of Art. A clever miniature of Dr. Wolcott, more generally known as Peter Pindar, by Lethbridge, is a truthful but very favourable transcript of that selfish man and unsparing writer. As a piece of rich and honest painting, it is deserving of high praise. Bishop Horaley, the opponent of Priestley, also by Lethbridge, the miniature painter, has likewise found a place in the Gallery. King Henry the Eighth, a small square picture on copper, is from the Lee Priory Collection, and welcome as one of a class of portraits in which the Gallery has hitherto been somewhat deficient. The swarthy countenance of King Charles the Second, in large black wig, with steel cuirass and buff sleeves, is shown to considerable advantage in a clever bust-portrait by Mrs. Beale, whose imitations of Lely frequently pass for the work of her master himself. General Monk, poor as a picture, but valuable as a piece of accurate portraiture, resembles in many respects a well-known miniature of him by Cooper. Lord Chesterfield, taken at a comparatively early period of life, and probably before the commencement of his celebrated Letters, is a clear and well-painted picture, superior both in colour and in drawing to the other more generally known portraits by Hoare, of Bath, by whom this also was painted. The round, placid countenance of Richardson, the author of 'Clarissa Harlowe,' with a pimple on his cheek, just sufficient to mark identity, without producing a disagreeable effect, is highly favourable as a specimen of Highmore's powers; whilst another portrait, exhibiting the fiery eye and flexible mouth of Dick Steele, with a sudden movement of the head, affords a striking contrast both in character and treatment to the former picture. Richardson, the painter, is certainly not seen to advantage in this picture, for the conception and execution are by no means fairly balanced. Bishop Burnet puts in an appearance through a heavily-shadowed picture, by Riley. He has a sullen and obstinate look; neither the eyes nor form of the lips would prepossess any one very strongly in his favour. He wears the blue mantle and insignia of the Chancellor of the Order of the Garter. Many of the pictures in the Gallery are now hung of necessity in the darkest places between the windows, and several of the smaller and very interesting portraits are put out of sight round the corner of a projecting wall, where few persons would think of looking for them. The terra-cotta bust of Oliver Cromwell has been carefully cleaned, and is worthy of being seen in a better light. The pictures and busts now amount to 159 in number.

The Royal Botanic Society of London commenced their Spring Exhibitions for 1863 on Saturday last. The weather was fine, and the show attractive. The second and third exhibitions will take place on April 11 and 25.

The first Evening Reception at the Royal Society was held by General Sabine, President, on Saturday last, at Burlington House. A goodly company of literary and scientific celebrities honoured the General's invitation, and the rooms

were furnished with objects of science and art. Mr. Buckland and Capt. Coles, perhaps, found the largest number of spectators; the first by his tanks for the artificial breeding of salmon and trout, the second by his model of the famous cupola ship. Among minor attractions were Prof. Maxwell's apparatus for viewing the mixed colours of the spectrum; Mr. Crooke's specimens of metal thallium; Mr. Olley's chromo-photographs; and a number of relics and memorials of Linnaeus, including some autographs, busts and medals.

Monsieur Nadault de Buffon, the grand-nephew of the great naturalist, whose name he has assumed and whose correspondence he edited, is about to bring out a second edition of the latter publication, and is anxious to make, through these pages, a last appeal to the collectors of autograph letters, for copies or information. Buffon passed several years of his youth in England, and preserved during his life most of the friends of his youth and corresponded diligently with most of them. Is it possible that so much can have been entirely lost, and that the only letters of Buffon known in England are those to the Abbé Leblanc now in the British Museum? M. Nadault de Buffon is also anxious to ascertain if it is possible to find in England any trace of the family of a Mr. Hinckman, tutor to the Duke of Kingston, as it was Mr. Hinckman who induced Buffon to become a naturalist. Any information will be thankfully received by M. Nadault de Buffon, directed either to himself at Chalon-sur-Saône, or to the care of Messrs. Williams & Norgate, London.

We hear that Mr. C. W. Heckethorn, a Swiss gentleman residing in London, who some years ago published by subscription a metrical version of Tegner's 'Frithiof Saga,' is preparing a new and improved edition of his work for the press. We may fairly expect to see a great increase of interest in all kinds of Scandinavian literature during the next twenty years.

Mr. A. J. Symington, author of 'Pen and Pencil Sketches of Farøe and Iceland,' has been elected a Founder-Member of the Royal Society of Northern Antiquities of Copenhagen, of which the present King of Denmark is President.

The Council of the Society of Arts have agreed to offer fifteen prizes for the following subjects:—1. The Human Figure in bas-relief, in modelling in terra-cotta, plaster, or wax, one prize of 10*l.* for the best, and a second prize of 5*l.* for the next best, work executed after Raphael's design of the 'Three Graces.'—2. Ornament in bas-relief, in the same, one prize of 5*l.* for the best, and a second prize of 3*l.* for the next best, work executed after arabesques by Lucas van Leyden.—3. The Human Figure as a bas-relief, in repoussé work in any metal, a prize of 10*l.* for the best, and a second prize of 5*l.* for the next best, work executed after Raphael's 'Three Graces.'—4. Ornament, in the same, one prize of 5*l.* for the best, and a second prize of 3*l.* for the next best, work executed after a Flemish salver in the South Kensington Museum, date about 1670.—5. Ornament, in hammered work, in iron, brass, or copper, one prize of 5*l.* for the best, and a second prize of 3*l.* for the next best, work executed after an iron German arabesque, about 1520, in the South Kensington Museum.—6. The Human Figure in bas-relief, in carving in ivory, one prize of 10*l.* for the best, and a second prize of 5*l.* for the next best, work executed after a terra-cotta ascribed to Luca della Robbia, about 1420.—7. The Human Figure in metal chasing, one prize of 10*l.* for the best, and a second prize of 5*l.* for the next best, work executed after a reduced copy of Gibson's 'Psyche.'—8. Ornament, in the same, one prize of 5*l.* for the best, and a second prize of 3*l.* for the next best, work executed after a bronze plaque in the South Kensington Museum.—9. The Human Figure in enamel painting on metal, copper, or gold, one prize of 10*l.* for the best and a second prize of 5*l.* for the next best, work executed after Raphael's design of the 'Three Graces,' executed in *grisaille*.—10. Ornament in *grisaille*, one prize of 5*l.* for the best, and a second prize of 3*l.* for the next best, work executed after a German arabesque, 16th century.—11. The Human Figure, in painting on porcelain, one

prize of 10*l.* for the best, and a second prize of 5*l.* for the next best, work executed after Raphael's 'Boy bearing Doves,' in the cartoon of 'The Beautiful Gate.'—12. Ornament, in the same, one prize of 5*l.* for the best, and a second prize of 3*l.* for the next best, work executed after arabesques by Lucas van Leyden, 1628, and coloured according to the taste of the painter.—13. Ornament, inlays in wood (marquetry, or buhl), ivory or metal, one prize of 5*l.* for the best, and a second prize of 3*l.* for the next best, work executed after a majolica plate in the South Kensington Museum, 1490.—14. Ornament, engraving on glass, one prize of 5*l.* for the best, and a second prize of 3*l.* for the next best, work executed after arabesques by Lucas van Leyden, 1628, engraved the height of the photograph; and if round a glass or goblet, repeated so as to be not less than 9 inches long when stretched out.—15. Ornament in embroidery, one prize of 5*l.* for the best, and a second prize of 3*l.* for the next best, work executed after a German example in the Green Vaults at Dresden. The works will be the property of the producers, but will be retained for exhibition, in London and elsewhere, for such length of time as the Council may think desirable. The exhibitors are required to state in each case the price at which their works may be sold, or if sold previous to exhibition, at what price they would be willing to produce a copy.

MR. GHÉMAR'S EXHIBITION OF THE ROYAL FAMILIES OF ENGLAND AND DENMARK.—Portraits of The Queen, the Prince and Princess of Wales, life-size, comprising Fifty-one Photographic Pictures and Drawings, executed by Mr. Ghémar, from actual sittings, are NOW ON VIEW at the FRENCH GALLERY, 130, Pall Mall (First Floor).—Admission, 1*s.* N.B.—Each visitor will be presented with a Portrait of the Princess of Wales, carte de visite size.

MR. EDMUND YATES'S INVITATIONS TO EVENING PARTIES and the SEASIDE.—A SPIRIT-RAPPING SEANCE. An entirely New Part, entitled 'Twenty Minutes with a Medium,' from actual sittings, are NOW ON VIEW at the FRENCH GALLERY, 130, Pall Mall (First Floor).—Admission, 1*s.* N.B.—Each visitor will be presented with a Portrait of the Princess of Wales, carte de visite size.

A MORNING IN MEXICO.—Magnificent and exquisite EXHIBITION OF CERAMIC STATUETTES, illustrating Life, Manners, Customs and Costumes in Mexico. Open daily, from Ten to Six. Gallery, 68, Newman-street, Oxford-street.—Admission, 1*s.* Saturdays, including Descriptive Catalogue, 2*s.* 6*d.*; Visitors under Fifteen, 1*s.*

SCIENCE

SOCIETIES.

ROYAL.—*March 26.*—General Sabine, President, in the chair.—The following papers were read: 'On a Simple Formula and Practical Rule for calculating Heights Barometrically without Logarithms,' and 'Bessel's Hypsometric Tables, as corrected by Plantamour, reduced to English Measures, and re-calculated,' by A. J. Ellis.—'Researches in the Chemical Constitution of Narcotine, and of its Products of Decomposition,' Part I., by A. Matthiessen and G. C. Foster.—'Postscript to a Paper on the Formation of Fibrin from Albumen,' by A. H. Smee, jun.—'On Diffusion of Vapours: a Means of distinguishing between Apparent and Real Vapour Densities of Chemical Compounds,' by J. A. Wanklyn and J. Robinson.

BRITISH ARCHEOLOGICAL ASSOCIATION.—*March 25.*—T. J. Pettigrew, V.P., in the chair.—J. H. Challis and the Chairman (for the time being) of the Library Committee of the Corporation of London were elected Associates.—The Chairman exhibited a Charter, 15 Edw. III., giving to the Prior and Convent De Bello Loco (Newstead) the manor of North Muskham, Notts.—Mr. Wentworth exhibited a Placita in an action at Nisi Prius, 31 Edw. III., Joan Voy, of Pontefract, *versus* Sir Peter De Maulay, of Doncaster, Knt. Also an Inquisitio post Mortem, with regard to the estate of the same Joan Voy, dated 43 Edw. III.—Mr. Gunston exhibited two Bone Tubes, apparently the handles of large implements, found in Egypt; one was carved with rings and a band of eyelet-holes, the other with triangles and cross-lines. Mr. Gunston also exhibited a small Bone Haft, of early date, incised on each side with two lines of chevrons, found in Clerkenwell, and a triangular blade of bone, probably a spatula, found with Roman antiquities in Southwark.—Mr. Clarence Hopper forwarded a notice fixing the date of the decease of Bogo De Clare, 23 Edw. I., a

man of large property, whose daily expenditure had been laid before the Association as illustrative of the domestic manners of that reign, by the Rev. Mr. Hartshorne. He possessed the fruits of Thatcham and Chieveley, Berks, which upon his decease passed to Nicholas, Bishop of Sarum.—Dr. Lee exhibited a Chinese Teapot, representing various fruits, seeds, &c., peculiar to the reign of Kang-Hi (1661-1723). They are beautifully modelled.—Mr. Cumming exhibited a Chinese model, in porcelain, of the Capsule of the Hibiscus, most naturally modelled.—Mr. Baskcomb exhibited a German Tobacco-pipe, of the close of the reign of Leopold I., which, from the armorial bearings, would appear to have belonged to him.—Miss Westmacott exhibited a pair of Snuffers of the Elizabethan period.—Mr. Gunston produced a pair executed from the same mould, having a head of Mercury, with a medallion profile above, guilloche border, foliage,—and Mr. Vere Irving exhibited a pair of a later period, found in Lanarkshire,—and Mr. Cumming read a paper 'On the Various Kinds of Ancient Snuffers.'—Mr. T. Wright read a paper, written by the Chairman, 'On Thuribles,' giving their history, and an account of the most remarkable specimens in gold, silver, copper, bronze and terra-cotta.—Several examples were produced by Mr. Pettigrew, Mr. Forman, Mr. Fitch and others.

INSTITUTE OF BRITISH ARCHITECTS.—*March 28.*—W. Tite, M.P., President, in the chair.—A paper was read by the Rev. J. L. Petit, M.A., 'On the Abbeys of Ireland,' illustrated by original sketches.

INSTITUTION OF CIVIL ENGINEERS.—*March 31.*—J. Fowler, Esq., V.P., in the chair.—The paper read was 'On Structures in the Sea, without Coffers Dams; with a Description of the Works of the new Albert Harbours at Greenock,' by Mr. D. Miller.

ROYAL INSTITUTION.—*Jan. 30.*—Sir H. Holland, Bart., V.P., in the chair.—'On the Points of Contact between Science and Art,' by Cardinal Wiseman.

Feb. 20.—H. B. Jones, M.D., Honorary Secretary, in the chair.—'On recent Discoveries at Jerusalem.'—'The Temple Area and the Fortress Antonia,' by the Rev. G. Williams.

March 6.—Sir H. Holland Bart., V.P., in the chair.—'On the Photographic Transparency of Bodies, and on the Photographic Spectra of the Elementary Bodies,' by W. A. Miller, M.D.

March 13.—The Rev. J. Barlow, V.P., in the chair.—'On Fogs and Fog Signals,' by J. H. Gladstone, Ph.D.

INSTITUTE OF ACTUARIES.—*March 30.*—C. Jellicoe, Esq., President, in the chair.—'On the Relation of the Carlisle Table to the Government, the Registrar General's and other Tables of Mortality,' by Mr. Jardine Henry.

MEETINGS FOR THE ENSUING WEEK.

- MON. Entomological, 7.
- TUES. Royal Institution, 2.—General Monthly Meeting.
- TUES. Photographic, 8.
- WED. Graphic, 8.
- SOCIETY OF ARTS, 8.—'Sewing Machine; its History and Progress,' Mr. Alexander.
- MICROSCOPICAL, 8.
- ARCHAEOLOGICAL ASSOCIATION, 8.—'Discovery at Priory of St. John the Baptist, Holywell, Shoreditch,' Mr. Long; 'Queen Eleanor's Cross at Northampton,' Rev. C. H. Hartshorne; 'A Holy Sepulchre, Glastonbury Abbey,' Mr. Syer Cumming.
- FRI. Astronomical, 8.
- ARCHAEOLOGICAL INSTITUTE, 4.

FINE ARTS

SOCIETY OF BRITISH ARTISTS.

THIS Exhibition is above the average. The works of many young men appear on the walls, and give them a brighter character than we have before noticed. Of figure pictures there are not many which can pretend to take high rank; amongst them observe Mr. J. Noble's *Incident from Pepys's Diary* (No. 26), showing the worthy diarist leading the Duchess of York, "fat Anne Hyde," to the door of Lely's house, to whom she was to sit for a portrait. With an obsequious swing Pepys has taken the lady's hand, looking into her face with an expression that is a capital rendering of character. The execution lacks bright-

ness and purity.—Mr. E. J. Cobbett's *The Proposal* (38) is imperfect: the head being too large, the figure dumpy, and the textures, with all their dash, heavy; yet the character is good—a girl meditating over a written offer of marriage.—In Mr. J. Finnie's *Gossips* (59) are two north-country people; a man, seated on a wall, and a market-woman, having a chat; both of them ill-favoured, but showing expression.—Mr. J. S. Cavell's *The Woodhouse* (67), a little girl busy in chopping wood from a small forest stored up, is cleverly painted; rendering interior effect felicitously, although rather flatly. The girl is capably studied—see the tone of colour on her pinafore.—Like Messrs. Cobbett and Finnie, Mr. W. Bromley takes small heed of beauty; accordingly, his *Village School* (69) has all the variety of action seen in merry children, but not one pretty creature on the canvas.—Decidedly the best figure picture here is by Mr. Hayllar, "Sugar?" (163),—a lady with tea-equipage before her, leaning back in her seat to consult some visitor's taste. This is painted with dash, spirit, and the consent of action and accessories that signalizes artistic power. It is painted with even too much dash, so as to make one fear the artist may suffer through that very quality. The face is rather too portrait-like to be excellent, but its expression is crisp and fresh. The wall decorations and tea-service are singularly well done. Notice the fawn-brown of the gown, and its harmonies throughout the picture. Other pictures by this artist, as Nos. 48 and 294, are discreditably to his ability in their excessive flimsiness.—Contrast the style of the last picture with that of Mr. Hurlstone's *At Seville* (207), a Spanish woman with the inevitable fan. Get to a little distance and see what Mr. Hurlstone means by all those smears and patches of colour; this done, the whole work falls into a keeping that entitles the artist to be styled, as he has been, a Birmingham Velasquez.—For a strong contrast, go a little further on, to Mr. P. R. Morris's *Butterfly Days* (214), with its timid execution, real feeling for childish beauty and sentiment, free from sentimentality. Here is a child, hat in hand, chasing a butterfly under summer trees and sky. This work is exceedingly pretty and bright; the flesh, in the shaded side of the face especially, rather thin in handling—a defect the young artist may overcome. Another excellent work by Mr. Morris we shall place here, although it is a coast-scene—*Lights of the Ocean* (672); a large, brilliant moon is about to pass behind a climbing bank of clouds; her light makes a long wake towards us.

Mr. F. G. Price's *Tuning-up* (614), an old amateur tuning his violin, showing to us the cunning eye and the wise and sidelong ear as he tests the strings, is a capital example of expression; notice the sly, dry wrinkles about the eyes, the lean and thoughtful features, the set mouth, as very characteristic. There is bright and pleasant colour in this picture.—Mr. R. Tucker's *Preparing the Nets* (701) is a scene in a fisherman's house. The subject, a Devonshire lass and her lover, having a quiet flirtation, while she mends her father's nets, is excellently painted. Outside the doorway we catch a glimpse of the Devon coast, the sea, and its cliffs in sunlight. There is a pleasant homeliness about the girl's face which is pleasant.—Mr. J. T. Lucas has another *Fisherman's Daughter* (282), showing some beauty, study of nature and brilliancy.

Foremost among the landscapes as a work of art is Mr. Anthony's *Langham Castle, Carmarthenshire* (400), a coast-castle, which rears its tall grey towers, round whose summits the rich, dark ivy clings, rising from a stark beach, whence the tide has retired, leaving a ragged, stony wilderness; behind the fortress is a great swirl of rain-cloud, such as Mr. Anthony can paint perfectly, and glimpses of deep, pure blue sky with snowy masses heaped upon it. The absolute truth and effective poetry of this work are proofs of singular powers possessed by the artist, and triumphantly assert that Art can be poetic in fidelity.—Mr. B. W. Leader's *Fine Morning in the Llechl Valley* (42) is an excellent work, removed, by the painter's love of nature, from the mechanical treatment which has ruined the popular

Boddington school, so called. This picture is assimilated to such works in subject, but is far more careful in execution; in fact, its feeling is more honest.—*The Lodge, Kippington Park, Sevenoaks* (44), by Mr. W. S. Rose,—a true park entrance with its pretty lodge,—is a little painty in execution, yet has such a brightness, clearness and dainty touch that it ought not to be overlooked when we are seeking for creditable and pleasant pictures.—Mr. J. F. Hardy's *Chepstow Castle, with the Wymcliff* (89) gives a fine idea of that noble site; is a little dry and thin in colour and handling; its look of air and that somewhat rare quality of the painter's which enables him to grasp the whole of a scene or subject are so well marked that we gladly call attention to it.—Mr. V. Cole's *Road over the Heath* (95) will hardly satisfy his admirers or soothe their fears that his undeniable skill and love of nature may degenerate into mannerism. The scene is a sunny, sandy, far-spanning heath, from whose heights we look over distant counties; to the left is the ever-recurring group of pines against the sky. Brilliant as this picture is, we shall pay the debt of old admiration for its artist's ability by warning him that many parts show the mechanism of mere execution to be overcoming his love of truth and nature.—Mr. Holliday's *Foss Noyon, on the Conway* (107) shows that deep track of the immemorial stream that has been eaten through rocks and amongst boulders, mossed and streamer-hung, lichen-stained, and shaded from the sun by trees of brilliant green. It is rare indeed to find a landscape so good as this, so solidly and vigorously painted, with such a fine appreciation for nature, such care in rendering that appreciation, and such power to do it justice. Notice the clear shadows on the walls of rock, the rich, deep colouring of the mosses and lichens on the boulders, the pure, swift stream's effect upon its bed, and the sheeny swirl where it passes the rocks, the blue sky-reflections on the surface. So far as literal translation goes, this picture, completely different as it is, is equal to that by Mr. Anthony. It has the pathos that comes out of fidelity, but not the pathos of human thought added to that: hence its inferiority in conception and performance.

Mr. T. Collier's *On the Lluydy, N. Wales* (148), a black cloud over a sunny scene, is thially painted to excess; it is therefore a little weak and over bright in colour, but its feeling for nature is beyond challenge. The effect is excellent.—Mr. H. Moore sometimes paints with careless pretension that is pitiable; his *Ripe for the Sickle* (109), the edge of a cornfield, with the corn wind-tossed and tawny in the sun, is exceedingly beautiful and true. The vista of a path and removed trees is worthy of note.—*A Summer Crisp with Shining Woods* (167), by Mr. F. Walton, a study of a beech wood, under the boughs of which are seen the sunny cornfields and distant purple-greyish hills. One laments the artist has not handled it with greater purity of colour; yet the work is strong, bright and suggestive. If its style had been weaker, we should have hoped better from the artist in future.—*Spring-time* (341), by Mr. G. H. Boughton, is by an artist whose little picture attracted attention at the British Institution—('Passing into the Shade'). This is wrought in the same almost French manner. A girl is sowing seed in a newly-ploughed field. The feeling for tone, the sober, rich expressiveness, and softness of execution which mark this little picture are pleasant to an artist's eye.—A few other estimable pictures may be added to the above, *A Farm Yard* (111), by Mr. A. Corbould, has some well-painted horses.—*A Doubtful Reception* (77), by Mr. R. Physick, jun., shows spirit in treating canine character.—a kitten's visit to a kennel.—Mrs. Anderson's *Still Life* (245), dead game, peacock, and fruit, has a commendable colour and rendering of texture.—*The Wounded Kite* (367), by Mr. J. C. Bell,—such a bird, with an injured wing, screaming as he flies,—is inspired.—*The Grand Canal, Venice* (392), by Mr. W. Henry, renders very solidly and powerfully that often-painted scene.—Mr. T. F. Wainwright's *A Summer Noon* (694) is warm, truthful and bright in treatment.

FINE-ART GOSSIP.—The French Exhibition will open to the public on the 13th of April; the private view will be on the 11th, next Saturday. We understand that it will contain a large collection of French and Belgian pictures; also about twenty statuettes of animals, in bronze and plaster, by M. Hähnel, of Dresden. Amongst these are hippopotami, lions roaring, sleeping, walking, and lions of the Cape, and lionesses, giraffes, camels, ostriches, cocks, eagles, stags and leopards.

At Messrs. H. Graves's Rooms, in Pall Mall, may be seen a picture of the view from Richmond Hill, by Mr. Cropsey. Remembering who has painted that scene, it is rather too much to be told that this work is "far beyond all former pictorial representations of the subject." Turner, for one, did it indifferently well. Judging this production by its own standard as a popular picture intended for engraving (by Mr. K. Wallis) it has considerable merit. If, like most American landscape painters, the artist fails to render the pure brilliancy, which is the most beautiful characteristic of colour, and so errs almost to paintiness, he has grasped the subject as a whole powerfully, and, with the reservation stated, with some fidelity. Exceeding in solidity, this picture is yet various and rich, and ought to engrave well because it is in good tone. The shortcoming observable in this work would, no doubt, have been avoided if the painter, instead of executing it "entirely from sketches made on the spot," had done the work itself on the spot.

The awards of medals and honourable mentions to students of the Female School of Art at South Kensington, have reached this year the fullest number allowed by the Art Department, *i. e.* thirty. The recipients are named as under:—Medals, and to compete for national medallions, Mrs. Kemp (2 medals); Misses E. Bradley, R. M. David, C. Davis, C. Edwards, E. Fisher, H. Gransmore, S. Hull (2 medals), M. A. Holt, J. K. Humphreys (2 medals), E. Martin, M. Mason, C. Tripé and H. Wilkie.—Medals only, Misses A. M. Abbot, A. E. Black, A. Challice, K. Grose, C. Hull, F. Hall, J. Hodges, E. Harker, J. Laing, F. Redgrave, E. Royal, E. A. Schutze and W. A. Walker (2 medals).—Honourable mention, Mrs. Charles, Misses A. Bradley, J. Hunter, J. Hands, A. Lushington, E. Miles, M. A. Phillips, J. Snell, M. E. Slack, J. Warry and E. S. Westbrook.

The sale of Mr. Beckingham's pictures, at Messrs. Christie & Manson's, on Saturday last, produced the following prices for noteworthy examples:—Mr. T. Creswick, Haddon, The Old Bowling Green at Haddon, and A Picnic Party at Roslyn, 110 guineas (Mr. Cracken).—Mr. P. F. Poole, Mountain Spring, 145 guineas.—Mr. R. Ansdell, Going to the Lodge, 270 guineas.—Mr. W. P. Frith, Measuring Heights, from 'The Vicar of Wakefield,' 800 guineas (Mr. Ellis).—Mr. T. S. Cooper, Summer, and companion, 325*l.* 10*s.* (Sharpe).—Mr. T. Faed, Rest, 105*l.* (Haigh).

Workmen are now erecting in the North Court at the South Kensington Museum the Tribune, or *Cappella Maggiore* of the conventual church of Santa Chiara, Florence, which was originally erected in 1493. As a complete specimen of a style which is by no means desirable for imitation, this is a valuable acquisition. It may serve as a warning only in its general character, although many of its details have extraordinary beauty. Mr. Robinson's account of the edifice we condense thus. The convent stood in the Via Santa Maria B.—Santo Spirito was suppressed early in this century; the portion now imported was used until 1842, then formally desecrated and converted into a studio. The owner began to sell portions of it, and a public appeal for its preservation as a whole meeting with no response in Florence, the complete structure was acquired for South Kensington. All the ashlar stone facings of the interior, with the marble high altar, are now being re-erected. It is supposed to have been built by *Ti Cronaca*, a follower of Brunellesco, and "is so entirely coincident in every line, form and detail with the corresponding parts of Brunellesco's churches S. Spirito and S. Lorenzo as to be a perfect typical representation of his style." There is a frieze of glazed terra-cotta, probably by Della Robbia, round the interior, comprising cherubim,

garlands and religious emblems in coloured enamel on a blue ground. The altar is known to be the work of L. del Tasso. We cannot agree with Mr. Robinson that it was intended to be part of the entire composition of the tribune; at any rate, if so, it was not well designed. The *tabernacolo*, also acquired, is probably by D. da Settignano. The area of the building is about 18 feet square, the height 37 feet to the summit of the cupola which covers it; the marble high altar, standing detached within, is about 19 feet high, by 10 feet wide. We regret to see so large a space as this appropriated in the museum to a confessedly second-rate work, not characteristic of a noble period, and deriving its art-value from sculptures that might have been placed singly with other details comprising the national collection. Surely a photograph or drawing would suffice to show what the building was. Would not casts of the best works of the true Renaissance, so often glorious, be more valuable than such as the above and the clumsy *Cantoria*, also imported?

"An old reader," referring to the *Athenæum's* review of Mr. Benrose's 'Manual of Wood Carving' (No. 1810), requests us to point out examples, accessible to the London wood-carver, which illustrate the period and style advocated by us. These were the Early, and true, Renaissance, and best periods of Gothic carving, as being preferable to the commonly-styled Renaissance, the Rococo, Goutier, and merely imitative fashions of Gibbons and the later Dutch school. It is not difficult to satisfy our Correspondent. Most English cathedrals contain inimitable Gothic examples: at Wells a nearly perfect set of *Miserere* seats exists, which may be taken as models; these have been photographed by Messrs. Cundall & Downes. In Westminster Abbey (Henry the Seventh's Chapel) and St. Helen's, Bishopsgate, are many like and excellent works. In the South Kensington Museum is a splendid collection of casts from wood and stone carvings (that are equally useful) of Gothic character, of all periods, from archaic, consummated or over-florid character. We do not say, copy these; but study their spirit, and, informed thereby, go to Nature in answer to modern requirements. In the same place are many Jacobian works that should not be overlooked. Superb specimens of pure Renaissance are in another part of this Museum, in castings from Ghiberti's Florentine doors, which the student may profitably compare with the casts from real fruit and foliage exhibited by Mr. Brucciani, and the thin, hard, liney, but exquisitely finished works of M. de Triqueti, from the "Madeleine Frieze," Paris,—all in the same place. Not far from these are exquisite specimens, in terra-cotta, &c., by Della Robbia, wood carvings in *quattro* and *cinq-ento* styles, *cassoni*, chests, panels, &c. In the Crystal Palace are innumerable casts of the most various and valuable character. Let such as these be studied after heedful observation of the works of Gibbons, of which the churchwardens' pews in Allhallows Barking Church, Tower Street, are most elaborate; in St. Paul's, his own, or made under his superintendence, is an enormous quantity; the old pulpit is by Mowatt. At Hampton Court there is no end of such work. Of larger and exterior work much remains in the City Halls, in Aldersgate Street, Prince's Square, Finsbury (griffins); at the Sir Paul Pindar's Head, Bishopsgate Street (a ceiling); on the hammer-beams of Westminster Hall roof, in Great Ormond Street and Queen Square, Westminster (doorways). In Gothic diapers, Westminster Abbey is inexhaustible.

MUSIC AND THE DRAMA

ROYAL ITALIAN OPERA, COVENT GARDEN.

SEASON 1863.

Mr. GYE has the honour to announce to the Nobility, Gentry, Subscribers, and the Public, that the Opera Season of 1863 will commence on TUESDAY NEXT, April 7th,

on which occasion will be performed Auber's celebrated Opera, **MASANIELLO.**

The following is a List of the Engagements already entered into:—

Mademoiselle ADELINA PATTI,
Madame DIDIÉE,
Mademoiselle ANTONIETTA FRICCI,
Mademoiselle MARIE BATTU,

Mademoiselle DOTTINI,
Madame RUDERS DOERFF,
Mademoiselle BRESSE,
Madame TAGLIAFICO,
AND
Madame MIOLAN-CARVALHO.

Mademoiselle FIORETTI,
(Her First Appearance in England.)
Mademoiselle MAURENSI,
(Her First Appearance in England.)
Mademoiselle ELVIRA DEMI,
(Her First Appearance in England.)
Madame DE MAFFEI,
(Her First Appearance in England.)
AND
Mademoiselle PAULINE LUCCA,
(Her First Appearance in England.)

Signor TAMBERLIK,
Signor NERI-BARGLI,
Signor LU'CHESI,
Signor RUSSI,
AND
Signor MARIO.

Signor NAUDIN,
(His First Appearance at the Royal Italian Opera.)
Signor FERENZI,
(His First Appearance in England.)
AND
Signor CAFFIERI,
(His First Appearance in England.)

Signor RONCONI,
(His First Appearance these two years, since his severe illness.)
Monsieur FAUBE,
AND
Signor GRAZIANI.

Herr FORMES,
Signor TAGLIAFICO,
Signor FELLAR,
Signor PATRIOSNI,
Monsieur ZELIGER,
Signor CAPPONI,
Signor CIAMPI,
AND
Monsieur OBIN,
(His First Appearance in England.)

Director of the Music, Composer, and Conductor,
Mr. COSTA.

Principal Danseuses.

Mademoiselle SALVIONI,
Mademoiselle ZINA RIGLIARD,
Mademoiselle MONTEBRO,
(Her First Appearance in England.)
Mademoiselle DUREZ,
(Her First Appearance in England.)
AND
Mademoiselle LUMILATRE,
(Her First Appearance in England.)

| | |
|--|------------------|
| Maestro al Piano | Signor LI CALSI. |
| Leader of the Military Band (Coldstream) | Mr. GOUFREY. |
| Chorus Master | Mr. SMYTHSON. |
| Poet | Signor MAGGIORI. |
| Prompter | Signor MONTEBRO. |
| Leader of the Ballet | Mons. NADALD. |
| Machinist | Mons. DESPLACES. |
| | Mr. SLOMAN. |

THE UNRIVALLED ORCHESTRA AND CHORUS OF THE ROYAL ITALIAN OPERA.

Stage Manager—Mr. A. HARRIS.
The Scenery by Mr. WILLIAM BEVERLEY,
Mr. GRILEVE, and Mr. TELBIN.

Artists Costumiers,
Madame VALLET, Monsieur HENRIER, Mrs. JAMES,
and Mr. COOMBE.

THE SUBSCRIPTION WILL CONSIST OF FORTY NIGHTS.

But as there will (after the first week) be regularly Four Nights in each Week, viz. Monday, Tuesday, Thursday, and Saturday, Subscribers will, by marking known their wishes at the commencement of the season, have the choice of selecting either two of the Four Nights. Subscribers of last season are also respectfully requested, if they wish to retain their Boxes or Stalls, to notify the same at once to Mr. PARSONS, at the Box Office.

TERMS:—

| | |
|--|---------------------------------------|
| Boxes on the Second Tier | (for Four Persons) 100 Guineas. |
| Ditto First Tier | (ditto) 300 " |
| Ditto Ditto at the back of the Theatre | 150 " |
| Ditto Grand Tier | (ditto) 240 " |
| Ditto Pit Tier | (ditto) 230 " |
| Orchestra Stalls | (Each) 35 " |
| Amphitheatre Stalls, First Row | (ditto) 18 " |
| Ditto Second Row | (ditto) 12 " |

SUBSCRIPTIONS TO BE PAID IN ADVANCE.

Application for Boxes and Stalls to be made to Mr. PARSONS, at the Box Office, under the Portico of the Theatre.
Also of Mr. MITCHELL, Messrs. LACON & OLLIER, Mr. HOOKHAM, Messrs. CHAPPELL, Mr. BURN, Messrs. COCK & HUTCHINGS, Bond-street; Mr. SAMS, St. James's-street; Messrs. CHAMBER, BEALE & WOOD, Regent-street; and of Messrs. KEITH, PROWSE & Co. Cheap-side.

ST. JAMES'S HALL.—Mr. WILBY COOPER'S GRAND CONCERT, WEDNESDAY EVENING, April 8. To commence at Half-past Seven o'clock.—Vocalists: Mdlle. Parepa, Madame Weiss, Miss Clari Fraser, Miss Messent, Mdlle. Lancia, Miss Eleonora Wilkinson, Miss Poole, Mrs. Lockey, Madame Baxter, Miss Palmer, Madame Sainton-Doby; Mr. Sims Reeves, Mr. Wilby Cooper, Mr. John Morgan, Mr. Santley, Mr. Winn, Mr. Weiss, Mr. Lewis Thomas. The West London Madrigal Society (conducted by Mr. Joseph Heming, and the Orpheus Glee Union. Solo Instrumentalists: M. Sainton, Signor Fozze, Mr. Lazarus, The Brothers Booth, Mr. Antonmar, Signor Andreoli, Mdlle. Michelin (Conservatoire de Paris). Conductors: Mr. Benedict, Herr Wilhelm Ganz, Mr. J. L. Hatton, Mr. Haggitt, Mr. Frank Mori, Mr. G. B. Allen.—Stalls, 10*s.* 6*d.* and 5*s.*; Balcony, 2*s.*; Area, 2*s.*; Admission, 1*s.*—Tickets at Addison & Lucas's, 20, Regent-street; Longdale's, 25, Old Bond Street; Austin's, 25, Piccadilly; and all Music-sellers.

MR. DEACON begs to announce that he will give THREE REANCES OF CLASSICAL INSTRUMENTAL MUSIC, at 16, Grosvenor Street (by the kind permission of Messrs. Colliard), on MONDAYS, April 7th, May 11th, and June 8th, to commence at Three o'clock. Particulars will be duly announced.—72, Welbeck Street, Cavendish Square, W.

EWER & CO. beg to announce, that they will give TWO MORNING CONCERTS, at the Hanover Square Rooms, on TUESDAYS, May 5 and June 2, in order to introduce to the subscribers of their Musical Library the latest and most important Compositions of Chamber Music. Subscribers will receive invitations.—Tickets to Non-Subscribers, Half-a-Guinea each. Programmes will be shortly published.—Ewer & Co.'s Musical Library, 8, Regent Street, London.

NEW PUBLICATIONS.

INSTRUMENTAL MUSIC.

THERE appear to us some signs of awakening among our publishers. The number of good reprints and re-issues increases; the heap of trifles and transcripts is smaller than we have known it in former years, and the scale and pretension of some of the new music would seem to imply that all parties are disposed to venture out a little more than formerly.

Here, to begin, is a *Grand Prelude and Fugue* for the organ, by G. Gretton (Op. 28). (Cramer & Co.) Both prelude and fugue are aimed at players in the highest state of development: for the former, the phrase announced at the opening shows fancy; and more, it is one capable of being turned and twined and wrought out, as the style demands. The second subject, however, announced at bar 4, p. 4, is puerile and common. Mr. Gretton is little more happy in the subject of his Fugue. Within such narrow limits as those in question, the repetition of the same bar should be eschewed. Then, he has broken away too far from the sage old rule of constancy to a given number of parts. There is too large a variety, without any corresponding effect; the great object to be desired in this form of writing being by persistence, skillfully exhibited, to work up a climax out of clear and well-selected materials. Mr. Gretton's fugue, however, is brought to its close with a considerable amount of point and animation.

Three *Andantes* for the Organ, intended as *Introductory or Middle Voluntaries*, by Henry Smart, (Ashdown & Parry),—are more complete for what they profess to be than the organ-music just left. Mr. H. Smart is more experienced than Mr. Gretton. His ideas are generally graceful (especially that of *Andante* No. 2). He is grave even when brilliant, as a writer for the organ should be, but he is rarely dull.

Mr. J. Lodge Ellerton's *Trio* in D major, No. 2, for Piano, Violin and Violoncello (Op. 112), (Schott, Mayence)—is another result of that fertile and sincere industry which we had lately occasion to characterize. The opening *allegro* has, as is promised, a good share of *brío*. The theme of the *andante* is sickly and affected; the *scherzo* is too slight; the *finale Siciliana* is gay, with more of the *Saltarella* than of the *Siciliana* in its humour. There is nothing in this Trio to alarm players of moderate powers; indeed, like other amateur composers who may naturally refer to their own executive accomplishments, the pianist's left hand is appealed to somewhat sparingly, which gives a general effect of feebleness to the composition.

Dream Pictures—[*Traumbilder*]. Six Pieces for the Pianoforte. By Stephen Heller (Op. 79). (Ashdown & Parry).—M. Heller never speaks, unless he has something to say. The first of these short pieces (as usual graced by a fanciful title) is the least significant.—The second, an *Allegro Energico* in A minor, is as fine a movement of its kind as was ever written, requiring a player, however, of extraordinary force of wrist and extension of finger in the left-hand.—No. 3 is light and coquettish.—No. 4, an *Allegro Agitato*, pleases us less, because less definite in style.—No. 5 may be called a little study of dotted notes used with reference to a particular rhythm.—No. 6 is one for the simultaneous action of both hands, with episodes. Simple though it looks, this will be found anything but easy—music to tax the fingers of well-exercised players.

Song of the Blacksmith—[*Chanson du Chaudronnier*, *Morceau Caractéristique*, par Jules Egghard]. Op. 124 (Ewer & Co.),—by its title, disadvantageously recalls a certain 'Harmonious Blacksmith' by Handel. How vigorous was his anvil-beat!—how feeble is this one!

Morning and Evening: Two Nottornos for the Pianoforte, Op. 6,—*Tugend und Liederschaft, Charakterische Duetten, für Pianoforte und Violine*, von Leon Kerbusch, Op. 7, No. 1 (Augener & Co.), are both above the mark, as betokening the thoughts and powers of one who could write something better than these musical scraps, of which every real lover of music bids fair to become heartily tired, so remorselessly is the shortest string of fancy and acquirement played on at the time present.

Grand Fantasia for the Flute, with an Accompaniment for the Pianoforte on Subjects from 'Le Domino Noir', by R. Sidney Pratten (published by the Author), was written with reference to the "Prize Medal Perfected Flute" of last year's Exhibition—a brilliant Concert-piece, which will find few flute-players so able to render its brilliancies as their author.

Nos. 8, 9 and 10 of *The Musical Antiquarian Magazine*, edited by Mr. Pittman (Lonsdale), add to our knowledge of Ricciotti's music by three more specimens. All are worthy of disinterment. All have style—a mixture of freedom and sweetness, without frivolity, that is very agreeable—and are virtually more modern (as we have said of other good ancient music) than the larger portion of today's bubbles.

We must deal briefly with the pianoforte works still waiting notice, some of which have been mentioned incidentally on the occasion of their performance; as, for instance, the 'Queen Mab,' the *scherzo* by Mr. Cusins, here arranged for four hands (Lambourn, Cock & Co.),—the single pieces from Mr. A. Sullivan's 'Tempest' (Cramer & Co.),—the superb *Marche et Cortège* from M. Gounod's 'Reine de Saba,' arranged as a pianoforte solo and duett (same publishers).—We have now two new works from that fertile writer, Mr. Brinley Richards, *Ariel, Caprice à la Valse; Andante con Moto* (Williams), two of his best works.—Mr. M'Lellan's name is new to us. His "Adieu, Fairy Fountain," and *La Belle Amazone* (Ashdown & Parry) show a feeling for colour and character which, if their writer be young, and self-mistrustful withal, may come to good.—*La Sylphide*, by Alfred Jaell (Ewer & Co.), is his hundred and sixteenth work.—"Tis *Lovely Summer Day*" and "*Toujours le même*" (Lea) are transcripts of ballads by Mr. Lea, made by M. Arnold Hennen, of Aix-la-Chapelle.—"*Remembrance: Romance*, by Alfred Baylis (Addison & Lucas), may be described as the attempt of one having more grace than experience.—We have a heap of dance-music, signed Joseph Kremer (Paris, Brandus & Co.), the worth of which is small,—*The Ettie Valse*, by Mr. C. Rennie Powell (Olliver),—and (best of the dance-music before us) *The Stamp Galop*—a very good galop—by Mr. Arthur O'Leary (Ewer & Co.).

VOCAL ASSOCIATION.—Our concert societies move with an irrational unsteadiness. Instead of each maintaining some special object of its own, each appears eager to interfere with its neighbour. The society under notice, directed as it is by a competent musical composer, and doing a showy amount of business, is not satisfactory. That its choral singing, to cultivate which it was gathered, makes no progress was to be heard in the only great choral piece of the evening, Mendelssohn's organ anthem, "Hear my prayer," the execution of which was coarse and inferior. The first act of the concert contained a pretty 'May Song,' by Mr. Wallace, sung by Miss De Courcy, and *encored*.—'The Lady of the Lea,' one of Mr. H. Smart's most graceful and pleasant melodies, excellently said by Miss Palmer,—a ballad from 'Freya's Gift,' by Miss Saunders,—a *Serenade* by Mr. Allen, allotted to Mr. W. Cooper, and *encored*. After these came "Ah, mon fils," from 'Le Prophète,' which was given in the most robust and exaggerated German style, with tremblings and pauses, by Madame Theresa Ellinger, from Vienna. These vocal pieces, with Bishop's "O, by rivers," taken too slow, and Mr. Benedict's pretty student's song, "Blest be the home," began the concert. Of the composition which closed the first act we have now to speak separately.

The elegantly imagined songs of Miss Gabriel have made her name familiar to the public. Yesterday week she tried a more ambitious flight in a *cantata*, 'Dream-land,' containing several numbers, setting a good idea by Mr. Arthur Matthison—namely, that of the influences, remembrances and hopes of a man's life, dreamed by a pilgrim during his night-halt in a journey over the desert. We have characterized this work advisedly; and seeing that Mr. Matthison dreams good ideas—is obviously the possessor of fresh fancies, lending themselves to musical effects—it is worth while to warn him against his careless and inaccurate manner of working, which sometimes results in no-meaning and confusion of imagery, sometimes in language anything but simple and euphonious, and in rhymes which are no rhymes. It is really, after all, a craft, not an instinct, to write verse for music; and it is unfair to blame composers and singers for not bringing out clearly that which is ill expressed and ungraciously arranged.

The lady who has set this well-fancied, but unequally expressed, *cantata* has "done her spiriting gently," and moreover wisely—that is, with self-knowledge. Though there be colour in the brief connecting links of chorus, the attraction of the work does not lie in its elaboration, but in its songs and duett, all of which are becoming to the voice, and please by their refinement, if by no startling originality. They were sung by Miss Parepa and Mr. Wilbye Cooper, well aided by Mr. Winn. Three numbers—a mother's song, a war song and a love scene—were *encored*, and the composer herself was greeted most cordially at the close of the performance. We were reminded of the activity of our lady amateurs by the book of the words, containing, as it did, on one of its fly-leaves, a page of songs ascribed to "Dolores," half a page to "Claribel." Further, while thinking over *Cantatas* written by ladies (not forgetting Mrs. Mounsey Bartholomew's stern and serious, yet perhaps not more essentially solid, 'Nativity'), it was impossible to forget a setting in this form of Collins's 'Passions' by Mrs. Tom Taylor, written some years ago for the Blind Asylum at York, which has vigour and merit enough to entitle it to be heard in some society where the Salique law does not prevail.

The grace and peculiarity of the concert in question, then, were due to the interest of this new music, and the courtesies (not strained ones) naturally attaching themselves to its production. But there is no counting on a repetition of such chances and sensations.

MUSICAL AND DRAMATIC GOSSIP.—That which may be called fresh Handelian ground is about to be broken by Herr Otto and Madame Goldschmidt, who are to present 'L'Allegro' and 'Il Pensieroso,' in aid of a charity at the St. James's Hall on the 1st of May.

The Passion-Week performances of 'The Messiah,' directed by Signor Costa and Mr. Martin, have duly taken place at Exeter Hall. What has become (for the thirtieth time of asking) of the Bach Society? The "Passions-Musik," which has been studied and performed by it in former years, belongs to the past penitential week far more intimately than a work which deals with the Nativity as well as the Ascension.

The choral rehearsal of the Sacred Harmonic Society, yesterday week, was devoted to Handel's 'Belshazzar.'

A monster concert, the first of a series which Mr. H. Russell has undertaken, was given at the Agricultural Hall, Islington, in the course of the last ten days, to the satisfaction of an enormous audience.

The students of the Royal Academy gave a concert of sacred music the other day, at which an Anthem by Dr. Steggall was performed.

Mrs. Fanny Kemble is again, we are glad to see, about to read Shakspeare in London,—commencing with 'As You Like It' on Monday next, and continuing the entertainment on alternate nights.

We are reminded by more than one friend and contemporary that Schumann's Overture to 'Man-

fred' is not, as the programme of the Musical Society may have led the public to expect, new to England, having been performed more than once at the Crystal Palace Concerts. To the overture we may refer on some future occasion; not undertaking in the mean time to assert that we may not have heard and spoken of it on some former occasion:—one peculiarity of this strange music being, that on our memory it leaves little or no trace, beyond a general impression of strain from dull sounds and vague phrases enlivened by discords.—The only other novelty at this concert was a violoncello *Concerto*, composed by Signor Piatti, and played (it is superfluous to say *how* played) by himself.

Among the first musical arrivals from the Continent is that of Mr. Dannreuther, the young pianist whose name has been already mentioned by those conversant with Leipzig as a pianist of more than ordinary promise. He will play, we are informed, this day week at the Crystal Palace. There, by the way, it need surprise no one, should they find established a comic opera some day, the work by M. Meyer Lütz having given so much pleasure as to call for its repetition. May-day, meanwhile, will as usual be marked with its grand concert there; on which occasion the choral force of the fifteen hundred voices, kept together by the Sacred Harmonic Society, will, we presume, be called out.

It is stated in the *Morning Post* that the appearances of the Marchese Gaetani (formerly Mdllie. Piccolomini) at Her Majesty's Theatre will be merely at three performances for the benefit of Mr. Lumley, which are to be given there during the month of May.

Letters from Barcelona describe the success of Signor Mario at the Italian Opera there to have surpassed expectation, and almost any success of his former campaigns.

We omitted, last week, to notice the decease of that useful and intelligent, if not very interesting actor, Mr. Charles Selby. In character-parts of a certain severe and sour humour his place will not be easily filled. Besides being a valuable actor, he was a neat and industrious playwright and adapter, many of whose pieces keep the stage; and, as an efficient and active member of the Dramatic Authors' Society, his loss will be felt by that body.

MISCELLANEA

The Cupola of St. Peter's at Rome.—Cardinal Wiseman, in his lecture 'On Points of Contact between Science and Art,' illustrated his argument by a striking example of the most salutary, because uncontrolled intervention, of science in a matter relating to architecture which occurred in the history of St. Peter's at Rome. "Although," said the Cardinal, "the architect, Michael Angelo, had taken the greatest precaution for the security of the dome, yet in 1681 numerous cracks appeared in various directions through the cupola. Marble dovetails placed across the crack broke with alarming rapidity, and it was feared that in a few years the whole dome might fall in. Various remedies were suggested by architects; but the Pope Benedict the Fourteenth wisely observed that this was not the business of art, but that of science. A commission of three eminent mathematicians (Boscovich, Le Sueur and Jacquier) was appointed to examine the case. In 1742 they issued their report, showing by their calculations, that the weight of the entire dome with its lantern came to 55,248 tons, and that there was a balance of 1,674 tons on the side of pressure against support; concluding with the remark, 'that irreparable ruin must be apprehended unless a timely and efficient remedy was applied.' The remedy they proposed was entirely scientific—to put six more solid iron girders round the huge periphery of 420 feet. No time was lost. In 1743 two girders were braced round the drum, and in 1744 three more were added. We have here a notable instance of Science coming to the rescue of Art in one of its most painful crises. The proposed cure fully answered; and now, after 120 years, no sign has been given of subsequent damage."

To CORRESPONDENTS.—J. R.—A Subscriber—C. W. H.—R. L.—E. F.—K. S.—S. H.—F. G. S.—received.

NEW WORKS.

Published this day,

COTTON, AND THE WANT OF IT.
3 Coloured Plates, 1s.

BENTHAM'S BRITISH FLORA.
Illustrated Edition. Part 4, 2s. 6d.

CURTIS'S BRITISH COLEOPTERA.
Part 4, 2s. 6d.

CURTIS'S BRITISH LEPIDOPTERA.
Part 4, 2s. 6d.

CURTIS'S BRITISH HYMENOPTERA.
Part 4, 2s. 6d.

CURTIS'S BRITISH DIPTERA. Part 4,
2s. 6d.

Each with 5 Coloured Copper-Plates.

CURTIS'S BRITISH ENTOMOLOGY.
Complete in 8 vols., classified arrangement, 770 Coloured Copper-plates, price 16l. 16s.

The FLORAL MAGAZINE. Part 36,
4 Coloured Plates and a Companion, containing Original Articles and Useful Information relating to Floriculture. 2s. 6d.

CURTIS'S BOTANICAL MAGAZINE.
Figures and Descriptions of New and Rare Plants, by Sir W. J. HOOKER, K.H. D.C.L. Part 230, Third Series, 6 Coloured Plates, 2s. 6d.

THE GEOLOGIST: an Illustrated Magazine of Geology, Palaeontology and Mineralogy. Part 64, 1s. 6d.

The STEREOSCOPIC MAGAZINE.
Part 58, 3 Stereographs, with Descriptive Articles, 2s. 6d.

BRITISH LAND and FRESHWATER MOLLUSKS. By LOVELL REEVE, F.L.S. Fine Wood Engravings. 10s. 6d.

The FIELD BOTANIST'S COMPANION: a Familiar Account, in the Four Seasons, of the Flowering Plants most common to the British Isles. By THOMAS MOORE, F.L.S. F.R.H.S. Coloured Plates, 12s.

PHOSPHORESCENCE; or, the Emission of Light by Minerals, Plants and Animals. By Dr. T. L. PHIPSON, F.C.S. &c. Numerous Illustrations. 5s.

HANDBOOK of the BRITISH FLORA.
By G. BENTHAM, F.R.S. Pres. L.S. 12s.

The TOURIST'S FLORA. By J. Woods.
12s.

On the FLORA of AUSTRALIA. By Dr. HOOKER, F.R.S. 10s.

201, REGENT-STREET.

CRAMER, BEALE & WOOD'S MUSIC CIRCULATING LIBRARY for Town and Country.
Terms—Two, Three, and Four Guineas per Annum.

CRAMER, BEALE & WOOD undertake the PUBLICATION of COMPOSITIONS for the Author.

HALF-PRICE.—All full-priced Music sent post free at Half the Marked Price.

THE PRINCE OF WALES'S WEDDING MUSIC. Dedicated by special permission to His Royal Highness the Prince of Wales.

THE PROCESSION MARCH. By ARTHUR S. SULLIVAN. Arranged for the Pianoforte. 5s. Performed at the Crystal Palace by the full Orchestra; also nightly at the Royal Covent Garden Opera House.

THE PRINCESS OF WALES'S MARCH (on Danish Airs). By ARTHUR S. SULLIVAN. 3s. Played by the Guards' Band on the day of the Procession.

THE BRIDE FROM THE NORTH. Song. Poetry by HENRY F. CHORLEY; Music by ARTHUR S. SULLIVAN. 3s.

THE SNOW-WHITE PLUME. Song. Poetry by W. H. BEL-LAMY; Music by J. L. HATTON. 3s. Sung by Mr. Henry Harg.

THE WEDDING; Descriptive Fantasia for the Pianoforte. By J. BRIDHAM.

THE ORANGE-BLOSSOMS VALSE. By LOUIS JULLIEN. 4s.

The Titles have been brilliantly illustrated by the best Lithographic Artists. The complete set may be had in an elegant Portfolio, price Half-a-Guinea, net.

DREAM of ST. JEROME. Price 2s. 6d.

"Miss Charlotte presently came down from the old folks, and went to the piano, and played us Beethoven's 'Dream of St. Jerome,' which always soothes me and charms me so that I fancy it is a poem of Tennyson in music."
"Adventures of Philip," by W. M. Thackeray.

THE DANISH NATIONAL AIR. Arranged for the Pianoforte by BRINLEY RICHARDS. 2s. 6d.

BRINLEY RICHARDS'S BISHOP'S MELODIES. Nos. I, II, and III. now ready.

No. I. 'Mynheer van Dunck' .. 3s.
No. II. 'Chough and Crow' .. 3s.
No. III. 'Tell me, my heart' .. 3s.

BRINLEY RICHARDS'S LOVE'S REQUEST. Arrangement for Pianoforte of A. Reichardt's Popular Song. 2s.

WILHELM KUHE'S Arrangement of A. Reichardt's Popular Song, 'Love's Request.' 2s. 6d.

STEPHEN HELLER'S LATEST WORKS.

Deux Valses, Op. 97, complete, 7s. 6d.; in Three Books, each 4s.
Deuxième Canonette, Op. 100 .. 4s. 6d.
Réveries du Promeneur Solitaire, Op. 101 .. 4s. 6d.
Nocturne, Op. 103 .. 4s. 6d.
Polonaise, Op. 104 .. 4s. 6d.
Deux Romances sans Paroles, Op. 105. In Two Numbers, each .. 2s. 6d.

RÉNE FAVARGER'S ORFANELLA. 3s.

"A good adagio, plaintive, and well carried out."
Saturday Review, March 7, 1863.

POLYDOR DE VOS'S SCHWÄBISCHES VOLKSLIED (Den Heben langen Tag). An elegant little piece for the drawing-room. 3s.

PLAYED BY MISS GODDARD.

J. ASCHER'S FANTASIA on LURLINE.
Le Chant des Nalades. 5s.

W. GANZ'S NEW PIANOFORTE PIECES.

Grande Valse brillante .. 3s.
Tylisienne .. 3s.
Souvenir de Wiest, Mazaruka .. 3s.

WALTER MACFARREN'S PIANOFORTE SOLOS.

The fairy boat, Barcarole .. 3s.
Lilian, Valse Élegante .. 4s.
Dreamland, Morceau de Salon .. 3s.

POLISH NATIONAL HYMN. Sung in the Churches of Warsaw. Now prohibited by the Russian Government. Arranged for the Pianoforte by E. KANIA. 3s.

VIRGINIA GABRIEL'S NEWEST BALLAD. 'Ladye Mabel.' 3s.

HENRY SMART'S NEW SONGS for
Contralto:—

The pure in heart shall meet again .. 2s. 6d.
Sir Brian the Bold .. 3s. 6d.
Young Emmeline, "Prison pour Elle" .. 3s. 6d.
Waiting for the Spring .. 2s. 6d.
Bright be her dreams .. 2s. 6d.
Thinking of thee .. 2s. 6d.

LITERATURE

The Works of Thomas Hood, Comic and Serious, in Prose and Verse. Edited, with Notes, by his Son. (Moxon & Co.)

A new generation of readers has arisen to welcome the collected works of Thomas Hood. Some of us remember the pleasant hum and glow of expectancy with which we waited for the advent of one of his books. Far off its coming shone in the faces of young and old. Its presence was greeted with eyes that danced, and lungs that crowded, and sides that shook. Its merry memory was a joy for ever. And there are the same human hearts to be set beating; the same eager faces of youth to be set dimpling; the same wrinkles on the face of age to be turned into ripples of laughter now as of old.

There is no fear that these works will ever fail of their old effect. Thomas Hood's poems and pun-pictures, whims and oddities, have taken their place in our affections. They now ask a little more room on our shelves, and that we can promise for them.

Their author has established his right, as a favourite of the English heart, to have all his writings carefully gathered and garnered up. We like to know all we can of him, and have all that we can of his. Whilst an author is living we only ask for his best—the nuggets of his gold. But when he is dead and gone, we are glad to get the “washings,” and like to see careful hands seeking diligently for the golden grains. We judge the writer by his “lumps,” but do not despise the gold-dust. Thousands of faces will bend and brighten over these pages for more years than we can count, merry eyes will twinkle with the light from these books so funnily reflected, young faces will grow glorious, and young voices uproarious. A Will-o'-the-Wisp light will flit about the family circle. There will be sly ticklings at the very heart-roots by a tricky spirit, and these will out suddenly in inextinguishable mirth. There will be leaning heads of lovers that bend together with one heart over the book, and two hands clasped beneath the table; quiet chuckles of old hearts, that laugh helplessly within. There will be still higher reward for the writer. The world will pay for its smiles in gold, but keep its pearls of heart for those that make it weep. This success is Hood's, and in shy ways and shady places a tear will be the still more eloquent witness of his moving power—the noblest payment for the pleasure.

We find the wit untarnished by time; the fun has lost none of its freshness. Enjoyable as ever are the old perfectest of puns, whether in picture or verse. Hood's puns flash every time they go off,—being for all, not one, time. As, for example,—

His death, which happened in his birth,
At forty-odd befell;
They went and told the sexton,
And the sexton tolled the bell.

Or, speaking of Orient nations,

Where woman goes to mart the same as Mangoes.

Or let us look at what we call his pun-pictures of the ‘Whims and Oddities.’ It is noticeable that the wit kept some of his best wine “in the wood,” and dealt it out fresh “on draught.” Who ever tires of that scene where the heads of two Quakers are visible just above the ice on a bitter winter's day, and there they hang surveying each other in what he would call an *ice fix*, or state of suspended animation? This he entitles a “coolness between Friends.”—Or the view of a particularly bald old gentleman who has just upset a beehive,

and how doth the little busy bee improve each shining second on the bald, shining head? This he calls an “Unfortunate Bee-ing.”—Or the “Spoilt Child,” wherein the servant is sitting with the infant under her care, she quietly reading her paper and comfortably killing the child? Then there is that unforgettable “last in bed to put out the light,” wherein the worthy couple, in all haste, dash at the bedclothes, making ends meet and heads clash at the same moment—and it's not a laughing matter; but who's to put out the light? We might refer to an infinite variety of merry thoughts that will bear an endless picking out. But in going over, or even mentioning, the works of Hood we are, as Leigh Hunt has said of wit and humour, under a St. Anthony's temptation reversed—a laughable instead of a frightful one. For “thousands of merry devils pour in on all sides,—doubles of smiles, buffooneries of burlesques, stings in the tails of epigrams, glances of innuendoes, dry looks of ironies, compulences of exaggerations, ticklings of mad fancies, claps on the back of horse-plays, complacencies of unwarenesses, floundering of absurdities, irreistibilities of iterations, significancies of jargons, wailings of pretended woes, roarings of laughters, and hubbubs of animal spirits.” The wit is showered down with all the opulence of a rain-cloud shedding its brightest, most bountiful drops. This not only represents his works, but his way of working. No sooner does a witty thought enter his head, but his mind is all mirrors, with a hundred reflections, forthwith. It is like that scene, mentioned by Sydney Smith, at the French Embassy, where he mistook the reflections of himself in the looking-glasses for a meeting of the clergy. And, not only does his mind reflect in this numerous way, but it also *refracts* in a myriad forms that range from Lilliput to Brobdingnag, and in every tint that can be conceived on any colourable pretext. It is the moment of transformation in a mental pantomime. Hey, presto! and they are all at it—change on change, and jest on jest come tripping on, and tripping up, and tripping over one another in as bright and bustling a bit of business as ever included the sparkle of harlequin, the trick of clown, the wise wag of pantaloon's beard, and the beauty of columbine. Every drop of ink from his pen, every line from his pencil swarms into life with the most fantastic shapes ever assumed by the merriest imps of mirth and mischief that play bo-peep with face and mask. His puns are often unanswerably absurd or unutterably wise. They are the sort to suit Charles Lamb, who, next to a good pun, loved a good bad one. They either shut you up, or you must laugh. There is nothing else for it. If you are wise, you will laugh! They are also the sort to obviate what Charles Lamb thought would be the greatest inconvenience of being in utter darkness, viz., if you made a pun you would have to feel all over your friend's face before you knew whether he was enjoying it. In fact, it would have to be a broad grin for you to perceive it. With Hood's, the laugh would be too ready and ringing. He makes instant appeal to another kind of *feeling*. He looked upon a pun, he says, as a horse—with him it was Pegasus—having a pillion for an extra sense to ride behind. It is warranted to carry either single or double. And so perfectly does it carry that many a grave reader will enjoy the single sober sense, and never see the second rider that sits grinning behind. Or, to change the illustration, much of his wit was the mere flashes struck out by the hoofs of the winged horse of the Muses.

Amongst the fresh features that peep out from betwixt the old faces in these new volumes,

we are caught and tickled by a few of his answers to correspondents in the *London Magazine*, marking his early punning propensity. He kept the sign of the “Lion's Head” in those days. People only saw the head, but there was also the most appropriate *wag* to the tail. One writer is informed that his “Night” is too long, for the moon rises twice in it. We do not know whether the author retorted that it must have been at least luminous. The “Essay on Agricultural Distress would only increase it.” The “Tears of Sensibility had better be dropped.” “B is surely humming.” The “Echo will not answer.” Whilst it is suggested the “Sonnet to the Rising Sun must have been written for a Lark.”

Hood's higher humour is also alone and unparagoned; there is nothing like it; nothing we can place near it to say what it is like, amongst those that have gone before. It is “Hood's own.” It never tastes bitter in the mouth after the enjoyment. It is not cynical, or destructive, or gross. He never laughs with Rabelais in his easy chair to roll down into the mud. To us the brightest gems of his humour seem trembling into tears. Surely they *are* tears set glittering in the sunshine. There is nothing hard and dry and merely shiny. The lustre is moist like that of the buttercup. Above all, there is the clearness of a good conscience, the pureness of a high heart, the aroma of a most sweet nature. The cause of an indescribable quality of Hood's wit is, that this is only his other way of crying. The smile is that of a sad heart's sunshine. The look is ineffably pathetic, as that of some dear ailing child who laughs up in the mother's face to hide its suffering, and ease her heart a little. The jewels we spoke of *are* indeed tears, live from the heart. They have not been polished for future use, like Sheridan's, and set to most advantage, “each other's beams to share.” In the midst of the merriest mood the quick ear detects a strange arresting tone, in the voice, like that note of the nightingale's which pierces through all her ecstasy, and brings the dew into our eyes. You look round; the smile is still on the face, but you know well enough that he has just dropped a tear within. It's all very funny, of course, but he is only making mouths at his own troubles, and light of his own heavy cares. He was compelled, as he said, to make broad grins under narrow circumstances, and be a lively-Hood for a livelihood. So he laughed for his living because puns sold better than poetry. The public were too much delighted with Mr. Merryman on the stage to care for sadder shows behind. Only those to whose eyes had been added the “precious seeing” of sympathy, and who listened, with the heart at the ear, could tell what a world of sorrow there was in the voice.

Thomas Hood made many attempts to convince the world that there lay something in his nature deeper than the wit that sparkled on the surface; that there was the true Hippocrene under all this effervescence and dance of frolic fun—the body of the wine, so to speak, as well as this light spirit or soul of whim, that bubbled up and beaded the surface. This was only a kind of laughing-gas which would escape first, and the world inhaled it so readily and liked it so lightheadedly, that it would not wait for or believe in the real wine. Hood himself pleaded his cause so humorously in his Prefaces, who could believe that he was sadly, seriously in earnest? Why, the very seriousness was only all the more provocative of laughter: a more cunning way of making merriment. It was like Liston insisting on playing tragedy, and tickling all

foregone comic conclusions into irresistible laughter. So the world would not have Hood's best wine. It would not let him dive down into the tragic gloom of his nature for the most precious jewels that lurked there. It would not hear him in his earnest mood. It insisted, like Elizabeth with her portrait, on having his presentment *without shadow*. He must continue to ease his heartache by laughing, or by making others laugh. He refers to this, humorously of course, in his Introduction to 'Tynley Hall,' wherein two of his proof-readers turn tormentors and insist on it that he was laughing when he thought he had been crying:—

"The Momus began; and, I confess, to my astonishment, his main objection to my novel insinuated a dearth of the pathetic. 'Not,' he said, 'but there is abundance of bloodshed and shedding of tears; if I recollect rightly, the second volume alone contains a divorce, arson, burglary and suicide. But what of that? Excuse me, sir, for saying so, but we know your tricks. We are not such fools as to snivel when all the while you are grinning at us in your sleeve.' 'Well, you amaze me, sir,' said I, involuntarily lifting up my hands; 'it was my own impression that, on the whole, my novel was too sombre.'—'Excuse me,' answered the Droll, 'you were never more mistaken. There are things that might be pathetic from other pens, but we know you of old. Even your horrors don't take us in. Show us a clot of coagulated blood, and we tip one another the wink, and say, "currant jelly." For instance, there is the murder of Belmour; Higgs tittered all the time he was setting it up; and for my own part, when the proof came before me at dinner-time, I confess I fairly choked in my pint of stout.'—'And I wish you had!' I exclaimed testily, nettled beyond patience at such a reception of my pet catastrophe."

So he *breathed* his comic vein, and let the most of his life out in that way. Hood was within himself the one great antithesis out of which sprang the antithetic character of his writings. With the roots of his life deeply grasping grave realities, he was bidden to bear only flowers and fruit of merry fancy. This antithesis—the contact and explosion of two opposites—will be found one of the chief means on which he relies for obtaining his ends—or, rather, it was so natural as to act unconsciously—both in his puns and his pathos. In his witty rhymes his mind is continually catching the light at the oddest possible angle. And this angle, so to speak, is a corner round which the two meeting extremes rush into each other's arms in a collision which shocks them with surprise and the lookers-on with laughter. In the serious poetry the finest effect is often antithetical. In the 'Song of the Shirt' he tells us, the singer sat—

Sewing at once with a double thread
A shroud as well as a shirt.

And she exclaims—

Oh, God, that bread should be so dear,
And flesh and blood so cheap.

In the 'Dream of Eugene Aram' he makes the murderer say of himself, and his victim—

A dozen times I groaned; the dead
Had never groaned but twice.

This tendency to antithesis, we say, was the natural outcome and expression of his life and literary conditions. It is only work of Fancy rather than of Imagination; comparison rather than creation. But then this was a fellow of "excellent fancy" as well as "infinite jest." We are sometimes apt to forget how rare was the fancy of this Poet; how genuine was the feeling. The world is still beguiled by the dazzling brilliance of the Punster. Could a more graceful fancy have been embodied in an apology to one whose birthday was in November than we find in these lines?—

I have brought no roses, sweetest,
I could find no flowers, dear;
It was when all sweets were over
Thou wert born to bless the year.

And compensation enough, say we, for this was the woman who made sunshine in the shady places all through the saddest parts of the year of Hood's life. A prettier fancy was never exquisitely wrought than the 'Plea of the Midsummer Fairies,' in which the mighty magician Shakspeare rescues the small people of elfin world from Old Time and mortal doom to confer on them immortality. The whole poem has the freshness and fragrance and rathe bloom of fancy. Take, for illustration, this picture of a weeping child:—

His pretty, pouting mouth, witless of speech,
Lay half-way open, like a rose-lipped shell;
And his young cheek was softer than a peach,
Whereon his tears for roundness could not dwell,
But quickly rolled themselves to pearls, and fell
Some on the grass, and some against his hand,
Or haply wandered to the dimpled well
Which Love beside his mouth had sweetly planned,
Yet not for tears but mirth and smilings bland.

'The Two Swans,' another fairy-tale and worthy companion, is full of a delicate loveliness, the most evanescent graces being caught and reflected in its crystal clearness. It is a wave of the true wand that calls up this lustrous white vision—

A solitary swan her breast of snow
Launches against the wave that seems to freeze
Into a chaste reflection, still below
Twin shadow of herself wherever she may go.

And forth she paddles in the very noon
Of solemn midnight, like an elfin thing
Charmed into being by the argent moon—
Whose silver light for love of her fair wing
Goes with her in the shade, still worshipping
Her dainty plumage;—all around her grow
A radiant circlet, like a fairy ring;
And all behind a tiny little clue
Of light, to guide her back across the waters blue.

This swan is, of course, a princess in disguise to do some mighty work of love, and thus the chill white vision is made warm with a beating human heart.

We are inclined to prize these, and other poems of pure fancy, all the more because of the circumstances under which they were written. Their author had to do figuratively what the shipwrecked Camoens did literally, that is, bring his poetry on shore in his teeth, having to strike out for his life with hands and feet. It is a pity that he could not have been writing immortal poetry often when he had to make the accustomed pyrotechnic display of puns,—a pity that he had to grind down so much of his mental seed-corn into daily bread. Speaking of the poor poet whose ambrosia may be sure, but whose bread is very uncertain, he says, "Pure fame is a glorious draught enough, and the striving for it a noble ambition; but, alas! few can afford to drink it neat. Across the loftiest visions of the poet earthly faces will fit; and even while he is gazing on Castaly little familiar voices will murmur in his ear inquiring if there are no fishes that can be eaten to be caught in its waters." And, there being no fish in Castaly, he had to angle in other streams; and so he laughed and coughed, laughed and spit blood, laughed and made the public laugh, as we say, till the tears ran down its face at last; for it learned at length that this was "a fellow who could play the fool" to a higher purpose than it had thought.

He will touch the heart yet, as well as tickle the ear. There's a barb to his arrow, and, when he has driven it well home, you will scarcely feel inclined to play with the feather at the other end, which winged it to the heart. You invited him to a banquet of mirth, and it went on merrily, as though the feast would never end. You asked for a jester to jingle the bells on Folly's cap, and he did your bidding bonnily. But he will also show you that

motley is not the only wear. He is no longer Puck or Clown or Jester. You look up and see a quiet man in black, with a face gradually whitening and waning in the death-shadow. There is a set sternness about his mouth, a grim earnestness lights up the eye. He has another story to tell now; another song to sing. He has risen to his highest stature—lengthening in death—and in his grandest character, to plead the cause of the poor. No longer the funny favourite of the drawing-room, he is out in the street singing a song that will thrill through the heart of England. There is something singularly touching in the sound, as of a voice almost choked with tears. There is something doggedly stern in the march of the measure, as though it must be uttered thus to get it out at all. He sings the 'Song of the Shirt,' and you must listen. Ladies who move so high above the world of the poor, and sit in their beauty like pictures of life in the boudoir's frame of gold, or lie down to sleep in a fairy land of rest, will be compelled to come out on the balcony to hear more of the song, and see more of the sights the poet has to show them. Kind-hearted old gentlemen will lay down their paper with a "Bless me!" and begin fumbling in their breeches-pocket.

Many young men got a new glimpse of life and its duties from the moment that Hood unveiled his two acts of one great tragedy of Poverty, and showed the grim facts naked in their sternness as shroudless corpses. It is now twenty years since Hood sang, with a heart aching for humanity, his famous 'Song of the Shirt' and 'The Bridge of Sighs,' but they left echoes in the heart of his country which can never die. The rich and poor have in many ways, and through many doors, looked more closely into the face of each other than they had ever done before. And not only did those songs set many to work in all worthy ways; inspiring many schemes for the alleviation of suffering, and for the benefit of the toiling poor; they likewise left a subtler sense, a readier ear, a quicker sympathy on the part of the rich, so that when the cry of want and distress runs like the fiery cross through the land there is an instantaneous response, as in the case of our present great national calamity.

Ireland in 1862. Translated from the French of the Rev. Father Adolphe Perraud. (Dublin, Duffy.)

We need not be told that in every party there is a sprinkling of bigots. There was an Irish prelate once, who, by pronouncing Protestants to be "vermin," exposed them to the sudden death which is the lot of vermin everywhere. Only the other day, the Prussian minister, Count Bismark, sighed for the destruction of all great cities, they being the hotbeds of democracy, and the meeting-places of those thinking men who are abominable in the eyes of such personages as Count Bismark.

Father Perraud belongs to the faction of bigotry, and has written a melancholy book to excite the Irish peasants to follow the example of the Poles. The only excuse for the author which we can conceive is that this "Priest of the Oratory of the Immaculate Conception" has written the volume to order—superior ecclesiastical order;—and having nothing to say for his client, he follows the old rule and abuses England.

It is curious to observe how books of this description defeat themselves. Martin Ha-very's Celtic history of Ireland only served to show that all the old Celtic heroes and patriots were unscrupulous knaves, regardless of truth and honour, and that where three

Irishmen met each was afraid of treachery in the other two. Father Perraud as unwittingly condemns the character of the Celtic and conspiring element. He leads to the conviction that if a single Irish Catholic is on a jury, he will violate his oath to serve Irish Catholic ends. He calls the trial of the knaves who attempted a sanguinary rebellion, and whose journals advocated carrying off ladies of rank, and flinging vitriol into the faces of those who were not with the rebels, a "cruel tragedy." See what became of these conspirators. The government gave life to the men who would have spread massacre and devastation over Ireland, exiling them; and the government gave them a certain liberty under *parole*, and that word of honour the greater part of them broke. It is difficult to say much for these friends of Father Perraud. Where are those patriots now? Some of them are upholding slavery as a desirable institution in America; others are fighting to prevent a repeal of union which, as a principle, they had been ready to further and fight for elsewhere.

It is the maxim of Father Perraud that England is an enormous criminal, and that she is guilty of every calamity, woe,—of everything, in fact, that can give umbrage to a single Irishman. But the wild spirit of abuse leads him into comical and in fact troublesome dilemmas. This guilt of England he describes as being the inevitable consequence of the act of King Henry in buying the fee-simple of Ireland from the Pope. So then, it is the villainy of the Pope, who sold what he had no right to dispose of, which is the source of all Irish calamities! Surely Father Perraud says more than he intended to say.

This leads us to another consideration. Father Perraud has seen in the land so marvellously ill administered by a government whose rights are given them by a legislature wherein Roman Catholics have voices and use them loudly,—the Father has seen lately a true sample of how liberty can be enjoyed by the ultras of his favourite party. Certain students of the new Roman Catholic University, regardless of the disgrace they brought on the Irish character, insulted the young Princess of Wales by destroying the preparations made to do her honour on the occasion of her marriage. All that follows such a disgraceful act is an assurance from the head of the college to the public, that it is the principle and the practice of Roman Catholics to show respect to the sovereign family under which they live. Having explained which, the students who have illustrated the principle by their practice, go quietly to their classes unpunished. Again, very recently, one of the bigots who mar the peace and prosperity of kingdoms, protested against the idea that there was liberty for Catholics in Ireland; he abused the government, declared that his party would not be satisfied as long as government permitted Trinity College, Dublin, to exist; and forthwith went home instead of—had he been in Paris, to La Force—had he been in Rome, to Sant' Angelo.

If not in these particular samples, yet in similar exemplifications of the liberty which Ireland enjoys, and the impunity with which some men abuse it, Father Perraud sees a fine opportunity to write what he otherwise would scarcely dare even to *think* under the government of the Eldest Son of the Church and the protector of the Holy See. The inspirer of the volume is Monseigneur Dupanloup, that famous Bishop of Orleans, who holds Louis Napoleon to be no better than Pilate, but who dares not say so directly. Father Perraud says that, and much more, in this book, indirectly. While contemplating Ireland, he is forced to the con-

clusion that, after all, the sole thing to be deplored is that the Roman Catholic Church is not dominant. At all events, it may speak out when it is so minded. Ah! if such might but be the case in Christian and Catholic France! Hear him:—

"England and Ireland are under the same institutions, the same customs, and the same administrative machinery, judicial and financial. What is more, there is not a single one of all the civil and political liberties, coveted to-day by many great continental nations, of which Ireland is not in full possession: trial by jury, for instance; the independence of judges; the responsibility of all functionaries before judicial authority; the right of association and meeting; individual liberty; liberty of the press; liberty of education. These are certainly precious guarantees, and all the more valuable inasmuch as they render possible the reform of every abuse and the accomplishment of every improvement. * * Thus the great association for the Repeal of the Union; the meetings held in 1859 and 1860 in favour of the Sovereign Pontiff; the independence with which the daily press follows up and scourges the abuses of authority, criticizes the acts of government, hands over to the severity of public opinion the greatest names in the United Kingdom; the liberty enjoyed by the bishops in treating all questions, whether spiritual or temporal, without having to fear prosecution or the rigours of a superannuated legislation; all these are so many unequivocal signs of the existence of an undoubted political liberty, and of one which, notwithstanding solemn promises, has not yet come to crown the edifice of our own newly-granted institutions in France."

Having thus asserted that Ireland is far in advance of France in the enjoyment of civil and religious liberty and equality, the Father has the assurance to exclaim,—“Oh, Ireland and Poland! noble sisters who have suffered, and still suffer, so much for our holy faith, grasp tightly in your hands, crimsoned with your blood, the standards of St. Patrick and St. Casimir!” The blessing of God is promised to those who persevere. Ireland is urged not to be happy so long as a Protestant Viceroy is at the Castle, every liberty and prosperity to the contrary notwithstanding. All this is to avail her nothing so long as she sees Mordecai, the Jew, sitting at the king's gate.

The Life and Times of the Right Hon. Sir James R. G. Graham, Bart., G.C.B., M.P.
By Torrens M'Cullagh Torrens, late M.P.
Vol. II. (Saunders, Otley & Co.)

The Memoir is resumed in this volume at the retirement of Sir James Graham from the Cabinet in May, 1834. It cannot be said to become more vivacious, anecdotal, or graphic as it proceeds; but the parliamentary analysis is carefully followed out, and the apology, or panegyric, is ingeniously sustained. It is a characteristic of the biography that so much of apology should mingle with the narrative. The resignation of 1834, to begin with, necessitates a good deal of it. We believe that, several times during his career, Sir James Graham, whether under a sense of failure, or disgust with politics, or the yearnings of a born country gentleman, meditated throwing up, once for all, the responsibilities of public life. We find him, in the autumn of 1834, lying “on the purple heather,” muttering again, “What shadows we are, and what shadows we pursue!”—owning that he had seen more than enough of red tape, and asking himself why he, who could be a sportsman, should be a statesman? There was no “greatness” in all this, whatever Cincinnati may have to say about it. Still, he had ears for the rumours of London, and especially of the West End “that governed England,” and a keen scent for the

King's doings at Brighton in November, when it was declared that Lord Brougham could no longer hold the Great Seal, that the Whig Ministry was at an end when Peel was named Premier and the Duke of Wellington became temporarily, not only First Lord of the Treasury, but Secretary of State in all the Departments, with Lord Lyndhurst simultaneously Lord Chancellor and Chief Baron. The Netherby knight disapproved of the whole proceeding, although it was intimated to him that the new Minister might desire to know, upon his return from Rome, where he could be found. As it happened, when the King's messenger did arrive, he found him about to dine at the rectory at Arthuret, and with certain politicians of a strong blue tint. One of these, bursting with impotence and impatience, suddenly asked him, “Well, Sir James, what are you thinking of doing?”—“The only thing I am thinking of doing just now,” he answered, “is of eating a good dinner.” That evening he received the offer of a seat in the Cabinet; but both he and Lord Stanley had previously settled their resolve to refuse. They voted, however, with Government in the election of a Speaker, and on the second day, when an amendment was proposed to the address. It was during the latter debate that O'Connell quoted the lines of Canning as descriptive of Sir James Graham and those who, with him, were then led by Lord Stanley,—neither a party nor a faction. What is it, he asked, that—

Down thy hill, romantic Ashburne, glides?

—The Derby Dilly carrying six insides.

“No political *sobriquet*,” remarks Mr. M'Cullagh Torrens, “ever stuck more closely, and few ever more effectually served their purpose.” With reference to his one important speech of that session, Mr. M'Cullagh Torrens points to the defects of Sir James Graham's oratory, in an analysis worth noting:—

“Besides references to Acts of Parliament and to former debates, we find in the course of a two hours' speech citations of all sorts of testimony,—wary words from Hallam, and loose exaggerations from Hume;—earnest and devout commentaries from Hooker on the subjective worth of popular belief, and external evidences from Paley of truth as established by Act of Parliament;—long quotations from Lord Minto's speech on the union with Ireland, for which nobody who listened cared a jot; and still longer quotations from the evidence of the Catholic leaders given before the Committee of 1825, as to what the effect of emancipation would be had it been given then, but which it was worse than useless to quote, considering how timely concession had been refused;—opinions of Dr. Doyle and of Dr. McHale;—statistical passages from the report of the Irish Ecclesiastical Commission, and epistolary threatenings of agitation to come, indited from Derrynane.”

Sir James was often dull in Parliament, but rarely dull upon the hustings. There, he was generally very popular, and always intensely local.

Sir James Graham did not return to office with the Whigs, but sat below the gangway, still an insider of the Derby Drag; but when the House divided on the Municipal Corporation Reform Bill, his temperament as a public man was vividly illustrated:—

“When the numbers were announced on the second division, Sir James and his friends were about to cross the House to their usual seats when a cry of ‘Stay! stay!’ arose from one or two voices on the ministerial side, which drew forth a loud and protracted cheer. Lord Stanley, having been teller, resumed his accustomed seat below the gangway; but Sir James, stung by the insulting tone of the discourteous and disorderly ebullition of feeling, with a defiant and disdainful look, remained on the Opposition side.”

He had voted with the Opposition, and the Liberals told him to stay where he had voted.

This might have been on their part unwise, but on his it was unworthy.

It was in the following year that Lord Lyndhurst, the Duke's favourite Lord Chancellor, made his desperate assertion that three-fourths of the Irish people were aliens in blood, language and religion. "Never before," says Mr. Torrens, "was so much mischief wrought by one brief phrase." The ground taken, after this event, by Sir James Graham was, that while the door to compromise seemed closed he would make no concessions! In this year, too, he seceded from Brookes's, as he afterwards withdrew from the Carlton, though Pitt, at the head of Toryism, remained a member of Brookes's, as did Sir James Scarlett and Lord Rosslyn, though in office under the Duke of Wellington. But, with the Knight of Netherby, passion overcame twenty-four years of pleasant memories:—"His heart was full of bitterness on account of the manner in which he had been treated by the organs and agents of the party."—Lord Brougham, Sir Francis Burdett, and Lord Stanley withdrew from Brookes's Club in the same year.

In June, 1837, the King died, and Mr. M'Cullagh Torrens recounts an amusing incident of parliamentary life:—

"On the following day Lord J. Russell appeared at the bar of the Commons, charged with a message from the Queen. A cry immediately arose of 'Hats off,' and the Speaker, forgetful for the moment of the precise usage prescribed on such occasions, announced from the chair that 'Members must be uncovered.' Every one present forthwith complied, with the exception of Sir J. Graham, who excited some observation by continuing to wear his hat until the first words of the message were pronounced. As nothing at the time escaped the vigilance of party criticism, a paragraph appeared the same evening in the *True Sun*, reflecting on the supposed indecorum. At the meeting of the House next day, the right hon. baronet called attention to the fact, for the purpose of explaining that he had only complied with the older, and as he thought better, custom of waiting until the initiatory word 'Regina' or 'Rex' was uttered, before uncovering,—a mode of testifying respect for the Crown which was more emphatic, and which had, he thought, a better effect. * * * The Speaker said that the hon. member for East Cumberland was strictly correct in his observance of the practice of the House; and he accounted for his own apparent deviation therefrom by his desire to preserve order and to save time."

The ensuing general election tried him still more sorely. He lost his seat for Cumberland, and lost his temper too, suffering himself to declaim, at the Bush dinner, that he had "not expected to be hunted almost like a mad dog through the streets of Carlisle." At that time, apparently, he had scarcely nerve or good humour enough for public life. When he re-entered Parliament as Member for Pembroke, he began by taunting Mr. Hume as one who might be useful if "he would be content to skim along the mud of official proceedings"; but he winced when Sheil ironically spoke of him as "the member for East Cumberland," and added "I beg pardon, the member for Pembroke." In fact, Sir James Graham was in no way a relenting assailant, and employed fiercer epithets than he cared to tolerate when applied to himself.

In 1841, he hoisted the Conservative flag with due ceremony, and joined the Carlton Club. Conservatism, Mr. Torrens observes, was becoming irresistible, though he suggests no connexion between that fact and the new accession to the Carlton phalanx. Sir James now fairly turned round upon the Whigs, in a speech which proved how far he was the sensitive debater who had a right to cry for quarter:—

"Never was a country cursed with a worse, a more reckless, or a more dangerous Government. The noble Lord, the Secretary for Ireland, talks of 'lubricity'; but, thank God, we have at last pinned you to something out of which you cannot wriggle."

His biographer does not justify this language, neither did he himself upon reflection. His next seat was for Dorchester, and his place in the Cabinet at the Home Office,—a troublesome office in days of discontent and agitation. "There was hardly a day," he said in the House, "that I did not find it necessary to have personal communication with the Horse Guards, as well as with the heads of the police in the metropolis and in the manufacturing districts." But he added to the difficulties of his own position. Here is his biographer's confession:—

"There was in him, it must be owned, sometimes too much of a haughty and imperious mood, which especially betrayed itself in his demeanour as a Minister. He seemed as though he were haunted by a morbid fear of appearing (as he phrased it) 'to be hustled into doing anything by the mere pressure from without,' so long as he believed that pressure could be resisted."

Personally, he was then, in 1844, perhaps the most unpopular statesman of the day:—

"How do you account for it," said a mutual friend standing one day below the bar to a noble lord whom Sir James had lately complimented highly in debate, and towards whom he had certainly never shown anything like disrespect.—"How? Why just look at him, as he sits there, with his head thrown back, and his eyes fixed on the windows over the gallery, as if there was nothing going on in the House worth his listening to." Another distinguished supporter, when asked why so many people hated him, replied, "He has cocked his hat on the wrong side of his head; and depend upon it, that's a mistake not easily got over."

Moreover, "you could not go into the Carlton without finding some self-important country gentleman half-inarticulate with rage at the way in which he had been treated by that intolerable coxcomb whom Peel had been fool enough to put at the Home Office, and to whom he was resolved never, so long as he lived, to speak again." But he seemed intent upon manufacturing unpopularity for himself. The Post-Office Inquiry heaped it in abundance upon his head. Wrongly or rightly? Mr. M'Cullagh Torrens takes his part roundly, and endeavours to paint a sentimental portrait of the political hero, assailed by a thousand slanders, which rankled in his heart, while he scorned to manifest, by any outward expression, the pain he endured. We must say that the picture fails to win our sympathy. It is, at the best, repulsive, and not at all pathetic:—

"In a certain sense, the wound was incurable; and who shall tell of how many hours of unsuspected suffering it was the cause? With all his pluck and pride, he was femininely susceptible to opinion. He was too great an actor not to be able to laugh aloud, while he writhed with inward pain. Much of what was said against him never reached his ears. But he was fully sensible of the growing symptoms of party estrangement. He probably misapprehended, in some respects, its immediate cause, and morbidly attributed them to the universal tendency of the world to desert those who are out of popular favour. He repeatedly gave expression to his conviction that he had been made a scapegoat; and that while others who had not laboured harder or more efficiently in the framing and carrying of useful measures would obtain their meed of fame, he should be remembered only in connexion with this miserable affair of the Post Office."

That he was a laborious minister may more readily be allowed. Sir Robert Peel's testimony on this point is conclusive—"What I do in the way of work is nothing to what Graham does." And he breakfasted on a cup of tea and a

biscuit; for spare diet, in the Home Secretary's opinion,

"was essential to the preservation of his capacity for labour, such as that which he had to undergo. For any one who was subject to gout, and who could not find time for out-of-door exercise, there was nothing for it but to live low, if he would retain his capacity for mental work." He never ate luncheon, and his only meal was dinner, which he generally took at eight o'clock."

Now, this opinion is repudiated by many public men, whose exertions are enormous, and whose dinners correspond. "Eat much and drink little" is the creed of one whose official toils have been beyond any comparison with those of Sir James Graham.

In 1847, he refused the Governor-Generalship of India, as he had refused it more than once before, but this time because "he could not bring himself to take it from Lord John." He clung to the House of Commons, after the Free-Trade Debates, and during one of the great economical discussions that succeeded, let fall a few words which Mr. Torrens thinks constitute a "retort," and, therefore, are imperishable as an anecdote:—

"When addressing the House one evening, on the oft-debated subject of the connexion between the rate of wages and the price of food, Sir James reiterated his declaration that experience had convinced him that the former had a constant tendency to rise in proportion as the latter fell. Lord George, who was sitting on the front Opposition bench below him, threw back his head, and, looking round at him, exclaimed, 'Ah! yes, but you know you said the other thing before.' A shout of laughter, in which Sir James joined, was followed by cheers and counter-cheers; and curiosity was on tip-toe for the retort. From his perch, as he used to call it, the ex-minister looked down at his noble antagonist, and said in a tone of ineffable humour,—'The noble Lord's taunts fall harmless upon me; I'm not in office now.'"

Again was he offered a peerage, but once more adhered to the House of Commons, now intent on Committee-room work:—

"He would listen, with mingled amazement and amusement, to some marvellous romance of pseudo-science from the lips of a chemist or an engineer; put a quiet question or two, without dropping a hint of the impression it had made on his mind, just to fix the empiric irretrievably with his pretentious imposture; and then spend half the evening reading up, to be ready to cross-examine him the next day, which he did with a tone and air of calm superiority and scrupulous politeness, that often excited the envy and admiration of the less finished practitioners who sat on the other side of the table."

It was in 1852 that he again stood for Carlisle, abolishing all necessity for apologies and explanations by the simple words, "Well, gentlemen, the wanderer has returned." He was elected, and returned thanks. "Somebody had said that if he were returned Carlisle would be called a refuge for the destitute. Well, that was a better name for it to bear than an hospital for the incurable."

In his sixty-third year he began to feel himself an old man. He cherished the habits of parliament, but shunned the thought of office. Yet on the hustings he was vigorous as ever, and in 1859, when a squib was published, styling him a weathercock, retorted, "Well, I think it very likely that on the day of election I shall show which way the wind blows." This was exactly in his own style, suited to, and sufficient for, a popular occasion. His end, however, was near, and two years later he rested in the old church of Arthuret.

With the materials at hand, Mr. M'Cullagh Torrens has, no doubt, done his best, except that he strains his sympathy with Sir James Graham's character so far as to somewhat invidiously admire him. It is not a very flattering

thing, after all, to say of a public man that he could be amiable in private. Public men have no right to keep all their graciousness at home; at all events, if they do, the world, which sees them only in public, is not bound to reflect that superciliousness at the Home Office—an affront to all—may be compensated for—to a few—by gentle manners in a drawing-room. Personally, not much interest attaches to the life or character of Sir James Graham. Politically, though he boasted at Carlisle in 1859, referring to a contest of three-and-thirty years ago, "I then fought under the Blue Flag, and I fight under the Blue Flag still," he wrote his own epitaph when he said "In a party sense, it must be owned that mine has been a devious career."

Remarkable Adventurers and Unrevealed Mysteries. By Lascelles Wraxall. 2 vols. (Bentley.)

FROM the pages of odd volumes from the libraries of many countries, Mr. Lascelles Wraxall has drawn a series of sketches, anecdotes and characters, which Mr. Bentley has now given to the world under the title of 'Remarkable Adventurers and Unrevealed Mysteries.' The adventurers comprise such persons as the False Dauphin, Cardinal Alberoni, Baron de Ripperda, the Pretended Anne of Cleves, the Count St.-Germain, the Man in the Iron Mask, Count Ruggiero, Anacharsis Cloots, Baron de Kalb, Axel Fersen, Theodore King of Corsica, Gonzaga Deutz, Henry Reuss, Joseph Süß Oppenheimer, Prince Kaunitz, Count de Bonneval, Jacob Cazotte, Cagliostro, Hugo Schleichtweg, Charles Hesse, John Michael von Kleement, the Countess von Rochlitz, Struenzee and Königsmarck, Kaspar Hauser, the Chevalier D'Eon, William Walker, Joseph Frohn, and a few others. The members of this series have no connexion with each other, not even that of illustrating any common thought; but they have the interest attaching to what is strange, dashing, and mysterious, in a very high degree.

As some of the chapters have already appeared in periodicals, we refrain from any large amount of quotation, lest the reader should find himself treated to an old story recently re-told. A couple of paragraphs must suffice—one from the chapter on Cazotte's famous prophecy, the second from that on the Convulsionists.

Mr. Wraxall, after some examination of the evidence, is of opinion that Cazotte did actually pronounce the famous prophecy, though he is also of opinion that Laharpe, "like a true Frenchman," added a good deal to Cazotte's words by way of dramatic ornament. Use has been made of the scene by M. Louis Blanc and M. Alexandre Dumas:—

"In the year 1788, Cazotte supped with a distinguished party of guests at the house of the Duchesse de Grammont. He sat silent at one end of the table, staring at his half-empty glass, and only rousing from his reverie when the victory of philosophy over 'religious superstition' was too jactantly announced. Suddenly he sprang up, leant over the table, and said in a hollow voice, and with pallid cheeks:—'You have reason to congratulate yourselves, gentlemen, for you will all be witness of the great and sublime revolution which you so eagerly desire. As you are aware that I understand something about prophesying, be good enough to listen to me. You, M. Condorcet, will give up the ghost, lying on the floor of a subterranean dungeon; you, M. N——, will die of poison; and you, M. N——, by the executioner's hand.' On hearing this strange outbreak, all began protesting that prisons, poison and executioner had nothing in common with philosophy and the sovereignty of reason, on whose speedy approach the soothsayer had just congratulated them; but Cazotte coldly continued:—'It is as I tell you, and all this will

happen in the name of reason, humanity and philosophy. All I have announced will take place when reason is the sole ruler, and has its temples.'—'In any case,' Chamfort retorted, 'you will not be one of the priests of that temple.'—'Not I, M. de Chamfort, but you assuredly will, for you deserve to be chosen before all for such functions. For all that, you will open your veins in two-and-twenty places with a razor, and will not die till some months after that desperate operation. As for you, M. Vicq d'Azyr, it is true that the gout will prevent you opening your veins, but you will have them opened by another person six times in the same day, and die during the following night. You, M. de Nicolai, will die on the scaffold; and so will you, M. de Maleherbes!'—'Thank heaven!' Richer exclaimed, 'M. Cazotte only owes a grudge to the Académie.' But Cazotte quickly continued:—'You, too, M. Richer, will die on the scaffold; and those who are preparing such a destiny for yourself and the rest of the company here present are all philosophers like you.'—'And when will all these fine things happen?' some one asked.—'Within six years from to-day.' Laharpe also cross-questioned the prophet of evil in a mocking voice:—'And pray what will happen to me? M. Cazotte.'—'A great miracle, sir; you will be converted, and become a good Christian.' This put an end to the feeling of awe that had begun to creep over the company; and the Duchesse de Grammont, reassured by the general laughter, asked in her turn:—'The fate of us poor women, I assume, will not be so bad, for in revolutionary times we are neglected.'—'Ladies,' Cazotte answered, 'this time your sex will not protect you; and though you may carefully refrain from interference, you will not fail to be treated exactly like the men. You, too, Madame la Duchesse, and many other great ladies, will have to mount the scaffold, and be taken to it in a cart, with your hands tied behind your back!' The duchess, who regarded this as a jest, added:—'I trust, at any rate, that I shall have a mourning coach.'—'No, no; a common cart will be your last carriage. Besides, greater ladies than you will be dragged to punishment in the same way.'—'I hope you do not allude to the princesses of the blood!'—'To even greater than they.'—'But we shall not be refused the comfort of a confessor, to exhort us in our dying moments!'—'Such a favour will only be granted to the most illustrious of all the victims.'—'But pray, what will happen to yourself, M. Cazotte?' some of his audience asked, beginning to feel rather uneasy.—'The same thing will happen to me,' he replied, 'as happened to the man who, during the last siege of Jerusalem, pronounced a final imprecation on that city, then on himself, and was straightway killed by a stone.' After saying this, Cazotte bowed to the company, and left the room."

Of course, the prophecy,—if it were prophecy,—came true. The difficulty of believing any part of this strange narrative arises from the fact that the scene was never mentioned until all the events had come to pass and all the actors, with the sole exception of Laharpe, were dead.

To the believers in table-rapping and sofa-floating as a new spiritual revelation, such good old stories as that of Madame de La Croix, the exorciser of evil spirits, may be recommended as showing that credulity and fanaticism are not things of our time only:—

"Madame de La Croix had been in her youth the most perfect model of Roman beauty. Full of grace and expression, with piercing eyes, an aquiline nose, a head well set upon fine shoulders, and a magnificently developed bosom, she would pass for the *beau-ideal* of a beautiful empress. Of all these charms there only remained to her in the serene a clever and lively face, a noble presence, pretty feet, a grand air, and great facility of elocution. These imposing remains, which in reality are far rarer than are supposed, were admirably adapted to the part which she played when she set about exorcising the demon: her menacing gestures and the sound of her voice caused a tremor; and there

was such nobility in her carriage, such elevation in her fervour, and such a lofty expression of faith and confidence in her whole person, that she might be readily taken for a saint in the act of performing a miracle. Baron von Gleichen, though he frequently called on her in the hope of seeing the fiend quit the body of a possessed person in his presence, was never so fortunate as to arrive at the right moment: as regards cures, he only witnessed those of toothache, choleric and rheumatism. Madame de La Croix described with peculiar simplicity and grace, as well as with the most picturesque expressions, the visits which the evil spirit paid her when she was alone. Her hearers fancied they could see what she was describing, for there were such naturalness and vivacity in her statements. Every time that Gleichen paid her a visit she had something new to tell him about the demoniac company. At one moment he heard of amusing tricks which had been played her: at another, she had been suffering from the most fearful persecutions. At times, entire processions of penitents, dressed from head to foot in pink, or else Capuchins, as ugly as they were offensive, or other persons ridiculously or improperly attired, came at night to walk upon her bed, the Capuchins sending her kisses, and the penitents plucking her blankets. At times, they gave her the amusement of a ball, in which she perceived the strangest costumes and most discordant fashions of every age. Another time she was shown a magnificent display of fireworks, pyramids of diamonds, dazzling illuminations, or enchanted palaces. And she described all this with so much taste, and such vivacity and facility of language, that her stories appeared far more interesting than the majority of those told in society about grand fêtes or brilliant assemblies. One day she repeated a theological discussion which she had held with one of her most familiar spirits, travestied as a doctor of the Sorbonne, who treated her as a heretic, and began defending the doctrines of the Church of Rome in the most orthodox manner. 'But,' she added, 'as he at length mingled blasphemy with his arguments, I closed his mouth with a padlock, which he will wear to the day of the last judgment.'—'But,' Gleichen asked, 'where did you get this padlock from?'—'Ah, my dear baron,' Madame de La Croix replied, 'how little do you know of the difference existing between spiritual and material reality! It was a real padlock which I placed on him: ours are only the appearances of padlocks!' Many persons, sufficiently malicious to amuse themselves at her expense, invited her to their houses, under the pretence that they saw ghosts. The jest was often carried so far that Madame de La Croix ended by seeing that she was being played with. But she laid these humiliations at the foot of the Cross, and on this point said to Gleichen, with as much good sense as frankness: 'You who have known me so jealous of my reputation and superiority, who are aware that I deprive myself of the smallest superfluities in order to give to the poor; who see that the profession I carry on only produces me shame and contempt in a country where, through my position in society and my family relations, I might play a very different part; do you not understand that the task I am fulfilling is imposed on me by a superior power! Tell me frankly if you think that my mind has broken down, and that I have lost my reason!' It was the more difficult to categorically answer these questions so bluntly asked, because the baron was forced to confess to himself that he had never known the lady's mind more lucid. He withdrew from the embarrassment by the help of conventional compliments, while thinking that a fixed idea can easily coexist with an intellect in other respects sound, and that in the best organized human brain there is always a little nook reserved for madness. However, he declares that Madame de La Croix (whom he saw for the last time in 1791, at Pierry in Champagne, the estate of Cazotte, who, after having been a Martinist, had become one of her most fervent partisans) was animated by such an active love for humanity, such edifying piety, so touching a goodness of heart, and such mature sense and nobility of character, that it was impossible not to love and esteem her. She regarded the revolution as a work of the

demon, and boasted, as a peculiar trait of bravery, of having destroyed a lapis-lazuli talisman, which the Duc d'Orléans had received in England from the celebrated High Rabbi Falck-Scheck. She declared that 'this talisman, which was destined to raise the prince to the throne, had been broken on the bosom of Philippe Egalité, by the mere power of her prayer, at the moment when he fell senseless in the midst of the National Assembly.' Baron von Gleichen concludes his anecdotes about this singular woman with the description of a scene which he said he could never forget, and which he always found it impossible to explain. A possessed man whom a neighbour of his, a miller, had compelled unconsciously to form a compact with the Fiend, came every now and then to Madame de la Croix. Hence the possessed man was still curable. Every time that he came to see her he fell on his knees, and recounted to her, with sobs, the horrible sufferings to which he was constantly a prey. Madame de la Croix made him lie down on a sofa, undressed him, and passed over his body relics dipped in holy water. Then, horrible rumblings were heard inside him and the sufferer uttered fearful yells; but the devil held firm, and the hopes of dislodging him were constantly disappointed. One day this man became furious, leapt off the sofa, and seemed ready to attack the spectators. Madame de la Croix then placed herself between him and her company, and forced him back to his place with an imperious and menacing gesture. Upon this, the possessed man began gnashing his teeth with such force that passers-by could have heard him in the street, and vomited such horrible imprecations that his hearers felt their hair stand on end; after which he broke into violent invectives upon Madame de la Croix herself, and terminated the scene by an enumeration of the most abominable sins which the lady had committed, and entering into details sufficient to make her die of shame. She listened to all this with her eyes calmly raised to heaven, her hands crossed on her chest, and shedding bitter tears. Had she been younger she might have passed for a penitent Magdalene. When the sufferer had ended, she knelt down, and said to the company: 'Gentlemen, you have just been witnesses of the just punishment of my sins which God has granted to my repentance. I deserve the humiliation which I have endured in your presence, and would willingly submit to it in the presence of all Paris, if that would procure the pardon of all my sins.'

Some paragraphs which we recently quoted from Mr. Home's 'Incidents in my Life' read wondrously like a variation of Baron Gleichen's narrative of what he saw, or thought he saw, at Madame de La Croix's house. We have seen more amusing and clever tricks done on the stage by Messrs. Houdin and Bosco.

Leavings from Low Latitudes; or, Extracts from the Journal of the Hon. Impulsia Gushington. (Murray.)

THIS charming production, originally planned by Lord Dufferin as a Christmas fun-book, is well enough timed as an Easter folly. It is even pleasanter to look at the thrilling adventures of the Pilgrim of the Desert, as here pictured, than to read the passages of the journal illustrated by them—and for a simple reason. The troubles which overtake fools from St. Mary Axe, or fools from May Fair, on their travels, have been told somewhat threadbare since the days of 'Humphrey Clinker.' Hook, Hood, Moore, Miss Waldie, Mrs. Trollope, Mr. Lever, Mr. Thackeray, recur to us as leading the van of merry folks who have delighted to narrate the absurdities of John Bull and his spouse as exhibited in foreign parts. True, there is no caricaturing the reality—no exhausting its varieties. Our own ears have heard the Venus at Florence described as "the last effort of Hadrian's chisel" by one of the Gushington family, and the Pompeian motto "Salve," on the doorway of an apothecary's shop at Naples, approved as "really appropriate" by another comfortable female tourist of the race. As for the aphorisms and allusions penned by travellers, serious and saucy, not in travellers' books alone, but with a publisher's "imprimatur" for the use of Mudie, who shall show forth the wonders of their splendour and variety? Miss Impulsia, the heroine of Lord Dufferin's romance, though "a being of the mind," is tame and sensible compared with certain of the sisterhood in flesh and blood who could be named, alive, travelling, and, what is more, publishing. Her face in the first "cut," as she sits reading 'Eothen' in Brook Street, tells us, by its sentimentality, that, like Alciphron the Epicurean, a voice within her warns her to seek the Nile; also, by its vacant stare, that she is marked out for vicissitude on her travels. She exports a lady's-maid; and Abigail on the Mediterranean becomes well nigh as portentous a sea sufferer as the one immortalized by Hood, who, in like circumstances, "found, after Christianity, only one comfort, which was, in giving her mistress warning." We were sure that at Alexandria Mrs. Minikin would "strike," leaving her lady lonely among her boxes and the donkey-boys,—and would insist on being sent home. This she did. Plate the sixth shows us the splendid descendant of Æneas, whom Miss Gushington, fancying herself Dido, preferred to all the more homely "Dragomen" proposed to her. That Dmitri proved lazy, dirty, a liar and a thief, was not to be read in his looks, nor in the "sit" of his *justanellas*. But our pilgrim, like a true Impulsia, was sure to fall into bad hands. Those who next fleeced her were a family of four M'Fishys; and how the mother was tipsy, and the father was sharp as a needle, and the pragmatic cub of a son was ill-mannered and impudent, may be here clearly seen as well as mournfully read. But the best pictures in the book are those displaying Impulsia's wonderful and lonely adventures on camel-back in the Desert and their sequel, after parting with the M'Fishys. Her mad Mazeppa ride (Plate xiv.) is wondrously funny, and will make many an Impulsia to come rate "the Ship of the Desert" as heartily as did Miss Martineau, who fairly lost her temper, and swore, it may be recollected, when she spoke of the comforts of that conveyance. Nor has anything much more comical (even in the incomparable 'Book of Nonsense') been seen than Miss Gushington's subsequent apparitions, after having been plundered of all her wardrobe by the wild Arabs,—first, presenting herself in her cage before the astonished Sheikh—next, bestriding her donkey in a disconsolate epine attire, as her solitary chance of getting back to Luxor and the decorum of petticoats! We need go little further in specifying how the ill-starred gentlewoman stumbled from this Scylla into a Charybdis, made up of the courtesies of two jocund Irish sharpers; and when clear of this third whirlpool,—how, after having flung into it one hundred pounds, she floundered into a deeper Slough of Despond by meeting a cousin of hers as stupid as Lord Dundreary, who was bringing home with him from India a lady more passionate than honest. Miss Gushington was only dragged to *terra firma* by a French Chevalier of Industry, in whose hands she is left when the curtain drops. Poor lady! She ought to have been allowed some glimpses of sunshine had she been twice as gushing as she was. If there be a fault in this merry Easter offering, it is the want of relief. "Sham upon sham," said the Doctor in Miss Edgeworth's 'Manœuvring,' "is too much for any man!" The disasters showered upon Madame D'Arblay's "L. S." in her 'Wanderer' utterly

chilled our interest. Spohr's 'Jessonda' is spoilt by the excess of lachrymose music it contains; and what bore is so wearisome as the funny man who never ceases cracking jokes and launching provocative riddles? But the fault of Miss Gushington's dilemmas, as above specified and illustrated, can have only a partial effect on the acceptance of a book which is full of genuine and permissible whimsies.

The Second War of Independence in America.

By E. M. Hudson, Juris Utriusque Doctor.
Translated by the Author from the Second Revised and Enlarged German Edition.
With an Introduction by Bolling A. Pope.
(Longman & Co.)

THE contents of Mr. E. M. Hudson's volume may be divided into what is said too late, and what had better not have been said at all. Its exposition of the United States Constitution, and arguments in support of the right of secession have more than once been placed before English readers, and have long since been accepted by those who take part with the South. The portion of the book which had better not have been written is that which relates to compulsory labour. Slavery, according to Mr. Hudson, is so beneficent a system that the highest interests of negro and planter alike demand its maintenance and development. It brings the African savage in contact with the influences of Christianity, and raises the proprietor of black men to the highest grade of civilized humanity. "Slavery in America," observes the author, "may be considered from two points of view: on the one hand, as a *social*, on the other, as a *political* relation. Regarded from the first point of view, slavery is decidedly patriarchal. The head of the family is the slave-owner or master, while the slaves are incorporated into the family. The wife and children excepted, the slaves claim the chief care and attention of the head of the family. Interest and feeling unite to induce the master to bestow the greatest kindness and protection upon his dependents, and in this way a more intimate bond of affection is created than is possible between master and hireling in any country. The master is, at the same time, the protector, confidant, and friend of his slaves, and must afford them clothing, support, medical attention and religious instruction. The children of the slave-proprietor grow up with those of the slaves, so that from the earliest youth there exists a mutual affection between the future masters and their slaves." In like fashion is the character of the Southern planter put upon the canvas. "The relation of the slaveholder," says Mr. Hudson, "guarantees him a purely independent position, allows him leisure for devoting his time to literature, science and politics, affords opportunity for the improvement of his tastes, enables him to reap the benefits of elevated social intercourse, and develops in him a more pure appreciation of what is noble, while producing a superior degree of refinement." No unprejudiced reader will refrain from laughing at this flattering picture of life in Dixie's Land, where there is actually no literature whatever superior to pro-slavery journalism, no science higher than that "social science" which left the New Orleans jail what Mr. Russell found it, no politics apart from a fierce determination to keep black serfs in firm bondage,—where refined taste expresses itself in deep drinking, "elevated social intercourse" is tempered by duelling, and appreciation of what is noble manifests itself in incessant calumny of England and the English. When the Southerners were being injured by the misrepresentations and fictions of abolition-

enthusiasts, we did our best to expose the falsehood of statements which were misleading our countrymen; and now that pro-slavery cant is making itself heard with corresponding influence, and aims at depreciating the labours of the philanthropists whom Clarkson and Wilberforce led on to victory, we are equally prompt in giving it its right name. We can assure Southern writers that the tone which has of late become prevalent amongst them will fail to achieve its object, as far as English opinion is concerned. It is true that just now there is a fashion in England with careless and frivolous people to profess admiration for "the patriarchal character" of American slavery, but it is the folly of "a season." It will soon die out, and in the mean time it will not touch the strong hatred of "the peculiar institution" which lives in the heart of our race.

Poems of Rural Life in the Dorset Dialect. By William Barnes. Third Collection. (J. R. Smith.)

THREE distinct collections of these rural poems have now appeared, and the first of the series has been twice re-demanded. This popularity has been gained in spite of a dialect which must, to some extent, startle and perplex the general reader. Such a result, for reasons which we are about to state, speaks well for the public discrimination.

We are by no means desirous that the example of Mr. Barnes should be widely followed. Works written in a dialect must, of necessity, be deviations from the national standard of language. It will be an ill day for our literature when each shire shall set up a laureate, whose verse must be elsewhere obscure; when Cumberland, for instance, shall produce poems that will need the help of a translator to be understood in Cheshire. Still it is undeniable that the experiment of Mr. Barnes has its peculiar advantages, and, viewed as an exception, we can give it not only toleration, but welcome.

It must be remembered, in the first place, that in these rural poems life is regarded, for the most part, from the side of the yeoman and the peasant. Mr. Barnes has the great merit of letting his rustics speak for themselves; from their own lips we learn how events affect them, how the influences of nature cheer or soften them. They are no idealized shepherds and shepherdesses with crooks, ribbons, and cloaked stockings, but the plain dwellers beneath thatched roofs who wear smocks and lineys. In thus exhibiting them, Mr. Barnes, though nominally a lyric poet, becomes virtually a dramatic one. The characters into which he throws himself express their own individuality in thought, feeling and language, as they would in a play. It is this fact, indeed, that best justifies the adoption of a dialect. The writer himself shows the limits of such a medium when he occasionally forsakes his humble favourites for persons of higher position. The phraseology, for example, which so well suits the rustic lover of "Meary" in 'Woone smile mwore,' strikes us as being entirely out of place in the "Pillar'd Geate," where the object of affection is a lady by birth, and her suitor one who has risen in life and "lightened up his mind with lore." Instances of the latter kind, however, occur but rarely.

The first collection of these poems has been some time before the public, and its pictures of external nature under many aspects—its pastoral scenes of common village life, now and then quickened by the excitement of a fair, a feast or a wooing, are familiar to many. We can hardly say that the Third Collection, now

before us, has the sustained merit of its predecessors. The pieces show less variety of subject, and some of them are less carefully finished and spring from slighter occasions. But in the faintest of these sketches we are sure to meet some redeeming touches of truth and individuality, and the best of them are equal to any that have come from the same hand. Mr. Barnes has still the sportive humour evinced in 'A Bit of Sly Coorten'; the simple and suggestive paths shown in 'Evenen, an' Maidens out at Door'; and that faithful detail which, in such bucolics as 'Evenen Twilight' and 'Evenen in the Village,' presents a distinct landscape, enlivened by distinct figures. Here, too, is an interior, in which words show, vividly as could the pencil, the glow on the hearth, the genial faces around it, and the white world beyond the window:—

NOT GOO HWOME TO NIGHT.

No, no, why you've noo wife at hwome
Abiddn up till you do come,
Zoo leave your hat upon the pin,
Vor I'an your waiter, here's your inn,
Wl' chair to rest, an' bed to roost;
You have but little work to do
This frosty time at hwome in mill,
Your frozen wheel's a-stannn'd still,
The sleopn ice woont grind vor you.
No, no, you woont goo hwome to night,
Good Robin White, o' Craglin mill.

As I come by, to day, where stood
Wl' neik'd trees, the purple wood,
The scarlet hunter's ho'es veet
Tore up the sheikn ground, wind-fleet,
Wl' reachn heads, an' pankn hides;
The while the flat-wing'd rooks in vlock,
Did zwim a-sheen'n at their height;
But your good river, since last night,
Wer all a-vrose so still's a rock.
No, no, you woont goo hwome to night,
Good Robin White, o' Craglin mill.

Zee how the huffn win' do blow,
A-whirl'n down the giddy snow:
Zee how the sky's a-weikn dim,
Behind the elem's neik'd lim'
That there do lek'n above the keene;
Zoo tekke your pieses beside the dogs,
An' sip a drop o' hwome-brew'd eile,
An' sing your zong or tell your tette,
While I do baft the vire wl' logs.
No, no, you woont goo hwome to night,
Good Robin White, o' Craglin mill.

Your meire's in steable wl' her hocks
In straw above her vetterlocks,
A-reachn up her meary neck,
An' pull'n down good hay vrom rock,
A-meikn slight o' snow an' sleet;
She don't want you upon her back,
To vall upon the slippy stwones
On Holly hill, an' break your bwones,
Or miss, in snow, her hidden track.
No, no, you woont goo hwome to night,
Good Robin White, o' Craglin mill.

Here, Jenny, come pull out your key
An' hansell wl' zome tidy tea
The silver pot that we do owe
To your prize butter at the show,
An' put zome bread upon the board.
Ah! he do smile; now that 'll do,
He'll stay. Here, Polly, bring a light,
We'll have a happy hour to night,
I'm thankful we be in the lew.
No, no, he woont goo hwome to night,
Not Robin White o' Craglin mill.

Such are the heartiness and brightness of this extract that we could almost wish to be snowed up, like Robin White, in a Dorset farmhouse. In our next quotation, Mr. Barnes appeals to deeper sympathies, and shows a pathos as direct as his humour, and as forcibly conveyed through visible objects:—

EARLY PLAYMEATE.

A'ter many long years had a-run,
The while I wer a-gone vrom the pieece,
I come back to the vields, where the zun
Ov her childhood did show me her feace.
There her father, years wolder, did stoop,
An' her brother, wer now a-grown staid,
An' the apple tree lower did droop
Out in orchard where we had a-play'd.
There wer zome things a-seem'n the seime,
But Meary's a-married away.

There wer two little children a-sent,
Wl' a message to me, oh! so feart
As the mother that they did zool ment,
When in childhood she play'd wl' me there.
Zoo they told me that if I would come
Down to Coomb, I should zee a wold friend,

Vor a playmeate o' mine wer at hwome,
An' would stay till another week's end.
At the dear porch'd door, could I dare,
To see Meary a-married away!

On the flower-not, now all a-trod
Stwony hard, the green grass wer a-spread,
An' the long-althght woodbine did nod
Vrom the wall, wl' a loose-hangn head.
An' the martin's clay nest wer a-hung
Up below the brown oves, in the dry,
An' the rooks had a-rock'd broods o' young,
On the elems below the May sky;
But the bud on the bed, couldn' bide,
Wl' young Meary a-married away.

There the copee-wood, a-grown to a height,
Wer a-vell'd, an' the primrose in bloom,
Among chips on the ground a-tura'd white,
Wer a-quiv'ren, all beare o' their lewth.
The green moss wer a-spread on the thatch,
That I left yellow reed, an' avore
The small green, there did swing a new hatch,
Vor to let me walk in to the door.
Oh! the rook did still rock o'er the rick,
But wl' Meary a-married away.

The reader will remark in the above how touchingly the lapse of years is indicated by the features of the scene. The apple branch droops lower, the flower-not is trodden "stwony hard," the thatch that was "yellow reed" is covered with moss. The fight of time is marked, as it were, by shadows on the dial of nature. Through the whole poem there is a pensive harmony between the feelings of the bereaved lover and the surrounding landscape, while the sad sweet burden of the verse completes the charm.

We could cite other examples not inferior. The book, as we have hinted, exhibits the faults of too rapid production; but, on the whole, it is an addition to our poetical wealth. The "realism" of style, which is the first feature that strikes us, is the least of its merits, and, indeed, in another class of poetic composition might be no merit whatever. Beneath the surface of local peculiarities Mr. Barnes shows that true imagination which makes appearances representative—indexes to the inner life of nature or symbols of the heart and the mind. His sympathies are warm and healthy; his observation is accurate and deep, and his verse happily modulated to the sentiment which it expresses. Above all, he is original. At times, indeed, he reminds us of Burns; but the resemblance is free from imitation, and may fairly be traced to the common qualities of kindred minds when their themes are similar.

An Introduction to the Old Testament, Critical, Historical and Theological, containing a Discussion of the most Important Questions belonging to the several Books. By Samuel Davidson, D.D. Vol. III. (Williams & Norgate.)

In the same fearless and unfettered spirit as he began, Dr. Davidson here concludes his Introduction to the Old Testament,—a work which, with other recent publications, betokens an activity of inquiry in relation to the highest matters at the present period. Notwithstanding all opposition, modern criticism pushes forward its researches, even into regions which have been hitherto considered as belonging to the province of faith, and consequently entitled to exemption from the intrusive gaze of reason. Nor will the enlightened lover of truth regret this, knowing that, whatever temporary disturbance it may occasion, the ultimate result must be the dispersion of much mischievous error, and the establishment of clear and correct views upon a firm foundation.

Dr. Davidson's concluding volume is devoted to the prophetic and apocryphal books: the contents and authority of which are discussed with the aid of all the light that can be thrown upon the subject by the researches of German and English writers of every school. Whatever may be Dr. Davidson's predilections, he has

certainly not confined his attention to any particular class of works, but shows an acquaintance with all of importance. Whether his conclusions be erroneous or not, they are the results of no one-sided discussion, the arguments for and against being stated with sufficient fullness to enable the reader to form his own judgment. With many of the most eminent German Hebraists, and for reasons here ably set forth, he attributes the latter portion of the book of Isaiah, from the commencement of the fortieth chapter to the end, to a different author from that of the preceding thirty-nine chapters. At the same time, he protests against being supposed to charge this more recent writer, or whoever incorporated his discourses with those of Isaiah, with any attempt to impose upon the reader. On the contrary, he considers him to have been "a true prophet, inspired by God in a remarkable degree." He disputes the authenticity of the book of Daniel, though he admits it to be partly historical. As to its reception into the canon, he says—

"It is a modern view to suppose the Jews in possession of a fixed collection of canonical writings—sacred in its limits—at the time this book appeared, and yet inserting the supposititious prophecy. The canon, properly speaking, was never looked upon as *closed*. No precise barrier of inspiration belonged to it in the eyes of the Jews before Christ's advent. Their ideas of books that should or should not be put with the old writings, were vague and floating. Language and time were their guides, and not imperious ones. The prevailing spirit of the people determined the point. National taste, tone, and religious perception had some effect. *Definite canons* of ecclesiastical criticism were not the criteria employed. Till the time of Christ, or at least till the time when Judea was conquered by the Romans, the question remained in a somewhat loose state. And when the collection was finally settled, the result was brought about gradually—unconsciously for the most part to those concerned. It was not a *marked* thing. Nor did the time partake of the nature of an *era*."

With regard to the apocryphal books, Dr. Davidson denies that they are so inferior to those of the canon as many think, who hold the one class to be human and the other divine. Like Dr. Stanley, he maintains that the writers of the canonical books were not all inspired in an equal degree. He considers that in one or two instances the authors of apocryphal writings give evidence of a higher inspiration than scriptural writers, and that their works may be read with more profit.

The volume closes with a useful Index to the whole work.

The Naturalist on the River Amazons: a Record of Adventures, Habits of Animals, Sketches of Brazilian and Indian Life, and Aspect of Nature under the Equator, during Eleven Years of Travel. By Henry Walter Bates. 2 vols. (Murray.)

THE great artery of South America, the river Amazons, has of late years been explored by three naturalists, of whom this country may well be proud, and whom science justly places in the foremost rank of those who have extended her boundaries and enriched her with new and reliable observations: we mean Messrs. Spruce, Wallace and Bates. All three, dispensing with the pittance flung to explorers by Government, relied upon their own resources, and paid their way by sending home collections for sale to their agents in London. The fact that such an arrangement was successful speaks well for the industry of the travellers and the growing taste for the fruits of such labours at home. In tracking their steps over the immense territories explored,

and in reviewing the bold enterprises which they accomplished, we ought not for a moment to lose sight of the fact that the whole was a private undertaking likely to collapse by a single false movement. Of the three, Mr. Richard Spruce, the botanist, has performed perhaps the boldest feat by slowly working his way from the Lower Amazons to its head waters, on the eastern slopes of the Peruvian Andes, everywhere collecting specimens of the vegetation, and giving us graphic descriptions of the Flora. Every one is aware that this route had been repeatedly traversed by the early Spanish and Portuguese travellers; that the French have sent there La Condamine, and the Germans Pöppig; but few persons seem to know that Mr. Spruce is the only scientific Englishman of note who has performed the journey. Mr. Spruce ought to follow up his valuable contribution to the *Journal of Botany* by publications more accessible to the general public. Mr. Wallace, the second of the bold explorers we have named, set out in 1847; and after examining the Lower Amazons and Rio Negro, returned home richly laden with treasures, some of the most valuable of which were lost in the wreck of the vessel he had embarked in. However, sufficient had already reached England to establish his reputation as a zealous collector and a thoughtful observer of natural-history objects: which was confirmed by the publication of his 'Travels,' and 'Palm Trees of the Amazons.' Lately returned from the exploration of one of the least-known countries on the face of the earth, New Guinea, all lovers of Natural History are eagerly waiting for a volume on that region. Last, though not least, we turn to Mr. Bates, who has just presented us with the interesting work at the head of this notice, embracing an account of eleven years of travel on the Lower Amazons, and containing a mass of observation and information seldom met with in books of travel.

The author started, in 1847, in company with Mr. Wallace, both bent upon "solving the problem of the origin of species." His companion returned at the end of four years. Mr. Bates remained seven years longer, and as the two took different routes after the first two years, the reader need not fear finding the present publication a mere paraphrase of Mr. Wallace's work. The author confined himself chiefly to the collection of zoological objects, and amongst them the insects seem to have engaged his chief attention. The best proof of his zeal in this direction is furnished by a statement of the number of species composing his collection. During the eleven years he was in South America, he gathered no less than 14,712 species, 8,000 of which were entirely new to science, and of nearly all of which numerous specimens were sent home. In the list from which we have quoted we find 14,000 species of insects, 360 of birds, 140 of reptiles, 120 of fishes, 52 of mammals, 35 of mollusks, and 5 of zoophytes, a great part of which are in the hands of Messrs. Gray, Sclater, Bowerbank and Günther for the purpose of description. These figures must not be regarded as representing, even approximately, the sum total of the number of species found on the Lower Amazons, but some of them do so relatively. Of the vast preponderance of insects there can be no doubt. When at Pará, Mr. Bates writes: "It will convey some idea of the diversity of butterflies when I mention that about 700 species of that tribe are found within an hour's walk of the town; whilst the total number found in the British Islands does not exceed 66, and the whole of Europe supports only 390."

Mr. Bates's travels extend a little beyond

Ega,—a town of which Pöppig has given us a description as it was in 1832,—and he everywhere met from the Portuguese descendants and the Indians with kindness and hospitality. Of the free negroes he speaks well and hopefully, some of whom he numbered amongst his "most esteemed friends, men of temperate, quiet habits, desirous of mental and moral improvement, observant of the minor courtesies of life, and quite as trustworthy as the whites and half-castes of the province":—

"The easy, lounging life of the people amused us very much. I afterwards had plenty of time to become used to tropical village life. There is a free, familiar, *pro bono publico* style of living in these small places, which requires some time for a European to fall into. No sooner were we established in our rooms, than a number of lazy young fellows came to look on and make remarks, and we had to answer all sorts of questions. The houses have their doors and windows open to the street, and people walk in and out as they please; there is always, however, a more secluded apartment, where the female members of the families reside. In their familiarity there is nothing intentionally offensive, and it is practised simply in the desire to be civil and sociable. A young Mameluco, named Soares, an *Escrivaõ*, or public clerk, took me into his house to show me his library. I was rather surprised to see a number of well-thumbed Latin classics, Virgil, Terence, Cicero's Epistles, and Livy. I was not familiar enough, at this early period of my residence in the country, with Portuguese to converse freely with Senhor Soares, or ascertain what use he made of these books; it was an unexpected sight, a classical library in a mud-plastered and palm-thatched hut on the banks of the Tocantins."

Like the Persians and other eastern nations they "go out of town" during the heat of the summer:—

"We found here several families encamped in a delightful spot. The shore sloped gradually down to the water, and was shaded by a few wide-spreading trees. There was no underwood. A great number of hammocks were seen slung between the tree-trunks, and the litter of a numerous household lay scattered about. Women, old and young, some of the latter very good-looking, and a large number of children, besides pet animals, enlivened the encampment. They were all half-breeds, simple, well-disposed people, and explained to us that they were inhabitants of *Cametá*, who had come thus far, eighty miles, to spend the summer months. The only motive they could give for coming was, that 'it was so hot in the town in the *verão* (summer), and they were all so fond of fresh fish.' Thus these simple folks think nothing of leaving home and business to come on a three months' picnic. It is the annual custom of this class of people throughout the province to spend a few months of the fine season in the wilder parts of the country. They carry with them all the *farinha* they can scrape together, this being the only article of food necessary to provide. The men hunt and fish for the day's wants, and sometimes collect a little India-rubber, sarsaparilla, or copaiba oil, to sell to traders on their return; the women assist in paddling the canoes, do the cooking, and sometimes fish with rod and line. The weather is enjoyable the whole time, and so days and weeks pass happily away."

Those who are fond of reading about natural history will find in these volumes a rich mine of information. We have capital sketches and anecdotes of bird-killing spiders, vampire bats attacking men asleep, and moths so exactly like humming-birds in appearance that at first sight you can scarcely tell whether you have an insect or a bird before you, and almost justifying the belief of the natives that the two were the same species. Brazil, too, has its Darwinists. "Look at their feathers," they said; "their eyes are the same, and so are their tails." "This resemblance," continues the author, "has attracted the notice of the

natives, all of whom, even educated whites, firmly believe that one is transmutable into the other. They have observed the metamorphosis of caterpillars into butterflies, and think it not at all more wonderful that a moth should change into a humming-bird. The resemblance between this hawk-moth and a humming-bird is certainly very curious, and strikes one even when both are examined in the hand. Holding them sideways, the shape of the head and position of the eyes in the moth are seen to be nearly the same as in the bird, the extended proboscis representing the long beak. At the tip of the moth's body there is a brush of long hair-scales resembling feathers, which, being expanded, looks very much like a bird's tail."

Probably, in no part of the world is the vegetation more luxuriant than in the valley of the Amazons, and men like Buckle have assigned it as the reason why civilization could not gain a firm footing in a region where so much of labour and energy is expended in keeping down the thousands and thousands of germs of vegetable life ever ready to dispute with man the possession of the soil. There is much in Mr. Bates's book to confirm the correctness of this deduction. Everywhere the towns and villages are surrounded by regular "walls" of impenetrable forests; and land neglected for a few years is speedily re-occupied by trees and shrubs, densely entangled with creeping and winding plants. Fancy such a mass of vegetable giants silently but steadily encroaching, and you have the key to much that appears singular in the character and mode of thought of the inhabitants:—

"We often read, in books of travels, of the silence and gloom of the Brazilian forests. They are realities, and the impression deepens on a longer acquaintance. The few sounds of birds are of that pensive or mysterious character which intensifies the feeling of solitude rather than imparts a sense of life and cheerfulness. Sometimes, in the midst of the stillness, a sudden yell or scream will startle one; this comes from some defenceless fruit-eating animal, which is pounced upon by a tiger-cat or stealthy boa-constrictor. Morning and evening the howling monkeys make a most fearful and harrowing noise, under which it is difficult to keep up one's buoyancy of spirit. The feeling of inhospitable wildness which the forest is calculated to inspire is increased tenfold under this fearful uproar. Often, even in the still hours of mid-day, a sudden crash will be heard resounding afar through the wilderness, as some great bough or entire tree falls to the ground. There are, besides, many sounds which it is impossible to account for. I found the natives generally as much at a loss in this respect as myself. Sometimes a sound is heard like the clang of an iron bar against a hard, hollow tree, or a piercing cry rends the air; these are not repeated, and the succeeding silence tends to heighten the unpleasant impression which they make on the mind. With the natives it is always the Curupira, the wild man or spirit of the forest, which produces all noises they are unable to explain. Myths are the rude theories which mankind, in the infancy of knowledge, invent to explain natural phenomena. The Curupira is a mysterious being, whose attributes are uncertain, for they vary according to locality. Sometimes he is described as a kind of orang-atang, being covered with long, shaggy hair, and living in trees. At others, he is said to have cloven feet and a bright red face. He has a wife and children, and sometimes comes down to the roças to steal the mandioca. At one time I had a Mameluco youth in my service, whose head was full of the legends and superstitions of the country. He always went with me into the forest; in fact, I could not get him to go alone, and whenever we heard any of the strange noises mentioned above, he used to tremble with fear. He would crouch down behind me, and beg of me to turn back. He became easy only after he had made a charm to protect us from the Curupira. For this purpose he

took a young palm leaf, plaited it, and formed it into a ring, which he hung to a branch on our track."

Mr. Bates gives a very interesting account of the Saüba, one of the leaf-carrying ants, which every traveller in tropical America will remember as making regular roads, often many miles in length:—

"Besides injuring and destroying young trees by despoiling them of their foliage, the Saüba ant is troublesome to the inhabitants from its habit of plundering the stores of provisions in houses at night, for it is even more active by night than in the day-time. At first I was inclined to discredit the stories of their entering habitations and carrying off grain by grain the farinha or mandioca meal, the bread of the poorer classes of Brazil. At length, whilst residing at an Indian village on the Tapajos, I had ample proof of the fact. One night my servant woke me three or four hours before sunrise by calling out that the rats were robbing the farinha baskets. The article at that time was scarce and dear. I got up, listened, and found the noise was very unlike that made by rats. So I took the light and went into the store-room, which was close to my sleeping-place. I there found a broad column of Saüba ants, consisting of thousands of individuals, as busy as possible, passing to and fro between the door and my precious baskets."

We have already stated that one of the principal objects of Mr. Bates's explorations was to gather facts "towards solving the problem of the origin of species." He thinks he has found such a solution in adopting Mr. Darwin's theory and making many of his facts bend to it.

NEW NOVELS.

The Rival Races; or, the Sons of Joel: a Legendary Romance. By Eugène Sue. 3 vols. (Trübner & Co.)—Nineteen volumes of this amazing production, left incomplete by its author, are here condensed into three. This translation can hardly have been a labour of love; and the reason of attempting it is difficult to fathom, unless the object was to present the English reader with a fiction outdoing the horrors and monstrosities of 'Les Misérables.' If so, the feat is accomplished. There are hardly three consecutive pages in these three closely printed volumes, without some abomination tainting them—some trace of lust, torture, murder, physical agony. But thus it must be with writers of M. Sue's intolerable school. Relying on what is poisonous, horrible and repulsive for effect, and seeing that the natural combinations of such monstrosities are soon exhausted, they have to goad themselves forward in the path of distemperance and frenzy. Happily such a course can have only one issue. 'Les Mystères de Paris' was poorer and more ephemeral as a work of art than 'Mathilde.' 'Le Juif Errant,' which excited some attention in its time, was swept out of notice by the 'Monte Christo' of M. Dumas. 'Martin' and 'Les Sept Péchés Capitaux' were failures. For his last effort, here paraphrased, the jaded and misanthropic Sybarite (such was M. Sue during the closing years of his life) appears to have coiled up and clotted together every perverse and morbid fancy conceivable. The frantic effort defeats itself. This legend of a Breton family, before the days of Christ, and during the first eight centuries, showing how destiny called on them to endure the most fearful sufferings for the preservation of the old traditions of their nationality, is unreadably tedious. Even disgust ceases to stir as we turn over its pages. We close the book, saying, "Can vice in fiction do no more than this?" and turn with a keen appetite to the driest piece of matter-of-fact reading that presents itself.

Loring and Winning. By Elizabeth Harcourt Mitchell. 2 vols. (Saunders, Otley & Co.)—This story does not reveal to us scenes of gambling and their attendant train of evils, as its name might lead us to suppose; but is a sober, commonplace and closely-written tale of everyday life, in which the actors go through the various vicissitudes com-

mon to all. The author gets over difficulties by removing from the scene any that are in her way: a husband dies on the eve of giving a Christmas ball, and his wife follows him to the land of spirits in a highly romantic but very unusual manner, after a widowhood that only lasts four hours. The whole winds up in the orthodox fashion of a five-act comedy, by everybody marrying each other; no less than three couples going through the ceremony in one morning at the parish church. This tale, we imagine the first attempt of the author, betrays many faults that time and care may correct. The principles are high-toned and excellent. The writing is weak, and the interest not sufficiently sustained; and the work itself does not deserve strong praise or censure, for it seldom soars beyond the safe sphere of mediocrity.

Nobly False: a Novel. By James M'Grigor Allan. 2 vols. (Newby.)—'Nobly False' is as nonsensical in its story as it is in its claptrap title. The author avows in his preface that the story has been written with a view to future adaptation to the stage, and that the life of Shelley is the quarry from which his plot has been hewn. He disavows all intention of identifying his characters with real personages, but he has evidently had them in his mind. They are not particularly like human beings, but resemble a stiff school-boy transcription. Gerald Lindor, who is intended for Shelley, is remarkable for the perverseness with which he takes up everything at the wrong end. Lady Lindor, his mother, educates him on the model of Émile, and he becomes the most self-sufficient, impracticable young prig that home education could produce. His father, Sir Thomas, has a dislike to his son, in which the reader will sympathize. "Gerald's precocious tendencies to pry into the mysteries of metaphysical subjects, and his enthusiasm for abstract truth which led him to question generally-received opinions, and to bring them to the test of critical examination," must have been awfully tiresome, at the tender age of his early teens—and when quite a boy, the author says with pride, that "with the burning love of truth characterizing a great mind, he spurned at the boundaries attempted to be placed to his mental and moral faculties by any sect," and that he read the French philosophers and German metaphysicians, and indeed all the theological works he could lay his hands on. An immense conceit of himself, and headstrong obstinacy without a particle of common sense, is the copy from the life which the author produces. Nothing can be more stupid and wearisome; he refuses to fish, hunt or shoot, because he decides that it is wrong to destroy life; and the author's idea of a hunt is, a fox so tame that it refuses to run, and which has to be beaten to make it show sport. Gerald falls in love with the keeper's daughter, Miriam Groves, whom the author in his preface announces as his ideal of womanly love and disinterestedness, and whilst running over the names of those Queens of Hearts, Undine, Haidee, Paul's Virginia, and Faust's Marguerite, the author declares that there is still another height, or depth, of love and devotedness, and this he finds in—the *Traviata!* Gerald Lindor goes to college, whence he is expelled for his atheistical pamphlet, details copied from the Memoirs of Shelley,—his father disowns him, and he consoles himself with Miriam, to whom he means honourable marriage, but his mother on her deathbed exacted a promise that he would not marry until he is five-and-twenty. Miriam, though the mirror of virtue and the soul of purity, consents to live with him as his mistress, and he, sooner than break his promise, allows her to do so, promising marriage however when the time comes. Such a wrongheaded young man as he is made by the author could not fail to get into political mischief: he gets mixed up in seditious meetings, makes foolish speeches, and is entirely without insight to discern the false from the true. There is a clerical villain, who is black and shining without a single redeeming quality, who makes mischief and works woe to an extent that would be quite inconceivable, except that the other people are idiots. He discovers the connexion between Miriam and Gerald, and he first induces Gerald's father to confine him as a lunatic, and then he works on Miriam to set her lover free, that

he may marry a fine lady to please his father. Miriam deliberately withdraws from the home where Gerald had placed her, makes him believe from her conduct that she is an abandoned woman, and writes to tell him that she has deceived him and never loved him: this she does that he may not regret her, and then she swallows poison. Having done everything in her power to make Gerald miserable for life, she sends for him, tells him what she has done and expires in his arms! This is being "nobly false,"—and it is the author's ideal of womanly grace and goodness. Gerald's conduct is worthy of her; he marries the beautiful Lady Augusta, in order that Miriam may not have wasted her sacrifice, and then upon his wedding-night he shoots himself before the full-length portrait of Miriam in the presence of his bride, with words of execration on his lips; and Lady Augusta puts on perpetual mourning and then goes mad.

A Pilgrimage over the Prairies. By the Author of 'The Fortunes of a Colonist.' 2 vols. (Newby.)—'A Pilgrimage over the Prairies' is a sequel to 'The Fortunes of a Colonist,' and the reader who turns over its pages is presumed to be familiar with the former story. No one, therefore, should take up the present volumes who has not gone through a special course of preparatory reading. Whether those who begin with 'The Fortunes' will feel inclined to enter on 'The Pilgrimage' we cannot say; but we can state confidently that no one who commences with the journey over "the Prairies" will care to prolong his intercourse with the author.

Sephas; or, Cloudy Skies: a Story. By Michael Ford. (Saunders, Otley & Co.)—The writing of this tale is of unequal merit; and, in fact, it almost gives the impression of the book being the work of more than one author. The story is not worth the trouble of telling, even in outline. Nothing can be said in its favour, except, perhaps, that here and there may be found a passage which seems to give promise of ability to write something more satisfactory in the future.

OUR LIBRARY TABLE.

Ulrich von Hutten, Imperial Poet and Orator, the Great Knightly Reformer of the Sixteenth Century. Translated from Chauffour-Kestner's 'Études sur les Réformateurs du 16^{me} Siècle.' By Archibald Young, Esq., Advocate. (Edinburgh, Clark; London, Hamilton, Adams & Co.)—Though France has produced several, and Germany has given the world many biographies of Ulrich von Hutten, it is remarkable that no Englishman has written the life of the man who was a noble type and epitome of the age, of which the scholarship was represented by Reuchlin and Erasmus, the religious reformation by Luther and Melancthon, and the knighthood by Franz von Sickingen. It is difficult to account for this deficiency in our literature, when it is remembered that Hutten not merely played a conspicuous part on the side of the great religious conflict which commands our strongest national sympathies, but that this life of effort, adventure, and vicissitude was one peculiarly adapted for biographic treatment. "I have," observes Mr. Young in his Preface, "said that scarcely any life of the sixteenth century presents stronger elements of dramatic interest than that of Hutten. His early flight from the Abbey of Fulda; his travels, as a poor scholar and student, throughout Germany and the neighbouring countries, now the guest of a peasant or burgher, now of a powerful noble or wealthy bishop, whose hospitality he repaid by his verses and the charms of his conversation; his perils from shipwreck and robbers; his first journey into Italy, during which he was besieged in his lodgings at Pavia by French soldiers, and reduced to such straits that he gave himself up for lost, and, like a true poet, composed his own epitaph; his escape and subsequent enlistment in the army of Maximilian; his return to Germany, and publication of those eloquent philippics against Duke Ulrich of Wurtemberg, whereby he elevated his private wrongs, in the assassination of his cousin, into an affair of national importance; his second visit to Italy, and his combat, single-handed,

against five Frenchmen who had insulted Kaiser Maximilian and the fatherland; his coronation at Augsburg, as Imperial poet and orator, by the Emperor's own hand; his brilliant services at the head of that noble army of scholars, the friends and followers of Reuchlin, who emancipated the human mind from the bondage of the old scholastic teaching; his terrible assaults on the vices and corruptions of Rome; his heroic self-abnegation in giving up his patrimony to his family, lest they should suffer by his proscription; his friendship with Sickingen, and their evenings in the strong castle of Ebernberg, passed in reading the writings of Luther, till the strong hand of the Bayard of Germany grasped his war-sword, and he exclaimed, 'It is the cause of God and of Truth'; last scene of all, the defeat and death of Sickingen, the proscription of Hutten, his flight to Baale, Mulhausen and Zurich, and his early death on the little island of Uffnau,—where is the romance that possesses stronger or more varied elements of dramatic interest than this true story of one of the countless champions and martyrs of freedom! Far from being a sufficient history of the hero, Mons. Chauffour-Kestner's essay is little more than a sketch of the literary side of Hutten's career, illustrated by lengthy extracts from those of his writings which made the deepest impressions on his contemporaries. Of the personal life of the Reformer it gives nothing more than occasional glimpses. The memoir, however, is acceptable in its present form; for the sketch is good so far as it goes, and the translator's work has been well done. We trust it may inspire Mr. Young, or some other writer, to put Frederick Strauss's Life of Hutten into an English dress. It is worthy of remark that Dr. Strauss and M. Chauffour-Kestner differ as to the date of Hutten's death. The essayist makes him die at Uffnau, August 29, 1524, at the age of thirty-six; whilst Dr. Strauss puts his death at the end of August or beginning of September, 1523, when his age was thirty-five years and four months.

The National Almanac and Annual Record for the Year 1863. (Philadelphia, Child; London, Trübner & Co.)—'The National Almanac and Annual Record for the Year 1863' is a statistical survey of the social, commercial and political career of the American States throughout 1862, and though it falls short of perfect completeness and accuracy, it is far superior to all works of the same class which have hitherto been produced by Transatlantic writers. Coming from a Northern source, it is animated by Northern spirit, but is not upon the whole wanting in fairness to the South, although it calls the attitude of the Slave States "rebellion," and mentions Jefferson Davis and his subordinates as "The So-called Confederate Government." Eighteen closely-printed pages set forth the unwise restrictions of "The New Tariff." Mr. Holley's article 'On Iron-clad War-Vessels' is far too brief; but the author is preparing a volume for the press, in which he engages to give the latest results of experience with regard to armour-ships. From the 'List of Books published in the United States during the Year 1862,' it appears that war has not greatly lessened the activity of the Northern book-trade. Indeed, the New York pirates of English novels seem to be doing even brisker business than the piano-manufacturers, the flourishing state of whose affairs we recently remarked upon. In the course of 1862 the North published thirty-nine works of prose fiction from the pens of English writers, of which publications a portion were reprints of old standard novels, and twenty-six were new editions of "season" tales, that are still having their run in the London circulating libraries. Thus English novelists supplied America with one new novel a fortnight throughout the entire twelve months. It would be interesting to know how often, in the same time, American publishers made remittances of money to authors in this country.

Memoirs of the Past, and Thoughts of the Present Age. By Joseph Brown, M.D. (Longman & Co.)—The writer of this pugnacious essay on things in general opens his first chapter with an announcement that his sojourn on this earth cannot be long, as he is approaching his eightieth year, and then proceeds to show with pathetic force how com-

pletely an educated man of narrow views may be found lagging in the rear whilst he believes himself in the vanguard of intellect. Wishing to pay due respect to the grey hairs of one who is himself singularly deficient in reverence for the learning and virtues of those from whom he differs in opinion, we will say no more of a book to which praise may not be awarded.

The House of the Forest of Lebanon; or, the Proverbs of Solomon. A Poetical Commentary; with Notes and Dissertations. By William Day. (Hobart Town, Walch & Sons; London, Simpkin, Marshall & Co.)—"A taste for building rhymes," says Mr. Day, "cultivated in youth, and indulged in latter years as an agreeable employment of time that might otherwise have run to waste, is principally answerable for the appearance of this volume." If the labour of writing 'The House of the Forest of Lebanon' has kept Mr. Day out of mischief, his sorry attempts to improve upon Solomon have done more good before publication than they will ever again effect. One of the teacher's most familiar maxims is thus rendered by the rhymester:—

"No; 'tis not barbarous to apply,
In tender years of infancy,
Correction to your darling boy;
To spare the rod were cruelty;
Love doth the discipline employ;—
Be not the loved one's enemy."

Mr. Day has no more sense of the grandeur of Bible language than he has of the feebleness of his own.

Labourers in the Vineyard; Dioramic Scenes in the Lives of Eminent Christians. By M. H., with a Recommending Preface, by the Rev. A. K. H. Boyd, B.A. (Edinburgh, Johnstone & Co.; London, Hamilton & Co.)—To the young people who are especially addressed in these brief sketches, the author says, "I purpose in these Dioramas (the pictures of which are painted with words) to bring before you events in the lives of some good and great men and women; to show you, that in every profession God can be glorified, and that in all places and circumstances the faithful servant will find work to do in his Master's vineyard." The writer's views on questions pertaining to religion are far from broad; but her temper is gentle, even as her earnestness seems to be unaffected. Her tales are told with a simplicity which will not fail to please those for whom they are written.

Danes, Saxons and Normans; or, Stories of Our Ancestors. By J. G. Edgar. (Beeton.)—Some praise is due to the pen which has written, and the pencils which have embellished with more than a hundred and fifty pictures, this child's book of history. "I have endeavoured," says Mr. Edgar, "to tell in a popular way the story of the Norman Conquest, and to give an idea of the principal personages who figured in England at the period when that memorable event took place; and I have endeavoured, I hope not without some degree of success, to treat the subject in a popular and picturesque style, without any sacrifice of historic truth. . . . I have continued my narrative for many years after the fall of Harold and the building of Battle Abbey, and have traced the Conqueror's career from the coast of Sussex to the banks of the Humber and the borders of the Tweed." Possessing more of the merits and fewer of the faults of his former books, Mr. Edgar's 'Danes, Saxons and Normans' will be read in school-room, nursery and play-room; whilst Mr. Dudley's excellent engravings will secure for it a place on many a drawing-room table.

Californian Life Illustrated. By William Taylor. With engravings.—'Californian Life Illustrated' has fewer merits than the author's previous work, 'Seven Years' Preaching in San Francisco'; but it is an entertaining picture of a Wesleyan Missionary's life in the American gold country, which should be glanced at by readers who under ordinary circumstances do not care to peruse the literature of religious sects. Brother William Roberts, the Superintendent of the Wesleyan Missionaries in Oregon and California, it appears, makes the circuit of his congregations equipped in a fashion that well becomes a minister of a church militant. "On this visit to California," observes Mr. Taylor, "Brother Roberts brought with him his blankets, sleeping and travelling gear,

and on his arrival bought and rigged up a mule, and thus travelled 'on the foal of an ass' in primitive independent style, carrying a Bible in one hand and a good Colt's revolver in the other." The sermons of this sound preacher abound in denunciations of gambling, which is the almost universal vice of Californian settlers. The Rev. Mr. Damon, a Wesleyan minister of the mealy-mouthed sort, was disposed to make terms with the professional gamblers, but Brother Roberts boldly declared cards and dice to be inventions of Satan, and denounced those who handled them for gain. That the preacher's courage was rewarded, the reader learns from a story which beautifully illustrates one side of the "voluntary system" as it works in a new country. "A friend who heard him preach at Coloma, says that the Rev. Mr. Damon, from the Sandwich Islands, preached that day in the same house, and a hat-collection of 130 dollars was raised, to be divided equally between the two preachers to defray their travelling expenses. In the 'hat' was found a twenty and a ten dollar piece, carefully folded in paper, on which was written 'I design the twenty dollars for Mr. Roberts, because he fearlessly dealt out the truth against the gamblers. The ten dollars are for Mr. Damon.' Signed by the leading gambler of the town."

My Summer Holiday: being a Tourist's Jottings about Tenby. (Freeman.)—This book has, evidently, had for its writer a good-natured person, who takes with him to his holiday that holiday-spirit, which does not disdain small pleasures because great ones are not accessible, and who can make a place like Tenby, with its rocks and sands, and coves and ruins, suffice—even though in the next house to him may be living some tourist bent on the Alpine peak which no foot has yet scaled, or the pass, to cross which is imminently dangerous nine days out of ten. But good-nature, however contagious, cannot make the most lenient of critics wholly blind nor entirely dumb. Our Tenby chronicler is too simple after the fashion of Mr. Richard Swiveller,—too largely addicted to those sentimentalities which, whether they be Della-Cruscan, or Wordsworthian, or Moore-ish, or after the fashion of Tennyson, are so enervating that admiration is tempted to go to sleep, and patience to close the book, and considerate kindness to ask, "Why give sarcasm a pretext by the employment of a style with which we are used to associate the idea of folly and false enthusiasm?"

Breton Legends, &c.—*Légendes Bretonnes: Souvenirs du Morbihan*, par C^e D'A.] (Paris, Jung-Treuttel).—There is a fashion in scenery as well as in hair-dressing. In the days of Anne Radcliffe, England looked to the Pyrenees for such picturesque beauty as France was held to possess,—or if not, to Dauphiné. The strange, picturesque desert beyond Bordeaux, with its grand sea-lake in the pine forest of Arcachon, the volcanoes of Auvergne, the towns which inclose such riches of antique art as Noyon, Troyes, Laon, Rheims, Chartres, Périgueux, Poitiers, and fifty besides,—had no virtual existence for those bent on the grand tour, who slowly ground their way along the high roads of France, too impatient for the Alps or Italy to condescend to a halt, let the temptation be ever so peculiar and unhackneyed. Towards the beginning of this century, the sphere of their sympathy was enlarged, by admitting within its round 'La Vendée' as a romantic labyrinth within which a strange resistance had been kept up by a peculiar people. Then Cotman, and Dawson Turner, and Charles Weld began to talk about and to draw the architectural treasures of Normandy; later still, M. Villemarqué and Émile Souvestre, by their legendary collections still further "brought out" the district to which this book is devoted, the last of the family, and possibly, therefore, the least interesting. It would be almost as difficult to give a fresh flavour to a Breton book as to a collection of Irish fairy tales. None of the legends before us, at all events, has any apparent novelty,—and the author has no vivacity of style to redeem the triteness of his matter.

Les Aventures d'un Chien de Chasse. By G. de Cherville. (Paris, Jung-Treuttel).—Readers of fiction who prefer stories of life pertaining to stable and kennel before all other tales, will find amusement

in these pages, which come from the pen of M. de Cherville, who, though he has never before published under his own name, has long been an esteemed "collaborateur" of Alexandre Dumas. In a prefatory letter, here published, the great novelist encourages his modest fellow-workman to prepare himself for immediate popularity. If M. de Cherville looks for brilliant success he will be disappointed, but the merit of his two stories secures them from absolute failure. The 'Adventures of a Sporting Dog' contains less force but more sprightliness and piquancy than are found in English stories of the same kind. A translation of 'Les Aventures d'un Chien de Chasse' would possibly find acceptance amongst sportsmen on this side the Channel. The second story, 'Histoire de Coco,' is not so good.

Among Sermons and other Miscellanies, which may be at once handed over to their several readers, we find on the table:—*Sermons preached before His Royal Highness the Prince of Wales during the Tour in the East*, by the Rev. Dr. A. P. Stanley (Murray).—*Fellowship in Joy and Sorrow: a Sermon*, by Samuel, Lord Bishop of Oxford (Parker).—*The Abiding Presence of the Spirit in the Church: the Fulfilment of Christ's Promise*, by the Archbishop of York (Parker).—*Revue Continentale, sous la direction de M. N. Batjijn* (Willis & Sotheman).—*The Colonial Office List for 1863* (Stanford).—Vol. III. of *Pun*.—Mr. Jones's *Second Series of Lectures on the Ancient and Modern Dramatic Poets* (Allen & Co.).—Part I. *A Dictionary of Chemistry*, by H. Watts (Longman).—Part I. *First Outlines of a Dictionary of the Solubilities of Chemical Substances*, by F. H. Storer (Trübner).—*Orioso: a Play*, by Anon.—Vol. II. of *Transactions of the Historic Society of Lancashire and Cheshire* (Liverpool, Holden).—Mr. Curtis's *Chronological and Genealogical Tables illustrative of English History* (Simpkin).—*The Princess Alexandra and the Royal House of Denmark: a Genealogy*, by Frans Thimm (Thimm).—*Epithalamion; or, the Royal Nuptials: a Poem*, by W. T. Matson (Faithfull).—*A Lay of the Minister*, by the Rev. W. B. Philpot (Virtue).—*Tom Burton; or, the Better Way* (Partridge).—*Wordsworth's Excursion: Book I., The Wanderer, with Notes* by the Rev. H. G. Robinson (Hamilton).—Part I. of *Tammas Bodkin; or, the Humours of a Scottish Tailor* (Menzies).—*Napoleon III. et ses Complices, dédiés à Garibaldi* (Wilks).—*Mantie Uttair, ou le Langage des Oiseaux, Poème de Philosophie Religieuse, Traduit du Persan de Farid Uddin Attar*, par M. Garcin de Tassy (Paris, Imprimerie Impériale).—*Catalog der Kunstaammlung des Freiherrn Carl Rolas du Rosey* (Williams & Norgate).—*To a Bridegroom-Elect: a Poem*, by C. D. (Booth).—*The Rocks of the Wrekin, and what is written upon them*, by a Lady (Houlston & Wright).—*The Active Lists of Flag Officers, Captains, and Commanders of the Royal Navy, with Particulars exhibiting the Progress, &c. of Officers, from their Entry into the Service to December, 1862*, by Rev. W. Harvey (Stanford).—and *A Voice from the Motherland, answering Mrs. H. Beecher Stowe's Appeal*, by Cives Anglicus (Trübner & Co.).

- Wayland's *Elements of Moral Science*, 7th edit. 12mo. 2/6.
- Worley's *Poems and Transactions*, 8vo. 5/6.

AUGUSTUS LEOPOLD EGG, R.A.

By the death of Augustus Egg, at Algiers, the Royal Academy loses an efficient member. So efficient was he that, with the exception of Mr. Ward, we believe, no other member of that body—not a portrait-painter—has exhibited so constantly or so regularly as the deceased. From 1838, when his name first appeared in the Catalogue, until 1860, when health failed, he contributed each year, excepting only in 1852, 1853 and 1856. Sometimes he sent three works, most often two. A. L. Egg was born in Piccadilly, where his father had been settled for some years, on May the 2nd, 1816. He went to school at Bexley, Kent; and, although possessing and evincing considerable ability in painting and drawing, did not originally intend to practise Art as a profession. In 1834, however, he entered the Art-school of Mr. Sass, in Bloomsbury, and in the following year, at the same time with Mr. W. P. Frith, became a student of the Royal Academy. Two years afterwards he exhibited his first picture in the Society of British Artists' Gallery, in Suffolk Street: this work was purchased by the Prince Consort.

In 1838 Mr. Egg sent to the Royal Academy a picture representing a Spanish Girl, which was very favourably received, and sold to the Art-Union of London. In 1841 appeared 'Romeo and Juliet'; in 1842, 'Cromwell discovering his Chaplain, Jeremiah White, making Love to his Daughter Frances'; in 1843 'The Introduction of Sir Piers Shafton to Halbert Glendinning,' from Scott's 'Monastery.' From the appearance of this picture we date a great improvement in the artist's style and sentiment; in it the first seemed to be strengthened, and the last to become more manly. Next came 'Scene from The Devil on Two Sticks.' The advance was still more marked in the picture of 1845, 'Scene from "A Winter's Tale"—Autolycus singing "Come buy of me, come buy, come buy."' 'Buckingham rebuffed,' the work shown in 1846, seems fresh in our memories (it was re-exhibited at Manchester, 1857), and was one of the most remarkable pictures of the year; lacking none of the qualities which succeeding years of practice gave to his pictures, except a certain solidity of painting, which Mr. Egg, with others his contemporaries, adopted about twelve years since, to the great improvement of their systems of execution, and in accordance with the general feeling that facility of sketching was unsound in theory, and but a poor kind of Art in itself. No man acknowledged the importance of this change more frequently and freely than did Mr. Egg himself: to it he owed the bolder and more solid practice which distinguishes his later from his earlier works.

'The Wooing of Katherine' ('Taming of the Shrew'), painted 1846, enhanced the artist's reputation, and is one of the best humorous Shaksperean pictures of the English school. This, with 'Lucentio and Bianca,' from the same play, appeared in 1847. The next year brought out 'Queen Elizabeth discovers she is no longer young,' and marked the artist's possession of that somewhat exaggerated tragic force, the culminating expression of which was the triptych seen at the International Exhibition. Herein are to be found the antithetical points in the artist's mind to that humour and gaiety which were expressed by subjects from Le Sage and the like writers. Soon after the exhibition of these pictures Mr. Egg was elected an Associate of the Royal Academy (1849). 'Henrietta Maria in Distress relieved by Cardinal De Retz' followed his elevation, together with 'Launce's substitute for Proteus's Dog.' That one of his works which is received as the best appeared in 1850—'Peter the Great sees Catherine, his future Empress, for the first time.' Herein the solid manner and increased care of execution to which foregone practice had led up, pronounced themselves effectively in sound drawing, thoughtful modelling, and heedful study of nature. For these advantages the warm colouring which erst characterised the painter's style was temporarily sacrificed, not to be recovered, in harmony at least, until the last picture that was to come before the world by his hands appeared. 'Peppy's Introduction to Nell Gwynne' was a transitional picture, begun, we believe, before the 'Peter the Great,' although that pre-

ceded it at the Royal Academy. In 1852 and 1853 Mr. Egg's health, never strong, was seriously affected. In 1854 was shown 'Dame Ursula and Margaret' and 'A Study.' In 1855 three pictures, 'Through the green Shade wandering,' 'Come unto this Bosom, my own stricken Deer,' and the double picture 'The Life and Death of Buckingham,' were exhibited. In 1857 the first 'Scene from "Esmond."' In this year Mr. Egg arranged the modern pictures in the Art-Treasures Exhibition, Manchester, in doing which he had the good fortune to please almost every one. The selection of examples proved his tact and taste, and was singularly characteristic and satisfactory. In 1858 came 'The Knighting of Esmond' and the triptych before alluded to, representing the breaking up of a home and its consequences.

'The Night before Naseby' and a Sketch were exhibited by Mr. Egg in 1859. In 1860 his subject was from his favourite theme 'The Taming of the Shrew'—the Dinner scene. This was one of the best of his works in colouring and spirit; in it were combined some of the qualities of both his styles. In the next year Mr. Egg's name appeared as Royal Academician. Weak health, against which he had struggled for several years, compelled the painter to try the climate of Algeria. So much benefit did he get from this, that he had recently been enabled to carry on some long-delayed work, and hopes were entertained of his final recovery. He spoke cheerfully on the subject, and seemed to feel much better; indeed, he may have felt over-confident in this improvement, for it appears that he incautiously exposed himself, while riding, to a cold wind: hence an attack of asthma rapidly prostrated the recently-gained strength he had, and he died at midnight on the 25th ult. His long-seated disease of the lungs seems to have been in abeyance at the time. He was buried on the top of a high hill near the city of Algiers, that spot seeming to the friends about him preferable to the crowded cemetery. Every intimate friend he had bears testimony to the manliness and goodness of his heart; all are grieved at his early loss.

SCIENTIFIC BALLOON ASCENT.—THE LINES IN THE SPECTRUM.

Blackheath, April 6, 1863.

FOR the purpose of observing the black lines in the sky spectrum at different altitudes, and the sun spectrum if possible, an apparatus was employed consisting of a prism, a fine adjustable slit half an inch in length, placed in the focus of an object-glass, and a telescope directed to the prism, lent for the purpose by the Astronomer Royal, and is the same apparatus as that used by Prof. Smyth on the Peak of Teneriffe. No angular measure was prepared for or contemplated; only eye observations and comparison of differences between the spectrum as seen on the ground and at different heights during the journey. A careful examination of the spectrum between the hours of 3 and 4 P.M., before starting, showed B as the boundary at the red end, and a little beyond G at the violet end when looking at the sky; and when looking at the sun, I could not see quite to H. The lines C, D double, E, b, and F were very plainly shown, with many lines between them. At 4h. 20m., at the height of about half a mile, a cursory examination of the spectrum showed a close correspondence with that on the earth, showing lines B to G, but the extreme lines with, I thought, less distinctness. At 4h. 30m. at the height of about one mile, the spectrum was bright, but less in length, both at the violet and red ends. The line G was quite the limit, and I could not see B, and C was doubtful. At 4h. 35m., at the height of about 2 miles, G was lost entirely, and the violet was dull; I could see F and D, but not beyond. At 4h. 42m., at 3 miles high, I lost violet entirely, and could not see F. At 4h. 46m., between 3 and 4 miles high, the spectrum was very short. I could see from a little beyond D to E, I think b, but not F. At 5h. 10m. at 4 miles high, I could not see any spectrum, excepting a little yellow tinge. At 5h. 30m. at 4½ miles high, I saw no spectrum and no colour. At 5h. 45m., at the height of 3 miles, on descending, there was no

spectrum; I opened the slit, and saw a faint tinge of colour only.

Bearing in mind that the time available for this class of observations in the balloon is inadequate to take correct drawings, I only attended, with as much care as the shortness of the time admitted, to the general appearance, the limiting lines of visibility at both ends of the spectrum, and very little to the thickness, or number, or definition of the lines themselves. The general result is, that no lines were lost from the spectrum, excepting those by the shortening of the spectrum itself; but it must be borne in mind, that although it was very light with us, yet the sun was low, and the shortening of the spectrum itself may be attributable to the want of light. For this class of experiments, it will be necessary to have a balloon ascent starting either in the morning or about noon, to compare with the preceding observations, and to determine whether the spectrum does really shorten with elevation, as well as to determine whether any lines are lost by passing into a less dense atmosphere.

One of the principal subjects of research in the balloon experiments of last year was the determination of the law of decrease of temperature with increase of elevation. The results from my ascents last season were, that when the sky was clear, a decline of 1 degree took place within 100 feet of the earth, whilst at the height of 30,000 feet a space of fully 1,000 feet had to be passed for a change of 1 degree of temperature, and that between these limits a gradually increasing space was required for a change of temperature to the same amount, plainly indicating that the old theory of a decline of temperature of 1 degree for every 300 feet must be abandoned.

The previous ascents were made in the months of July, August and September. It became of the highest importance to have similar experiments in the other months of the year, and the British Association, at its meeting in Cambridge, voted 200l. for experiments to be begun in the spring, and some of which, if possible, during the prevalence of east winds.

The balloon left the earth, on March 31, from the Crystal Palace, at 4h. 16m. P.M., the temperature of the air being 50 degrees; at 4h. 25m. we were one mile high, with a temperature of 33½ degrees; the second mile was reached at 4h. 35m., with a temperature of 26 degrees; the third mile at 4h. 44m., when the temperature was 14 degrees; at 3½ miles high the temperature was 8 degrees. A warm current of air was met with, and it rose to 12 degrees at 4h. 58m.; at 5h. 2m. we passed out of the current, and when 4½ miles high the temperature was just zero of Fahrenheit's scale.

In descending, the temperature increased to 11 degrees at about three miles high, at 5h. 38m.; then a cold current was met with, and it decreased to 7 degrees. We soon passed through it, and the temperature increased to 18½ degrees at two miles high, to 25½ degrees at one mile, and to 42 degrees on the ground, which was reached at 6h. 30m.

When one mile high the deep roar of London was heard distinctly, and its murmuring noise reached us at a greater elevation. At heights of three and four miles high the view was indeed wonderful—the plan-like appearance of London and its suburbs; the map-like appearance of the country round; then running the eye down the winding Thames, to the white cliffs at Margate, and on to Dover, Brighton was seen, and the sea beyond, and all the coast line was clear up to Yarmouth. The north was obscured by clouds. Looking under us, and to the south, there were many detached cumuli clouds, resting apparently on the earth, like patches of shining wool, and in some places a solitary cloud thus apparently resting on the earth surrounded by a clear space for many miles.

JAMES GLAISHER.

ANNE HATHAWAY'S COTTAGE IN THE YEAR 1610.

8, St. Mary's Place, April 7, 1863.

I have the pleasure of sending, for first publication in the *Athenæum*, a copy of the most interesting document respecting this cottage which has presented itself to my notice in the course of long-continued researches for materials for a history of the Hathaway family. The tenement in question, with

its garden, and other lands, the latter now separated from them, were originally part of the manor of the Duke of Northumberland. Upon the occasion of his attainer, in the first of Queen Mary, the estate was forfeited, and it continued to belong to the Crown until the time of James the First, when it was granted by letters patent to William Whitmore and John Randall. These persons sold it in 1610 to Bartholomew Hathaway, in whose family it continued until the present century.

From the description in the deed of conveyance of 1610, here printed, it might at first sight be thought that the tenement was divided into two holdings, and that Bartholomew Hathaway had at some time previously occupied only one portion of the present building. The latter inference will, I believe, be found on examination to be erroneous, and I am inclined to think that the Hathaways occupied the whole at the time of Anne's birth and during her life. The allusion in the deed to a portion of the estate having been previously occupied by Thomas Perkins refers to a remote period, for the same description occurs in a survey of the property made in the year 1543, at which time John Hathaway held the tenement and land then described as having been previously in the tenure of Perkins. In old deeds, the descriptions of parcels were often copied from more ancient instruments, without a strict regard to existing facts.

That the two tenements mentioned in the following conveyance formed together the old building now preserved at Shottery, can be satisfactorily proved by the various title-deeds and settlements respecting the estate, copies of which, in an uninterrupted series from 1610 to the present time, are in my possession. The identification of the pieces of land attached to the tenements is a matter of greater difficulty, but names of fields continue generally unaltered; and perhaps some one in the neighbourhood will come forward to tell us where Hewlands, Hewlyns, and the various closes here named, are situate. J. O. HALLIWELL.

This Indenture, made the first daie of April, in the yeeres of the reigne of our soveraigne Lord James, by the Grace of God of England, Scotland, Fraunce and Ireland, king, defendour of the faith, &c., that is to saie, of England, Fraunce and Ireland the Eight, and of Scotland the three and fortieth, Betweene William Whitmore, of London, esquier, and John Randall, of Preston Bagott, in the countie of Warwicke, gent., on the one partie, and Bartholomew Hathaway, of Shottery, in the Countie of Warwicke, husbandman, on thother partie, Witnesseth that the said William Whitmore and John Randall, for and in consideration of the somme of two hundred poundes of good and lawfull Englishe money unto them well and trulie before thenesaling and delivery of theis presentes in hand paid by the said Bartholomew Hathaway, whereof and wherewith they the saide William Whitmore and John Randall doe acknowledge themselves to be fullie satisfied and paid, and thereof and of every parte and parcell thereof doe clearlie acquite and discharge the saide Bartholomew Hathaway, his executors and administratours, and every of them for ever, by theis presentes, Have graunted, aliened, bargained, solde, and infeoffed, and by theis presentes doe fullie, freele, and absolutelie graunt, alien, bargain, sell, infeoffe and confirm unto the said Bartholomew Hathaway, All that thaire message and tenement and one yarde land, with thappurtenaunces, scituat and being in Shottery aforessaid, in the said countie of Warwicke, sometyne in the tenure or occupation of Thomas Perkins, and now or late in the possession or occupation of the said Bartholomew Hathaway, or of his assignee or assignes; and all that thaire message and tenement, and one other yarde land, with thaire appurtenaunces, called or knowne by the name of Hewlands, scituat and being in Shotterie aforessaid, in the said countie of Warwick, now or late in the tenure or possession of the said Bartholomew Hathaway, or of his assignee; And also all that thair tofte and half yarde land, with thappurtenaunces, called or knowne by the name of Hewlyns, scituat, lyeing and being in Shotterie aforessaid, in the said countie of Warwicke, now or late in the possession or occupation of the saide

Bartholomew Hathaway, or of his assignee or assigns; and also all those three closes with theirs and every of their appurtenances, whereof one is called or knowne by the name of Hewland Close, one other called or knowne by the name of Hewlyns Close, and thother called or knowne by the name of Palmers Close, which said three closes are scituate, lying and being in Shottery aforesaide, in the said countie of Warwick, and now are or late were in the possession or occupation of the said Bartholomew Hathaway, or of his assignee or assignees; And also common of pasture goinge and pasturing of and for such and soe manie horses, beastes and cattells in the comon fieldes waste grounde places commonable in Shottery aforesaide, in such manner as other the tenants and occupiers of the premisses, or anie part thereof, have used to have for and in respect of the premisses; and also all and singular howses, barnes, stables, orchardes, gardens, landes, tenementes, meadowes, pastures, feedinges, commons, common of pastures, waies, wastes, waters and watercourses, wooddes, underwoodes, hedgerowes and trees, and the grounde and soyle of the same, and all other easementes, commodities and hereditamentes whatsoever, with their and every of their rightes, members and appurtenances unto the said two mesuages and tenementes one tofte and two yardes lande and an half, three closes, or unto anie of them belonging, or in anie wise appartayning, or reputed, knowne, used or taken as parte, parcell or member of them, or anie of them; all which saide premisses now are or late were parcell of the manour of Old Stratford, in the said countie of Warwick; Except, and out of their presentes reserved unto the said William Whitmore and John Randall, and their heires and assignes for ever, all free warranties, court leetes, and viewes of franck pledge, and all that to Court Leete and view of franck pledge belongeth, waifes, straies, goodes and chattells of fellons and fugitives, fellons of themselves and of persons outlawed and putt in exigent, and all deodandes, and alsoe free liberties of hunting, hawking and fowling, and other jurisdictiones, franchises, and liberties whatsoever, To Have and to hould the said two mesuages and tenementes, one tofte, two yardes lande and a half, three closes, and all and singular other the premisses, with their and every of their appurtenances before by their presentes bargained or sold, and every part and parcell thereof (except before excepted), unto the said Bartholomew Hathaway, his heires and assignes, To the onely and proper use and behoof of the said Bartholomew Hathaway, his heires and assignes, for ever, in as large, ample and beneficiall manner and forme, to all intentes, constructions and purposes as the same were given and graunted by our said Sovereigne Lord the Kinges Majestie unto them the said William Whitmore, John Randall, and their heires, by his highnes lettres patentes, bearing date at Westminster the two and twentieth daie of Marth last past, yielding and paying therefore yearlie for ever unto the said William Whitmore and John Randall, their heires and assignes, the yearly rent of thirtie-three shillings fowerpence of lawfull Englishe money at the feastes of St. Michael the Archangell and the Annunciacion of St. Mary the Virgin, by even porcions; And if it shall happen the said yearly rent of thirtie-three shillings fowerpence, or anie part or parcell thereof, to be behind and unpaid after anie of the said feastes in which the same ought to be paid, being lawfullie asked or demanded, That then, and at all tymes then after, it shall and may be lawfull to and for the said William Whitmore and John Randall, their heires and assignes, into the premisses herein before mentioned to enter ad distrayne, and the distresse and distresses then and there so found to leade, drive, carry away, and ymound, and in the same impounde to retaine and keepe until the said yearly rent of thirtie-three shillings fower pence, with the arrerages thereof, if anie shal bee, hee or they shalbe fullie satisfied and paid; To be holden of the cheif lord or lordes of the fee or fees thereof by the rentes and services therefore due and of right accustomed; And the said William Whitmore, for himself, his heires, executours and administratours, and every of them, doth cove-

naunte and graunt to and with the said Bartholomew Hathaway, his heires and assignes, and to and with every of them by their presentes, that all and every the premisses with their appurtenances before mentioned and intended to be bargained and sould, are and bee, and at all times from henceforth shall and may continue, remayne and bee to the said Bartholomew Hathaway, his heires and assignes discharged, or upon request to be made unto the said William Whitmore or his heires saved harmeles of and from all and all manner of titles, troubles, charges and incumbrances whatsoever had, made, suffred, done or occasioned by him, the said William Whitmore, his heires or assignes; And also, that hee the saide William Whitmore, his heires and assignes, shall and will, from time to time, and at all times hereafter, during the space of six yeares next ensuing the date hereof, upon the reasonable request, costes and charges of the said Bartholomew Hathaway, his heires or assignes, doe and suffer and cause to be done all and every such further lawfull act and actes, thing and thinges, whatsoever for the further and better assurance and conveyance and sure making and conveying of all and singular the said premisses with the appurtenances and of every part and parcell thereof to be conveyed and assured unto the said Bartholomew Hathaway, his heires and assignes for ever, according to the true intent and meaning of their presentes, with warranty onely against the said William Whitmore, his heires and assignes, according as by the learned councill of the said Bartholomew Hathaway, his heires and assignes, shalbe reasonably advised; And the said John Randall doth for himself, his heires, executours, administratours and assignes, covenante and graunt to and with the said Bartholomew Hathaway, his heires and assignes, by their presentes, That all and every the premisses with the appurtenances before mentioned and intended to bee hereby bargained and sould are and bee, and at all tymes from henceforth shall and may contynue, remaine and be to the said Bartholomew Hathaway, his heires and assignes, discharged, or upon request to be made to the said John Randall or his heires saved harmeles of and from all and all manner of titles, troubles and incumbrances whatsoever had, made, suffered, done or occasioned by him the said John Randall, his heires or assignes; And also that he the said John Randall, his heires and assignes, shall from tyme to tyme, during the space of six yeeres next ensuing upon the reasonable request, costes and charges of the said Bartholomew Hathaway make, doe or suffer to be done, anie further act or thing for the better and more perfect assurance of the premisses, and of every part thereof, with their appurtenances, to the said Bartholomew Hathaway, his heires and assignes, with warranty onely against the said John Randall, his heires and assignes, according as by the learned councill of the said Bartholomew Hathaway, his heires and assignes, shall be reasonably advised. And it is agreed betweene the said parties to their presentes that for the doeing of anie such act or thing for the better assuring of the premisses the said William Whitmore nor his heires shall not be enforced to travell from or out of that city or county where he or they at the tyme of such request shalbe respectivelie abiding. In Witnes whereof, the parties aforesaid to their presente indentures interchangeably have sett their bandes and seales the daie and yeare first above written, 1610.

W. WHITMORE. JOHN RANDOLL.
(L.S.) (L.S.)
Sealed and delivered in the presence of
RICHARD COCKS, FRA. COLLYNS, PETER
ROWELL, JOHN ROSWELL.

PROF. OWEN ON THE HUMAN BRAIN.

At a meeting of the Anthropological Society, held on Tuesday last, after a paper had been read by Mr. Gore, 'On the Smallest Human Brain on Record,' Prof. Owen made some observations which our readers will be glad to see reported. The Professor said:—

The normal organization of the human species is liable, and perhaps more so than that of lower

species, to malformation as a consequence of arrest of development; and this is especially the case with the organ the great relative size and complexity of which form the chief characteristic of the human organization, viz., the brain.

Instances of this arrest of development are known in different varieties of the human kind, e.g. in the Negro one, as exemplified by the female called by her showman the "Hottentot Venus"; and by the hybrid Spanish and Indian children from San Salvador, called by their showman "Aztecs." But the best recorded cases of such cerebral arrests are those of Europeans, as exemplified by the idiot whose brain is preserved in St. Bartholomew's Hospital; by that whose brain, weighing 1 lb. 4 oz., is described by Dr. Todd (*Cycl. of Anat.*, vol. iii., Art. 'Nervous Centres'); and by the still smaller and more remarkable instance of the idiot with the brain weighing only 10 oz. 5 grains, avoird., described this evening by Mr. Gore.

No physiological phenomena are of greater interest and importance than those which tend to directly elucidate the relations of the cerebral organ to the mental phenomena in mankind. Such elucidation is given by these cases of variety, in which the brain and cranium fail to be developed to their normal proportional size: and the one which Mr. Gore has communicated to us is, so far as my research has extended, the smallest instance of a brain, otherwise of sound structure, with which the individual has lived in health beyond maturity to middle age. I would first remark that the brain so arrested in development does not offer a close resemblance to, or correspondence with, that of the Chimpanzee, Orang, or lower forms. It is, at best, only a general resemblance; such, e.g., as may be due to the arrest of the backward growth of the cerebral hemispheres, falling short of, or not extending beyond, the cerebellum, with the concomitant low development of the included structures indicated in Dr. Todd's description, in which he remarks, "there could scarcely be said to be any trace of the hippocampus minor." (*Cycl. of Anat.*, vol. iii. p. 719.) Sometimes, as in this case, the fetal condition of non-convolution of the surface of the hemispheres persists; more commonly there are convolutions corresponding in size and depth with the normal human ones, but fewer in number, as in the "St. Bartholomew's" brain, and in that described by Mr. Gore. But all these cases exemplify the principle that the specific character marks the embryo as essentially as the adult, that the embryo does not pass through lower forms of animals. Just as the toes, as soon as they appear in the human embryo characterize the foot, whilst they bud forth, in the ape, in the direction to form the lower hand. We know that the individual idiots supplying the examples described by Dr. Todd, Mr. Gore and myself (in the St. Bartholomew's case) were the abnormal offspring of parents with the proper human brain, of the average weight. Had any of these perished in a cavern at times when idiots were less cared for than at present, the skull, falling into the hands of the Transmutationist, might have been described, and exhibited at the Royal Institution, as that of the "missing link"; the idiot "Aztec" children were two of a family of six, with normal brains, and the parents exhibited no departure from the ordinary size of cranium and capacity of mind. In the absence of special information, and the presence of skulls of Bocheamen, Hottentots and Negroes, corroborating Tiedemann's and Peacock's evidence of the normal size and weight of the brain in those families of the human race, it is to be inferred, or held to be more probable, that the Hottentot Venus was a case of "arrest of development," rather than as manifesting the normal character of a lower race linking on the Ape to Man. It is instructive to notice the close analogy of the psychical phenomena in these cases of arrest of development.

The "Aztecs" showed lively but abrupt movements, without obvious aim; the features showed movements devoid of intelligible expression, but with the general actions indicative of internal pleasure or gaiety. When I visited the children in their bed, early in the morning, a week after my first inspection of them, they recognized me; I had examined their teeth in the first instance, and

the boy pulled down his lip to show them to me, on the second visit. I do not feel justified, however, from this evidence of their recalling an individual to mind, in ascribing to them a good memory. They were fond of beating a little drum and jingling a tambourine. They spoke a few words of English and more of Spanish, but seemed incapable of framing a definite proposition; they were pleased with, and attracted by, any bright object or toy. They had no sense or instinct of shame. The size of the cranium in the female indicated a brain arrested at the stage of that of the Hottentot Venus, figured by M. Gratiolet. The Aztecs were stupidly docile; doing what they were bidden, but not in an intelligent way. Mr. Gore states, in reference to the woman with the still smaller brain, "Her manners were exactly those of a very young child. She could say a few words, and was obedient and affectionate to those about her." If one were to affirm of such a condition of mind that "it was not idiocy, not even imbecility," such a statement would not justify the selection of any of those arrests of cerebral development as the figure by which the true relations of the highest form of brute brain and the lowest normal form of human brain would be illustrated: because, such statement does not truly illustrate the functional powers of the brain stopped short in its development; it merely enables the reader to form a fair judgment of the mental constitution of the propounder and adapter of such statement.

The late Dr. Todd has recorded the chief characters of an adult idiot's brain, which he examined in 1844, and which he regarded "as an example of the class of changes which take place in the brains of most idiots."—(Art. 'Nervous System,' *Abnormal Anatomy, Cyclopaedia of Anatomy and Physiology*, vol. iii. p. 719.) The weight of the brain was 1 lb. 4½ oz. avoirdupois "after having lain in spirits for some days. The upper surface of both hemispheres 'was perfectly smooth'; the convolutions were not (there) developed. The Sylvian fissure was well marked"; at its posterior extremity there was a slight puckering, indicating a feeble development of the "insula of Reil." A few fissures and imperfectly developed convolutions were found upon the inferior surface of the middle lobe, and upon the lateral and inferior surfaces of the anterior lobe. The *corpora mamillaria* appeared to be fused together. "The corpus striatum was exceedingly small."—"The hippocampus major was very small"; and there could scarcely be said to be any trace of the hippocampus minor. "The lateral ventricles were large and rather dilated. The fornix was well developed, as was also the corpus callosum."—"The cerebellum was well developed." The pineal gland was large.

OUR WEEKLY GOSSIP.

AMONG the pictures likely to be seen at the Royal Academy in May, we can now name the following:—Mr. J. Phillip sends a 'Scene at a Church-Door';—Mr. Holman Hunt, a portrait of Dr. Lushington;—Mr. G. F. Watts, a life-size picture of 'Ariadne seated on the Sea-shore' and a 'Cupid mischievous';—Mr. Stanfield, five sea-pieces—'The Morning after Trafalgar'; 'The Coast of Calabria'; 'Mouth of the Texel—Tide out'; 'The Worm's Head Cape on the South Wales Coast';—The Pilot-House, Dover;—Mr. F. Goodall, 'The Offering of the Palm'; 'The Opium Bazaar, Cairo'; 'A Nubian Coffee-Bearer';—Mr. T. Faed, 'The Young Housewife'; 'The Silken Gown'; 'An Irish Orange-Girl';—Mr. Armitage, 'The Interment of a Christian Martyr in the Roman Catacombs';—Mr. E. M. Ward, 'The Foundlings' Visit to Hogarth's Study to see the Portrait of Capt. Coram'; and 'The Last Toilette of Charlotte Corday';—Mr. Elmore, 'Lucrezia Borgia and a Bravo'; and 'A Nun';—Mr. R. Redgrave, 'Sunshine—a Surrey Landscape, looking over Wootton Wood'; and 'Strayed Lambs—Children asleep, after Play';—Mr. E. W. Cooke, 'Catalan Bay, Gibraltar'; 'Dutch Trawler at Anohar at Scheveling'; 'Salute at Sunset, Venice';—Mr. Millais, 'The First Sermon'; 'The Lion's Den—Children at Play'; 'The Eve of St. Agnes';—Mr. Hook, 'Low Tide—a Little Harbour in Scilly'; 'The

Sailor's Wedding'; 'The Prawners';—Mr. Leighton, 'A Greek Girl with Fruit'; 'An Arquebussier'; 'Lady and Peacocks'; 'Ahab and Jezabel meeting Elijah at the Door of Naboth's Vineyard';—Mr. Calderon, 'Scene in the English Ambassador's House in Paris during the Massacre of St. Bartholomew';—Mr. H. S. Marks, 'How Shakspeare studied'; 'A Missal-Painter and his Critics';—Sir E. Landseer, 'A Picture of Bears.'—The hangers are Messrs. Frith, C. Landseer and A. Cooper.

The Italian Sculpture Court at South Kensington has been prepared for the exhibition of the Wedding Presents of the Prince and Princess of Wales. These treasures will be seen to great advantage. The room will be opened for the private view on Wednesday evening, next week, and for admission of the public on Thursday, the 16th of April; the Free and Students' days being kept as usual.

Dr. Carpenter, in the note which we printed last week, challenges his reviewer to give chapter and verse for the passage—"Of the genetic continuity between the Foraminifera of successive geological periods, graduating backwards to the period when they began to descend from a common original." This brief summary of Dr. Carpenter's view is not perhaps to be found in the book in this precise order of words. The condensation is the reviewer's. The ideas are Dr. Carpenter's; nay, the very words are his; and all that the reviewer has done is to bring them together, and express the meaning in a single phrase. A reviewer has to think of space and time. Would the reader have been better pleased—or science better served—by our quotation of the following passages?—"Even with regard to these family-types, it may fairly be questioned whether analogical evidence does not rather favour the idea of their derivation from a common original than that of their primitive distinctness." (p. iv.)—"The evidence in regard to the genetic continuity between the Foraminifera of successive geological periods, and between those of the later of these periods and the existing inhabitants of our seas, is as complete as the nature of the case admits." (p. v.)—"Hence I cannot but believe that any systematic arrangement of Foraminifera will be of real value only in so far as its basis is laid in a thorough knowledge of the nature and extent of those variations which every chief modification of this type shows itself so peculiarly disposed to exhibit, and as, in building it up, the idea of natural affinity is accepted as expressing, not only degree of mutual conformity, but actual relationship arising from community of descent, more or less remote. For the occurrence of endless gradational departures from any types which we may assume as fixed, and of links of connexion between such as present the best-marked differentiations, seems to me to point unmistakably to this as the only means of escape from that difficulty of indefinite multiplication which attends the doctrine of distinct specific creations when applied to a group in which scarcely any two individuals are alike." (p. viii.)—"This view of the case derives great force from the fact, which constitutes the special feature of interest which this group has for the geologist, that there is strong reason to regard a large proportion of the existing Foraminifera as the direct lineal descendants of those of very ancient geological periods." (p. ix.)—"Any subordinate groupings of genera and species which may be adopted for the convenience of description and nomenclature, must be regarded merely as assemblages of forms characterized by the nature and degree of the modifications of the original type, which they may have respectively acquired in the course of genetic descent from a common ancestry." (p. xi.)—Our brief passage of four lines contained the whole sense of the above. We are sure that every candid reader, even Dr. Carpenter himself, will allow that, while condensing his language, we had carefully preserved his meaning.

Mrs. Fanny Kemble's resumed readings from Shakspeare must take a new, as well as a known English place in the regard of every person who loves that which is best when produced in illustration of the best things of Art. Her reading of 'As You Like It,' on Monday last, at the Egyptian Hall, brought us back the old charm,—"the tune

of Imogen,"—belonging to a voice without paragon among voices in its varieties of delivery,—the known deep, exquisite, poetical intelligence,—and if here and there something of the old mannerism in rendering and delivery, a ripened and refined expression of the poet's imaginings, words and characters which could by no magic of voice or feature or manner be expressed, were not the matter at the heart of the interpreter.

On Easter Monday, besides Mrs. Kemble's readings from Shakspeare, the public had a new entertainment by Mr. and Mrs. German Reed, assisted by Mr. Parry, in Regent Street,—and a variety introduced into an old favourite by Mr. Edmund Yates and Mr. Harold Power, who brought out a new scene at the Egyptian Hall, entitled 'Twenty Minutes with the Spirits,' being a sly rap at those table-rappers who were, a little while ago, a real social nuisance. The room in Regent Street was crowded to excess, to hear a pleasant trifle from Mr. Andrew Halliday's pen, called 'A Charming Cottage.' The little piece, thanks to Mrs. German Reed, was thoroughly successful. In his 'Twenty Minutes with the Spirits,' Mr. Yates dresses for one of the American charlatans who lately levied black mail upon all ranks of our society, Mr. Power for one of his victims. The humour of the thing is somewhat coarse, like the originals who have to be portrayed; yet the two clever satirists make a good deal of fun out of very slight materials, and the spectators enjoy it heartily. In the other parts of Mr. Yates's entertainment there are some agreeable changes, especially in a couple of anecdotes supplied by Mr. Charles Dickens. One of these is an extremely droll account of a public meeting, with passage of arms between the chairman and a popular orator.

On Tuesday Mr. David Fisher, comedian, late of the Adelphi Theatre, appeared, for the first time, at the Hanover Square Rooms, in a musical entertainment, entitled 'Facts and Fancies,' assisted by Miss Kate Mellor and Miss Sarah L. Kilpack. Mr. Fisher gave a burlesque imitation of an author with a sensation drama in search of a manager and a market; also a 'True History of the Two Gentlemen of Verona,' with musical and vocal accompaniments. Several other lively and amusing trifles concluded the entertainment, and the applause of a very good audience left the actor no room to suppose that the approbation was a "fancy," not a "fact."

Mr. Burford provided excellent stuff for the Easter holiday makers, in bringing out for view his splendid panoramas of the three great cities, which past history and present events have made so interesting—Athens, Mexico and Rome. Athens is the head-quarters of a singular and successful revolution; Rome is expecting its true owners to take possession; and Mexico is waiting fitfully for the advancing French. Apart, therefore, from their magical beauty, the three panoramas comprise a cycle of historical suggestions; and we know of few places in which an intelligent youth, who has not yet seen the world, could spend a day more profitably, or in which the veteran tourist who has been everywhere and seen everything could so pleasantly renew the memories of his younger days.

We are sorry to find that the arrangements about Her Majesty's commission for the Wedding Picture have not been so simple and pleasant as they might have been. Mr. Gambart, we are told, has relieved Mr. Frith from his engagement to paint the three large pictures of London Life only so far as the Queen's commission is concerned,—not finally, or even remotely, yielding any part of his right. The question is in dispute between artist and proprietor. Mr. Frith, we are informed, holds a written licence from Mr. Gambart to paint Her Majesty's picture before commencing the illustrations of London Life; but Mr. Gambart alleges that this limited release was given by him on the verbal assurance, many times repeated by Mr. Frith, that he, Mr. Gambart, and he only, could and should have the right to engrave this previously-executed work. Into the circumstances which led to the transfer of this right to Mr. Flatow, the proprietor of 'The Railway Station,' we need not now enter; enough to say, that such a

transfer was never contemplated by Mr. Gambart when he signed the licence, and is now the subject of his protests and counter-claims. The case may possibly go to arbitration.

For an infringement of copyright in the engraving of 'The Light of the World,' Mr. Gambart recovered, on the 2nd inst., 100*l.* damages from Mr. Solater, a picture-frame maker of Canterbury. It appeared that a serious falling off occurred in the sale of the engraving in question; and, after much inquiry, Mr. Gambart learned that the defendant, as he himself boasted, had sold photographic copies of the work to a considerable number. Mr. Gambart stated that he had given Mr. Holman Hunt 200 guineas for the copyright, 300 guineas to the engraver, and 130*l.* to the owner of the picture for allowing the engraving to be made. This is, of course, a process occupying considerable time; besides which, much more time was required for the exhibition of the work throughout the country to Mr. Gambart's benefit. He had expended 2,000*l.* in bringing out the print; and, he stated in court, realized, in the first year, about 10,000*l.*

The portrait of Mr. Lewis, referred to in our last as bequeathed to the National Gallery in connexion with the interest of 10,000*l.*, is by Sir M. A. Shee, and represents William Thomas Lewis, father of the testator, Thomas Denison Lewis, in the character of the *Marquis* in 'The Midnight Hour.' The actor died in 1811, aged about sixty years. His portrait was exhibited at the Royal Academy in 1792.

Mr. J. E. Hodgkin has written a long letter in answer to Mr. Vaux's note on the Palimpsest of Uranus. Of this answer we can only give the few explanatory words:—"Mr. Vaux has been led into a very natural error, by copying a passage, at second-hand, from an article in the *Literary Churchman*, of March 2, 1863, in which the word *cal*, which only serves to connect two passages, separated by some three lines of text, and which should have been rendered 'and,' has been inadvertently printed in *capital* letters, as if it were a part of the text, and as if the two passages were in immediate connexion."—Mr. Hodgkin is of opinion that a full account of the five readings quoted by Mr. Vaux would explain some of that gentleman's difficulties and remove some of his scepticism. That full account—we submit—would be best given in a private communication. Results only are for the public ear. At present we see no reason for re-opening the general discussion as to the authenticity of the MS. of Uranus.

A new theatre is about to be erected in Holborn, on an eligible site nearly opposite Chancery Lane. A clearance is already commenced for the intended building, which is designed to include a refreshment-room on a very extensive and complete scale. Both it and the theatre will be constructed of iron. The directors promise a series of "dramatic performances consonant with the elevation and refinement of British taste." They also propose a number of improvements in the system of lighting, ventilating and warming the interior, and the adoption of the most recent continental inventions in regard to the arrangements on the stage. In a word, they undertake to "provide in the most liberal manner for the comfort and entertainment of all who may frequent the New Metropolitan Theatre."

Mr. Boucicault's plans for a new theatre also progress, and have taken the shape of a "New Theatre Company," which includes the Westminster Theatre, as well as the proposed structure in the Haymarket. The company announce that they have acquired nearly an acre of land on the corner of Westminster Bridge, with a frontage facing the Houses of Parliament, the value of which will be enhanced by the New Southern Embankment. We hope the competition thus indicated will lead to our having new theatres which (in Mr. Boucicault's words) may "embrace all the advantages and improvements to which the people of London are entitled, including wide entrances, roomy seats, unobstructed passages, and good ventilation."

The Council of the Society of Arts, acting on a suggestion from the Society of Wood Carvers, have

agreed to allow the use of the Society's rooms for the purpose of holding an Exhibition of Wood Carving, both modern and ancient, in the month of June, 1863. The Council offer the Society's Silver Medal and grant 30*l.*, the Society of Wood Carvers giving 15*l.*, as a fund for prizes to be awarded to exhibitors on that occasion. These prizes will be awarded thus:—Human Figure, in alto or bas relief—1st prize, 8*l.* and the Society's Silver Medal; 2nd prize, 4*l.*; 3rd prize, 3*l.* Animal or Still Life—1st prize, 8*l.*; 2nd prize, 4*l.*; 3rd prize, 3*l.* Natural foliage, fruit, or flowers, or conventional ornament in which grotesque figures or animals may form accessories—1st prize, 8*l.*; 2nd prize, 4*l.*; 3rd prize, 3*l.* Employers or private owners may be exhibitors, but *bona fide* workmen only can receive prizes. The prizes are open to all Art workmen in Great Britain, whether belonging to the Society of Wood Carvers or not.

The following needs no introduction:—

"Society of Arts, April 7, 1863.
"In your notice last week of the prizes offered by the Society of Arts for Art workmanship in various departments, sufficient prominence seems scarcely given to the important principle that these prizes are offered to the *workman* and not the employer. May I ask the favour of your stating this point.
I am, &c.,
"P. LE NEVE FOSTER, Secretary."

The task of preparing the gold casket, to be presented by the City of London to the Prince of Wales, is confided to Mr. Benson, not Bennett, as stated by a slip of the pen.

The insurrection in Poland has brought to our table nearly as much jubilant verse as the marriage of the Prince and Princess of Wales. If Poland could be helped by song, she would soon be free. We have scarcely any other choice than to set it all aside as useless for the end in view, though occasionally, as in the following extract from some lines by the author of the 'Story of Queen Isabel,' the poetic merits plead for insertion:—

Come Day of Truth, let Europe read her crime
In her last vaunt, slow fruit of Toil and Time,
To see a Murder wrought before her eyes,
And suffer it, because so strong and wise!

Selfish our Freedom seems and smooth our Art—
Give back the rough young World which had a heart!
Which wore its life as lightly as its glove,
And dared to fight for Truth or die for Love!

—Unhappily, if Poland is to be aided now, it must be by others than her purely literary friends.

Since the paragraph appeared concerning the Catalogues published by the Ordnance Survey Office, subsequent editions of the same useful works have been issued, which include the survey of Ireland, and are brought down to the 1st of March of the present year.

The Annual Dinner of the Members of the Institution of Civil Engineers, which was fixed for Wednesday, the 22nd inst., has been postponed, owing to a domestic calamity in the family of the President.

On the 15th of March, Dr. Luther discovered the twelfth planet, at the Bilk Observatory. The discovery was confirmed by the Observatory of Bonn on the 23rd of March. The new planet, which is the seventy-eighth of the small planets between Mars and Jupiter, has been named Diana.

MR. GHÉMAR'S EXHIBITION of the ROYAL FAMILIES of ENGLAND and DENMARK.—Portraits of The Queen, the Prince and Princess of Wales, life-size, comprising Fifty-one Photographic Pictures and Drawings, executed by Mr. Ghémars, from actual sittings, are NOW ON VIEW at the FRENCH GALLERY, 120, Pall Mall (First Floor).—Admission, 1*s.* N.B.—Each visitor will be presented with a Portrait of the Princess of Wales, *carte de visite* size.

MRS. FANNY KEMBLE.—Readings of Shakespeare.—Egyptian Hall, Piccadilly (Dudley Gallery).—Mr. MITCHELL has the pleasure to announce that Mrs. FANNY KEMBLE will continue her READINGS of SHAKESPEARE'S PLAYS every Monday, Wednesday and Friday, commencing at Eight o'clock. Monday, April 13, the Play of 'The Merchant of Venice'; Wednesday, 15, the Comedy of 'Twelfth Night'; Friday, 17, the Tragedy of 'Othello.'—Seats (Unreserved), 3*s.*; Stalls, 5*s.* A few Fauteuils, 7*s.* each, may be obtained at Mr. Mitchell's Royal Library, 33, Old Bond Street, W.

MR. EDMUND YATES'S INVITATIONS to EVENING PARTIES and the SEASIDE.—A SPIRIT-RAPPING SEANCE. An entirely New Part, entitled 'Twenty Minutes with a Medium,' will be given every Evening. Medium, Mr. Yates; Visitor, Mr. Power. There will also be several new arrivals at the Seaside. To commence at 8; Saturdays at 3.—Stalls, 3*s.*; Area, 2*s.*; Ball-cony, 1*s.* Egyptian Hall, Piccadilly.

Will open on Monday next, the 12th inst.
THE FRENCH GALLERY, 120, Pall Mall.—The TENTH ANNUAL EXHIBITION of PICTURES, the contributions of Artists of the French and Flemish School.—Admission, 1*s.*; Catalogue, 6*d.*

SCIENCE
—
SOCIETIES.

ASTRONOMICAL.—March 13.—G. B. Airy, Esq., Astronomer Royal, in the chair.—'On the Fringes of Light observed by M. Poullain at Gorcee during the Total Eclipse, 31st December, 1861,' by M. Hermann Goldschmidt.—'On the Determination of the Longitude of Valencia, in Ireland, by Galvanic Signals, in the Summer of 1862,' by the Astronomer Royal.—'On the Movement of the Solar System in Space, deduced from the Proper Motions of 1,167 Stars,' by E. Dunkin, Esq.—'On the Rating of Chronometers,' by J. Hartnup, Esq.—'On the Parallax of certain Stars,' by M. Auwers.—'Results of the Meridional Observations of Small Planets; Occultation of a Star by the Moon; and Phenomena of Jupiter's Satellites; observed at the Royal Observatory, Greenwich, in the month of January, 1863,' by the Astronomer Royal.—'Occultations observed at Highbury,' by T. W. Burr, Esq.—'On the Visibility of Stars in the Pleiades to the unarm'd Eye,' by the Astronomer Royal.—'Observations of Mars,' by W. Lassell, Esq.—'Proceedings of the Madras Observatory,' by Norman Pogson, Esq.—'Companions of Sirius.'

ENTOMOLOGICAL.—April 6.—F. Smith, Esq., President, in the chair.—Prof. Lacordaire, Dr. Leconte, and Dr. Hagen, were elected Honorary Members.—Sir J. Hearsey exhibited a collection of Indian Lepidoptera.—Mr. Waterhouse exhibited a British specimen of a small Coleopterous insect, which he thought would probably prove to be *Aleochara inconspicua* of Aubé.—The President exhibited specimens of *Claviger testaceus*, which he had hoped to have shown alive, as they had readily sucked sugar and water supplied to them on blotting paper; they had, however, all died before the meeting was held; they were found in the nests of *Formica rava*, near Croydon.—Mr. Lowne exhibited species of Australian ants, and made some observations on their habits and economy; several of the species were believed to be new and undescribed.—The Secretary read a letter received from Mr. C. A. Wilson, of Adelaide, a Corresponding Member of the Society, giving a brief account of the successful attempt of the South Australian exploring party under Stuart to cross to the north-west coast of the continent. The Secretary also read a paper, communicated by Mr. Hewitson, containing descriptions of two new Diurnal Lepidoptera; and a paper, communicated by Mr. R. Trimen, containing Descriptions of four new species of Rhopalocera from Tropical South-Western Africa.

ROYAL INSTITUTION.—Feb. 13.—W. R. Grove, V.P., in the chair.—'On Artificial Illumination,' by E. Frankland.

April 6.—The Rev. J. Barlow, V.P., in the chair.—Messrs. L. F. V. Harcourt, W. Harvey, J. N. Lookyer, P. J. Reuter, O. Sturges, F. Thompson, and R. Wigram, were elected Members.

MEETINGS FOR THE ENSUING WEEK.

- Mon. Geographical, 8.—'Frobisher Straits proved to be a Bay.' Capt. Hall: 'Visit to Red River, Dr. Rae.
- Tues. Royal Institution, 2.—'Animal Mechanics,' Prof. Marshall.
- Actuarial, 4.—Council.
- Syro-Egyptian, 7.—Anniversary.
- Ethnological, 8.—'Antiquity of Man,' Mr. Crawford.
- Statistical, 8.
- Engineers, 8.—'Structures in the Sea,' Mr. Miller; 'Seine Railway,' Mr. Bruton.
- Wed. Horticultural, 1.—'Amelia and Rose Show.
- Meteorological, 7.—Council.
- Society of Arts, 8.—'Auto-Typography,' Mr. Wallis.
- Society of Literature, 8.—'Ancient Ruins, Missolonghi,' Mr. Colnaghi.
- Thurs. Royal Institution, 2.—'Relations of Geology with Allied Sciences,' Prof. Ansted.
- Numismatic, 7.
- Linnean, 8.
- Chemical, 8.—'Derivatives of Naphthylamine,' Messrs. Purkin and Church.
- Royal, 8.
- Antiquaries, 8.
- Fri. Philological, 8.
- Royal Institution, 8.—'Culture of Fish,' Mr. Buckland.
- Sat. Royal Institution, 2.—'Science of Language,' Prof. Müller.

FINE ARTS

FINE-ART GOSSIP.—Several additions to the picture galleries at South Kensington deserve special comment. Amongst these is the water-colour drawing by the late Mr. Sleep, referred to by us a few weeks since; it represents St. Paul's, as seen from off a neighbouring dock in the river below: a singularly felicitous drawing, giving the scene with brilliancy and completeness: quite another thing from the ordinary compositions in almost mono-chromatic fashion called after London sites; the artist has not been afraid to give force of colour, while he has been ashamed to "prettify" his subject with tinsel. The nation will certainly not regret the purchase, for 1,500*l.*, of Ward's magnificent 'Bull, Cow and Calf,' lately placed here after being varnished; familiar as we are with this picture, its masterly and grand treatment, its many qualities of colour, character, tone and drawing, come with new force upon us on seeing it again in the place it now occupies; a good distant view, which is obtainable, or a near one, equally show its value. Near to this are two portraits, respectively by Reynolds and Gainsborough, which, if not the best works of either, serve beyond any examples known to us, to characterize and contrast their proper styles; these are hung pendant, for this purpose it would seem. The first represents an officer, Capt. Orme, in a red coat with green and white facings, standing by his horse; such personification, such solidity of handling, vigour and grasp of every quality in his art, was scarcely ever better shown than here by Reynolds. The coat is a wonderful study of rich, sober, soft, and textural colour, quite another thing from the brick-encased military men that glare on the Academy walls every year. Not only does he stand on his feet, which these do not always, but he looks a man and a gentleman,—no padded doll. The price of this work was 210*l.* Gainsborough's is also a full-length life size, an old gentleman, Dr. Ralph Schomberg, with one of his genial, gentlemanly faces, and that air of ease in Art which hardly less distinguishes the painter than it did his rival. He wears a darkish, peach-blossomed or crimson coat, and is seen strolling through one of Gainsborough's exquisitely keyed and coloured landscape backgrounds. Price, 1,000*l.* Both these works seem in perfect condition, and are examples of the best time of each painter. A second Gainsborough, Mrs. Siddons—painted 1784—is one of his most perfect works—cost 1,000*l.*—and Hogarth's portrait of Mary Hogarth may be added to this list of recent acquisitions. Also, for 1,420*l.*, Crome's inimitable landscape, 'Mousehold Heath,' which, with good reason, delighted everybody at the International Exhibition, and taught gallery-loungers that there had existed a perfect landscape-painter who was out of their ken. The state of popular ignorance about Crome was made plain by the fact, that until May last scarcely any one had heard of him. Up to this time there have been no purchases of English pictures since the acquisition of the Hogarths and Wilkie, bought with the Angerstein pictures, in 1824. A large portion of the national collection of water-colour drawings has been hung in the beautifully-decorated galleries opened a short time since. A considerable number of sculptures, some of them recent acquisitions, have been arranged very tastily in the galleries that surround and traverse the new South Courts of the Museum; among them are several portraits of living and recently-deceased persons, artists, *literati*, &c., and many modern statues. We need not commend to lovers of Art and beauty the Loan Collection, which still flourishes, not in such a wonderful multitude of items as erst, but with an otherwise unparalleled interest in this country.

The Council of the Architectural Museum offers to artist-workmen prizes of the following descriptions:—For Wood-carving, two prizes, of 20*l.* and 5*l.*, as first and second premiums to competitors who shall most successfully execute a Miserere seat such as is found in the stalls of Cathedrals; the subject to be a profession, trade or occupation, treated in modern costume; the composition to consist of not more than two figures, or one figure and one animal; to be completed by November the

2nd next. A lithograph of the size for the work may be obtained by written application to the Hon. Sec., J. Clarke, Esq., 13, Stratford Place, W. Casts from one or both the successful works will be taken as subjects for the colour prize, under-mentioned. The Committee of the Ecclesiological Society offer, through the authorities of the Architectural Museum, a prize of 5*l.* 5*s.* for coloured decoration, to which Mr. Beresford Hope will add 3*l.* 3*s.* for one or more extra prizes. Instead of an ancient subject, as before, the above indicated wood-carving prize will, as soon as adjudicated, be employed. Casts of this will be ready within a reasonable period after the decision is made; the coloured specimens must be ready by March the 1st next. Candidates may adopt what medium for application of the colour they please. Casts will be obtainable, for 5*s.* each, at the Museum, or 2*s.* for packing and case, from the Hon. Sec. of the Architectural Museum. Duplicates allowed. The Ecclesiological Society's Council adjudicate. Certificates of merit and a minor prize of 1*l.* 1*s.* will be given for fit examples.

With the following note on the question of Mosaic Decorations for St. Paul's we must drop the subject:—

"April 6, 1863.

"Mr. A. B. Thompson could not have selected an apter illustration of the justice of my opinion respecting the use of mosaics than that which is afforded by the Cathedral of Monreale. If he will give unbiassed attention to the passage in my letter of the 21st ult., of which he quotes the half only, this will become clear to him. As to the power of mosaic to render subtle and pathetic expression, that is best decided by artists; the authority of several of the most eminent now living supports my conviction that it is much inferior, in that respect, to painting. The practice of the greatest artists in their best works will suffice to those who value authority; common sense might satisfy all on the point. Mosaic is not so much objected to by me as its employment to represent the 'Transfiguration.' Inflexible as mosaic is, no doubt something might be got out of it; but shall we not pay too high a price for its durability by sacrificing the subject for the material? Let it not be forgotten that the pictures would be within, not without, St. Paul's, and that whatever expressiveness may be got in mosaic could be far surpassed in painting. I am ignorant that Mr. G. G. Scott has consented to place a mosaic representing any such subject as the *Transfiguration* upon the ceiling of Wolsey's Chapel at Windsor; indeed, I am informed that the mosaic works now in progress are strictly decorative, heraldic insignia, &c., while fresco is to be employed upon the walls for pictorial subjects. It may be safely asserted, that the cost of mosaic over fresco is as four to one.

"YOUR CORRESPONDENT."

"Amongst other commissions given by the Duke of Sutherland," writes our Correspondent from Naples, "was one to a young Venetian sculptor, Asteo Fausto. On visiting his studio, his Grace was struck by the beautiful modelling of a work which this sculptor is executing for Victor Emmanuel. It is a dolphin, on which is seated a Cupid, with the arms uplifted, and holding reins, made of flowers, in his hands. The extreme grace of the Cupid, the beauty of the features, and the ease of the position so pleased his Grace that he has ordered it to be executed as a separate figure with a shell, the ear of Venus, in one hand, serving as a vase for flowers. The artist was an exile from Venice; he joined Garibaldi in Sicily; fought for the liberties of his country there and under the walls of Capua, on which occasion he was made an officer on the field.

MUSIC AND THE DRAMA

MUSICAL UNION.—NINETEENTH SEASON.—FIRST MATINÉE, TUESDAY, April 14, at Half-past Three.—Quartett E flat, Mozart; Grand Duett in D, Piano and Violoncello, Mendelssohn; Double Quartett, E minor, Spohr; Solos on the Piano-forte. Artists: Sainton, Piatti, Ries and Webb, Pollitzer, Payne, Watson, &c. Pianist, Halle.—Members who have not received their Tickets to leave their names and addresses at St. James's Hall. Visitors' admissions, Half-a-Guinea each, to be had of Cramer & Co., Chappell & Co., Olliviers; Ashdown & Parry, 18, Hanover Square; and Austin, at St. James's Hall. Director, J. ELLA.

APTOMMAR'S SEVENTH HARP RECITAL, April 27, at 16, Grosvenor Street (by kind permission of Messrs. Collard). The Programme will consist of Selections made by the Audience from a number of popular Compositions (by twenty Composers), including the National Melodica.

S. BLUMNER'S SOIRÉES, at Hanover Square Rooms, on April 24, May 25, and June 18. Full particulars will be duly announced.—Address, 5, Pelham Crescent, Brompton.

MR. DEACON begs to announce that he will give **THREE SEANCES OF CLASSICAL INSTRUMENTAL MUSIC**, at 16, Grosvenor Street (by kind permission of Messrs. Collard); on **THURSDAYS, April 30 and May 31, and MONDAY, June 8,** to commence at Three o'clock.—Violin, M. Sainton and Herr Pollitzer; Viola, Mr. H. Webb and Mr. Clementi; Violoncello, Signor Perse; Contra-Basso, Mr. C. Severn; Piano-forte, Mr. Deacon.—Tickets for the Series, One Guinea; to admit three to a single Seance, One Guinea; single Ticket, Half-a-Guinea; to be had of Mr. R. W. Ollivier, 19, Old Bond Street; or of Mr. Deacon, 72, Welbeck Street, Cavendish Square.

MADAME LIND-GOLDSCHMIDT, St. James's Hall, Piccadilly, FRIDAY EVENING, May 1.—Mr. and Madame Goldschmidt having kindly promised their services in aid of the **ROYAL HOSPITAL FOR INCURABLES** at Putney, the Directors have the honour to announce that a Grand Performance of Handel's Cantata, *L'ALLEGRO* and *IL PENITENTE* (the Poetry by Milton), will take place at the St. James's Hall, Piccadilly, on **FRIDAY EVENING, May 1,** commencing at Eight o'clock. The Solo Parts by the following eminent Artists:—Madame Lind-Goldschmidt, Madame Lemmens-Sherrington, Miss Lascelles, Mr. Montem Smith, and Mr. W. H. Weiss. The Band and Chorus will be complete, comprising upwards of 700 performers. The Cantata will be preceded by Handel's Orchestral Concerto, No. 12 (Grand). Conductor, Mr. Otto Goldschmidt. Prices of Admission, 7*s.*, 10*s.* 6*d.*, and One Guinea.

BETHOVEN ROOMS, 76, HARLEY STREET.—MDLLE. BONDY begs to announce that her **THIRD CONCERT** will take place on **SATURDAY MORNING, May 2,** at Three o'clock. Full particulars will be duly announced. Tickets, Half-a-Guinea each. Address, 11, Duke Street, Portland Place.

ROYAL ITALIAN OPERA, COVENT GARDEN.—Mr. Gye's season began on Tuesday evening with a performance of 'Masaniello,' which was all but very brilliant,—the exception being made by the *Elvira* of Mdlle. Battu, which is not up to the Covent Garden mark. Happily, however, the part is not important, the musical strength of the opera lying on the tenor and baritone. These were MM. Naudin and Faure;—the former new to this theatre, though not to London. Since, however, M. Naudin sang for Mr. E. T. Smith, he has ripened and polished his style. His voice, though not of the first class, is sufficient for the stage, and fairly under his command. His expression is good, and M. Auber's music gains, it need not be told, by being sung with the true French accent. He was well received, and, on the whole, may be rated as an acquisition to the company greater in value than most recent ones. M. Faure's *Pietro* is the best we have seen—as a piece of acting, rude, fiery, sinister; as a piece of singing, polished, powerful; the music handled by a real artist. He, too, was cordially greeted, and the duett betwixt him and the fisher patriot (pity that it should be cut!) was *encored*. So also was the overture,—and no wonder. It *ashes* (no other word will describe it) under the hands of Signor Costa;—the prodigious spirit and brilliancy of whose orchestra is heard to its utmost advantage in a prelude so full of vivacity. Mr. C. Lucas, who retires from the desk of principal violoncello, is replaced by Mr. G. Collins. The chorus was as usual,—now the first stage chorus in Europe. Never was the opera more magnificently put on the stage, nor ever were the groupings, dances and mimic displays demanded by this grand musical *ballet* (for 'Masaniello' is more of a *ballet* than an opera) arranged and carried out with greater propriety and spirit than by Mr. Harris. So that, on the whole, the season has commenced auspiciously.—'I Puritani' is to be given this evening for the first appearance of Madame Fioretti.—Mdle. Carlotta Patti will sing in a concert on Thursday, and Mdle. Frizzi attempt the perilous venture of appearing as *Norma*.

DRURY LANE.—On Monday, instead of an Easter piece, Mr. Falconer contented himself with reproducing his drama, so successful at the Lyceum, of 'Peep o' Day.' The stage of the National Theatre presents superior opportunities of display; and of these the manager has availed himself to the utmost. The scenery, by Messrs. Grieve and Telbin, is excellent, and the cast has been in many respects improved. Miss Cleveland, as *Kathleen Kavanagh*, supported the character throughout in the spirit of a true artist; and *Harry* himself was efficiently acted by Mr. Loraine. Mr. Graham, too, as *Black Mullins*, and Mr. Charles Verner, as *Barney O'Toole*, deserve commendation. The

performance concluded with the farce of 'Magic Toys,' supported by Miss Lydia Thompson.

HAYMARKET.—Miss Louisa Angel made her debut on Monday, as *Beatrice*, in 'Much Ado about Nothing.' The audience was impressed by her acting, which, though wanting in weight for so important a part, displayed intelligence throughout, and she supported the earlier scenes with spirit. The play was followed by an interlude entitled 'Mr. Buckstone at Home,' by Mr. Stirling Coyne; designed as an Introduction to a Panorama illustrative of the recent tour in the East of the Prince of Wales. This introduction was of a more elaborate construction than might have been expected. It exhibited the manager in a state of perplexity in regard to a mythological piece which he has accepted; when a familiar friend, in the person of Mr. Farren, enters by the trap, and at once attracts whatever he wants to his hand, so that at his wish decanters, glasses and cigars move towards him, while he delivers his opinions. Letters also are received by the manager, increasing his difficulties. Other spiritual manifestations occur. One Hamlet in a black wig enters spouting like Charles Kean, and another Hamlet in a flaxen wig deports himself like Fechter. Then Sir Peter Teazle appears with Widow Green; followed by impersonations of Italian Opera, and Miss Fanny Wright as Perea Nena. Mazeppa comes next, with Harlequin, lamenting over the change that has taken place at Astley's; and then enter the Colleen Bawn, the Peep o' Day, Jeannie Deans, and Miss Louise Keeley as Burlesque, with other similar characters too numerous to mention. At last Britannia rises, and recommends the Panorama, which succeeds, accompanied with music selected from David, Rossini, and Beethoven. Cairo and the Grand Mosque lead off the solemn procession, followed by the Temple of Isis at Philæ, Jerusalem with the Mosque of Omar, Mount Zion, the Golden Gate, and the Mount of Olives; the Ford of the Jordan, the Dead Sea; Nazareth, with the Latin Convent; the Sea of Galilee, Mount Hermon, Damascus, with a party of Mohammedans listening to an Arabian *improvisatore*, in the court-yard of a mansion; the Ruins of the Temples of the Sun and Jupiter at Baalbec; Beyrout, Lebanon, Constantinople. These pictures have been painted, at Mr. Buckstone's suggestion, by the Messrs. Telbin and Mr. T. Grieve, and are admirably executed.

PRINCESS'S.—A new farce was produced on Monday, by Mr. M. Morton, called 'Killing Time.' *Lady Milicent Mayduke* (Miss Amy Sedgwick), afflicted with *ennui* on account of six weeks' rainy weather at Tunbridge Wells, is glad to give shelter to a wet stranger (Mr. George Vining), for the sake of having somebody to talk to. That purpose served, she is anxious for his departure; but he sees the matter in a different light, and frightens her by his eccentric conduct. An explanation ensues, and he turns out to be the gentleman intended by her family for her husband. The farce was followed by a burlesque, written by Mr. Byron, and entitled 'Beautiful Haidee! or, the Sea Nymph and the Sallee Rovers.' It is a *mélange* composed with reference to 'Don Juan,' 'Lord Bateman' and 'Lurline'; and being beautifully illustrated with scenery by Mr. F. Lloyds, was perfectly successful. It was well acted by Miss Murray, Miss Hudspeth, Miss M. Oliver, Miss Helen Howard, Mr. C. Seyton and Mr. G. Belmore.—It should be added, that Mr. George Vining has been admitted by Mr. Lindus as his partner in the management of this theatre.

OLYMPIC.—Another burlesque was produced at this house on Monday. The subject is 'Acis and Galatea,' by Mr. F. C. Burnand, who has closely copied Gay's serenata; and the new drama, in regard to its getting-up, imitates as far as possible the style in which Mr. Macready placed the original work on Drury Lane stage. The performance, which abounds with more fun than might have been expected from the theme, was greatly indebted to the excellent acting of Miss Hughes, Miss Annie Kemp, an American *débütante*, and Miss J. Taylor. The scenery has been painted by

Messrs. Telbin and Grieve, and is in all respects most satisfactory.

STRAND.—Here Mr. Byron has another burlesque, entitled 'Ali Baba; or, the Thirty-nine Thieves, in accordance with the Author's well-known habit of "taking one off," which sparkles with puns, and commanded the suffrages of the audience.

ST. JAMES'S.—Here Mr. William Brough indulges his humorous vein by an Easter Extravaganza, entitled 'The Great Sensation Trial; or, Circumstantial Effie Deans.' The purport of the piece is obvious from its title, and, assisted by the talents of Mr. James Rogers and Miss Mary Wilton, was eminently successful. It is decidedly well mounted.

SADLER'S WELLS.—Mr. Herman Vezin and Mrs. Charles Young appeared here on Monday in Shakespeare's comedy of 'As You Like It.' The engagement of these artists will probably improve the business of the house, which has lately suffered from the absence of the legitimate drama, to which the audience under previous managements had been accustomed.

MUSICAL AND DRAMATIC GOSSIP.—Among other candidates for the Gresham Professorship of Music, not hitherto named by us, the *Morning Post* announces Dr. Dearle, Mr. Clare, Mr. Benson, Mr. Martin, Mr. J. Goddard, Mr. Weber, Mr. G. F. Flowers, and Mr. W. M. Cazalet.

At the *Crystal Palace Concert* on Saturday the Symphony was Schumann's in B major, and the pianoforte *Concerto*, Beethoven's in C minor, played by M. Halle. The singers were the strenuous Mdlle. Ellinger and Miss Julia Elton. To-day Chopin's expressive and dreamy *Concerto* in F minor, which we remember to have heard only once given by Madame Dulcken many years ago, will be taken in hand by Mr. Dannreuther.

M. Vieuxtemps will play at next Monday's *Popular Concert*.

Mdlle. Titiens, Madame Lemmens-Sherrington, Miss Palmer, Messrs. Sims Reeves, Montem Smith and Santley, are already engaged, we perceive, for the Norwich Musical Festival. The new oratorio by M. Silas is entitled 'Joash,' the new *cantata* by Mr. Benedict 'Richard Cœur de Lion.'

The success of the harp as an instrument has decided Mr. Aptommas, one of its leading professors in this country, to give a new series of harp recitals this year.

So far as English eyes can see from a distance, the attempt to make a French marriage between Shakespeare's 'Love's Labour's Lost' and Mozart's half-Italian, half-German 'Così fan tutte,' so long announced at the *Théâtre Lyrique*, may fail to answer the expectations of those who projected it. That we are not pedantically set against modification, re-consideration, re-arrangement even, in the case of certain works, there is no need to repeat. M. Carvalho's version of Mozart's unattainable opera, 'Il Seraglio,' was, in every point of view, commendable; because, while a dull story was made less dull, there was no violence in its treatment done to musical sentiment or meaning. The original group of characters remained unaltered; and if the place of some of the musical pieces was changed, such change could be defended on the highest precedents. Now it happens, that 'Così fan tutte' contains one of Mozart's best pieces of semi-comic dramatic expression in the quintett 'Deh scrivermi,'—that admirable dialogue of false against real emotion—with the ironical *aside* comment of the old cynic, *Don Alfonso*. Not merely is the scene here displaced in musical sequence; but also, the humour of the words and the *dramatis personæ* are totally altered (we read) in the new *libretto*,—and hence the modification of the entire work cannot fail to fall dead. The opera could not have been otherwise than conscientiously executed and munificently produced under the auspices of M. Carvalho; but we fancy that the line may here have been crossed, separating that which is expedient and defensible from what is empirical.

Since writing the above, we have received from Ger-

many—Germany the immaculate—Germany which will go into spasms against the French desecration of Mozart—the 'Tempest' music of Herr Taubert, arranged to a certain play by one Shakespeare of the old country, and the play arranged in a peculiarly German fashion for the German stage by Herr Dingelstedt. That Schiller mended 'Macbeth' we know; but Schiller was a noble, real, mighty genius, and as such had more right to vindicate his fancies. Here we have a minnow setting a triton to rights. Herr Taubert's music to the 'Tempest' proves on perusal (not stage-hearing) only to be described by the epithet of paltry. One pleasant concerted piece, the setting of "Come unto these yellow sands," has been equalled, if not exceeded, as a piece of common prettiness in every French opera combination for years and years past, and can only be accepted as lovely in a land where pretty commonplace is to hold its ground by way of marvellous protest against ugliness, despair and decay! Herr Taubert's work, as also Herr Dingelstedt's arrangement of the play, is hopelessly weak, the music in no respect to be measured against Mr. Sullivan's.

Some of the leading features of the Düsseldorf Whitsuntide Musical Festival have been already mentioned. To those noted in the *Athenæum*, may be added a Psalm of Marcello's, scored by Lindpaintner, an Overture by Herr Fausch, who, conjointly with Herr Goldschmidt, will conduct the performances, some scenes from Schumann's 'Faust' music, and some from Herr Hiller's oratorio, 'The Destruction of Jerusalem.'

On Good Friday, Haydn's 'Seven Words' was performed in the Church of Saint-Roch, Paris. On Easter Sunday Cherubini's Coronation Mass.

'La Bataille de l'Amour' is the title of M. Vaucorbeil's new comic opera. A concert was to be given at the *Opéra Comique* of Paris, on Wednesday last, in aid of the living descendants of Rameau, whose fortunes are very low.

M. Bagier is to manage the Italian Opera of Paris, in the stead of M. Calzadò.

A real sensation was excited the other evening at a concert of the Conservatoire, by the delicious *nocturno* from the 'Béatrice et Bénédict' of M. Berlioz, sung by Mesdames Vandenhuevel, Duprez and Viardot. It was received with a rapture such as rarely awaits modern compositions in that most conservative of conservative places—not more, let us add, than its merits deserve.

Signor Verdi is going to write an opera on the hideous subject of 'Salambo,' for the Grand Opéra of Paris, to be completed two years hence.

During the past week a concert was to be given at Vienna for the renovation of Beethoven's monument. Among other items in the programme figured the 'Sinfonia Eroica,' illustrated by *tableaux vivants*.

The Italian Opera season, in New York, according to American papers, has set in as spiritedly as if there were no such abominations in the disunited States as Confederate doings. Madame Medori is the *prima donna*.—Madame Charton-Demour is on her way home to the Old World.

'Don Juan de Marana,' by M. A. Dumas, has been revived at the Théâtre de la Porte St.-Martin.

"By royal decree," writes our Naples Correspondent, "the Teatro del Fondo has been granted to Signor Maieroni for three years beginning from the first day of Lent 1864. He is making great efforts to merit the confidence reposed in him. As writers, he has engaged Dall' Ongaro, Giotti, Revere, Sabatini, Giacometti, Indelli, Arabia, Castelvechio, Pouchani, Cuciniello, Colucci, Riocio, Avitabile, Brescia, Gualtieri, Sommas, who are amongst the best dramatic writers of Italy. He has announced his intention also of opening a gratuitous dramatic school for both sexes. Amongst the performers engaged are Fanny Sadowski, Isolina Pianureti, Grajosa Majeroni and other ladies, as also Achille Maieroni, Luigi Taddei, Alberto Vernier and many other names. Mdlle. Titiens has now concluded her engagement with the Impresario of San Carlo, and by far the most finished *artiste* we have had for many years will leave us this week. Thwarted by many obstacles, by a wretched company, by a number of Neapolitan *Faulladeens*, and by that

Southern vanity which appropriates to itself the monopoly of all musical taste and talent, she has triumphed over all these difficulties, and leaves Naples with a greater name even than when she entered it."

MISCELLANEA

Zoological Gardens.—A Zoological Garden has been established at Moscow. The new undertaking has been favoured by the present of an aviary, at the value of about 6,000 roubles, from a lady. Another present, by the Imperial Society of Acclimatization at Paris, consists of two zebras from the Soudan, and some sheep of the Mauchamp race. The menagerie of the Museum of Natural History at Paris has received in its turn an Auer ox from the Cologne Gardens. This stranger makes a great sensation in Paris, according to the *Moniteur*, being the first on French ground since Cæsar's time. Zoological Gardens become more and more the fashion on the Continent. Towns of moderate size can boast now of handsome collections of animals, while only a short time ago these were the prerogatives of large capitals, like London, Paris and Amsterdam. We gather a few interesting statistics on the rise and origin of these institutions. We read of zoological gardens in China as far back as 2,000 years ago; but they consisted chiefly of collections of some favourite animals, such as stags, fish and tortoises. The Greeks under Pericles introduced peacocks in large quantities from India. The Romans had their elephants; and the first giraffe in Rome, under Cæsar, was as great an event in the history of zoological gardens at its time as the arrival, in 1849, of the Hippopotamus was in London. The zoological gardens of former times served their masters occasionally as hunting grounds. This was constantly the case in Persia; and in Germany, so late as 1576, the Emperor Maximilian the Second kept such a park for different animals near his castle, Neugebäu, in which he frequently chased. The first zoological garden of which we have any detailed account is that in the reign of the Chinese emperor, Wen Wang, founded by him about 1150 A.D., and named by him "The Park of Intelligence." It contained mammalia, birds, fish and amphibia. Alexander the Great possessed his zoological gardens. We find in Pliny that Alexander had given orders to the keepers to send all the rare and curious animals which died in the gardens to Aristotle. Splendid must have been the zoological gardens which the Spaniards found connected with the Palace of Montezuma. The letters of Ferdinand Cortez and other writings of the time, as well as more recently 'The History of the Indians,' by Antonio Herrera, give most interesting and detailed accounts of the menagerie in Montezuma's park. The buildings belonging to these gardens were all gorgeous, as became the grandeur of the Indian prince; they were supported by pillars, each of which was hewn out of a single piece of some precious stone. Cool, arched galleries led into the different parts of the garden—to the marine and fresh-water basins, containing innumerable water-fowl,—to the birds of prey, falcons and eagles, which latter especially were represented in the greatest variety,—to the crocodiles, alligators and serpents, some of them belonging to the most venomous species. The halls of a large square building contained the dens of the lions, tigers, leopards, bears, wolves and other wild animals. Three hundred slaves were employed in the gardens tending the animals, upon which great care was bestowed, and scrupulous attention paid to their cleanliness. To this South American zoological garden of the sixteenth century no other of its time could be compared. The majority of the zoological gardens now in existence have been founded in this century, with the exception of the Jardin des Plantes, which, although founded in 1626, received its first living animals in the year 1793-94. Hitherto, it had been a garden of plants exclusively. The first zoological garden in Germany in this century is that of Berlin, which was founded fifteen years ago.

To CORRESPONDENTS.—J. P. S.—C. B.—M.—received.

CRAMER, BEALE & WOOD'S
PIANOFORTE GALLERY,

207 and 209, REGENT-STREET,
(THE LARGEST IN EUROPE.)

Every Instrument may be relied on as at least equal to the description given of it. Inferior Instruments are carefully excluded from the stock.

Pianofortes by all the eminent English, Continental, and American Manufacturers, for Sale or Hire.

CRAMER'S ENGLISH PIANETTE,

22 Guineas.—Cramer & Co. manufacture this capital small Instrument. It has all the requisites of the best Pianoforte—check action, solid touch, agreeable tone. The Case is of polished Ash or Pine. In practising on this Pianoforte the fingers of the player will be strengthened much more rapidly than on an old instrument, loose in the key, and worn in the hammer. In Rosewood, 25 Guineas; in Walnut, 26 Guineas.

Purchasers are particularly requested to observe that this Instrument has not the common or single action, but the double or check action; and that Cramer & Co. are the only manufacturers of it in England.

CRAMER'S DRAWING-ROOM COTTAGE—

TAGE.—Cramer & Co. manufacture a Cottage Pianoforte of the medium size, and of the very best description. The tone is full, pure, and vocal. The touch is agreeable, rapid, and effective. This beautiful Instrument has been produced with an elegance of design, quality of wood, and general substantiality which have gained for it universal approbation. No better Pianoforte of this class can possibly be made. In Rosewood, 30 Guineas; Walnut, 31 Guineas. 207 and 209, Regent-street.

SECOND-HAND PIANOFORTES.—

A great number of Instruments by Broadwood, Collard and Erard, nearly equal to new, at 25l., 28l., 40l. and 45l.

CRAMER'S PIANO MÉCANIQUE,

manufactured by the inventor, M. Debain, of Paris, is an Instrument entitled to the foremost among the triumphs achieved in the mechanical arts. Any one can play upon it. Price 65 Guineas. If with a Keyboard, enabling it to be used by a pianist like an ordinary pianoforte, 90 Guineas. The Instrument is very strongly made, and warranted to stand any change of climate. 207 and 209, Regent-street.

CRAMER'S HARMONIUMS, as manu-

factured by the inventor of the instrument, M. Debain, of Paris, received the Prize Medal and the very highest commendation. Their superiority has been incontestably maintained.

| No. | Material | Stops | Price |
|--------|-------------------|--------------------------------|---------|
| No. 1. | Polished Oak Case | one stop, four octaves | 5 0 0 |
| | Ditto | one stop, five octaves | 9 0 0 |
| 2. | Ditto | three stops | 12 12 0 |
| 3. | Ditto | five stops | 14 14 0 |
| 4. | Ditto | seven stops | 19 19 0 |
| 5. | Ditto | nine stops | 22 15 0 |
| 6. | Ditto | eleven stops | 26 15 0 |
| 7. | Ditto | thirteen stops and knee action | 36 15 0 |
| 8. | Ditto | fifteen stops and knee action | 43 0 0 |
| 9. | Ditto | nineteen stops and knee action | 59 0 0 |

WITH PERCUSSION.

| | | | |
|-----|-------|---------------------------------|---------|
| 10. | Ditto | nine stops | 29 10 0 |
| 11. | Ditto | thirteen stops | 39 0 0 |
| 12. | Ditto | seventeen stops and knee action | 60 0 0 |
| 13. | Ditto | twenty-one stops | 87 0 0 |

CRAMER, BEALE & WOOD.

CRAMER'S CHURCH HARMO-

NIUMS, with two rows of keys, as manufactured by M. Debain, inventor of the Harmonium. Nothing can surpass these delightful instruments, either as regards solidity of workmanship or extreme beauty of tone. When united to the new Pedalier few organs of any ordinary size produce finer effects. Prices in Oak or Rosewood Cases, with knee action, 17 stops, 58 guineas; 21 stops, 66 guineas; 23 stops, percussion action, 110 guineas. 201, Regent-street, London.

CRAMER'S HARMONIUM PEDAL-

IER, fitted for any instrument.—M. DEBAIN, the inventor of the Harmonium, has recently constructed a set of Pedals, producing a quality of tone similar to the Pedal Pipes of a large Organ. It is admirably adapted for the practice of Fugues, as well as general Organ Music of a high class. The compass is 21 octaves (C to E); there are three sets of vibrators and two stops—viz., Basses, 8 feet C, and Contre-basse, 16 and 32 feet C. Price 37 guineas. 201, Regent-street, London.

CRAMER'S CHEAPEST HARMO-

NIUM IS DEBAIN'S beautiful Small Instrument in a Polished Oak Case. Price Six Guineas. Admirable tone, combined with the very best workmanship.—201, Regent-street, London.

CRAMER'S ANTIPHONEL, or Sub-

stitute for an organist or harmonium player (invented by M. Debain, of Paris), by which any one, even without a knowledge of music, can play hymn tunes, psalms and chants. It is also adapted for the performance of overtures, quadrilles, waltzes, &c. It can easily be fitted to any existing organ or harmonium, and is not liable to derangement. Price Twelve guineas. 207 and 209, Regent-street, London.

CRAMER'S CONCERTINAS.—PRIZE

MEDAL. Prices—2, 3, 4, 5, 6, 8, 10, 12, 16 and 18 guineas. 201, Regent-street.

CRAMER'S CORNETS, manufactured

by F. BESSON, the receiver of twenty-three medals. Cramer & Co. are now the sole Agents in London for the sale of F. Besson's well-known Brass Instruments. Estimates for Bands furnished. 201, Regent-street.

LITERATURE

A Memoir of Charles James Blomfield, D.D., Bishop of London, with Selections from his Correspondence. Edited by his Son, Alfred Blomfield, M.A. 2 vols. (Murray.)

It is the saying of Erasmus, that "Bishops have forgotten that in their title is the signification, literally,—labour, pains, application." Whether this could be said of the threescore and ten prelates by whom the London diocese had been administered from the year 1051 to that of 1828, we will not inquire, but we may safely assert that it is in nowise applicable to Bishop Blomfield, who presided over the see of London from the latter date until his resignation of the see in 1855.

Bishop Lowth was in the last year but one of his occupation of the metropolitan see when Charles James Blomfield was born, in 1786, the son of a schoolmaster at Bury St. Edmunds, Suffolk, so renowned for its milk, its maids and its stiles, that all three make part of ancient county proverbs, is hardly less famous for the prelates which it has given to the Church, both before and since the Reformation;—complacent Losing, scholarly Angerville, aristocratic Paschal, Wycliffe-hating Sudbury, courtly Edwardston, well-descended Peverel, humbly-born Wolsey and fierce Stephen Gardiner are Suffolk prelates of the earlier period. Wentworth's convert, Bale, experienced May, that "discreet professor of conformity," Overall, Maw, who accompanied Prince Charles to Spain, as Edwardston did Lionel, Duke of Clarence, to Italy, Brownrigg, born, like Wolsey, in the county town of Ipswich, and Charles James Blomfield are of the second epoch. Of this goodly list, three were born in Bury,—namely, Angerville, or Richard de Bury, as Dr. Holden, of Durham, calls him, Gardiner and Blomfield. The last possessed all the restless activity of Angerville, with more than his scholarship, and all the administrative power, with the tenacious memory, of Gardiner. We may add, that, in another respect, Blomfield closely resembled Brownrigg, who was a born wit and humourist, and of whom it was prettily and creditably said that his wit was "Page, and not Privy Councillor, to his judgment." It may be that many of these names and the fortunes of those who bore them were not unknown to the Bury schoolmaster's little and delicate son, when, on being asked as to his views of a profession, replied, "I mean to be a bishop!"—and kept his word.

Sixteen or eighteen hours a day at his books, a couple devoted to rowing or walking, and three or four to sleep, helped him to gain great honours at college and to injure his health, for his hours of relaxation bore no comparison with the extent of time he devoted to labour. Yet, even when thus toiling for distinction, few persons were equal to him for the point and liveliness of his talk; and his contemporary and friend, Chief Baron Pollock, adds the crowning testimony: "I never heard him originate or repeat an expression which, as a bishop, he could wish unsaid." This could not be said of another prelate whom Suffolk furnished to episcopacy—Losing, notorious for his greed, the vices of his youth, the wisdom of his later years, and for his droll, self-complacent maxim,—"When young, go astray; when old, mend your way!"

It was not, however, the very highest motive which influenced Blomfield in selecting the Church for a profession, and the throne of a bishop for his ultimate seat there. His son is

justified by the evidence of his father's letters in saying that his sire probably preferred the clerical profession "rather as affording means and leisure for literary pursuits, than as offering in its own peculiar duties that wide field of usefulness which, ere long, opened upon him." He was at that time, too, of so nervous a temperament that, on sudden alarms, he could not stand without clinging to a tree or railing until the nervous tremor had passed off. To a scholar,

Sickled o'er with the pale cast of thought,

the prospect of a quiet country living with abundance of leisure for literary pursuits, must have been a look forward in the direction of an earthly paradise. But, that attained, labour and not leisure was his portion.

Meanwhile, Blomfield began life by editing Greek plays and contending fiercely with his critics, one of whom, George Burges, is still alive, in extreme old age, and is not quite so much "forgotten" as Mr. Alfred Blomfield takes most of his father's adversaries to be. As a critic in Greek literature, Blomfield first appeared in the *Edinburgh Review*, for at that period he was a Whig, accepted Jeffrey's fee, took the arm of Sydney Smith, advocated Catholic Emancipation, and was, altogether, as different a man in the beginning and the end of his career as his Christian namesake, Charles James Fox himself.

Thoroughly honest, though sometimes inconsistent, he appears to have been from first to last. After his ordination he preferred being curate of Chesterford and taking pupils, to being the tutor to the sons of Bishop Pretzman, "with the salary of 400*l.* a year and the promise of a living." But he did not decline, on his first marriage, in 1810, to hold the rectory of Quarrington with the curacy of Chesterford (residing at the latter place), although it made him a pluralist and a non-resident incumbent, "a class which, in later life," after he became a bishop, "he was bent on exterminating."

In 1811, Lord Spencer added to his other benefices the Buckinghamshire rectory of Duntun, where Blomfield resided till 1817, working well as a rector, and fiercely as a critic of Greek scholars with adverse views to his own, of one of whom, Barker, who had a hand in Valpy's 'Stephens's Greek Thesaurus,' Mr. Alfred Blomfield makes this extraordinary statement: "This gentleman practised the art of writing criticisms upon himself, in periodicals, disguised under the initials of other scholars, in order to have the satisfaction of answering them in his own name. This, at least," adds Mr. A. Blomfield, after the above positive statement, "Elmsley thought he did." We suspect that those Greek controversies "bothered" the University old stagers, for we find Blomfield longing for the time "when a man may mention a Greek or Latin author to a company of Cambridge seniors without exciting a general thrill of horror and surprise." Awaiting that good time, the non-resident incumbent of Quarrington became a Buckinghamshire magistrate, riding to Sessions in yellow overalls! Rector and Justice of the Peace! but "in later years, as a bishop," says his son, "he disapproved of such unions." We may add that, if his Lordship had heard of a curate in his diocese riding through the mud in yellow overalls, the young man would have certainly come to grief.

The great scholar took the measure of the Buckinghamshire clergy, and treated them with as much scorn as he had lavished on George Burges and the other critics who had been severe upon him as an editor of Greek plays. In 1816, he had to preach the Visitation Sermon to the clergy at Aylesbury.

In writing to a friend on the choice of a subject, he says: "I was thinking of discussing the utility of learning to the clerical profession, but the mention of this might give offence to my worthy brethren in the Archdeaconry of Bucks; as it would be unpolite to hold forth in praise of a fair complexion to a party of negroes." This sort of smartness, combined with peremptory manners in transacting parochial business, gained for him a mixed reputation. He was quite as much feared as admired by the country-folk, one of whom remarked, "I call him Mr. Snaptrace."

And to these country-folk the Greek scholar was not always the most efficient preacher. When the livings of Great and Little Chesterford, and of Tuddenham, in his native county, had been flung into his lap, he preached at Chesterford, on the text, "The fool hath said in his heart, There is no God." He preached *ex tempore*, for the first and only time in his life, having forgotten his written sermon. Anxious to know how he had succeeded, he asked one of his congregation, on his way home, how he liked the discourse:—"Well, Mr. Blomfield," replied the man, "I liked the sermon well enough; but I can't say I agree with you; I think there *be* a God!"

In later life, his speeches in the House of Lords were remarkable for what this discourse wanted—clearness; but in that assembly, the Bishop never spoke without great previous preparation, his MS. notes for his harangues being made with the utmost care. At the former period, however, congregations were not critical, and people generally, between squires and supreme pastors, were very much in the case of the poor, as reported by the poet:—

"God cannot love" (says Blunt with tearless eyes).
"The wretch he starves"—and piously denies;
But the good Bishop, with a meeker air,
Admits and leaves them, Providence's care.

Patrons then gave livings to useful young fellows who could help them in agricultural matters, and though a new race of bishops was rising, there was the old leaven in some of those who were left. There was Bishop North, whose chaplain and son-in-law "examined two candidates for orders in a tent on a cricket-field, he himself being engaged as one of the players." Another candidate, calling on Bishop Pelham, received word, through the butler, to go and write an essay. Bishop Bathurst was known as the "lax bishop," even among lax bishops; but he was hardly more careless than the chaplain of Bishop Douglas, who examined candidates, as Garrick did young actors, while shaving, but, unlike the great player, "stopped the examination when the candidate had construed a couple of words!"

Under pastors like these a whole generation had grown up; and when Blomfield was at Chesterford, the jolliest day in the year was Easter Sunday, not because of the festival, but because of the nobility and gentry posting down to the Newmarket Spring Meeting, which commenced on Easter Monday. There were crowds and a fair in front of the inn, which adjoined the church, and while the rector was administering the sacrament, the aristocratic sportsmen would drive up to the inn, in open carriages, playing at whist, and, throwing out their cards, would call to the waiter for fresh packs. The rector and his diocesan, Howley, endeavoured to remove this scandal, but it was not till long after that the opening day of the Spring Meeting was changed to Easter Tuesday. The strongest resistance to a change in the day came from the Duke of York, who said that "though it was true, he travelled to the races on Sunday, he always had a Bible and Prayer-Book in the carriage!"

At the time when a prince made such a remark to a prelate, it was the custom to consider the lower orders of rural people as hopelessly ignorant and besotted; but we find instances of their acuteness and right way of thinking combined with a simplicity savouring of wisdom, and this even in the young. Take, for instance, the reply of the little rustic lad, who being asked what was meant by the words in the Catechism, "succour my father and mother," answered, "Why, giving on 'em milk!"

In 1819, Lord Bristol called the attention of his brother-in-law, Lord Liverpool, to Mr. Blomfield, the son of Lord Bristol's old friend, and accordingly he became rector of St. Botolph's, Bishopsgate, the gross value of which was 2,000*l.* a year. The rector, now a D.D., had to do with a new race of people; city knights, like Sir W. Rawlins, who said, at a public dinner, that he hoped to see the day prophesied of, "when every man should do right in his own eyes"; others like the obstinate Quaker who would remain covered at a vestry meeting in the church, but who was overcome by the resolution proposed by the rector and adopted by the meeting, "that the beadle be directed to take off Mr. —'s hat," which was accordingly done, and the Nonconformist having saved his conscience, submitted. Then there were men, and women too, of another quality, people of the lowest order and highest smartness, people on whom Dr. Blomfield and other gentlemen constantly called in the terrible winter of 1822-3. The people were relieved partly according to their families. Dr. Blomfield thought he detected the same children in different rooms, and at last discovered that, as he went up and down stairs, the people let down children by the window, from one story to another. He was just the sort of man to encounter such persons; and knights, Nonconformists, rough-and-readys, undoubtedly, respected him. Even the Jews of Houndsditch sent their children to his parochial school; and one clergyman, at least, paid him the compliment of stealing his sermon, in which he stoutly denied that the fall of the Brunswick Theatre was a divine judgment on the particular sufferers, and applied it to the visitation of the cholera.

His own compliments to the clergy were not many. He confessed that he had never heard but one good preacher, and that was Rowland Hill. Dr. Maltby accompanied Dr. Blomfield, and greatly admired the discourse; but when Mr. Hill floundered in attempting two pieces of Greek criticism, the two future bishops sat and winked at each other. We may add, that when they became bishops, they pretty strongly protested against all such visits, whether to fashionable, semi-schismatical, or sensational preachers generally. Hill, at all events, in no one point resembled Andrewes, of St. James's, Piccadilly, who "had the merit of preaching not his own sermons; he used to preach Paley"; and when asked to publish his sermons, "declined, saying he could not publish his manner with them."

When Dr. Blomfield became Archdeacon of Colchester, he certainly made the clergy of the archdeaconry feel that there was a man among them of the new stamp, who understood his business, did it himself, and compelled others to perform their own. Suddenly, in 1824, Law passed from Chester to Bath and Wells, and then the ladies seem to have resolved that Blomfield should go to Chester. Lady Spencer was "all on tiptoe" for it, and exhorted him accordingly:—

"My dear Doctor," she writes, "I hope I need not tell you that I trust I shall soon have to shake

you by the hand as Bishop of Chester. Don't be so indiscreet as to refuse it because it is a sadly poor one—remember it is the step which you must tread on to a richer one. All the old twaddles have dropped—young ones don't depart so readily; and I am myself so old, that I am impatient to see you seated on that bench, where you will be so admirably placed and so usefully disposed of. If the Metropolitan is translated, which his looks portend, the Bishop of London replaces him; and who so likely as yourself, with all your London knowledge and experience, to be the Bishop of this diocese, if you are on the bench—but then you must be, or my plan can't take place. Seriously, Lord Spencer and I are all on tiptoe to hear of your acceptance; for, though it may be present ruin, yet it will be some future affluence. And why should you not keep your St. Botolph? Indeed, pray, pray give me a line, and pray think, reflect and ponder with all your powers, before you refuse; for, indeed, I do think it a very different thing to refuse now than it would have been to have refused some time ago. I am so hurried and so bothered with all sorts of perplexities, that I am sure I must have written nonsense, and I cannot now read it over to be sure I have done so. Excuse me, my excellent friend, and take the intention of this note in good part, although it may be so inadequately expressed.

'Ever affectionately yours, LAY. SPENCER.'

This rattling Countess was Lavinia Bingham, daughter of the first Earl of Lucan; and Dr. Blomfield, under such inspiration, accepted Chester, retained St. Botolph's, and was not yet of opinion that pluralities and non-resident incumbents were stumbling-blocks in the Church. The new bishop speedily appeared in the light of a reformer. Tillotson was the first prelate, we believe, who preached without a wig, but that old-fashioned episcopal appendage had never been, as yet, entirely laid aside. Blomfield asked Carr of Chichester to unite with him in asking the sanction of George the Fourth for a dispensation from wearing wigs, at all. Nothing came of it; but when William the Fourth was told that the Bishop of London, in obeying his commands to dine with the King, would be glad to come without his wig, the monarch replied, "I dislike wigs as much as he does, and shall be glad to see the whole Bench wear their own hair." And the prelatial wig went out of curl for ever!

Bishop Blomfield's life-long characteristic was a desire to set things in order, and now he indulged it to the uttermost. He put unwelcome stumbling-blocks in the way of candidates for ordination, announced that he would ordain no person who had been in the army, navy, or trade (the tent-making of St. Paul would have disqualified the apostle); and would no more admit an Irish ordained clergyman into the diocese of Chester than Illinois would a negro into its administration. The old intimation, "No Irish need apply," was practically sustained by him to the end of his days.

Mr. A. Blomfield thus describes his father in his Chester period:—

"In speaking or writing on the subject of clerical duties, the Bishop would sometimes convey his admonitions with a certain sharpness of manner, which concealed the real kindness of his heart; nor was he careful to make that difference which the Cheshire clergy expected in his treatment of the mere curate, of narrow means and no position, and of the independent squire-parson of good family. When some one remarked that his portrait, painted soon after he became a Bishop, represented him with a decided frown, 'Yes,' he replied, 'that portrait ought to have been dedicated, without permission, to the non-resident clergy of the diocese of Chester.' He used to tell a story of one clergyman, whom he had reproved for certain irregularities of conduct which had been brought to his notice by his parishioners, and who had replied, 'Your Lordship, as a classical scholar, knows that lying goes by districts; the Cretans were liars, the Cappado-

cians were liars; and I can assure you that the inhabitants of — are liars too.' Intoxication was the most frequent charge against the clergy. One was so drunk while waiting for a funeral that he fell into the grave; another was conveyed away from a visitation dinner in a helpless state by the Bishop's own servants. A third, when rebuked for drunkenness, replied, 'But, my Lord, I never was drunk on duty.'—'On duty!' exclaimed the Bishop; 'when is a clergyman not on duty!'—'True,' said the other, 'I never thought of that.'

There can be no doubt that Bishop Blomfield was by nature a less stern man than he seemed. To him the tenets of Calvinism were repulsive; and the damatory clauses of the Athanasian Creed he declared to be no part of Christian doctrine, but simply the individual opinions of those who had compiled the articles of that doctrine previously recited in the Creed. This common-sense view of the case we owe to his natural kindness of feeling. After his sick-visitations, the visited used to say of him, that he was "the most forgiving man" they had ever met with. He certainly was not too exacting with regard to his clergy at this time, for he expressed an opinion that two full services on a Sunday were all that was needful, and that Wednesday evening lectures and similar services were not required.

In the House of Lords he at once took a distinguished place, for "his speeches were those of one who had something to say, not of one who had to say something." He had strong opponents, but they were chivalrous adversaries. In his first speech, in 1825, he thoroughly defeated an assault of Lord Holland, with great honour to the vanquisher. Upon which Lord Holland himself generously crossed the House, shook him warmly by the hand, and predicted his future success as a debater. We only wonder that a man of the Bishop's perceptions could ever have fancied that the cause of the Church might suffer if the new pleasure-grounds in St. James's Park were not closed against the public on Sunday mornings.

The Bishop, promoted to London in 1828, voted against Catholic Emancipation. He had previously listened to a five-hours' speech, in private, from George the Fourth against the same measure, and he had afterwards to meet the Duke of Clarence, who did not hold the same opinions as his brother:—

"Bishop Blomfield's acquaintance with the Sovereign who now succeeded to the throne had a singular commencement. He addressed a letter to the Countess of Dysart, at Ham House, requesting permission to see that ancient mansion. The Countess, hospitable as she generally was, at first declined, saying, 'I never saw any Bishop here in my brother's time.' Afterwards, however, she relented, and, as the most agreeable arrangement to all parties, desired Sir George Sinclair, who had married her granddaughter, to fix a day for the Bishop to dine there, adding that he might invite William the Fourth, then Duke of Clarence, and a large party to meet him. Sir George was not aware that the Duke had taken great offence at the Bishop for his recent speech and vote on Catholic emancipation. Observing that they took no notice of each other, he presented the Bishop to the Duke, who immediately addressed him in a voice loud enough to be heard by all the company, 'I had lately the pleasure of seeing the Bishop of — along with me in the lobby of the House of Lords, but I had not the pleasure of seeing the Bishop of London.'—The Bishop courteously replied, 'It is with regret that I ever vote on a different side from your Royal Highness.'—The Duke resumed, 'I was the more surprised, and I consider you the more in the wrong, because I thought I had reason to expect the reverse.'—'Whether I was actually in the wrong or not,' replied the Bishop, 'my conscience told me that I was in the right.' The Duke was about to continue, when dinner was fortunately announced. At table, the Bishop drew him

into conversation, and so completely conciliated his good opinion that some days afterwards he said to Sir George Sinclair, 'I like the Bishop far better than I expected, and I do not care how soon you invite him to meet me again.' He felt that he had gone too far, and asked, 'How did the Bishop look when I told him my mind?'—'I did not see,' replied Sir George, 'for my eyes were fixed upon the ground.'—'Did any one else observe how he looked?'—'No; I believe their eyes were turned in the same direction.' This anecdote is given on the authority of Sir George Sinclair."

The Bishop was as much opposed to the emancipation of lazy incumbents of his own Church as he was to the political freedom of another. He insisted on incumbents residing on their livings, even if these were in the worst part of the Essex marshes. If a curate could live there, a rector might. "Besides," as he said, "there are two well-known preservatives against ague. The one is a good deal of care and a little port-wine; the other a little care and a good deal of port-wine." He preferred the former; but, he added, "if any of the clergy prefer the latter, it is at all events a remedy which incumbents can afford better than curates." Then, he was seldom off his guard, even when another was decrying pluralities. Lord Tavistock was once doing this in the House, but the Bishop silenced him by the remark, "I say that it is impossible to do away with pluralities without doing away with *impropriations*,"—on which Lord Tavistock's family had waxed from maceration to fatness.

With a high hand did he subsequently rule or try to rule; but with all his seeming pride there was abounding love, and people who disliked, learned to regard him like the roughs of Bethnal Green, who began by sending a mad bull into the company who were laying the first stone of the first of the fifty new churches proposed by the Bishop to be built in the metropolis, and who ended by uncovering as the procession passed, preceding them, when the church was finished. Still, his ungovernable passion for business which led him to be the first where an attack was to be made, exposed him to satirical remark:—

"The Bishop had been bitten by a dog in the calf of the leg, and, fearing possible hydrophobia in consequence, he went, with characteristic promptitude, to have the injured piece of flesh cut out by a surgeon before he returned home. Two or three on whom he called were not at home; but, at last, the operation was effected by the eminent surgeon, Mr. Keate. The same evening the Bishop was to have dined with a party where Sydney was a guest. Just before dinner, a note arrived, saying that he was unable to keep his engagement, a dog having rushed out from the crowd and bitten him in the leg. When this note was read aloud to the company, Sydney Smith's comment was, 'I should like to hear the dog's account of the story.' When this accident occurred to him, Bishop Blomfield happened to be walking with Dr. D'Oyly, the Rector of Lambeth. A lady of strong Protestant principles, mistaking Dr. D'Oyly for Dr. Doyle, said that she considered it was a judgment upon the Bishop for keeping such company."

But the bite of the dog was as nothing compared with what he had to bear from recalcitrant clergy. Young curates of that section in the Church which professed unaffected veneration for bishops, when the latter are not opposed to them, would snub him for holding opinions quite contrary to St. Basil! It would be difficult to say whether his pity for these was not greater than his contempt for another class of young curates, who make such a business of sucking oranges and taking voice-lozenges in the vestries, as if their two or three hours' work in the day were a labour to consume them. He offended such men as these, who would have refused, in country districts, all allotments to

Dissenters,—wondering that the people in such districts were not *all* Dissenters. Not less did he offend another extreme party when he expressed his opinion that the writer of Tract 90 could hardly be a member of the Reformed Church. There certainly was no *sham* in him. He was the first to denounce Mr. Oakley's theory, that a Church of England minister might lawfully believe Romish doctrine, if he did not teach it!

Little inconsistencies are hardly worth noticing. He who had played at picquet in his early church days would not tolerate cards in his later, and he who now supported the daily service system had once been satisfied with Sunday services only. His dislike for churches exclusively for the poor was, perhaps, founded on his experience of the jobbery which would creep into such projects, the subscriptions for such alleged churches being sometimes converted into funds for churches with highly-rented pews and fashionably-dressed congregations, fellowship with whom was not to be thought of by miserable sinners in fustian. Setting aside, however, all smaller matters, Bishop Blomfield will be honourably remembered for three things—having introduced order and becomingness into the service of the Church, promoted church building, and set going the colonial church system. In all this, individuals may have suffered wrong, but the community profited; and the Bishop had to work under many disadvantages:—

"As an instance of the interruptions to which he was obliged to submit from persons who brought their real or imaginary grievances before him, the following anecdote may be related. A deputation, headed by a colonel in the army, waited upon him at London House, to represent to him the condition of the inmates of lunatic asylums, and to request him to make provision for their being regularly visited by the parochial clergy. The Bishop replied that he did not know whether the clergy would be prepared to undertake this additional burden; and that, even if they were, he did not think that the security thus afforded for the proper treatment of lunatics would be a very great one. 'But,' rejoined the colonel, 'we would hail with satisfaction any additional security; for I can assure your Lordship that there is not a single member of this deputation who has not himself, at some time or other, been an inmate of a lunatic asylum!' It may be imagined that, after this confession, the Bishop was not a little relieved when the deputation withdrew, and its members were seen quietly making their way past Norfolk House into Pall Mall."

Mr. A. Blomfield states that his father gave away a third of his income in charitable purposes; a little more stress is laid on his munificent almsgiving than is, perhaps, desirable. We prefer looking at the good man on his humorous side, of which there are many new instances given in these volumes, where some of the capital stories afloat might well have been preserved. However, here are samples of his humour:—

"Lord Althorp, when Chancellor of the Exchequer, having to propose to the House of Commons, a vote of 400*l.* a year for the salary of the Archdeacon of Bengal, was puzzled by a question from Mr. Hume, 'What are the duties of an Archdeacon?' So he sent one of the subordinate occupants of the Treasury Bench to the other house, to obtain an answer to the question from one of the Bishops. The messenger first met with Archbishop Vernon Harcourt, who described an Archdeacon as '*aide-de-camp* to the Bishop'; and then with Bishop Copleston, of Llandaff, who said, 'the Archdeacon is *oculus Episcopi*.' Lord Althorp, however, declared that neither of these explanations would satisfy the House. 'Go,' said he, 'and ask the Bishop of London; he is a straight-forward man, and will give you a plain answer.' To the Bishop of London accordingly the messenger went, and repeated the question,

'What is an Archdeacon?'—'An Archdeacon?' replied the Bishop in his quick way, 'an Archdeacon is an ecclesiastical officer, who performs archidiaconal functions'; and with this reply Lord Althorp and the House were perfectly satisfied."

With a neat application of a text he could illustrate a Christian opinion:—

"When a friend of the Bishop's was once interceding with him on behalf of a clergyman who was constantly in debt, and had more than once been insolvent, but who was a man of talents and eloquence, he concluded his eulogium by saying, 'In fact, my lord, he is quite a St. Paul.'—'Yes,' replied the Bishop drily, '*In prisons oft.*' And when, at the consecration of a church, where the choral parts of the service had been a failure, the incumbent had asked him what he had thought of the music, he replied, 'Well, at least, it was according to Scriptural precedent: *The singers went before, the minstrels followed after.*'"

And here is a happy saying to an unsuccessful grumbler:—

"A clergyman, who had sought preferment in many quarters and had failed, once said to him, 'I never got anything I asked for.'—'And I,' replied the Bishop, with characteristic quickness, 'never asked for anything I got.'"

A little "poke" at one of his oldest friends was an enjoyment to him:—

"On a former occasion, when Bishop Maltby, had objected to receive the diminished income which the arrangements of the ecclesiastical commission had fixed for the see of Durham on the death of Bishop Van Mildert, Bishop Blomfield, in allusion to Dr. Maltby's former classical labours, had remarked that, probably, he did not wish for an *abridgment of his Thesaurus*."

To the last, this turn for humour was the Bishop's characteristic, of which we could add many illustrations not contained in this book. That last came in 1857, two years after infirmity had caused him to resign his office. He was permitted to reside in the old palace at Fulham, the moat around which is as old as the time of the Danes, and where he had found relaxation in music and gardening. His greatest opponents in the day of battle will be ready to acknowledge his merits, his services, and his good qualities generally, and to admit that he was no unworthy successor in a line of metropolitan bishops, some of whom bear the brightest names in our ecclesiastical history.

Love and Mammon; and other Poems. By Fanny Susan Wyvill. (Bell & Daldy.)

THE promise which we found in 'Pansies' is still in the bud, and has not yet flowered into full performance. But this second book is as rich, we think, in a still higher promise. Many glimpses here reveal the true poet's eye; many lines have the real poet's touch. It would be easy to find passages of prose done into verse with a commonplace look and sound; but he would be very shortsighted who could see nothing further. The author has laid herself open to this charge chiefly on account of her having treated modern life in familiar phrase. We, for our part, are glad to overlook such flaws or blemishes in any honest attempt to compete with the novelists, and thus give to poetry that narrative and dramatic interest which, in our time, it so much lacks. The tide has turned in this direction. Mrs. Browning's 'Aurora Leigh' fervently set a great example; and Mr. Tennyson's 'Idylls of the King' showed him working his way with rare success towards that objectivity which enriches poetry with more incident and action, giving, as it were, the spirit of poetry a more commonly human embodiment. The younger followers must look closely at the work of this great master to see how far the poet can compete with the novelist in detail, and how much he can afford to leave

on the lower ground because of his own higher range.

Miss Wywill has in 'Love and Mammon' endeavoured to set before us the old, old story of marriage for money. The character of Flavia, with her siren beauty—soft eye, with "a fairy laughing in it,"—her "hair like golden water,"—and loose, light heart, in which the names of her lovers are written as in water,—is delicately drawn. Here is a good bit of external painting:—

Flavia that day was in her lightest mood;
And when, with evening, Philip Wynwode came,
She brightened to the zenith of her grace:
And, gliding in and out amongst the guests,
With softness, archness, waywardness for each,
Skillfully toned to chime with their ideal—
White-robed, with glittering leaves of sparry green
Carelessly thrown upon her skirts and hair;
That hair like golden water, half let loose
Over the lustrous whiteness of her neck—
She seemed the Spirit of some distant star,
Who, at quick fancy's bidding, had forsaken
Her realm of beauty.

Here again is a description which skilfully sets a stern, rejected lover, who has come for a last word, amid all the tender luxury and touching grace of the beloved's boudoir:—

A dainty roomlet, pranked in delicate green;
That high sea-tint, badge of the golden-haired.
Thro' the Venetian blinds, hot sunshine streamed
Full on a flowering rose-plant till it shone
A glowing citadel of crimson light.
Vases of choicest flowers filled the air
With sighs of too oppressive sweetness: Art
And Nature smiled harmonious: here a rose,
And there a statuette with snowy limbs;
Small pictures, each a treasure in itself,
And crystal chalices overtopped with flowers.
Twin shelves of darkest oak, grotesquely carved,
Displayed, within, such gay and goodly store
Of glittering baubles—china, filigree,
Enamel, gold-freckled lapis-lazuli—
That none could choose but think on certain stones,
Whose rugged round, cleft thro' and halved, reveals
A heart of sparkling secrets.

Not for him
Who sternly waited there, to sink in ease
Mid soft, luxurious cushions; not for him,
To bask in sunny fragrance of delight;
Or touch the ribbon of yon light guitar,
Because it once had swept her milk-white arm.
On him the appeal of luxury was lost—
He stood uncompromising and unmoved
When Flavia entered, beautiful beyond
The beauty of our common work-day earth.
A cloud of silvery grey, black knots, and jet,
Mourned gracefully the memory of him
Whose timely death had so enriched her life;
And harmonised with that unrivalled hair,
That hair like golden water.

This, of course, is only the outside of poetry's inner world; but, then, youth stands on the outside, and its eye is first caught by the fleeting glow and the vanishing grace. Our author's look, however, rests too much on externals. For example:—

Lo!
That queenly figure, bending all its pride
Beneath the load of unrequited love,
Till woman's weakness yields; and down she sinks
At her bedside, a soft, white muslin heap.

Now, this is in a description of a character very different from Flavia's, or we might have admired the cunning of that last appeal. It is a true woman who thus sinks, with bowed head, and heart breaking under the weight of its secret love. Muslin may do much in its tender sanctity and cloud-like veil of human heaven, but it fails to give the right thrill on this occasion. It is out of place; the author overrates its charms.

This glimpse of a happy home, into which a child-angel's face just peeped, with its blessing on the human love, and passed, goes deeper:—

And when red frolic warmed the winter night,
And dancing shadows were their company,
Oft at his feet she sat with upward gaze,
Reading his fiery-eyed serenity,
And holding, with his hand, the inward key
To every thought that stirred within his soul.
Yet lacked they not that hallowed nameless bond,
Known but to them whose lips have met in grief.
For three short years of fall-orbed happiness
An angel dwelt with them in human form,
With deep blue eyes and locks of dusky gold;
Lispings the sweet words, "Mother," "Father," dear;
And smiling blessings on them as they watched,
Heart linked in heart, above its dimpled sleep:

Till, life being all one sunny holiday,
It faded back into the angels' land;
Leaving behind a little daisied grave,
And, bending o'er that grave, a memory,
Faithful as sorrow—deeper far than death.

Many readers will make a music of their own for this sensible lyric:—

LITTLE MAY'S LESSON-BOOK.

She sits as steadfast o'er her task,
As Mother o'er a sleeping child:
A foolish word I paused to ask:
She answered me, but never smiled.
From lip, nor brow, nor studious eye,
Could I now win one passing look,
That aught of treason should imply,
To yonder old brown spelling-book.
Just once from earth to heaven wide,
As tho' she sought some unborn hour,
The bonnie bud looked up and sighed,
Grave with the promise of the flower.
Perhaps she saw bright shadows thrown
From motions of the angel crowds;
Or baby faces like her own,
Smiling amid the still white clouds.

And as I watch the earnest grace
Of little, tender, dark-eyed May,
Whose foot is foremost in the race,
Whose laugh rings merriest at play;
I pray that she may read aright,
A deeper lesson yet in store:
A lesson learned by heaven's light,
Or not at all for evermore.

I pray that fast in her may stand
Such purity of heart and lip,
As honours every woman's hand
That meets its clasp of fellowship:
Such purity as shed abroad
On lowered heads shall close the past,
And clear their eyesight for the road
That reaches home and rest at last.

I pray, when Love shall lead her out
Into the solemn deeps of life,
That trust may never yield to doubt,
Nor steadfast force to worldly strife.
Rather, tho' all be wrecked and lost,
May she have strength to rise and say,
"I bless this love, were life its cost;
It gives more than it takes away."

I pray that she may never scorn
Trifles that are life's daily food;
Respect towards the humbly born;
The gift of self for others' good;
The kindly look, the gentle tone;
The insight that divines a grief;
The silent sympathy alone,
Where silence best may speak relief.

Thus, standing upright to the mark
Which measures highest womanhood,
In nothing stooping, where 'tis dark,
And height may scarce be understood,
Perchance her lesson may be learned
So well that dying ones may say,
Their love, their hope, their faith was earned
From little, tender, dark-eyed May.

Altogether, 'Love and Mammon' is a book of promise, which will find its admirers.

Memoirs of Remarkable Misers. By Cyrus Redding. 2 vols. (Skeet.)

THE title of these volumes has a ring of precious metal which will be music to the ears of those who love money, and it gives promise of entertainment to idle readers who delight in personal gossip; but the work itself is not satisfactory. It is lifeless, ill-arranged, ill-written, and unworthy of its far from lofty subject. Misers are a class of moral imbeciles, who claim pity rather than scorn, charitable forbearance rather than disdainful anger; and the writer who draws attention to their unlovely infirmity should exhibit something of that reverential tenderness which protects from ridicule those who grope their way through life without the light of reason. Society has little need, and therefore little right, to exclaim against a frailty which is its own condemnation and punishment, cutting its victims off from human sympathy and separating them from every fountain of joy. But regarded from a right point of view, the miser is an instructive though sad spectacle; and the lessons taught by his sin and suffering are often pathetic and always profitable. There is wholesome warning in the universality of a passion which is found to taint men of every degree of mental capacity, every variety of natural disposition, every grade

of social condition; and there is unspeakable sadness in the reflection, that when greed of gain has once taken hold of a human being it is ineradicable, and steadily grows in strength in proportion as hopes are extinguished, perceptions deadened and faculties narrowed by increasing years. Frequently, ignoble thirst for gold is united with vicious tendencies that are extremely injurious to society; but in a large proportion of cases the miser is no one's enemy but his own. Whilst his wretched condition acts as a warning rather than as an encouragement to those who secretly nurse in their breasts the seeds of avarice, he is not seldom found the jealous guardian of principles of action which are beneficial and honourable. Honesty is a frequent characteristic of the miser. Whilst he defrauds himself of the happiness to which he has a legal right, he is often punctiliously scrupulous in his dealings with the world. Though he grudges the farthings which he spends on a repulsive meal, he would starve rather than steal the paring of an apple. In many cases sentiments more generous than strict pecuniary probity, sentiments akin to benevolence and chivalric honour, exist beneath the rags and grime that bring upon him the jeers and hootings of the street. Benson, the notorious miser of Cheshire, denied himself dignity and comfort through long years of voluntary misery in order that he might purge his honour of the blot fixed upon it by an enemy who claimed his hereditary estate. In the will by which the miser left the claimant means wherewith to test the soundness of his pretensions by legal investigation, he said "If I had gone to law and suffered the lawyers to fatten upon the property, it would have been all eaten up. There are funds now provided to determine the case, and keep the estate intact for its rightful owner. I believe it to be my own, but the idea that it may not be so has annoyed me. The individual to whom I fancy it belongs, if it does not belong to myself, will not venture into court for his right. Yet he has charged my relatives with keeping him out of it. Let him try the question when I am gone, with the money I leave behind me for the purpose. Thus he cannot say I have not left the means to others to do it for him. If he will not, let him retract his slanders against the dead and against myself, when lands and chattels can never more give me care for my family's honour or my own." Such was the aim of a life, the wretchedness and apparent meanness of which rendered a gentleman of ancient lineage and estate a byword and reproach throughout the counties in which his property was situated. Mention could be made of many other cases where the sordid rags and tatters of miserly habit have concealed from view human nature's fairest and most precious qualities, even as the pomp and glitter of ostentatious wealth have been known to blind observant eyes to the deformities of fortune's favourites. Of virtues so concealed family affection is, doubtless, the most common. The cases are numerous where men of narrow views have striven with all their little strength to acquire money, not for the sake of the money itself, but out of desire to place their offspring beyond the reach of penury; and from such cases many could be selected where death, having struck down the objects of affectionate care, has left the labourers in a cheerless old age, with no pastime but niggardly thrift, no amusement but the unsatisfying game of acquisition. To such unhappy men surely commiseration is due rather than disdain. Christian charity can even say something in behalf of a class of misers on whom it is customary to deal out unmeasured opprobrium—the very successful hoarders

who, in doting old age, delight to add pence to the millions which they have raised by persevering labour from small beginnings. Not long since, a millionaire died at a point of extreme senility, about whom rumour told strange and revolting stories. Doubtless most of these stories were gross exaggerations of the truth; possibly many of them were altogether false. It may, however, be assumed that one of the anecdotes was, at least, based on fact. In early life the old man had been a petty dealer, increasing his worldly substance by earning or saving pence; in the best years of his prosperous career he was a great capitalist and negotiator, winning thousands by a stroke of his pen; in his old age, with enfeebled powers and darkened mind, he amused himself with a daily routine of the petty transactions by which he had first raised himself from indigence. Living in a palace, which was only one of his seats, the childish old man used to be wheeled out on the terraces of his pleasure-grounds, in order that he might encounter a pretended higgler, placed in his way by his considerate children. The man who acted the part of dealer regularly, morning after morning, offered for sale the articles which the capitalist required for his dinner, and the millionaire in due form haggled and chaffered with him for the fowls and fruit thus offered for sale; and when he had bought at a rate far below market-price the produce of his own farm-yard and gardens, he was wheeled back to his library, and placed in his arm-chair, happy in the belief that he had "driven a hard bargain." Such was the scene which was day by day enacted under the shadow of the rich man's dwelling; and when it was reported to the world, there was loud derision for the Croesus who was deluded into thinking he had outwitted a tradesman, but no tenderness for the broken man whose life at its close thus reverted to the usages of humble, but laudable, industry which, nearly seventy years before, had made him a man of mark in his obscure class. Countless stories of the same kind could be told of misers. Every one remembers the great lawyer who, after winning wealth and eminence in his profession, had the nursery of his second childhood furnished with a table piled high with briefs, about which he was daily consulted by fictitious clients, who went through the form of paying him a fee at each consultation. The octogenarian did not yearn for heavy fees, but was best pleased with the small sums, which had given him delight when he first commenced the struggle of life in Temple chambers. Nor is the story less affecting of the aged miser who, on his death-bed, thinking of his early struggles, which he still believed to be affairs of the present, and wasting love on his only child—a daughter, who had been in the grave well-nigh fifty years—said, in pitiful accents, to the octogenarian wife who stood beside him, "We must be careful, dear—or our Lotty won't be a lady." His dead child's name was Charlotte.

But Mr. Redding has no tenderness for the class whom he portrays. Indeed, his remarkable misers are, with few exceptions, remarkably repulsive misers; and he delights in giving prominence to their most hideous features. For the most part, they are sordid, rag-wearing, offal-eating misers; and in his delineations of them the author's nearest approach to artistic treatment is a coarse method of contrasting gold with tatters, and accumulations in the three per cents with piles of old clothes. His "cases" are gathered from newspapers and chap-books, and he has been at no pains to point the particular moral of each memoir, or to classify his anecdotes. He omits well-known stories which show how inordinate love of money may exist in

the same person side by side with moral qualities which are most opposed to it, as in the case of "Vathek" Beckford's father, who could beard a king on his throne and yet shiver with fear at the apprehension of poverty, could spend a fortune on rebuilding his palace and yet grudge himself a glass of madeira in his last illness. In like manner no attempt is made to illustrate the most noteworthy effects of miserly habits on the intellect. Not a word is said of the tendency of misers to estimate wealth by its power to aid accumulation rather than by its power to purchase luxury. "Look," said a money-loving celebrity, when he saw a brother magistrate put his name down for 10*l.* on a charitable subscription, "that man has given away 10*s.* a year from himself and his heirs for ever." Even when the materials are ready at his hand for a striking piece of character painting, Mr. Cyrus Redding fails to make proper use of them. The story of Elwes the patrician miser, with its strange contradictions, has been told so often and so well that it might have been deemed impossible for a practised writer to give a feeble sketch of the man who refused a peerage and dressed himself in cast-off wearing apparel, who wrung pence from his servants and lent thousands to his friends, and who used to leave the whist-tables of St. James's Street to haggle for shillings with cattle-dealers and butchers in Smithfield Market; but Mr. Redding has contrived to give confusion and weakness to his portrait of the worthy whose career is familiar to all collectors of anecdotes. On other points, where a student of English literature has less excuse for stumbling, Mr. Redding has laid himself open to adverse criticism. In one page he speaks of the Tories of Queen Anne's time, as obeying their "apostolic champion, the notorious *Sachreville*," and in the next page, where he speaks of the Duchess of Marlborough, he says, "Pope satirized her in *Atossa*."

Studies in Roman Law, with Comparative View of the Laws of France, England and Scotland. By Lord Mackenzie, one of the Judges of the Court of Session in Scotland. (Blackwood & Sons.)

THE study of the Roman Law has never been popular in England. The ancient jealousy which produced the wrathful declaration of the Barons at the Parliament of Merton has existed with little diminution amongst us, if not to the present day at least to a recent time. The Civil law is a foreigner, and the natural Englishman dislikes a foreigner. He is moreover a foreigner who once tried to oust that common law which we were all taught to consider as the perfection of reason; and this has rendered our dislike still more intense. Moreover, the Civil law was the pet of the clergy, and was of course proportionally disliked by the laity; so that while the former duly obeyed orders in avoiding all knowledge of the municipal law of England, the latter prided themselves on their entire ignorance of the Roman law. The consequence has been that to the present time England has by no means kept pace with the principal nations of the Continent in the study. The list of names which we could oppose to those of the great civil lawyers of France and Germany would be so inconsiderable that we decline entering upon the comparison altogether.

Yet no person acquainted with the study of the science of the law will deny that a knowledge of the Roman law is essential to the character of an English lawyer in the higher signification of that term. Without a knowledge of the Roman law (or of any other law except our own) a man of retentive memory and natural quickness may fill his mind with those sta-

tutory provisions and legal decisions which, in nine cases out of ten, govern the common cases which arise in the every-day practice of a lawyer; but the tenth case will call for the exercise of higher power than the accurate recollection of what the legislature has enacted or what Lord Eldon has decided. Happily, there still arise some cases to be decided on principle, which call forth the powers of the real lawyer.

The study of the Roman law is as necessary to the lawyer who aspires to be something more than a mere depository of *dicta* and enactments, as the study of the nude figure is to the perfection of the sculptor, for it would be as easy for the one to trace in the beflouted outline of a lady of the present day the anatomy of the human form, as for the other to discover in the mass of statutes which are, session by session, made, tinkered, consolidated, revoked and re-enacted, the principles of the law.

The study of the Roman law being then necessary, yet being unpopular and notoriously neglected, it is no slight gain to have a readable book upon this subject. This Lord Mackenzie has undoubtedly supplied in the present volume; and the work is interesting, not from the introduction of digression or of anecdote, but simply from the fact that the author has a large and clear view of his subject, and is master of a simple and easy style of writing, which enables him to impart his knowledge in such a manner that it may be received without labour or embarrassment by the reader of ordinary intelligence and attention. Lord Mackenzie commences his work with an historical sketch of the sources of the Roman law and the political changes in the government, from the foundation of the city to the accession of Justinian. He narrates the steps by which the "many thousands of volumes which no fortune could purchase and no capacity could digest," were consolidated under that Emperor,—the fate of Justinian's legislation in the East and West,—and the revival of the study of the Roman law in Europe, with its progress to the present time.

In a chapter preliminary to the exposition of the Roman law, (which is the chief object of the work,) the author then takes a cursory glance at jurisprudence as a science, and makes some general observations on the principal divisions of law which form the subject of a course of legal education. In that part of this chapter which treats of the public law of nations there is perhaps the clearest statement of the facts and of the law of the late affair of the Trent that we have met with.

The exposition of the Roman law, which is the author's main object, is set forth in six parts, treating respectively of the law of persons, the law relating to real rights, the law of obligations—of succession, of action and procedure, and of criminal law and procedure. These parts are divided into numerous chapters, each treating of the law upon a particular *status* or thing, as Citizens and foreigners, Slavery, Marriage, Legacies, &c.; and at the end of each chapter, when the subject admits it, a short statement of the law which prevails in France, England and Scotland is added; rather intended, we apprehend, to interest the student by suggesting the more obvious comparisons which arise between the provisions of the several laws, than pretending to be a formal statement even of their principal provisions. The author freely admits the imperfection of this part of his work, arising principally from the narrow limit within which he has thought proper to compress it. In his preface, Lord Mackenzie acknowledges the great assistance he has found in this part of the work from the excellent 'Compendium of English and Scottish Law,' by Mr. Patteson. On the

law of marriage, and on several other subjects, these comparisons of the Roman, French, English and Scottish laws are very interesting, and executed with great ability.

It would not be difficult to point out some minor faults in this work. Occasionally a statement is misplaced, as that of the law which renders the Gretna Green marriage, after the manner of our forefathers, invalid in England, which should be stated under the English, not the Scottish, law of marriage. Again, we occasionally meet with phrases which none but Scottish lawyers are bound to understand, as that a Scottish promise of marriage may in certain cases be "resiled." Where the general execution of the work demands so much praise as in the present case, we are ashamed to dwell upon such defects, which are not only small, but are of rare occurrence. The book contains a view of the Roman law which is at once clear and comprehensive, and it will be invaluable to the student as the 'Blackstone' of the Roman law.

Correspondence of Fräulein Günderoode and Bettine von Arnim. (Boston, Burnham; London, Trübner & Co.)

We are afraid the world has grown too old for the proper enjoyment of a collection of rhapsodical letters, which were published, in German, some twenty years ago, under the title, 'Die Günderoode,' and which now reappear in an English translation, with a far more appropriate title, since the precocious "child" Bettine wrote a much larger proportion of the letters than her spiritual adviser, the seraphic Canoness. The period in which they are composed extends from the year 1804 to 1806, and consequently represents a state of the Teutonic mind in which the rollicking sentimentality of the romantic school had succeeded the prosaic "enlightenment" of a previous generation. The creed that prevailed was the emancipation of the artist from all conventional obligations, and the ruling passion was hatred of "Philisterei," viz., that regard for decency and order, by which civilized society is held together. Choice spirits who abhorred the old-fashioned Deism of Berlin, indulged in a fantastic paganism, and found that they were the salt of the earth recklessly scattered on an ungenial soil. In such an age, of which Novalis is the purest, and the 'Lucinde' of Frederick Schlegel the coarsest representative, excitable young ladies would naturally rush into letter-writing, and mutually bespatter each other with admiration, like Bettine and Caroline Günderoode. When the fair enthusiasts have been brought up in a highly-cultivated and intellectual society, it is likewise natural that their letters should be sometimes amusing, and that here and there a vein of shrewdness should appear amid a solid mass of nonsense. Bettine, who is a degree younger in these letters than when she corresponded with Goethe, is no bad specimen of a thoughtless devil-may-care sort of girl, who has a ready talent for observation and humorous description, and a more artificial tendency to indulge in the sentimentalities and fantasies of her time. Whether the reader will be ready to accept Fräulein Günderoode as the pure, dignified, gentle being who was exactly qualified to guide the little madcap, may be doubted, although such is evidently the belief of the American translator of the letters. Indeed, when we bear in mind that poor Günderoode killed herself at the early age of twenty-six, because (they say) Professor Creuzer, the mythologist, refused to worship her among his many deities, her qualifications as a pilot on the sea of life become extremely questionable.

The translation is very creditably executed,

and any one who has read Bettine's letters in the original will be ready to agree with the translator that his (or her) task has been one of "great difficulty." There is one thing that Bettine hates more than *Philisterei*, and that is the employment of any stop that exceeds the value of a comma. Hence sentences run into each other in a fashion which causes infinite difficulty to the reader, while it indicates the most perfect ease on the part of the writer, whose style seems to be modelled on that of the famous, though anonymous, English historian, who stated, to the great discomfiture of children, that "King Charles walked and talked, half-an-hour after his head was cut off."

In an article from 'The Dial,' which stands as a Preface to the translation, an ingenious theory is propounded. At the end of one of the early letters, Caroline says: "Wenn du Muse findest so schreib bald wieder," and, on the assumption that "Muse" is written for "Musse" (leisure), the words, "If thou findest time write soon again," appear in the text. In the Preface, however, the belief is affirmed, that "Muse" ought not to be spelt "Musse," and that the sentence means that the ladies waited for the inspiration of the Muse before they began to write. This interpretation is so very pretty, that although we should prefer "*die* Muse," we would gladly accept it, did we not find Günderoode saying a few pages further: "Es ist keine heitre Zeit in mir, viel Muse, und keine Begeisterung für sie." As we fear we cannot agree to the fact that Günderoode has "much Muse," and no inspiration for her, we must needs double the "s," and if we do it in this case, we are sorely tempted to do it in the other.

The Missionary Life and Labours of Francis Xavier, taken from his own Correspondence: with a Sketch of the General Results of Roman Catholic Missions among the Heathen. By Henry Venn, B.D. (Longman & Co.)

It was scarcely to be expected, perhaps, that the Honorary Secretary of the Church Missionary Society should fitly write the life of Francis Xavier. That famous father of missions was a Roman Catholic and a Jesuit, and seventy years after his death the fifteenth Gregory made him a saint. Mr. Venn has compiled an interesting volume, but it is one rather of controversy and criticism than of biography. Few biographers, in fact, set out with the hope of making so little of their hero. Of course, the Catholic records of Xavier are extravagant and often imaginary; yet, for the most part, they were hardly worth refuting, while, as for the miracles, it is almost amusing to encounter, in a bran-new book, a grave denial that Xavier raised the dead, rained ashes on the city of Tolo, was lifted a cubit from the ground when he celebrated mass, or had his crucifix brought back to him from the depths of the ocean by a supernatural crab. Yet Mr. Venn, it appears, still stands in awe of these legends. His whole design, indeed, is evidently that of destroying whatever authority may still attach to the name, not of Xavier alone, but of all his successors in the same faith, working in the same field. The concluding chapter is, indeed, a direct, wholesale, and, we think, unfair attack upon Roman Catholic missions, which, if they did not permanently multiply converts to the extent that their promoters alleged, at least prepared the soil and laid a wide basis for those who followed them. Few who have familiarized themselves with the particular class of publications referred to will admit that the "records of Protestant Evangelical Missions" are almost invariably, as Mr. Venn suggests, "cautious and candid," however "multitudinous" they may be. Exag-

geration has been the rule on both sides, and this memorial of Francis Xavier is one illustration of it.

The "Saint" was born in April, 1506, at the Castle of Xavier, in the Kingdom of Navarre, at the foot of the Pyrenees. On his mother's side he claimed community of blood with the Kings of Navarre and the Bourbons. The first we hear of him is twenty-seven years later at the University of Paris, whence he writes to an elder brother in Spain, vindicating from certain charges himself and his friend, Ignatius Loyola. Loyola, he acknowledges, had saved him from debt and the Protestant heresy. With other associates, these two trusty Catholics began early their proselytizing wanderings, and Xavier was appointed to labour in India,— "India" then including East Africa, Arabia, Persia, Hindostan, China and the Indian Archipelago. To that region, as "Papal Nuncio to the New World," with letters of recommendation to kings, princes and governors, he journeyed, dining on board ship with John of Portugal's Viceroy; nor did he ever return. Three years were passed in Southern India, two among the Chinese Islands, four in managing the Indian missions and apostolizing in Japan, and one on the coast of China, where he died, in December, 1552. On the voyage, visiting Socotra, he saw a woman walking with two little children: seizing the children, he forthwith baptized them—an act of zeal which might have been attended with troublesome consequences. But at Goa his prospects seemed splendid. There was a cathedral, with a resident bishop, a chapter of canons, a Franciscan convent, and many religious houses. However, the people, European and native, were proportionately godless. And here began his difficulties. For example, the Viceroy was a luxurious man, who—

"took advantage of Xavier's influence with Ignatius to supplicate from the Pope a variety of superstitious favours, such as privileged altars, and Indulgences for the Viceroy himself and his wife, together with some favours of a more practical kind, which none but Popes could grant, namely, that the season of Lent should be transferred from its present position in the Calendar, which was inconvenient for that climate, to the months of June or July, and that the Bishop of Goa should be spared the trouble of taking long voyages to administer confirmation, by enabling him to confer the benefits of that rite at distant settlements through the imposition of the hands of his vicars."

Glancing around, he might well have recoiled from the responsibility of the work he had undertaken. Westward, he saw Africa, with Ethiopia, where Prester John—or Precious John, as some of the Jesuit Fathers called him—was still supposed to reign; northward, Arabia and Persia; southward, a world of continents and islands; eastward, Hindostan; close to him, sordid factories and dissolute garisons. So he began humbly with the pearl-divers east of Comorin, amid whom he wrote his famous account of missionary triumphs. He travelled through the villages ringing a bell, preaching, praying, baptizing, until the very labour of baptizing wearied his hands, and his voice failed him through much repetition of the Creed. He adds:—

"Conceive, therefore, what kind of life I live in this place, what kind of sermons I am able to address to the assemblies, when they who should repeat my address to the people do not understand me, nor I them. I ought to be an adept in dumb show. Yet I am not without work, for I want no interpreter to baptize infants just born, or those which their parents bring; nor to relieve the famished and the naked who come in my way. So I devote myself to these two kinds of good works, and do not regard my time as lost."

He confesses to having baptized on that coast, within a year, a thousand infants "who had died before they could commit sin, and who therefore had gone up to heaven intercessors on his behalf." Afterwards, it appears that girls and boys are sinless up to the age of fourteen, which is a sweeping assertion to make in India. Alluding to the practice as persisted in to the present day, Mr. Venn cites a curious report from Dr. Perochean, Vicar-Apostolic of Su-Tchuen, in China:—

"We pay some Christians, men and women, who are acquainted with the complaints of infants, to go seek out and baptize those whom they shall find to be in danger. It is easy for them to meet them, particularly in the towns and large villages, where, on fair-days, there is to be seen a crowd of poor people reduced to the greatest poverty, who come to ask for alms. It is in winter especially that the number is highest, because want is more pinching at that time. You see then on the roads, at the gates of the towns and villages, or crowded together in the streets, poor people without number, with hardly any clothing, having neither fire nor lodging, sleeping in the open air, and so attenuated by the protracted torture of hunger, that they are nothing but skin and bone. The women, who are, in this case, the most to be pitied, carry on their back children reduced to the same extremity as themselves. Our baptizing men and baptizing women accost them in the gentle accents of compassion, offer them, gratis, pills for these little expiring creatures, give often to the parents a few farthings, always with great kindness of manner, and an expression of the liveliest interest in their situation. For these poor creatures it is a sight of transport almost unheard of. They willingly allow our people to examine into the state of the child, and spill on its forehead some drops of water, which they declare to be good for it, while, at the same time, they pronounce the sacramental words. Our Christian baptizers are divided into two classes. Some are travellers, and go to a great distance to look for dying children."

Yet Xavier refused to baptize a Brahmin who was willing to become a Christian if the fact could be concealed. Mr. Venn sneers at the ardent joy, or "seraphic feeling," expressed in Xavier's exhortations to Christians at home, that they should come forth and aid his Indian labours; but there is no reason to doubt his sincerity, or that he did actually work for the spiritual and physical welfare of his great flock. The Christians of Cape Comorin in the summer of 1544 were attacked by an unconverted tribe:—

"Some were killed, a large proportion taken away as captives, and the rest driven into caverns of the rocks overhanging the sea, where they were perishing by hunger and thirst. Instantly Xavier freighted twenty of the country boats, called dhonies, with provisions, and started with them himself to succour the distressed Christians; but adverse winds baffled all his attempts to reach the promontory of Cape Comorin. He remained eight days at sea, using every effort, but in vain, and was at last obliged to return to Manapur, to which place many of the wretched fugitives found their way. Xavier having waited in vain for a change of wind, went on foot to Cape Comorin, a distance of fifty miles, and thus describes the scene:—"Never did I witness a more wretched spectacle: attenuated countenances, ghastly with famine; the foul carnage throughout the country—here unburied corpses, there the sick and wounded at the last gasp; decrepit old men fainting through age and want; women giving birth to children on the public roads, their husbands with them, but unable to procure help; all in the extremity of one common destitution."

His efforts at this period were worthy of all imaginable praise, and it was not his fault that his admirers made miracles out of them. No doubt, he took at first a sanguine view of his own success; but, at a later epoch, after years of trial, he acknowledged where the Mission had failed:—

"The caste of fishermen on that coast retain their nominal Christianity to the present day. But they seem never to have spread, or to have exercised any influence upon the surrounding heathen."

They have not repudiated, at all events, the Christianity they embraced three centuries ago at the persuasion of Francis Xavier and his predecessor. This surely is a result, though of no very considerable magnitude. Historically, it is far from uninteresting.

At this point Mr. Venn diverges into the legendary history of Xavier, analyzing some of the reputed miracles, ten in number, which led to his canonization. Confessedly, however, the missionary himself employed the word miracles loosely and enthusiastically, without really claiming to have been a worker of "miracles." Gregory the Fifteenth declared, of course, that Xavier had raised the dead, turned salt water into sweet, and restored the blind to sight; and Mr. Venn thinks it worth while to argue upon the testimony adduced. "Let us bring these reputed miracles," he says, "to the criteria of Paley, and their authenticity vanishes." Paley's help is surely not wanted.

The next expedition of Xavier was to the Spice Islands. At Macassar, in Celebes, there were several Christian villages already:—

"A priest who had ministered to them had lately died. Xavier, therefore, immediately visited these Christians, and describes, with great satisfaction, his baptizing children and infants, many of whom died immediately afterwards, from which he inferred that they had been kept alive by a divine interposition until the entrance to eternal life had been thus opened to them."

Thence to the Moluccas, where he baptized a queen; to certain islands inhabited by poisoners, not now recognizable by this description; and back to India, where he stayed fifteen months, organizing the Jesuit missions. Mr. Venn now says of him—

"Upon reviewing Xavier's character it will appear that he possessed in a very high degree some of the essential qualities of the leader of a great enterprise. He was of a generous, noble, and loving disposition, calculated to gather followers, and to attach them firmly to his leadership."

Nevertheless, he was, Mr. Venn believes, unfitted for the command of a great mission. In 1548 and 1549, his confessions of failure begin; and they are interesting. To a missionary at Travancore he writes:—

"If you will, in imagination, search through India, you will find that few will reach heaven, either of whites or blacks, except those who depart this life under fourteen years of age, with their baptismal innocence still upon them."

And next, to Ignatius Loyola:—

"The Portuguese in this country only rule the sea and the coast. They have no footing in the interior, except in the cities where they have established themselves. The natives, on account of the enormity of their wickedness, are as little as possible fitted to embrace the Christian religion. They so abhor it, that they have no patience to listen to us if we introduce the subject. To ask them to become Christians is like asking them to submit to death. Hence all our labour is at present to guard those who are now Christians."

The proposal to which he afterwards humbled himself was, that India should be converted, not by missionaries, but by the civil power. The viceroys and magistrates of Portugal were to proselytize, and if they neglected this, were to be imprisoned for years and deprived of all their possessions. Thus for a time disheartened, he visited Japan, whereof he observes—

"The Japanese excel all other nations yet discovered in honesty; so that I believe no uncivilized nation can be compared with them in natural goodness of disposition. They are ingenious, yet not in the least given to fraud."

Moreover,—

"Xavier reports that there was an almost universal belief in the immortality of the soul; and that the learned amongst them indulged in deep speculations upon such questions as these:—"When death has silenced the voice of the body, has the soul, at the moment of its departure, the power of utterance?"—"If a departed soul were to return to the world, what would be his chief address to the living?"

Two years dispelled at least the most ambitious of his expectations, and the Mission, after ninety years' existence, was ultimately extinguished. But Xavier himself writes, contemplating a visit to China—

"I shall succeed in opening it for others, for I can do nothing myself."

The Japanese regarding the Chinese with veneration, Xavier imagined that, by influencing the latter nation he should also be influencing the former. But his new enterprise was one of enormous peril—

"He learnt upon his arrival at Sancian that any attempt of the Chinese to smuggle an European into the country would be visited with the death of themselves and of their families. Nevertheless, he tried to bribe the Chinese to run the risk. Numbers refused. He found, at length, a merchant whose junk only contained his own family and servants, who was willing to run this risk of life. The desperate nature of the risk is evident from the greatness of the bribe, Xavier calls it 'enormous.' It was to consist of twenty 'pics' of pepper, valued at 200 moidores, which, Xavier adds, would be to the Chinese merchant worth 350. In English money this would have amounted to nearly 300*l.* even at that day, a sum representing many times the amount at the present time. Such was the liberality of James Pereira, that Xavier was able to offer this sum. The courage, however, of Xavier's interpreter failed him, and he deserted. A lay brother whom Xavier was to take with him proved, he says, false, and was expelled by Xavier from the fraternity."

On that coast he died, without a companion to cheer him: no priest conducted his funeral, or laid him in his grave; he died in a shed constructed of branches, amid a mob of traders, and was hurriedly buried in the sand. In a summary of Xavier's character, Mr. Venn is generous in his attempt to be impartial, and renders high praise to the missionary's intellect, energy, goodness of heart, courage, sympathy with all other missionaries, and love of peace. But,—

"reduce his history to its true dimensions, and Protestant Missions have no reason to shun a comparison. His pretensions fall short of those of Samuel Marsden and his two European Catechists in New Zealand, spending their first Sunday amidst a crowd of warlike cannibals, upon a coast which had been shunned for many previous years by every merchant ship; or of Henry Martyn, the solitary witness for the word of Christ in Shiraz, disputing with the most learned Mahometans in their own tongue, and winning their admiration for his person, notwithstanding their bitter enmity to his religion; or of Williams, in his visits to the islands of the Pacific, where no European before himself had landed, and persevering in his efforts to impart to them the Gospel of Christ, till his life was sacrificed at their hands; or of Judson in the prisons of Burmah."

The passage was unnecessary, is invidious, and serves no purpose whatever, except that of suggesting that some missionaries are jealous of the fame which belongs to Xavier. Whatever dangers the good Jesuit encountered, he was ready to face them, no matter how formidable. It is to be regretted that a volume otherwise very welcome should have been disfigured by Mr. Venn's incessant consciousness that he is writing of a pilgrim from the gates of Rome.

Chemistry. By William Thomas Brande, D.C.L. and Alfred Swaine Taylor, M.D. (Davies.)

CHEMISTRY is a progressive science, and "a student of chemistry must be prepared for a new crop of systematic names, and a new classification of elements and compounds, every ten years." If this ceased to be the case, it is clear we must have rung out all the changes on the sixty-six known elements, and have determined every possible state of intercombination.

The philosophy, too, of an advancing science must be constantly subject to modifications. As our methods of analysis are rendered more delicate, and our applications of physics, to determine the nature of bodies, become more refined, important changes must arise out of our reasonings by the light of our improved knowledge.

The hypotheses which aid us to-day may fail us to-morrow in explaining some newly-discovered phenomena. The accepted theory of the chemists of the popular school of this year, may, probably will, fade away in the next, before some more enlarged deduction; as completely as did the phlogistic doctrine of Stahl before the positive philosophy which distinguished the disciples of Lavoisier.

Lavoisier was the first to systematize chemistry. Before his time there were numerous discoveries, proving the complex characters of matter, and pointing to the laws by which its constitution was regulated. Scheele, in 1780, brought the great powers of his philosophic mind to bear on an examination of "air and fire," and he clearly saw the true causes in operation to produce combustion. About the same time, Dr. Priestley made the discovery of oxygen, and laid the foundation of pneumatic chemistry. But the blinding influence of that philosophy which taught that "phlogiston, the simple inflammable principle," was ever present, retarded the progress of the science.

A careful study of the history of chemistry at this period will show how powerfully the language, in which truths were expressed, acted to obscure the truth itself. "A demonstration that heat or warmth is composed of phlogiston and empyreal air," while it expresses facts with which we are now familiar in the chemistry of combustion, conveyed no idea to the mind of the real nature of the phenomena under consideration. When Lavoisier, however, gave the world the advantages of a systematic nomenclature—when empyreal air received the name of oxygen gas, and its combinations with metals were termed oxides,—a wonderful stride was made. Relieved from the pressure of a false idea, truths burst, like the buds of spring under the influence of light, into leaf. Davy discovered potassium, sodium, and the other metallic bases of the alkalis and earths. He improved the chemical philosophy, and introduced yet more distinctness into the Lavoisierian nomenclature. Upon this followed the atomic theory of John Dalton, which completely explained the laws regulating every kind of chemical combination. Clear as this theory appears to us, we find Davy calling it an "ingenious supposition," and Dr. Thomson writing of it as a "curious theory." Wollaston and Proust failed for some time to penetrate the atomic mystery, and the great Berzelius only received it after long years of earnest study.

With each of the steps to which we have referred, there arose "a new crop of systematic names, and a new classification of elements and compounds." With the knowledge of this fact, and with the consciousness that in such a science as chemistry is, this must continue to be the case, why have the authors of this volume

indulged in such language as we find in their Preface? Can Drs. Brande and Taylor really intend to convey to the young student of chemistry, as the impression on their minds, the advantages of idleness, the importance of standing still? They say, "It is not necessary to the progress of this science that its language should change with the opinions of every new theorist. The numerical value of atoms and volumes is not of so much importance to a student, as a correct description of the properties and uses of the substances which they represent. On this part of the subject much labour appears to us to have been wasted by certain writers. They have apparently been engaged in working out an idea, and seeking for some Utopian standard of perfection."

With the theory of types, and the discovery of homologous series before them,—with, as we must suppose, a knowledge of the successful application of hypothesis to the discovery of anhydrous acids—of the modes of artificially constructing many organic acids and other complex natural bodies,—even to the promise of producing in the laboratory most of the substances discovered in the animal economy,—we cannot account for the strange paragraph which we have quoted. The authors are true disciples of the school of inductive philosophy, and are content with "fitting hypotheses to facts"—forgetting when they say, speaking of modern chemists, that "they have introduced a deductive system, by which facts are made to bend to hypotheses," that they are expressing their own prejudices rather than the logical truth. Modern chemistry is precisely in the position which is described by Sir John Herschel:—"The inductive and deductive methods of inquiry may be said to go hand in hand, the one verifying the conclusions deduced by the other; and the combination of experiment and theory which may be brought to bear in such cases forms an engine of discovery infinitely more powerful than either taken separately. This state of any department of science is, perhaps, of all others the most interesting, and that which promises the most to research." To the combined influences of inductive inquiry and deductive philosophy we owe the discovery of those artificially-formed essences of fruits and flowers which are now of great commercial importance. The whole series of compounds which we gather from what was formerly the refuse of the gasworks result also from them. We should never have obtained the mauve, magenta, and other beautiful dyes derived from aniline, if deduction had not aided induction. We are quite ready to admit that the student who now commences his acquaintance with chemistry must, if he desires to master the science, bring all the powers of his mind in full activity to bear upon it. With the rapid discovery of new compounds, the construction of new names has, naturally and properly, kept pace. But these names are founded on facts previously determined, and they convey to the mind the true constitution of the substance to which the compound term is applied. The principle, the hypothesis, by which this system of nomenclature is regulated, being once understood, all becomes easy.

With these remarks we advance to the more satisfactory task of recommending this volume to all who require the most recent information on chemical science. The newest discoveries have been studied with care and described in clear language. For example, the delicate processes of spectral analysis are given with great conciseness and correctness. We are told of the methods by which the beautiful coloured bands produced by burning metals are ren-

dered evident; and it is explained to the reader how he may infer the physical condition of the sun's surface from an examination of the sun's rays. The new metals discovered by this mode of analysis—cesium, rubidium and thalium—are fully described. So delicate and refined is this mode of search, that rubidium existed in the Durckheim water, in which it was first discovered by Bunsen, in the proportion of 1-2,000,000th part of the weight of the water. Further, by the same process of inquiry, this apparently rare metal has been found to exist in beetroot; and "it has also been found in the ashes of tobacco, tea, coffee, and in the crude tartar derived from the grape." Surely these are evidences of the value of deductive science! A series of useful tables and a copious index add to the value of the volume.

Friendless and Helpless. By Ellen Barlee. (Faithfull.)

'Friendless and Helpless' is a record of operations in relief of one of the most distressed classes in London—the needlewomen—and the liberal support which has been accorded in furtherance of the object, and it is the produce of "a daily gleanings of experience in the field of misfortune." This experience has suggested remedial measures which have been partly put in practice. Wisely, there has been no attempt at supplying the part of the one whose duty it is to care for the spiritual necessities of the distressed: but rather, the plan has been, first to raise the temporal prospects of the poor and necessitous, and so to prepare the soil for the divine seed to take root and expand. Such a system must have been welcome to the clergy, whose office should be not so immediately concerned with the relief of temporal wants; and at the same time it took away the excuse for that religious cant and hypocrisy which is often resorted to in order to elicit charity.

Amongst others with whom our author had to deal, and concerning whom she gives her experience, are those who are called educated women,—women who have been taught to read and write, but whose faculties never received any specific culture. These persons are principally the children of small tradespeople, and have been kept at home in indolent indulgence, struggling after *false gentility*,—dress and appearance their chief aim, whilst a little desultory assistance in housework and ill-remunerated crochet and embroidery form their principal occupations. Their parents die, and they are reduced to absolute want, all the harder to endure from their not having acquired the habits of those who are inured to hardship.

One remedy suggested for this evil was the opening of offices in London and other large towns, where the employer on the one hand, and the searcher for employment on the other, could register their various needs and capabilities. Some success attended the effort, but the experiment principally served as a test of the women's insufficiency. There was found amongst them most frequently a want of application and steady plodding perseverance: in some instances enough of spasmodic energy to conquer the first difficulties, and no more.

This little work indeed is full of valuable information with regard to the relief of distress. Amongst other things, the author condemns the habit of "impulsive street donations," as well as the careless distribution of coal, bread, and other provision tickets by district visitors. There is a chapter concerning the Government *Dépôt* in Piccadilly for the employment of 1,000 unmarried women.

Upon the whole, it may be said that, in a

small compass, this work contains much that is of interest.

OUR LIBRARY TABLE.

Life in the South: from the Commencement of the War. By a Blockaded British Subject. *Being a Social History of those who took Part in the Battles, from a Personal Acquaintance with them in their own Homes. From the Spring of 1860 to August 1862.* 2 vols. (Chapman & Hall.)—"The Blockaded British Subject" of the above title appears in the body of the work under her proper name and title, as Miss Sarah Jones; and speaking of the "professional engagement which first tempted her to visit Virginia," she says, "In order to gratify a somewhat too expensive taste, and at the same time preserve my independence, I had resolved to take up my abode in a Southern family, and give lessons in the 'ornamental branches,' as all accomplishments are called." In other words, Miss Jones is an English lady who, whilst she resided as a governess in various families of the Slave States, had opportunities of studying the domestic side of Southern life, and now places before the public the results of her observations. On the whole her testimony is favourable to the Confederates; and if her volumes had appeared two years since, before English people had arrived at a just appreciation of the good as well as evil features of those whom Northern partisans have systematically misrepresented, we should have warmly recommended them to the notice of our readers. At the present date they can do but little more than corroborate the accounts of previous writers. Those, however, to whom appetite is still left for books on America, will find amusement in the pages of this Englishwoman, whose pictures of society bear to Mr. Russell's 'Diary' the same relation that Mrs. Atkinson's 'Recollections of Tartar Steppes' maintain to her husband's graver and more important works. Just as the Correspondent tells much which would never fall within the range of a woman's experience, the governess photographs much which a man would either not observe or would erroneously pass over as unworthy of narration. The intercourse between Southern ladies and their house-slaves is capitally described. The reader sees the white teeth of the indolent, garrulous, impudent "darkies," as they assemble at the outside of drawing-room windows, and unimproved watch the proceedings of their superiors; and by the guidance of womanly discernment he is made to understand the difficulties which surround those owners who endeavour to control their negroes wisely as well as firmly. The genuine F.F.V.s seem to have impressed Miss Jones less favourably than the gentle Virginian families of a slightly lower grade. The former she found not free from a sort of arrogance, to which in this country a by no means complimentary epithet would be applied; whilst from the latter she invariably experienced delicate consideration and kindness. With regard to the "peculiar institution," her testimony is simply a repetition of what unprejudiced observers have said again and again. She went South a believer in the fictions of 'Uncle Tom's Cabin,' and has returned from it bearing witness that planters are not such fools as to treat their black servants with needless severity. "Much as I had hesitated in going to the South, through a dread of witnessing the sufferings of the slaves, not once had I seen serious reason for pitying them. I had known them in houses and in fields, domestic servants and 'plantation hands,' had come upon them unexpectedly and suddenly in the midst of their labour; and in the two years and a half between six of the Slave States, exclusive of Maryland, I had never seen or heard of corporeal punishment, excepting such as has been mentioned in these pages." Still, though she maintains that plantation discipline is for the most part lenient, she allows that the negroes are kept by their owners in a condition which is but little superior to that of brutes. In her second volume Miss Jones prints the official "pass" which enabled her to journey on her homeward way from the head-quarters of the army of the Potomac to Baltimore, and in which she is described as having a "robust build," "florid com-

plexion" and "carrotty hair." Such was the pass which a Federal officer (and gentleman?) had the brutality to impose on the lady, who shows no ordinary moral courage in publishing it.

Ideal Views of the Primitive World, in its Geological and Palæontological Phases. By Dr. F. Unger. Edited by Samuel Highley. Illustrated by Photographs. (Taylor & Francis.)—Dr. Unger's original work has been popular in Germany, chiefly, perhaps, on account of the excellence of its illustrations, in which the author's thorough botanical knowledge has enabled him to impart accuracy to pictorial representations. It would be well if those who shall in future make copies of these designs for popular writers would not attempt to improve upon them, as what may seem a striking improvement may turn out a striking inaccuracy. For instance, in his illustration of the Wealden Period the designer introduces two iguanodons looking thunder and lightning at each other, which may be truthful enough; but to improve upon this by making each attempt to smother the other (as has been done elsewhere), would be untruthful as well as ludicrous. The photographic reductions from the original illustrations, which appear in this English edition, are in a high degree commendable. The "warmth of tone and general softness" which are claimed for them in the Preface may be freely conceded. So successful an attempt should encourage the editor to reproduce in like manner other superior and expensive palæontographical works published on the Continent. Several might be instanced; and we hope the acceptance of the present publication will warrant the issue of others of a like nature.

Dreams and Realities, by Walter Cook Spens (Edmonston & Douglas), has found publishers, and that is the only noticeable fact about them. We need only give one specimen. A piece headed 'To my Wife,' commencing with

I knew that she was delicate,
contains this choice stanza—

I woke from a dream of the tomb,
O God of Heaven! to see
The blood of my cherished darling
 Welling over her and me,
A spasm writhing her pallid face
 With quivering agony.

Mauritius; or, the Isle of France, being an Account of the Island, its History, Geography, Products, and Inhabitants. By the Rev. Francis P. Fleming, M.A. (Society for Promoting Christian Knowledge.)—"Mauritius; or, the Isle of France" is an honest little book, and, in a small compass, gives much information about the natural characteristics, political history, and present social condition of the island, where in the days of the

— atrocious, pernicious
Soudrel that emptied the till at Mauritius,
claret cost 10d. a bottle, and pine-apples a penny each, whilst a pound of butter was worth 10s., a pair of gloves 15s., and an evening dress-coat 30l. of English money. In the year 1854, Mr. Fleming was stationed there as military chaplain, and he availed himself of his position to study the dependency with minute attention. Where he has not relied on his own personal observation, the author has had recourse to the works of Baron Grant, Montgomery Martin, and other writers. The illustrations, selected from a portfolio of the author's sketches, have considerable merit.

Sussex Archaeological Collections, relating to the History and Antiquities of the County. (Sussex Archaeological Society.)—We have to congratulate this Society upon its prosperity as shown by the Report. The number of members is maintained, the financial affairs of the Society are in a more satisfactory state, and the Society has been enabled to obtain a lease of Lewes Priory grounds, in addition to those of the Castle, which they had previously acquired. Moreover, the Annual Meeting at Hastings appears to have been a great success, the weather being favourable to the development of that picnic element which now enters so largely into archaeological pursuits. The contents of the volume before us are fully up to the average of such publications. There is the fruit of much careful research in Dr. Turner's history of Petworth, and in the Rev. Edward Turner's attempt to trace the boundaries and history of Asdown

Forest. Mr. Slade Butler relates some rather commonplace ghost stories, and then asks triumphantly, "Who shall say that this varied tradition of sane intercourse between the spirit world and our present existence is altogether a fiction?" One of the most interesting of the papers is that upon 'Old Sussex Harvest Customs, and Peculiarities of Speech at Hastings,' by Mr. James Rock. Few things are more curious than the similarity which exists between the customs of different and remote parts of the country as they appear in songs and observances at harvest festivities, showing as it does the amount of communication which must have existed when personal locomotion would appear to have been next to an impossibility. The harvest song here set out, in which the singer asserts that he has been to Plymouth and he has been to Dover, is still sung annually in the remotest parts of Norfolk, though the labourer there, if we remember rightly, makes the bolder assertion that he has been to Paris as well as to Dover. The tune, too, as here given, is sufficiently like that to which the East-Anglian sings the words, to prove that it is (with some rustic and traditional variations) the same. The existence of French words in the language of the Sussex fishermen, ascribed to their dealings with French smugglers, is also curious. These peculiarities of manners and of language are fast dying out, and one of the most interesting functions of these Societies is to preserve a record of them. One growl before we end. We cannot see the utility of transcribing the inscriptions in Icklesham church and churchyard. The pious doggrels are of the common form, and we are not aware of any interest that attaches to persons in whose honour they were engraved. It is to be regretted that this paper was not omitted, in favour of one of those said to be reserved, through superabundance of matter, for the next volume.

Burton Abbots: a Woman's Story, in Four Books. 3 vols. (Newby.)—"Burton Abbots" is an interesting story, despite its length and its rambling construction. The original characters are lost sight of, and the story becomes a minute detail of young ladies' flirtations, out of all proportion in their length to the rest of the story; indeed, the last volume is dragged out beyond all patience. The first volume is very well told, the story of the poor first wife is extremely well managed—the episode of the second wife, and the history of the household, are also very interesting, but the author's strength seems suddenly to fail; and at the moment when the black mystery of Mr. Claridge ought to have been clearly defined, the author becomes afraid of dealing with a villain, and the conclusion is lame and impotent; the secret which his associate holds over him is weak, and has to be eked out, subsequently, by the suspicion of a murder which he did not commit—and Mr. Claridge is removed from the story a raving maniac. Much more might have been made of the tale than is made of it. The superstition of the curse supposed to brood over the family on account of the estate having once been church property is very feebly indicated. The story is ill constructed, but like an old house, which has been built at various times, it is homely and comfortable, and it has an interest in defiance of criticism. There are too many short threads which break off and are not woven into the story; the unrequited attachment of the heroine is too long drawn out, and the narrator of the story, Miss White, the governess, becomes in the end foolish and tiresome; she is also needlessly ugly. The interest of the story lies in the excellent spirit in which it is written, and the healthy religious element which pervades it. There is no plot, and there are so many persons brought into the narrative, that it is impossible to give any outline of the story. Readers who begin the work will continue to the end with a mild interest of their own; but the author would do well to study compression in her next book. She should also keep to one main branch of her subject, without endeavouring to weld half-a-dozen episodes into one.

Of Religious Publications we have to record:—*The Gospel in Madagascar: a Brief Account of the English Mission in that Island*, by the Author of 'The Life of the Rev. W. B. Johnson' (Seeley),—*Prayers, Texts and Hymns for those in Service*

(Faithfull),—*On Unity of System* (Newman),—*The Prayer that teaches to Pray*, by the Rev. M. Dods (Hamilton),—*Times of Succession Times of Revival*, by the Lord Bishop of Oxford (Parker),—*Better Times Coming; or, More on Prophecy* (Tresidder),—Vol. II. of *The Christian Advocate and Review* (Wertheim),—*The Religion of School Lads, Addresses to School Boys*, by D. Cornish (Freeman),—*The Bible Examined by Modern Science and Reason*, by a New Yorker (Tousey),—*A Plain Help to Public Worship*, by the Rev. F. Exton (Mozley),—*Human Corruption*, by the Rev. Dr. Stanley (Parker),—*A Letter to the Lord Bishop of London in favour of Liturgical Revision*, by the Rev. S. Minton (Longman),—*The Gospel Narrative Vindicated; or, the Roman Census, Luke ii. 1-5, explained, and with Reference to the Birthday of Our Lord, for the First Time established on Independent Historical Grounds*, by Johannes von Gumpach (Bagster),—*Notes upon the Evidence taken before the Committee on the Ecclesiastical Commission*, by Ecclesiasticus (Ridgway),—*A Few Words on the Subject of Religion*, by an Outsider (How),—*Sermon Reading and Memoriter Delivery*, by A. M. Bell (Hamilton),—*Cottage Readings*, by Mrs. R. Valentine (Mozley),—*A Sketch of the Life of John Lee: a True Story for Farm Lads* (Mozley),—*Lucy Strutt; or, Self-Confidence Humbled* (Mozley),—*The First Grave* (Mozley),—*Buller's Arguments on Miracles Explained and Defended; with Observations on Hume, Baden Powell and J. S. Mill: to which is added a Critical Dissertation by the Rev. H. L. Mansel, by the Right Hon. J. Napier (Hodges, Smith & Co.)*,—*The Unpreached Gospel: an Embedded Truth*, by the Author of 'The Study of the Bible' (Simpkin),—*Lectures on Theology, Science and Revelation*, by the late Rev. G. Legge; with a Memoir by J. Legge, edited by James Legge and John Legge (Jackson, Walford & Halliday),—*Evangelical Ethics; or, the Place assigned to Works in the Gospel Economy*, by the Rev. J. C. M'Cauleand (Hodges, Smith & Co.),—*The Spirit Interceding*, by the Rev. J. R. Woodford (Parker),—*Life Thoughts*, by the Rev. W. Morley Punahon (Wealey),—*The Sin against the Holy Ghost*, by the Rev. T. T. Carter (Parker),—*An Exposition of the Epistle to the Romans on the Principles of Scripture Parallelism*, by J. W. Hinton (Houlston & Wright),—*The Spirit convincing of Sin*, by the Lord Bishop of London (Parker),—*The Inquiry of a Retired Citizen into the Roman Catholic Religion*, edited by the Rev. T. Formby (Longman),—*The Spirit Comforting*, by the Rev. E. B. Pusey (Parker),—*English Orthodoxy, as it Is and as it Might Be*, by the Rev. G. V. Smith (Longman),—*Leaflets from Woods and Glens* (Hamilton),—*Daniel's Vision of the Four Beasts*, illustrated with Six Engravings (Tresidder),—and Vol. V. of *The Works of John Howe* (Religious Tract Society).

LIST OF NEW BOOKS.

Alford's Freebooters, illustrated, f. 8vo. 3/6 cl. gt.
 Alford's Pearl of the Andes, illustrated, f. 8vo. 3/6 cl. gt.
 Appleby's Illustrated Handbook of Machinery, &c., 8vo. 2/6 cl.
 Beeton's Dictionary of Arts and Science, Vol. 2, 8vo. 8/1.
 Beutley's Practical Grammar of the Sanskrit Language, 8vo. 7/6 cl.
 Bonn's God's Way of Peace, new edit. 18mo. 1/6 cl.
 Boy's Handy Book of Sports, Pastimes, Games, &c., 18mo. 5/1 cl. gt.
 British Beetles, with Descriptions by Janson, 4to. 18/1.
 Bitchell's (Rev. Dr.) My Ministerial Experiences, cr. 8vo. 3/6 cl.
 Clephane's Rough and Smooth, a Tale of our Own Times, 12/1.
 Close's Footsteps of Error, traced through 25 Years, 8vo. 9/1 cl.
 Cobbett's Advice to Young Men, new edit. f. 8vo. 2/6 cl.
 Craig's Handbook to the Modern Provençal Language, 3/6 cl.
 Daily Lucerne, a Course of Family Prayers, cr. 8vo. 3/1 cl.
 Davidson's The Pentateuch Vindicated, cr. 8vo. 3/6 cl.
 De Teissier's (G. F.) Village Sermons, cr. 8vo. 9/1 cl.
 Diraal, the Author, Orator and Statesman, by John Mill, 7/6 cl.

THE ALBERT MEMORIAL CROSS.

The only forms of monument to Albert the Good that ever had a chance of success were, A Group of statues, a Gothic memorial cross, a Grecian temple with a statue within, and a monolithic obelisk on an enormous scale. The obelisk was disposed of when it was found impossible to procure a single block of fine granite fit for the purpose. Two millions was the sum talked of to procure an English or a Scottish needle, and the sum subscribed was about 70,000l. There was little hope of any such difference as exists between these amounts being made up either by further subscriptions or by Parliamentary grant. A built-up obelisk was out of the question, although one might have been had at a comparatively small cost, and everybody felt that to remove the great needle from the banks of the Nile and set it up in Hyde Park would be a mistake. The idea of a group of statues soon absorbed itself in the alternative schemes of a temple or a cross, with either of which such a work would necessarily combine, if it did not form the leading feature. Between the temple and the cross there was small doubt that for a monument to an English Prince of Gothic descent, to be commemorated by Englishmen and to Englishmen, there was a want of keeping in the idea of a classic temple on the banks of the Serpentine. People said nobody would go into the temple except to get out of the rain; that there would be a want of keeping also in the statue itself, which must either be in classic costume, a thing not to be borne, or in modern costume, and so utterly at variance with the style of the inclosing edifice. Moreover, modern imitations of antique architecture had not, on the whole, been so satisfactory as to encourage further attempts, although the Carian Mausoleum itself had been recently dug up as if *à propos* to the occasion.

The Gothic Cross remained. This form had been proved capable of much excellent effect, and more has been hoped from it. Englishmen like a thing that has been tried and not failed, and the Martyrs' Memorial, Oxford, and the Scott Monument, at Edinburgh, were deservedly admired, and are really great successes, such as could not be predicated of a Greek or Roman Mausoleum. Above all, the exquisite Eleanor Crosses at Waltham, Northampton, and Geddington commend themselves to us, not alone as perfect works of English Art—the Building Accounts showing only one foreign carver to have been engaged on them,—but as peculiarly suited by old associations to the purpose of commemorating a good prince. Indeed, it has always been understood that if this form of memorial were not adopted for the National Monument, Her Majesty would herself erect such a cross; so that Victoria of England would repeat for Albert of Saxony what Edward of England did for Eleanor of Castile.

By some such process of elimination, the work of Mr. Scott has been brought forward, and, in effect, adopted. It combines the advantages of a memorial of noble size, with ample opportunities for display of statues, colour, and decorative carving, and is, moreover, one edifice. The general material proposed by Mr. G. G. Scott, the architect, for this structure is Sicilian marble; its total height about 150 feet, and the extreme width of its base about 70 feet, that is the space of ground on which it stands, measured from side to side; in general plan it is four-square, a matter which must be borne in mind throughout our description. Generally, it is a lofty cross, canopied by a statue, raised upon a pedestal. At the base is to be a flight of steps, divided into two grades by a platform or landing, in which the upper rests upon the lower, as on a new base. At the angles of the lower grade of, we believe, ten steps, are to be placed advanced pedestals, set angle-wise,

carrying outwards the level of the platform and sustaining colossal groups of statues, representing the quarters of the globe. In the same manner the second grade of similar steps, rising above this, has a pedestal at each angle bearing statues, in this case emblematical of the Arts of Peace; of course, on a somewhat smaller scale than those lower down. Upon the upper platform thus obtained stands the cross itself, four-square, with advanced blocks at the angles, from which rise the groups of shafts that sustain the superstructure and inclose the statue of the Prince. The base on which these shafts rest may be about 8 feet high, enriched with cornice and base mouldings, running wholly round it, and having on its four faces and those of the blocks suggestive groups of figures, sculptured in very high relief, and about life-size, representing in, let us say, somewhat the same manner as appears in Delaroché's famous Hemicycle, the Arts,—Architecture, Painting, and Sculpture, and, on the fourth side, Science.

In the centre of the third platform, canopied by the roof of the cross, is a seated statue of the Prince, dressed in the robes of the Garter, about ten feet in height, and of marble. On the four faces of the pedestal are to be armorial bearings of the Prince and his connexions, executed in mosaic. It will be seen that that material appears several times in the design, and, so employed, no better material is known. The shaftings, at the angles, have this peculiarity: they are four in each group, set angle-wise in plan to that of the structure; they are banded midway of their height, and have, set somewhat in advance on their exterior faces, *i. e.* over the diagonal of the base, a decorative statue, each rising almost to the band. They are to be of red granite, polished, and with highly-ornamental capitals; they are carried up above the caps in the form of pinnacles, one over each, each consisting of four shaftlets, so to speak, inclosing minor statues, gabled, with high-pointed roofs and bold finials of metal.

Each face of the monument has a gable, of high pitch, cusped into a trefoil on its inner edge, so as to break the outline of the space canopied, crocketed on the upper sides with crockets of beaten metal, gilt; the same being very bold and effective in character, and breaking into a bold gargoyle at each angle that enriches the general outline. Over the gable-pinnacles finials are to be placed, also gilt. In the tympan, or pannelled face of each gable, forming a very characteristic feature of the whole design, is to be a mosaic, with gold ground, we believe; certainly representing incidents in the life of the Prince which may be taken to characterize his career. If we look at any one of these gables, of course the roof of two others is presented to us; this is to be covered with metal in the form of scales, richly embossed. At the intersection of each roof is the square die that rises above their ridges, its four faces decorated with elaborate diapers. Above this rise, in three stages, open canopies supported on shaftings, pinnacled, trefoiled on the face of the tympan, inclosing statues of the Christian Virtues, of the Arts of Peace, and other suitable representations. The whole is surmounted by an open cross of metal, gilt and enamelled. Such is the design, broadly described and subject to minor modifications, to execute which it is proposed to employ the 70,000l., with accumulated interest, that has been subscribed. The estimated cost is 100,000l. The House of Commons is to be asked to grant a sum sufficient to make up the deficiency; but we think, now that a decision has been arrived at with regard to the character of the monument itself, that subscribers will, without difficulty, be found for the remainder of the amount required. Unavoidably, but most unfortunately, the lack of understanding by the public of what the thing they were invited to subscribe for was likely to be, has checked many a contribution.

THE ROYAL MARRIAGE PICTURE.

10, Pembroke Villas, April 13, 1863.

A statement which appeared in last Saturday's *Athenæum* relating to a difference between me and Mr. Gambart requires some explanation, and I believe I am the proper person to give it. As a return for the "written licence" which, as you

truly say, Mr. Gambart gave me with regard to the Wedding Picture, I offered him the refusal of the copyright, and he declined to take it. I then sold it to Mr. Flatou. This is a very simple matter, and as far as I am concerned "pleasant" enough. Mr. Gambart says that I gave him many verbal assurances that the copyright should be his. I did so. I quite intended it to be his,—but at a price that I thought it worth, leaving him free to refuse to pay the price if he thought it too much. He did refuse; and, very kindly, in a letter written on the day of his refusal, offered to do his best to find me a purchaser, recommending to me an eminent Pall Mall firm in that capacity. How far this is reconcilable with his declaration (I quote your own words), "that such a transfer was never contemplated by him," I do not understand. I have assured Mr. Gambart that as soon as the picture of the Marriage of the Prince of Wales, the copy, sketches, &c., are finished I will carry out my engagement with him with respect to 'The Streets of London'; or, if he prefer it, I will return him the money he has paid me on account of them, with interest, and release him from his engagement to me. What can I do more? As to arbitration, what is there to arbitrate about?

W. P. FRITH.

DISCOVERY AT ABBEVILLE.

Abbeville, April 14, 1863.

THE readers of the *Athenæum* will, I think, be glad of early information respecting the remarkable discovery just made by M. Boucher de Perthes of a human jaw-bone, imbedded in what may be considered the very oldest portion of the gravel-beds which yield the flint-implements with the osseous remains of the mammoth, tichorine rhinoceros, &c.

The history of his discovery, as recorded in the local journal, *L'Abbevillois*, for April 9, is as follows:—Towards the end of last month, a workman in the gravel-pit of Moulin-Quignon (on the outskirts of Abbeville) brought to M. Boucher de Perthes, along with a worked flint, a small fragment of bone, which he had found close by it. Having divested this bone of the sand with which it was covered, M. Boucher de Perthes found imbedded in it a tooth, which, although very imperfect (the crown having been almost entirely destroyed, apparently by caries), was distinctly recognizable as a human molar. He immediately repaired to the gravel-pit, examined the place in which the worked flint and the tooth were said to have been found, and satisfied himself that there could not have been any accidental or secondary mode of introduction of the tooth, but that it must have been imbedded (if the workman's account was to be trusted) in the original deposit. Naturally expecting that, where one fragment had turned up, others might not be far off, M. Boucher de Perthes urged the workmen to proceed very carefully with their excavations; and directed them, if they should come upon anything like a bone, at once to inform him, without removing it from its place. On the 28th of March, another workman came to inform him that what appeared to be a bone had just shown itself in the gravel; and on going to the spot, M. Boucher de Perthes found that it was really so, the projection of the bone from the face of the excavation being about 8-10ths of an inch. He carefully removed the sand from around it, and himself extracted it from its matrix; the bone proved to be the lateral half of a lower jaw, unquestionably human. From the immediate neighbourhood of this jaw, a companion of M. Boucher de Perthes (M. Oswald Dimpre, well known in Abbeville as an archaeologist and draughtsman) disinterred a flint hatchet.

M. Boucher de Perthes had yesterday the kindness to place in my hands this precious fragment, and I was immediately struck with its almost black colour, its solidity and its weight; all these peculiarities (which are in marked contrast to the characters of the bones ordinarily found in these gravel-pits) being obviously due to one and the same cause, viz., metallic (ferruginous?) infiltration. The worked flints and the ordinary flints obtained from the same deposit are all of them characterized by a like depth of colour, which is

not seen in those taken from any other part of the same pit, or from any other gravel-pit yet opened in the neighbourhood of Abbeville. Of the anatomical characters of this jaw, I should not wish to give a decided opinion without a more careful examination than I had the opportunity of making; but my impression is that they differ very decidedly from those of the same bone in any race at present inhabiting Western Europe.

This morning M. Boucher de Perthes has been kind enough to accompany me to the gravel-pit of Moulin-Quignon, and to show me, as nearly as he could, the situation in which this most interesting specimen was found. Unfortunately there had taken place, a few days previously, a slip of the overlying strata, by the debris of which the exact spot was covered; but a part of the same deposit was visible at a horizontal distance of a yard or two, so that I could indubitably verify its general character and position. That the vertical section of this pit, which is about 15 feet deep, presents a condition remarkably free from signs of disturbance, is a fact which has been verified by numerous experienced geologists, whose testimony upon such a point is of far more value than mine. The stratum in which was found the bone in question, and which lies at the very bottom of the pit, *immediately upon the subjacent chalk*, is distinguished from the whole overlying mass by the extreme depth of its ferruginous (?) colour, pervading all the flints contained in it, of which I have brought away specimens taken out by myself. We have, therefore, not merely the personal testimony of M. Boucher de Perthes and others who were present at the disinterment, but the evidence of the *pièce de circonstance* itself (which by some will be regarded as yet more satisfactory), that this bone could not have come from any less depth in the gravel-bed than that in which it is stated to have been found; and I cannot myself conceive that any one who carefully examines the undisturbed condition of that bed can entertain a doubt that the bone in question is a *true fossil*, dating back to the time of its original deposition.

I may add that the gravel-bed of Moulin-Quignon is about 100 feet above the present level of the river, and therefore corresponds in position with the upper gravels of St. Acheul, not with the lower gravels of Mancheourt; so that if we accept the conclusions of Mr. Prestwich as to the relative ages of these gravels, this human jaw was buried in the deepest (and therefore the oldest) portion of the earliest of these fluvial deposits.

W. B. CARPENTER.

THE ANTIQUITY OF MAN.

Margate, April 15, 1863.

MY absence from town for Easter has prevented me from replying sooner to a letter which appeared in your columns of April 4th, p. 459, signed H. Falconer, in which a formal complaint is made of my having failed, in my recently published volume on 'The Antiquity of Man,' to do justice to the part which he and Mr. Prestwich have played in determining the true age of the cavern and ancient river-gravel deposits containing the remains of extinct mammalia and of man and his works, and of my having in some cases appropriated to myself the merit of discoveries and conclusions which belongs to them.

Shortly after the appearance of my book, I received a complimentary letter from Dr. Falconer, in which he spoke of such parts as he had then read in terms of high satisfaction, saying that he had only perused carefully a part of the volume, and that in a more cursory reading of other chapters he had detected several mistakes. I called at his house some weeks later to tell him that I was preparing a second edition, and should be glad if he would point out to me any passages which might require correction. To my surprise, I found his tone towards me and my book quite altered, and he gave me to understand that he preferred coming out in print with his objections to certain of my statements, and must therefore decline to assist me in minor points in the improvement of my new edition. I learned soon afterwards that he was to be associated in this proceeding with Mr. Prestwich, and that they were preparing a joint repre-

sentation of the circumstances on which they fancied themselves aggrieved. As I had always been on most friendly terms with both of these gentlemen, I at once offered to each, separately, that if they could explain to me in what manner I appeared to them to have acted unfairly I would do everything I could to rectify errors or omissions, but both declined by letter so nearly in the same words as to leave me in no doubt that they were acting in concert; and that they were so soon afterwards confirmed by a declaration to that effect in a note addressed to me by Dr. Falconer.

On referring again to the various and frequent occasions in which I had cited both these authors in my first edition, I could find no reason to alter or extend any one of the notices which I had made of their labours. I have therefore reproduced the work as it was, and the public must decide whether I have shown any disposition to underrate their merits. When I first speak of Mr. Prestwich (p. 98), I say that "there was no one in England whose authority deserved more weight in overcoming incredulity in regard to the antiquity of the implements in question. Since, besides having published a series of important memoirs on the tertiary formations of Europe, he had devoted many years specially to the study of the drift and its organic remains. His report therefore to the Royal Society, accompanied by a photograph showing the position of a flint tool *in situ* before it was removed from its matrix," &c. I alluded to his visit to Amiens, and quoted his notices and papers in the *Proceedings and Transactions of the Royal Society* before mentioning my own visit to Abbeville and Amiens, which followed in the same year, and the results of which I communicated to the British Association at Aberdeen in 1859. If my observations corroborated those of Mr. Prestwich as to the co-existence of man with the extinct mammalia, it must not be forgotten that his also were in like manner simply confirmatory of results which his French predecessors had arrived at, and which had been most fully and clearly stated only four years before by Dr. Rigollot, aided by an excellent geologist, M. Buteux. They again were only adding additional evidence in support of conclusions previously announced in 1847 by M. Boucher de Perthes, in his '*Antiquités Celtiques*.'

In my address to the Geological Section of the British Association, I insisted strongly on the proof of the vast antiquity of the implements in the valley of the Somme, as deducible from the joint testimony of the repeated denudation which the valley had undergone during and after the period of the imbedding of the flint tools, as well as the time required for the extinction of so many mammalia. Mr. Prestwich in his earlier memoirs seemed to me unwilling to attribute such high antiquity to the implement-bearing beds, leaning to the opinion that the evidence tended rather to bring the mammoth and its contemporary Fauna nearer to our times, than to carry back Man to an era exceedingly remote. On this and other points, such, for example, as the relative antiquity of the upper and lower level gravels of the Somme, I had frequent discussions when exploring the neighbourhood of Amiens in company with Mr. Prestwich during one of three visits which I paid to that district. I will not pretend to say that my arguments had any influence in inclining him to adopt what appear to me to be the more enlarged views which are set forth in his later papers; but I cannot help reminding Dr. Falconer that as improvements in theory are usually the result of a free exchange of ideas, the advantage of such co-operation is most commonly mutual, even when the relative qualifications of the two debaters are as unequal as he (Dr. Falconer) would in this case pronounce them to be; for the writer of the letter to which I am now replying observes, "that some men are occupied in communicating the new results of science to the educated public, but it cannot be permitted that the broad line of demarcation which separates their peculiar labours from the researches of original observers should ever be confounded," (p. 460). He afterwards adds, after enumerating his own claims to rank, not as a mere expositor of what others have done, but as one of the original observers, "I now invite Sir Charles Lyell, or any one else on

his behalf, to point out a single new fact or one solitary special observation which he has contributed bearing on the immediate subject of the antiquity of man." Before accepting this invitation, I will turn to those portions of Dr. Falconer's letter in which he dwells particularly on the want of appreciation of his own services to science in a field which he has of late years cultivated with much assiduity. "In the events, he says, which led to the re-agitation of the question of primeval man, I brought to light the cave evidence; he (Mr. Prestwich) followed it up by the investigation of the deposits containing flint-implements in the valley of the Somme." He informs us how, in the spring of 1858, he heard of the discovery of a new cave at Brixham, and dwells on the leading part which he took in obtaining a grant from the Royal Society of 100*l.* to explore that cave. "I had the sole charge," he says, of laying down the plan, and giving the instructions upon which the exploration was to be conducted by Mr. Pengelly. * * * I identified the fossil bones, determined the flint-implements, and drew up the preliminary report for the Geological and Royal Societies, on the strength of which another grant of 100*l.* was made. From first to last, I was the prime mover in everything connected with the exploration of the Brixham cave, except the superintendence of the excavations."

Now, if the reader will refer to my account (p. 98) of the examination of this intact bone-cave at Brixham, he will see that I assign the work done to the joint labours of Mr. Prestwich, Dr. Falconer, and Mr. Pengelly. Of Mr. Prestwich it is said by Dr. Falconer, "he took charge of the financial and business details, and the investigation of some of the physical phenomena." I allude to Dr. Falconer as having shown me at Torquay numerous fossils taken from the cave, and I thought I might leave it to be inferred that the species of mammalia mentioned by me were determined by him. If I had spoken more at length and more unreservedly of what I learned at Torquay of the cave excavations, I should have said that the brunt of the work, with the exception of the naming the fossil mammalia, was done by Mr. Pengelly, who had under him Mr. Keeping, a skilled and scientific workman. Mr. Pengelly was well known as one who had acquired much experience in the examination of caves during nearly twenty previous years, having explored Kent's Hole, among others. He was also highly qualified as a geologist to observe accurately and to reason philosophically on what he saw. After examining the cave myself, and conversing with Dr. Falconer at Torquay, I derived most of my information given in 'The Antiquity of Man' from a lecture on the Brixham cave which I heard Mr. Pengelly deliver at the Royal Institution in London in 1859. I had also the advantage of referring to a speech on the same subject addressed by the same geologist to a joint meeting of the Ethnological and Archaeological Societies, on the 19th of February, 1861, and reported in the *Geologist* (vol. iv. p. 153). But my account would have been more complete had it not been for Dr. Falconer's procrastination, for he might have told us more than we now know about the fossil remains, and a paper by Mr. Pengelly, which has been for some time ready, would then have appeared. The machinery organized with so much care for enlightening the world on the contents of the Brixham cave, on which the Royal Society have spent 200*l.* of the public money, and on which a liberal donation from Miss Coutts has also been expended, is now and has been for nearly four years at a standstill, waiting till the "prime mover," as he styles himself, is ready to lead off with his report. If I have not assigned to every one his due share of credit in the working out of the Brixham cave results, I believe that Dr. Falconer is not the one who has reason to complain.

In his letter now under consideration he says— "From the Brixham cave I proceeded to Sicily, to explore the caves there, after visiting my friend M. Boucher de Perthes, at Abbeville, by previous arrangement; and near Carini I discovered the Grotta di Maccagnone, in which fresh proofs of the great antiquity of primeval man turned up,

under very remarkable conditions. (*Quart. Journ. of the Geol. Soc.* 1859, vol. xvi. p. 101.) Here, again, Sir Charles Lyell opens his account of it with an untenable remark: 'Geologists have been long aware,' &c. (op. cit. p. 174). I invite him to show in what geological works the familiar knowledge which he there asserts is to be found before the statement of the fact by me."—*Athenæum*, p. 460, col. 2.

Every reader of the letter who happens not to have had my book at hand, or who never sees this reply, will unavoidably infer from the above passages, which I have given in full, that I have ascribed to some earlier geologists the merit of discovering facts in the Sicilian caves bearing on the antiquity of man which were first worked out by Dr. Falconer; whereas in the very pages referred to ('Antiquity of Man,' pp. 174-6), I distinctly state that the earlier geologists had only found, at San Ciro and elsewhere, bones of the hippopotamus, &c., (and these I had mentioned in the 'Principles of Geology' more than thirty years before,) but that Dr. Falconer first found, in the Grotta di Maccagnone, not only the remains of hyenas, but also associated flint-knives, charcoal, and other objects indicating human intervention. My introductory sentence, of which, by an unfortunate accident, Dr. Falconer has given only one line, runs thus—"Geologists have long been familiar with the fact that on the northern coast of Sicily, between Termini on the east and Trapani on the west, there are many caves containing the bones of extinct animals."

That Dr. Falconer has, in this instance, unintentionally, and by a strange oversight, entirely misrepresented me I am fully convinced; but if so, I am at least entitled to give him back the advice which he has proffered to me, namely, "to avoid, in future, using language so liable to misconstruction."

I now come to another claim, made in behalf of Mr. Prestwich and himself, that they were the first to settle the true chronological relations of the glacial period and certain fluviatile drifts and cave deposits in which the bones of extinct quadrupeds, and in some of them also human remains, occur.

I have given, at p. 168, Mr. Prestwich's section of Hoxne, referring to his paper in the *Philosophical Transactions*, to show the posteriority in date of beds containing flint tools like those of Amiens to the boulder clay. But I remarked that having seen the section in company with Messrs. Gunn and King, we could obtain no proof of the bones of extinct animals having been found in the same stratum with any one of the tools. Dr. Falconer, in 1860, announced to the Geological Society that he and Col. Wood had found in the osseous breccia of certain caves in the Gower Peninsula, in Wales, the bones of the elephant, &c., and some contemporary relics of man. He also declared his opinion that they were all post-glacial; but as the boulder clay was not present in or near the same caves, the evidence did not convince me, who had not been on the ground; and other geologists, present at the discussion in London, who were in like manner well acquainted with Wales and its drift, were not satisfied with the proofs. The year after, April, 1861, I received a letter from Mr. James Wyatt, of Bedford, informing me that he had found two flint implements of the two types most common at Amiens, in the gravel of the valley of the Ouse, at Biddenham, near Bedford. He invited me to visit the spot, which I did, in company with Mr. Prestwich and Mr. J. Evans, before the end of the same month and within a fortnight of the discovery of the tools. My two companions had previously explored the same ground, and had told Mr. Wyatt that the ancient gravel of the Ouse resembled that in which flint tools had been met with in France. He, after qualifying himself for the search by two visits to Amiens, had watched the diggings for months, until, at last, he obtained the *works of art* alluded to. I have given a brief account of what I saw myself, pointing out that we derive from this section information which I had *looked for* in vain at Amiens and Abbeville, and I might have added, in every cave or valley previously described by Mr. Prestwich

and Dr. Falconer,—namely, unequivocal evidence of the posteriority in date of drift containing both extinct mammalia and contemporary flint tools to the glacial formation fully developed in the same place. The diagram section which I gave in illustration was not copied exactly, either from those published by Mr. Prestwich or that given by the Editor of the *Geologist* to illustrate Mr. Wyatt's paper, but abridged from both, and was such a one as I could have made sufficiently well to answer my purpose, had I not enjoyed the benefit of Mr. Prestwich's co-operation in surveying the ground. I was not called upon, in the brief space which I was able to allot to this question in my book, to make a digression on the previous state and progress of opinion as to the age of river-gravels and cave-deposits in general relatively to the boulder clay. Dr. Falconer has suggested that I had not acquired "that intimate knowledge of the history of the subject which was requisite to qualify me to narrate what others had done." This may be quite true, for I never aspired to write for the *Geology of the last eighteen years* what D'Archiac has done so well for the ten years which preceded, named 'L'Histoire des Progrès,' &c. There is a fitting time and place for such compositions; but to adjust the claims which the late Mr. Trimmer or those which Prof. Morris, or Mr. Prestwich or Dr. Falconer, and perhaps several other British and foreign observers may have to priority on this important theoretical question, in such a manner as to satisfy all, would be no easy task, and I well knew that not one in a hundred of my readers cared for the information if I had possessed it. They wanted to learn from me, in as few words as possible, what my own conclusions were after reading what others had written, and after examining myself the clearest sections I could get access to.

They were aware that my 'Principles of Geology' had been widely circulated before the successful careers of Mr. Prestwich and Dr. Falconer as scientific writers had begun. Some were aware, also, that so long ago as the year 1835, in a paper on Sweden, I had treated in the *Philosophical Transactions*, not only of the boulder formation, but of post-glacial, elevated, marine strata containing works of art,—a paper which the Royal Society had complimented by selecting it as the Bakerian Lecture of that year. From that period to the present I had devoted much time to the investigation in Europe and North America of the glacial and post-glacial formations. I had thrice examined the Norfolk cliffs, and had shown in a paper published on them in 1840 how like were the fossil remains of pre-glacial and post-glacial deposits, a fact which has caused me ever since to be very cautious in deciding whether any given drift or cave-breccia is or is not post-glacial, in cases where the boulder clay does not happen to be at hand, as at Biddenham in the valley of the Ouse. My last visit to the Norfolk cliffs was after I delivered my address at Aberdeen on the implement-bearing drifts of the valley of the Somme. I had also studied at Natchez, on the Mississippi, what was supposed to be the oldest geological position of the osseous remains of man; and again in 1859 I went to Puy-en-Velay to make up my mind as to the true date of the "fossil man of Denise." I had thrice explored the valley of the Somme, had investigated the site of Prof. Crabb's fossil remains in the loess, near Maastricht, had explored the Neanderthal cave and the caverns near Liège, as well described of old by Dr. Schimper, in order to qualify myself for the interpretation of such phenomena and written descriptions bearing on the antiquity of man and the "reorganization," as Dr. Falconer has very properly termed it, of the question whether man was coeval with extinct mammalia;—a question decided in the affirmative by competent observers and reasoners long ago, although they propounded their truths to an unbelieving generation. Whether if before visiting the Biddenham pits I had gone to South Wales, I should have come round and given in my address to Dr. Falconer's views as to the post-glacial date of the mammalia of the Gower caves, with their associated human relics, I cannot say, but certainly my conversion was not brought about by his paper or

arguments, nor by those of Mr. Prestwich, though I by no means wish to disparage or deny the effective part they have played in bringing about a reform in our theoretical opinions in regard to the relative date of man and the most intense period of glaciation in Western Europe.

Dr. Falconer concludes with a postscript respecting the erroneousness of my list of the fossil mammalia of the pre-glacial "forest and lignite" beds of the Norwich cliffs. The entire want of fairness of spirit which has dictated his comments on this head may be judged of when the reader has perused the annexed letter from the Rev. S. W. King,—which he has kindly permitted me to print.

CHARLES LYELL.

Saxlingham Rectory, April 11, 1863.

My dear Sir Charles,—I have just read Dr. Falconer's letter in the *Athenæum* of April 4th, to which you refer as stating, in a postscript, that the list of fossil mammalia from the Norfolk "Forest Bed" as given by you—"Antiquity of Man," pp. 216-217,—is either so erroneous or imperfect that he objects to his name being connected with it." Turning to your pages, I find that my impression was correct, that you had not professed to give a complete catalogue of the fossil mammalia of the Norfolk pre-glacial "Forest Bed," but only "a list of some of the species, of which the remains have been collected by Messrs. Gunn and King."

With regard, then, to the identifications thereof attributed to Dr. Falconer, I need only refer to his recent and most valuable memoir 'On the Living and Extinct Species of Elephants' (*Nat. Hist. Rev.*, Jan., 1863, p. 68), where he says,— "For a long time I was led to question the occurrence of the true mammoth in England— anterior to the deposition of the 'Boulder Clay.'.....But I have lately seen abundant proof of indisputable authenticity in the collections of the Rev. John Gunn, of Irstead, and the Rev. S. W. King, of Saxlingham, both in Norfolk, besides other cases, that *E. primigenius* of the characteristic type existed in England before the deposition of the Boulder Clay. Perfect molars, presenting every element for rigorous identification, have been found in the 'Forest Bed' at the bottom of the section, between Cromer and Happisburgh, on a horizon of fluviatile or lacustrine strata, which have yielded remains of *E. meridionalis*, *E. antiquus*, *Rhinoceros Etruscus*, and *Hippopotamus major*, &c." Therefore, as far as the first five, and perhaps most important, mammals of your list are concerned, Dr. Falconer can hardly complain that the identifications are erroneous, or object to his name being connected with them.

With respect to the remainder of the list, I am not aware of any well-founded exceptions, hitherto published, to the identification by Prof. Owen of *Equus fossilis*, 'British Fossil Mammalia,' pp. 384-8; *Sus (scrofa)*, p. 429; *Cervus Capreolus*, p. 488; *Arvicola amphibia*, p. 205; *Trogontherium Cuvieri*, pp. 185-7; *Castor Europæus*, p. 191; of each of which, excepting the first, I have authentic specimens, from the Forest Bed, kindly identified for me by Prof. Owen. At the date of publication of his work (1846), Prof. Owen, probably, had not satisfactory evidence of the occurrence of Bovides in that formation; but I have recently had unmistakable horn-cores placed in my hands of a large bovine animal from Cromer. As to the "other species of Cervus," I have numerous remains of several Cervidae awaiting determination (including, probably, Megaceros, as I wrote to you). From the pre-glacial Estuarian beds, narwhal and walrus were fully recognized from my specimens by Prof. Owen; and Cetacean remains, though necessarily very doubtful as regards specific determination, are of frequent occurrence. The British Museum possesses the unique jaw of *Palæopalaux magnus*—the Norwich Museum, *Talpa vulgaris*, *Ursus* (sp.?), &c.,—and your list might, of course, have been enlarged had you gone beyond reference to my friend Mr. Gunn's collection and my own.

Believe me, ever truly yours,

S. W. KING.

OUR WEEKLY GOSSIP.

Sir George Cornwall Lewis, whose sudden death, at the age of fifty-seven, has taken the world of politics and society by surprise, was something more than a statesman among scholars and a scholar among statesmen. As author, editor, Privy Councillor, and Cabinet Minister, he was alike noticeable. He was not, indeed, a first-class writer, for he lacked, in a remarkable degree, the delightful humour, the brightness and flow of fancy, the originality, speciality and sympathy, which invest the few high priests of literature with power to charm. But he was an able man, of very large attainments, logical, sound, sedate, uncompromising, capable of doing good service to truth, and also capable of waiting for the literary rewards which, in cases like his, are slow to come. There would be no use in saying that the late Editor of the *Edinburgh Review* was a popular author. His writings won the respect, even where they failed to conquer the conviction, of scholars and authors; but they were, at best, too dry and abstruse, too solid and consecutive, to please the subscribers of a library, and the reading public, who heard him spoken of as one of the literary men of the Cabinet, knew him chiefly by name. Mr. Mudie was not troubled by many demands for 'The Astronomy of the Ancients' or the 'Enquiry into the Credibility of Early Roman History.' Yet, on the other hand, it may be safely foretold that these two books will be consulted by men of learning and ability when the trumpety of the day, which jostled them into corners out of sight, will be utterly unknown. All the works of their author had the dry quality which is invaluable in wine, but intolerable in books. That on 'The Origin of the Romance Languages' might have been made as interesting and as flimsy as a romance; but Sir George chose to make it as uninviting and as durable as a dictionary. Even in his political works, those on 'Local Disturbances and the Irish Church Question,' 'On the Use and Abuse of Political Terms,' 'On the Influence of Authority in Matters of Opinion,' 'On the Government of Dependencies,' and 'On Methods of Observation and Reasoning in Politics,' there is the same solidity, not to say heaviness, of treatment. The very titles of his volumes show how close an attention he had given to politics as a science. Sir George had the genius which succeeds in public office better than in Albe-marle Street or Paternoster Row. He could do any amount of work, sit up any number of hours, write any quantity of despatches. Everything that industry could accomplish he achieved: fame as a scholar, reputation as an administrator, standing as a statesman. These were victories to win, and they were all honestly won by the untiring exercise of faculties common to us all. In that fact lies the lesson of an honourable and successful life.

The daily journals announce the decease, at the advanced age of ninety-eight, of Dr. Fowler, of Salisbury, a veteran well known in scientific circles. He was proud of his longevity, as many will remark who met him within recent years at meetings of the British Association. We well remember the enthusiasm with which, on his return through London, he talked of having accomplished the long journey from Salisbury to Glasgow to attend the meeting in 1856. One essential of long life, he then said, was to "lie abed in the morning till you are done enough"; and he mentioned that having felt cold in the course of the day, he had "eaten an ice at Gunter's, which warmed him thoroughly." Dr. Fowler was elected a Fellow of the Royal Society in April, 1802. His decease leaves to Lord Brougham, who has been a Fellow a little over sixty years, the venerable position of "father" of the Society.

As offerings of loyalty and affection, the Wedding Presents now on view at the South Kensington Museum have an interest for the royal recipients, for the gratified donors, and for the general public. These gifts are many and costly; but their merits as works of Art are not very striking, and, in this respect, the works in gold and precious stones suffer by comparison with the treasures around them

in the Loan Collection, against which they are necessarily judged. The most beautiful of all the jewels is the *parure* of opals designed by the Prince Consort, executed by Messrs. Garrard, and presented by the Queen. Of its kind, this work of jeweller's art is perfect. The bracelet given by the ladies of Manchester comes next in beauty, though not in commercial value. Feminine visitors speak in the highest terms of King Leopold's presents of lace; and of the Irish lace, in terms only less than the highest. The most showy article is, perhaps, the gold dressing-service; and the most sentimental, the bracelet of the bridesmaids.

The show of roses and azaleas at the Horticultural Gardens drew a goodly company on Wednesday morning. The flowers were extremely fine, and, the weather being magnificent, the grass dry, and the music good, the gathering was a great success.

The late Director of Her Majesty's Theatre is said to be preparing for publication a History of the Opera during the period of his connexion with that theatre, including much personal anecdotic matter and details of varied character.

The price of Crome's landscape, 'Household Heath,' lately purchased for the National Gallery, was 420*l*.

Fifty years ago, three benevolent gentlemen met in John Street, Minorities, animated by a desire to help the orphan and the widow in their sore distress and temptation. These three gentlemen, Dr. Andrew Reed, Mr. A. Burt, and Mr. J. Lynes, resolved to begin their good work by paying down each his own subscription, and by inviting the co-operation of other earnest men. One of the first to give them help was the late Duke of Kent, the father of our Queen. A small house was taken as a first "Home," and in it were placed three necessitous girls. In this humble way was founded the London Orphan Asylum, an institution which has rendered extraordinary services to the cause of charity for many years; since its foundation, nearly 3,000 fatherless children having received food, shelter, clothing and education within its walls. These poor orphans have been admitted from nearly every county in England, and they represent almost every class of the people, from professional families down to those of the artisan. This being the year of jubilee, it has been now resolved to celebrate the foundation of this noble charity by adding, within twelve months, accommodation for one hundred orphan children, fifty of whom shall be elected in June of this present year, and fifty in January of the next year. The public confidence and the Divine blessing which have strengthened the hands of its promoters thus far, will, doubtless, attend them in their new experiment. It is a charming incident in the subscription list now opened with this object, that a sum of 500*l*. has been contributed by old scholars of the foundation.

In a sort of postscript to his interesting communication from Abbeville, printed elsewhere, Dr. Carpenter says, in reference to the subject of a quotation from his work on the 'Foraminifera':—"I did not so much object to the representation given of my opinions as to the presentation of those opinions in what professed to be a quotation from my pages, but was really the language of the reviewer, . . . whose too concise summary of my opinions altogether fails to convey the distinction which I have myself most explicitly drawn (Preface, p. xi.) between the *conclusion* which I hold to be not merely justified, but required by the evidence at present in our possession as to the derivation of the vast aggregate of diversified forms contained in this group, by genetic descent from a small number of principal family-types; and the *question* which I suggest, whether analogical evidence does not rather favour the idea of the derivation of those family-types from a common original, than that of their primitive distinctness. As this last is a point on which I have by no means made up my own mind, I am anxious not to be represented as having answered it in the affirmative."

In the course of a few weeks the National Gallery will contain some important additional pictures, recent acquisitions. The most interesting of these are as follows:—1. The famous portrait, from the

Grimani Collection, of a tailor cutting out cloth, by Moroni. He is represented standing before a table with the shears in his hand. This work is a companion to the equally well known 'Jesuit,' called 'Titian's Schoolmaster,' in the Duke of Sutherland's Collection. 2. A portrait of Andrea del Sarto, by himself, in admirable condition. 3. The Manfrini Bellini, 'St. Jerome reading in his Study.' 4. An altar-piece, by Crivelli, from Matelica. 5. 'The Death of Procris,' by Pier di Cosimò, the master of A. del Sarto. 6. An altar-piece, 'Virgin, Child and Saints,' by Lanini. 7. Two portraits, by Lorenzo Lotto; died, old, 1560.

The Ordnance Survey of England and Wales will be completed at the end of this month, and the map on the one-inch scale soon published as a whole. This work was begun in 1784, and of course needs a complete revision. Before this is undertaken a decision must be come to upon the advisability of continuing the use of the larger scales—the one-inch, employed for certain parts of the work—to the whole. This has been recommended by the Parliamentary Committee on the subject, and, by the experience of the Irish Survey, would probably be highly remunerative, and by that evidence useful. Whatever the scale be, it must be distinctly understood that nearly three generations must not elapse again before we get a decent map of the country. If it were practicable for the leading map-sellers to correct the existing map and publish photographic versions of the same, so improved, the public would be thankful and the government healthily stimulated by a little competition.

That commercial enterprise has at length taken the direction of theatrical investment is a circumstance that might be expected to excite apprehension among theatrical managers; but that astute men of the world should resort to clandestine means of opposition, could scarcely have been anticipated. The police reports, however, bear evidence to the fact. On Friday week, Mr. Boucicault was at the Lambeth Police Court, appealing to the Hon. G. C. Norton, in respect to a placard, without a printer's name, which had been exhibited in front of the Westminster Theatre, the offices of the Building Company, and the bankers of the same, with the purpose of injuring the theatrical projects in which Mr. Boucicault had taken the lead. The bill in question is as much wanting in grammar, as it is in a printer's name. We are told, for instance, that "the shares in the Covent Garden Theatre are void through being burnt down." The gist of the composition is, of course, to show that theatrical property is liable to depreciation in value. Drury Lane shares, once worth 500*l.* each, now sell at 40*l.* The rent of the theatre was once 11,000*l.*; it is now 5,000*l.* The St. James's once let for 4,500*l.*; it now lets for 1,000*l.* But the placard forgets to state that the Princess's Theatre, once let for 1,200*l.* a year, now fetches 4,000*l.* Theatres fall or rise in value according to the manner in which they are managed. Mr. Greenwood's management of Sadler's Wells led to an increase of rent, and Astley's, now that it is in Mr. Boucicault's hands, is of more value than it was in those of its former proprietor. We regret to add, that the distribution of the obnoxious and foolish placard had been traced to the door, not of Exeter Hall, but of a neighbouring theatre. Meanwhile the public has answered the fallacious objections raised in its usual practical manner. The share lists of the New Theatre Company were closed on Tuesday last, in spite of the issuing of the placard. We recommend to managers a more manly course of warfare. If they can prove to the public that new theatres are not wanted, they will be listened to; if they cannot, their case is not to be mended by the exhibition of anonymous placards.

Critical eyes seldom care to scrutinize portraits of members of the Courts of Europe which are painted "by command" of sovereigns. Critics have long ago given up the hope of finding much value in works the standard of which is habitually low. Judging, therefore, the lithographic portrait of the Princess of Wales which Messrs. Colnaghi, Scott & Co. publish, after a picture by M. Lauchert, Court-Painter at Berlin, by this standard, we do

not care to say much against it. The artist is not a Bellini or a Titian—he is not even a Chalon—still he has probably done the best he could with a subject that might make any painter happy.

A sale of the Library of the Princess Elizabeth, Landgravine of Hesse-Homburg, a daughter of George the Third, took place at the rooms of Messrs. Sotheby & Wilkinson, in the course of last week. Most of the books contained the signature of the Princess, and many of her MS. notes, chiefly showing her piety and strong feelings of friendship towards the donors. The Princess was herself artistic, and was well known to the public by her etchings, representing 'The Power and Progress of Genius,' and by her designs to 'Cupid turned Volunteer,' 'Birth and Triumph of Love,' &c. Amongst the more interesting articles were: Beauties of England and Wales, 25 vols., 22*l.* 10*s.*—Bible of 1632, in old embroidery, 10*l.* 15*s.*—Bible of 1796, with MS. note respecting John XIV., read by her "the moment after I had paid my last visit to my Angel Husband in his coffin, &c.," 1*l.* 9*s.*—Book of Common Prayer, by Sturt, 3*l.* 16*s.*—Book of Common Prayer, with a Miniature of her father, George III., apparently by herself, 1*l.* 12*s.*—Private Journal of Sir Joseph Banks, containing his Voyage round the World with Capt. Cook, transcribed entirely in the autograph of the Princess, 7*l.* 15*s.*—Queen Elizabeth's Prayer-Book, the edition of 1590, 4*l.* 8*s.*—Carter's Memoirs, illustrated with portraits, 15*l.* 10*s.*—Correspondence of Margaret Countess of Cumberland, transcript in the autograph of the Princess, 11*l.*—Horse B. Marise Virginia, Germanicè, manuscript on vellum, with illuminations by Nicholas Glockenton, 23*l.*—Harding's Account of the Dukes of Gloucester, manuscript, illustrated with drawings and engravings, 20*l.*—Holbein's Drawings for the Armour used at the Tournament of Henry VIII., 30*l.*—Marlborough Gems, with descriptions, 2 vols. 36*l.*—Sumner on St. John, with autograph note stating it to be "the most perfect and consoling I ever met with," 1*l.* 5*s.* The entire sale produced 915*l.* 12*s.* 6*d.*

The Palace of Industry in Paris is now open for the reception of works intended for the Artistic Exhibition, which will be open to the public on the 1st of May next. It is intended to award 21 medals for general works of Art, 12 for sculpture, 7 for engravings, 6 for architecture, and 1 large medal, of the value of 4,000 francs, as an Imperial prize for the best subject in any class.

M. Poey, of the Observatory at Havana, has forwarded a Report to the Academy of Sciences at Paris of 214,417 hourly meteorological observations, made by him and his assistants during the past year. The Report also embraces various interesting observations on magnetism, earthquakes, hurricanes, and spots on the sun. The latter possess great value at present, considered in connexion with the same class of observations made in Europe during the past year.

A company is being formed in Italy for the purpose of constructing scientific instruments of great accuracy. They will be made by skilled workmen, and every instrument will be verified before leaving the establishment, which will be at Turin. Among the promoters of this scheme are the names of Amici, Bechi, Bellandi, Donati and Lambruschini.

The Pasha of Egypt is said to contemplate the establishment of a line of steamers suited for Nile navigation, and, in winter, "fitted up with every convenience for European travellers." These vessels may start from Cairo, go up the river on a voyage of which Siout is but in the middle: they will go past Girgeh, past Thebes, Karnac, Luxor, Erment, Medineh Abou, Eneh, Edfou, to Assouan, and there, almost under the tropic, land their cargoes and passengers. A railway from this point to Berber, as proposed, will out-do, in strangeness, the "line" from Smyrna to Ephesus, opened last year, and offer return-tickets to above the Fifth Cataract, where the Nile must be fairly cold with mountain water, where it becomes Nile by the union of the Takatz with the Bahr el Abiad, where the trade of Birmingham, Manchester, London and Paris may

meet that of "utmost Axume," Gondar, Sennaar, Mokha, and the lands under the very Equator itself.

THE FRENCH GALLERY, 120, Pall Mall.—THE TENTH ANNUAL EXHIBITION OF PICTURES, the contributions of Artists of the French and Flemish Schools, is NOW OPEN.—Admission, 1*s.*; Catalogue, 6*d.*

MR. GHÉMAR'S EXHIBITION OF THE ROYAL FAMILIES OF ENGLAND AND DENMARK.—Portraits of The Queen, the Prince and Princess of Wales, life-size, Fifty-one Photographic Pictures and Drawings, by Mr. Ghémar, from actual sittings, ON VIEW at 120, Pall Mall (First Floor).—Admission, 1*s.* N.B. Each visitor presented with a Portrait of the Princess of Wales, carte size.

MRS. FANNY KEMBLE'S READINGS OF SHAKESPEARE.—Egyptian Hall, Piccadilly (Dudley Gallery).—Mr. MITCHELL begs to announce that Mrs. FANNY KEMBLE will continue her READINGS OF SHAKESPEARE every Monday, Wednesday and Friday Evenings, commencing at Eight o'clock. Monday, April 20, the Play of 'Henry the Fourth, Part I.'; Wednesday, April 22, the Play of 'Henry the Fifth'; and on Friday, April 24, the Tragedy of 'Macbeth.'—Seats Unreserved, 2*s.*; Stalls, 5*s.*; a few Fauteuils, 7*s.* each. Mr. Mitchell's Royal Library, 33, Old Bond Street, W.

A MORNING IN MEXICO.—Magnificent and exquisite EXHIBITION OF CERAMIC STATUETTES illustrating Life, Manners, Customs and Costumes in Mexico. Open daily from 10 till 6. Gallery, 66, Newman Street, Oxford Street, W.—Admission, 1*s.*; Catalogues, 3*d.* each; by Book-Post, 4*d.*

Mr. EDMUND YATES'S INVITATIONS TO EVENING PARTIES AND THE SEASIDE.—SPLITTING SNAKE; A Thirty New Part, entitled 'Twenty Minutes with a Medium,' will be given every Evening. Medium, Mr. Yates; Visitor, Mr. Power. There will also be several new arrivals at the Seaside. To commence at 8; Saturdays at 2.—Stalls, 5*s.*; Area, 2*s.*; Balcony, 1*s.*—Egyptian Hall, Piccadilly.

SCIENCE

SOCIETIES.

GEOGRAPHICAL.—April 13.—Sir Roderick I. Murchison, President, in the chair.—Col. the Hon. St. George Foley, C.B., G. Elder, J. Fisher, J. H. Gladstone, C. Moubot and T. Ogilvy, Esqs., were elected Fellows.—'Frobisher Strait proved to be a Bay, and on the Fate of Five Men of the Arctic Expedition in the Reign of Elizabeth,' by Mr. C. F. Hall.—'A Visit to Red River and the Saskatchewan,' by Dr. John Rae, M.D.

ASTRONOMICAL.—April 10.—The Astronomer Royal, President, in the chair.—Among the communications made at this meeting, there were two or three of more than usual interest. The first was from Mr. Stone, principal assistant at the Royal Observatory, Greenwich. Mr. Stone had completed the calculations of the mean horizontal parallax of the sun, as deduced from observations made at Greenwich on the planet Mars at his recent opposition, compared with other similar observations made in Australia. The result is that the heretofore received mean distance of the earth from the sun must be diminished by about three millions of miles! The necessity of this reduction of distance had been previously suspected by M. Leverrier indirectly from certain planetary disturbances, which appeared to require an increase of the earth's mass compared with that of the sun. The Greenwich observations give 8".97 for the sun's mean horizontal parallax. Dr. Winnecke, from observations on Mars made in Germany compared with others made at the Cape of Good Hope, obtains 8".96 for this element. M. Leverrier, from planetary disturbances, suspected 8".95! The close coincidence of these results, thus independently obtained, is not only remarkable as indicating extreme accuracy of observation, but as an additional confirmation of the firmness of grasp with which gravitation binds together the planetary Cosmos.—Another interesting communication was made by M. O. Struve, the Astronomer at Pulkowa. From certain careful comparisons of the latitudes of many places in the neighbourhood of Moscow, obtained by astronomical processes, compared with those obtained by geodetic triangulation, it became manifest that Moscow stands near to the edge of a huge elliptical bowl consisting of materials lighter than those of the average density of the earth's crust. This bowl or trough is about 28 miles wide from north to south, and exceeds 40 miles in an easterly direction. The interest of the observation does not terminate with the particular case of Moscow, but seems to indicate that henceforth in all instrumental determinations depending on the level or the plumb line, attention must be given to the lithological character for the place of observation. Here, again, is a point of contact between the two

antithetical sciences of astronomy and geology.—Lastly, the Astronomer Royal communicated certain results obtained from observations of star spectra, recently made at Greenwich. It appeared that the sodium line, D, is by no means universally present in these spectra, but that the iron line, Fraunhofer's F, is very prevalent.

GEOLOGICAL.—April 1.—Prof. A. C. Ramsay, President, in the chair.—Messrs. S. N. Carvalho and W. E. Wood were elected Fellows.—The Rev. Dr. O. Heer, Signor P. Savi, Signor G. Ponzi, Dr. J. Leidy, H. Marchese Pareto and Prof. A. Daubrès, were elected Foreign Correspondents.—The following communication was read:—'On recent Changes in the Delta of the Ganges,' by J. Fergusson, Esq.

BRITISH ARCHAEOLOGICAL ASSOCIATION.—April 8.—T. J. Pettigrew, V.P., in the chair.—The following Associates were elected:—Sir H. Halford, Bart., J. Farrar, M.P., and the Rev. Dr. T. Barclay.—Mr. Fornan exhibited a bronze of Greek workmanship; also a leaden seal, supposed to be that of a magician of the fifteenth or sixteenth century.—Mr. Vere Irving produced photographs of fragments of stone conjectured to have belonged to an ancient priory, at Lesmahago, Lanarkshire.—Mr. Cæsar Long made a communication relating to the discovery of two leaden coffins on the site of the Priory of St. John the Baptist, at Holywell, Shoreditch.—Mr. Syer Cuming read a paper, 'On a Fragment of an Eastern Sepulchre in the Yeovil Museum.'—The Rev. Mr. Hartshorne's revised paper, 'On Queen Eleanor's Cross at Northampton,' was read.

ARCHAEOLOGICAL INSTITUTE.—April 10.—Canon Rock, D.D., in the chair.—Dr. H. Johnson communicated a few notes on the recent progress of the investigations at Wroxeter. During the latter part of the past year the old diggings have not been touched, but have been kept open, and are visited by numerous persons. In October the ground where the old North gate is alleged to have stood was opened for the purpose of ascertaining whether any remains could be found. The foundations of a town wall were traced running towards Norton, but nothing like a gateway was found. A few days were also spent in excavating in the Cemetery, when sufficient evidence was afforded that the ancient burial-ground had extended along thus far from the gate. The diggings were undertaken at the suggestion of Mr. Wright, and amongst the discoveries made were—1. A kind of square building under ground, and similar to what was found in the other part of the Cemetery: there was no floor, nor any remains of a body. 2. About a dozen entire sepulchral urns of various forms and sizes, containing burnt bones, generally human. 3. Some of the urns contained lachrymatories, in one of which Dr. Johnson detected traces of oil. 4. A beautiful clear glass urn about eight inches high. 5. One entire speculum, and another in fragments; they are of copper, with a large mixture of tin, so as to seem white; are brittle, and of a brilliant surface. 6. Several nearly perfect lamps, which Dr. Johnson supposes to be made of foreign clay: one of them has the head of Hercules. 7. A nondescript article in bronze, much resembling a lancet. Dr. Johnson stated that additions are being constantly added to the Museum of Antiquities.—The Rev. F. W. Baker, M.A., gave an interesting account of excavations and restorations which have been going on for several years past at Beaulieu Abbey, under the direction of the Duke of Buccleuch. All the foundations of the Abbey Church, upwards of 330 feet in length, have been now clearly traced; the position of every buttress and pillar discovered. The whole site, which had formerly been covered by cow-sheds, and workshops and saw-pits, has been carefully turfed and inclosed by an iron railing, to prevent further desecration. Many lead coffins have, at different times, been found on the site of the Abbey Church; and, during excavations made for the purpose of ascertaining whether there had been a crypt under the choir, the remains of a female wrapt in lead were discovered in front of the High Altar. The

body was, no doubt, that of Isabella, daughter of Earl Pembroke and wife of Richard, Earl of Cornwall—better known as King of the Romans, and brother of King Henry the Third. She was buried at Beaulieu, with great pomp, in 1239; and an incised stone, with the effigy of a female much defaced, has lately been discovered, bearing this inscription: JACET: YSABELLA: PRIMA: V...: the last word is, doubtless, VXOR, there being space for those letters before the dots. On the other side of the stone, which is much worn, may be faintly traced RICARDI: ROMANORVM. Adjoining the tombstone of Isabella is another incised slab, upwards of ten feet in length, and which once bore a figure under a canopy, and over the top of the canopy a royal crown. This stone, till lately, was supposed to have covered the remains of Isabella; but the inscription on the first-mentioned stone shows this to be incorrect.—Mr. W. Molyneux furnished a detailed account of recent excavations made by him at Beau Desert, in Staffordshire, the seat of the Marquis of Anglesea. Mr. Molyneux succeeded in laying open, in one of the series of hills in Cannock Chase, the remains of a curious building, of two rooms, the exterior walls of which were more than five feet thick. Plans of the building and of the entrenchment wherein it was found were exhibited, and the whole of the objects exhumed were laid before the Meeting.—The Duke of Buccleuch exhibited a stone vessel found a few years ago on the site of Beaulieu Abbey, but which is clearly of late Flemish manufacture.—The Count Stuart d'Albanie brought for the inspection of the Institute a plombus or glandus, found in the scoria of a large and ancient lead-mine in the kingdom of Granada, wrought by the Romans, and believed to have been worked by the Celtiberians.—Mr. J. Yates made some interesting remarks on the glandus, which was very similar to those that have been found on the plain of Marathon and in other parts of Greece.—Mr. A. Way exhibited a Spoon of pewter or some white metal, supposed to have been found in the Thames, near London. On the handle is the head of Queen Anne and the initials A. R. On the reverse are imitative Hall marks, but not conformable to those of any year in the reign of Queen Anne. The metal resembles that of which vast numbers of objects found of late years near the Thames are formed.—Mr. H. Farrer, jun., the Rev. Lambert Larking, M.A., Mr. Joseph Bond and Mr. W. Burges also exhibited objects of archaeological interest.

ETHNOLOGICAL.—April 14.—'On the Antiquity of Man,' by Mr. J. Crawford, President.

ROYAL INSTITUTION.—March 20.—Major-Gen. E. Sabine, V.P., in the chair.—'On the Forces concerned in producing Magnetic Disturbances,' by B. Stewart, Esq.

SOCIETY OF ARTS.—April 5.—P. Graham, Esq., Member of the Council, in the chair.—The paper read was 'On the Sewing Machine: its History and Progress,' by Mr. E. P. Alexander.

SYRO-EGYPTIAN.—April 14.—Dr. W. Camps in the chair.—'On the Watershed of the Nile and the Indian Ocean,' by Mr. Ainsworth.

MEETINGS FOR THE ENSUING WEEK.

- Mon. Asiatic, 3.
- Architects, 8.
- Tues. Statistical Society, 8.—'Direct Imperial Expenditure, Colonies,' Mr. Purdy.
- Engineers, 8.—'Scinde Railway,' Mr. Brunton; 'St. Germain's Sillice of the Middle Level Drainage,' Mr. Hawkshaw.
- Royal Institution, 3.—'Animal Mechanics,' Mr. Marshall.
- Zoological, 9.—'Pheasants,' Dr. Selater; 'Birds, East Africa,' Dr. Haultaub.
- Wed. Geological, 8.—'Gneiss and other Azole Rocks, Bavaria and Bohemia,' Sir I. Murchison; 'Section at Moektrœ, near Ludlow,' Mr. Lightbody.
- Society of Arts, 8.—'Construction of Twin Screw Steamships,' Capt. Symonds.
- Archæological Association, 8.—'Roman Villa, Berke,' Dr. Palmer; 'Roman Antiquities, Corinium,' Prof. Buckman; 'Peaked Hats,' Mr. Cuming.
- Thurs. Antiquaries, 2.—'Anniversary.
- Royal, 8.
- Boyal Institution, 3.—'Geology,' Prof. Ansted.
- Fri. Horticultural, 2.—'Election of Fellows.
- Royal Institution, 8.—'Luminous Meteors,' Mr. Herschel.
- Sat. Royal Institution, 3.—'Language,' Prof. Max Müller.

FINE ARTS

THE FRENCH GALLERY.

THE Tenth Exhibition of French and Flemish Pictures, at the French Gallery, has one of its customary claims upon our interest, as comprising specimens of many artists' methods of treatment and courses of thought. This year the materials for contrast are strong, and it is difficult to avoid the pungency of the antitheses presented by the works of M.M. Gérôme, Leys, Décamps, Frère and Troyon. These are the leaders upon the walls in Pall Mall this year. On the whole, the proportion of figure pictures unusually exceeds that of landscapes; in some respects this is decidedly advantageous.

To the artistic eye the most important and attractive picture here is a darkly luminous piece of canvas by Décamps, exhibiting one of his dashes of fierce humour and sardonic jests at classes of men. This artist was often delighted to satirize his fellows; he presents them as monkeys in human attire. The picture is an early one. The title is *Valuers and Appraisers* (No. 16); the subject the appraisal of a large, darkly-toned landscape—a G. Poussin, it may be—that stands upon an easel. Before this sits a wealthy valuer, pury, self-satisfied and important, scrutinizing it through a glass. Behind and by the side of this monkey well-to-do are miserable, sneaking and obsequious monkeys, some seedily dressed, some hat in hand. Their countenances embody the artist's richest feeling for humour, and are supremely expressive. The student will look upon this work with interest, inspired by its marvellous execution. The glow of Rembrandtish light that exists in gloomy clearness, almost as intense as in enamel, and yet ten times softer and more jewel-like than the effect of enamel at its best, marks this work for delighted study. Every portion seems flooded with light, soberly rich and gloomily grand. The picture has the deep lucidity of oil and the brilliancy of a gem. Notice the accessories introduced behind the easel, the exquisite tones in the dresses, the keeping of the background. For execution alone, this is one of the most perfect works by the master—one, too, which it is unusually interesting to see here, after the unfinished 'Truffe Hunter' of last year, which illustrated the process of working that led to such results as now before us. It would be a service to Art to place these pictures side by side.

From the Rembrandtish intensity of this to the cold, delicate, clearness of M. Willems's picture, *The Introduction* (135), it is worth while to turn. M. Willems, several of whose paintings at the International Exhibition made him popularly known in this country, although he had before exhibited here, has not studied Jan Steen and Terberg without profit, yet with less than might have been expected from masters so capable of instructing their followers in the art of filling, no less than in the necessity of filling, the vacant spaces that are the Saharas of interior painting, and too often the desolations of so-called "conversation-pieces," such as that before us. Here a young cavalier is introducing himself to two ladies: hat in hand, he bows; one lady rises to receive her visitor, a servant places a chair. The actions are homely, natural and characteristic, the faces pleasant, and the most is made of the subject that can be made. A thorough knowledge of his models would have taught M. Willems how to fill up the dreadful blanks of the floor that recede into the picture, board after board, smoothed, lined and veined, but not wholly genuine in finish; in other parts also are great spaces "to let," as by the side of the fireplace. *The Proposal* (136), by this artist,—a youth energetically declaring himself to a young lady,—derives from Terberg less happily than the last. In both there is much solid and valuable painting.

The work which will most attract popular attention, and it may be discussion, is M. Leys's *Entrance of the Arch-duke Charles into Antwerp, 1514* (76). Love of mere character almost always masters this painter; yet, so felicitous is he in personation, that we cannot wonder at his devotion, although paid by a needless sacrifice. The work

before us must be studied in relation to its nature, —as an oil version of one of a series commissioned by the City of Antwerp to illustrate its history. As a mural painting we must consider it, and so feel the less regret at the introduction of two upright and not elegant pillars, that cut the composition into three portions, and painfully break its lines. Half the canvas is occupied by a flight of steps, at the foot of which are seated two heralds. At the top stands Charles the Fifth, then a youth, with his characteristically lean face and limbs, taking the oath (to preserve the city's privileges), which is administered by a richly-robed ecclesiastic, one of those "Moyen-Age" looking priests whom M. Leys delights to paint. Behind, are the famous Arch-duchesses who accompanied Charles; on a step lower stands an attendant priest, bearing his chief's mitre upon a cushion. Evidences of haste in this work,—see the heralds' faces and the modelling of their arms,—are to be regretted from a painter whose ability to execute is unchallengeable, but whose peculiar style will not admit anything like slighting.

Although *The Procession in Paris during the League* (93), by M. Robert Fleury, is not one of the most effective works here, nor one of his best, it will serve to illustrate some of the powers of an able painter; to this end it will reward study.—Neither is M. Gérôme's *Camels at the Fountain* (42) by any means one of his most important works; nevertheless, it will be well to look at the firm and deliberate drawing shown in the stringy limbs of the animals, no less than in their faces. There is much good execution in this picture; its admirable point is in the eager rush of the beasts that drink from the fountain, their wide strides and outstretched necks; one behind thrusts himself forward with finely expressed passion.—*The Danish Girl going to Church* (53), by Madame Jerichau, is one of the best and most agreeable of her pictures.—*Village Politicians* (61), by M. L. Knaus, has the artist's abundant humour: some neighbours have come to visit a woman cook at home: she expresses her views with decision and has them received with attention. Probably this is not a recent work, being more solid in handling and less bright than we have seen from M. Knaus of late.—One of the best humorous pictures in the gallery is by a pupil of M. Leys, M. V. Lagye, *A Toy shop in Antwerp in the Fifteenth Century* (64). An ancient street, a booth therein, with its great flap-shutters raised, the stock of toys set out upon the board, and a lady, in all the quaintness of costume and character of the time, has brought a child to buy for itself. Some parts of the execution of this work, as the textures of dresses, &c., are exquisitely done. Longer practice will probably make the artist a colourist.

M. Tissot's *Death Dance* (119), a subject in which the old German masters took grim delight, has a good deal of spirit;—his *Faust and Marguerite in the Garden* (117) makes both parties a little too old;—his *Young Luther at Church* (118) has qualities of solidity and feeling that are commendable: the Reformer looking at some girls placing votive candles.—M. Ruiperez is a pupil of M. Meissonnier, and does his master credit in representing character, although he imitates the worst faults of that master in clayey colouring and hardness of execution. *Musicians and Soldiers in a Hostelry* (95) is the best of his four works, showing troopers listening to a harpist and violin-player.—M. Meissonnier's *Etcher* (79), such an artist at work in the shaded light of a window, is characteristically red in colour, but less opaque and elaborate than usual; in many parts the treatment of tone and chiar-oscuro is beautiful. This work is, as almost always with the artist, remarkable for characteristic expression,—see the attitude of the figure and the arrangement of its accessories.—M. E. Frère is in force here with four pictures, every one of them deserving consideration. There is exquisite pathos in the face of the *Widowed Mother* (35). *Breakfast-time at the Farm* (34) shows farm-children and others gathered round a table. *The Arrival at School* (36) has much humour in it. A new boy, in an enormous pair of breeches, has brought out his presents before an elder comrade, who looks very eagerly into the basket. It is between school

hours. In the background two pupils amuse themselves by fighting.

The most remarkable landscape here is by M. Troyon, *Unloading Boats at Low-Water* (123),—a sandy shore, stretching miles off into the picture; over it lie heaped, sleepy-looking summer-clouds, with one blue gap in the mass of grey, which closes in the horizon softly, and without an edge. In the front is a smack aground. The effect of truth, and the broad, masterly treatment of this picture, are noble; of its school it is one of the best works we have seen. The sea, with the sober shimmer upon it, is a triumph of study.—M. Lambinet's landscapes, although ever of the same theme, never lack interest, so charmingly does he render them, with brilliant and pure colouring and natural truth. *A River Scene* (66), a bright river running through marshy grounds, is admirable in its water and clouds. See also *The Duck-Pond* (65), by the same.—M. Bentabole's *Coast Scene* (3), chalk cliffs, and downs above them in bright sunlight, is a pleasant and faithful study.—Among other landscapes here, see M. A. Bonheur's *Meadow Scene in Auvergne* (6),—M. T. Frère's Oriental scenes (38, 39, 40),—M. Noel's *Pécamps* (84) and *Dourtarney* (85), &c., as possessing more or less of interest.

FINE-ART GOSSIP.—The private views of the Institute of Water-Colour Painters' Exhibition and that of the Female Artists' Society occur this day (Saturday); the public openings of both will be on Monday next. That of the last is held at the new Gallery of the Society, 43, Pall Mall. By way of explanation of the change of title by the first-named body from that of the New Society of Painters in Water-colours, which it has borne for nearly thirty years, we learn that its constituents felt that the old designation was always liable to misconception; some persons thought the association a thing of yesterday, others that it was a sort of stepping-stone to the elder Society of Water-Colour Painters in which men underwent a probationary training; this was not so much to be wondered at when it was found that several members of the Institute left it for the Society. The recent purchase of the premises in which the Exhibition is held, formerly held on lease and of late by yearly tenancy, determined the Institute to rebuild them and assume a new name in its new quarters. This rebuilding is also an enlargement, by taking in a house that stood at the back of the former gallery, and otherwise an improvement by raising the floor so as to avoid the shadow from the adjoining and loftier gallery of the British Institution. Two full members have been elected this year, Messrs. W. L. Leitch and J. S. Prout, from the order of Associates. The Institute is to be identified as much as possible with the New Society.

Mr. Dante Rossetti has just completed a life-size picture, comprising the head and shoulders of Joan of Arc kissing the sword found in the church at Fierbois, where in a vision she had been directed to seek it. She holds the weapon in both hands, pressing her lips against the blade above the hilt. The head is bare; its hair heaped in a bold mass from off the face. The expression is given with remarkable force and spirit, embodying the intensity and enthusiasm of the heroine in every line and hue. One arm is visible, covered with plate-armor. Over her shoulders is a mantle, damasked with gold, through which the arm appears. This is executed for Mr. J. A. Rose.—A companion to this will be a head of Helen, with the goblet she dedicated to Venus; for the same gentleman. This artist has also in hand a half-figure of Fortune, represented as a female figure shuffling a pack of cards.

The new shilling Catalogue of the National Gallery, Foreign Schools, contains the noteworthy addition of fac-similes of the signatures of artists upon pictures in the Collection, mostly of the original size. This is a very useful addition, and supplies what is often wanted, so far as its scope permits, the means of inquiring into the genuineness of works of Art.

Messrs. Clayton & Bell are executing, as a memorial of the late Lord Yarborough, a window

to be placed in the choir of Lincoln Cathedral. It is in early fourteenth-century style, and contains, set upon a diaper ground, six panels, each bearing representations of incidents in the Passion and Resurrection of Christ; bands of angels are also introduced, which give an excellent effect to the well-composed whole.—We were misled by erroneous information in attributing to this firm the perpetration of such a blunder as the reproduction of Overbeck's picture—'Christ healing the Sick' for a window in Bath Abbey. The design they produced is an original one, very well suited to architectonic purposes. The same firm are executing, in marble, a life-size figure of Christ on the Cross, which is to surmount the reredos behind the high altar of Hamburg Cathedral.

Mr. M. Noble is to execute a colossal equestrian statue of the late Lord Eglinton, to be set up at Ayr.

Portraits of the Princess of Wales abound just now. We have one upon our table published by Messrs. M'Lean, of the Haymarket, lithographed by M. Desmaisons, after a photograph by M. Hausen, of Copenhagen, which is, notwithstanding its hardness, the most creditable to the artist of any we have seen.

German religious art has sustained a severe shock by the death of Heinrich von Hess, on the 29th of March, at the age of sixty-five; and Munich has lost in him the painter with whom its artistic fame is almost inseparably connected. Next to the architectural attractions of the town, which are only the first as they are the first seen, the churches built by King Ludwig arouse the traveller's interest; and to Heinrich von Hess the decoration of these churches is chiefly due. The frescoes in the Basilica of St. Boniface, and the Court Chapel, as well as the painted windows of the church in the Au, are mostly from his hand; and in naming these the most characteristic, as the most valuable, of their kind have been recorded. Probably no Englishman has visited Munich without carrying away a grateful recollection of that fresco in the Boniface church, in which the departure of the saint from Netley Abbey is presented; and this picture, as well as others of the series, has been diffused over all England by means of engravings. Hess was born in Düsseldorf, in 1798, and came of an artistic family. His father was an engraver; his elder brother, still living in Munich, a battle painter of eminence; while other of his relations have also distinguished themselves in Art. Heinrich passed some time in Rome, being assisted by King Ludwig, then Crown Prince of Bavaria, on whose accession to the throne, however, he was recalled to Munich as Professor in the Academy and Director of the Painted Glass Manufactory. In the latter capacity, he made designs for the windows of the Cathedral at Ratisbon, and, later, for the windows of the church in the Au. The new Munich glass has been the subject of much controversy, aiming as it does at presenting pictures on glass instead of painted windows; but whatever may be the verdict of the best authorities as to the truth and correctness of these works, the pictures as designed by Hess must receive their due share of praise. The frescoes in the Court Chapel were the next works undertaken by Hess and his scholars, and after these the series of pictures detailing the life and works of St. Boniface, the Apostle of the Germans. These frescoes are by far the most important of his productions, and are in many ways worthy of being considered unique in the history of modern Art. They are distinguished from the generality of German religious works by having one most important quality—that of sympathy with the subject represented. Hess seems to have been fully in his element in portraying the deeds of St. Boniface not to have been moved by the abstract fineness of the subject or by recollections of similar frescoes executed by the great masters. He leaves unfinished a picture of 'The Last Supper,' in which the Apostles receive the Sacrament kneeling; this has not yet been shown, except to visitors at his studio.

MUSIC AND THE DRAMA

ERNST PAUER begs to announce SIX HISTORICAL PERFORMANCES OF PIANOFORTE MUSIC, in strictly Chronological order, with an entirely new Programme, at Willis's Rooms, King Street, St. James's, ON MONDAY, April 20.—The Vienna School. April 27—Italian Composers: the School of Clementi and his Pupils. May 4—Bach, his Sons, Friedemann, Emanuel, Johann, and Pupil. May 11—French Composers and the Romantic School. May 18—English Composers, and Selection of new English, French, and German Pianoforte Music. June 1.—The most Influential and Celebrated Composers. At Three o'clock each day.—Subscription Tickets, one Guinea; Single Tickets, 5s. each. May be had on application to E. Pauer, 3, Cranley Place, Onslow Square, S.W.; the principal Musicians; and of Mr. Robert W. Ollivier, 19, Old Bond Street, W.

APRIL 20.—Mr. HENRY LESLIE'S CHOIR, Hanover Square Rooms. The Programme will include Wesley's motets—"In Exitu Israel," Mendelssohn's Psalm, "Why rage fiercely the heathen." Pianist, Charles Halle.—Tickets, 5s., 2s. 6d., and 1s. Addition's, 210, Regent Street; Hanover Square Rooms; and Austin's Ticket-Office, 28, Piccadilly; and all Musicians.

MR. DEACON begs to announce that he will give THREE SEANCES OF CLASSICAL INSTRUMENTAL MUSIC, at 16, Grosvenor Street (by the kind permission of Messrs. Colliard), on THURSDAYS, April 20 and May 21, and MONDAY, June 8, to commence at Three o'clock.—Violin, M. Sainton and Herr Pollitzer; Viola, Mr. H. Webb and Mr. Clementi; Violoncello, Signor Fesze; Contra-Basso, Mr. C. Berens; Pianoforte, Mr. Deacon.—Tickets for the Series, One Guinea; to admit three to one Seance, One Guinea; single Ticket, Half-a-Guinea: to be had of Mr. R. W. Ollivier, 19, Old Bond Street; or of Mr. Deacon, 72, Welbeck Street, Cavendish Square, W.

MADAME LIND-GOLDSCHMIDT, St. James's Hall, Piccadilly, FRIDAY EVENING, May 1.—Mr. and Madame Goldschmidt having generously given their services, a Grand Performance of Handel's Cantata, L'ALLEGRO and IL PENSIEROSO, will take place in AID of the FUNDS of the ROYAL HOSPITAL for INCURABLES at Putney. The Solo Parts by the following eminent Artists:—Madame Lind-Goldschmidt, Madame Lemmens-Sherrington, Miss Lascelles, Mr. Montem Smith, and Mr. W. H. Weiss. Conductor, Mr. Otto Goldschmidt. The Cantata will be preceded by Handel's Grand Orchestral Concerto, No. 12.—Tickets, 7s., 10s. 6d., and One Guinea each, may be obtained at Mr. Mitchell's Royal Academy, Old Bond Street; Messrs. Addison & Lucas's, Regent Street; at all the principal Musicians' and Libraries; and at the Office of the Hospital, 10, Poultry.

ROYAL SOCIETY OF MUSICIANS.—Patroness, Her Majesty the Queen.—The ANNUAL PERFORMANCE of the MESSIAH will take place at ST. JAMES'S HALL, on WEDNESDAY, May 6, at Eight o'clock, in aid of the Funds of the Charity.—Conductor, Prof. W. A. Bennett. Mdlle. Titiens, Mdlle. Parepa, Miss Eliza Hughes, Miss Lascelles, Mr. Sims Reeves, Mr. Whiffin, Mr. Lewis Thomas, and Mr. Weiss.—Tickets, 10s. 6d., 5s., 2s., at Addison & Lucas's, 210, Regent Street; Austin's Ticket Office, 28, Piccadilly; and at the principal Music Warehouses.

HER MAJESTY'S THEATRE.—In some respects Mr. Mapleson has improved on his arrangements of last season, though "more remains to do." His chorus, which a quarter of a century ago would have been thought sufficient—nay, amazing—can now pass only as mediocre. The same may be said of his orchestra, which, however, seems better under Signor Ardit's control than it was in 1862. The voices of his principal singers in 'Il Trovatore,' with which the theatre opened this day week, could hardly, we apprehend, be matched as a quartett in Europe; the artists being Mdlle. Titiens, Madame Alboni, Signor Giuglini, and Mr. Santley. The voice of the *prima donna* was, during a great part of the evening, at its best,—and it will, and must, and should, command an audience to a certain degree in 'proportion as, for sake of splendid tone, they can dispense with delicacy of finish and sacred fire. Thus Mdlle. Titiens was weakest where she should have been strongest—in Signor Verdi's best scene, the air 'D'amor sull' all' rose,' and the following 'Miserere.' It would be a pity should it prove that one so gloriously endowed with the ninety-nine requisites has already reached the meridian of her talent; but at present it would seem as if her Neapolitan campaign had brought with it no progress. Madame Alboni and Signor Giuglini exerted themselves to their utmost. Mr. Santley is now, beyond contest, the best *Conte di Luna* on the stage;—he acts and presents himself with greater power and ease than formerly. All four singers were most warmly applauded. Between the acts of the opera, a new *Serenata* was performed in honour of the late royal marriage; the words by Mr. Oxenford, the music by Mr. Cusins (Lambourn, Cock & Co.).

ROYAL ITALIAN OPERA.—Mr. Gye's second opera was 'I Puritani,' given this day week for the introduction of Signora Fioretti. The readers of our foreign correspondence may recollect that favourable mention of this lady, while she was singing in Naples, has appeared there. Her voice is a genuine *soprano*; her execution is finished with an honesty rare in these slovenly days. She is, in brief, a singer, as the word used to be understood; and seeing that in Paris and London we lay

greater stress on the refinements of the fascinating art as settled by the canons of the great school, than they now do in Germany and Italy, it will not surprise us if her pleasing natural gifts and good vocalism raise her to a favour she has not enjoyed at home. Her success on Saturday was complete, and being thoroughly merited is not likely to be transient,—though, probably, it must be maintained in comic, not serious, opera; her powers as an actress being limited. As regards her playmates, the cast can hardly be called satisfactory; Signor Neri-Baraldi, clever as he is, cannot be accepted as an *Arturo*, save provisionally, and the days of Signor Ronconi's glory as a sentimental singer are over. M. Faure completed the quartett.

CRYSTAL PALACE CONCERTS.—Mr. Dannreuther.—Unless we are mistaken, Saturday last showed a remarkable first appearance in a world where first appearances become, year by year, more and more difficult,—the world of pianoforte players. Mr. Dannreuther is a player requiring small consideration on the score of youth; less allowance for inevitable inexperience; least of all, no silly sympathy such as those melancholy creatures called prodigies easily manage to engage, to the destruction of their future progress. He is simply an artist who enters his profession with an armament of means, powers, and intellectual endowments, regarding the future issue of which there can be no doubt, life and health permitting. His success, from first to last, was remarkable, we repeat. Chopin's first *Concerto*, the one in F minor, is no piece of plesantry, but a difficult, dreamy, elaborate composition, in places weak—the beauty of which (and the beauty is great) can only be developed by one who commands rare powers of execution and an innate delicacy of sentiment not to be assumed nor counterfeited—the true musician's sentiment. This difficult *Concerto* was delivered with so much command of the instrument, so much energy (when energy was wanted) and poetical grace, as not merely to hold fast a large and miscellaneous audience, to whom it was strange, but to assert, to all those who have ears to hear, the arrival of a great new player. A feat much more difficult has not often been accomplished. After this, Mr. Dannreuther played Prof. Moscheles' graceful *Serenade*, (Op. 103), a charming, real and sound single movement, and then Dr. Liszt's brilliant transcript of M. Gounod's brilliant and natural *Faust Waltz*. The themes seize the ear, and the treatment of them is most effective for every purpose of display. Better played the piece could hardly have been, save, perhaps, by Dr. Liszt himself.

ADELPHI.—A new farce has been produced here, entitled, 'The Trial of Tompkins.' It is an adaptation of 'Le Meilleur des Pères,' by MM. Adrien Decourrelle and Jules Adonis, which has been contributed to the English boards by Mr. T. J. Williams. The success of the piece depends on the humour of Mr. J. L. Toole, as *Timotheus Tompkins*, who, as suitor for the hand of *Bella Sharpshins*, is subjected to certain trials by her father as the conditions of acceptance. His courage is tested, and, by the force of brag, he at first succeeds, but his inherent cowardice is soon proved. His rival, *Henry Mowbray* (Mr. Sefton), introducing real pistols, with powder and ball, instead of those mentioned in the manuscript programme, to which he had had furtive access, Tompkins at once surrenders his claim to the lady. There is not much in such incidents as these; but the actors laboured to make them effective.

SURREY.—The notion of a sensation-piece by the managers of this house is a cumulative one. Not content with working up to a particular situation, they prefer a series of startling effects, any one of which would suffice for an ordinary drama. Every scene is a sensational scene, the last, if possible, the most so. Mr. Sawyer, a Brighton author, has determined to indulge the Surrey audience "to the top of their bent," and in a drama entitled 'Jessie Ashton; or, London by Day and Night,' has linked together as many horrors as he could

crowd into the space, and more than he could render intelligible. The heroine goes through a succession of dangers contrived for her by her lover's brother, from which she is continually delivered by her lover himself, and when she thinks, "poor easy soul," she is about to be married, finds, on the authority of her persecutor, that she has been "changed at nurse," and is the sister of her betrothed. But this is not enough; she must also be charged with murder, escape from prison, and undergo a struggle for life with a villain on Westminster Bridge. This scene is superbly set, and reconciled the audience to every inconsistency. In what we have stated, we have only indicated one of the three plots which are involved in the very complex story of the drama. In a second plot, another heroine, more fortunate, but not so innocent, poisons one of her admirers at a Casino after having cut out her sister's tongue, and ultimately falls by the dumb girl's hand. We may be excused from inserting any more of these atrocities; and the reader will, we guess, be content with what we have given, as sufficient indices of what he may expect to see, should he be an intending visitor to this theatre.

MUSICAL AND DRAMATIC GOSSIP.—Musical Paris is about to sustain a serious loss in the departure of Madame Viardot, we perceive, who will shortly leave the capital as a resident, carrying with her the most cordial good wishes of all who take interest in what is generous, real and deep in Art. Apart from her successes as a creative artist, the influence of so consummate an intelligence, musically and intellectually exercised, as hers has been, though not paraded in public, can hardly be over-estimated or over-regretted in private. It may be said, without exaggerated praise, that there has not been one real musician of any value or significance for the last fifteen years, in the French metropolis, who has not in some form passed through her hands, and been enriched or refined, or encouraged by so passing. That her own public appearances on the stage and in the concert-room, remarkable as these have been (last and most remarkable as the interpreter of Gluck's sublime music), in no respect represent the artistic value of this gifted lady's life is known to hundreds besides ourselves. Her withdrawal is not, however, to be considered as one of those acts of formal farewell and final retirement in which many of her contemporaries and predecessors have delighted to indulge, for the sake of re-considering them. Slackened intercourse with active life need not mean utter cessation of it, and every one has good cause to hope will not—in this case.

Mr. Halle was the pianist at Monday's *Popular Concert*, at which M. Vieuxtemps re-appeared.—The programmes of the first concert of the *New Philharmonic Society* held on Wednesday, and of the *Philharmonic Concert* to be held on Monday next, might expressly have been devised to give rest to the ears of weary critics.—The only items in either having the most remote approach to novelty, are Weber's *Concerto* in c major, chosen by Dr. Wylde for Madame Arabella Goddard, and the same composer's *Concerto* in E major, which Mr. Cusins is to play on Monday.—In truth, the *Concertos* of Beethoven and Mendelssohn must be laid aside for the present,—they have been played to satiety.—Herr Pauer's *Matinées* will commence on Monday next.

It would seem, if Austrian journals are to be trusted, that Mdlle. Adelina Patti has been, during her stay in Vienna, as much assailed (the word is not too strong) with honours, cataracts of gold, and inroads of popular curiosity and rapture, as was Mdlle. Jenny Lind in America,—a fact to be left without comparison or comment, save in such a practical question as this,—"Why do not more young ladies follow Mdlle. Patti's example, and learn to sing properly?" The world is only too willing to go out and greet them, if the pretext be only tolerable.

The following is from Naples. "On Wednesday, Thursday and Friday evenings, the 'Miserere' of Signor Mercadante was executed by the pupils of the Music School, in the church of San Pietro a Maiella with success. On Thursday and Friday

evenings the 'Miserere' of Maestro Pistilla was executed in the church of San Francesco di Paolo, by a grand orchestra and the finest *artistes* in Naples. The effect of the music produced by choruses of men, women and boys was, of its kind, grand.—We English have, however, been especially interested with a musical performance which took place in the theatre of the Winter Garden on Tuesday last. Our countryman, Mr. George Douglas, Chancellor of our Consulate, had undertaken the bold task, after Pergolesi and Rossini, of setting to music the 'Stabat.' It was received with great favour. In the interval between the first and second parts, a *Sinfonia* by Achille Gardi, a young Neapolitan *artiste* of evident talent, was performed, the instrumentation of which was masterly."

German papers announce the discovery at Vienna, of an unknown Oratorio, by Schubert, on the subject of Lazarus. This is described by some writers as a composition of high interest and originality. Such, however, is the present state of German musical partisanship in praise and the reverse, and so increasingly resolute seems the humour of the people to take to themselves an exaggerated credit for certain national possessions, and to treat those of other countries with unexampled indifference and contempt,—that only limited credit can be placed in any printed recommendation which arrives from that country. "We are living now in Germany," writes one competent to speak (and who, like Handel, Bach, Haydn, Mozart, Beethoven, Spohr and Mendelssohn, can perceive that Art is of no country, "in an atmosphere as bad and unwholesome for music and art altogether as is conceivable. The more one can rail against other countries, the more one will be praised at home, by those who make fair and foul weather here." Fortunately, the English at least, do not return injustice for injustice, and thus feel an interest to test for themselves the value of music by a poet, however incomplete, so rich in fancy, so real in vocation, as Francis Schubert.—Among the service-music of the Holy Week at Vienna, a "Stabat," by the same composer, was performed in the church of Alt-Lerchenfeld.

Prof. Bischoff, of Cologne, has been arranging a new text to Beethoven's hastily-written *Cantata* 'Der glorreiche Augenblick.'

Among new compositions named in the *Allgemeine Musikalische Zeitung* are an overture to 'The Siege of Saragossa,' by Herr Lührs, and a comic opera, 'The Abbot of St. Gall,' by Herr Herther, produced at Leipzig on Easter Eve. Herr Tausch (not Fausch, as was erroneously printed last week) has been adding to the library of Shakspeare music by decking 'Twelfth Night.'

Writers of history, from week to week, have to tell that the revival of M. Gounod's 'Faust' at the Théâtre Lyrique, has proved so successful, that the manager has been compelled to break French engagements entered into by Madame Miolan-Carvalho (the original, and it may be said, the incomparable *Marguerite*), finding it more discreet to make heavy sacrifices and important concessions, than to attempt the run of the opera. The artist will not arrive in London before the middle or end of May. The opera, we read in Lombard journals, is the only work which has pleased at La Scala, Milan, during the past season.

It may be recollected that Marschner undertook a copyright trial, in regard to what he considered a piratical infringement of his rights, by a French published translation of his 'Vampire.' The Imperial Court has at last decided the question. The plaintiff is "cast," and condemned to pay the costs: the plaintiff has been quiet in his grave for these two years past!

Mlle. de Pommeraye that was—Signora Pomerani that is—has appeared at the Italian Opera in Paris as *Desdemona*, and is said, by the *Gazette Musicale*, to have succeeded.

The same journal undertakes that M. Offenbach shall, before the close of this year of grace, deliver to the Grand Opera at Vienna a four-act work, 'The Rhine Fairies,'—to the Victoria Theatre at Berlin, a three-act work, 'The Fair Aurora,'—for the bath-season at Ems, an operetta, 'Il Signor

Fagotto,'—and to Les Bouffes-Parisiens in Paris, a comic opera, 'The Georgians,' to inaugurate the new theatre, which will open on the first of October.

Signor Vincenzo Sarti, a new tenor singer, is said to have made a real sensation at Palermo.

The history of theatrical creations gains a new anecdote or two from the remembrances of M. Halévy, by his friend and contemporary, M. Édouard Monnaie, now being published in the *Gazette Musicale* of Paris.—'La Juive,' the opera which made Halévy's fame—his best serious opera, on a book which it has been said Signor Rossini refused—did not come to light without many difficulties to be removed. The scene was originally laid in Goa, and not in Constance. At first, on the question being broached to him, Nourrit, of whom the fickle Parisians were already beginning to complain, as past his prime, refused to personate *Eleazar*, the father, preferring *Leopold*, the lover. It would be to own that he was growing old, he said. How his re-consideration has enriched the tenor-singer's repertory with a character in its dramatic force and interest pairing off with *Otello*, all Europe knows; but Europe did not know till now, we apprehend, that Nourrit suggested the addition of the fine song, 'Rachel,' to the close of the fourth act—nay, even sketched the words,—as he also prompted Scribe and M. Meyerbeer, in 'Les Huguenots,' to produce the magnificent duet in the fourth act, following 'The Benediction of the Diggers,' which was originally set down for its *finale*. Though both additions served the dramatic singer's turn by affording room for individual display; both, also, indicate an acute and poetical dramatic intelligence, with which tenors for the most part have not proved themselves too richly provided.

MISCELLANEA

The French Post-Office.—The following facts, which regard the workings of the French post, are communicated by a German newspaper, and may be taken as supplement to the statement about the German posts which we published last December. The doings of the French post afford a fresh proof of the success of every attempt at lowering the rates of carriage and facilitating communication, for in the first year that the weight of letters was raised from 7½ to 10 grammes, the postage-stamps sold amounted to 2½ millions of francs more than in the preceding year. Registered letters were formerly charged a double rate, but as soon as this was reduced to an invariable charge of 20 centimes, the number of them more than doubled. When the postage from Paris to London amounted to 2 francs a letter, a basket was kept at the porter's lodge of the British Embassy, and every decently-dressed man might drop his letters in there, and have them conveyed by the courier who went twice a week. The want of efficient arrangement is generally the cause of postal obstruction, and, till lately, the treaties between France and other nations were in great need of reform. At present, the only state which maintains the old ineffectual scheme is, as might be expected, the Papal Government: a letter from Paris to Rome costs a franc, while one from Paris to Naples costs only 40 centimes, and to China 80 centimes, making China nearer to civilization by 20 centimes than Rome. The regulations of the book-post are, however, still faulty: a kilogramme of books costs 2 francs 40 centimes to Bavaria, Saxony, Prussia and Hanover; 4 francs 65 centimes to Baden and Wurtemberg; and 6 francs 60 centimes to Austria. Thus, if a book is sent from Paris to Baden, a journey of twelve hours, it costs double the freight to Munich, a journey of twenty-four. And a reform is wanted in the matter of proof-sheets, which are not allowed to go under a cross-band for fear people should write correspondence on the margin. A German author, residing in Paris, had a book of 100 sheets printed at home, and found correcting the proofs too great a luxury, as the postage of each sheet amounted to 3 francs.

LITERATURE

Der chemische Process der Ernährung der Vegetabilien. Von Justus von Liebig. (Brunswick, Vieweg & Son.)

The Natural Laws of Husbandry. By Justus von Liebig. Edited by John Blyth, M.D. (Walton & Maberly.)

THE seventh German edition of Prof. von Liebig's 'Applied Chemistry' opens with an Introduction, which has been omitted in Mr. Blyth's English translation. We will not say unaccountably omitted, since a plausible reason for the omission will present itself to the mind of every reader. If Horace shuddered a little when his friend Asinius Pollio figuratively walked upon ashes, beneath which a latent fire was still glimmering, a publisher may be excused if he does not willingly put his hand into a fire.

Prof. von Liebig's Introduction owes its existence to the treatment which his mineral manures have received at the hands of the British agriculturists. Prof. Liebig is querulous, personal, and condemnatory. He has taken John Bull by the horns, and the tuzzle will afford sport for the scientific Philistines. The German is on dangerous ground; but even more irritating than the Professor himself is a certain English physician (name unknown) whose remarks form the most highly-seasoned part of the Introduction.

Prof. von Liebig, it seems, highly disgusted with the experiments of Mr. Lawes, so far as they were considered proofs of the inefficiency of his manures, and still more disgusted with the importance attached to them by Mr. Philip Pusey, President of the Royal Agricultural Society, was anxious to know what it all meant. Mr. Lawes, according to Mr. Pusey, had given a death-blow to the so-called mineral theory of Prof. von Liebig. Be this as it may, Mr. Lawes has certainly not given the death-blow to the Professor himself, who rises, with renewed vitality, in wrathful defence of his offspring, so wantonly, as he thinks, set down in the scientific obituary.

The condemnation of the mineral theory, and the manure, which is its practical result, could only originate from a defect somewhere. The defect might be in the manure itself, or it might be in the British mind. Convinced that it was not in the former, Prof. Liebig might, by a mere logical process, have arrived at the conclusion that it was certainly in the latter; but preferring direct information to the indirect form of reasoning, he applies to a scientific Englishman, by profession a physician, to report as to the general condition of natural science in this country.

The physician is delighted with the job. National pride as a British subject, and veneration for science, as represented by Prof. Liebig, are both alive within him; but they pleasantly harmonize with each other. Thus, he begins:—"We are an eminently practical people, endowed with an amount of active force, energy, boldness and perseverance in undertaking and carrying out great enterprises, that falls to the lot of no other nation. This appears not only in industrial and commercial undertakings, or in the exploits of our travellers, but in all possible directions. Observe the soldier in our little army during the Indian campaign, surrounded by a population which, naturally treacherous and cruel, only waits for his defeat to tear him in pieces. Threatened in his camp by a frightful distemper; weakened by the most wearisome marches, under a tropical sun, and

opposed to an antagonist strong in numbers, whom he himself has instructed in all the arts of war,—observe this soldier, his bravery and his devotion to his cause; in the battle itself how he bends to no danger, and how his strength increases with every obstacle! Never did the history of the world record more heroic deeds; and most elevating is the spectacle at home, when, on the arrival of an Indian post, the whole country is transformed, as it were, into an arena, round which is seated the people, with greedy eyes and outstretched heads, following the motions and the deeds of every single soldier as of the entire army, each spectator having his own especial favourite, to whom he shouts, 'Courage, brave heart! we see all that you are doing for your country, for us!'"

So much, and a little more, for the gratification of national pride; but who does not feel that a "but" is coming, nay, is the very apex to which all this eulogy is tending? These noble Britons who are packed on the seats of a vast Colosseum, in the midst of which the Indian peninsula is so conveniently placed for inspection, though thirty millions in number, have not thirty among them all who know either what science is or what is its object. Do not let Prof. Liebig, in the spirit of German cosmopolitanism, quote the names of Newton, and Adam Smith, and Davy, and Stuart Mill, to show his too sympathetic correspondent that he is going a little too far: "No," says the English physician, "the researches of these men have struck no root into the people itself; they only serve palpably to show how rare among us is the inspiration for science, and how brilliant and rich it is when manifested in an individual, since in him are reflected those great capabilities which are proper to the nation."

English science, our Doctor thinks, is only dilettantism. Brown and Owen, and Lyell and Phillips, are certainly great men, and we talk about them with becoming reverence, but we take great care never to read their books. The man of science, therefore, when he is 'cute as well as scientific, will contrive every now and then to please the dilettanti. Thus, Prof. Tyndall, whose really profound investigations in electricity and magnetism were little noticed, made a tolerable sensation with his work on the Glaciers, the scientific substance of which might, with a slight compressing power, be reduced to a brace of propositions. "Listen (says the Doctor, in pursuance of this argument) to your ingenious friend, the Duke of Argyll, when he delivers his inaugural discourse to the Edinburgh Royal Society. With what dialectical dexterity and eloquence does he refute Darwin's arguments on the origin of species! One would think he was making gilded balls dance and glimmer in the sunlight, on purpose to bid them vanish in his sleeve with the dexterity of a Bosco. Scientific questions that can be decided by the Duke of Argyll, who can only take them up as a pleasant pastime for a leisure hour, must necessarily be set down as mere dilettantism."

But if we are wretched smatterers in all the other physical sciences, we outdarken ourselves in the particular science of chemistry. Let Shadwell be supposed not a poet, but an ordinary English chemist, and these lines from Dryden's 'Mac Flecknoe' will hit him off to a nicety:—

The rest to some faint meaning make pretence,
But Shadwell never deviates into sense.
Some beams of wit on other souls may fall,
Strike through, and make a lucid interval;
But Shadwell's genuine night admits no ray,
His rising fogs prevail upon the day.

Nay, even if we find a good chemist, we should be puzzled to talk about him, for we have not a word in our language—so says the Doctor—to denote what a German would call a "Chemiker." In our ignorance, we fancied that even this formidable word might be translated "Chemist" without violent inaccuracy. But, no doubt, the Doctor saw "Druggist" at the tail of the English equivalent, well knowing that there are heathens who if told that Raphael was a painter would infer that, if he had properly learnt his business, he must have been a glazier also. It is consoling to hear that the *Journal of the Chemical Society* is at any rate trying its best; the *Journal* seems as if it would like (*scheint zu wollen*) to become a chemical journal, if it could: we will give it credit for its good intentions.

Prof. Liebig is, moreover, requested by his English annotator to reflect that our teachers of chemistry do not derive from their chairs sufficient income to keep them from starving, and are therefore obliged to enter into the service of ignorant manufacturers, and to devote the time they might otherwise employ in scientific investigation to some more profitable pursuit. Want may sharpen wit, but it does not advance chemistry. Let it be borne in mind, too, that the very name of a theorist is hateful to Britons, and that the scientific attainments of one of our most eminent surgeons make him profoundly unhappy, so much does he fear lest his character as a practical man should be compromised.

All this duly considered, Prof. Liebig is warned by his adviser not to be especially wrathful with poor Messrs. Lawes and Gilbert, for though "the many experiments of Lawes and Gilbert on the fattening of swine, oxen and sheep can only awaken compassion in the minds of those who know anything of physiological processes," it is to be remembered they are only Englishmen. Mr. Lawes is rather better than the rest of his countrymen, for he did make experiments of some sort or other on the manures; whereas, of the 4,600 members of the Royal Agricultural Society, not a single man did anything of the kind, though the Doctor kindly thinks it probable that they all read Liebig's book.

In the "Introduction," the English Doctor's letter is preceded by a minute examination, on the part of Prof. Liebig himself, of Mr. Lawes's experiments and the results deduced from them. Weighing his own wrongs and the information he has received, the Professor arrives at the conclusion that, as far as scientific agriculture is concerned, the landholders of Great Britain are in a very bad way. Yet, when we look about us, it is difficult to see any serious grounds for being discouraged.

When Mr. Glaisher got up nearly five miles high above the smoke of London he could see probably the whole area of the "farm" which supplies the metropolis with food,—all Essex, Kent, Herts, Middlesex and Surrey, most of Sussex, much of Hampshire, Berks, Bucks, Oxfordshire, Cambridgeshire and Suffolk. Of course, as everybody knows, the food supply of London also comes from more distant counties and from far off countries. The cattle-trains which every week unload at Paddington and King's Cross come from west and east and north as far as railroads reach, and the grain which is daily transferred to our warehouses comes literally from the ends of the earth. The counties named do, nevertheless, feed a population equal to that of London, most of whom reside in the metropolis. It is the material of their soil and of the air which floats above it, out of which the annual food of all that multitude is built; and

every year for centuries the grain and meat thus grown have been sold off from it, never to return. The soluble parts of both air and soil on which plants feed have thus been annually exported from this district; and, to aggravate the loss, as one would think, every year the soil has been washed by five times its bulk of that powerful solvent, rain-water, which carries all it can to sea. What process can be imagined more perfectly adapted to the rapid deterioration of the land and the reduction of its fertility? But what is the actual fact? What would Mr. Glaisher have seen from a similar elevation a few centuries ago? The landscape may have been as green, but it was for the most part waste and wild. Trees and gorse and scrub covered the greater portion of it—perennial plants, often taking years to gather up the power to yield an occasional autumnal produce. And the soil itself, where it was inclosed, was most of it every year in bare fallow, or only naturally clothed; thus taking years to yield an occasional and scanty crop of grain. There is not a plant the farmer grows which does not give a threefold produce, four or five times as often, from tenfold the acreage within this district, now, as compared with then,—not an animal he feeds that does not now in tenfold numbers produce double the amount of flesh in one-third the time that it did five centuries ago. And it is, of course, from an increased fertility of the soil that this immense increase of production is originally derived.

This wonderful agricultural progress and success has, indeed, been equally witnessed in all parts of the island, and local examples might be named which would even more strikingly illustrate it. On the Prince Consort's Flemish Farm of stiff clay soil, now drained, steam-cultivated, equipped with farm buildings, and producing heavy crops of wheat, oats, beans, &c., a few deer used to find a scanty living amidst gorse and rushy grass and woodland glades. Tiptree Farm was Tiptree Heath not fifty years ago. We take the general aspect of Mr. Glaisher's landscape, however, in preference to any particular locality within it, because it is the feeding-ground of wasteful London. Its produce traverses first the streets and then the sewers of the metropolis; and the enormous drain is enough to impoverish a province. That the province is, notwithstanding, being rapidly enriched is to some extent, no doubt, owing to the guano, nitre, bones, oilcake, grain and all kinds of food annually imported by the river which carries the elements of all these things to waste. Even more, it is owing to those agricultural improvements which put the natural resources of our growing crops in soil and air to their fullest use. And it is further due to improvements in the plants and animals themselves by which these resources are so economically utilized. But the fact remains, however it may be explained, that improvement, not impoverishment, is visible in all directions; and the circumstances, therefore, certainly are not favourable to the reception of the warning voice which, in the volume before us, Baron Liebig utters in the ears of British agriculturists.

British agriculturists, let us say at once, owe much to Prof. von Liebig. It is to the faith which he inspired in the chemistry of vegetable and animal growth that we owe the rapid rise of the manufacture of artificial manures among us as well as the safety and extension of so-called "artificial" feeding in the meat-manufacture, and both of these events are of first-class agricultural importance. His confident argument, bristling with apposite illustrations, has often aroused both thought and effort, the good effects of which remain, notwithstanding the diminished confidence with which, as time

has tried his theories and assertions, some of them have been ultimately received. He is here again as arrogant as ever,—warning us of our coming ruin, foreshadowed as it is by the clover sickness and turnip failures, which indicate the exhaustion of our subsoils,—laughing our scientific men to scorn, and especially sarcastic and unfair towards Messrs. Lawes and Gilbert, who have supplanted him as authorities on the chemistry of agriculture in this country.

We now grow more bread and meat than ever we have done before; and, what is a still greater proof of national prosperity, even so, we do not keep pace with the increasing numbers and demands of our population. We supply all countries with our improved breeds of cattle and sheep. Ayrshire, Durham, Hereford and Devon, but a few square miles apiece, supply the agriculturists of all nations with breeds which are unequalled anywhere. We have taught our neighbours the fertilizing influence of land-drainage, by which we have ourselves immensely benefited;—we have supplied them with all the machinery of the farm;—we have at length shown them how to apply steam-power in the cultivation of the soil, as it has been already successfully applied in most other agricultural processes. Our Example Farms, the work of private enterprise, headed by those of the late Prince Consort, furnish now the rule of ordinary practice in every county; our farmers produce more food per acre than those of any other country. And although, according to all the rules of German philosophy, we ought to be languishing and moribund, certainly we have not learnt as yet "how not to do it." Leaving the work of abstract reasoning to others, true to the instincts of our race, we succeed in the accomplishment of our work. We do not, indeed, accept the Chinese as our exemplars; but, preferring cleanliness and health, we have thus saved energy and life more than sufficient to replace, by labour in other fields, whatever our cleanliness may in the mean time have cost us. And our German censors may rest assured that, as soon as the profitableness of any process for the purpose shall be proved, *vis inertia* will no more hinder us than abstract reasoning hitherto has urged us; but the work of saving London sewage, and so of inaugurating the "only safe system" of agriculture, will very soon be done.

It is in some such mood as may be thus expressed, that most readers will rise from a perusal of Baron Liebig's work. The proofs which they everywhere perceive of our agricultural progress and success cannot fail to clash grotesquely with his predictions of our failure and exhaustion; and, moreover, it is not without a mixed feeling of indignation and amusement that they will find our scientific leaders, whose good services have been long and gratefully acknowledged, treated by him with insolence.

Let us not, however, following the example of his strong personal prejudice and bias, refuse to admit the useful light which he has once more thrown on the phenomena of vegetation and of cultivation. While his arrogant self-confidence repels us, let it not hinder us as agriculturists or persons interested in agriculture, from examination of his arguments and assertions. Meanwhile, it is gratifying to find, of so energetic and powerful a teacher, that these pages betray no signs whatever of that age which he confesses in such characteristic terms, "when the elements of the mortal body betray a certain tendency to commence a new circle of action."

The Strange Adventures of Captain Dangerous; who was a Soldier, a Sailor, a Merchant, a Spy, a Slave among the Moors, a Bashaw in the Service of the Grand Turk, and died at last in his own House in Hanover Square: a Narrative in Old-fashioned English. Attempted by George Augustus Sala. 3 vols. (Tinsley Brothers.)

In the last and most humorous sentence of a characteristic Preface Mr. Sala calls this story of Captain Dangerous's strange adventures "an experiment," and admits that it has been severely handled by critics on its way into the world through the pages of a monthly magazine. What the critics have said or left unsaid we do not care to ask. Mr. Sala must settle accounts with them; and that he is able to arrange matters with his adversaries so that a balance of honest and pungent satire is left standing in his favour no one familiar with his writings will question. Perhaps no work of fiction was ever less adapted for serial publication than this remarkable and entertaining autobiography. Fortunately, we have not to judge it in parts, but to speak of it as a whole; and after many pleasant hours spent over its pages we are in a position to recommend it from more than one point of view to readers of widely different tastes. Unquestionably it is "an experiment," in these days when plot and character are the two principal ingredients in every popular novel, and when the writer of prose fiction is usually required to delineate the life of the present day, or times bordering on the present. Of plot 'The Strange Adventures of Captain Dangerous' has none whatever. Readers who begin at the last chapter of the third volume and work backwards, will slide into the story just as smoothly as those who in orthodox fashion begin at the beginning. From first to last it has neither mystery nor puzzle of any kind. Neither is it a novel of character; for apart from Captain Dangerous, the bluff, manly narrator of his own vicissitudes, there is not a personage in the book on whom the author has in any degree exercised that faculty for the creation of character which he displayed in 'The Seven Sons of Mammon.' Neither can it be described as a novel of incident; for though each chapter abounds with adventures, the interest of the tale does not depend upon them,—indeed, is scarcely heightened by them. Even the most sympathetic listener to stories of peril and disaster is spared the liveliest kind of pity and the most agonizing excitement of anxious fear when the hero of each position is his own historian, and in the opening of his narrative says that he has not only triumphed over his enemies and conquered evil fortune, but is at the advanced age of sixty-eight rich, hearty and respectable.

Now that the reader knows what this story is *not*, it is time to tell him what it is. When he first sits down to write his autobiography, Captain John Dangerous is the occupant of his own house in Hanover Square, and the father of a certain blue-eyed Lillias who has recently become the wife of Edward Marriner. Happy in witnessing the happiness of his child, enjoying good health and spirits, but burdened with overmuch leisure, Captain Dangerous seeks amusement in committing to paper the principal facts of his personal history. The year in which he thus turns author is 1780, and his reminiscences begin with recollections of a childhood sixty years distant, which was spent under the care of his grandmother, in the same house which he occupies in his old age. All the early part of the first volume is excellent. The portrait of the grandmother, a lady of highest quality, living in dignity and mysterious splendour, and

visited by the Jacobite aristocracy of "the town," is followed by a sketch of the aged lady's girlhood, when she was Arabella Greenville. The ease and strength with which the girl is put upon the canvas, surrounded by the historic characters of the Commonwealth and Restoration, show that Mr. Sala could succeed in the highest field of the novelist's art. The Protector's state progress to the City and his interview with Arabella, after she has attempted his life in the hope of avenging the murder of her lover, are admirably managed. So good, indeed, is the entire sketch of Captain Dangerous's ancestress that we think Mr. Sala would have done well had he given us an historical romance, based on the story of which he here gives only glimpses, and had left the adventures of the lady's grandson for another work.

Having said just enough about his grandmother to make readers wish that he had said much more, Captain Dangerous recalls how she was interred with suitable pomp, and then proceeds to tell how it fared with him after the death of his venerable protectress, when he was barely ten years of age. Acting under influences, about the exact nature of which the reader is left in doubt, malignant guardians, bent on dishonouring the well-descended child, send him to a wretched school, where he is starved and flogged with a brutality which justifies suspicion that Gnawbit, the pedagogue, has received instructions to make away with his pupil. Escaping from the clutches of the tyrant, little John Dangerous joins a gang of deer-stealers in Charlwood Chase, and works with them till the strong hand of law lays its grip on him and his companions, and he is shipped to "the Plantations," doomed to endure perpetual slavery. Returning from the West Indies to Europe, he takes service as a gentleman's servant, and travels about the Continent in attendance on a master whose feebleness, and meanness, and absurdities are delineated in a fashion which reminds the reader of Smollett's method of portraying the ludicrous. After changes of fortune, some of which are minutely set forth, though most of them are only hinted at, the adventurer figures as the servant of his country instead of a private master. As a Tower warder he sees the executions of Kilmarnock and Lovat. Throwing up his appointment, however, he soon tries his fortune in the more dignified character of a military loungee in the western quarters of the town. Then he turns sailor again; and ultimately, after countless mutations of fortune,—amongst which love, marriage, slavery and military service bear part,—he returns to London a wealthy widower, bent on spending a calm and philosophic old age. Of the means by which he acquired his riches the Captain speaks vaguely, but, from what he lets fall, it seems clear that he was not inexpert in the noble art of plundering.

This outline of a chequered and scarcely reputable career Mr. Sala has filled up with graphic sketches of such men and things as a Captain Dangerous of the last century might be presumed to deem most worthy of remark. Fielding's London is put before the reader from the point of view which a jolly, rollicking Bohemian of the period would be most likely to select as a ground for observation. In short, 'The Adventures of Captain Dangerous' does for the London of a hundred years since what 'Twice Round the Clock' has done for London of the present day. In the same way, Mr. Sala, in language suitable to the character of his hero, paints the characteristic features of distant cities at the time when Captain Dangerous visited them. Such is the narrative

which the writer calls "an experiment," and for which he anticipates the criticism that it is improbable any one person should have passed through all the adventures and vicissitudes allotted to his hero. That such a reflection on the book would be misplaced, it is almost needless to observe. The career of Captain Dangerous was, of course, no ordinary career; but it would not be difficult to match it in the actual lives of adventurers who figured in the days of our great-grandfathers. But the question of probability is out of place; the inquiry for the critic being whether the narrative, as a whole, resembles the stories with which the literary offspring of Defoe stocked the book-stalls of the eighteenth century. When it is compared with the works of which it is an imitation, Mr. Sala's "experiment" must be allowed to be a great success. As a life-like reproduction of an obsolete form of literature, setting forth, with much vigour and freshness of humour, a living writer's ideal of the views and ways of life taken by an adventurous rover some generations since, the book will delight those who are familiar with the sources from which its stores of information have been drawn. It will also be read with interest by those persons who wish to know what an eighteenth-century novel, based on the adventures of one leading character, was like, and yet would be restrained by considerations of delicacy from perusing the works of which 'Moll Flanders' may be regarded as a type. Whether, as far as the writer's reputation is concerned, the game is worth the candle,—whether he has not expended labour and much reading on a task which will, at best, only procure him praise for ingenuity, when he might have used them on work of a higher order,—and whether, now that his mimetic feat has been accomplished, he will find very many readers who can fully appreciate the merits of his performance, are open questions. Looking merely at the work before us, we do not hesitate to commend it as a book which will raise its author's reputation amongst men of letters.

Epigrams, Ancient and Modern: Humorous Witty, Satirical, Moral, Panegyric, Monumental. Edited, with an Introductory Preface, by the Rev. J. Booth, B.A. (Longman & Co.)

THE Epigram is of very respectable antiquity; yet the men of old did not, indeed, to their very great credit, show a malicious precociousness in saying sharp things. The ancient epigram had more polish than point. The maker wished to be brilliant, and not brutal or censorious. Probably, there is no older claimant to be the inventor of epigrams than the "lady's-maid" of the Eleusinian Queen Metanira, the sprightly Iambe. When Ceres, with weeping eyes and bleeding heart, was in search of that naughty daughter of hers, the wilful Proserpine, Iambe was sent with her to lighten the way by her smart sayings. The maid allowed no opportunity to slip, and the Goddess of Corn, wiping away her tears, shook like full ears of wheat in a pleasant harvest-wind at the sparkling little sayings of the tight-girdled handmaid of Metanira.

Among graver people of old the epigram did not flourish. Toplady, however, in one of his numerous writings, is disposed to look upon Elijah's address to the priests of Baal, of which he gives his own translation, as epigrammatic. But an anonymous author, in the Truth-seeker, found something more sarcastic still in the remark of Lemuel's mother to her royal son, whom she had been urging against the perils of the bowl, and who was, probably, not so at-

tentive to the matronly counsel as a dutiful son might have been: "Give *shechar* unto him who is ready to perish!" The point of which is not unlike that in one of the many epigrammatic songs of Dibdin:—

Says Father, when last I from Guinea
Returned with abundance of wealth,
"Now, Jack, pray don't be such a ninny
As to drink!"—Said I, "Father, your health!"

The old Greek epigram was, as the name implies, simply an inscription or a superscription, monumental or otherwise. Pun, point and quibble were the additions of later times. The nearest approach to *point* is in that on Sappho:

Some reckon Muses nine! Ah, careless men,
The Lesbian Sappho makes the number, ten!

The epigrams of other Greek writers are moral maxims or instructive similes; and, perhaps, the most beautiful of all is the epigram by Simmias, which is not less beautiful or touching in the English form in which it has been given to us, in the tuneful lines beginning with—

Wind, gentle evergreen, to form a shade
Around the tomb where Sophocles is laid.

Scarcely less perfect is the so-called epigram, we might say epitaph, on Euripides, which has been so well imitated by Jonson in his lines on Drayton's tomb in Westminster Abbey. Indeed, with respect to epitaphs especially, and, in many instances, epigrams also, rare Ben is equal to any Greek of them all, in excess of praise as well as excess of wit; not excepting, as an illustration of the former, the lines on Aristophanes wherein the Graces are described as looking for a shrine, and finding it at last in the $\psi\upsilon\chi\eta$ of the satirist of Cydathene.

Concentrated satire was that which the Romans added to the elegant terseness of the Greek, thereby producing the modern epigram. The Cæsars, in such examples as are given by Suetonius, were rather ambitious than successful epigrammatists. No doubt, the guests in whose presence the wit was uttered laughed hysterically: who would *not* laugh at the good things of a potentate who was occasionally in the habit of cutting off heads which would not wag in approbation? Martial, of course, stands at the head of all Latin writers of epigrams, and how strange is the mixture!—Filthy and refined, crawling and rampant—the rankest abuse and the most exquisite flattery—heavy as a sledge-hammer, and light, and bright, and piercing, and curative though painful, as the finest gold probe in one of Anel's surgical cases. He licks the feet of the Cæsars, and tells them hard truths as though he were Court jester instead of Court poet. He pours into woman's ear phrases that might revolt the very lowest of them who infested the Suburra, and anon he murmurs musical words that might win the purest heart to love. Perhaps he is at his very best when writing epigrams brimming with affection to his wife,—

Tu desiderium domine mihi mittis urbis
Esse jubes, Romam tu mihi sola facis.

—Such lines are far more enjoyable than those in which he abuses his parents for allowing him to learn to read. For the latter lines he has himself been plentifully abused; but they are evidently written in jest, and Martial is no more to be held in dishonour for them than his character is to be settled by what is unclean in his epigrams. The abounding beautiful is to be weighed against the abounding base; and his own assertion, epigrammatically put, must be allowed some weight,—

Laetiva est nobis pagina; vita proba est.

—Southerne might have said the same at the end of the dullest and dirtiest of his comedies. Congreve, on the other hand, abounds in dirty epigrammatic wit, the uncleanness of which, he maintains in his Prefaces, only exists in the base application made of the wit by his readers.

The great merit of Jonson's Epigrams, including therein his monumental inscriptions, is their originality in union with their unparalleled beauty and eloquent terseness. In all our satirical writers the epigram abounds. Young's Satires may be cut up into epigrams, and they would form a handsome volume. In less degree may this be done with Pope. Yet where it can be effected, the success is, perhaps, even more complete, Pope being less verbose than the divine. Epigrams have been said to be intended, as the lancet,—used pointedly for the benefit of the sufferer and the instruction of the looker-on. But they are too often like a splinter, which irritates and does not heal a wound. A true epigram should have many graces about its point, fine as those fair angels who, legends say, could dance together by thousands on the thin end of a needle. All depends on the spirit in which they are written. The philosophers who uttered epigrams on their deathbeds, even he who said that life was an epigram and death the point to it, may be undoubtedly set down as having had fear and vanity for their inspiring muses.

But it is time that we should turn to Mr. Booth, who has compiled a very imperfect and unsatisfactory volume on this subject. One of his objects seems to be to ridicule the "cloth," the most severe epigrams being those levelled at clergymen. If these were all *ancient*, there would be less objection to be made; but when he reprints from *Punch* all those with which Bishop Villiers and "Cheese," as Mr. Booth calls him, were pelted, we think he shows want of judgment, which includes a lack of charity. The following are Mr. Booth's illustrations of life among his brethren:—

The Traveller and Clergyman.

C. I've lost my portmanteau.
T. I pity your grief.
C. All my sermons are in it.
T. I pity the thief.

He gives, too, repeated funny illustrations of "All flesh is grass," which is miserable fun on so serious a subject. This is a sample of—

A late Bishop's Charge to his Clergy poetized.

Hunt not, fish not, shoot not,
Dance not, fiddle not, fute not;
Be sure you have nothing to do with the Whigs;
But stay at home, and feed your pigs;
And, above all, I make it my special desire,
That, at least, once a week you dine with the Squire.

The above, against a wide-awake bishop, is perhaps condoned by another:—

On a Parson who fell asleep at a Party.

Still let him sleep, still let us talk, my friends,—
When next he preaches we'll have full amends.

Mr. Booth finds most delight in "banging the bishops":—

On B——, Bishop of Durham, and Barrington, the Pickpocket.

Two names of late, in a different way,
With spirit and zeal did bestir 'em,
The one was transported to Botany Bay,
The other translated to Durham.

Anon, the satire includes congregation as well as clerics:—

"Attend your Church," the parson cries;
To Church each fair one goes;
The old go there to close their eyes,
The young to eye their clothes.

But the compiler soon "harks back" to the trail of the parsons:—

Time Enough.

A clerical prig, who one morn joined the chase,
For which he had always an itching,
Was thrown from his horse, and fell flat on his face,
A dangerous, dirty, deep ditch in.

Each Nimrod that pass'd him for help loud did cry,
But onward all eagerly panted;
The whipper-in lustily roars, "Let him lie!
'Till Sunday he will not be wanted."

With the exception of the lines on Secker, and one or two others, the clergy and Church are rather pilloried than exalted, or even fairly represented, in this collection, wherein the faults are innumerable. One of the most unpardonable

of these faults is the want of notes exactly where they are wanted. Thus we have, without any reference to the cause of quarrel between Dean and Duke, the following:—

The Duke and the Dean.

James Bridges and the Dean had long been friends;
James is be-duked, and so their friendship ends;
And sure the Dean deserves a sharp rebuke,
From knowing James, to boast he knows the Duke.

SWIFT.

The want of a note is still more felt in the following case:—

On Lord Cadogan.

By fear unmoved, by shame unawed,
Offspring of hangman and of bawd;
Ungrateful to the ungrateful men he grew by,
A bold, bad, boist'rous, blust'ring, bloody booby.

ATTERBURY.

How are young readers to understand the above? Does Mr. Booth know that the Cadogan of the above epigram was the wretched fellow who, when Bishop Atterbury was sent prisoner to the Tower, cried, "Fling him to the lions"? Atterbury went too far in the above, for it was Cadogan's grandfather, Sir Hardress Waller, who was one of the judges of Charles the First, and Cadogan's mother, Bridget Waller, was certainly not open to the episcopal abuse.

But ignorance is better than indecency; and if some epigrams are unintelligible to general readers, others are too well annotated. That on the bodies of Dr. Sacheverell and Sally Salisbury ought never to have been admitted.

The crushing epigram which Burns made against Andrew Horner is here given to the disadvantage of one Turner; and no allusion is made to the quarrel out of which it arose, and without mention of which the piece sounds like wanton brutality. The epigrams connected with English history, whether social or political, are rendered worse than useless; they are misleading, for want of an explanatory note. We cite one example out of many:—

On the late Duchess of St. Alban's.

The line of Vere, so long renown'd in arms,
Concludes with lustre in St. Alban's charms;
Her conqu'ring eyes have made their race complete;
They rose in valour, and in beauty set.

The "late Duchess of St. Alban's" was the widow Coutts, the ex-actress Mellon; but the Duchess of the epigram was the sole daughter and heiress of the twentieth Earl of Oxford. She is among the Hampton Court beauties, and this daughter of Aubrey de Vere married the first Duke of St. Alban's, the son of Charles the Second and Nell Gwynne. It was the great-grandson of this duke and duchess who married Miss Moses, the damsel who was refused by Lord Peterborough because her fortune did not come within 15,000*l.* of what he considered might qualify her to become his wife. The tale, told by Lord Auckland, is worth all the epigrams in this ill-arranged volume.

But it is not of ill arrangement or carelessness only that the reverend collector is guilty. Numerous are the gross errors made in naming the authorship of many of these epigrams. Thus, we find—

The Book-Worms.

Through and through the inspired leaves,
Ye maggots, make your windings:
But, oh! respect his lordship's taste,
And spare his golden bindings.

BURNS.

—If this is to be found in any genuine edition of Burns, it is at best an imitation of Guichard's epigram:—

Je te tiens, souris téméraire,
Un trébuchet me fait raison;
Tu me rongerais, coquine, un tome de Voltaire,
Tandis que j'avais là les œuvres de Pradon.

Mr. Booth's ignorance of the authorship of some of the commonest epigrams in our language is more pardonable when he refrains from naming any writer, as in the case of "Tender-handed touch a nettle," which is universally known to be Hill's, than when he ascribes the

work to an impossible source. He signs the following, not with the name of the author, but that of the man satirized:—

On "the Tuft Hunter."

A Duke once declared—and most solemnly too—
That whatever he liked with his own he would do;
But the son of a duke has farther gone,
He will do what he likes with what isn't his own.

LORD W. LENNOX.

This change of hero into author cannot come of respect to the peerage, as the next sample will certify:—

To Lady Mount E——, on the Death of a favourite Pig.

O dry that tear so round and big,
Nor waste in sighs your precious wind;
Death only takes a single pig—
Your lord and son are still behind.

Mr. Booth does not see what a wretched imitation this is of Sir C. Hanbury Williams's epigram on the first Duke of Dorset and his son:—

Folly and Sense, in Dorset's race,
Alternately do run,—
As Carey one day told his Grace,
Praising his eldest son,
But Carey must allow for once
Exception to the rule,—
For Middlesex is but a dunce,
Though Dorset be a fool.

Mr. Booth knows nothing of this epigram. He does not even know who wrote the lines beginning—

I know the thing that's most uncommon.

Every boy recognizes them as Pope's, against whom the reverend compiler seems to have a grudge, for he ascribes to *Dryden* the following misquoted lines on

Nobility of Blood.

Worth makes the man, and want of it the fellow,
The rest is all but leather and prunella.
What can ennoble fools, or knaves, or cowards?
Nothing; not all the blood of [all] the Howards.

DRYDEN.

—If he had subscribed "Lord W. Lennox" to the above, Mr. Booth would not have done Pope greater wrong. But what may we not expect from a collector of epigrams who cannot even guess at the authorship of the lines commencing with—

Who can believe with common sense
That bacon tried gives God offence?

—They are Swift's. We are thankful the compiler did not give them to Ravenscroft or Sir Samuel Tuke.

Sometimes Mr. Booth splits a poem in two, and guesses rightly at the authorship of one of the fragments. At page 52 he gives the two verses on the statue of Nash between the busts of Pope and Newton, but he names no author. The author of the last of the two verses was Chesterfield; the first is an interpolation. Then, at page 258, he gives three verses which, in the original form, precede those at page 52, and, omitting the two famous epigrammatic verses with which the poem opens, subscribes the name of Chesterfield to the bit Mr. Booth has chipped out of him. Then, Pope's fine epigram complimentary to my Lord is thus ticketed:—

Written on Glass, by a Gentleman who borrowed the Earl of Chesterfield's diamond pencil.

Accept a miracle, instead of wit,
See two dull lines by Stanhope's pencil writ.

Some epigrams Mr. Booth mars cruelly or absurdly. Thus, he gives the well-known epigram on Wolsey:—

Born of a butcher, by a bishop bred,
How high his highness holds his haughty head!

as—

Begot by butchers, but by bishops bred!

When he comes to the monumental epigrams *par excellence*, Mr. Booth misses a fine opportunity. The subject was chosen, recently, whereon to lecture, by the Rev. Dr. W. A. Newman, late Dean of Cape Town, and the lecturer wisely and skilfully contrasted the hopelessness of a future in the heathen inscriptions, with the holy and beautiful assurances of it on the resting-places of the early Christians. Mr.

Booth follows another method. He has no idea of drawing a moral from the treatment of the subject. He has given a few of the best ancient inscriptions, but the best among the modern he omits altogether.

This corpse
Is Tommy Thorpe's

is not edifying; nor is there profitable instruction in such as the following:—

On a Clergyman named Chest.
Here lies at rest, I do protest,
One Chest within another;
The chest of wood was very good—
Who says so of the other?

All this is in execrable taste, and Mr. Booth even goes out of his way to indulge in it. For instance, he gives the subjoined as the epitaph

On Quin, the Ador, in the Abbey Church at Bath.
The scene is changed—I am no more;
Death's the last act—now all is o'er.

—If Mr. Booth had only inquired of a friend at Bath as to the truth of this, or looked into a Bath Guide, he would not thus have offended. The epitaph on Quin is by his great rival Garrick, the actor, who snatched from him the succession to the inheritance of Betterton and Booth, and it rings in this wise:—

That tongue which set the table in a roar,
And charmed the public ear, is heard no more;
Close'd are those eyes, the harbingers of wit,
Which spake before the tongue what Shakspeare writ.
Cold is that hand which, living, was stretched forth
At friendship's call to succour modest worth.
Here lies James Quin: deign, reader, to be taught,
Whate'er thy strength of body, force of thought,
In nature's happiest mould however cast,
To this complexion thou must come at last!

From the above instances, we think it will be seen that the Rev. Mr. Booth has entirely mistaken his vocation,—at all events, as a collector of epigrams: and, as the ex-King Stanislaus once epigrammatically remarked, "Notre chancelier vous dira le reste!"

Heat considered as a Mode of Motion: being a Course of Twelve Lectures delivered at the Royal Institution of Great Britain in the season of 1862. By John Tyndall. (Longman & Co.)

Prof. Tyndall says in his Preface, "I have endeavoured to bring the rudiments of a new philosophy within the reach of a person of ordinary intelligence and culture." It will be admitted by all who read these Lectures that the author has succeeded.

Our old philosophers regarded heat as a substantive entity: a subtle something diffused through all matter, and regulating its physical state. The conditions of a solid, a fluid, and a gaseous body they supposed to be determined by the quantity of heat contained in it. The "new philosophy" sets aside the labours of deeply-earnest minds for long years: it refuses to regard heat as an "imponderable element," but insists on its being only "a mode of motion." "Heat," says our modern philosopher, "can produce mechanical force, and mechanical force can produce heat; some common quality must therefore unite this agent and the ordinary forms of mechanical power." Nothing can be more certain than this: but there are many gifted minds still clinging to the view that heat is a diffusive power, and they would explain the production of heat by mechanical force, and the well-known effect of heat, in establishing and continuing mechanical power by another and an equally logical mode of reasoning from that so zealously adopted by Prof. Tyndall.

The discussion will be a long, earnest and interesting one, and truth will be advanced by the conflict of minds. There is in many portions of these Lectures too much of the spirit of an advocate, and sometimes there is evidence

of special pleading which is unbecoming the philosopher.

The mountain, upon whose "heaven-kissing" summit is seated the Angel of Truth, is not to be assailed in the spirit which has given so much celebrity to our author amidst the snow-clad mountains of Switzerland. The impetuous zeal by which the summit of Mont Blanc was achieved will not avail in climbing into the higher—the sublimer regions of Truth.

The conclusions to which the "new philosophy" leads the student may be given in Prof. Tyndall's own words:—

"Every mechanical action on the earth's surface, every manifestation of power, organic or inorganic, vital and physical, is produced by the sun. His warmth keeps the sea liquid and the atmosphere a gas, and all the storms which agitate both are blown by the mechanical force of the sun. He lifts the rivers and the glaciers up the mountains, and thus the cataract and the avalanche shoot with an energy derived immediately from him. Thunder and lightning are also his transmuted strength. Every fire that burns and every flame that glows dispenses light and heat which originally belonged to the sun. In these days, unhappily, the news of battle is familiar to us, but every shock and every charge is an application, or mis-application, of the mechanical force of the sun. He blows the trumpet, he urges the projectile, he bursts the bomb. And, remember, this is not poetry, but rigid mechanical truth. He rears, as I have said, the whole vegetable world, and through it the animal; the lilies of the field are his workmanship, the verdure of the meadows, and the cattle upon a thousand hills. He forms the muscle, he urges the blood, he builds the brain. His fleetness is in the lion's foot; he springs in the panther, he soars in the eagle, he slides in the snake. He builds the forest and hews it down,—the power which raised the tree and which wields the axe being one and the same. The clover sprouts and blossoms, and the scythe of the mower swings by the operation of the same force. The sun digs the ore from our mines, he rolls the iron, he rivets the plates, he boils the water, he draws the train. He not only grows the cotton, but he spins the fibre and weaves the web. There is not a hammer raised, a wheel turned, or a shuttle thrown, that is not raised, and turned and thrown by the sun. His energy is poured forth into space, but our world is a halting-place where his energy is conditioned. Here the Proteus works his spells."

Readers of this book will not expect to find the calmness of Herschel or Faraday; for Prof. Tyndall has his own individualities as a writer and thinker, which lend to his work their character and charm.

The Law of Copyright. The Engraving, Sculpture and Designs Acts, the International Copyright Act, and the Art Copyright Act, 1862. With an Introduction and Notes. By E. M. Underdown, Esq. (Crockford.)

This is a useful and opportune book. It is adapted not only for artists, but likewise for purchasers of works of Art. It contains a mass of information well arranged and indexed, all which is of the utmost importance to persons interested in the production, sale, or purchase of such works, including photographs.

In the history of British law there is, perhaps, no branch of legislation more remarkable than that which relates to copyright. When a nation emerges from barbarism, and its population increases in density and wealth year by year, it becomes of deeper importance to furnish profitable employment to the masses. The man who has power to conceive and realize a new work, whether of Literature, Music, or of Art, then becomes a public benefactor in his generation in proportion to the usefulness of his production in advancing knowledge and creating profitable employment for others. No one who

reflects upon the subject can fail to see and appreciate the extent to which the civilization and commerce of England have been indebted to, and are now largely dependent on, the productions of literature, music and the fine arts.

How slowly the nation has appreciated the justice and the policy of protecting authors from invasion of that property to which they are entitled in the copying or reproduction of their works is extraordinary. Unless an author has the *exclusive* right of making and selling copies of his work, that is, of preventing all persons without his permission from exercising such right, of course his property in the reproduction is rendered comparatively valueless. Thence the necessity of calling in the aid of the legislature to secure to authors the exclusive reproduction of their works which in England is called copyright. Our legislation upon this subject has always been based upon the justice of protecting authors from an infringement of their *property* in the reproduction of their works. This being so, it would seem but just that the true principle upon which to legislate would have been to limit an author's enjoyment of his copyright only so far as might be considered *essential* for the public interests. Unfortunately, the legislature appears invariably to have acted upon the notion that protecting an author from being plundered of the fruits of his talent and industry was creating a "*monopoly*," thus trenching upon the rights of the public. Thence it is that bit by bit protection has been reluctantly and gradually wrung from parliament in favour of these works which are now the subject of copyright in England, and in every case the author's term of copyright seems to have been unnecessarily curtailed.

It is instructive to compare our system of legislation upon copyright with that of France. Prior to the great revolution in that country at the close of the last century, authors had no protection for their productions, excepting only such as the Crown might choose to confer as a *privilege* by special grant. One of the first uses the French made of their liberty was to institute an inquiry upon the subject of copyright: our legislation was cited as based upon the true principle of that *property* which every author of right has in the reproduction of his works; such property was stated to be "of the most sacred description," inasmuch as it was the production of the human mind. This great principle being established, it was carried out by legislation, alike simple, comprehensive and liberal. It justly placed authors of literary and musical productions, as well as authors of works of fine art, in all respects upon a perfect footing of equality, giving them the exclusive right of reproduction of their works for their lives, and also for a subsequent period in favour of their families, which has since been considerably increased. The invasion of that property renders the offender *criminally* liable, as well as civilly responsible for any damage sustained by the proprietor.

This just and beneficent law of Copyright in France has been in operation since 1793, and there can be little doubt that it has largely tended to foster new and admirable productions in literature, music and the fine arts. Above all, it has created that honourable tone of feeling existing amongst French artists which, in the higher branches of Art, has especially given them such great superiority, and which effectually precludes professional malpractices and charlatanism.

Attention is called to these facts on account of the bearing they have upon our own neglected and defective legislation as to artistic copyright. Some of the lamentable results to which it has

given rise are disclosed in the Appendix to Mr. Underdown's book.

Just seventy years after the artists of France were invested with an exclusive copyright in their works, a similar act of justice was last year accorded in favour of British artists. Prior to that time, no copyright in a picture or drawing could be acquired in England. This discreditable fact is recorded in the statute of last session, to which we have referred, and which was obtained through the influence and at the sole expense of the Society of Arts. The evidence which induced the Council of the Society to obtain the Act is judiciously given by Mr. Underdown, because it does justice to the wisdom and usefulness of the Council in carrying so important a measure of reform; while, at the same time, a careful perusal of that evidence must satisfy every reasonable author and purchaser of modern pictures and drawings that it is not only of importance to his own protection, but also to that of the profession and the public to secure the copyright in such works. For example, Mr. Poole, R.A., at p. 175, says, "I know cases of spurious copies by the dozens, or scores. They are the exact size of the original picture, the object being to deceive. Pictures have been sent to me and brought from the country, Oxford and Cheltenham, Bristol, &c., and in all cases copies; the parties who brought them to me bought them as originals, and lost large sums by the transaction. The vendors, I believe, were quite aware they were spurious copies; and I also believe that artists were employed by these persons to make the copies."

Mr. Frith, R.A., at p. 176, says, "Spurious copies are very common. A copy of one of my own pictures was sold as an original at Christie's. No doubt the seller was aware of the forgery. The instances of similar frauds are numberless."

Mr. J. B. Pyne, p. 179, says, amongst other things, "I was once waited on by a low dealer, who wished to persuade me of the authenticity of a spurious work, and who afterwards offered to bring me five pictures a week, to sign, and consequently acknowledge for mine. He proposed to weekly hand me over 10*l.*, 2*s.* per picture." As to spurious copies of his works, he says, "the most flagrant instance occurred thus. I handed over to a picture-liner a work to be mounted or lined. In less than a fortnight, a clergyman forwarded to me a very badly executed copy of the picture, saying he could buy it for a very small price, having found it in the hands of a dealer. This dealer knew my works as well as I did. The picture was in every respect as to measurement, signature, &c. an imitation of my own. It was also lined, to bear a stricter comparison with the original."

Mr. Charles Branwhite, member of the old Water-Colour Society, p. 181, says,—"The sale of spurious pictures is a very common practice. I have known a person sell as many as *seventeen* copies from one picture; and, in other cases, keeping a person constantly employed in doing nothing but make copies for sale."

Mr. George Lance, p. 190, says,—"I know of cases where copies of my works must have been made during the time of their exhibition, either before or after the hours of admitting the public. I have also heard of a dealer offering an actual commission for several pictures of fruit, on condition that my name might be introduced in some way as the designer and painter of them." Much more of the evidence is of equal interest.

If it be asked how such a lamentable state of things as some portions of this Appendix disclose could have arisen, the answer appears to be—*first*, from the non-existence of any law for the protection of copyright in pictures and

drawings prior to 1862; and, *secondly*, to a neglect of duty on the part of the Royal Academicians. For nearly a century the Sovereigns of this country have entrusted these gentlemen with certain peculiar and very questionable privileges, in consideration of the gratuitous instruction in fine art given at the schools of the Royal Academy. Considering that the training of youth was committed to their charge, it became an additional duty upon the part of the Royal Academicians towards the Sovereign and the public, by every means in their power, to put down the extensive system of deception and fraud, which, it now seems, has been long known to exist, as to the manufacture and sale of spurious copies of pictures. Can any one doubt the truth of the opinion expressed by Mr. Poole, R.A., that artists were employed to make these copies? What have the Royal Academicians ever done to repress such malpractices? Why did they leave it to the Society of Arts, by their influence, and at their sole expense, to obtain the Act of last session? If certain members of the Royal Academy have habitually made, and been "assisted" in making and selling copies of their pictures under the name of "repetitions," or "artists' copies," with and without the sanction of the owners of the original pictures, then the whole state of things becomes explained and is readily understood; otherwise, it is unaccountable.

These observations are intended in no unkindly spirit to the Academy, which, at the present time, happily numbers amongst its members some as honourable and earnest men as are to be found in any other profession. Their efforts in the cause of reform at the Academy will have the support of public opinion. For good and evil, the influence of the Academy upon British art and artists has been and is very great. If its members, as a body, are desirous of putting down the pernicious and fraudulent system prevalent in England as to works of fine art, they will do so most effectually by not allowing any picture to be included in the Royal Academy Exhibition the copyright whereof has not been protected as the Copyright Works of Art Act, 1862, directs; and as to which Mr. Underdown's book gives all the very simple but needful forms and instructions.

Essays, Critical, Biographical, and Miscellaneous. By S. F. Williams. (Freeman.)

In this book we are shown what manner of penalty is to be paid for living in an age of prose-poets and semi-German humorists. The second-hand Johnsonians were an oppressive race as writers, even when they were such women of wit and poetry as Fanny Burney and Anna Seward; yet we would rather keep company with them than with those who try at the styles of Macaulay, or of Mr. Carlyle, or of the Author of 'The Stones of Venice.' To-day's fine writing, however, will always be found staler and more surfeiting than the affectations of a bygone time. We shrink from it with something akin to personal shame,—as we do from a national folly or injustice. Mr. Williams, however, we apprehend, will take little heed of any criticism,—so complacent is, apparently, the humour in which his lucubrations have been written. Of the fifteen essays, we have only read those on Thackeray, Longfellow, Gerald Massey, Abraham Cowley, Alexander Murray, George Crabbe, and Cavour. Perhaps the reason for such abstinence will be best explained by a specimen of the style which has proved so satiating. Mr. Williams is writing of Murray:—

"Young Alexander's lineage was one of his

diadems. Though in the veins of his ancestors and his own no 'noble blood' flowed, still his was as noble and royal as kings'. Others of his kind in literature were poor—well-nigh poverty-stricken men. William Postellus was a domestic; Sebastian Castallo was a labourer; Anthony Purver was a shoemaker; Robert Hill was a tailor; Wolfgang Musculus was first a ballad-singer, a weaver, and then a sort of bricklayer; Thomas Pendrell 'stuck to the last'; Henry Wild used the 'goose' and the 'sleeveboard,' and made 'continuations.' And what was Magliabecchi! * * Everything in which he delighted clung to him. He was not leather and gutta percha. * * 'As,' says he, 'I read constantly and remembered well, I soon astonished all our honest neighbours with the large passages of Scripture I recited before them. My fame for reading and memory was loud, and several said that I was a "living miracle." I puzzled the honest elders of the Church with recitals of Scripture and discourses about Jerusalem.' We can just fancy these old gents, grey in custom as in years. * * Doggedly maintaining that all the virtue of these 'new-fangled dodges' consists in their similarity to 'what used to be'; domesticated like cats; living from day to week, from week to month, from month to year in the A B C of things; terrified when some sly urchin popped into their dwellings, and turned these letters into syllables, and the syllables into words, and, with admirable *sang-froid*, cried 'boah!' upon all their traditional nonsense. * * He was not the lad to believe that life is a playground—a vast parlour or drawing-room, filled with sofas and easy chairs. Such things were to him, when compared with mental exercise and culture, ponderous coffins, wherein people tombed themselves alive. Life was to him, what it is to every great soul, a battle. He was the Scotch Peripatetic. His father put him to mind sheep. Why, all ye gods, is it that fathers act so silly sometimes? Lads are thrust into circumstances—dragged with a cart-ropes—adverse to their genius, and what is the consequence? Why, either business is neglected—these stones and bricks and dirt are left down below—and the eagle soars on ever upward and upward, with its eye upon the sun—the spirit finds its home and its kindred and its joy; or the lads are crippled for life, maimed and blindfolded, or, what perhaps is worse, tortured out of existence. A shepherd's wand was a dull thing to him. Give him books, and wand and hill and sheep were entirely forgotten. 'I was sedentary,' says he—'given to books, and writing on boards with coals.' Here was the true man, with an eye to the future, with budding hopes and eager desires, shoving aside the circumstances in which he had been placed, and hewing, as out of a rock, a pathway for his giant self. Bravo Al!

If the above be new and true, give us what is old and false. Mr. Williams is tormented by the vain desire to be deep, brilliant and comprehensive. Often, when he is talking of one thing, he is thinking of another: as, for instance, when the writer of 'Vanity Fair' is the theme, he seems unable to settle Mr. Thackeray's place, or appraise his merits, or admire his style, without a running criticism on Mr. Dickens.

John Leifchild, D.D.: his Public Ministry, Private Usefulness, and Personal Characteristics. Founded upon an Autobiography. By J. R. Leifchild, A.M. (Jackson, Walford & Hodder.)

In general, religious biographies are so trimmed with a view to the deceased's reputation and the presumed usefulness of the work, that the human element is nearly eliminated; facts are either suppressed or told in vague allusions, and the author contrives to take up as much space as his subject. In the present work, the memoir of Dr. Leifchild by his son, there is an attempt at human portraiture,—the reader can form to himself a notion of the man. It is a very interesting and readable book.

Dr. Leifchild was the son of a cooper, living

at Barnet, in Hertfordshire: the mother was a degree higher than her husband in social position; she was the daughter of Bockman, the artist, some of whose pictures are to be seen at Hampton Court. She had been too well brought up to be altogether a suitable helpmate for one in her husband's station of life; but that circumstance may, in some degree, account for the natural refinement and good manners of her eldest son. She and her husband do not seem to have been very happy; their dispositions were opposite—the husband being a comfortable Wesleyan Methodist, whilst the wife was a decided Calvinist and a hearer of Mr. Romaine, whose works are still religious classics.

John Leifchild was from his childhood the subject of religious impressions, and always under the influence of religious restraint; his life was singularly free from any worldly admixture of scenes and impressions. He records in his Autobiography—"My fondness for reading and musing, and my acquired skill in playing upon some instruments of music (the flute and the bass-viol) preserved me from many deteriorating influences. The result was, that I never, so far as I now recollect, swore a profane oath, never played a game of cards, and continued to the last ignorant of cards and all games, except those of the most innocent kind appertaining to childhood and youth. I cannot help thinking that by this happy ignorance I was kept from scenes of dissipation and places of hazardous excitement." At this period, however, he speaks of himself as working at his father's trade, but with little steadfastness and proficiency. How could I, when I stole away as often as I could with a book in my pocket in order to peruse its contents? My imagination was heated with the works of Richardson and other novelists, while my judgment was unformed." He also mentions his own early bias towards Calvinism. When he was not more than thirteen, he used to go to the village of Whetstone, to attend a Calvinistic chapel, where Mr. Mathews, a bookseller in the Strand, London, and father of the celebrated comedian, was the usual preacher, "and a very sensible and impressive one I thought him to be, although he was not impassioned." Added, however, to the doctrinal attractions, there was another, "a young female, to whom, although so young, I was secretly attached, also attended at this chapel with her friends." The sequel of this romance is curious. She was afterwards married to a fashionable tradesman in London, who eventually became unfortunate; and in after-life, when Dr. Leifchild had become a popular preacher, she solicited relief from him. She was one of his congregation, and never dreamed that, as a boy, he had worshipped her and "feared to address her"! It was Dr. Leifchild's custom to record all the noticeable deliverances from danger he met with during his life. One of these is quaintly told. One evening, returning across Finchley Common from London to Barnet, with his father, in their own vehicle, his father, to raise their courage, said, "Child, let us sing Ottford" (a favourite hymn tune). Before the first strain could be raised, a highwayman called out, "Stop!" and, presenting a pistol, desired the father to be quick with his money. At that moment, another pair of wheels was heard close behind, and the highwayman rode off. "There, child," said his father, "God has appeared for us; now let us sing Ottford"; and Ottford was sung till they reached Barnet.

Dr. Leifchild, at sixteen, was apprenticed to a cooper at St. Albans, though he says of himself that "he had a consciousness of being born

to something better than the drudgery of trade." He had a natural genius for preaching, and about this time he attended the sermons of the Rev. Samuel Nicholson, at the Abbey Church, repeating his sermons in private, and endeavouring "to imitate his almost matchless elocution."

The first attempt he made at speaking in public was at a Wesleyan class-meeting, where he was asked to lead; and, though with some trepidation, he complied, with great liberty to himself and acceptance from those who heard him. When little more than a boy, he married his first wife, who was not long spared to him. When about nineteen he removed to London, both for the sake of getting work and for the opportunity of attending different places of worship. His talent for preaching even then was developing itself, and he was often asked to take the place of some of the "local preachers" of the Wesleyan persuasion, sometimes delivering as many as four addresses on a Sabbath afternoon; by this means he obtained fluency and boldness. All this time he was almost entirely uneducated. He split away from Methodism on the point of "effectual calling"; Wesleyan views were not sufficiently Calvinistic; and he joined the Independents, with which body he remained united to the day of his death. He found friends who placed him in the Hoxton Academy, instituted to train young men for the Independent ministry. Although the course of study was not very severe or profound, it still was training, and Dr. Leifchild made the best of it. His singular talents for preaching, for riveting the attention of large congregations, were recognized by all the directors and teachers. Rowland Hill wished to induce the young student to become his assistant; but young Leifchild was not drawn towards him. When twenty-eight years of age (and a widower) "he accepted a cordial invitation from the Christian community worshipping at Hornton Street Chapel, Kensington,"—where he soon became very popular amongst his own people, and obtained the respect of those not within the pale. There was a great prejudice in Kensington against Dissenters, but the vicar was on friendly terms with him. One of the features in this work is the complacency with which Mr. Leifchild dwells on the attention and social recognition his father received from persons superior to himself in social position. It seems as though the religious excellence of his father received additional value from being indorsed by fine people. This casts an incidental light upon the effect of religious disabilities. In those days the Test and Corporation Acts were in full force, and Dissenters were not the powerful body they are now; they felt themselves socially inferior to the members of the Established Church. Dr. Leifchild's preaching certainly raised the character and standing of Dissenters in Kensington; but there is a complacent dwelling upon the names of persons of rank and position who attended his ministry or showed him attention, as if

A saint in crape were twice a saint in lawn.

Serjeant, then Mr. Talfourd, in an article, entitled 'Pulpit Oratory,' in the *London Magazine*, for March 1821, gives the following description of his preaching:—

"Mr. Leifchild is one of those who feel 'the future in the instant.' He has almost as intense a consciousness of the world to come as he has of the visible objects around him. He speaks not only as believing, but as seeing that which is invisible. The torments of the hell which he discloses are as palpable to his mind as the sufferings of a convict stretched on a rack by a human torturer. He

speaks as if he and his hearers stood visibly on this 'end and shoal of time,' with the glories of heaven above him, and the eternal abyss beneath, and on the reception of his living words the doom of all who heard them were at the moment to be fixed for ever. He makes audible to the heart the silent flight of time, so that the wings of the hours seem to rustle as they pass by with fearful sound. * * * In the description of dying scenes, Mr. Leifchild is too frequently tempted to dwell on circumstances which border on the physically shocking. When he abstains from this, he is absolutely fearful. We remember once hearing him, at the close of a striking description of the alarm felt by a sinner at the approach of death, exclaim in a wild tone, 'His friends rush to him—he is gone!' then with a solemn impressiveness add, 'He is dead!' and, at last, in a voice that came on the ear like low thunder pronounce, 'He is damned!' The effect was petrifying and withering. It seemed as though he had actually witnessed while he spoke the passage of a soul into eternity, and the sealing of its irrevocable doom."

This is not the style of preaching to convince the understanding; there is in human nature a certain nobleness of sentiment which resents alike promises and threats. The fear of death is not at all a high motive of action to set before men, and we can imagine many men refusing to accept any form of doctrine, however sound, that was enforced by denunciations of consequences which had no connexion with grounds of belief.

Mr. Leifchild tells, with garrulous complacency, how, in the course of his father's labours on behalf of the Bible Society, "he became acquainted with and personally noticed by the Dukes of Kent and Sussex." The Duke of Sussex asked him where he preached, and the biographer remarks: "The comparatively obscure dissenting minister might excusably feel a little flattered by this royal attention and interest." Here, however, is an amusing account of a deputation to George the Fourth; it is graphic, and shows a reverence for royalty as expressed in those days:—

"Not only had my father the honour of conversing with a royal duke, but while at Kensington he was introduced to royalty itself. He must be allowed to narrate the event in his own words:— 'I was one of the ministers of the three denominations, Presbyterian, Baptist, and Independent, who proceeded to Carlton Palace, Pall Mall, with an Address of Congratulation to the Prince Regent upon his accession to the throne as George the Fourth. We were a motley group, of various dimensions, dresses, and appearance. We advanced in a somewhat confused manner through a long room, with noblemen in waiting on each side, like statues, to the king, who was seated on a low throne at the further end. He was lusty, pappy, and pale, in a kind of uniform, and with a cocked hat, which on our approach he took off with inimitable gracefulness. Dr. Rees, our senior, a Presbyterian, and a fine-looking man, read the address. The king's air of supineness had given way to a mirthful smile, as he saw the satisfaction on our countenances when we were admitted to the royal presence. At the close of the address he read a brief reply, and then unexpectedly addressed us *impromptu* in these words:—"The manner in which you have spoken of my late revered father must touch every heart, and none more than my own (laying his hand upon his breast). You may assure yourselves, gentlemen, of a continuance; while I sway the sceptre, of all the privileges you enjoyed under his auspicious reign." To this we had almost audibly said, "hear, hear." When the king was informed that we waived the usual privilege of all kissing hands on account of the fatigue it would occasion him; and that as twelve only of the clergy had been permitted to do so, six only of our number would be selected for the honour, he smilingly observed, "O you may all kiss hands." Upon this we all fell in a most humiliating posture on our knees to kiss his extended hand. Some of those who were large and aged men, especially

Doctors Rees and Waugh, had great difficulty in rising, and retired backwards in some confusion, not being accustomed to such a movement. As we retired, the king said to us, "You may stay in the adjoining room till I return." While waiting there, we saw a small deputation of Quakers advancing with an address, which one of their number held before him in a frame. One of the pages coming towards them to take off their hats, Dr. Waugh, who loved a joke, said to the foremost Quaker in an audible whisper, 'Persecution, brother'; to which the brother significantly replied, while pointing upwards, 'Not so bad to take off the hat as the head.' We saw the king again as he returned in procession, and we departed well pleased. I believe we were all remarkably loyal in our prayers the next Sunday."

In 1811 Dr. Leifchild married a second time; it was a happy marriage, and it exercised a singularly beneficial influence over his life and career. From Kensington, Dr. Leifchild was invited to Bristol to take the pastorate of Bridge Street Chapel, with a unanimity and earnestness which certainly must have been both touching and flattering. He accepted it after some consideration. His fame as a preacher widely increased; he was now recognized as one of the leading dissenting ministers. At Bristol he had a charming old-fashioned house, a quaint garden; and he was as happily and pleasantly situated as a man could be in this world. Bristol at that time was the residence of two other remarkable preachers,—whose name and fame have spread beyond the bounds of their sect,—Robert Hall and Mr. Jay. There are some interesting sketches of another distinguished Nonconformist, John Foster, the author of the 'Essays.'

After a residence of six years at Bristol, Dr. Leifchild received a call to become the minister of Craven Chapel in London. This, after much deliberation, he decided to accept, although against the opinion of his friends and in spite of the wild entreaties of his Bristol congregation that he would not abandon them. The event proved that he had judged wisely, for his sphere of usefulness became very widely extended and the influence of his ministry was incalculable. He gave himself to his work with a zeal and devotedness which carried all before him like a strong tide; he was possessed with the tremendous responsibility of his mission, and he addressed himself to every detail of ministerial labour with unflinching ardour and energy. His converts may be numbered by the thousand. A popular minister is emphatically "set in slippery places," but Dr. Leifchild's life bore the scrutiny of both friends and foes; his personal influence continued to the last hour of his life, and no discrepancy ever appeared between the eloquent preacher and the excellent man. He was childlike and guileless, and he was too much impressed by the importance of his message to be at all self-conscious or to have a thought of himself—this is very great and very rare praise to have deserved. Having left few written records of himself, the influence of his eloquence has already become a tradition, but the influence of his life and conversation still endures; the influence of his example was deeper than the effect of his preaching, although that was a power very great to have been exercised by one man.

In 1854 Dr. Leifchild felt that age had begun to tell upon him; he could no longer bear the whole burden of services of the chapel; and although the congregation would thankfully have given him an assistant, difficulties arose, and the Doctor made up his mind to retire. He chose Brighton as his residence, but he did not subside into peaceful idleness; he took charge of a chapel just erected in Brighton, and

although his labours were lighter, they were not less energetic than they had been in London. In 1856 he lost his wife, to whom he was tenderly attached, and after this he retired from public life. He returned to London, where he continued to reside near Primrose Hill until his death in May, 1862, full of years and honour.

Reforms in Russia; with a Glance at the States-General of Russia in the Sixteenth and Seventeenth Centuries—[Des Réformes en Russie, &c., par Prince Pierre Dolgoroukoff]. (Trübner & Co.)

THE world heard of this protest before it assumed a distinct shape and gave the lie to everything pretending to be at once Imperial and Liberal in Russia. Nor was the protest needless. The contemporary annals of the Czarism were being written, almost universally, to amuse the public opinion of Europe, and of England especially, by Muscovite or German agents, all interested in applauding the recent policy of the Emperor. We have scarcely had, for years past, an uncoloured sketch from Muscovy. But the Prince Dolgoroukoff is not himself an impartial witness. He is too essentially, exclusively and arrogantly a Noble, the partisan of an order, the representative of an exasperated class; and he plainly speaks of the other orders as dependent, not on themselves, but on the great aristocracy whose privileges are threatened. It is feudality against autocracy. Still, Prince Dolgoroukoff is a politician, well informed, high-minded, and thoroughly distinct from those Jew pedlars who regularly pack, for the English and Belgian markets, false intelligence from the North. His work has roused many passions in Russia, notwithstanding the strength of her literary frontier and the vigilance of her intellectual coast-guard; it is a topic in Germany, and it appears, oddly enough, to be favoured by two opposite varieties of political thinkers in France. Eloquent and lucid, firm if not entirely calm, vigorous, warm and direct, it will certainly be read by no Russian without profit, and by none of any other nationality, who ever reads seriously at all, without interest. The Russian Empire is passing through an important crisis; not in Poland only, but in its other provinces also. Its thousand years of history approach a new and, in one sense, a definite epoch; and the condition in which it exists is one not merely of peril, but of decay, demoralization, exhausted vital force. Such is Prince Dolgoroukoff's view. He affirms that there is no justice in the Empire; that its tribunals are nests of venality whenever they are not registers of Imperial caprice; that there is no security for personal freedom, property or honour; that the administrative departments constitute a regular mart for corrupt patronage; that finance has sunk to its dregs; that money has totally vanished; that no confidence survives; that credit is at an end, industry crushed, commerce shackled. The clergy have been trampled upon by the bureaucrats; the nobles are slaves, and the people victims. This is the appeal of the Prince Peter Dolgoroukoff from the Czar Alexander the Second. It is on the part of the nobility, however, that he most bitterly and persistently complains. Their privileges are fictitious; as, for example, that which exempts them from corporal punishment, it being notorious that, from the lowest to the highest, they may—women no less than men—be secretly flogged at an office of the Imperial Chancery. Proceeding with his indictment, he cites the mercantile and trading classes as discontented on account of the inequalities which deprave the law, and the impossibility of obtaining un-

adulterated justice. The peasantry, while gratified by the abolition of serfdom, dread the tyranny of officials, and believe that they can only have changed masters:—a Noble's view of the matter, it must not be forgotten. As for the army, it aspires to better treatment and better pay, and, above all, to the repudiation of the birch-rod as a means of disciplining warriors. Finally, vast religious sects are praying for religious liberty. Here we have, in miniatures roughly reduced, Prince Dolgoroukoff's "internal aspects of Russia." External to her frontiers, she employs, at a gigantic cost, an inefficient and unimportant diplomacy. Russia, the more timid dealers in bugbears will rejoice to learn, could not now maintain for twelve months, beyond her own borders, an army of 150,000 men; her other battalions march in a mirage before the eyes of the world; they are unpaid and penniless phantoms. The Prince is certainly not to be accused of a bias in favour of his own Emperor. Upon the text thus set forth, he elaborates an argument not more gloomy than might have been anticipated.

NEW NOVELS.

The Story of Elizabeth. With Two Illustrations. (Smith, Elder & Co.)—'The Story of Elizabeth' turns upon a subject which is, or ought to be, quite inadmissible for a novel: the antagonism of a mother and daughter, both rivals for the love of the same man, who has done enough to make each hope that he loves her. The mother, proud, jealous, imperious, acts treacherously towards her daughter—sacrifices her happiness—blots out all the natural gladness of her youth—until she nearly drives her to desperation. No doubt, amid the many sorrowful and sinful tragedies enacted in the world, this terrible domestic duel has had its place, but it is unfit to be turned into story; it trenches on the sin of incest, and no mode of treatment can take away the taint. In an old Greek tragedy, this perversion of the most sacred human relationship would have been recognized in all its terrible proportions; but 'The Story of Elizabeth' is told in a mocking, sarcastic spirit, which is very unpleasant, and which degrades all the characters alike. Sir John Dampier, the man who causes all the dire misery and mischief that goes on, is a shallow, selfish, idle man, entangled with three women, to one of whom he is affianced; to none of whom is he in earnest; and the story of his levity and reckless pursuit of his own amusement is told with an unconscious indifference that is startling. There is an absence of all genuine pity or sympathy in the book; indeed, we cannot call to mind a work that seemed to come so little out of the author's own heart. It is written in a hard, arid spirit, that acts upon the feelings of the reader like an unseasonable frost. Elizabeth is sneeringly compassionated for being a fool; and even when she has been reduced to the point of death and is recovering, the first feeling that is recognized, by the only good female character in the book, Jean Dampier, who has nursed her, is the inconvenience that her recovery may entail. The absence of all earnestness in the tone in which the story is narrated is incongruous and unpleasant. The character of Anthony Tournour is well drawn; and poor Elizabeth herself excites more pity in the reader than she does in the author, and one would have wished that her happiness at the last had been less of a mere accident—an accident which only more fully illustrates the worthlessness of the man she has loved so well. 'The Story of Elizabeth' is undeniably clever; but it is the cleverness caught by living in a society where smart, compendious, trenchant judgments are summarily passed on men and things, with scant charity and small discrimination. The work does not indicate a rich or fertile nature. Had it been less clever and more genial, there would have been the germ of greater promise; as it is, it remains to be seen whether the cleverness and facility of style will mature into a deeper and gentler habit of thought and expression. We heartily hope that it will; for there is talent enough in the author to make us wish to see it

come to perfection; and the author may take our word for it that nothing hinders so much good as the practice of supercilious, harsh judgment, whether expressed towards the creatures of his brain or towards those in real life who shrink from the touch of bitter words.

Deep Waters: a Novel. By Anna H. Drury. 3 vols. (Chapman & Hall.)—This story begins well. The first volume is interesting, and the complication exciting; but as it proceeds, the "waters" grow too "deep" for pleasant wading—for anything, indeed, but drowning. There never were such sorrows heaped upon the head of one poor heroine since the days that heroines were heroines or novels were novels! The heavens become one confused mass of black, murky clouds, pouring down hail and rain; and they are too thick and too dark for the reader to be able to see his way through the mazes of the story. He is left to stumble in a painfully perplexed manner, and even at the end there is not a gleam of sunlight. The weather clears up, but it is dark and cold. The excellent and much-suffering heroine is left in a deep decline, making a voyage to Australia for change of air, but with no other prospect than that of dying at the end of a few months. The characters of the story are nicely drawn. The two chief female characters are excellent and charming women, both attached to the same man, who has proved faithless to one of them and married the other under stress of paternal compulsion, which again has been put on under stress of villainous tyranny, trading on a guilty secret. This situation is complicated by a fraudulent bank defalcation, after the precedent of Sir John Deane Paul; and the wife, who is also an heiress, sacrifices her fortune for the creditors, and is reduced to the misery and adversity with which it is so pleasant to see good men and women struggling. If once taken up, the book will be read through; but the story is so full of suffering and unhappiness, without any mitigating circumstances, that no reader will be likely to take the story up twice. Some of the scenes are very forcible, and each character is nicely discriminated. Miss Drury has certainly talent to write a novel both pleasant and profitable, and we treat her to make her next story less like a November day.

The Deserted House of Hawksworth. 3 vols. (Hurst & Blackett.)—The Deserted House of Hawksworth is a sensation novel *manquée*,—it is a confused jumble of all the incidents that have been effective in recent stories. The book opens with the visit of a man to a house shut up ever since his wedding morning, twenty years before, when his bride had eloped to marry, whereupon the deserted bridegroom had boarded up the windows, locked the doors, leaving the wedding feast upon the tables, built a high wall all round the grounds with spikes on the top, and lived the rest of his days within sight of the chimneys, until the moment the story begins, when he is on the point of entering it, and the ghostly ruin and decay are described just as it is written in the story of 'Great Expectations,' Mr. Elford being the counterpart of the unfortunate lady there described. Mr. Elford dies of his emotions on revisiting this spot, as he is on the point of revealing a secret. Concealed in a certain escritoire, this secret, of course, the executors and those most interested cannot find, or the story must have been "untimely nipped." Then follows scenes in Cornwall after the manner of the story of 'The Dead Secret,' and then come complications and mysteries, such as have been read in novels too numerous to mention. Mrs. Gordon, the faithless bride of Mr. Elford, fills the scene along with her daughter Christine, who is all that her mother ought to have been. Well! she is not allowed to marry the man she wished to marry and who wishes to marry her, because his mother discovers who she is; and then there is a wonderful Italian girl named Marina, and her lover, who plays her false, and who turns out to be old Mr. Elford's son, who had been married though nobody knew of it. This was the secret he had locked up in his bureau and was going to tell when he died, and it is discovered of course in a secret drawer; and then Christine, who has been adopted along with her mother, by an unexpected uncle, is made to marry Mr. Elford's

son, against her will, to save her mother from disgrace. Marina comes on the wedding-day and makes mischief, and nearly commits murder and suicide, but just misses doing either; and then the old house is burnt down, just after it has been repaired and beautified and they are all gone to live in it, and Mrs. Gordon dies of her injuries, and Christine's husband falls in love over again with Marina, and gets tired of her, and they quarrel whilst standing on the brink of a precipice, and Marina pushes him over, and then goes mad and walks about till she dies of hunger and exhaustion; and then somebody tells Christine all about it, and she is not sorry to be a widow, but she refuses to have any of his fortune,—so, as she is quite poor and her old lover is the rector of the parish, there is no further scruple on either side, and they marry at last and seem as if they were going to be very happy. The novel is not a good one: there is no repose nor probability in it, and the different parts do not hang together,—it might have been written by different hands and afterwards imperfectly reduced to some sort of unity.

OUR LIBRARY TABLE.

New Theorems, Tables and Diagrams, for the Computation of Earthwork. By John Warner, A.M. (Philadelphia, Lippincott & Co.; London, Low & Co.)—In reviewing this book we are noticing a new system, and one which deserves the serious attention of those who wish for greater accuracy, as well as of those who would like to do as well as at present upon easier terms. Mr. Warner presented his plans to the Society of Engineers at Glasgow, to which he read a paper on the subject; and in the minutes (since published) of the meeting we find that Dr. Macquorn-Rankine expressed a strong opinion of the advantage of Mr. Warner's methods, of which we had previously formed a very favourable opinion. The method consists, as usual, in the use of tables; but there is also an ingenious instrument, by which considerable accuracy may be obtained with very little trouble. The tables are, of course, only representations of formulæ; but the formulæ contain an accurate treatment of cases more difficult than those of preceding tables. Up to the present time the tables are adapted to the simpler cases; and the complications are managed—we suppose—by that sort of skill in making inferior tools do higher work which practice teaches to those who are fit to learn. But such a state of things ought only to be provisional: we are very sure that better methods are wanted. Now, Mr. Warner is a mathematician of considerable power, as appears not only from the theoretical appendix to this work, but also from another work which he calls a treatise on morphology, that is, on curves. He is not only a professor of augmented methods, but he comes forward with tables constructed with much labour, and with examples the working of which shows that the use of the tables is easy enough. The instrument by which he professes to give additional help is also very well worth attention. On these things put together we feel justified in recommending all those whom it concerns to examine for themselves, and to bring Mr. Warner and his system to the test of actual trial. We have been much struck with the thoroughly practical way in which he has commenced his proceedings, as well in the structure of the book itself as in the efforts which he is making to procure a hearing in this country.

Tales from the German. Translated by E. K. E. (Faithfull.)—The two tales which compose this volume have no quality good enough or distinctive enough to justify their publication in an English dress. Combining the vocation of publisher with that of printer, Miss Faithfull should exercise care in the selection of her manuscripts, and should not employ her efficient staff of women printers on "copy" which a prudent publisher would return to its authors. Her character as director of a printing-house is established; but her position as a publisher of entertaining or useful books has still to be made. Generous sympathy with her labours will, for a time, procure a sale for the collections of verses and novelettes

which have hitherto been the principal productions of her presses, but she ought not to rely on such good feeling as a permanent means of support. The lady may, together with this word of counsel, accept our assurance that we wish good fortune to her undertaking, and believe her capable of achieving a durable and genuine success which will need neither the smiles nor succour of benevolent patronage.

The Physical Geology and Geography of Great Britain: a Course of Six Lectures delivered to Working Men in the Museum of Practical Geology, Jermyn Street. By Prof. A. C. Ramsay. (Stanford.)—This is a simple and easily understood little book, in which a master of his science explains the elements of it in a manner which must have been agreeable to his workmen auditors. To such persons it must have been no slight privilege to listen to a thoroughly informed lecturer while condescending to become a popular teacher, and these pages demonstrate that portions of geological science can be made plain and palatable to ordinarily intelligent men. So far this little volume is a model for other lecturers, and every geologist would desire his science to be extensively popularized in like manner. There is no valid reason why similar lectures should not be delivered in several parts of London, and in all our large towns. "Experience tells me," says Prof. Ramsay, "that at these courses of lectures a number of my old friends come to see me again and again, and that also there are many new faces present." Elsewhere, also, like experience would doubtless follow, and it is nothing short of inexcusable apathy or neglect that the palæontological treasures of our fine museums should be left useless in their cabinets, and totally unavailable for popular information. There is nothing new to geologists in this volume, but it is not intended for them. Some, however, may not be acquainted with this Professor's glacial-lake theory, and they will find it here simply expounded—to the effect that while all other supposable agents fail to account for the origin of the rock-basins in which the greatest proportion of lakes lie, and while they cannot be attributed, in most cases, to the wearing of the sea or the disturbance of the rocks, they may be principally assigned to the slow and long-continued scooping power of great glaciers in their passage over the localities now occupied by lakes like those of Geneva, Thun, Lucerne, and Constance. Although this theory has been much opposed, the Professor has something very plausible to say for it in these pages, and something more strictly scientific in another publication. His brief notice of physical geology in our own country, and its relation to agriculture, population, and arts and trades, must have been very acceptable to his original auditors, and might be much more largely expanded. We shall be glad to see many such volumes, with, however, a little more care in correcting the press.

The Law of Joint-Stock Companies, containing the Companies Act, 1862, and the Acts Incorporated therewith. With copious Notes of Cases, the Rules and Forms of the Court of Chancery and Forms of Articles of Association, by Leonard Shelford, Esq., Barrister-at-Law. (Butterworths.)—The Joint-Stock Companies Act of the last session, not only consolidates and amends the previous enactments upon this subject, but also establishes a new class of companies to be called "companies united by guarantee." The Act consists of no less than two hundred and twelve sections, with sundry schedules, and it has been followed by seventy-seven Orders of the Court of Chancery, with schedules also. The Act in many cases adopts nearly *verbatim* the language of former statutes, so that a great number of the decisions which have been pronounced on the construction of former statutes will be authorities for the interpretation of the new Act. This state of things obviously affords a favourable opportunity to the author for the exercise of that industry and skill which have already produced many of the most useful books to be found in the lawyer's library. Mr. Shelford has bestowed great care and labour upon this work. It contains, we conceive, all the law upon this important subject, and the matter is well arranged and well indexed.

The Legal Exemption of the Clergy from Turnpike

Tolls. By the Rev. J. S. Sidebotham, M.A. (Oxford, Shrimpton; London, Whitaker & Co.)—This is a short pamphlet by a clergyman who objects to pay tolls, partly from the natural dislike which we all entertain to that process, but chiefly, we think, because Nonconformist ministers do not pay and "the idea that tolerated persons are intended by law to have a privilege from which legally authorised persons are the only class excluded, is really too preposterous to be for an instant entertained on consideration by any person of ordinary intellect." The exemption of a clergyman on his parochial duty, whether the gate be within or without his parish, is plain enough. Whether a clergyman on temporary duty is exempt, and whether he may claim exemption when other persons are with him, are questions which have been often discussed, but never, we think, expressly decided. In the early part of the short pamphlet the author seems to assert that the case of Temple v. Dickinson decides both these questions in favour of the clergy, but before the end he admits that it does not, for the sufficient reason that the questions did not arise; but then the author is satisfied that if Lord Campbell were alive and the questions came before him he would decide them in favour of the clergy,—an argument that somewhat reminds one of the old song of Guy Faux. The questions are of some interest.

Indian Year-Book for 1861. A Review of Social, Intellectual and Religious Progress in India and Ceylon. Compiled by John Murdoch. (Nisbet & Co.)—Apologising for the delay which has occurred in the publication of this summary of events which occurred so far back as 1861, Mr. Murdoch says, "some explanation is due for the late appearance of a Year-Book for 1861. The primary object of the work is to give facts about Missions. The Home Reports are not printed till about July, and another month elapses before they reach India. It is hoped, however, that the next issue will appear rather earlier, as well as be free from some of the imperfections which must be found in a first attempt." Amongst the imperfections of the present volume is the absence of a good general Index.

The Diary of a Hunter from the Punjab to the Karakorum Mountains. (Longman & Co.)—In the year preceding his death, at Meen Meer, where he fell in the August of 1861 whilst bravely ministering to his sick soldiers of the 51st King's Own Light Infantry, Lieut.-Col. Henry Augustus Irby made a hunting excursion from the Punjab to the Karakorum Mountains. The journal kept by the Colonel during this six months' trip is now offered to the public by his brother. Indian sportsmen will turn over its pages with pleasure, and the writer's personal associates will accept it as an agreeable memorial of an officer whose manly and devout nature won the affections of all who knew him.

The Trial of the Constitution. By Sidney George Fisher. (Low & Co.)—"The flight of events," observes Mr. Fisher, "is now so rapid that he who wishes to influence opinion must speak quickly, and cannot therefore bestow much time on careful and artistic execution." The writer of these words does not now need to be informed that his volume appears too late to be of any service to the North. Indeed, ere he took pen in hand the time had passed when his views might have produced a transient effect.

Of Miscellaneous publications we have to mention:—*A Comparison between Iron-Clad Ships with Broadside Ports, and Ships with Revolving Shields,* by Capt. Coles (Stanford);—*Out New Mode of Cupola Ship—H.M.S. Enterprise,* by Rear-Admiral Halsted (Nichols);—*Military Despotism; or, the Inniskilling Dragoon, a Tale of Indian Life; To the Members of the House of Commons* (Chapman & Hall);—*Garrating; or, is the Ticket-of-Leave System a Failure?* by One who Watches (Hotten);—*Mr. Symons On the Distribution of Rain over the British Isles* (Stanford);—*The Maze of Banking,* by a Depositor (Simpkin);—*The Colony of Rupert's Land: Where is It, and by what Title held?* by Capt. Syngé (Stanford);—*Ireland's Right and Need: Self-Government, a Letter to the Earl of Carlisle,* by W. Smith (Kelly);—*An Exposure of the Extraordinary Persecution of Dr. Domingo Gounouillon,*

by the Authorities of Montevideo (O'Byrne);—*The American War Crusade; or, Plain Facts for Earnest Men,* by J. R. Balme (Hamilton);—*Honesty is the Best Policy, an Aphorism submitted (without permission) for the Consideration of the Right Hon. Sir Charles Wood,* by a Late Company's Officer (Wilson);—*Notes on the Rate of Mortality in Manchester,* by Dr. Whitehead (Ireland);—*A Report upon some of the Colonial Medicinal Contributions to the International Exhibition,* by C. Hunter (Churchill);—*The Plain English of American Affairs,* by J. Worden (Bennett);—*A Reply to the Address of the Right Hon. the Earl of Shaftesbury and others to the Right Hon. Sir C. Wood on the Proposed Law of Contract for India,* by W. F. Fergusson (Ridgway); and *The System of Landed Credit; or, La Banque de Crédit Foncier, the Working of that Institution in Europe, the Introduction of the System into Lower Canada briefly considered,* by G. H. Macanlay (Quebec, Desbarats & Derbishire).

LIST OF NEW BOOKS.

Agnes Falconer, 18mo. 1/6 cl.
Almar's Pearl of the Andes, fc. 8vo. 2/6 bds.
Anderson's Guide to the Highlands of Scotland, 4th edit. 10/6 cl.
Balfour's Flora of Edinburgh, fc. 8vo. 3/6 cl.
Balfour's Mother's Lessons on the Lord's Prayer, new edit. 2/6 bds.
Bessy's Money, by the Author of 'Mary Powell,' roy. 18mo. 1/6 cl.
Bibliotheca Classica, ed. by Long, J. Erpili, by Conington, Vol. 2, 14/6 cl.
Black's Guide to London and the Environs, 2nd edit. fc. 8vo. 2/6 cl.
Boucheret's Hints on Self Help, fc. 8vo. 1/6 cl.
Brook's Gertrude Winn, or Our Nation's Curse, fc. 8vo. 1/6 swd.
Buckmaster's Elements of Chemistry, 2nd edit. 18mo. 3/6 cl.
Butler's Atlas of Modern Geography, new edit. 10/6 h. f. bd.
Cesari, with Explanatory Notes by Anthony, 4/6 cl.
Calendar of State Papers, Dom. Ser., 1664-1688, edit. by Green, 15/6 cl.
Chambers's Reading Books, Book 4, 12mo. 1/4 cl., Book 5, 1/6 cl.
Chope's Harmonies to the Gregorian Tones, Noted and Pointed, 1/6 cl.
Chope's Versicles, Canticles, and Litanies Noted and Pointed, 1/6 cl.
Corkran's Bertha's Repentance, 8vo. 9/6 cl.
Cupples's The Green Hand, new ed. fc. 8vo. 1/6 swd.
Daumas's Horses of the Sahara, &c., trans. by Hutton, 10/6 cl.
De Burgh's Messianic Prophecies of Isaiah, 8vo. 6/6 cl.
De Porquet's First French Reading Book, new ed. 12mo. 2/6 cl.
Dicey's Six Months in the Federal States, 8vo. cl. 8vo. 12/6 cl.
Disraeli's Calamities and Quarrels of Authors, new ed. post 8vo. 3/6 cl.
Dixon's Digest of Cases Connected with Law of the Farm, 3 ed. 8/6 cl.
Fisher's Personal Narrative of Three Years' Gentleman in China, 18/6 cl.
Freeman's Pictures of German Life, 3 series, transl. 2v. post 8vo. 21/6 cl.
Gaskell's A Dark Night's Work, 8vo. 10/6 cl.
Gumpach on Historical Antiquity of People of Egypt, 8vo. 3/6 cl.
Hall's Treatise on Differential and Integral Calculus, post 8vo. 8/6 cl.
Happy Family, and Ten other Tales, 18mo. 1/6 swd.
Harley's Jaundice, its Pathology and Treatment, 8vo. 7/6 cl.
Harris's John, Story of Our Bards, Essays & Poems, 12mo. 4/6 cl. gilt.
Harrow Atlas of Modern Geography, Junior, new ed. folio, 7/6 cl.
Hawkins's Concise Treatise on Construction of Wills, 8vo. 10/6 cl.
Hick (Samuel), Memoirs of, by Everett, new edit. fc. 8vo. 3/6 cl.
Hieron's Atlas, Pt. 1, 8vo. 1/6 cl.
Holden's The Ordinances of Prisons Investigated, 8vo. 3/6 cl.
Hugo's Commentary on 'The Merchant of Venice,' transl. 8vo. 1/6 cl.
Hutton's Principia Græca, 3rd edit. 12mo. 3/6 cl.
James's Morley Erasmian, new edit. fc. 8vo. 1/6 swd.
Jevons's Elements of the Theory of Probability, 8vo. 4/6 cl.
Jukes's Types of Genesis briefly narrated, 2nd edit. post 8vo. 7/6 cl.
Kallisch's Hebrew Grammar, with Exercises, Pt. 2, 8vo. 12/6 cl.
Keith's Complete Practical Arithmetician, by Maynard, n. ed. 4/6 cl.
Kingley's Water-Babies, a Fairy Tale, post 4to. 7/6 cl.
Laurie's Entertaining Lib.: 'Day's Sandford and Merton,' n. ed. 1/6 cl.
M'Dowell's Exercises on Euclid and Modern Geometry, 8/6 cl.
Maclaren's The Plain of Troy Described, 8vo. 7/6 cl.
Norton's Pentateuch and its Relations to Jew and Christian, 2/6 cl.
Parlor Lib.: 'Recollections of Detective Police Officer,' fc. 8vo. 2/6 cl.
Philipp's Jurisprudence, 8vo. 12/6 cl.
Ridley's Our Food and our Physic, 3rd ed. post 8vo. 1/6 cl.
Simple Woman (A), post 8vo. 10/6 cl.
Smith's History of Wesleyan Methodism, V. 1, 3 ed. post 8vo. 10/6 cl.
Smith's Fairy Rainbow's Stories, as She told Them, 18mo. 3/6 cl.
Sorrows and Joys, Tales of Quiet Life, fc. 8vo. 1/6 cl.
State in the Folds Land, new edit. fc. 8vo. 2/6 cl. gt.
Streathfield's Musings on Scriptural Subjects, 16mo. 3/6 cl.
Tennant's Notary's Manual, 3rd edit. 8vo. 24/6 cl.
Therry's Reminiscences of New South Wales, 2nd ed. 8vo. 14/6 cl.
Thesaurus, Requisite et Brevi Annotatione Instructi Paley, 4/6 cl.
Thomson on Culture and Modern Geometry, 8vo. 5/6 cl.
Twopenny's Lectures for a Village Night School, fc. 8vo. 1/6 cl.
Visit to the Birds and Beasts, Moveable, roy. 8vo. 2/6 bds.
Waddell's (Rev. P. H.) Discourses, 8vo. 7/6 cl.
Whitehead's Life and Death of the Irish Parliament, cr. 8vo. 2/6 cl.
Wilms's Hand-book for Mappers, Engineering, &c. 2nd edit. 4to. 40/6 cl.
Wilson's Tales of the Borders, by Leighton, new edit. V. 1, 1/6 swd.
Wonders of the World in Earth, Sea and Sky, by Uncle John, 3/6 cl.

[ADVERTISEMENT.]—Ready this day, a new Gift-book of Games, price 5s.—THE BOY'S HANDY BOOK OF GAMES, Sports, Pastimes and Amusements: being a complete Encyclopedia of Boyish Recreative Pursuits of every description, and forming a Guide to the Employment of every Leisure Hour. 98 pages, post 8vo. Numerous Engravings. Extra cloth, full gilt side, back and edges.—London: WARD & LOCK, 158, Fleet-street.

THE DOCTRINE OF HETEROGENY AND MODIFICATION OF SPECIES.

Down, Bromley, Kent, April 18.
I hope that you will permit me to add a few remarks on Heterogeny, as the old doctrine of spontaneous generation is now called, to those given by Dr. Carpenter, who, however, is probably better fitted to discuss the question than any other man in England. Your reviewer believes that certain lowly organized animals have been generated spontaneously—that is, without pre-existing parents—during each geological period in slimy ooze. A mass of mud with matter decaying and undergoing complex chemical changes is a fine hiding-

place for obscurity of ideas. But let us face the problem boldly. He who believes that organic beings have been produced during each geological period from dead matter must believe that the first being thus arose. There must have been a time when inorganic elements alone existed on our planet: let any assumptions be made, such as that the reeking atmosphere was charged with carbonic acid, nitrogenised compounds, phosphorus, &c. Now is there a fact, or a shadow of a fact, supporting the belief that these elements, without the presence of any organic compounds, and acted on only by known forces, could produce a living creature? At present it is to us a result absolutely inconceivable. Your reviewer sneers with justice at my use of the "Pentateuchal terms," "of one primordial form into which life was first breathed": in a purely scientific work I ought perhaps not to have used such terms; but they will serve to confess that our ignorance is as profound on the origin of life as on the origin of force or matter. Your reviewer thinks that the weakness of my theory is demonstrated because existing Foraminifera are identical with those which lived at a very remote epoch. Most naturalists look at this fact as the simple result of descent by ordinary reproduction; in no way different, as Dr. Carpenter remarks, except in the line of descent being longer, from that of the many shells common to the middle Tertiary and existing periods.

The view given by me on the origin or derivation of species, whatever its weaknesses may be, connects (as has been candidly admitted by some of its opponents, such as Pictet, Bronn, &c.) by an intelligible thread of reasoning a multitude of facts: such as the formation of domestic races by man's selection,—the classification and affinities of all organic beings,—the innumerable gradations in structure and instincts,—the similarity of pattern in the hand, wing or paddle of animals of the same great class,—the existence of organs become rudimentary by disuse,—the similarity of an embryonic reptile, bird and mammal, with the retention of traces of an apparatus fitted for aquatic respiration; the retention in the young calf of incisor teeth in the upper jaw, &c.;—the distribution of animals and plants, and their mutual affinities within the same region,—their general geological succession, and the close relationship of the fossils in closely consecutive formations and within the same country; extinct marsupials having preceded living marsupials in Australia, and armadillo-like animals having preceded and generated armadillos in South America,—and many other phenomena, such as the gradual extinction of old forms and their gradual replacement by new forms better fitted for their new conditions in the struggle for life. When the advocate of Heterogeny can thus connect large classes of facts, and not until then, he will have respectful and patient listeners.

Dr. Carpenter seems to think that the fact of Foraminifera not having advanced in organization from an extremely remote epoch to the present day is a strong objection to the views maintained by me. But this objection is grounded on the belief—the prevalence of which seems due to the well-known doctrine of Lamarck—that there is some necessary law of advancement, against which view I have often protested. Animals may even become degraded, if their simplified structure remains well fitted for their habits of life, as we see in certain parasitic crustaceans. I have attempted to show ('Origin,' 3rd edit. p. 185) that lowly-organized animals are best fitted for humble places in the economy of nature; that an infusorial animalcule or an intestinal worm, for instance, would not be benefited by acquiring a highly complex structure. Therefore, it does not seem to me an objection of any force that certain groups of animals, such as the Foraminifera, have not advanced in organization. Why certain whole classes, or certain numbers of a class, have advanced and others have not, we cannot even conjecture. But as we do not know under what forms or how life originated in this world, it would be rash to assert that even such lowly endowed animals as the Foraminifera, with their beautiful shells as figured by Dr. Carpenter, have not in any degree advanced in organization. So little do we know of the conditions of life all around

us, that we cannot say why one native weed or insect swarms in numbers, and another closely allied weed or insect is rare. Is it then possible that we should understand why one group of beings has risen in the scale of life during the long lapse of time, and another group has remained stationary? Sir C. Lyell, who has given so excellent a discussion on species in his great work on the 'Antiquity of Man,' has advanced a somewhat analogous objection, namely, that the mammals, such as seals or bats, which alone have been enabled to reach oceanic islands, have not been developed into various terrestrial forms, fitted to fill the unoccupied places in their new island-homes; but Sir Charles has partly answered his own objection. Certainly I never anticipated that I should have had to encounter objections on the score that organic beings have not undergone a greater amount of change than that stamped in plain letters on almost every line of their structure. I cannot here resist expressing my satisfaction that Sir Charles Lyell, to whom I have for so many years looked up as my master in geology, has said (2nd edit. p. 469):—"Yet we ought by no means to undervalue the importance of the step which will have been made, should it hereafter become the generally received opinion of men of science (as I fully expect it will) that the past changes of the organic world have been brought about by the subordinate agency of such causes as Variation and Natural Selection." The whole subject of the gradual modification of species is only now opening out. There surely is a grand future for Natural History. Even the vital force may hereafter come within the grasp of modern science, its correlations with other forces have already been ably indicated by Dr. Carpenter in the *Philosophical Transactions*; but the nature of life will not be seized on by assuming that Foraminifera are periodically generated from slime or ooze.

CHARLES DARWIN.

THE ANTIQUITY OF MAN.

10, Kant Terrace, April 20, 1863.

It is with regret that I find myself at issue with the Author of 'The Antiquity of Man.' I could have wished to have avoided any controversy on the subject, as I hope at some future period to have a fitting time and occasion for my own account of the inquiry; but there are portions of Sir Charles Lyell's letter to the *Athenæum*, of the 18th inst., in reply to Dr. Falconer's letter in the number of the 4th inst., which call for some brief notice on my part. I would most willingly have commented on the proofs of Sir Charles Lyell's important work had they been submitted to me before the publication of the first edition: not having had that opportunity, I found myself obliged to report to Sir Charles, when he wrote to ask me for a list of errata and corrections for the second edition, that "I raised objection to the tone and cast of some chapters, and that the corrections I might think necessary would involve more alteration than was practicable or than could originate with me." I referred as an example to the Bedford case, "on which so many important geological questions hinge." Sir Charles in his reply informed me that, after referring to the published accounts of it, he did not see what he had to alter. It is possible that I may not have been sufficiently explicit. I should regret if it were so.

With regard to that particular case, I can only repeat the statement that I made to my friend, Dr. Falconer, that the Bedford section was made out by me long before the period of Sir Charles's visit there; that the main features were pointed out by me to him on that occasion; and that I further brought a short notice of Mr. Wyatt's interesting discovery together with the first geological description of the section before the Geological Society, in March, 1861,—somewhat prematurely, possibly, for being part of a general inquiry, in which, as Sir Charles knew, I had been engaged for some years, I should have waited until I could have brought forward the whole subject (long unavoidably delayed by the limited measure of time I can take from active business avocations), but for its special bearing on the question of the Antiquity of Man, and the publicity given to this case. Only those

engaged in the study of the quaternary deposits, and who know how difficult it is to obtain definite facts, and how many days and years may be spent in examining ground which affords only negative evidence, can understand the importance of a good positive case like that of Bedford. I quite agree with Sir Charles Lyell in his observations about too frequent references to original authorities in a popular work: it may even be a question whether the general reader may not consider such references to authorities and to companionship already too frequent in 'The Antiquity of Man.' No doubt, as Sir Charles observes, the public generally are satisfied to learn from him his own conclusions in as few words as possible; but he must remember that he is also addressing a large scientific public, and that it is not a question of frequent but of accurate reference that is contended for. I am satisfied that whatever may have been the intention of Sir Charles, his readers must form a very inaccurate idea of the important part taken for many years past by Dr. Falconer in researches connected with the antiquity of man, in the investigation of bone caves in general, and of the Brixham cave in particular, as well as of the relative part taken by the various geologists named by Sir Charles, and by Sir Charles himself, in other parts of the investigation. I have been greatly interested in the progress of the Brixham cave exploration, and can fully corroborate Dr. Falconer's account of it; and this misapprehension is another reason which makes me regret the delay in the publication of the final results.

Sir Charles Lyell is perfectly correct in saying that I have modified my views since the publication of my first memoir (not memoirs) on this subject. But I would remark that that paper was read before the Royal Society in the month following my first visit to the Somme Valley and to Hoxne, and that in it I contented myself with a description of the ground and with the determination of the geological age of the deposits—points which remain unpugned—and stated that I reserved my views on the theoretical questions for further inquiry and research. After an interval of three years, I brought these forward in a memoir, read before the Royal Society in March, 1862; and although my views had, I admit, been modified and matured, the main question of the post-glacial age of the beds was confirmed by various new sections; whilst, although feeling that the period concerned is one of very remote antiquity, I still adhere to the opinion I had before expressed, that the evidence does not carry man back in past times more than it brings forward the great extinct mammalia towards recent times.

One of the great charms of scientific inquiry lies in the free and intimate intercourse and interchange of ideas amongst men engaged in the same branches of research. In such intercourse, where each observer contributes his facts or his opinions, the starting-point of some of these must often be lost to view, and all men of science must, at times, have felt and experienced that, in the lapse of time, an unconscious process of greater or lesser mental assimilation unavoidably takes place. It is, therefore, only when certain limits are passed, albeit inadvertently, that any one would care or think fit to object.

Every geologist must feel indebted to Sir Charles Lyell for the philosophical spirit he has brought to bear in geological inquiry, and all must admire the untiring energy with which he has for years past investigated the phenomena he describes. Having studied with him in the field many of the complicated phenomena of the post-pliocene deposits, while I claim as my share of the work the detection and the interpretation of certain physical phenomena, I am free to acknowledge the pleasure and advantage I have received from the discussion of the various questions arising therefrom with a geologist so experienced and philosophical as Sir Charles Lyell.

JOSEPH PRESTWICK.

THE NEW ZEALAND MOAS.

April 22, 1863.

A paragraph is now going round the papers stating that, just before the mail left, one of the

most gigantic of birds, a Moa or Dinornis, and believed to be extinct, had been seen alive in New Zealand, and that an enterprising colonist had offered a reward of 500*l.* for its capture, dead or alive. The public seem to be divided respecting the amount of credence to be attached to the story; but the fact that a gentleman residing on the spot thought it worth while to offer a handsome reward would seem to show that there was, in his judgment, some probability on the very face of it. That some of the smaller species of Dinornis may still be alive is an opinion which even Prof. Owen, if I understood him rightly, entertains. If extinct, the Moas have become so probably in quite recent times—that is to say, since the occupation of New Zealand by the Maoris. This opinion, I think, may be supported by philological arguments, briefly stated in my Official Reports on the Fiji Islands, presented to Parliament, May, 1862, and also in my 'Viti,' p. 383, where I said:—"Toa" is the Fijian form of the word 'Moa,' applied throughout Polynesia to domestic fowls, and by the Maoris to the most gigantic extinct birds (*Dinornis*, sp. plur.) disinterred in New Zealand. The Polynesian term for birds that fly about freely in the air is *Manu* or *Manumanu*; and the fact that the New Zealanders did not choose one of these, but the one implying domesticity and want of free locomotion in the air, would seem a proof that the New Zealand Moas were actually seen alive by the Maoris about their premises, as stated in their traditions, and have only become extinct in comparatively recent times."

BERTHOLD SEEMANN.

SCIENTIFIC BALLOON ASCENT.

Blackheath, April 21.

In the *Athenæum* of the 11th inst. are detailed the observations I made on the sky spectra in the Balloon Ascent on March 31. They were so different from what I expected that I could not avoid coming to the conclusion, that they were of little value in consequence of the ascent having been made so late in the day. I therefore resolved that the next ascent should be made when the sun was near the meridian, and that the spectrum examination should be a primary subject of investigation. The apparatus was the same as that used on the previous experiments. It was covered with black cloth to prevent any stray light falling on the prism, and whilst observing my head was also covered with black cloth. Between the hours of 11 A.M. and noon, I examined the solar and sky spectra with care. The sky was generally covered with cumuli, and there was a great mist. The solar spectrum extended from B to H nearly; and the sky spectrum from B to G, but these were quite its limiting lines.

We left the earth on April 18 at 1h. 17m. P.M.; within two minutes afterwards we were 3,000 feet, and at 1h. 23m. we were one mile high. The second mile was passed at 1h. 29m.; the third at 1h. 37m.; the fourth at 2h.; and the highest point was reached at 2h. 30m.—at the height of four and a half miles nearly. At 2h. 36m. we passed below four miles; the next mile downwards was passed at 2h. 40m.; and at 2h. 46m. we were two miles from the earth, which we reached at 2h. 50m. At 1h. 20m. looking close to the sun, the line G was very clear, as well as the two nebulous lines H, and the spectrum extended somewhat further; many lines were seen. At 1h. 21m. at the red end of the sky spectrum near the sun, the line B was very clear, and many lines between B and F were visible. At 1h. 28m. the sky spectrum under and close to the sun extended from A at the red end to beyond H, the lines were beautifully defined, and I thought somewhat more numerous than as viewed from the earth. At 1h. 28½m. the sky spectrum at some little distance from the sun did not reach to G, and scarcely to B; but there were many lines between these extremes. At 1h. 33m. on directing the slit to the sky far from the sun, the field of view was dark. At 1h. 37m. as the balloon was revolving I had a beam of light from the sun, whilst looking at the red end, and all lines were clear up to A. At 1h. 39m. the slit was directed to a point in the sky as near the zenith as the balloon permitted, and the spectrum was

very short, and no lines were visible; turning the telescope round so as to sweep the sky, from a high point to a low one, I lost the spectrum entirely; there was no light at all. I could not turn the telescope round sufficiently to direct the slit to the clouds beneath. From 1h. 47m. to 1h. 49m. I could not get the slit directed to the sun, but the sky was blue and bright, and I kept my eye at the telescope and looked intently, but there was no light. I became anxious and uneasy, lest from my confined and constrained position, I was not looking fairly through the telescope, or the slit had become out of order, or something had become deranged, as shortly before the apparatus had swung round with a lurch of the balloon. At 1h. 53m. I examined the eye-piece, and cleaned it, for fear in my anxiety I had breathed upon it; I also examined the slit, and every part of the apparatus I could: all seemed to be right. At 1h. 56m. the field of view was quite dark, the slit being directed to the sky far from the sun. At 2h. 9m. and at 2h. 14m. the field of view was quite dark, when the slit was directed to the sky, the sun being nearly opposite. At 2h. 15m. I succeeded in getting a good adjustment upon the sun; and from this time till 2h. 31m. I devoted myself almost entirely to the examination of the spectrum; during this time we were from 4 miles to 4½ miles high. The balloon revolved once round in about five minutes; and I kept my eye at the telescope during the first revolution, and nearly so with the others. When the light came from the sun I confined myself at first to the violet end, which extended a good way beyond H, both of which were clear and made up of many fine lines. On passing from the sun, the spectrum shortened, and G was the limit; this was soon lost, and the spectrum shortened very rapidly, and there was none when looking opposite to the sun; on approaching the sun again, the spectrum again appeared. I directed my attention this time to the red end: B was visible on approaching the sun, and A became visible when a beam of light entered from the sun itself, and many lines were visible between A and a, and a and B; on passing from the sun the same phenomena were repeated as before; and when the sun again came round, I carefully examined the whole spectrum from A to a good way beyond H, sweeping the telescope up and down two or three times, and every line was visible that I had seen when looking at the sun from the earth before starting, and a great many more. The number of lines visible seemed to be innumerable. This experiment appears to be conclusive, and shows that sky spectra, viewed from above the clouds, are confined to the immediate vicinity of the sun itself, and indicates that the amount of light from the sky is very small indeed. The number of lines in the solar spectrum appear to be increased when viewed from a position above the clouds, and therefore none of the lines as viewed from the earth would seem to be atmospheric.

Taking together the whole of the sky spectra, they agree with those of the preceding ascent, and confirm their accuracy.

After reaching the height of four miles, and we had determined we were moving directly towards the coast, Mr. Coxwell continually applied to me for the readings of the barometer, and directed our companion, Mr. I—, to keep a sharp look-out for the sea. Immediately after we attained an elevation of four and a half miles Mr. Coxwell let off some gas, and said he felt assured there was not a moment to be lost in getting within view of the earth. He again let off gas rather freely, so that we descended a mile in four minutes. At 2h. 46m. we were two miles from the earth, the barometer reading 21.20 inches, when Mr. Coxwell, catching sight of Beachy Head, exclaimed "What's that?" and on seeing the coast through a break in the clouds, he again exclaimed, "There is not a moment to spare—we must descend rapidly, and save the land at all risks." It was a bold decision, but we were in a critical position, and I do not see what else could have been done.

When orders were given to put out sand we did so simultaneously, which gave a favourable check; and as the lower part of the balloon itself assumed a parachute form, the shock was not so bad as

might have been expected. Most of the instruments were broken, owing to their delicate construction, and my attention being drawn from them, yet, strange to say, the glass vessels of air collected at the highest point for Prof. Tyndall remained uninjured, as did some bottles of lemonade which Mr. Coxwell had placed in the car.

We descended the last two miles in four minutes, and the descent was within half-a-mile of the station at Newhaven. JAMES GLAISHER.

BOOK-MAKING.

Munich, April 12, 1863.

An article which appeared in the *Athenæum* of the 7th March, signed "M. Digby Wyatt," has just been sent me. The article in question is directed against my book 'Vorschule der Kunstgeschichte,' and warns every one against a deceptive system of book-making, inasmuch as the illustrations of the book are, for the most part, taken from other works, and many of them two or three times repeated. It seems that Mr. Wyatt has done nothing more than look at the illustrations of my book, and taken no notice of the text; his notion, too, of the end and aim of the book is altogether an erroneous one. The 'Vorschule der Kunstgeschichte,' as the very title implies, is intended merely to be preparatory to the study of the history of Art. It is to be classed therefore with the æsthetical handbooks. But how, for example, would it be possible to reproach the author of a work intended to pave the way to the study of literature, with having borrowed from others, when he merely quoted passages from different authors, Shakspeare, Milton, Pope, Byron, in order to prove his assertions, and to explain more clearly what he had said? The same passage, too, might be repeated; now for some peculiarity of construction, now on account of the force of expression; or, again, for the opposite of this, or because of a particular grammatical form; referring thus to one and the same passage, instead of interrupting the reader by obliging him to turn to a former page. This is what I have done. I show my reader how works of Art originated and were developed, and point out the different relative relations to be considered when viewing them, as well as the qualities which are most prominent. That I do not travel to Rome in order, with a few lines taken from 'The School of Athens,' to obtain a pattern of a "free systematic arrangement," but rather take them from a well-known engraving, is an act that can hardly require an apology. And if I, in one instance, give The Graces as a model for the beauty of the lines, I surely may place the same group again before the reader when giving him a specimen of matchless symmetry.

But why pursue the matter further? I am certain that had Mr. Wyatt done me the honour to read my book, instead of merely looking at it, he would not have shown so much irritation, which would be perfectly justifiable if the 'Vorschule' were meant to be a mere picture-book or a collection of woodcuts. These, however, are only the explanations of what I recommend as preparatory to the study of the history of Art. And in this part of the work, which after all is the most important one, no one will be able to accuse me of plagiarism, unless indeed I have copied from myself, which occasionally is unavoidable.

DR. ERNST FÖRSTER.

THE WEATHER.

Admiral FitzRoy has made his annual Report to Mr. Milner Gibson, President of the Board of Trade, in which he gives the general summary of results obtained from the practical application of meteorology to every-day use. The results of such utilization of facts are shown by two papers appended to this Report, which give statements of wind and weather following every instance of making our cautionary signals. These results are certainly remarkable; indicating a vast amount of saving through the warnings sent from London.

Applications have been made for the cautionary signals from no less than fifty-four of the places on our coasts, and as some of these have been preferred but recently, they are evidences of deliberate con-

sideration, and of the value attached to the fact that by means of our regular reporting stations and the Coast Guard, aided by the organization effected locally, in some districts, all the coasts of Great Britain and Ireland to which the telegraph extends (including the Isles of Man, Jersey and Heligoland), can now be warned of coming dangers in less than one hour.

More than this, however, has already been effected, and more is in prospect. From France we receive telegrams twice a day:—in the early morning from Rochefort, L'Orient and Brest, which telegrams reach London as soon as our own from Ireland or Scotland; and in the afternoon, through Paris, from Lisbon, Bayonne, Brest, Helder and Copenhagen. In exchange for which reports we send daily reports to Paris Observatory from seven places; and to Calais—for the French coast specially—at eleven, besides such occasional warnings as may be useful to the French north-west coasts, including our Channel Islands.

During 1862, many foreigners examined the arrangements at the office in London, and four of those gentlemen (who were accredited to high positions at the Exhibition) expressed intentions of establishing similar arrangements (on a smaller scale) in their respective countries, namely, France, Italy, Hanover and Russia.

In the last autumn France commenced arrangements for a system of coast telegraphy for ordinary weather as well as for storms, and within the last few weeks Admiral FitzRoy has heard from the officer at Paris, appointed to conduct this service, that he has organized eighteen stations on the French coasts.

Admiral FitzRoy classifies the critics who have questioned the policy of his signals thus: "Many may ask—'Is this system of weather-telegraphy sound and advantageous?—If so, why is it opposed?' There are no less than four distinct classes of interested opponents, and they should be known. First. Certain persons who were opposed to the system theoretically at its origin, and having openly expressed, if not published, their objections, are naturally reluctant to adopt other ideas until converted. Secondly. A numerous body who cannot have had time and opportunity to look fully into the rationale, but do not realize any want of special information, undervalue the subject, assert it to be a 'burlesque,' and misquote really great authorities. Thirdly. A small but active party which failed in establishing a daily weather newspaper indirectly opposed to the Board of Trade Reports, and have since endeavoured, by conversation, by letters, and by elaborate criticisms in newspapers or periodicals, to exaggerate deficiencies, while ignoring merit in the works of this office, however beneficial their intended objects. And fourthly, those pecuniarily interested individuals or bodies, who would leave the Coasters and the fishermen to pursue their precarious occupation heedlessly—without regard to risk—lest occasionally a day's demurrage should be caused unnecessarily, or a catch of fish missed for the London market.

"Especially referring now to persons who would have the warning signals, but not the 'forecasts' (results of considerations on which the signals depend), may I quote from my 'Weather Book' the following words?—'Frequently, remarks in favour of the cautionary signals, but in depreciation of the forecasts, have been made. Their author now begs to say that it is only by closely forecasting the coming weather, and by keeping atmospheric condition continuously present to mind, that judicious storm warnings can be given. Forecasts grow out of statical facts, and signals are their fruit.'

"To show some of the concordant opinions of such forecasts entertained in France and Scotland, in Ireland and England, I might quote numerous printed or written passages. In this Report, however, I will only observe that the views and expressions of seafaring men, of the maritime population in general, of the Coast Guard, and of Her Majesty's officers in command, are remarkably favourable.

"Perhaps it may be asked, 'On what meteorologic conditions or changes are the forecasts based?'

They depend (may be briefly replied) on considering the atmosphere as a lighter ocean, having currents, elastic expansibility, equilibrium, momentum or inertia, chemical alterations, and extreme sensibility to heat or cold, its *chief motors*; and on knowing the statical conditions of air in this oceanic envelope at many places simultaneously, likewise again similarly after certain intervals of time, by which means intercomparisons are made, showing the relative conditions and causations whence dynamic effects originate. These dynamic motions are proportional to disturbances of level, like those caused by a head of water, to inequalities of temperature and consequent *chemical* changes, with more or less electric action. They are our winds, and may be softly gentle,—or as heavily boisterous as in a *tempest*, of which differences, through all degrees, instrumental means and telegraphy now give available information. To utilize their indications adequately, a central office should know the natural and general atmospheric movements, with their disturbing causes, even as a pilot knows the varieties of streams and eddies in a wide estuary.

“The whole map of a region (say the British Islands) should be outlined in the mind, as the estuary with its shoals is mentally visible to the pilot. The normal tendency of the *whole atmosphere* (in our latitudes) to *move eastward* while crossed or variously interfered with by polar or tropical currents, that in course of seasons cause every variety of wind and weather, should be *always* considered, and then, with due allowances made for gradual advances from westward, for effects of land and differences of temperature—good forecasts may be generally drawn.

“The daily forecasts so extensively, yet without public cost, sent everywhere by the newspapers (whether the full tables are published by them or not), together with the regular tabulation of facts observed in numerous and widely-separated places, afford general information now highly appreciated by a very large and increasing majority, although they are at present only tentative, and liable to errors of judgment, in drawing conclusions, however reliable the facts.”

OUR WEEKLY GOSSIP.

SOME doubts have arisen as to the genuineness of the alleged discovery of a human bone in the drift. Messrs. Prestwich, Evans and Taylor have paid a visit to M. Boucher de Perthes, for the purpose of comparing the new facts with previous discoveries. Mr. Evans is said to have been struck with the suspicious appearance of one of the flint-heaps. The axes appeared to have been artificially stained; and, on being placed in water, they looked as if all the colour would brush away. The general circumstances are said to have impressed the English geologists with a strong feeling of uncertainty. No one, of course, can suppose that any part of the mystification—if there should be mystification in the matter—lies at the door of M. Boucher de Perthes; it is, however, feared that the rewards proposed by that gentleman for the discovery of human bones may have tempted the quarrymen into a discreditable trick. At all events, this new fact in the great controversy as to the Antiquity of Man requires to be set free from a very reasonable doubt.

The Prince of Wales has been pleased to appoint Wednesday, June 10, for uncovering the Memorial of the Great Exhibition of 1851. The ceremony in the Horticultural Gardens will be on a splendid scale.

The Exhibition of Sculpture in the Horticultural Gardens will be opened to the public on the 5th of May. Works are pouring in daily—artists who have been long condemned to the dark vaults of the Royal Academy seeming to appreciate the open galleries and light avenues of the Conservatory in these Gardens.

Her Majesty's Commissioners of the International Exhibition of 1862 have testified their appreciation of Mr. Tennyson's Ode on the Opening of the Exhibition, by presenting him with a very handsome silver urn and salver. The urn bears the following inscription: “Her Majesty's Com-

missioners of the International Exhibition of 1862 present this urn to Alfred Tennyson in grateful remembrance for his gift of prose and noble song, 1st of May, 1862.”

General Sabine's second *Conversazione* will be held next Saturday, May 2, at Burlington House.

A life of M. Victor Hugo, understood to be from the pen of Madame Hugo, will be shortly published in London and Brussels. The work, it is said, will contain a drama and many other unpublished works of the poet.

Death has removed two noticeable performers from the scene. Miss Kate Saxon died on Monday week, at the age of thirty-six. This lady, who won a reputation as the “clever little girl” in Mr. Falconer's comedy of ‘Extremes,’ was originally a Quakeress, and early acquired a reputation as a lecturer at the Whittington Club, on the Bloomer Costume. She married Mr. T. C. Forster, and for some time visited the provinces as a lecturer, but ultimately proceeded as an actress to America, having previously appeared as Helen, in ‘The Hunchback,’ at Drury Lane. She returned to England in 1858, and gave some entertainment in Lancashire and Yorkshire, in association with the late Mr. Malone Raymond; afterwards, she was engaged both at Covent Garden and the Lyceum.—On Wednesday week died also Mr. James Rogers, a comedian who has recently risen to some celebrity, and possessed a fund of humour of a peculiar sort. His last performance was that of the caricature, Effie Deans, at the St. James's Theatre, in which part he actually appeared the evening previous to his death. But the effort had exhausted his energies, and he was unable to take off his clothes. Next evening, saying to his wife, “The little raffle is over,” he smilingly expired. He was forty-two years of age, and had long suffered from ill health; yet he was always ready with his jest, and as an actor was one of the most genial “funny men” on the boards, especially as a burlesque performer.

Dr. Richard Fowler, whose death at ninety-eight we mentioned last week, is one of the few men who take the threescore years and ten, not only from natural, but from literary birth. Seventy years ago, in 1793, he published at Edinburgh a three-and-sixpenny octavo volume, entitled ‘Experiments and Observations relative to the Influence lately discovered by M. Galvani, and commonly called Grand Animal Electricity.’ A chain of sequences he lived to see!

Mr. Cropsey, the American painter, is about to leave London for New York, for a period more or less considerable. The pictures and sketches remaining in his studio, including the large picture of ‘Richmond Hill,’ are to be sold by auction next week.

A communication on the electric conductivity of thallium has been made to the French Academy of Sciences, by M. Lucien de La Rive. The result of his experiments is, that while the conductivity of silver is 100, that of thallium is 8.64. This places it between lead and tin, the relative conductibilities of these metals being 7.77 and 11.45.

Messrs. Bacon & Co. have sent us a copy of Colton's new Map of the Southern States, which they have just received from New York. It is a new edition of a popular and excellent work, corrected up to the present time, so as to show the position of the invading and defending armies, the new fortifications, and many other things of interest. It also marks the canals cut by the Federals and the country which they have inundated in their attempts to approach Vicksburg and reduce the shores of the Mississippi.

We are glad to learn that it is the intention of the authorities of Manchester to form a portrait-gallery of local worthies, and a museum, to be situated in the Queen's Park. Such a scheme as this may be made or marred exactly as the trivial idols of the day are caught up or neglected. For royal or noble personages there is sure to be plenty of applause and abundant memorials, deserved or undeserved. Therefore, let us pray this plan may begin with the portrait of some one who is not a tawdry hero, but a Manchester worthy, some

valiant Union doctor who fought against typhus, some earnest parson or priest, some unsentimental prison-visitor. Above all, let the committee recollect that fidelity of resemblance is the main thing in such a scheme, and get good pictures if they can, but always good portraits.

The recent discovery of eleven pounds weight of ancient gold ornaments in the neighbourhood of Hastings, and their almost total destruction, renders it highly desirable that the law of treasure-trove should be made clear to popular comprehension,—that if it is not just, as seems to be the common impression, it should be amended, and the practice of the Crown, in exercising its conventional rights, defined. Two years ago, steps were taken in this direction; but a general belief exists that after some vacillation they were retraced. At any rate, so long as finders do not know that they will receive full value for discoveries, and have not confidence in their appraisal, it is silly to expect country folk will yield treasure-trove to an authority they contemn. In some parts a belief is held that such discoveries entail condign punishment upon the finders. Stupid as this may be, it exists and ought to be corrected. How great is the loss we learn from the fact that before a Commission of Inquiry a Dublin goldsmith averred that, through his hands alone, not less than 10,000*l.* worth of mere metal had passed into the melting-pot. How much greater was its value in Art! Let us add the finder's account of his discovery of the eleven pounds of gold:—“I ploughed up a long piece of metal; it was in a hole a little deeper than a foot; it was about a yard long, with two ‘trumpets’ at each end (? one at each end), twisted in three grooves.”—This was no doubt a torque, or twisted belt of gold for the waist or chest.—“We also found a great number of rings, some of which were larger than the others (probably carcanets and mamillary *fibule*). The larger rings were round, but did not shut to.” The smaller rings may have been specimens of the so-called ring-money, really studs, or articles having a similar office. Probably the find was some Northman's share of plunder derived from Ireland, the natives of which were riddled by that people as through a sieve, buried on landing for a Sussex foray, and never recovered.

A curious statistical return of deaths by fire is contained in the last Report of the Registrar-General. By this it appears that in the fourteen years, 1848-61, 39,927 persons were burnt alive or scalded to death. Of these, which constitute an average of eight a day, 1,344 were infants under one year of age; 4,500 were children of one and under two years; and 9,777 were between two and four years of age. Between the ages of five and fifteen, 6,255 girls and 3,750 boys were burnt to death. Above the age of fifteen years, men, who are far more exposed to danger from fire than women, die from this cause in greater numbers than the latter; but after the age of fifty years, women again turn the scale, their combustible dresses and the prevailing fashion of amplitude exposing them to greater risks than men.

The Commissioners appointed to inquire into the working of the Scientific Institutions in Dublin in receipt of parliamentary grants, have recommended that the Museum of Irish Industry should be abolished. An exception is made in favour of the Professors of Geology and Botany, who are recommended to be transferred to the staff of the Royal Dublin Society. The Report of the Commissioners further recommends that the collections of the Industrial Museum should be distributed between the Royal Dublin Society, the three Queen's Colleges, and Marsh's Library in Dublin.

In the archives belonging to the Princes of the Ernestine line of Saxony, which are kept at Weimar, an interesting discovery has been made: it consists of a number of autograph letters by Luther and to Luther, unknown till now. Herr Burckhardt, Keeper of the Records, has been entrusted with the publication of these letters, which treat principally on clerical matters. They will appear in print very shortly.

Not only at Tübingen a monument to the memory of the late poet Uhland will be erected,—

several other towns of Germany claim the same honour. Especially near Frankfurt, at Oberursel, a committee has been formed, which intends to raise a monument to Uhlant on the Altkönig; the house which stands now on this lovely hill of the Taunus is to be called, henceforth, "Uhlant's Ruhe." The poet, it seems, in his old and younger days, had loved the spot, with its beautiful woods, proud castles, venerable towns, sweet valleys and charming vistas, near and far, and had often climbed the Feldberg and the Altkönig. Only the small sum of from three to four thousand florins is wanted to carry out the ideas of the committee; and this sum, it is expected, will be easily raised by a lottery or bazaar, for which all the fair dames who ever delighted in Uhlant's songs are busy now. Also at New York a committee has been formed, which receives subscriptions from the Germans residing there, to erect a monument to the beloved poet, without whose sweet melodies perhaps no German would ever feel at home among the Yankees. A proposal has been made to place Uhlant's bust in the new Central Park, which already contains Schiller's bust. We are glad to hear that this idea has been accepted by the committee, and that the necessary funds are fast gathering.

Among the generation of German poets who, some thirty years ago, first appeared before the public, and since then have made themselves a name and a position in the literature of their country, Julius Mosen occupies one of the first places. His talent, which is one of great versatility (he has written lyrics, philosophical epics, dramas and novels), rests upon a deep and fervent patriotism, which, uttering itself in beautiful and stirring strains at a time of the most gloomy political reaction in Germany (even before the French Revolution of 1830 had cleared the air a little), soon made the young poet a favourite of the nation, which looked forward with joyous expectation to his poetical future. Some of his songs written at that time (we name only,—"Die letzten Zehn vom vierten Regiment," "Andreas Hofer," "Der Trompeter an der Katschbach," "Die Völkerschlacht bei Leipzig") have become popular in the best sense of the word, and are up to this day sung by fresh young voices (students' or turners', as the case may be) all over the country. A few of his charming minor poems ("The Statue over the Cathedral Door," and "The Legend of the Crossbill") are well known, too, in this country, having found a translator in Longfellow. Alas, that so promising and earnest a beginning should have been cut short by a cruel fate! Mosen, in the fullness of his strength and in the midst of his labours and plans, was seized with an incurable disease. For the last fifteen years, not able to move, and hardly able to speak, he has been confined, like Heine before him, to his sick room,—always following, with heart and soul, the political and literary development of Germany, but forbidden any more to partake in it. Among the last wishes of the noble sufferer, that of seeing his poetical works (which are dispersed in a great number of volumes, long ago out of print) in a collected form before him, and thus to leave them, as it were, as his last legacy to the nation, stands foremost, and, thanks to the energetic sympathy of the youth of his country, he will, ere long, see it realized. The German "Turnerschaft," at the instigation of the Oldenburg "Turnverein" (Mosen lives at Oldenburg, whither he was called, in 1843, as "Dramaturg" of the Grand-Ducal Theatre), has taken the matter in hand, and brought it to a happy issue. The subscription, in which the Germans in England also have largely participated, has had such a splendid result, that it is almost equal to a national demonstration, and the complete edition of Mosen's works, consisting of eight compact volumes, will be in the hands of the subscribers before the end of the year. We hear that, in comparatively calm moments, he jestingly compares himself to old blind Ziska, whose horse led the Hussites to battle and victory, and who, dying, called out, in the arms of his followers: "Diese Victoria danke ich euch!"

BRITISH INSTITUTION, Pall Mall.—The GALLERY for the EXHIBITION and SALE of the WORKS of BRITISH ARTISTS, is OPEN DAILY, from Ten till Five, and will CLOSE on SATURDAY, May 9.—Admission, 1s.; Catalogue, 6d. GEORGE NICOL, Secretary.

Will open on the 27th inst.

SOCIETY OF PAINTERS IN WATER COLOURS.—The FIFTY-NINTH ANNUAL EXHIBITION, at their Gallery, 5, Pall Mall East (Close to the National Gallery).—Admittance, 1s.; Catalogue, 6d. JOSEPH J. JENKINS, Secretary.

INSTITUTE OF PAINTERS IN WATER COLOURS (founded 1831 as the New Society of Painters in Water Colours) IS NOW OPEN.—Gallery, 53, Pall Mall. JAMES FAHMY, Secretary.

THE FRENCH GALLERY, 120, Pall Mall.—The TENTH ANNUAL EXHIBITION of PICTURES, the contributions of Artists of the French and Flemish Schools, is NOW OPEN.—Admission, 1s.; Catalogue, 6d.

MRS. FANNY KEMBLE.—READINGS OF SHAKESPEARE.—Dudley Gallery, Piccadilly, every Monday, Wednesday and Friday Evenings, at Eight punctually.—On Monday, April 27, Mrs. Kemble will read "The Tempest"; Wednesday, April 29, "Much Ado About Nothing"; Friday, May 1, "King Lear"; Seats (Unreserved, 3s.; Stalls, 5s.; a few Fauteuils, 7s. each. Mitchell's Royal Library, 33, Old Bond Street.

Mr. EDMUND YATES'S INVITATIONS TO EVENING PARTIES and the SEASIDE.—A SPIRIT-RAPPING SEANCE. An entirely New Part, entitled "Twenty Minutes with a Medium," will be given every Evening. Medium, Mr. Yates; Visitor, Mr. Power. There will also be several new arrivals at the Seaside. To commence at 8. Saturdays at 8.—Stalls, 3s.; Area, 5s.; Balcony, 1s.—Egyptian Hall, Piccadilly.

A MORNING IN MEXICO.—Magnificent and exquisite EXHIBITION of CERAMIC STATUETTES, illustrating Life, Manners, Customs and Costumes in Mexico. Open daily from 10 till dusk. Gallery, 68, Newman Street, Oxford Street, W.—Admission, 1s.; Catalogue, 6d. each; by Book-Post, 4d.

LEVAISSOR EN VISITE.—SCÈNES ET CHANSONS COMIQUES.—Tous les Mardis, Jedis et Samedis pendant le mois de Mai, commençant MARDI SOIR, le 5 Mai, à 8 heures, DUDLEY GALLERY, Piccadilly.—1. Le Mari au Bal Levaissor.—2. Est-ce tout? Mlle. Teissier.—3. Parodie des Danes de Salon, Levaissor.—4. Le Monde tel qu'il est! Levaissor.—5. Comment on mène son Mari, Mlle. Teissier.—6. La Mère Michel au Théâtre Italien, Parodie Bouffe, Levaissor.—7. Le Mal de Mer, Scène Comique Nouvelle, Levaissor. M. Roosenboom tiendra le Piano.—Places Réservées, 7s.; Non-réservées, 5s.; Quelques Fauteuils, 10s. 6d.; Mitchell's Royal Library, 33, Old Bond Street.

SCIENCE

SOCIETIES.

ROYAL.—April 16.—Dr. W. A. Miller, Treasurer and V.P., in the chair.—The Right Hon. Sir Edmund Walker Head, Bart., was elected a Fellow.—The following papers were read:—"On Ozone," by E. J. Lowe, Esq.—"On the Equations of Rotation of a Solid Body about a fixed Point," by W. Spottiswoode, Esq.—"On the Fossil Human Jawbone recently discovered in the Gravel near Abbeville," by Dr. W. B. Carpenter.

ASIATIC.—April 20.—The Right Hon. Holt Mackenzie in the chair.—A paper "On the Extent, Construction and Cost of Railways in India," by J. C. Marshman, Esq., was read.

ROYAL SOCIETY OF LITERATURE.—April 14.—J. Hogg, Esq., in the chair.—The Rev. C. Babington read a paper, in which he gave an account of a Collection of Greek Inscriptions recently procured by Capt. Spratt, R.N., during a survey of part of the coast of the Island of Crete. A few of them have been already noticed by Pashley, in his travels in that island, or by Boeckh, in his "Corpus Inscriptionum Græcarum," but the majority are as yet unpublished.—Mr. Vaux read a paper by D. E. Colnaghi, H.M. Consul, Bastia, "On some Ancient Ruins near Missolonghi," which was a continuation of a former paper by him, "On the Remains of Old and New Pleuron in Acarnania." In the present paper, Mr. Colnaghi gave an account of the Ruins of Calydon and Chalcis.—Mr. Vaux communicated some interesting letters from Mr. G. L. Taylor, the well-known author of the "Antiquities of Rome," with respect to his discovery, June 3, 1818, of the famous Lion of Charonea, which was erected in commemoration of the Thebans who fell in the battle, at that place, B.C. 338, with Philip of Macedon. This lion (a cast of which has been lately sent to the British Museum) is fully described by Pausanias; but, strangely enough, has been so covered with *detritus* washed down from the adjacent mountains, that Dodwell, Gell and Leake sought for it in vain. The greater part of this lion is still preserved *in situ*.—Mr. Vaux also communicated a paper by J. Yates, Esq., "On a Volume recently acquired by the British Museum, and containing a Treatise on Geography, compiled from Strabo, Arrian,

Ptolemy, &c., with three rude Maps of the Fifteenth century.'

NUMISMATIC.—April 16.—W. S. W. Vaux, Esq., President, in the chair.—Rev. A. Pownall exhibited one Gold Coin of Valentinian I., and two of Valens, found in Leicestershire.—Mr. Madden read a letter from Capt. Turton relative to a find of Roman coins, including several Carausius', at Upsall, Thirak.—The Rev. Churchill Babington read a paper "On Two Unpublished Coins of a City unknown to Numismatic Geography, which appears to be Berbis of Pannonia."—Mr. Evans read a paper communicated by W. Webster, Esq., "On a Gold Coin of Francis and Mary," which, after a close examination, he condemned as a forgery.—Mr. Evans read a paper, communicated by the Rev. A. Pownall, "On the Short Cross Pennies, bearing the Initial Cross of the Legend on the reverse *pommée* or *botonée*."

INSTITUTE OF BRITISH ARCHITECTS.—April 20.—Owen Jones, V.P., in the chair.—A letter was read from General Knollys, announcing that the Prince of Wales had consented to become Patron of the Institute.—Mr. T. S. Pope, jun. was elected a Fellow.

STATISTICAL.—April 21.—Col. Sykes, M.P., in the chair.—"On the Direct Imperial Expenditure for the Colonies," by Mr. F. Purdy.

INSTITUTION OF CIVIL ENGINEERS.—April 14.—J. R. McClean, Esq., V.P., in the chair.—At the monthly ballot the following candidates were elected:—Messrs. W. D. Dent, M.A., J. Fogarty, J. Lewis, G. W. Rendel and T. C. Townsend, as Members; Messrs. H. W. F. Bolckow, H. Bolden, O. Bowen, C. W. R. Chapman, J. Davis, C. Gott, C. T. Hargrave, C. Löwinger, R. C. Rapier and A. Rumball, as Associates.—The paper read was "Description of the Line and Works of the Scinde Railway," by Mr. John Brunton.

April 21.—"Account of the Cofferdam, the Syphons and other works, constructed in consequence of the failure of the St. Germain's Sluice of the Middle Level Drainage," by Mr. Hawkshaw.

ROYAL INSTITUTION.—Feb. 27.—The Rev. J. Barlow, V.P., in the chair.—J. Lubbock, "On the Ancient Lake-Habitations of Switzerland."

SOCIETY OF ARTS.—April 15.—R. Westmacott, Esq., R.A., in the chair.—The paper read was, "The New Art of Auto-Typography," by Mr. Wallis.

MEETINGS FOR THE ENSUING WEEK.

MON. Actuaries, 7.—"Calculation of Liabilities of Insurance Companies," Mr. Sprague.
— Geographical, 8.—"Visit to Ode, Ijebu Country, Western Africa," Capt. Bodingfield; "Explorations of the Elephant Mountains, &c., Western Africa," Capt. Burton; "Travels in Equatorial Africa (Gaboon, Congo, &c.)," Mr. W. Reade; "Notes on Madagascar," Lieut. Oliver.
TUE. Royal Institution, 3.—"Sound," Prof. Tyndall.
— Engineers, 8.—"Middle Level Drainage," Mr. Hawkshaw; "Charing Cross Bridge," Mr. Hayter.
WED. Society of Arts, 8.—"Varieties of Minerals used Economically," Prof. Ansted.
THURS. Royal, 8.
— Antiquaries, 8.
— Royal Institution, 2.—"Geology," Prof. Ansted.
FRI. Philological, 1.—"The Letter R," Mr. Weymouth.
— Archaeological Institute, 4.—"The Crypt and Chapterhouse of Worcester," Prof. Willis.
— Philological, 8.
— Royal Institution, 1.—"Japanese Art," Mr. Leighton.—Annual Meeting at 2 o'clock.
SAT. Royal Institution, 2.—"Language," Prof. Max Müller.

FINE ARTS

INSTITUTE OF PAINTERS IN WATER COLOURS.

THE late New Society of Painters in Water Colours is now to be known under the above title; the Association has enlarged its space and obtained a better light for the gallery by carrying it into the "first floor" of the old premises, and taking in a house at the back. The improvement is considerable, and the appearance of the gallery quite other than it was. As usual, the number of figure-pictures here is small, and their merit by no means great.

There is most of good Art-quality, among the figure-subjects, in Mr. H. Warren's little picture of a girl at a cottage-door (182); she is supposed to

be bidden adorn herself while her lover, one Lubin, is "away": she will probably not obey the injunction. Here is unusually solid painting, a rare quality in water-colour Exhibitions, in the dress of this girl; her face has expression, not quite successful, but creditable; while the flesh, if not pure in colour, is bright. The climbing and other plants about the door are extremely well and truly painted; in mere execution the most successful parts of this picture.—Mr. Tidey's *Temptation of Christ by the Pharisees* (245), commissioned, says the Catalogue, by the Bible Illustration Society, does not seem to us of a kind of Art desirable for presentation to the People. With many figures and a grand theme this painter has not taken Nature sufficiently into his confidence to enable him to render so many forms and such a subject. A bolder treatment would have been more valuable for a work intended to be popular. His *Study* (154), a woman in an Arab or Turkish head-dress, has a large manner of drawing we should like to see in the more important production.—Mr. L. Haghe's large picture, *The Doge Andrea Dandolo leaving St. Mark's after taking the Cross* (82), gives the high interiors of the domes and the walls of the church, covered with gold-grounded mosaics and architectonic figures, with an effective force that only lacks clearness of colouring to be brilliant, and is, nevertheless, satisfactory. The figures, which are numerous, are less so. By the same is *Cellini and Francis the First at Fontainebleau* (278), the sculptor presenting the model of a group to the king. The interior is effectively painted, but, unfortunately, the text describes Francis speaking to Cellini, while the picture shows him addressing his attendants.

In execution no less than in conception of the purposes of Art, Mr. T. Sutcliffe is the exhibitor here who aims highest and succeeds best; his works are landscapes, excepting the beautiful drawing *Maggie and Jewels* (309), which, for translation of nature and subtlety of colouring, is in itself a jewel. The marble whiteness of the bird's wing, the green-black glossiness of his tail and body plumage are exquisite. *Oak-tree and Stream* (258), a very simple theme admirably treated, shows a few bushes beneath an oak; amongst their roots goes a bright rivulet. In handling and tone this work is beyond challenge. Mr. Sutcliffe habitually produces a certain sootiness in the colour of his pictures that should be overcome. In the last, and in *Tree in Harewood Park* (96), a beautifully-drawn bole and branches,—*A Cornfield* (64),—and *Stream at Hampthwaite* (3), a little river coursing under a slight screen of foliage,—this is apparent. In other respects nothing in their way can be more excellent than his works.—Notwithstanding its thinness of treatment, one of the most beautiful translations of nature here is Mr. G. Shalders's *Near Leatherhead* (281), a team waiting at a cross-road in evening twilight; a barn behind a hedge, its grey thatch telling beautifully with the pale glow of the sky, is most felicitously treated: admire the general tone of this work.—Mr. Hine contributes some fine studies of nature that have a broader claim upon our interest than is due to ordinary transcripts; amongst the best of these is *Winchelsea from the Rye Road* (82), *The Land Gate, Winchelsea* (98) and *Rye, from the Marshes* (240), which last is a perfect example of broad and delicate treatment.—Mr. Whympers's *The Passage from the Sea, Clovelly* (4) and *Clovelly Pier* (23) are clearly-executed portraits of certain localities, taken in a characteristically-thin manner. The first shows the cliff-path that winds from the beach, overlooking the house-tops; the second the high headland beyond the village, its deep valleys, the sweeping shadows over them, and the freshening tide that comes into the harbour, all painted, with unusual breadth and brightness. Like these, his *Bodiam Castle* (48) is weak in local colour, where it might have been strong to great advantage.

Mr. E. G. Warren is probably the most brilliant painter of landscapes in water-colour; he devotes himself somewhat too frequently to beechen shades and distant views from under them. He has, however produced several drawings—one, a moonlight, two or three years ago, we especially remember, that showed him competent to do equally well

with other themes. No. 11, *Among the Bracken*, has red, fading fern in the foreground, beautifully handled. From a high headland we look over half a county belted with trees; those in the mid-distance are very cleverly handled; the sky, bright masses of cumuli on blue green, is a little dirty in colour. No. 40 has a similar subject, showing a view from a headland, clothed with ripe corn, over the elm tops to the far weald; on the proper right, a heathy hill-side; to the left, a tree-clothed knoll; a pale blue rim of rising hills on the horizon. The wheat in front may be a little too positive in colour; but the perspective, so to say, of its waving surface, as the sheeny grain glitters with grey reflections from the sky, is excellent. *Where the Deer frequent* (186) is much like what we have often seen before from this painter, as above noted. No. 139, *Folding Time*, is a charming picture of a sandy road over a common, covered with heather, rich in the colour of the sky and tones of the landscape.—*Mount Hermon, Syria* (20), Mr. W. Telbin, is broad, and powerful in rendering of the purple glow of Oriental hills at evening.—Mr. C. Vacher's *Arab Tombs, Algiers* (35), two white edifices, standing in the glare of the sun, by a scanty grove of palms, and amongst a wilderness of aloes, renders sunlight well, though not so clearly as might be desired.—Mr. J. Philp's "*When summer's sun went down*" (37) is rather poetical in suggestion than absolutely faithful in reproduction of nature; taking it as it is, there is much to like in the broken sea-coast, the near parts softened with sea mists of an autumn evening—those removed half lost in light; the clear, bright sea itself is cleverly treated in motion. *Exploring the Coast* (83) shows how this kind of suggestive art may betray itself by becoming almost exclusively composition, sacrificing literal fidelity to nature.—Mr. W. L. Leitch's *Canal Scene, Berks* (53), a mill on a bank, at evening,—a broad veil of grey cloud, with pale, gilt lines upon its folds, seeming to descend slowly over the scene,—a smooth canal, with boats, in front,—is worthy of admiration rather for its feeling for general truth than solidity of detail.—*Barden Tower and River Wharfe, York*, by Mr. W. Bennett (57), is much larger and broader in style than we have seen from the painter. We have the rich valley, with its river, the massed trees and white castle walls seen amongst them. Other pictures by Mr. Bennett show him to aim rather at quantity than quality of production—an error obviously fatal to his powers.—*Calm off Southend* (60), by Mr. T. Robins, Thames straw-barges lying off the shore, is excellent in grey colour, and very cleverly drawn.—Mr. J. C. Reed's *The Reeks of M'Gillicuddy, Killyarney* (116), a bright meadow lying amongst mountains, has some brilliancy of treatment and signs of extreme facility which captivate the eye at first to disappoint it on closer examination—a style of execution strongly marked in the graceful but unsolidly-painted group of beeches that stands on the banks of the little river. His *Steeple Rock, Kynance Cove* (131), shows his powers to better advantage—a bold and effective drawing of that strange fragment, the bright green sea and sands about it.

Amongst the most satisfactory, because best executed, classes of drawings here are those of architectural subjects, old houses, streets, churches and castles. Mr. Deane has treated some of the old streets in French provincial towns with extraordinary spirit and real Art. His *Rue Poterie—Vitry, Brittany* (274), showing the great high-shouldered houses and their roofs of infinite forms, all delightfully quaint, is one of the best of his productions in colour, solid rendering and picturesque quality. Hardly inferior is *Old Houses in the Corn Market, Vitry* (172), by the same, shop-fronts, with their high-lifted hoods, like the booths of old London, and tall houses above them, whose eaves are of astonishing depth, is noble in Art-treatment; a splendid drawing, large in style and bold, yet singularly free from mere dash.—*The Old Hôtel de Ville, St. Omer* (10), Mr. T. S. Boys, is excellently done, the beautiful old porch and noble house behind it that were destroyed in 1831.—Mr. Carl Werner has produced many subjects from Jerusalem which show his style to be in

course of modification and improvement. Although still over-hot in colouring, for no climate can render stone devoid of greyness, and no sunlight can make the shadows as well as the lights of a picture glowing and hot, these works of his are less faulty than of yore. *Bethany* (25) is an example of how a clever man may, by working on a limited system, depart from nature and pictorial beauty at the same time. No one can deny its artistic execution, but it is obviously impossible that any effect of light can so cut up a landscape. *The Waiting Place of the Jews, Jerusalem* (88), is painted with great dexterity, but shows that erring hotness of colour we challenge; such excess of red, glowing reflexions in the shadows no one has seen out of Mr. Werner's pictures. The result of this error is that the stones seem transparent in their shaded sides, and, from the lighted sides lacking grey, they are like cork in texture. This characteristic corkiness is strongly marked in the otherwise beautiful drawing of *The Entrance to the Church of the Holy Sepulchre* (269), a noble specimen of Crusaders' Gothic architecture. The ancient portals and the window arcades of this building are worthy of careful study: nothing can be more picturesque, simple, or complete in design.—Several of Mr. Chase's studies of English Gothic buildings, notwithstanding their lack of colour, are creditable. Among the best are *Doorway, Castle Campbell* (135),—an old recessed porch, green with damp; *Entrance to Garden, Roslyn Chapel* (266),—a very solidly done drawing of sunlight coming through a doorway, a red curtain hanging on the wall.—Mrs. W. Oliver's *Trabbach, from the Moselle* (79) shows capitally the extremely quaint houses of that ancient town, their fronts half covered with green-grey slates, their oddest windows and doors and wild roofs.—Mr. E. Hayes's sea-piece is the best here: *Stormy Weather—Dutch Boat running up Channel* (76), an excellent exposition of motion in sea, and its ashy-green colour.

SOCIETY OF FEMALE ARTISTS.

THE Society of Female Artists has entered a new and improved phase of existence this year; it appears, for the first time, as an independent body, having a gallery for exhibition of pictures, and also, we are glad to learn, for the holding of a drawing-school, in the very convenient locality of Pall Mall, No. 48. We may consider the body as adolescent, if not adult, and congratulate the ladies interested upon the success of their efforts so far. It is satisfactory that they are gradually leaving the slavish practice, upon which we have ere now commented, of copying the systems, subjects and very manners of their respective husbands, brothers, fathers, or masters. Not rich in pictures of high pretension, this gallery is better worth a visit than if it were so, and shows in most of its contributors' works their praiseworthy diligence in acquiring the mechanical powers of Art.

Miss A. Burgess, as before, holds a high position with her charming water-colour drawing, *A Dutch Maid* (No. 3), a servant with a basket, in which there is judicious arrangement of colour, seen in the greys of her indigo dress, the background, and in the face, which last is capitally rendered as well as full of character. This is a genuine interior. *The Embroidress* (74) is worth looking at.

Somewhat too low in key for English taste, but by far the most artistic work here, is Miss A. Lindgren's *Grandmamma's Pet* (165), an old woman regarding with intense satisfaction the efforts of a loutish boy to thread a needle. He is much too big to be put upon a table, but there he is, sitting upon his own heels; his expression is capitally rendered, as is that of the woman, whose eyes glance above her spectacles with perfect rendering of humour. In its own key the colour of this work is excellent, as are the tone and handling of textures throughout. See also 161, *Girl tending Cattle*, by the same.—Miss Kate Swift's *The Butterfly and the Bee* (169), two girls, one diligently making nets, the other idly dressing her hair, is treated with great skill, the figures well drawn and composed: see the attitude of the last named, and the thorough consent in all her limbs; some of the colour in this work is a little heavy and dirty—else there is little to challenge in it.—Miss C. E. Babb's etching, styled

Victory (226), the inhabitants of a town gathered on its ramparts, and witnessing a battle, in which their side wins, with cries and all signs of joy, is worthy of high praise for the variety and spirit of its actions.—The Misses Taylor's *Original Sketches* (234) are good, full of spirit and grace, lacking only delicacy of execution. These humble, domestic themes are far superior to the pretentious series of like productions from the *'Idylls of the King'* (125).

—Miss Durant sets up the boldest pretensions of any exhibitor here, on the strength of three marble bas-reliefs of the life of Achilles,—sculptures not without conventional correctness, and even some grace of composition. This lady affects classic sculpture, but, in aiming at the Phidian manner, has even neglected to mark the distinctions of fabrics in her draperies: see those of *Thetis and Vulcan* in "receiving the arms" (2), where the smith-god's robe and that of the sea-goddess are much alike.

Of the landscapes, Mrs. F. Ouvry's *Thames at Maidenhead* (24) is rather over-dashing, but good in execution.—The architectural paintings, by Miss L. Rayner, are results of some years' assiduous practice: they have a corresponding value. *The North Entrance to the Cathedral of Rouen* (8), a little hot and too transparent in its shadows, is excellent. *The House of Knox, Edinburgh* (17), with its old grey stones and ragged front in sunlight, is rich in variety of colour, the perfection of this branch of Art, and very solid in execution. There are several other drawings by this artist worthy of admiration.—There is good colour in Mrs. Keating's *For Breakfast* (175),—bold and vigorous colour and admirable modelling in Miss F. Peel's *Gems of the Ocean: Study of Mackerel, Red Mullet and Smelt* (196), wherein she has done something like justice to the beauty of her subjects. Mrs. T. J. Thompson's three pictures, *From St. Boniface Terrace, Ventnor* (259), *Under the Rocks of Villa del Franchi, Gulf of Genoa* (260), and *Study in Borrodale, Cumberland* (261), are, one and all, admirable proofs of possession of real and earnest diligence and knowledge of nature which, maintained in exercise, will enable the artist to get rid of a certain blackness and apparent coldness in colouring, from which her works at present suffer.

FINE-ART GOSSIP.—The private view of the Exhibition of the Society of Painters in Water Colours takes place to-day (Saturday), opening at eleven o'clock. Two hours before that time representatives of the Press will be admitted, as of late. The public opening will be on Monday next.

A remonstrance should be made against exhibiting the designs for the Albert Memorial in the Royal Gallery of the Houses of Parliament. Entering this hall, on one side of which Mr. Maclise has painted the 'Interview between Wellington and Blucher after Waterloo,' while on the other he is now engaged with 'The Death of Nelson,' we found it blocked off by screens intended to hold the designs in question during their public exhibition. Behind these rises the first-named picture, one of the very few wholly satisfactory works resulting from the infinite labours of the Royal Commission of Fine Arts. It will scarcely be believed that this noble painting, upon which the artist has expended several of the best years of his life, has actually been covered up with cloths, in order that its colouring may not mar the effect of the architectural designs! Thus it has been for some weeks, and thus it is proposed to be for some weeks to come. On Saturdays the public is admitted to see the paintings in the Houses, while now the most important of them is covered up. Good taste and respect for the artist should have prevented this thing. Independent of the slight thus offered to him, a serious annoyance must be inflicted upon Mr. Maclise, if the designs are exhibited as arranged, by bringing crowds of persons, and their accompaniments of dust and noise, for weeks together into an apartment which is actually his studio, where he is working for the nation daily and all day long. The authorities ought to remove the designs into Westminster Hall or Burlington House.

At Mr. Cox's Gallery, 57, Pall Mall, is to be

seen a picture by Mr. J. Sant, having for subject Christ meeting the Apostles on the way to Emmaus, after the Crucifixion. The two disciples have been "communing and reasoning" on the events and teachings of the life of their Master; they are now walking and thinking, the one picking his way with his staff. They wear dark robes; beside them has come the white-robed figure of the Saviour; he has just accosted them with something like the rebuke, "O fools, and slow of heart to believe all that the prophets have spoken." The figures are nearly life size, and there is much about the method of their presentation which is striking and original. If it were not that this originality is not of the highest mental quality, the picture would be a noble one. The face of Christ and his action are too much of the earth, common and earthy, to suit and suggest the theme. One cannot rest satisfied with his ordinary and somewhat trite action as expressive of those proper to the Redeemer just risen from the tomb. The figures of the Apostles are more successful, because less subtle and noble in their demands on the painter, still they are not quite free from the painting-room's taint. It is really painful to see how the artist, with considerable pictorial ability, has contented himself with a low idea of the face of his chief figure: a higher one may be out of his reach, but to attempt something beyond the mere fleshy and studio typical head would have been noble even in failure.

Messrs. Day & Son publish, probably for enthusiastic amateurs, two sets of landscapes, lithographed, from those renowned localities the Ionian Islands and the Province of Auckland, New Zealand. The first of these is by Capt. H. J. Wilkinson, and is the first part of a series styled 'The Seven Islands,' not very valuable as works of Art, these drawings may present pleasant memoranda to men who know the places represented. The 'Village of Benize, Corfu,' is a lovely and famous scene that would have borne honest treatment and less rose-water-like style of drawing than has been here adopted for it. These drawings are very well in their way, but lack the unchallengeable fidelity, of a sort, of photographs, and have few of the merits of pictures. The letter-press descriptions of the localities which are attached to the drawings smell strongly of the Gazetteer, as seems to us, but then it must not be forgotten that the writer has spared us spasmodic poetry. The series from Auckland has a similar text attached. It is by Major F. R. Stack. There is such a strong family likeness in both sets that we must conclude the artists can claim but a small share of the works as published. Either they could not draw them in a manner to be presentable, and so the lithographer has done what there is in the landscapes beyond the local and prominent features, or, what is much more likely and a real offence, the lithographic draughtsmen has not condescended to reproduce the individuality of each artist.

'Notes on the Thirty-seventh Exhibition of the Royal Scottish Academy' is the title of a pamphlet signed by one Justus Clemens. So far as we are able to judge of the works criticized, now forming that exhibition, the opinions of the author are neither just nor clement. There is a want of balance in the judgments expressed, and, above all, much lack of recognition of the aims of artists. Notwithstanding this, there is a good deal of discrimination, and, so far as the writer's experience seems to allow him, much candour. "What compelling motive induces Scotch artists to emigrate [migrate] in such numbers, it is really not easy to make out"—is deliciously simple!

MUSIC AND THE DRAMA

MADAME LIND-GOLDSCHMIDT. St. James's Hall, Piccadilly.—Mr. and Madame Goldschmidt having generously given their services in aid of the ROYAL HOSPITAL for INCURABLES at Putney, a Grand Performance of Handel's Cantata, *L'ALLEGRO and IL PENSIEROSO* (the Poetry by Milton), will take place at the above Hall, on FRIDAY EVENING, May 1, commencing at Eight o'clock. The Solo Parts by the following eminent Artists:—Madame Lind-Goldschmidt, Madame Lemmens-Sherrington, Miss Lascelles, Mr. Montem Smith, and Mr. W. H. Weiss. The Band and Chorus will be complete, comprising upwards of 250 Performers. Conductor, Mr. Otto Goldschmidt.—Tickets, 7s., 10s. 6d., and One Guinea each, may be obtained at Mr. Mitchell's Royal Library, 22, Old Bond Street; at Messrs. Addison & Luce's, Regent Street; at the Principal Libraries and Music-sellers; and at the Office of the Hospital, 10, Poultry.

MUSICAL UNION.—TUESDAY. Half past Three, April 22. ST. JAMES'S HALL.—Quartet, No. 5, E flat (Op. 44), Mendelssohn; Grand Sonata in C (Op. 53), Beethoven; Quartet, E flat, No. 78, Haydn; Pianoforte Solo, Lubeck. Artists: Vieuxtemps, Rice, Webb and Piatti. Pianist, Ernst Lubeck, from Paris. Visitors' admissions, Half-a-Guinea each, to be had of Craner Co., Chancery Lane; Ollivier & Co., Abchurch Lane; and Parry, 18, Hanover Square; and Austin, at St. James's Hall. Director, J. ELLA.

HERE ERNST PAUER'S SECOND PERFORMANCE of PIANOFORTE MUSIC, in strict order, will take place at WILLIS'S Rooms, on MONDAY NEXT, April 27.—The Italian Composers; the School of Clementi and his Pupils. To commence at Three o'clock precisely.—Tickets for the Series, One Guinea; Single Tickets, 5s.; may be had of Mr. E. Pauer, 3, Cranley Place, Onslow Square, S.W.; and of R. W. Ollivier, 19, Old Bond Street, W.

APRIL 30.—Mr. HENRY LESLIE'S CHOIR, Hanover Square Rooms.—The Programme will include Wesley's *Motet*, 'In Exitu Israel'; Mendelssohn's *Psalm*, 'Why rage ferociously the heathen.' Violin, M. Sainon and Herr Politzer; Viola, Mr. H. Webb; Violoncello, Signor Perze; Contra-Basso, Mr. C. Serern; Pianoforte, Mr. Deacon.—Tickets for the Series, One Guinea; to admit three to a single Séance, One Guinea; Single Tickets, Half-a-Guinea; to be had of Mr. R. W. Ollivier, 19, Old Bond Street; or of Mr. Deacon, 73, Welbeck Street, Cavendish Square, W.

MR. DEACON'S FIRST OF THREE SÉANCES of CLASSICAL INSTRUMENTAL MUSIC will take place on THURSDAY, April 30, at 16, Grosvenor Street (by permission of Messrs. Colliard), commencing at Three o'clock.—Programme: Quartet in E Minor, Spohr; Sonata in C, Pianoforte, Beethoven; Sonata in B flat, Violin and Pianoforte, Mozart; *Lieder ohne Worte*, Mendelssohn, Pianoforte; *Sestet in E flat*, Berlin. Mr. Deacon and Herr Politzer; Viola, Mr. H. Webb; Violoncello, Signor Perze; Contra-Basso, Mr. C. Serern; Pianoforte, Mr. Deacon.—Tickets for the Series, One Guinea; to admit three to a single Séance, One Guinea; Single Tickets, Half-a-Guinea; to be had of Mr. R. W. Ollivier, 19, Old Bond Street; or of Mr. Deacon, 73, Welbeck Street, Cavendish Square, W.

EWER & CO. beg to announce, that their FIRST CONCERT for the INTRODUCTION of NEW MUSIC will take place, at the Hanover Square Rooms, on TUESDAY, May 5, at Three o'clock.—Vocalists: Mdlle. Florence Lancia and Madame O'Leary Vining. Instrumentalists: Messrs. Fancini, Salsotto, Rice, Webb, Witt, and Wohlens. Invitations will be sent to the London Subscribers of Ewer & Co.'s Library. Tickets to Non-Subscribers, Half-a-Guinea each.—Ewer & Co., Her Majesty's Music-sellers, 67, Regent Street, London.

ROYAL SOCIETY OF MUSICIANS.—ST. JAMES'S HALL, MAY 5. Handel's MESSIAH. Full Orchestra and Chorus.—Mdlle. Titiens her only appearance this season out of Her Majesty's Theatre, Mdlle. Paropa, Miss Eliza Hughes, Miss Lascelles, Mr. Sims Reeves, Mr. Whiffin, Mr. Wallworth, Mr. Santley (by the kind permission of Mr. Mapleton), Mr. Lewis Thomas, and Mr. Weiss. Conductor, F. Bennett.—Tickets, 10s. 6d., 5s., and 2s.; at Austin's, 28, Piccadilly; and all Music-sellers.

CRYSTAL PALACE CONCERTS.—Those revolutionary persons who manage the Crystal Palace Concerts have made another step in introducing the music of one who is rated as a great composer everywhere, except in England,—by performing, on Saturday last, the *Entr'acte* and *Bacchanal Dance* from M. Gounod's 'Philemon et Baucis.' What is worse, the audience was demoralized enough to enjoy it, as something *sui generis*;—quaint in form, rich in colour, and true in character. This *Entr'acte* is one among half-a-dozen thoroughly peculiar movements of the kind by M. Gounod (among which are the Shepherd's Song in 'Sapho,' the triple chorus in 'Ulyse,' the Bohemian Dance in 'La Nonne Sanglante'), showing with what art and variety he can sport on a ground bass, and how he can turn monotony to account in the production of effects. Mendelssohn's Pagan Chorus in 'St. Paul,' Beethoven's Dervish whirl in 'The Ruins of Athens,' are not more wildly and attractively illicit than this excellent curtain tune, dance and chorus: even when it is played without stage effects and groupings, and without the force given to the final climax by the voices, the impression made by it is new and seizing. The treatment of the orchestra is admirable, clear, effective and original. Greater strength in the stringed instruments was wanting at the Crystal Palace; but this organic weakness allowed for, the music had full justice. The concert closed with M. Gade's 'Hamlet' Overture,—which was not judiciously placed, as winding up a programme of light and brilliant music. It is grave, sad and vaporous; built on those minor themes which are thrown off by the thousand—one curiously like the other; none of them vulgar. Only such a mighty genius as Beethoven was able to show in his 'Egmont' and 'Coriolan' Overtures, and his Ninth Symphony, that there may be subjects in this mode, as characteristic and diversified as any major themes extant. That Herr Gade never fails to draw a delicious sound out of his orchestra (something, we have always fancied, distinctively Northern), we were anew reminded by the close of this Danish prelude. His music may never take a deep root in England, since we care more for distinct forms and colours than for the lights and shades of Cloudland, but it cannot be heard without interest by those having open minds and sympathies. M. Vieuxtemps played

two violin *solos*, in a style more mannered than ever; and the glory of his tone is on the wane. He was, however, warmly applauded,—and so, too, were the vocal violences of Mdle. Ellinger, which, it appears, pass with many persons for grand and classical singing. The real sensation produced by Mr. Dannreuther's playing has led to his second engagement at Sydenham to-day. He will play Beethoven's G major Concerto.

HERR PAUER'S HISTORICAL PERFORMANCES.—This series of chamber-concerts might justly be called an Illustrated History of the Pianoforte; with such care, research and width of knowledge have its programmes been drawn out—while the introductory remarks (which, when completed, will amount to a small volume) are full of well-selected facts and sincere criticisms. Herr Pauer's first *Matinée* was devoted to twelve artists, grouped by him as the Vienna school,—Frohberger, Wagenseil, Haydn, Mozart, Beethoven, Hummel, Ries, Czerny, Schubert, Moscheles, Liszt and Thalberg. Of course, there is no space disposable in this column for a criticism, point by point, of a history. Hence, having expressed high estimation of the artistic feeling and indefatigable zeal with which the work has been prepared, we must further be content to touch, as they pass, on a few specimens of the authors so ingeniously arranged and grouped. We were most interested by Haydn's variations on a theme in F minor; somewhat gentle, it is true, but ingenious and with true Haydn touches of modulation and suspense in the *coda*;—by an *andante* and *allegro* from a *Sonata*, (Op. 48), by Ferdinand Ries, a writer who, as Herr Pauer observes (what we have observed a score of times) has been unjustly neglected because of his over-facility and unselectness, but whose best works are marked, characteristic and well written for his instrument;—by an *andante* from Czerny's third *Sonata* (Op. 57), which, though hardly in the true *Sonata* style, has great elegance. Czerny, like Ries, hurt his reputation by his manufacturing rapidity. Lastly, we must mention Dr. Liszt's twelfth *Rhapsodie Hongroise*; one of those strange, interesting, characteristic national *fantasias*, in which the author's imperial and yet eccentric predominance over all other pianists is most clearly discernible,—a work far preferable to his formless, ambitious, yet, nevertheless, grand *Concertos*. As a "transcriber" (it is well said by Herr Pauer) this man of genius is without a rival. The other pieces in the programme were more familiar to us, or else less interesting than the above. All were rendered by the player in his best manner.

ROYAL ITALIAN OPERA.—'Norma,' as first requisite, demands a tragic *prima donna*. London has not forgotten its great *Norma*, who, having in this character partially robed herself in Madame Pasta's mantle,—herself rarely endowed with beauty and power,—so kept her ground that even Mdle. Lind in the plenitude of her reputation could not trespass on it for an hour; still less could Mdle. Cruvelli, sustained as that disappointing lady was by a chorus of exaggerated praise. The one artist who divided honours with Madame Grisi was Miss Kemble. Why should Mr. Gye compel us inevitably to recollect those golden and silver days by such a leaden presentment of the part as that made the other evening by Mdle. Fricki? She has copied Madame Grisi's dress,—she attempts a forcible attitude or two after Madame Grisi's fashion (these not good as models),—and she tries for Madame Grisi's great burst, 'No, non tremar,' therein putting forward all her power; but her voice is unequal, tremulous and out of tune,—her execution is inadequate to the requirements of the music (as was sadly shown in 'Casta diva'), and we have not yet discerned in her the existence of any real fervour for the stage or new true conception of its duties. The *Adalgisa*, Mdle. Dottini, is lifeless and weak. Furthermore, to close the chapter of objections, the offspring of *Norma* are not so well tutored as they should be. On Thursday week their behaviour, more artless and natural than suits stage art and nature, was amusingly distracting in the scenes which open the second act. In brief, the performance was an inferior one.

The concert which followed it was given to introduce Mdle. Carlotta Patti, a lady who, because of a slight lameness, can present herself only in concerts. Her appearance (Mdle. La Vallière was lame) is engaging. Nature made her very pretty. Art, the other evening, had dressed her consummately well (as fashions go). Her voice is a *soprano sfogato*,—one of the many voices which of its kind in these days spring up as if to confound those who have so troubled the world on the diapason question—a voice reaching to (not singing on) F in *alt*,—and one which is less worn in tone than her sister's. Meanwhile, it is clear that the new lady is no pretender. Her songs were the *polacca* from 'Linda,' 'Gli angui d'inferno' from the 'Flauto Magico,' and a Swiss echo song by Herr Eckert. Some of her *cadenzas* (like those of her sister) are wild, queer and out of style,—telling, it may be, of education in a land where there is no real school of tradition, of power, of comparison,—of that steady, life-giving influence derived from authority which made the artists of old. Among the vocal concert artists of modern time, however, Mdle. Carlotta Patti deserves a high place, because she is obviously able to execute, without stint or faltering, all her conceptions, in respect to music of enormous technical difficulty.

Of the new tenor, Signor Caffieri, who appeared in 'Guillaume Tell' the day before yesterday, we must speak on Saturday next. 'Rigoletto' is announced for this evening, with Mdle. Fioretti as *Gilda*.

HER MAJESTY'S THEATRE.—Mdle. Titiens has been singing in 'I Puritani,' an opera for which she is in no respect fitted, in 'Lucia'—for which she is as much unfitted—being a far too robust and inelegant musical *Bride of Lammermoor*,—and in 'Lucrezia Borgia.'—How long will it be ere the public is weary of these operas? Their continued existence on the stage, when, as now, they are supported by singers who in no respect equal the glorious artists for whom they were written and by whom they were introduced, tells a tale of the decay of modern composition not to be mistaken.—In 'La Farfaletta,' a short ballet, with music by Signor Giorza, Madame Ferraris shows that time has as yet made no inroad on her archness, grace and execution. The scenery is pretty and the dresses are fresh. The transfer of a portion of the proscenium to the orchestra is an improvement in Her Majesty's Theatre. In all modern conjunctions of principal artists with chorus (especially when the latter have to act), the form of the stage as it so long stood, offered serious difficulties, unfelt, of course, in operas of the older, slighter, less dramatic school.

HAYMARKET.—On Monday, Mr. and Mrs. Alfred Wigan commenced an engagement for a limited period with Mr. Tom Taylor's effective comedy of 'Still Waters Run Deep.' As *John Mildmay*, Mr. Wigan was as discriminative and as powerful in the various scenes of this culminating drama as in the olden time, when he swayed the sceptre of the Olympic. His peculiar style, so minute in its developments, and so complete in its ultimate impression, must prove a pleasing change to an audience to whom the same bill of fare has been so long presented; and he was greeted, as might have been expected, with unanimous applause. The part of *Mrs. Sternhold* was supported by Mrs. Wigan with her usual determination and tact. The Oriental panorama, which we have already described, succeeded the play, and is evidently appreciated by the public. It is calculated to attract for a prolonged period. The performances concluded with the farce of 'Porroving a Husband,' in which Miss M. Harris performed the part of *Pamela* with her usual vivacity.

SURREY.—A new piece was produced on Saturday, entitled 'The Devil on Town,' for the purpose of introducing Miss Rebecca Isaacs, with some beautiful songs, in the part of *Fanny Homelove*, which prospered so well with the audience, that Miss Isaacs was frequently *encored*. The piece, in its conception, resembles 'The Devil on Two Sticks'; and the infernal agency implied is supported with much cleverness by Mr. Shepherd. On

Monday Mr. Creswick re-appeared on these boards, as *Claude Melnotte* in 'The Lady of Lyons,' and on Tuesday in 'Virginus.' He was welcomed by the audience with all that heartiness which might have been expected from his long connexion with the house; and, after the extravagant melo-dramatic exhibitions which have been indulged in while he has been acting elsewhere, his presence here in the legitimate drama must have been felt as a wholesome relief.

MUSICAL AND DRAMATIC GOSSIP.—We are now informed that M. Gounod's 'Faust' will positively be represented during this season at the Royal Italian Opera, with Madame Miolan-Carvalho as Margaret.

An excellent and interesting concert was given by the Musical Society on Wednesday last. To the new Symphony by M. Silas we shall return shortly; being only, for the hour, able to announce its real and extraordinary success. Meanwhile, let us record that Mendelssohn's 'Melusine' Overture went better than we have ever heard that most delicate and spiritual of modern overtures go; and that Mr. Carrodus made a favourable impression in a Violin *Concerto* by Herr Moliqeu. He still, however, wants the crispness of execution and (in its last movement) the humour of its composer, his master.

M.M. Halle and Vieuxtemps were again the principal players at Monday's *Popular Concert*.

Among musicians new to England who have arrived for the season are the brothers Lamoury (violinists) and Mdle. de Ruda, who have appeared at a concert given by the Liverpool Philharmonic Society.—M. Wieniawski is, we perceive, on his way hither.

Mrs. Merest was to commence her series of Chamber Concerts yesterday evening.

One or two late musical performances have been overlooked in the hurry of the time,—among concerts, the liberal entertainment given by our other best tenor, Mr. Wilbye Cooper, at which, together with much other music, Miss Gabriel's 'Dream Land' was repeated.—A special musical service in aid of the National Society was given on Thursday week in Westminster Abbey, with a choir of two hundred voices, conducted by Mr. Hullah.

The evergreen M. Levasseur is about once again to bring his comic scenes and songs to London, and, in company with Mdle. Teisseire, to sing at the Dudley Gallery during the month of May.

The programme of the National Choral Society for the remnant of the present season and for the coming one, 1863-4, is noticeable; showing, as it does, that the institution in question depends not so much on its choral and orchestral merits, or on any extraordinary research in the music about to be performed, as on its *solo* singers, or rather on one *solo* singer, Mr. Sims Reeves, who is announced as its principal feature, to sing at all the performances of both seasons. This—no disrespect to our incomparable tenor—seems to us inverting the natural proceedings of a choral society intended steadily to promote the interests of Art. That singularly composed society, the *Vocal Association*, flies at every game; and, on Tuesday last, gave a new operetta, 'The Rosière of Salency,' by Mr. Maeters (we presume without dresses or scenery). What was said some weeks ago of the inevitable consequence of attempts like these to attract a public by devices at variance with the professions, which, by their fulfilment, should characterize any societies intended to last, applies here also.

M. Vaucorbeil's comic opera, 'Bataille d'Amour,' appears not to have succeeded at the Opéra Comique of Paris. The music is described as being dull and tormented.—M. Berlioz's 'Béatrice et Bénédicte' has met with a cordial reception at Weimar.

M. Borchardt, a bass singer at the Grand Opéra of Paris, best to be remembered, perhaps, as *Hercules* in Gluck's 'Alceste,' was struck with apoplexy on the stage there one night last week, and died in the course of the evening.

A new Symphony, by Mynheer Verhulst (an orchestral movement by whom was some years ago brought forward by Mr. Hullah), was the other day produced at Amsterdam.

Another version of M. Paul Féval's drama, now being performed at the Lyceum, under the title of 'The Duke's Motto,' has been produced at the Pavilion, Whitechapel, where it is called 'The Duke's Bequest—I am Here.' Mr. J. Vollaire is the adaptor, and he has been well seconded by the management, who have bestowed upon it some finely-painted scenery. It is efficiently acted, and has met with great success.

At the Britannia Theatre, Hoxton, Prof. Pepper's invention of the Spectral Illusion has been adopted as a stage expedient. A piece has been written by Mr. Hazlewood for the purpose of its introduction. It is called 'Faith, Hope and Charity,' and the ghost is a clergyman's widow who has been murdered by a baronet, and accordingly haunts him at midnight. The baronet, to the great surprise of the audience, thrusts his sword through the apparition. The effect was to entrance them as if spell-bound, and the majority were evidently unable to explain the cause of so extraordinary an appearance.

MISCELLANEA

Cardinal Mezzofanti.—Your readers may remember the anecdote of Cardinal Mezzofanti which I communicated to you in January. I beg to forward you some extracts from a letter I have received from a gentleman whose acquaintance I had the pleasure of making on the occasion of a former visit to Hardwicke House, in 1850. It was written to me for my private use, but I have now obtained permission to publish it, on condition of suppressing the names:—"As my friend Dr. Donaldson had the anecdote from me, you may possibly like to have it exactly given. The slight variation in your version is immaterial. In the winter of 1841-42 I called on the Cardinal at Rome. On the day following that interview I dined with Mr. —, of —, near —. Mezzofanti's name being introduced, — (my host's son) said, 'I saw Mr. Smith yesterday, who has just come from China, and says that he has had a conversation with the Cardinal, but does not think he knows a great deal about Chinese.' I thereupon observed, 'Well, that is rather curious, for I happened to be calling on Mezzofanti yesterday, when he said, 'a countryman of yours, Mr. Smith, did me the favour of coming to see me the other day. He has been about nine years in China, but has unfortunately studied only the Canton dialect, which is the worst of the thirteen spoken there.' My impression at the time was that Mr. Smith was not a clergyman, but a consul or merchant, but I may have been wrong... I am pretty certain that 'thirteen' was the number of Chinese dialects which the Cardinal named, and between which it may be presumed that he was able to distinguish. 'Nine' was also the number of years to the best of my recollection. In ordinary discourse it is easy to find one's memory at fault; but most persons would remember accurately words they heard fall from a celebrated man, whom they could but rarely see." It is very satisfactory to receive this, the correct version of the anecdote, from the gentleman who had it from the Cardinal himself. In my former letter to you I only professed to give it as I heard it. I have carefully taxed my memory, and I believe that I gave it as it was told to me, except that I may have used the expression "put him through the different dialects," instead of "trying him through," &c. I presume Dr. Donaldson must have believed that Mr. Smith and the Bishop of Victoria were one and the same, for he spoke of the gentleman who had the interview as a "bishop," and I remember it the more distinctly, because he was rather facetious in his comments thereon. I regret that the Bishop of Victoria should have been mistaken for the other Mr. Smith, but that is not my fault. And I also regret to find that, quite unintentionally on my part, I should have given his Lordship a wrong title in my former communication, but I am very ignorant of all matters connected with the Church of England, and I had not a Clergy List at hand. EDMUND WATERTON.

To CORRESPONDENTS.—J. R.—W. M.—J. J. W.—L.—D. M.—W. K.—J. V.—T. A. N.—received.

CRAMER, BEALE & WOOD'S PIANOFORTE GALLERY,

207 and 209, REGENT-STREET,
(THE LARGEST IN EUROPE.)

Every Instrument may be relied on as at least equal to the description given of it. Inferior Instruments are carefully excluded from the stock.

Pianofortes by all the eminent English, Continental, and American Manufacturers, for Sale or Hire.

CRAMER'S ENGLISH PIANETTE,

28 Guineas.—Cramer & Co. manufacture this capital small Instrument. It has all the requisites of the best Pianoforte—cheek action, solid touch, agreeable tone. The Case is of polished Ash or Pine. In practicing on this Pianoforte the fingers of the player will be strengthened much more rapidly than on an old instrument, loose in the key, and worn in the hammer. In Rosewood, 28 Guineas; in Walnut, 26 Guineas.

Purchasers are particularly requested to observe that this Instrument has not the common or single action, but the double or check action; and that Cramer & Co. are the only manufacturers of it in England.

CRAMER'S DRAWING-ROOM COT-

TAGE.—Cramer & Co. manufacture a Cottage Pianoforte of the medium size, and of the very best description. The tone is full, pure, and vocal. The touch is agreeable, rapid, and effective. This beautiful Instrument has been produced with an elegance of design, quality of wood, and general substantiality which have gained for it universal approbation. No better Pianoforte of this class can possibly be made. In Rosewood, 26 Guineas; Walnut, 24 Guineas. 207 and 209, Regent-street.

SECOND-HAND PIANOFORTES.—

A great number of Instruments by Broadwood, Collard and Erard, nearly equal to new, at 251., 252., 401. and 452.

CRAMER'S PIANO MÉCANIQUE,

manufactured by the inventor, M. Debain, of Paris, is an Instrument entitled to rank foremost among the triumphs achieved in the mechanical arts. Any one can play upon it. Price 55 Guineas. If with a Keyboard, enabling it to be used by a pianist like an ordinary pianoforte, 80 Guineas. The Instrument is very strongly made, and warranted to stand any change of climate. 207 and 209, Regent-street.

CRAMER'S HARMONIUMS, as manu-

factured by the inventor of the instrument, M. Debain, of Paris, received the Prize Medal and the very highest commendation. Their superiority has been incontestably maintained.

| No. | Description | £. | s. | d. |
|------------------|---|----|----|----|
| No. 1. | Polished Oak Case, one stop, four octaves | 6 | 6 | 0 |
| | Ditto one stop, five octaves | 9 | 9 | 0 |
| 2. | Ditto three stops | 12 | 12 | 0 |
| 3. | Ditto five stops | 14 | 14 | 0 |
| 4. | Ditto seven stops | 19 | 19 | 0 |
| 5. | Ditto nine stops | 22 | 15 | 0 |
| 6. | Ditto eleven stops | 29 | 15 | 0 |
| 7. | Ditto thirteen stops and knee action | 35 | 15 | 0 |
| 8. | Ditto fifteen stops and knee action | 43 | 0 | 0 |
| 9. | Ditto nineteen stops and knee action | 59 | 0 | 0 |
| WITH PERCUSSION. | | | | |
| 10. | Ditto nine stops | 29 | 10 | 0 |
| 11. | Ditto thirteen stops | 39 | 0 | 0 |

| 13. | Ditto twenty-one stops | 87 | 0 | 0 |

CRAMER, BEALE & WOOD.

CRAMER'S CHEAPEST HARMO-

NIUM is DEBAIN'S beautiful Small Instrument in a Polished Oak Case. Price Six Guineas. Admirable tone, combined with the very best workmanship.

201, Regent-street.

CRAMER'S CONCERTINAS.—PRIZE

MEDAL. Prices—2, 3, 4, 5, 6, 8, 10, 12, 16 and 18 guineas.

201, Regent-street.

CRAMER'S CORNETS, manufactured

by F. BESSON, the receiver of twenty-three medals. Cramer & Co. are now the sole Agents in London for the sale of F. Besson's well-known Brass Instruments. Estimates for Bands furnished.

201, Regent-street.

RUSSIA IN THE TIME OF PETER THE GREAT.

This day is published, in 2 vols. post 8vo. 21s.

THE DIARY OF AN AUSTRIAN SECRETARY OF LEGATION

At the COURT of MOSCOW in the REIGN
of CZAR PETER THE GREAT.

TOGETHER WITH A NARRATIVE OF THE DANGEROUS
REBELLION OF THE STEELITZ, &C.

Translated by COUNT MACDONNELL.

"This is the translation of a work of extreme rarity, and of high historical value."—*Times*.

"The two volumes will be read with avidity, and we may add that those persons who have perused with horror the accounts of the atrocities committed by the Russians in Poland—particularly that of 'trampling' and then murdering the wounded foe,—will be ready to account for it after closing this Diary, which describes manners and customs influencing the national character even in these later days."—*Athenæum*.

"This translation has certainly placed before us one of the most curious books which has of late issued from the press, especially the Diary, which records the author's own experiences, and furnishes original anecdotes, not to be found elsewhere, of the most remarkable man of his age."—*Morning Post*.

NEW WORK by the AUTHOR of 'EAST LYNNE,' &c.

In 3 vols. post 8vo. price 17. 11s. 6d.

VERNER'S PRIDE

By Mrs. HENRY WOOD,
Authoress of 'East Lynne,' 'The Channings,' &c. &c.

"'Verner's Pride' is a first-rate novel."—*Star*.
"'Verner's Pride' is in our opinion the best novel which Mrs. Wood has produced since she rose into sudden celebrity on the publication of 'East Lynne.'"—*Times*.

MR. RUSSELL'S AMERICAN DIARY.

In 2 vols. post 8vo. price 21s.

MY DIARY NORTH AND SOUTH;

OR, PERSONAL EXPERIENCES OF THE CIVIL WAR
IN AMERICA.

By W. H. RUSSELL, Esq. LL.D.

"Distinct as to materials, and in many places different as to tone from his Letters, Mr. Russell's 'Diary' is the best of the many sketches of American society published since the rupture of the Union."—*Athenæum*.

"An exceedingly readable book, and perhaps not less amusing because of the spice of egotism which appears in many of its pages. The author had unusual opportunities, and few could have used them to more advantage."—*Morning Post*.

"We cannot part from Mr. Russell without a cordial recommendation of his 'Diary,' to which as a readable book our review of necessity does injustice. The two volumes are perfect mines of anecdote, all characteristic, all excellently told, and all pervaded by a spirit of tolerance and simplicity, which is of itself sufficient guarantee for their truth!"—*Spectator*.

NEW STORY by the AUTHOR of 'AURORA FLOYD,' 'LADY AUDLEY'S SECRET,' &c.

ELEANOR'S VICTORY,

Is now in course of publication in

'ONCE A WEEK.'

BRADBURY & EVANS, 11, Bouverie-street, E.C.

LONDON, SATURDAY, MAY 2, 1863.

LITERATURE

The Cab Trade of London: its History, Profits, and Prospects. By W. T. Hemming. (Free-man.)

The London cab-driver is of noble and ancient descent. When Cæsar came into our well-peopled island, which, he says, was full of houses built after the manner of the Gauls ("hominum est infinita multitudo, creberri-maque ædificia fere Gallicis consimilia"), few things seemed to have more excited his admiration than the thousands of chariots, with their skilful drivers who showed such knowledge of their vocation under the orders of Cassivelaunus. We still number our chariots and charioteers by thousands; but they no longer carry terror by the "strepitus rotarum" over well-stricken fields in war. The only point of similitude between the ancient and modern "auriga" lies in this,—that as the priest used to have his eye on the former, so the policeman is concerned in watching the ways of the latter. In either case there seems to have been a determination to keep *Essedarius* and *Cabby* well up to the collar.

Between the periods of those two individuals, the world has occasionally been sorely troubled as to how it could keep moving; and the cab question is one which turns up once, at least, in the season. The London world has always had the river. The liquid highway was a great and cheap thoroughfare, and people went on joyous missions, matters of sorrow, affairs of business—to church, to law, to gaol, and to the gallows—by water, and passengers rallied each other as they passed. How, in later times, they went to the play by boat, and how many hundred watermen lived by the stage and the river, is pretty well known to us all. Besides the river, we have now the rail; and a very noisome and repulsive mode of conveyance it is. We do not think the open street is going to be left a desert just yet; nor the *Hansom* cab laid up in the British Museum, like an ancient canoe or a Druidical chariot.

Queen Elizabeth's Dutch coachman driving Her Majesty in a *caroche*, was so singular a spectacle, that beholders knew not what to make of it. Opinions were divided as to whether the machine were a monster, or a huge crab-shell from celestial *Kathay*. The fashion, however, was taken up at first by ladies of great households, who emulated the Queen; and though there were not yet public stands in the streets, coaches were soon to be had on hire. Taylor the Water-poet tells of half-a-dozen oyster-wives hiring a carriage to carry them, on the Thursday in Whitsun week, to Stratford-le-Bow, where Green Bower Fair was held. On their way, between Aldgate and Mile End, they were so be-madamed and mistreated by the mendicants, that, in return for the satirical homage, they spent all they had in largesses, and were fain to pawn their gowns and smocks the next day to buy oysters; as else "their pride had made them cry, for want of what to cry withal."

The original riders in the new-fangled *caroches* paid toll for their pride, in their humiliation at the hands of those sad scapegraces, the London apprentices, who, when too elate on festive occasions, were occasionally so bold as to make a rush at a "hell-cart," as they called the chariot of vanity, and capsize it to demonstrate their aversion to all things and persons aristocratic. There was no great luxury, however, in this sort of progression in those days. The passage was uneasy, the

street roughly paved, or, worse off, in deep ruts; and every description of impediment lay in the way, over which the riders were tumbled rather than conveyed. It was Taylor's opinion that the devil invented coaches and brought in tobacco; but whether the foul fiend brought the latter in a coach, or the coach in a cloud of tobacco smoke, he could not well determine.

Of course, the fashion did not die out because of the opposition. On the contrary, if in the middle of the sixteenth century coaches were but seldom to be seen in any part of England, at the close of that period and the beginning of the next pride was so far increased, according to Fynes Morrison, that there were few gentlemen of *any account*,—by which definition the writer especially meant "elder brothers"—who had not their coaches, and that in such number that the narrow streets of London were much impeded by them. Other classes, too, began to find the convenience of such vehicles, at least to those who rode therein. "Yea," says Fynes, "they who only respect comeliness and profit, and are thought free from pride, yet have coaches, because they find the keeping thereof more commodious and profitable than of horses, since two or three coach-horses will draw four or five persons, besides the commodity of carrying many necessaries in a coach."

The hired horse was still, however, a prized means of locomotion; but he was only for your "gentleman." He afforded too costly a ride for the commonalty. In James the First's reign, as Aglionby tells us when speaking of the volatile Earl of Cumberland, the master of a hack-horse cared not how lean he was, "so that he be able to carry him home two shillings at night." That was the price of hire for the day; and compared with the present value of money, the price was rather exorbitant for a lean horse.

The sedan-chair, all unpopular as it was when introduced by Buckingham, who brought the fashion from Spain, whither the chair had gone from the French town of Sedan, speedily became a favourite hired conveyance. Buckingham went better horsed and better coached than any noble of James's days, though some essayed to rival him. Few found fault with him; but when he introduced the sedan, humane people cried Shame upon him! Why should he degrade Englishmen into beasts of burden? Such was the cry, with the query; but as Englishmen cared to be carried, and others saw there would be profit in the carrying of them, the sedan became an institution, and fops and fine ladies who could not keep their own chairmen were glad to hire them. One Sir Samuel Duncombe, as we learn from Garrard, in *Strafford's Letters*, obtained royal sanction in 1634, to build forty or fifty "covered chairs" for the carrying of people up and down. The project gave the town something to talk about besides politics, and the old pensioner Duncombe profited by his patent. Occasionally, even now, an old-fashioned sedan may be seen swinging to Court on great drawing-room days. The majority have perished, but the beauty of some has caused them to be preserved. One of the most striking ornaments in the great saloon at Ashridge Park is a sedan-chair which once used to carry a cardinal, but which is now expanded into a magnificent screen.

With all these means and appliances, however, there was little facility afforded to the middle classes. The hackney-coach, precursor of the *cabriolet*, did not yet exist. The ponderous state and family coach was to be seen

lumbering by, conveying its lordly owner and his family through the ruts of the London highways. This, too, was succeeded by carriages of another and comparatively lighter class, but still for individuals, and not for the public generally. When the first hackney-coach-stand delighted the eyes of Londoners, is a question not at all easy to determine. Mr. Hemming says it was in 1634, and that Capt. Baily was the projector; but in this statement he only repeats a common error. Baily only introduced lower fares than before. The old sailor built four coaches, set the drivers in liveries, stationed them at the Maypole in the Strand,—that is, at the foot of Drury Lane,—and gave a list of fares for which they might be hired to various parts of the town throughout the day. "Other hackney-men seeing this," says Garrard, "they flock to the same place and perform their journeys at the same rate. So that sometimes there is twenty of them together, which disperse up and down, that they and others are to be had everywhere, as watermen are to be had by the water-side. Everybody is much pleased with it. For whereas *before* coaches could not be had but at great rates, now a man may have one much cheaper."

This settles the question. We know that in 1613, London hackney-coaches used to go down to ply at "Stirbitch Fair," in Cambridgeshire. But it was undoubtedly in Charles the First's reign that first appeared in the streets a conveyance for the people. In 1635, there were about a score of them—no more! and yet people of "quality" complained of the obstruction caused by these useful but humble carriages, and an ordinance for their disappearance was issued. That is, they were forbidden to *stand* in the streets. Persons requiring them were bidden to seek for them at the proprietor's residence. There were other regulations, as we learn from *Laud's 'History of the Troubles'*:—"The King's Majesty took into consideration the restraint of the multitude and promiscuous use of coaches about London and Westminster. The great number of hackney-coaches were grown of late a great disturbance to the king, queen and nobility, through the streets of the said cities, so as the common passage thereby was hindered and made dangerous, and the rates and prices of hay and provender, and other provisions of the stable, thereby made exceeding dear. Therefore no hackney or hired coach was to be used or suffered in London, Westminster, or the suburbs or liberties thereof, except the same be to travel at the least three miles out of town. And no person shall go in a coach in the streets of London and Westminster, except the owner of the said coach shall and do constantly keep within the said cities and suburbs thereof four sufficient able horses or geldings fit for His Majesty's service, whenever His Majesty's occasions shall require them, upon great penalties contained in the said proclamation."

There were difficulties set in the way of locomotion. There are also difficulties in the way of him who would describe its history truthfully. When the above regulation was enforced, Garrard says, "1,900 was the number of hackney-coaches of London, [with] base, lean jades, unworthy to be seen in so brave a city, or to stand about a King's Court." There must assuredly be some mistake in the numerals, which disagree so widely with other statistical returns. In 1637, the Master of the Horse, great sire of the Hackney-coach Commissioners, was authorized to grant licences for fifty hackney-coaches in London and Westminster, and as many more as might be required for other parts of England, no coachman being allowed to keep more than

a dozen horses. In 1652, there were two hundred coaches, and an additional hundred two years later, when the licensed horses to draw them numbered six hundred. The hackney-coaches reached the golden number of 1,000 in 1771.

In this last century, the institution considered itself threatened in a curious way, not by people who rode in other coaches, but by pedestrians who discovered means to do without them. The bearing of the umbrella question as affecting the coach interest has not been fully considered; and where it has been considered at all, the errors in the account are numerous.

Paris preceded us in the introduction of hired carriages, as it also did in this fashion of umbrellas for the protection of those wayfarers who went a-foot. This fashion was marked and approved just one hundred and ten years ago by Lieut.-Col., afterwards General, Wolfe. "The people here," he says, writing from the French capital, "use umbrellas in hot weather to defend them from the sun, and something of the same kind to secure them from snow and rain. I wonder," adds the young soldier, "that a practice so useful is not introduced in England (where there are such frequent showers), and especially in the country, where they can be expanded without any inconveniency."

Our gallant soldier was not aware that the umbrella question had been discussed a century and a half earlier by Fynes Morrison, who first saw the article itself in Italy, where he also heard of its use to pedestrians and others in regions still more remote. His description, as may be supposed, is sufficiently quaint. "In hot regions," he tells us, "to avoid the beams of the sun, in some places, as in Italy, they carry umbrellas, or things like a little canopy, over their heads; but a learned physician told me that the use of them was dangerous, because they gather the heat into a pyramidal point, and thence cast it down perpendicularly upon the head, except they know how to carry them for avoiding that danger."

In 1752, Wolfe was suggesting the introduction of the umbrella into England; and book after book, detailing the social history of London, tells us that Jonas Hanway was the first man who carried an umbrella, and that the year of the innovation must have been before 1786, when he died. But we meet with the article above three-quarters of a century earlier—namely, in 1710, in the October of which year Swift wrote his 'City Shower.' In that picturesque poem, we see that—

The tuck'd-up sempstress walks with hasty strides,
While streams run down her old umbrella's sides.

It is remarkable, however, that in this descriptive poem the sempstress, of all the persons exposed to the shower, is the only one who carries an umbrella. Dulman lags in the coffee-house, the Beau sits boxed in his chair,

While spouts run clattering o'er the roof, by fits;

the spruce Templar stands up under a gate, where he

Stays till 'tis fair, yet seems to call a coach!

As for the overtaken ladies—

To shops in crowds the draggled females fly,
Pretend to cheapen goods, and nothing buy.

The "oiled umbrella" distinguishes the sempstress alone, and we believe that, after all, Jonas Hanway was the first *man* who summoned courage to carry an umbrella about with him. The hackney-coachmen and the sedan-chairmen cried out against the innovation as trenching on their privileges and threatening them with ruin. They had nothing to say against the one great hall umbrella kept in aristocratic houses, and only used to cover a lady on her passage through the rain between her carriage and the door of the mansion.

They grumbled mildly when the great coffee-houses established an umbrella, which was lent to, and even returned by, well-known customers on showery days. But when men began to carry them in all weathers as a precautionary measure against any, then the whole tribe of chair and coach men cried "Haro!" on the effeminate offenders. Men even when accompanied by females under the "portable pent-house" were hooted, more especially by the hackney-men; while a gentleman alone, bearing his umbrella aloft, was saluted with yells and hisses, and cries of "Frenchman! Frenchman! why don't you call a coach?"—the term used indicating that the fashion came from that Paris where Wolfe had first seen it.

As a matter of course, these questions adjusted themselves. A little more than a quarter of a century ago, the old "Jarvey" began to die out. If the cart was glorified because the old Merovingian kings had nothing better to move about in, so has the hackney-coach had its glories and its day. In itself, it was a melancholy and fallen greatness. The vehicle full of cits had once been the carriage of a peer, but had come to grief. It sometimes came to worse than that, and in Charles the Second's time it was found convenient for the commission of murder. Then a dead duellist was occasionally cast into one, and sent home to his family. In William the Third's reign, the hackney took to disreputable ways of another sort, and lost for ever the privilege of driving in the Park, because crowds of painted hussies therein used to hoot the ladies who drove by in their own carriages. Who forgets the story how Harlequin Rich leaped out of one into a coffee-room and back again after the driver had looked for him in vain? and how Jehu ultimately refused his fare, shrewdly suspecting that the gentleman was the devil? In the old prize-money days, it was the favourite joke of half-a-dozen sailors to ride in a dozen and a half of hackney-coaches. They were almost as capacious as a man-of-war; and Fountayne Wilson, M.P. for Yorkshire, using one as a dressing-room, on going from the House to dinner, broke down opposite the Horse Guards, when the hilarious mob, on rushing to his rescue, found that eccentric and rarely-washed gentleman with two pairs of tight pantaloons and neither of them on! But the glory of the old hackney-coach consisted in the fact that for many years the regalia of England, crown, sceptre, and other finery, thrust into blue bags, were brought from the Tower to the Parliament House in a hackney-coach, whenever the monarch required their aid in helping him to show a kingly face in presence of the Legislature. The glory culminated when the Princess Charlotte ran away in one, from Warwick House, to her mother, in Connaught Place. When the number of that happy carriage was known, all the foolish part of London wanted to ride in it. It is a sad thing to add, that the glories of the conveyance did not honestly influence the character of the drivers. These were so notoriously brigands of a peculiar class, that when, in 1826, a Jehu of this tribe deposited at the Hackney-coach Office in Essex Street a bundle of bank-notes which had been left in his conveyance, his name, address and number were published abroad, as making in the aggregate something marvellous and worthy of remembrance.

The French cabriolet, which had just previously been introduced—a covered gig with the driver sitting at your side,—was an odious invention; but it was the forerunner of that cab which we now possess, and which conveys blushing brides to church, fevered babies to the grave, smitten paupers to the small-pox hospital, and

bevvies of children to pantomimes. In no other civilized country is such a horrible state of things permitted by the Government; and the disease and death thereby engendered make the modern cab as dreadful a machine to ourselves as ever the old British chariots of Cassivellanus were to the invaders.

Considering what the cab has fallen to, with its driver, we rejoice to hear that we are to have new and elegant vehicles, fine horses, courteous drivers and low fares. All this is, at least, promised in the prospectus of a new Company; and we hail the halcyon days which are said to be approaching, when we may enter a handsome carriage with complacency.

Personal Narrative of Three Years' Service in China. By Lieut.-Col. Fisher, C.B., Royal Engineers. (Bentley.)

It may be humiliating to confess, but it is, nevertheless, apparent from all the documents now in our possession, that the real power and resources of England were entirely unknown even to the most intelligent of the Chinese until we had entered the capital of their empire, made the head of the state a fugitive in his own dominions, and dictated such terms as we thought conducive to a lasting peace. The so-called opium war did not give the Celestials a fair notion of our greatness. Our power was, in fact, never put forth. The statesman's hands were bound, the soldier's sword was held in, by men of honest intentions and mistaken zeal. The religious press and the pulpits of the sectarians held the delusive opinion that the struggle was carried on for the immoral purpose of forcing upon the Chinese a pernicious drug. Had we known as much of the Flowery Land as we do at present, objections like these could have been easily met. The imported forms but an insignificant portion of the opium annually consumed in China; the chief supply being entirely of home growth, and having been so from time immemorial. But so profound was our ignorance at that time of these facts in Chinese social economy, that no answer could be given which would satisfy the class opposed to the prosecution of the war on moral grounds. Nor was this ignorance our only source of trouble. Just when we were about to reap the benefit of our exertions and Canton was about to open its gates, Lord Gough unfortunately accepted a heavy ransom and a promise to open the city to an unrestricted foreign intercourse. Europeans long resident in China saw in this arrangement a suicidal act and the germ of new troubles. There was no doubt that Canton must surrender to our forces, and Lord Gough ought to have insisted upon the immediate opening of the city, and have marched his troops through it to show that we had gained an undeniable victory. The news would have been carried all over the empire, and the prestige of our arms would have been permanently established. As the case stood, even the bulk of the Cantonese never knew that any ransom had been paid; they were told that the barbarians, intimidated by the heroic attitude of the favoured race, had deemed a safe retreat the better part of valour, and had gone away to Hongkong—a poor rock in the waste of sea—which had been thrown to them as a kind of sop, and would be taken back from them at the first favourable opportunity. After the British troops had left, the bearing of the Cantonese became worse than before, their insolence increasing when they found that our Government made the additional mistake of not insisting upon that portion of the treaty in which the opening of the city had been

stipulated. The foreign merchants were obliged to reside on the river, where they had, at considerable outlay, managed to extend the banks so as to form a narrow strip of garden, not more than a couple of acres in extent. This confined place was all they had for outdoor exercise. It was not deemed safe to enter any except a few of the narrow and crowded streets of the suburbs, where the principal Chinese merchants resided. The city itself, surrounded by high walls and closed by strong gates, was carefully guarded by Tartar soldiers against "foreign devils,"—the choice terms, translated for our benefit into English, by which the mob used to designate us. To venture beyond the suburbs into the country was an act of daring, in more than one instance attended with fatal consequences. During a short stay at Canton we attempted it once, but on our return home had to submit to indignities from the hands and mouths of the populace, that would have made even Job's blood boil with rage. This state of affairs continued till the outrage on the Arrow brought matters to a crisis. The right to enter Canton, nominally ceded to us by the last treaty, was now insisted upon; and Yeh, the Chinese governor, finding that subterfuges were no longer useful, flatly refused to acknowledge the right. The occupation of the foreign factories in 1856 by an insufficient force, the only one then at our disposal, enabled the Chinese to gain a temporary victory over us, and celebrate their little success by a triumphal arch. But the end was coming for these absurdities. The diversion of Gen. Ashburnham's force to India, delayed, until the end of 1857, the chastisement of which the pig-tailed heroes stood so much in need. The capture of Canton was admirably managed, December 29, 1857,—at least so we think. The Chinese believe we took an unfair advantage of them, by not following the example of Lord Gough; for we were mean enough to attack the city where the walls were least strongly defended, and to send men over them like robbers instead of forcing our way through the gates, the approaches of which were guarded by guns. On the 1st of January, 1858, Lord Elgin, Baron Gros, Gen. Straubenzee and the allied admirals entered the city in state, salutes being fired from all the ships, from the top of the ramp, and from another point of the walls. This time we had learnt to treat the Orientals after their own fashion. Nothing was neglected that could give *éclat* to the occupation, and the Treaty of Tien-tsin was the natural consequence. By that treaty, the Imperial Government of China acceded to all our demands; the most essential of which was a free and unrestricted intercourse with the interior by means of its great rivers. But it soon became evident that, in the eyes of one of the high contracting parties, this treaty was mere waste paper. A secret edict was despatched from Peking, Nov. 7, 1858, about five months after the signing of the treaty, to neutralize as much as possible all the benefits we expected to reap from our diplomacy and our arms. This document fell into our hands; and a greater piece of bad faith, combined with an utter want of appreciation of the greatness of the nations the Chinese endeavoured to baffle, has seldom been penned. The Emperor thinks that the origin of his troubles must be sought in his having surrounded himself by men utterly unfit to guide or control the actions of foreigners. Of course, new men had to be put in their places. But what steps must be adopted to keep the barbarians out, when a solemn treaty gave them the right to enter the country? The Emperor tells the Fayuen Commissioners, to whom the edict is addressed:—

"We have already ordered Leang Tung-sin to

proceed with despatch to Tung-chow, and to purchase a large supply of stakes, which he is to lay down securely in such positions at Tien-tsin, or on the sea-coast in its vicinity, as he may deem most suitable, in order to provide defence so secure, and a barrier so effectual, that the barbarian vessels will never again be able to enter the inner waters. This is a measure of the utmost importance. As to the province of Kwang-tung, which has hitherto been famed for its loyalty and patriotism, and on a former occasion received from his late Majesty the monumental inscription, 'A sovereign's reward for a people's devotion,' and a special edict expressing his marked approval of their conduct, and the gratification it afforded him, we look to those high ministers, Lo Tung-yen and others (*i.e.* the Fayuen Commissioners), to give effect to our wishes. On them the duty rests of making in secret all the necessary arrangements, of marshalling the rural population without attracting observation, and of everywhere establishing train-bands, and by securing among them combinations, as well as by rousing them to exertion and keeping their communications everywhere complete, they may present to the outer barbarians such a display of the power of China as shall cause them to retire from the position they have assumed."

None of these bold measures caused the barbarians "to retire from the position they had assumed." In June, 1859, the allied plenipotentiaries proceeded up the Pei-ho, *en route* for Peking, to ratify the treaty of Tien-tsin. On arriving at the Ta-koo forts, they found that the river had been made impassable, and the attempt to remove the obstructions and force a passage resulted in what is known as the Pei-ho disaster, but what may well be designated by a more appropriate name. Had the Chinese at this period yielded to our demands, and received our plenipotentiary in a becoming manner, our forces would not have entered their capital, and we should not have been able to show them our relative positions. The insolent terms in which the Great Council of State replied to our ultimatum left us no choice but to press on to Peking, and bring about a complete revolution in their opinion and treatment of us. This policy of victory was something they could appreciate and could not resist. When their sacred city was in our power, their Emperor a fugitive, and their lives at our mercy, they very quickly understood us and themselves. Your Chinese are great at facts: they never quarrel with fate; but immediately reconcile themselves to evils which they cannot avoid. Instead of looking down upon us "foreign devils," they now look up to us; instead of annoying, they try to please us. They even go so far as to ask us to fight their battles, devour their rebels, and restore peace to their country. Whatever may be the danger we incur in allowing our officers to help the Imperial Government in crushing the rebellion, we cannot blind ourselves to the fact, that the Chinese mind is now thoroughly convinced of our fighting qualities. It will not be denied that the display of our forces in the Chinese war has at last so far removed prejudices as to give us a chance of exhibiting the higher qualities of our race, and using them for the advancement of a people who seemed to have sunk into hopeless stagnation.

Lieut.-Col. Fisher was one of the gallant officers who contributed to bring about these results, and who, in the volume before us, gives us glimpses of the scenes that during his three years' services in China passed before him. As an engineer he had many bold and arduous duties to perform. He was present at the capture of Canton, the first attack on the Pei-ho forts, and the taking of Chusan; but, just when the expedition was ready to start for Peking, he was taken ill, and, much to his mortification, the news of the engagement before

Tung-chow, the capture of Parker and his companions, the looting of the Summer Palace, the surrender of Peking, the inhuman tortures endured by De Norman, Bowlby, and others—all this was brought to him by the sick and wounded who came to the hospital ships. By his unlucky sickness, Col. Fisher missed the very best part of his story; and he wisely refrains from giving us second-hand information, after having described as an eye-witness the earlier part of the campaign.

We have been much gratified in reading this volume. A pleasant vein of humour runs and sparkles through the work. Some of it is undoubtedly of an ephemeral character, and for that reason is published about a couple of years too late. Yet there are many facts in the book which will be useful to the future historian of one of the most remarkable campaigns in which the British arms have been engaged.

Disraeli, the Author, Orator, and Statesman.
By John Mill. (Darton & Hodges.)

THE career of a politician in the middle term of life, and fully occupied with public affairs, is especially ill suited for biographic treatment; and the many sketches of Mr. Disraeli which during the last twenty years have proceeded from writers of different shades of opinion and degrees of power, serve only to strengthen the rule, that the lives of remarkable men should not be written until death has put the world in a position to form a just and dispassionate estimate of all their merits and achievements. The biography of a man who is still acting on his own history is necessarily incomplete, and from manifest causes is almost invariably inaccurate; but the memoir to which we now draw attention has other failings besides those imperfections which characterize nearly all works of its class. A few words will be enough to display the object and spirit of a book which is a piece of laughable impertinence to the man whom it professes to honour, and to the public whom it undertakes to instruct. It is doubtless within the memory of many readers that some years since Mr. Thomas Macknight published a 'Literary and Political Biography,' setting forth in a far from friendly manner the principal facts of Mr. Disraeli's public career. The volume was by no means faultless. One of its most important statements has recently been proved to be untrue, and many of its judgments at the time of its publication were seen to be extremely unjust; but as a piquant collection of ugly stories relating to a person of mark, it obtained a short-lived notoriety, which was heightened by the violence and indiscretion of the politicians to whom it gave most pain. The sensation was, however, the affair of a season; and before three additional sessions of Parliament had witnessed the perfection of Mr. Disraeli's success as the leader of a great party, the book had met that speedy death which is the unavoidable fate of all such works. It had become out of date, and to general readers was as useless as an old Post-Office Directory or an antiquated list of fashions. Such was the career of a biography which Mr. Mill once again drags into the light of day, and hopes to crush with a reply which he is simple enough to think will be "read by the thousands of earnest and gifted young men who may be found in every part of England, who only need hope, and a clear, noble and definite purpose, to make them great men." What cheering assurance is there in these words for every patriotic Englishman! What may we not look for from a country in any part of which may be found "thousands of earnest and gifted young men," who can be changed from "possible" into actual heroes by

reading an ill-written eulogy of the honourable Member for Buckinghamshire? Never had nation joster grounds for exultation than the land whose sons, according to our author's showing, are ready "to release humanity from the fetters of ignorance and vice—twin-brothers of perdition,—whose dominion is more to be dreaded than the bonds of death."

The portrait which is to exercise so beneficial an influence on thousands of earnest and gifted young men cannot be recommended as an agreeable picture. It would be unfair to the earnest and gifted young men not to tell them that its artistic merits are below the sign-board standard of excellence. Mr. Mill's knowledge of Mr. Disraeli's history has been altogether gained from Mr. Macknight's volume and from magazine articles. He speaks much, indeed, of his patient study of the voluminous Hansard, but his acquaintance with the parliamentary chronicler is slight and superficial. His authorities are previous writers, whom on all matters of fact he follows with blind trustfulness, and whom he repays for their instruction with unmannerly abuse. Sometimes he misses the meaning of his authorities when they happen to be in the right, but their errors he invariably reproduces. For instance, in his opening pages Mr. Mill reiterates the old fiction about Mr. Disraeli and the *Representative* newspaper. "When first out of his teens," observes the historian, with characteristic felicity of expression, "he undertook what every young man that can, and many who cannot, write, believes himself to be highly qualified to perform—the editorship of a daily newspaper. We have looked into this paper, the *Representative*, and find little or nothing in it prophetic of the coming man." It is true that in a subsequent page Mr. Mill recalls this assertion, and in a note acknowledges that he has been enlightened on the point by the *Athenæum*; but his readers and critics will not be of opinion that this is a satisfactory mode of correcting a blunder. Surely the enthusiastic defender of Mr. Disraeli's reputation might have taken the trouble to cancel the erroneous passage, since its removal from his text might have been effected at the cost of very little trouble and expense. Let us hope that none of "the earnest and gifted young men," whose future greatness depends upon Mr. Mill's guidance, will take the poison of the large type, and fail to discover its antidote in the obscure note. On other matters the author avoids error by silence. Thus, when he alludes to the rupture between his hero and Sir Robert Peel, he cautiously observes, "It is useless to inquire too minutely into the causes of this estrangement. Such antipathies frequently occur." Of Mr. Disraeli's memorable speech on the Duke of Wellington the biographer says nothing whatever. But if he is cautious on certain questions affecting the object of his hero-worship, he breaks away from all restraints of prudence and decency when he criticizes the conduct of other public persons. His vocabulary contains an abusive expression for every one who has at any time opposed the Author of 'Coningsby.' Sir Robert Peel is called "a thing of shreds and patches," and is accused of "peculation," "tergiversation," "petty larceny," and "political infamy." Earl Russell, who is represented as still sitting in the House of Commons and writhing under Mr. Disraeli's sarcasms, the author compares to "a frog under a fungus." Mr. Gladstone is called "the Mr. Pecksniff of the House of Commons," and "a ranter who has had a 'call,'"—the merits of his eloquence being disposed of in the sentence which says, "He (Mr. Disraeli) is a good orator; he is wanting in that command over the passions

which characterizes the performances of Mr. Gladstone and Mr. Spurgeon, but his speeches are perfectly free from the cant and verbosity which characterize the utterances of those gentlemen." Of a dead writer and of a lady who is still alive it is said, "An old bachelor and an old maid—Parson Malthus and Miss Martineau—have done more than any two other people that we know of to excite this spirit of antagonism to the poor." The advocates of the ballot, who besides forming a strong party in the House of Commons number in their ranks some of the most profound scholars and thinkers of our time, are described as "a few political fanatics." But Mr. Mill reserves his hottest wrath for those who have at any time written against his idol. Mr. Macknight is said to be servant of "the Father of Lies"; and another writer, from whom Mr. Mill has largely borrowed, is stigmatized as "dull," "acid," and "scurrilous." A line penned against Mr. Disraeli's conduct is regarded as a proof that its writer is "a wolf howling at the moon." And in another sentence, where, with amusing self-confidence, he ranks himself amongst recognized literary men, Mr. Mill observes, "There has been, and we speak it to the disgrace of our order, more evil speaking against Mr. Disraeli than against any other eminent man with whose history we are acquainted."

Nor are the insults of the book confined to Mr. Disraeli's antagonists. Jews and Gentiles, Whigs and Tories, all come in for sneer or gibe. The country gentlemen of the House of Commons are derided for "looking doltish and out of place." The Scotch will not thank the author who says that England has "incorporated" their country; and the Irish will not deem themselves flattered by the page which allows them to be just a few degrees superior to the Jews, but proclaims them to be vastly inferior to the great Anglo-Saxon family. Of Jews Mr. Mill expresses his low esteem in several pages of elaborate depreciation, which is brought to a climax in the assertion, that Mr. Disraeli's intellect is of itself presumptive evidence that he is not of pure Israelitish extraction. "As a fitting conclusion to this matter, we are bound to add," says the author, "that we do not believe that Mr. Disraeli himself is of pure Jewish blood. That he has Jewish blood in his veins we are ready to admit, but his face and intellect betray an admixture of foreign blood; and there are circumstances in the history of his family which point in the same direction." This reasoning will assuredly be the reverse of pleasing to Mr. Disraeli, in whom generous pride of race is a leading characteristic. Nor will he be more gratified by the extravagant flattery awarded to his literary achievements. Of the 'Voyage of Captain Popanilla,' Mr. Mill says, "The whole work is admirably conceived and well carried out, and, except in the inimitable satire of Swift, has no rival that we are aware of in the English language." The Wondrous Tale of Alroy places Mr. Disraeli in the highest rank of imaginative writers, by the side of Dante and Milton. "It is," observes the eulogist, "one of the conceptions of genius in the highest hour of its inspiration, when the rapt muse pours forth its thrilling effusion, as the lark warbles his song to the rising sun. It is not only the best of all Mr. Disraeli's romances, it has scarcely a rival in the English language." When Mr. Mill is at a loss for a climax he always says, "it has no rival in the English language." The expression is not more common-place than most of Mr. Mill's remarks. For instance, he assures us that Mr. Disraeli's other works are "romantic enough, and we meet in them flashes of poetry breaking out like beams of sunshine through fleecy clouds"; and he adds, "Is Mr.

Disraeli a poet? We answer, yes; and almost regret that he did not stick to literature, and cultivate the favour of the 'sacred nine,' with the same assiduity that he has wooed 'the free and independent' electors of Buckinghamshire and the 'country interest' in the House of Commons." This sublime regret introduces the reader to the 'Revolutionary Epic,' of which the critic observes, "There is enough fire in this to assure us that his lips have been touched by a live coal from the holy altar." How does a man feel with a live coal at his lips? Elsewhere faint hopes are given that the author of the epic may one day present the world with a complete poem. "If Milton," says Mr. Mill, "had not been driven from office, blind and in disgrace, should we have ever had 'Paradise Lost'?" and would the enemies of the Puritans have ever allowed that they produced a great poet? From present appearances we can hardly hope that the beneficent powers will ever expel Mr. Disraeli from the House of Commons; but if they should do so, then perhaps we shall have a poem more worthy of his genius than that portion of his epic which he has already given us."

Such is the incense which this devotee burns before his idol; and with such words of servile adulation does he kiss the shoes of the statesman "whose influence," he affirms, "is more wide-spread and secure than it has been at any former period of his life." That Mr. Mill is sincere in this last expression of opinion, we can believe. Whether he would, in sporting phraseology, have staked so heavily on the honourable Member for Buckinghamshire if he did not believe him to be "the winning horse," is a question we will not attempt to answer; but it is an inquiry which Mr. Disraeli will, perhaps, put to himself.

Irish Convict Reform. By an Irish Prison Chaplain, in the Convict Service. (M'Glashan & Gill, Dublin.)

Life among Convicts. By the Rev. C. B. Gibson. 2 vols. (Hurst & Blackett.)

Mr. Gibson—who is the original Irish Prison Chaplain—published his pamphlet on 'Irish Convict Reform' in January, and his book, with the more catching title, 'Life among Convicts,' in April. The pamphlet is a sippant attack on Sir W. Crofton and the Irish convict system; the book is a reprint, almost word for word, of the pamphlet, swollen by newspaper cuttings, old stories, lengthy quotations from recent works on convict discipline, and reverential extracts from Sir J. Jebb's Reports, into two meagre volumes. The pamphlet was very dear at a shilling: the reader may guess what the book is at a guinea.

This speedy and unnecessary development of the pamphlet into two volumes is rather odd. The book is dedicated to Sir Joshua Jebb, "founder of the English and Irish convict system." Mr. Gibson styles him "the ablest and wisest prison administrator in Europe." As to Sir Joshua's Reports Mr. Gibson frankly confesses that "he knows of nothing in the shape of public reports superior to those valuable state documents, which form a new and interesting department in English literature." It is an old, and a true saying, that many a prisoner on his trial has no notion what a good fellow he is, and how highly he is esteemed by the judicious world, till he hears the glowing panegyrics of the witnesses to character called, as a last resource, by his counsel. Sir J. Jebb is undoubtedly on his trial now, and his friends would appear to have called Mr. Gibson as a witness to character. At least, some such hypothesis is needed to account for the remarkable transformation of

the Chaplain's obscure pamphlet into two circulating-library volumes. Pamphlets are never read, but the popularity of 'Female Life in Prison' has recently shown how warm an interest the public may be taught to feel in the inner life of our convict establishments. Mr. Gibson aspires to the "Prison Matron's" success,—but probably he will aspire in vain. The Matron earned her popularity fairly. She gave us, it is true, some superfluous second-hand statistics; but the greater part of her book was the simple yet graphic description of her personal experience and observation; she told her story with good sense and manifest truthfulness; she did not mar her pages with jibes and flattery, for she had no grudge to gratify, no favour to seek; and above all she was not cursed with the desire to be thought facetious. But the Chaplain, after his seven years' service, has little of his own to tell us,—no notable traits of prison character, nor garnered record of his own "Life among Convicts." Almost all his stories and incidents have been in print before,—he abounds in misrepresentations, inaccuracies and blunders,—his constant sneers at Sir W. Crofton and compliments to Sir J. Jebb are offensive, and his jokes, always poor and commonly stale, are wearisome. Book-making of this kind never achieves popularity. We are sorry this work is such trash: for the Irish system has now so many partisans that we should like to have seen an honest and vigorous defence of the English system,—which we can hardly think is so bad as it is now made, by comparison, to seem. Mr. Gibson's pamphlet will not serve it much. Sir J. Jebb is a good engineer, an authority on prison construction and ventilation, an industrious public servant and an amiable philanthropist; but the strong suspicions of the public that he is incompetent to grapple with the peculiar difficulties of the Convict question will not be dissipated by Mr. Gibson's testimonial that "he is the ablest and wisest prison-reformer in Europe."

The testimonial of a convict Chaplain, who has seen seven years' service, ought, of course, to have some weight; and, accordingly, Mr. Gibson speaks with the voice of authority. But his claims to authority dwindle on examination. As Presbyterian Chaplain at Spike Island, he has only thirty or forty convicts under his charge, and his duties among them are limited to three ministrations a week. Of the other convict prisons in Ireland, he has only been a casual visitor; while all his knowledge of the English prisons is apparently derived from a devout perusal of Sir Joshua Jebb's Reports. The value of his testimonial is further weakened by the awkward fact that he has given other testimonials quite incompatible with this. In his official Reports, to which we naturally turned on reading his abuse of the system which he serves, we find him speaking in a very different tone. In January, 1857, he declares, after twelve months' experience, that he "would find it difficult to conceive how the general government of the prison could be improved." In January, 1859, "he has reason to know that the Intermediate Prisons of Carlisle and Camden are working well under the skilful management of the principal warders, and the wise and efficient superintendence of the Local Inspector." In January, 1860, he reiterates his approval; and in January, 1862, he reports "that nothing can be better than the general discipline of the prison." Nor can Mr. Gibson shelter himself under the plea that in official documents he must write to suit his superiors; for in a 'History of the County and City of Cork,' published in 1861, we find two pages of laudation on the Irish System, beginning in this fashion,—“Enlarged and enlight-

ened principles, based upon the great laws and motives that regulate and influence our nature, have been laid down, and most successfully carried out, by the present Board of Irish Prison Directors," &c. The chief distinctive features in the Irish Convict System are the Intermediate Prisons and the police supervision over ticket-of-leave men. On these, therefore, especially the former, Mr. Gibson is very severe. The Intermediate Prison, it will be recollected, serves a double purpose—by placing the convict in a state of quasi-liberty, where he is almost free from physical, but subject to strong moral, restraints; his self-control is cultivated, and his fitness for full liberty at the same time tested. The convicts on the prison farm at Lusk are almost as free as ordinary labourers; the inmates of the prison factory at Smithfield are often sent, with money in their hands, on errands into the streets of Dublin. Without undergoing some such ordeal as these prisons furnish, says Sir W. Crofton, we have no right to turn a convict loose with a ticket-of-leave, nor can we expect society to give him a chance. Mr. Gibson tries to prove that the ordeal at Lusk—he studiously avoids Smithfield—is all a sham:—

"We are informed that the common of Lusk was chosen as an intermediate prison on account of the facilities it presents for tempting the prisoners. This may all be true, though I did not see a rath or fairy ring there. I am not well read up in the history of 'demonology and witchcraft,' but I believe the devil and his emissaries choose wild and barren heaths for their most fearful temptations."

'Macbeth,' 'The Witch of Fife' and 'Tam o' Shanter' are quoted to prove this point, and Mr. Gibson then proceeds:—

"We have visited the prison on Lusk Common, but have not been able to discover facilities for temptation of a worldly or a fleshly kind. There is no scope for burglary, highway robbery, rape, forgery, picking pockets, or even sheep-stealing; for every man of the forty or fifty prisoners at work on that flat space of ground is under the eyes of warders throughout the day, and securely locked up at night. There are no canteens, ale-houses or whisky shops, dancing saloons or cigar divans, at Lusk. * * * No maternal hen ever guarded a brood of ducklings with greater care from a mill-stream than Sir Walter Crofton guarded his intermediate prisoners from temptations of every kind. We commend him for this; but to call the discipline temptation, after the removal of the temptation, was very wrong. To parade, under such circumstances, before the world the prisoner's power of resisting was more than absurd. It was a sham. The temptations to which mankind are subject, as classified in Scripture, come under the three heads of 'the World, the Flesh and the Devil.' We have the world in towns and villages, from which the Intermediates are carefully removed, with one or two exceptions; the flesh in the shape of women, who are debarred, by a director's order, from entering a convict prison or a prison-boat, although the boatmen are exemplary characters. It would appear, therefore, as if the intermediate temptations, over which Sir Walter Crofton especially presided, were of a purely Satanic character. He took the Intermediates 'into the wilderness to be tempted of the devil.' How pious people can say the Lord's Prayer, and then say 'Amen' to Sir Walter Crofton's theory of temptation, or wish him success in the application of it, we cannot imagine. Granting that temptations are necessary for poor mortals, on what authority does the chairman of a convict prison assume the high office of that august personage who is supposed to preside over this department of morals? Where are his marks and signs of office—the hoofs and horns?"

So much for Mr. Gibson's wit; but we must give a specimen of his statistics also. In his report for 1861 Sir W. Crofton states that "since the establishment of Intermediate Prisons, upwards of six years since, only 10 per

cent. of all classes of convicts (4,600 in number) liberated from the government prisons have returned to them." In England, where it is part of the system to know as little as possible of discharged convicts, such a statement would be of little moment; for the other 90 per cent. might, for anything the directors knew to the contrary, be living in the full pursuit of felony. But in Ireland, where every diligence is shown to search out and re-consign to government prisons, even on slight offences, all relapsed convicts, whether ticket-of-leave men or ex-pirees, this morsel of statistics is very valuable. A writer in the last number of the *Edinburgh Review* states, with incautious exaggeration, as though on Sir W. Crofton's authority, that "80 per cent. of the Irish liberators are known to be doing well." Mr. Gibson, carefully avoiding the accurate official fact, seizes on the reviewer's slip as a good chance for airing his wit and his statistics:—

"I can aver that 28 per cent. of the prisoners in Spike Island are doing well as re-convicted convicts, who are generally well-behaved prisoners; and that 50 or 60 per cent. of those prisoners who have had 'the advantage of the Intermediate Prison' have emigrated to America or the Colonies, or have gone to England. I hope the latter are doing well; but how this can be 'known' I cannot imagine. * * * Different people attach different meanings to the same word. An Irish sailor allowed the captain's copper kettle to slip from his hand into the sea; but being a witty fellow, and knowing the captain to be a good-humoured man, said, addressing him, 'Would you say that a thing was lost, sir, if you knew where it was?'—'Of course not,' was the captain's reply.—'Well, sir, your copper kettle is at the bottom of the sea.' We know that more than 50 per cent. of Irish intermediate convicts are at the other side of the Atlantic and St. George's Channel, and we also know that some 28 or 30 per cent. of them are safely re-lodged in prison, and may, therefore, say, in Sir Walter Crofton's words, that they are 'satisfactorily accounted for'; as satisfactorily as the Irish sailor accounted for the captain's copper kettle."

Now this is a notable passage. For the assertion that 50 or 60 per cent. of the intermediate convicts have emigrated, Mr. Gibson does not and cannot produce a shadow of authority. Were it true, to have induced half his felons to transport themselves at their own expense would indeed be a feather in Sir Walter's cap. But let this pass, for his other fact is still more astounding. When Mr. Gibson, in one sentence, says that "28 per cent. of the prisoners in Spike Island are doing well as re-convicted convicts," and in another sentence declares "that 28 or 30 per cent. of them (i. e. 'intermediate convicts' according to the grammar, but plainly 'convicts of all classes' according to the context) are safely re-lodged in prison," it is evident, in spite of his inaccuracy, that he refers to the same fact. Now the "convicts of all classes" discharged during the time in question amounted to 3,505, and of these 2,039 were "intermediates." Whether, then, we judge Mr. Gibson by his grammar or his context, the result is, in either case, marvellous. The total number of convicts in all the convict prisons is barely 1,000; yet Mr. Gibson avers that they contain either 612 relapsed "intermediates," or else 1,051 relapsed "convicts of all classes." Whichever is the fact, the Irish Convict System ought not long to survive such a revelation. But the truth is, the Chaplain has puzzled himself with his figures. He evidently supposes the fact (if it is a fact) that 30 per cent. of the prisoners in Spike Island are relapsed convicts, proves that 30 per cent. of the discharged convicts have relapsed. Can Mr. Gibson tell the difference between six dozen dozen and half-a-dozen dozen?

We may examine one other morsel of Mr. Gibson's statistics. He is anxious to demonstrate that the Intermediate Prison is a worthless excrescence on the Irish System. If he can show that the percentage of relapses among the "intermediates" equals the percentage among the "non-intermediates," he has plainly proved his point. To this task, then, he addresses himself:—

"We learn from the 'Report for 1861,' p. 63, that 1,476 of the 4,600 discharged convicts were intermediate prisoners. More than half—but we shall say the half—of these went abroad. The 738 that remained at home gave 95 relapses into crime, which amounts to 13 per cent. If a mixed number of 4,600 yields 10 per cent., and 1,476 of this mixed number be deducted, yielding 13 per cent., what will be the per-centage on the balance?

| | |
|--------------------------|-----|
| 10 per cent. on 4,600 is | 460 |
| 13 per cent. on 1,476 is | 192 |
| | 268 |

3,124 268

Here we discover that the non-intermediates give 8.58, or a fraction over 8½ per cent. As 8½ is to 13, so is the advantage in favour of the non-intermediates, or of those who have not got the new Croftonian training."

The cool audacity of this calculation has evoked an official refutation from Sir W. Crofton's successor, Capt. Whitty. In the 3,124 non-intermediates, Mr. Gibson includes 1,095 female convicts, who, as they have their own "refuges" in lieu of intermediate prisons, are out of the question; and he also includes 563 male convicts discharged from the intermediate prisons in Cork Harbour, who should have been placed on the other side of the account. This is rather sharp practice. With the necessary corrections, we get 2,039 "intermediates" against 1,466 "non-intermediates"—a change which materially affects Mr. Gibson's percentages. But instead of his cooked statistics, Capt. Whitty gives us the facts:—"From 1866 to 1861 inclusive, only 3.72 per cent. of those discharged from the Intermediate Prisons were re-convicted to the Convict Prisons; whereas 14.5 per cent. of those discharged from the Non-intermediate Prisons were so re-convicted."

But enough of this worthless book; we do not care to criticize it further. It is daily becoming more apparent that transportation can never be renewed on any large scale. We must deal with our criminals at home; and, therefore, we must face and solve the question of convict discipline. However, till the Convict Commissioners have published their Report, which is now almost due, we are content to leave the controversy between the English and Irish Systems in abeyance.

Biographies of Celebrated Canadians and Persons connected with Canada, from the Earliest History of the Province down to the Present Time. By Henry J. Morgan. (Quebec, Hunter & Co.; London, Trübner & Co.)

This is an encyclopedia of the names most nearly associated in the history of Canada from the first discovery to the present day. Naturally, the biographies of the men now alive or recently dead are slight. Some of the notices of the earlier governors and explorers of Canada are very interesting, having the perennial fervour which belongs to stories of brave and daring adventure. The records of these worthies are, of necessity, brief; but they will repay perusal. The two Cabots, John and Sebastian, had discovered Newfoundland and the mouth of the St. Lawrence, the French had established a cod-fishery on the banks of Newfoundland as early as 1524. John Veranza, a Florentine in the service of France, journeyed along the coast from Florida to Newfoundland; but on a second expedition

he was lost—supposed to be killed and devoured by the savages, and for some years no one had the courage to follow in his track and explore the New World. In 1534, Francis the First sent out Jacques Cartier, a master mariner of St. Malo: he sailed up the great river St. Lawrence, and was the first who saw Canada; he was the founder and discoverer of the country. Of course, other men were appointed to govern the new settlement; but, in acknowledgment of his rare merits, Jacques Cartier and his descendants were ennobled. The Sieur de Roberval was the first governor. He was fascinated with its beauty, and made an exploring expedition up the country. He sent home to France for reinforcements; but the king, Francis the First, desired Cartier to bring him back home, as his services were needed for the war in Picardy. After the King's death (1547), Roberval went back to his beloved Canada, accompanied by a great number of emigrants, who never reached their promised land—they all perished, and the whole fleet of vessels foundered, none of the crews or the passengers escaping.

Samuel de Champlain was the next who inherited a thirst for Canadian adventure and exploration. About fifty years after Roberval, he went out, determined to prosecute Cartier's discoveries. He was the founder of the city of Quebec, and his exploits among the Indians and in exploring the wilderness are fascinating. He tried to convert the Indians, saying that "Kings ought not to extend their authority over idolatrous nations, except to subject them to Jesus Christ." This Christian sentiment did not, however, prevent him from inciting the Indian tribes to war amongst themselves. He took part with the Hurons against their enemies, the Iroquois.

Admiral Sir David Kertk, a French refugee in the service of Charles the First, attempted to make a foray on Canada for the honour of England, and actually obtained possession of Quebec and captured Cape Breton. Of course, the first treaty of peace between France and England insisted on the restitution of Canada. It was not for long years afterwards that England became the possessor of Canada. The history of the early French governors and the early French missionaries is by far the most interesting portion of Mr. Morgan's work; and readers who wish to see a compendious account of the progress of this great colony, from the time when Jacques Cartier sailed up the St. Lawrence, with the wild romantic dangers and adventures of the first explorers, to the account of the distinguished journalists and novelists and *littérateurs* of the present day, may find this wide track of time and change spanned over in the present volume of 'Sketches of Celebrated Canadians and Persons connected with Canada.'

Six Months in the Federal States. By Edward Dicey. 2 vols. (Macmillan & Co.)

A poorer book than 'Six Months in the Federal States' the present season has not hitherto seen. The feminine arrogance of its tone is even more remarkable than the feebleness of its style; and and it abounds in exhibitions of childlike vanity. It is doubtful whether Lord Fanny could have written a book with more sweet platitudes and pretty affectations. With the exception of a few paragraphs of impertinent gossip about New York and Boston authors, the book contains neither a line of original intelligence, nor a page which might not have been written six months ago in a London arm-chair. What object Mr. Dicey had in view when he crossed the Atlantic we are unable to say, for from the time when he entered New York till he

went on board a homeward-bound vessel his chief aim seems to have been *not* to see what was going on around him. He did not condescend to enter the chief public buildings of the American cities, because sight-seeing bored him. He made no attempt to witness the operations of the contending armies, because he thought it *most probable* they would not let him; and he admits that he was very particular *not* to make inquiries about the condition of the slaves in the Southern States. A droller special correspondent than Mr. Edward Dicey surely never existed. The frankness with which he confesses how and why he *did not* perform his duties to the employers who sent him out must be shown, in his own words. "There is," he observes in a passage where he sneers contemptuously at American cities in general, and New York in particular, "a picture-gallery; there are a few public buildings, which are supposed to possess architectural merits; and there is the Croton Aqueduct, interesting to engineers. Still, with all deference to my New York friends, I hardly think that a European traveller need go far out of his way to visit any of these curiosities. I plead guilty to *not having seen them*, and have as little intention of describing them—probably less—than I had of visiting them." The English of this passage is on a level with the logic. How could he have described, if he had not seen, them? Why should he tell the reader that he had as little intention of describing *than* of visiting them? And if he means neither to see nor describe why pass judgment on them? On the military operations of the contending armies the special correspondent speaks with greater prudence, *although* he made no attempt to witness them; but he avows with the candour of a young lady the consideration which decided him *not* to accompany the army of the Potomac. "It was," he says, "little use seeking to obtain permission to visit the peninsula, and I had received such uniform courtesy from all American officials that I had hitherto come across, that I did not like to disturb the pleasant tenour of my recollections by exposing myself to the probability of discourteous refusal from Mr. Stanton." More amusing is Mr. Dicey's excuse for not inquiring into the condition of the slaves. "The sight of misery," says the traveller, apologizing for his remissness, "one cannot in any way relieve is a painful one; and personally I have such a hatred of slavery that, while in the Slave States, I always preferred to give myself the benefit of the doubt, and try to fancy, as long as it was possible for me to do so, that the negroes I came across were free negroes, *not* slaves." It does not seem to have struck Mr. Dicey that he is bearing testimony to the general contentment of the negroes when he says he was able to travel through the Southern States and persuade himself that the slaves he encountered were happy freemen. The sight of suffering on the part of the bondmen and of cruelty on the part of their owners would have destroyed the pleasant delusion. But if Mr. Dicey publishes little that is likely to interest the public, he puts into his book much that is of high importance to himself. He tells how he was received with marked respect wherever he went, how he conversed intimately with diplomats, how he imparted his views on public affairs to grave and venerable statesmen, how he had the best introductions to the best society, and how the fame of his greatness surrounded him in every hotel and railway-car that he entered. He would *fairly* have passed on his way without the homage of admiring multitudes, but 'the friend of Cavour' was not permitted to travel unobserved, like an ordinary Englishman. "It is

useless trying to conceal anything in America," says the distinguished author. "Before I had been a couple of weeks in the country my name, *antecedents and history*, and a good deal of personal intelligence that was perfectly novel to myself, was published in the American papers."

Mr. Dicey, however, gives the reader something besides these personal particulars. Five-and-twenty of his pages are devoted to a report of one of Mr. Wendell Phillips's anti-slavery orations, and his volumes are liberally padded with extracts from articles which have appeared in the abolition journals and magazines of the North. An entire chapter is assigned to the case of Mr. Russell and Mr. Stanton, wherein Mr. Dicey shows to his own satisfaction that the individual minister, and not the government, should be condemned for the indignity offered to the Special Correspondent. "In justice," says Mr. Dicey, in his feminine English, "to the government it should be understood that the act was Mr. Stanton's individual one, and not the collective one of the Cabinet." Moreover, our author on rare occasions deigns to be playful. Thus he speaks of "the quaint Yankee river steamboats, which look as though, in an excess of sea-sickness, they had thrown their cabins inside out, and turned their engines upside down." Again, in a vein of not less subtle humour, he alludes to the cause of abolition as "the question of the eternal nigger." And on other phenomena of American civilization he speaks with a freedom which sets the rules of English syntax at defiance. Having described the execution of Gordon, the slave-trader, he says, "Horrible as the man's crime was, it is impossible to feel pity for him"; from which remarkable words it would appear that atrocious crime usually recommends the criminal to Mr. Dicey's sympathies. Adverting to slavery, he observes, "If the negro was as much below the white man in intellectual development as he is above the Australian savage, this is absolutely no reason why he should be bought and sold like a chattel." On the same subject he remarks in another chapter, "I do not consider it necessary to prove to my readers that slavery is a bad thing. If their knowledge of the world and their experience of their own hearts does not teach them what tyrants we should all be if we held irresponsible power over our fellow-creatures, let them," &c. Of the Washington hotels we are informed, "Even according to the American standard, there is not a decent hotel in the whole place. Willard's and the National are two huge rambling barracks, where some incredible number of beds could be run up; but it is hard to say which is the *shabbiest* and *dirtiest* internally; and, externally, *neither* of them have any pretensions to architectural grandeur." We are quoting from the "friend of Cavour," not from the text of Bill Sykes. Mr. Dicey adds: "Of the lot, Willard's is the best, on the principle that if you are to eat your peck of dirt, you may as well eat it in as picturesque a *ferm* as possible. The aspect of this hotel during the time that the army was encamped before Manassas was indeed a wonderful one." We should not notice such sentences if they were exceptional or their errors could by any charity be regarded as slips of the pen, results of haste, or typographical errors; but, in truth, there is scarcely a page of original writing in the two volumes which does not stand in need of merciful revision. These defects of style are the more noteworthy as Mr. Dicey is pleased to act the censor on what he terms "the free and *unsubventioned* press" of America. "There is," observes the fastidious critic of the "unsubventioned" press, "a carelessness about the writing which to me is *indefensible*. Apparently, leaders

are written without the proofs being revised. Constantly one stumbles on sentences which do not construe; while clerical errors are allowed to pass, for not correcting which the reader of any respectable English newspaper would be dismissed on the spot." We should be sorry to press this doctrine against the unlucky printer of Mr. Dicey's book.

NEW NOVELS.

Entanglements. By the Author of 'Mr. Arle,' &c. 2 vols. (Smith, Elder & Co.)—A high-flown, sentimental book, not ill written, and containing more matter than many novels, but foolish and unlike anything in real life. The heroine is mad, to begin with; living in an old hall, with her stepfather, whom she snubs most unjustly at every turn, for no particular reason, except that she "had a secret belief that he had at some time done her mother great wrong,"—which belief seems to be unfounded. The said mother had died melancholy mad, and a former wife of this unfortunate gentleman had drowned herself and her two children in a pond; and her priest (for she was a Roman Catholic) had jumped off a tower: so Bramblebridge Hall is a gruesome place to live in. Esterel, the heroine, wanders about all night, and has odd fancies, and is totally unmanageable, and Mr. Downside indulges her in every whim she takes up. Esterel seldom speaks to her stepfather, or to anybody else but the gamekeeper's daughter, for whom she has felt a violent passion, and who is seldom allowed to leave her flighty and unreasonable mistress. In hopes of rousing Esterel, Mr. Downside invites a former governess, who has made a great marriage, to come and stay at the Hall. Lady Winstay is the most natural (we might almost add the *only* natural) character in the book. "She is a managing woman, and then there is a keen pleasure in being despotic at the Hall, where she has lived in the humble capacity of governess and companion." Lady Winstay, nevertheless, considers it "a sacrifice of some magnitude to leave a gay and brilliant circle of gentlemen to whom she—very pretty some said, very silly some said, while others called her clever and witty—had been the centre of attraction." Lady Winstay, however, leaves her husband to entertain her guests at home, but she brings in her train a cousin and former admirer, Mr. Hillhouse. Lady Winstay is still very much in love with Herbert Hillhouse, and Herbert is sometimes devoted to her and sometimes sneers at her. He cannot marry her now, and the lady considers it will be doing a generous action to the cousin she has thrown over for Lord Winstay, if she puts him in the way of marrying her former pupil, the mad heiress. Herbert does his duty by making up to the heiress, and Esterel becomes sensible of his merits, which, however, are not very apparent to the mere readers of the story. Herbert flirts morning, noon and night with the fascinating and dreamy Miss Downside, and then fancies he prefers the pretty little gamekeeper's daughter to her, after all. Marion, having been Esterel's daily companion, is lady-like and well educated, and dreadfully spoiled and affected, and lives in a rapture of devotion to her "dear lady," and in humble admiration of Mr. Hillhouse. She wastes most of her time in wandering about in the woods, picking up primrose-buds and lovers—under the trees; and partly because Marion Fay is admired both by a clown and by an artist, Herbert determines to marry her. He is himself of low extraction, and by his own account has been a great scamp. He "is by this time not so young as he has been," and is by profession an author, but he lives habitually with Lady Winstay, who is very jealous, but very considerate, and who spends her time in inventing messages for Bramblebridge Hall. Esterel, of course, fancies Herbert comes very often on her account, and walks about the garden in white embroidered gowns, with scarlet and gold shawls, and bouquets of exotics in her hand, and Herbert cannot help admiring her, though he likes still better the gamekeeper's daughter, with her lilac cotton frock and her bunches of primroses. Eventually he proposes to marry Marion; and Esterel persuades Marion to abscond suddenly and si-

lently, leaving no trace of her hiding-place, that she may thus secure this highly-favoured swain. To preserve her dear mistress from madness or suicide, Marion consents, and really does the thing handsomely. For months no one, not even her parents, can find out anything about her, and Herbert the inconstant once more turns his attention to the heiress. They arrange everything most satisfactorily, and go to town for the *trousseau*; but, in the shape of a "milliner's young woman," who should turn up again but the troublesome Marion! Esterel then gives Herbert his choice of returning to Marion or marrying her. Knowing her tendency to insanity, Marion declares she no longer loves Hillhouse, who swears for his part that he now loves Esterel the better of the two, and will marry her or nobody. At this juncture what can poor Esterel do but go mad on the spot, get Marion to nurse her, and implore Herbert to console her humble companion after her death? After making a great merit of his remaining single for two more years, the author eventually marries off her couple, the old gamekeeper comforting his daughter with the reflection that, "if Herbert can only love her now with half a heart, it may be that this half she gains now is less unworthy of her than the whole she lost before."

The Brigantine: a Story of the Sea. By James Pascoe. 2 vols. (Bentley.)—The title of this book suggested pleasant thoughts of Capt. Marryatt's sea tales and of the inimitable 'Tom Oringle's Log.' Our anticipations have been cruelly disappointed. The plot is meagre and badly worked up, while the style is often obscure and ungrammatical. The scene is alternately laid in the Indian Ocean and on the coast of Ireland. The story turns upon the adventures of a brave but unprincipled money-loving pirate, a Burmese Christian Missionary, and a pair of Burmese lovers, pupils of the latter. The pirate pursues, almost throughout the book, a career of rapine and violence, occasionally redeemed by a good deal of bull-dog courage, and one or two acts of kindness. When within a few pages of the end, his ship is lost in a typhoon, and he himself thrown on a barbarous coast in an utterly destitute condition. We are told that he then becomes a good Christian and most estimable man—his virtues resembling, we imagine, very much those of a tiger who has lost his claws and teeth. The missionary gives utterance to some startling moral and religious precepts, and bores us unceasingly with commonplace remarks. The Burmese lovers, after a few adventures and perils, are, of course, married at last. The above are the principal characters of this book; and it speaks badly for the skill of the author that not one of them is able to engross our sympathies. Even in the midst of the greatest dangers, our interest remains dormant. In fact, there is no hero in the book; no one with whom a reader is able even for a moment to identify himself. Our interest is frittered away among half-a-dozen people, scarcely one of whom possesses that individuality which we expect in the leading characters of a novel. Moreover, the work is full of improbabilities and inconsistencies, while the pantomime-like changing of scene is wearisome. Devoid of continuity, it is but a collection of episodes, so badly worked up that the danger does not alarm us, the strife does not excite us, and the virtues do not call forth our admiration.

At Odds: a Novel. By the Baroness Tautpheus. 2 vols. (Bentley.)—The first novel of this lady, with its excellent and faithful pictures of German life, gave us reason naturally to expect much from the Baroness Tautpheus; but she seems to be one of those "single-speech" authors (there are such novelists as well as orators) who give out their whole store of experience, fancy, eloquence, with one effort, and thenceforth have little or nothing left for the profit and pleasure of themselves or their neighbours. Yet the scene and the time of this her latest tale—Bavaria and the Tyrol during the period of the French inroad under Napoleon—are rich and new as regards material; especially when this is handled by a novelist who, German by alliance, and as such admitted to every family secret and local tradition of the district and the crisis, can still look on these things from the English point of

view, and thus bring them home to our hearts and hearths as no national German romancer could hope to do. The battle of Hohenlinden,—the siege of Ulm,—the adventures and the triumphs of Hofer among those noblest of Continental peasantry, the Tyrolese,—are so many ingredients for fiction precious to one circumstanced as Madame Tautpous has been, and who, with intimate knowledge of foreign parts, writes for an English public. She has, however, made little of them, merely using them as the framework for story of love affairs "at odds"; and the story becomes tiresome, because its writer fails to present to us any of the personages whose caprice or perversity, or renunciation of antipathies, or growing tenderness, are the main theme of her novel. Nothing is too minute for the hand of a real artist. Miss Austen spoke of her "bit of ivory" when referring to her own inimitable novels of every-day life; but on no larger a bit of ivory Oliver, Petiot, Isabey, painted miniatures which will endure for all time, as portraits, of those whom the world will not willingly let die; and thus it was with Miss Austen. The Baroness Tautpous does her best to make us interested in the fortunes of two pairs of lovers, one of which gets married by mistake or misunderstanding; but we cannot care for either Hilda or Doris, nor for Frank and Emmeran, because we have not the remotest idea what either the ladies or the gentlemen were like;—and because, from the first, we were sure that the last page of the romance must put an end to unintelligible difficulties, and perplexities leading to nothing. Nothing can be much more tiresome or less mysterious than a masked ball, where the people are vapid and the dresses are faded, and the visors worn so thinly that, long before supper-time (the time of unmasking) a bystander, having a willing mind and a keen eye, could name the wearer of every mask. This is an insipid novel, to make the best of it, and we are disappointed accordingly.

OUR LIBRARY TABLE.

Cassell's Popular Natural History: Vol. III. *Birds*; Vol. IV. *Fishes, Reptiles, Insects, Worms, Molluscs, &c.* (Cassell & Co.)—This work is now completed, and we can repeat our opinion of its merits given in former notices. The work will mainly be prized for its engravings, many of which in the parts before us are excellent; but the figures as well as text bear such strong marks of book-making and careless editorship that we can but regret that such an excellent opportunity for the publication of a first-class work on Natural History has been lost. In the Bird Volume, for instance, no uniformity in the figures exists; on one page a bird will be figured of life-size, and on the next another bird of much larger size will appear in a small cut, forming apparently part of a series from some other work. In the Fourth Volume we must object to the plates in pages 20 and 21, illustrating the crocodile; in the former the upper jaw of the creature is represented as having a large mass of matter attached to it, half the size of the head, whilst on the opposite page the old fable of the Trochilus picking the teeth of the crocodile is represented as though it were matter of fact. The plate of the winged dragon, occupying nearly the whole of page 32, is a failure,—the limbs being far too coarse, whilst the great peculiarity of the animal, namely, the ribs extending through the dilated wing-like membrane, is entirely misrepresented. The insect portion, also, is full of mistakes, some of the most ludicrous of which are corrected in the errata; but others are unnoticed,—as, in page 188, the wonderful Hypococephalus beetle is called a Scarabeus. In page 192, *Blaps mortisuga* is called a Tenebrio, adding to the strange confusion made by figuring an Acaridan as the beetle of the meal-worm (*Tenebrio molitor*). In page 196 an exotic species is given as an illustration of the account of our common musk-beetle. In page 199, "The earwig and her young" is the title of a drawing representing a male earwig and a number of specimens of the small earwig (*Forf. minor*). In pages 207 and 208 our common great green grasshopper is given twice over as an illustration of two different families, whilst in page 212 another kind of grasshopper from Bogotà is given

as the common Brazilian lantern-fly. In page 226 the family of the white ants is introduced amongst the Hymenopterous insects, and in page 243 two different British species of humming-bird hawk-moths are given under the same specific name. In page 249 gall-flies of oak-apples are described among Dipterous insects; whilst the excuse in page 344 for the introduction of a figure of the lappet-moth on a leaf, inscribed "Gall on a leaf," only renders the error more absurd. The classification given in the text is full of confusion, which is attempted to be cleared up by a systematic Index at the end of the volume, which is scarcely more correct. Thus, it is evident that there is abundant room for a good Zoological work, in which the classification shall be clearly illustrated and a due proportion maintained in the space to be devoted to the different classes. Such works as Patterson's 'Zoology for Schools,' Burmeister's 'Zoological Hand-Atlas,' or Prof. Greene's Series of Manuals would form excellent bases for such a work.

Rinaldo: a Dramatic Poem, in Three Acts. By Chandos Hoakyns Abrahall. (Hodson & Son.)—We need not read far to find that the author of this poem has no dramatic faculty whatever. But we have read the book through, and have not discovered a single line of poetry. Nothing is drawn from Nature, not even the blood which is spilled so profusely. The type of the hero may be found in that style of Art wherein T. P. Cooke figures, all in his spangled glory, as the Knight of the Bloody Shoestring, with a dagger in one hand and a drawn sword in the other.

Happiness and Life. Poems. By Thomas Alexander. (Griffin & Co.)—Another of those many sad cases for which the advice of friends, &c. seems to be responsible. How much these friends have to answer for! Why will they insist that the coy authors of helplessly commonplace verse should importune the public!

Tales and Sketches of Lancashire Life. By Benjamin Erierley. Parts II., III. and IV. (Manchester, Heywood; London, Simpkin, Marshall & Co.)—We are glad to see that Mr. Benjamin Brierley has brought to an end his series of provincial tales, which may at some distant date be highly esteemed by antiquaries as truthful and carefully-executed illustrations of the Lancashire Dialect of the nineteenth century, though they may not be commended by the contemporary critic either as pictures of real life or as works of imagination.

Studies by a Tyrolese—[*Studien eines Tirolers, von J. Streiter.*] (Leipzig.)—In these days of mountaineering a book with the above title would naturally be taken as a contribution to the literature of the Alpine Club. Probably the Gross Glockner and the Orteler are the heights which have been studied; or if anything scientific is expected from the title, it is a disquisition on the glaciers of the Tyrol. But a member of the A. C. who should take up Herr Streiter's volume with such ideas would be as much disappointed as the country gentleman who made a strange perversion of Foxe's 'Book of Martyrs' into Martyr's Book of Foxes. Herr Streiter is the leader of the liberal party in Tyrol, and his studies are purely political. They will not surprise any who have followed the course of Tyrolese action; but to those who have preserved the old tradition of patriotism and generosity, as displayed against the French in 1809, a woeful disenchantment is in store. It was not against French invasion that the Tyrolese took up arms. Herr Streiter tells us, but against the annexation of Tyrol to Bavaria; nor was this on loyal grounds towards Austria, but on account of the liberal reforms that had been effected by the Bavarian Ministers. Herr Streiter is sore on the subject of education, and he has good reason to be. He tells us that the priests have, or had till lately, the sole power of teaching the young Tyrolese idea how to shoot, and that, in consequence, the Tyrolese are not as eminent marksmen intellectually as they are with the rifle. His copies of all the best German authors—Goethe, Schiller and Lessing—were confiscated; his teacher seized him by the hair and flung him down on the floor because he was going to see a tragedy of Alfieri's; and he had a serious discussion with another teacher as to

whether Homer was or was not a lubber. These recollections have filled him with a certain bitterness against priestly education; and the general system pursued in the Tyrol, of which he gives copious instances, only strengthens him in his antagonism.

Histoire de Nice et des Alpes Maritimes. By J. Napoléon Fervel. (Paris, Jung-Treuttel.)—In this slight sketch of the history of Nice, M. Napoléon Fervel cautiously justifies the policy of annexation which has created for the French Emperor more odium than *éclat*. On this point M. Fervel's reasoning will not make many converts.

As a means of preparing for the next Oxford Local Examination, Mr. M'Leod has issued—at rather a late period for the purpose—*Thomson's Spring: with a Life of the Poet, Notes Critical, Explanatory and Grammatical, and Remarks on the Analysis of Sentences* (Longman).—The Examiners complain, in their Report of the last Examination, that the candidates betrayed great ignorance of the poem selected for their study. If they have occasion to make the same complaint this year, it will not be for want of a suitable text-book. Whoever is well up in the contents of Mr. M'Leod's manual cannot fail to satisfy the Examiners in this subject.—We attach no special value to Mr. J. Lowres's *Grammar of English Grammars* (Longman), which is an indifferent compilation of commonplace materials.—Nor do we think more highly of *How to Train Young Eyes and Ears, being a Manual of Object-Lessons for Parents and Teachers.* By Mary Anne Ross. (Hamilton, Adams & Co.)—A teacher who requires such teaching as is here given must be a rare specimen.—*English Composition in Prose and Verse, based on Grammatical Synthesis.* By W. S. Dalgleish, M.A. (Edinburgh, Gordon)—is a more useful publication, full of clear explanation, well-chosen examples, and serviceable hints and directions.—*Book IV. adapted to Standard IV. Chambers's Narrative Series of Standard Reading-Books specially adapted to the Requirements of the Revised Code*, like its predecessors, is everything that could be desired for the special purpose in view, and may be used with great advantage as a means of education in general.—A similar remark is applicable to *Ductor in Unum Puerorum Latinae Linen insistentium.* Edited C. A. Johns, A.B. (Longman), which is a good Latin verse-book for beginners.—We close our list with *An Improved Principle of Single Entry Book-Keeping, by a Proof or Trial Balance.* By D. Sheriff. (Longman), and *A Handbook of Phonography.* By E. J. Jones. (Partridge).

LIST OF NEW BOOKS.

Ahn's Method of Learning French, 2nd Course, 8vo. 1/6 cl.
Allen's Young Mechanic's Instructor, 8vo. 2/6 swd.
Archer's Wayle Summers, Story of Inner and Outer Life, 3 vols. 2/1
Art's Adventure, 8vo. 3/6 cl.
Barker on Malaria and Miasmata, 8vo. 8/1
Barlee's Helen Linday, or the Trial of Faith, 2nd edit. 8vo. 2/6
Bowman's Our Village Girls, 18mo. 1/1 cl.
Braddon's Lady Audley's Secret, 9th edit. post 8vo. 6/1 cl.
Donaldson's Events of a Soldier's Life, new edit. 8vo. 6/1 cl.
Cassell's Illustrated Family Bible, roy. 4to. 2/6 cl.
Cobbe's Essays on the Pursuits of Women, post 8vo. 5/1
Cooper's Miles Wallingford, or Adieu and Ashore, new edit. 1/1 swd.
Curling's Wondrous Tale of Zadaak Beg, post 8vo. 3/1 cl.
Donaldson's Events of a Soldier's Life, new edit. 8vo. 4/1 cl. gt.
Esquirol's The Dutch at Home, 2nd edit. post 8vo. 9/1 cl.
Gudrun, a Story of the North Sea, from the German, 8vo. 9/1 cl.
Henry's Joseph Anstey, or the Patron and the Protégé, 8vo. 7/6
Hooper's Recollections of Mrs. Anderson's School, 2nd edit. 2/6 cl.
Hope's The House of Seines, post 8vo. 5/1 cl.
Lane's Arabic-English Lexicon, Book I, Pt. 1, roy. 4to. 38/1 cl.

Wood on Rupture, Inguinal, Crural and Umbilical, 8vo. 12/6 cl.

HEAT AS A MODE OF MOTION.

Royal Institution, April 27, 1863.

I trust you will permit me to make a few remarks in connexion with the brief review of my Lectures on Heat which appeared in your last number. It is quite possible that my mode of treating the subject may be open to even graver criticism than that which your reviewer has bestowed upon it; but I should be extremely sorry if an alleged personal defect on my part should stand between the readers of the *Athenæum* and a generalization which they ought to be among the earliest to understand and appreciate. The dynamical theory of heat, forming as it does the most important part of the theory of the interaction of natural forces, is deemed by the most competent authorities of this age fit to stand, in point of importance, beside the Newtonian theory of gravitation. It is held, without misgiving, by the leading natural philosophers of all the countries of Europe. Had the theory still to be discussed, I should never have presumed to bring it before the public as I have done. But proofs of it of the most varied and conclusive character have been accumulating for the last twenty years, until they have at last disarmed all opposition. This theory must not only be the future guide of the practical engineer in his applications of heat as a motive power, but in its more purely intellectual bearings the theory must profoundly affect the whole course of philosophic thought and inquiry. It, moreover, opens up views of vital phenomena, and of the organization of the material universe, which cannot be regarded with indifference by any thinking man; and it is for these reasons that I have endeavoured, as far as in me lay, to divest the subject, without injuring it, of technical difficulties, and thus to render it accessible to the intellectual public of England.

The passage which your reviewer has done me the honour to quote is the most highly coloured in the book. It reads, indeed, more like romance than science; and nothing is more natural than that it should stagger those who have not closely followed the developments of modern physics. It may be, and probably is, open to the charge of unnecessary iteration, but certainly no coolness or calmness on my part could add to the substantial truth of the statements therein contained. When, for example, I say that "every fire that burns and every lamp that glows dispenses light and heat which originally belonged to the sun," I mean to express a *fact*, and not a figure of speech. The heat of every fire in London is as much a part of the sun's heat as if every glowing coal had been taken by a tong from the body of the sun and put into our grates; and the sun's heat has been diminished by the exact quantity emitted by our fires. This seems very wonderful, but it is only a small part of the wonders which the dynamical theory of heat lays open to our view. The lifting of a weight from the earth is a commonplace act; but it is an act of the same mechanical quality as that performed by the sun when he lifts the oxygen from the carbon of carbonic acid gas, and permits the latter to store itself in the boles, branches and leaves of our trees. It is the solar force thus invested in the vegetable, that afterwards becomes the source of all animal power. Muscular force is simply the sun's force transmuted. The helmsman stands at the wheel, but he cannot add one jot or tittle to the motion of the ship. He directs, but cannot create. Equally ineffectual is human volition, or the organic processes of the animal body, to generate one unit of mechanical force. All such force is primarily derived from the sun. These are the latest verities of science, and, read in their light, the passage quoted by your reviewer will not appear extravagant. I may add, that these considerations are confined to the twelfth lecture of the course, and that the work embraces the relationship of the dynamical theory to all the phenomena of heat. It is, moreover, so written that the reader who wishes it may also make himself acquainted with the old theory. Indeed, the old theory comes out with greater vividness by its contrast with the new one. JOHN TYNDALL.

ANNE HATHAWAY'S COTTAGE IN THE YEAR 1624.

6, St. Mary's Place, April 27, 1863.

THE curious deed respecting Anne Hathaway's Cottage, printed in the *Athenæum* of the 11th inst., had hardly been published before I had the pleasure of discovering a still more interesting document illustrative of its history,—an inventory of the furniture of the cottage, or rather of the then farmhouse, as it existed in the year 1624: a list in the main, no doubt, of the same articles which were in the house in the latter days of Shakespeare. There are few existing documents more illustrative of the domestic economy of our ancestors than ancient inventories, and the present one tells us more of the social position of the Hathaways than any yet published. A little chapter might be written upon it, and with its assistance in the hands of a descriptive writer the chambers traversed by Anne Hathaway made to reassume their ancient character. Perhaps even more than one article herein mentioned has been preserved up to the present day. The important "joined bedstead," valued, with its accessories, at no less than three pounds,—a large sum for such an article in those days—we may believe, without a great exercise of faith, to be the carved Elizabethan bedstead now shown at the cottage, and the authenticity of which, as a piece of furniture originally belonging to the Hathaways, seems to be indisputable. The chest, and possibly one of the forms, are still in existence, but the former is not now at the cottage. Bartholomew Hathaway appears to have owned no plate, contenting himself with eight pieces of pewter, then a favourite and valued article of table furniture; nor is there a mention of the stately "cupboard." The inventory exhibits him, indeed, in the light we might have anticipated, of a substantial well-to-do farmer of the period, occupying his own land, of a plain English yeoman of the olden time, one not affected to luxury, new fashions or display.

The present inventory was exhibited in the Peculiar of Stratford-on-Avon, on December the 6th, 1624, by John Hathaway, the testator's son and executor. Dr. John Hall, the poet's son-in-law, and Stephen Burman were the overseers of Bartholomew's will, to each of whom he bequeaths the sum of 2s. 6d.

While on the subject of the Hathaways, it may be well to refer to a paragraph lately inserted in the Warwickshire papers respecting a portrait supposed by some to be a likeness of Anne Shakespeare. This portrait belongs to a person of the name of Bryan, who lives in a small cottage at Alveston, and whose wife is a descendant from some branch of the Hathaway family. I had the curiosity a few days ago to inspect this supposed Shakspearian relic, but it is certainly a painting belonging to a much more recent period. It is right to add, that there was not the slightest attempt on the part of Mrs. Bryan to exaggerate the importance of the relic, the history of which was simply that it had belonged to her grandmother, who always spoke of it as a portrait of one of the Hathaway family, without, however, being aware of the name of the lady represented. The picture is of interest to a Warwickshire collector; but unless it could be shown to be a portrait of one of the descendants of Anne's father, it can hardly be thought to be of any Shakspearian value.

The present document is only one of many of more or less importance in regard to the personal history of Shakespeare, his family or connexions, which are just now almost weekly occurring through new sources of information which have recently been opened. That we shall ever recover any documents to reveal any, much less the deeper, mysteries of the mind of the author of 'Lear' and 'Hamlet' is indeed unlikely; but I believe it will eventually be in my power to throw so much new light on the outlines of the poet's material life, that those who come after me may, from my dry accumulation of materials, compose a biographical account of Shakespeare more satisfactory than any which has yet appeared. J. O. HALLIWELL.

An Inventory of the goodes chatelles and credits of Bartholmew Hathway of Shotery in the

County of Warr: deceased, taken as they were prayed by Steven Burman, William Richardsons, and John Edwardes the xxvij.th day of October, 1624.

THE SPECTRE DRAMA.

Blackheath, April 27, 1863.

ALLOW me to state, with reference to the ghost scene now performing at the Britannia Theatre, that it is my invention which is there used, as adapted by Prof. Pepper for stage effect. My invention of an arrangement for producing certain optical illusions is calculated to supersede the magic lantern and all phantasmagorical and other apparatus hitherto employed; for whereas they only produce a motionless visionary figure, I associate on the same stage a phantom with a living actor, both different in costume, &c., and both acting in concert. Thus the scene may show them as sitting at the same table, on the same couch, opening the same cabinet, handling the same document, and, what is more, so seated in the same chair as to appear but one figure, yet seen one to arise out of the other, to go through different performances. The phantom character of one of such actors is shown by impregnability, passing through walls or furniture, or slow or quick dissolution. But effectually to fulfil these conditions would require a small building purposely designed for such performances, and therefore much credit is due to Prof. Pepper in having overcome the many obstacles presented by an ordinary stage.

These optical illusions are of a character calculated to disabuse the public mind in regard to the vulgar errors respecting apparitions, a belief in which has deprived many of reason; but which, as in this instance, may be realized by art, and, when occurring naturally, are mostly traceable to generally-known physical causes. HENRY DIRCKS.

PRIMEVAL MAN.

21, Park Crescent, April 25, 1863.

I do not see that Sir Charles Lyell, in his reply to my statement in your issue of the 4th inst., has rebutted any of the main points there urged. He appeals to the public, and announces that he has reproduced his work as it was. Good. I abide by my statement, Sir Charles by his. The case, which touches the ethics of scientific literature, will now rest with the men of science who are conversant with the merits of the question. In their hands I leave it; but there are points in Sir Charles's letter which call for explanation.

The complimentary letter and concert are easily disposed of. The former was the usual note of acknowledgment of a presentation copy with which I was honoured, written within a few hours of the receipt of the work. The opinion expressed on the perusal of one of the last chapters, did not necessarily involve, by synecdoche, the same opinion on the twenty-three other chapters which I had not read. On the 9th of March I wrote to Sir Charles that his account of what had been done in *re-agitating the question and conducting it to proof*, was so different from the view I took, that it would be necessary for me to say something in a separate form. He promptly replied that if I would point out where he should mention me, and what papers, he would do his best. It was not, however, a case of notice of papers or citations. Citations were already profuse to triviality; the world was even gravely informed (p. 179) who told Sir Charles the well-known English scientific work in which he would find an account of the habits of the living African hippopotamus, while weightier matters were forgotten. It was the cast of the subject as set forth in entire sections of some of the early chapters; the exceptionable account given in some cases of the labours of others; and the want of precise definition between his own observations and generalizations and those of his contemporaries that I objected to. I therefore declined the offer, and informed Sir Charles that Mr. Prestwich had availed himself, in part, of my intended communication to set himself right at the same time. The concert was avowed, being that of two inquirers who had long been engaged in pursuing a common object, which was more in discredit when they took it up than it is now.

When you quote words in inverted commas, you profess to do it exactly. A slight liberty may alter the complexion of a passage. One of my sentences ran thus: "The world at large is under obligation to those philosophers who, like Sir Charles Lyell, communicate the new results of science to the educated public, but they are expected to give an impartial narrative; and it cannot," &c. In Sir Charles Lyell's letter I am cited, in inverted commas, as putting it thus: "That some men are occupied in communicating the new results of science to the educated public, but it cannot," &c. The alteration has doubtless been made inadvertently in the heat of the moment; but it communicates an asperity to the passage for which I am not responsible. As regards my remarks on Sir Charles Lyell's account of the Brixham Cave investigation, I have nothing to alter. He was a member of the Committee, and all the documents were open to him. Prof. John Phillips, then President of the Geological Society, and of the Committee, can, with the other members, say how far Sir Charles's account fairly gives the facts of the case. There certainly has been some delay in the publication of the final results of the investigation; but Sir Charles has been incautious of statement in his attempt to cumulate the *onus* of it on me. A rational report, on a subject of the kind, is not a thing of discordant atoms,—of shreds and patches pinned together. His *brusque* remarks will doubtless awaken the Committee,—himself among the number. That the expenditure has already been not altogether unprofitably repaid by the results, is sufficiently proved by the fact that the present advanced state of the subject is in no inconsiderable degree owing to the impulse given to the investigation by the preliminary report before alluded to (*Athen.* No. 1849, p. 460, col. 1), and by the letter, dated November 1, 1858, which drew Mr. Prestwich to Abbeville. Another not very remote

consequence has, probably, been the production of Sir Charles Lyell's work itself.

Sir Charles complains that "by an unfortunate accident," I had only given one line of his introductory sentence respecting the Sicilian caves, and that by this "strange oversight" I had, although unintentionally, misrepresented him. The abridgment was done purposely, for brevity: I shall now give the details, and the reader will judge to what effect. Marine deposits, with shells, occur on the floors of certain of the Gower caves. My range of reading indicated no corresponding case within the European area, except the celebrated Cave of San Ciro, close to Palermo. I determined to examine it, before communicating my paper on the Gower caves. I was disappointed; the cave deposits of San Ciro were so disturbed that the evidence of the marine layer had disappeared, the pholad borings alone remaining. I had to search elsewhere along the coast, and discovered the "Grotta di Maccagnone," till then unknown, even to instructed Sicilians, and which has yielded such important information respecting the antiquity of man. The only ossiferous caves, on the north coast of Sicily at that time mentioned in geological works, were those of San Ciro, Belliemi and Ben Fratelli, all within the immediate environs of Palermo, and described by the Abbate Scinà and others thirty years ago. By personal observation and research, I traced the evidence of numerous other ossiferous caves along the north coast of Sicily; and, in my "Maccagnone" paper, I fixed on two points as conveniently indicating the boundaries. The published Abstract opens thus: "Dr. Falconer first described the physical geography of that portion of the north coast of Sicily in which the ossiferous caves abound, namely, between Termini on the east, and Trapani on the west. The geological structure of the tract had been ably investigated and mapped by Hoffmann" (*Quarterly Journal of the Geological Society*, 1859, p. 99). On turning to the 'Antiquity of Man,' I found the passage reproduced thus: "Geologists have long been familiar with the fact that, on the northern coast of Sicily, between Termini on the east, and Trapani on the west, there are many caves containing the bones of extinct animals." (Op. cit. p. 174.) I commented on it in the terms cited by Sir Charles Lyell (*Athenæum*, p. 460). He has managed by his mode of stating the case to put me in the wrong with your readers for a brief space; they can now judge who is open to the rebuke administered by him to me, bearing in mind that the known occurrence of three ossiferous caves at one point, Palermo, is something different from their abundance in the long stretch of coast between Termini and Trapani, being the fact brought forward by me.

Sir Charles Lyell charges me with "want of fairness of spirit," for objecting in my postscript (*Athenæum*, p. 460) to my name being coupled with the list of fossil mammalia given at pp. 216-17 of his work. I maintain my objection, and do not leave it to the Rev. S. W. King or to Sir Charles Lyell to decide for me what per-centage of accuracy and what of imperfect or uncertain determination I should assent to my name being appended to.

My connexion with the subject is of an older date than Sir Charles Lyell appears to be aware of, judging from his remarks (*Athenæum*, p. 524, col. 3). In 1831, I communicated a paper to the Asiatic Society of Bengal on Mammalian Fossil Bones from Ava ('Gleanings in Science,' vol. iii. p. 167, 20th April, 1831). In 1838, supposed human bones, from the "ancient alluvium" of the valley of the Jumna, were figured and imperfectly described in India. They were of vast antiquity, and occurred low in the section, mingled with fossil remains which I afterwards determined to be of extinct species. The subject excited lively interest in India, and Mr. James Prinsep (erroneously, I believe, on the evidence) pronounced in favour of man, as a fossil animal. In 1844, Sir Proby (then Capt.) Cautley and myself communicated to the Zoological Society a memoir on the "Gigantic Fossil Tortoise" of India, in which, after discussing the question from various aspects, the following conclusion is announced: "The result at which we have arrived is, that there are fair grounds for

entertaining the belief as probable, that the *Colossochelys Atlas* may have lived down to an early epoch of the human period, and become extinct since:—first, from the fact that other Chelonian species and crocodiles, contemporaries of the *Colossochelys* in the Sewalik Fauna have survived; 2nd, from the indications of mythology in regard to a gigantic species of tortoise in India." (*Proceedings of the Zoological Society*, London, 1844, Part xii. p. 85.) The germ of the same idea, however trivial, is contained in a 'Memoir on Fossil Quadrupeds,' dated Nov. 24, 1836 (*Geological Transactions*, Second Series, vol. v. p. 503.) In 1855, I was at work on the "Jumna fossils," expressing the opinion that "I considered them to be the most promising of results bearing on the human period." ('Descript. Catal. of Fossil Remains,' *Museum of the Asiatic Society of Bengal*, Calcutta, 1859, p. 7.) In 1856 I was discussing the subject with M. Boucher de Perthes; and since then I have been more or less continually engaged upon it in connexion with the cave evidence. Throughout, the little I may have done has been in the affirmative aspect; on the other hand, I may remind Sir Charles Lyell, that until after June, 1859, when the subject was launched as a proved case, he had constantly maintained the negative view,—in the 'Principles,' in his 'Second Visit to the United States,' on the Natchez case (vol. ii. p. 196), and in his Anniversary Address to the Geological Society, 1851, p. lxvii. "L'Homme fossile de Denise" was brought forward by Aymard in 1844. (*Bullet. Geol. Soc. de France*, 2^{me} Série, tom. ii. p. 107.) Rigollot's account of the "Instruments on Silex trouvés à St.-Acheul," was discussed by the Geological Society of France, in January, 1855, and discredited. (Op. cit. tom. xii. p. 112.) It was only after June, 1859, that Sir Charles Lyell's conversion was declared. Mr. Prestwich's researches and my own may have had little effect in bringing about the change, but they certainly immediately preceded it.

My *cartel* was specially confined to the "immediate subject of the proofs of the antiquity of man." Sir Charles Lyell has met it with a salvo of concentric fire from every battery he could command: but not one of them bearing on the object. On one point I cannot allow myself to be put in the wrong or misunderstood—namely, my full appreciation of the long-continued and important services which Sir Charles Lyell has rendered to geology. They have graven his name indelibly on the science. The consciousness of this well-assured and universally-recognized position might have warranted him in dealing ungrudgingly, and even generously, by the labours of his contemporaries; and men of science might have been spared the pain of the present controversy. The public, general and scientific, are indifferent to personal discussions, unless they involve a principle. My previous letter (*Athen.* No. 1849, p. 459) sufficiently indicates what principle I came forward to maintain. The day has gone by, when scientific works could be written in the style of Louis Quatorze: *La Géologie; c'est moi!—l'Antiquité d'Homme; c'est moi aussi!* H. FALCONER, M.D.

ORIGIN OF SPECIES.

Mr. Darwin's notes on the modification of species, given in our impression of last week, call for a few observations. We differ from such a naturalist as Mr. Darwin with respect; but the science which he cultivates is only in its infancy; and from the conflict of opinion we shall confidently expect the truth to appear.

The "similarity of pattern in the construction of the limbs of the great class of Vertebrata," with the like evidences of unity of plan in the organization of the Articulata; the resemblance of the different vertebrate classes to each other in their embryostate, and of all classes in their ovum state—and most of the other generalizations cited by Mr. Darwin, have been established by careful and sufficient induction, and are the well-earned fruits of such labour. They may seem to be explained or to be "connected by an intelligible thread of reasoning" on the supposition that one species engenders another, or on the hypothesis of the genetic relationship of all

species with a common ancestor. Lamarck adduced the facts of the change of size and shape of parts by exercise and by disuse to explain the passage of species to species, viewing them as transitory conditions of life; but, according to observation, the Lamarckian conditions of change are too limited to originate a species. Mr. Darwin assigns the tendency to variation in individuals as sufficing in time, and with concurrent external conditions, to bring about all the various forms and grades of vegetable and animal life; but observation teaches the limits to which variation extends in regard to the genetic powers and characters of a species. Neither this, nor any better attempt to explain the transmutation of species, would entitle the guesser to appropriate to himself the application of the genetic relationship of species to a better comprehension of the cause of unity of plan, and of other established truths in biological science. The conformity of type in recent and extinct animals of circumscribed localities would be equally intelligible on the assumption of species being the offspring of species, whether under Lamarck's, or Geoffroy St.-Hilaire's, or 'Vestiges,' or Darwin's views of the way in which such genetic relation was brought about. Observation has only, however, made us acquainted with the power of the individual to engender others of its own kind. But to arrogate for a hypothesis of the *modus operandi* of "transmutation" all the consequences and applications of the old and often-mooted notion of the engendering of species in the abstract, is a large assumption, and lets a new light into the character of the mind that indulges in it. The different generalizations cited by Mr. Darwin as being "connected by an intelligible thread of reasoning" exclusively through his attempt to explain specific transmutations, are, in fact, related to it in this wise: that they have prepared the minds of naturalists for a better reception of such attempts to explain the way of the origin of species from species.

Our application of Heterogeny to the production of Foraminifera pre-supposed, as in Prof. Pouchet's exposition of the theory in the production of infusoria, the presence of binary and ternary compounds, which are due as a rule, to living acts; but the results of organic chemistry show that life is not, or may not be, essential to the production of organic compounds. Howsoever produced, or originally created, the organic matter is widely diffused over earth and sea, and the conditions of its assumption of the sarcoidal or monadic forms and acts of life are a legitimate subject of inquiry, in no degree exploded by the inadequacy of such conditions to the production of a shell-fish or insect. Prof. Pouchet has prosecuted the research chiefly by the way of exclusion,—by his most ingenious contrivances and combinations to prevent or test the presence of the hypothetical atmospheric spores and germs to which Mr. Darwin with other homogenists would ascribe the appearance of living monads in infusions or sediments of organic substances. Mr. Darwin condemns the observer and expounder of the heterogenous operations in such ooze as finding therein a fitting hiding-place for the obscurity of his ideas; but the unprejudiced student of Prof. Pouchet's 'Hétérogénie' will acquit him of being open to that sneer. This work, of 672 pages, was published in the same year (1859) as Mr. Darwin's 'On the Origin of Species': to which it offers a striking contrast in the absence of mere speculative views and of expressions of feelings of belief and conviction, devoid of the grounds or proofs of such convictions. A conscientious history and close analysis of the course of human thought on Hétérogénie are promised; the rest of the work is a model of calm, clear and close philosophical experimental research and exposition. The 'Hétérogénie' resembles the 'Origin of Species' in this respect, that it aims, in the chapter devoted to the variability and temporary nature of species, to refute the arguments of Cuvier, De Blainville, Dumeril, and Lyell (p. 510), for the fixity of species. Prof. Pouchet discusses the three predicaments; viz., the origin of each species by creation as such,—their successive appearance through secondary laws,—their derivation from one unique, primitive, and only created species. This last hypothesis Prof. Pouchet

rejects (p. 503) and Mr. Darwin adopts—each independently of the other.

A finite intelligence cannot ascend to the first beginning of organic matter, or of the living being, or of the elements which compose a complex crystal. The prevalent belief rests on the acceptance of the revelation of the creative acts; and these the Pentateuch teaches are of two kinds—"the waters brought forth abundantly the moving creature that hath life,"—"the earth brought forth grass," &c.; but of man it is written, He "breathed into his nostrils the breath of life."

We deem the recent evidence adduced by Pouchet, Joly, Musset, Schaufhausen, Mantegazza of Pavia, Wyman (of Boston, U.S.), sufficient to show that, in reference to the origin of the lowest forms of life, the first expression best accords with the little which it has been given to us to know on this subject.

OUR WEEKLY GOSSIP.

THE spuriousness of the pretended discovery of a human bone in the drift, to which we last week drew attention, has since been confirmed by Dr. Falconer. M. Boucher de Perthes allowed Dr. Falconer to bring away the molar found with the jaw-bone; and when suspicion was aroused as to the genuineness of the "find," the English physician had this molar sawn across, when it turned out to be a modern tooth.

In the discussion which followed the reading of his paper last week at the Royal Society, the Astronomer Royal mentioned that the remarkable change which had taken place in the phenomena of terrestrial magnetism as observed at Greenwich since 1845, was such as might be expected to take place were the climate of the northern hemisphere to become more wintry in its character, while that of the southern hemisphere remained unaltered. It is already on record that Sir John Herschel considers the climate of the earth to be undergoing a change due to some cosmical cause. Is there any connexion between his conclusions and those of the Astronomer Royal? To those who take interest in the progress of terrestrial magnetism as a science, it will be gratifying to know that Mr. Airy expresses himself decidedly in favour of long-continued simultaneous observations in various parts of the globe. With series of observations extending over many years it becomes possible to institute comparisons, to note fluctuations and disturbances, and to discover something of their laws; while short and broken series baffle investigation, and harass the inquirer to no useful purpose.

Mr. Layard has received intelligence that Messrs. Speke and Grant have arrived at Khartoum, in Upper Egypt. The news comes by telegram from Alexandria, and is provokingly brief. We know, however, that these enterprising travellers started from Zanzibar on an exploring expedition; their course has consequently been through eastern and central Africa to Khartoum: and it is highly probable that they will be able to tell us, when they come home, the mystery of the Nile.

By the last mail from Africa we learn that Messrs. Chapman and Baines have effected their passage across from Walwich Bay to the Zambesi. Orders, it states, have been received in Africa for the recall and breaking up of the Livingstone Expedition.

The ceremonial of uncovering the Memorial of the Exhibition of 1851, on the 10th of June, 1863, has been prepared. The guests will assemble at the West Dome of the International Building. The Royal party will arrive at four o'clock, and will be conducted to a platform under the Western Dome, whence they will proceed down the nave to a balcony over the southern entrance of the Royal Horticultural Gardens, where the Council of the Society and the Executive Committee of the Memorial Committee will present addresses. The Prince of Wales will order the uncovering of the Memorial, which will be announced by a flourish of trumpets and a salute of artillery, after which military music will be performed and the fountains will play. The Royal party, headed by the procession, will walk round the Gardens, stopping at various points to see the Memorial and

the Garden. In the event of rain, the line of procession will keep under the cover of the arcades. The Exhibition Building will be thrown open to the visitors to the Garden.

We must correct a slip of the pen last week. The inscription on the urn presented to the Poet-Laureate by Her Majesty's Commissioners should have read:—"Her Majesty's Commissioners of the International Exhibition of 1862 present this urn to Alfred Tennyson in grateful remembrance for his gift of pure and noble song, 1st of May, 1862."

Mr. C. Dickens will preside at the anniversary festival in aid of the funds of the Royal Free Hospital, to be held at the Freemasons' Tavern, on Wednesday next, the 6th inst.

The Annual Dinner of the Institution of Civil Engineers has been fixed for Wednesday, June 10, at the Freemasons' Tavern.

A General Meeting of the Camden Society will be held this day (Saturday), at four o'clock in the afternoon precisely. The Marquess of Bristol, V.P.S.A. will be proposed for President, supported by an effective committee.

Her Majesty has signified her approval of the design recently described by us for the Albert Memorial Cross, by Mr. G. G. Scott, and Parliament has voted 50,000*l.* towards its completion. The Lords' Committee on the proposed Albert Bridge across the Thames, has expressed itself unwilling to sanction, without a stronger case than was shown in that instance, the erection of a new proprietary bridge, with tolls in perpetuity; it was of opinion that it was of urgent importance that the whole question of bridge accommodation should be considered with the special object of abolishing all tolls. The Putney and Fulham New Bridge Bill has been thrown out in favour of Fulham Bridge, to be on the western side of the existing structure.

We can have no objection to allow the following note of courtesy to appear in our columns. Our reviewer was well aware of the subscription to which Mr. Foster invites attention; but the great fact remains, that the Royal Academy left its own peculiar work undone for years until the Society of Arts took it up, and when it began to act at all consented to occupy a second place. Would the Royal Society have acted thus in regard to any of the great interests of science?—

"30th April, 1863.

"In the review of Mr. Underdown's book on Art Copyright in your last number, your reviewer is pleased to compliment the Society of Arts on its labours in obtaining the Copyright Act of last session, though somewhat too exclusively. The Society cannot in justice to others pass over this without notice. Your reviewer could not be aware, indeed I do not know that it has ever been published, that the Royal Academy contributed 40*l.* and the Society of Painters in Water Colours 20*l.* towards the expenses incurred in connexion with the obtaining that Act. The Society's Committee received much valuable personal aid from the President of the Royal Academy, who acted as chairman, as well as from several other distinguished members of that body.

"P. LE NEVE FOSTER, Secretary."

A portion of the grant of 20,000*l.*, voted by Parliament for the erection of a wing to the Record Office, will be devoted to the building of a new reading and writing-room for the use of those consulting the records.

The Corrie Library has been sold by auction at the rooms of Messrs. Sotheby & Wilkinson. The collection was remarkable as containing most of the County histories. The books were generally in fine condition and realized very high prices. Amongst the lots were: Addison's Works, 4 vols., the Baskerville Edition, in red morocco, by De Rome, 17*l.*—Cook's Voyages, 9 vols., and *falso* Atlas, 19*l.* 10*s.*—Coryat's Crudities hastily gobbled up, 9*l.* 5*s.*—Ashmole's Berkshire, 24*l.*—Atkyn's Gloucestershire, first edition, of which many copies were destroyed at a fire at the printer's, 15*l.* 10*s.*—Byble printed by Whitechurch in 1541, wanting title-page and cut in several places into the text, 25*l.* 10*s.*—Blomfield's Norfolk, 5 vols.,

wanting some plates, 16l. 10s.—Dibdin's Decameron, 3 vols., large paper, 37l.—Dryden's Works, 18 vols., large paper, 15l.—Dibdin's Bibliotheca Spenceriana, 7 vols., large paper, 35l.—Clutterbuck's Hertfordshire, 3 vols., illustrated with numerous drawings and engravings, 620l.—Dibdin's Typographical Antiquities of Great Britain, 4 vols., large paper, 40l.—Dugdale's Antiquities of Warwickshire enlarged, by Thomas, 2 vols., 42l.—Enderbie's Cambria Triumphans, 12l. 5s.—Gregson's Portfolio of Lancashire Fragments, 7l. 15s.—Hasted's Kent, 4 vols., 16l. 10s.—Horsley's Britannia Romana, large paper, a work of great rarity, in one volume, folio, 40l. 10s.—Lysons's Environs of London and Middlesex Parishes, 5 vols. in 12, illustrated with numerous engravings and drawings, 500l.—Nichols's Bibliotheca Topographica, 12 vols., 75l. 12s.—Ottley on Engraving, 2 vols., large paper, 16l. 5s.—Hutchins's Dorsetshire, 4 vols., large paper, perhaps the rarest of the County histories, 85l.—Manning and Bray's Surrey, 3 vols., large paper, 23l. 2s.—Morant's Essex, 2 vols., large paper, 31l.—Morland's Account of the Vaudois, 12l. 12s.—Nichols's Leicestershire, 8 vols., large paper, one volume on small, 182l.—Ormerod's Cheshire, 3 vols., large paper, 57l.—Pennant's London, illustrated with drawings and engravings, 6 vols., 386l.—New Testament, translated by the English College at Rheims, the first edition, which contains many notes which were subsequently suppressed as heretical and dangerous, 13l.—Testament, by Tindale, 1536, imperfect, 11l.—Warner's Hampshire, 6 vols. in 3, 9l. 5s.—Sandy's Travels, on large paper, having been the dedication copy to Charles the First when Prince of Wales, 24l.—Shaw's Staffordshire, 2 vols., large paper, 42l.—Smith's Virginia, and Travels, 26l.—Stow's London, 2 vols., 8l.—Thoroton's Nottinghamshire, wanting the slip of arms, 19l.—Whitaker's Richmondshire, 2 vols., large paper, 36l.—A volume of Injunctions, Canons and Articles, 15l.—A Collection of Foreign Portraits, 510l.—A Collection of old Drawings, 110l. The rest of the books sold in the same ratio, the entire collection of 1,033 lots producing 4,409l. 6s. The sale of engraved British portraits followed. The following were among the more important:—Queen Elizabeth between the Pillars, 5l.—Princess Mary, Queen of Scotland, by Elstracke, 6l. 10s.—James the First, Enthroned, by Pass, 6l. 6s.—James the First, Seated, by the same, 4l. 15s.—Prince Rupert, by Bloeeling, 4l. 14s.—George Villiers, Duke of Buckingham, by S. Pass, 4l. 10s.—George Sheldon, Bishop of London, by Loggan, 3l. 11s.—Sir Philip Sidney, by Elstracke, 4l. 10s.—Sir Thomas Chaloner, by Hollar, 11l. 11s.—The Second Charles, Heir of the Royal Martyr, by Faithorne, 18l. 5s.—Queen Catherine, by the same, 12l.—Countess of Castlemaine, by the same, 36l.

A Parliamentary Return of great interest has been recently made of our colonial possessions. It possesses also the great merit of being authentic. We gather from this Return that our colonies—excluding, of course, India—comprise altogether 3,350,000 square miles, and cost us for management 3,350,000l., being at the rate of 1l. per square mile. They have an aggregate revenue of 11,000,000l., and a debt of 27,000,000l., or just two years and a half's income. They import goods to the amount of 60,000,000l. nearly, and their exports amount to 50,000,000l., of which three-fifths come to this kingdom. The population of these colonies is under 10,000,000, of which only one half are whites.

Orders have been given by the French Emperor for the restoration in the most comprehensive manner of the Cathedral Church of St. Denis, near Paris.

The restoration of Goethe's house in Frankfort has been commenced. The object of the *Goethe Stift* is to render the house what it was in 1749, when the poet was born in it, and what it remained during the years which he passed in it as a child. The small room at the top of the house, which was the boy's study, and which has for some time been shown to visitors in Frankfort, is being stripped of the papering that dates from the year 1836 (as is proved by a series of newspapers of that year being pasted at the back), and the old papering has been discovered under

several layers of subsequent imposition. The most curious result of this discovery is that the paper of 1754 bears the old colours of the German Empire, yellow and black: an additional testimony to the formal and deliberate character of that *geradliniger Frankfurter Reichsbürger* who was the father of Goethe, and of whom Mr. Lewes gives us so peculiar a picture.

An important contribution to Wallenstein literature has just been published in Vienna,—an account of the last four years of Wallenstein's life, by Friedrich von Hurter, the historian of Ferdinand the Second and biographer of Pope Innocent the Third. The question of Wallenstein's guilt or innocence has long been debated; and his descendants were so fully persuaded of the latter by a work written in his defence, that they petitioned the Emperor of Austria for a restoration of his estates, as having been unjustly confiscated. The Emperor did not, however, see the question in the same light, and the general impression has rather been on the side of the Emperor. This present work is written without any bias for or against; is based entirely on researches made in archives, and contains scarcely a line that has been printed before. The author goes into the fullest detail, describes the transactions of every single day—not only what Wallenstein did, but also what he left undone—and a comparison of the high-sounding words with the smallness of the deeds confirms the unfavourable view of Wallenstein's character. It is curious to observe that the popular idea of Wallenstein, as a secluded, taciturn, brooding spirit, living in the stars and conferring little with the outward world, is proved to be thoroughly incorrect. True, he was fond of the extraordinary, but this was only to excite wonder in others. He descended to the smallest details of practical life, especially in money matters; so far from fitting out an army at his own expense, he took care to recover every farthing of his expenses; and in managing his estates he showed the most careful thrift, going through household accounts while conducting extensive political correspondence, and keeping a reckoning even of his fowls and geese. Perhaps Mr. Herman Merivale's new theory about Wallenstein, that he was a great impostor, a humbug of enormous pretensions, whose whole demeanour savoured of that intimate combination of enthusiasm with jugglery which imposes most successfully on mankind, startling and bold as it may seem, is not without confirmation from this volume. It cannot but strike readers of Schiller's History with surprise that nothing is done by the Imperial army so long as the first captain of the age is at its head, but that as soon as Wallenstein is murdered and a noted bungler succeeds him, the Austrians begin to win a series of victories.

BRITISH INSTITUTION, Pall Mall.—THE GALLERY for the EXHIBITION and SALE of the WORKS of BRITISH ARTISTS, is OPEN DAILY, from Ten till Five, and will CLOSE on SATURDAY, May 9.—Admission, 1s. Catalogue, 6d. GEORGE NICOL, Secretary.

INSTITUTE OF PAINTERS IN WATER COLOURS (founded in 1881 as the New Society of Painters in Water Colours).—THE ANNUAL EXHIBITION is NOW OPEN.—Gallery, 53, Pall Mall, opposite Marlborough House. JAMES FAHEY, Secretary.

FRENCH GALLERY, 130, Pall Mall.—THE TENTH ANNUAL EXHIBITION of PICTURES, the contributions of Artists of the French and Flemish Schools, is NOW OPEN.—Admission 1s.; Catalogue, 6d.

THE LAST SUPPER, by Leonardo da Vinci.—THE RESTORATION of this, the finest Picture ever conceived or painted, ON VIEW at the GERMAN GALLERY, 106, New Bond Street.—Admission, One Shilling. A Sketch of the Life of Da Vinci, and a Critical Analysis of 'The Last Supper,' by a distinguished Writer, Sixpence. Will open on Monday.

Mr. EDMUND YATES'S INVITATIONS to EVENING PARTIES and the SEASIDE.—A SPIRIT-RAPPING SÉANCE. An entirely New Part, entitled 'Twenty Minutes with a Medium,' will be given every Evening. Medium, Mr. Yates; Visitor, Mr. Power. There will also be several new arrivals at the Seaside. To commence at 8: Saturdays at 3.—Stalls, 2s.; Area, 2s.; Balcony, 1s.—Egyptian Hall, Piccadilly.

MRS. FANNY KEMBLE'S READINGS of SHAKESPEARE.—Dudley Gallery, Piccadilly.—Mrs. FANNY KEMBLE will continue her READINGS of SHAKESPEARE every Monday, Wednesday and Friday Evenings.—On Monday next, May 4, will be repeated (by desire) the Play of 'Henry the Fifth'; Wednesday, May 6 (also by desire), the Comedy of 'As You Like It'; and on Friday, May 8, the Tragedy of 'Richard the Third.'—In compliance with numerous requests the Readings will, in future, commence at Half-past Eight o'clock.—Reservations, 2s.; Stalls, 6s.; a few Fauteuils, 7s. each.—Mitchell's Royal Library, 23, Old Bond Street.

LEVIASSOR EN VISITE.—SCÈNES ET CHANSONS COMIQUES.—Every Tuesday, Thursday, and Saturday during the month of MAY, commencing on TUESDAY NEXT, May 5, at Half-past Eight o'clock.—Programme: 1. Le Mari au Bal, M. Levasor.—2. Est-ce Tout? Mlle. Telesire.—3. Les Cocasseries de la Danse (Parodie des Danses de Salon), M. Levasor.—4. Le Monde tel qu'il est, M. Levasor.—5. Comment on mène son Mari, Mlle. Telesire.—6. La Mère Michel au Théâtre Italien (Parodie Bouffe), M. Levasor.—7. Le Mal de Mer (Scène Comique Nouvelle), M. Levasor. Piano-forte, M. Roosenboom.—Seats, Unreserved, 2s.; Stalls, 7s.; a few Fauteuils, 10s. 6d. each; Mitchell's Royal Library, 23, Old Bond Street, W.

SCIENCE

SOCIETIES.

ROYAL.—April 23.—Gen. Sabine, President, in the chair.—The following papers were read: 'On the Arrangement of the Muscular Fibres of the Ventricular Portion of the Vertebrate Heart, with Physiological Remarks,' by Mr. J. Pettigrew.—'On the Diurnal Inequalities of Terrestrial Magnetism, as deduced from Observations made at the Royal Observatory, Greenwich, from 1841 to 1857,' by Mr. G. B. Airy.—'On the direct Transformation of Iodide of Allyle into Iodide of Propyle,' by Mr. M. Simpson.—'On the Distillation of Mixtures: a Contribution to the Theory of Fractional Distillation,' by Mr. J. A. Wanklyn.

GEOGRAPHICAL.—April 27.—Sir R. I. Murchison, President, in the chair.—W. Hatfield, Esq., H. P. Le Mesurier, Esq., G. Loch, Esq., Lieut.-Col. J. C. D. Morrison, H. Salt, Esq., and C. F. Varley, Esq., were elected Fellows.—The President read a letter from Mr. Tinné, communicating later intelligence of the Dutch ladies who are carrying out an expedition up the White Nile.—The papers read were: 'Visit to Ode, the capital of the Ijebu Country, Western Africa,' by Capt. Beddingfield.—'Exploration of the Elephant Mountain, &c., Western Africa,' by Capt. R. F. Burton.—'Travels in Equatorial Africa, Gaboon, Coriso, &c.,' by W. Winwood Reade, Esq.

SOCIETY OF ANTIQUARIES.—Anniversary Meeting.—April 23.—Earl Stanhope, President, in the chair.—W. Smith, Esq., and J. W. King, Esq., were nominated scrutators of the balloting list.—The President delivered his annual Address.—The usual obituary notices of Fellows deceased during the year ending April 5 were read.—Lord Stanhope announced that the Prince of Wales had been placed with his consent on the Society's list in the room of the Prince Consort.—The ballot was taken in succession on the two proposals for altering the statutes in respect of the hour of meeting and of the hour of closing the ballot, as laid before the ordinary meeting of the 19th of March. Both these proposals were carried in the affirmative, so that the Society will now meet at eight p. m. on Thursday evening, and the ballot will close at 9:30 instead of 10 p. m., as heretofore.—The following gentlemen were elected to fill the offices for the ensuing year:—Eleven Members from the Old Council: Earl Stanhope, President; W. Tite, Esq., M.P., Vice President; O. Morgan, Esq., M.P., Vice President and Auditor; J. W. Jones, Esq., Vice President and Auditor; F. Ouvry, Esq., Treasurer; A. W. Franks, Esq., Director; J. Bruce Esq., W. D. Cooper, Esq., A. J. B. Hope, Esq., F. M. Nichols, Esq., M.A., and W. J. Thoms, Esq. Ten Members of the New Council: Sir J. P. Boileau, Bart., Auditor; Dr. W. Smith, Auditor; Lord Aveland, W. H. Black, Esq., R. R. Holmes, Esq., Lieut.-Col. J. F. Lennard, R. H. Major, Esq., C. S. Percival, Esq., H. Reeve, Esq., Prof. A. P. Stanley; C. K. Wilson, Esq., Secretary.

ZOOLOGICAL.—April 21.—E. W. H. Holdsworth, Esq., in the chair.—Letters were read from Dr. G. Bennett and Mr. F. Williams relating to the probability of obtaining living examples of *Didunculus strigirostris*. Mr. Williams stated that he had a living specimen of this bird in his possession, which he was intending to convey to Sydney by the next opportunity.—A letter was read from R. Gunn, Esq., of Launceston, Tasmania, announcing the shipment of a living female Thylacine, with four young ones, for the Society's menagerie.—Mr. F. Buckland made some observations 'On the Variations of the Growth of Salmon,' and exhibited specimens illustrative of his remarks.—Dr.

Günther called the attention of the Meeting to some living Tree Frogs from Queensland, Australia, brought home by Mr. E. Daniel, which appeared to be of the following species: *Pelodryas carolena*, *Hyla Ewingii*, *H. citropus* and *H. Verreauxii*.—The Secretary announced the arrival in the Society's Gardens of a fine collection of Gallinaceous Birds from India, partly presented to the Society by the Baboo Rajendra Mullick, and partly deposited by J. J. Stone, Esq. and the Rev. J. Smyth. Amongst them were three pairs of the Teagopau (*Certhia sabyra*), the first examples of this splendid bird received alive in this country.—Dr. Sclater read a paper on the known species of the family Phasianidae and their geographical distribution. The list given enumerated fifty-six species of these birds, twenty-six of which had been already, at different times, exhibited in the Society's Gardens.—Mr. Blyth gave a notice of a new species of stag from Siam, which he proposed to call *Cervus Schomburgkii*.—Mr. A. Newton exhibited a remarkable exemplification of the manner in which seeds might be occasionally conveyed to a distance by birds, in the shape of the foot of a red partridge which had a large mass of clay, weighing more than six ounces, attached to it.—A communication was read from Dr. G. Hartlaub, containing a list of birds collected by Capt. J. E. Speke at Kazeh, in Eastern Africa, among which were several species new to science.—A paper was read by Dr. W. Baird, entitled 'Description of New Species of Worms.'—Dr. Gray pointed out the characters of a new Lemur from Fernando Po, proposed to be called *Galago pallida*, and of two new genera of Lizards: 1. *Holaspis*, a form allied to *Placocoma* of Fitzinger, of which the type was proposed to be named *Holaspis Guentheri*; and 2. *Porio dactylus*, allied to *Xanthuria* of Prof. Baird. The specimens on which these genera were based had been purchased in Paris and presented to the British Museum, with the MS. names attached by Sir Andrew Smith.

INSTITUTION OF CIVIL ENGINEERS.—April 28.—John Hawkshaw, Esq., President, in the chair.—The paper read was 'The Charing Cross Bridge,' by Mr. H. Hayter.

SOCIETY OF ARTS.—April 22.—Rear-Admiral the Hon. J. Denman in the chair.—The paper read was 'On the Construction of Twin Screw Steam-ships,' by Commander T. E. Symonds.

MEETINGS FOR THE ENSUING WEEK.

- MON. Asiatic, 3.
- Entomological, 7.
- Architects, 8.—Annual General.
- Royal Institution, 2.—General Monthly Meeting.
- TUE. Horticultural, 1.—Exhibition of Sculpture.
- Ethnological, 8.—'Natives, Vancouver's Island,' Dr. King and Prof. Busk; 'Wild Tribes, Interior of Malay Peninsula,' Père Bourcier.
- Engineers, 8.—'American Iron Bridges,' Mr. Colburn.
- Royal Institution, 3.—'Sound,' Prof. Tyndall.
- Photographic, 8.
- WED. Geological, 8.
- Society of Arts, 8.—'Bread-making and Condition of those Employed,' Dr. Wrayner.
- Society of Literature, 8.
- THURS. Linnean, 8.—'Two Aquatic Species of Hymenoptera,' Mr. Lubbock.
- Chemical, 8.—'Constitution of Salts,' Dr. Playfair.
- Antiquaries, 8.
- Royal, 8.
- Royal Institution, 3.—'Geology,' Prof. Ansted.
- FRI. Astronomical, 8.
- Royal Institution, 8.—'Soils of England,' Prof. Voelcker.
- SAT. Royal Institution, 3.—'Language,' Prof. Max Müller.

FINE ARTS

ROYAL ACADEMY.

FRESHENED, it may be, with the impetus got at the International Exhibition, or profiting by the completion of works that should have gone to the Royal Academy last year, the authors of the present collection in Trafalgar Square have made it considerably above the average. It is so, not through the presence of any commanding picture, such as sometimes characterizes an Exhibition in our memories by its title, but in the healthier, because more uniform, value and interest of many very excellent works. The Exhibition gains much from the presence of nearly every leading painter in England. Some are adequately represented, others not so; but, with three exceptions among men of the first rank, there will be found something of more or less importance from all

The exceptions are Mr. Mulready, who is still engaged upon the large painting exhibited last year in an unfinished state, and upon minor matters; Mr. MacIise, whose year has been occupied by the oil picture for the great stereo-chrome subject, 'The Death of Nelson,' in the Parliament House; and Sir E. Landseer.

To sum up the gathering by naming the works of its best men, regardless of schools, opinions or conventional standing, we may say that Mr. Stanfield sends five pictures, all coast scenes, the results of long-made memoranda; these have their subjects from the countries wherein he has most frequently found materials,—England, Spain, Holland and Italy. Mr. Millais is in force with three paintings, two of which are of humorous character and more solidly executed than has been his recent wont. Mr. Elmore has two pictures, small; Mr. Hook three, coast subjects from the Scilly Islands; Mr. Phillip two: one commissioned by the Speaker, comprising portraits of the political leaders of the day; also a Spanish subject. Mr. Leighton has four: one very large, a Scripture theme; a second, above the average size—a lady feeding peacocks—remarkable for its exquisite colouring and delicacy of painting; a third, one of those lovely heads which he so frequently has produced. Mr. Poole sends a small work. Mr. Faed has three pictures: an orange girl; a subject from an old ballad; and a domestic scene, of humorous character. Mr. E. M. Ward gives us two pictures, and shows an inclination to return to his early and better style,—both from themes such as he has often treated; and remarkable for the novelty of their defined incidents. Mr. F. Goodall has four works: studies of Oriental character and a view in Cairo. Mr. Armitage's single picture is a pathetic representation of an incident in early Christian history. Mr. Frith has a small picture; Mr. Holman Hunt a portrait, and a small fancy subject: one remarkable for character and strength of painting, the other for brilliancy and spirit. Mr. Creswick sends four landscapes, of unusual interest. Mr. E. W. Cooke has three, the chief a very remarkable study of a sand-drift at the east of Gibraltar. Mr. Cope sends two pictures; Mr. Redgrave three; Mr. Lee five. Mr. Marks will advance his reputation with a picture of the Shakspearian time, showing the dramatist studying human character in the streets of Elizabethan London. Mr. Calderon's production, showing the interior of the English Ambassador's house in Paris during the Massacre of St. Bartholomew, August 24, 1572, gives him a claim to the title of an excellent artist. Mr. Gale sends a work painted in Jerusalem,—the Wailing Place of the Jews at the wall of Solomon's Temple. Mr. Watts has a poetically suggestive subject and a portrait. Messrs. J. P. Knight and Wells send valuable portraits.

Let us give Mr. Stanfield the place of honour. The general character of his works is heightened above that of old, in added warmth of colour and less rigid handling. How great is this improvement we need hardly say. His most important picture represents the position of the English and captured Spanish ships off Cadix on the Day after Trafalgar (No. 123). A long line of the Andalusian coast stretches across the background, low, irregular, and generally white in colour. When the morning broke after that memorable day, it was with windy and troubled weather, perilous to the maimed victors and vanquished; some of the last, that barely escaped the fight, are believed to have been lost ere they could obtain a friendly shelter; even the English ships had been compelled to run for Gibraltar, in hourly fear of the enemy's lee-shore. The leading point of interest in the work before us is a demasted Spanish ship of the line, that, with anchors out from her bow, rides heavily and rolls deeply in the turbulent sea; it was not a storm, but a sharp, hard gale; there was danger to such a craft in that place, lest she should sink or should break from the holding-ground and go ashore, a prize lost to the English. To render aid in the former contingency and diminish risk of the second, an English frigate anchored inshore of her; so she is seen. Above the prize's taffrail is the Union Jack placed superior to her own ensign, the red and golden bars of Spain, the

crowned shield in the centre. Heeling to star-board, she shows her decks loaded with wreck, but half cleared away during the night; a wave has struck her on the port-bow, entering upon her deck; the force of the blow is finely expressed in her action, so to say. Somewhat removed from this is a ship still burning in the daylight, and other ships making their best way to the Rock. On the Coast of Calabria (94) has a similar, but more stormy, effect to the above; a *guarda costa*, with her rigging stowed low on deck, the great yards going fore and aft, so as to be a less conspicuous object to the smugglers she lies in wait for, is moored with a length of cable out, and rises easily on the seas. In the mid-distance is a felucca furling her tall sails in haste, probably having at the moment seen the craft lying in wait. Above, and as it were right out of deep water, rises a lofty and rocky coast; cliffs, in a nook of which, high up, is placed an ancient watch-tower; behind, and higher still, are mountainous and snow-capped hills. As an effective contrast to this, take next, *Oude Scheld*—*Texel Island* (177), a low shore, half mud, half sand, a river at low tide stealing to the sea; a warm glow as of Dutch sunlight, with which the artist has so often delighted us, is spread over all; deep grey and dun-coloured clouds lie behind a flat point of land, whereon are a signal-station and an old mill. Right in the front is a ship that, half a wreck, has been beached there; her broken masts lie in the sand. *Shakspeare's Cliff, Dover, 1849* (272) presents a subject that looks unfamiliar from the chosen point of view, but is perfectly faithful: this is the least interesting of Mr. Stanfield's works this year. The largest of all he sends is *The Worm's Head, Bristol Channel* (371), a headland, the strange appearance of which may have won it a title, long ago derived from the old Northern word *wurm*, "a worm or dragon," and appearing in other headlands not far removed, as in the Great and Little Orme's Heads. A towering block of white stone, that forms the crest of a sickle- or coil-shaped promontory, stands almost alone in the sea; the last runs fresh and restless at its feet, yeasty, and, by plunging, full of air that makes its blue brightness grey. The sky is marked with white spaces of pale sunlight, across which scowls a mass of rain-cloud.

Mr. Millais's moonlight interior will attract attention. *Madeline Disrobing* (287), from Keats's 'Eve of St. Agnes,' does not present that demoiselle of the fourteenth century who, before the gorgeously-hued window, "unclasped her warmed jewels one by one," and dared not look behind. Not a fourteenth-century lady in a fourteenth-century chamber unrobing herself to try St. Agnes' charm, not even a beautiful damsel retiring to rest in a chamber of her own age, say the sixteenth century, but rather a commonplace girl of our own day loosening her bodice after a ball in an old room of Jacobian date. There is a charm of execution about this picture which carries thought away from its absurdity. The anachronism is so thorough, being in the very features of the girl herself, that one soon gets rid of it to see how intense was the feeling that gave her such an expression of hesitating fear and eager amorous expectation of the charm's result. Before the tall curtains of the ancient couch, pillars of drapery that, beyond our sight, reach the roof, stands this woman, her hair loosened, her face flushed warm with accidental glow, her nervous fingers lingering at her waist-knots, a robe of blue and silver fallen about her feet, her figure bathed in pale light and stained with spaces of gules, azure and amethyst. The jewelled casket on the table at the window glitters in all its mouldings and inlays, and that high window marks its shape and dimmed blazonries upon the floor. Unable to get a fourteenth-century room with every accessory *in situ*, Mr. Millais has taken an old room and given us the sentiment of the subject as it might be while the charm had the force of faith. He has done this so well that all questioning is beside the matter, and we must take it or leave it. We cannot fail to see that the idea is as much the artist's own as that of Keats,—his best apology for adopting any ideas but such as are wholly his, and for borrowing even a text with which to illustrate his power. Mr. Millais goes to Knowle House and paints an ancient bed-room *as he saw it*, gaining

thereby something Keats himself had not when he wrote the passage describing the window, which for gorgeous verbiage has hardly an equal in the language. The excess of local colouring therein found, showing the poet studied his subject under an effect of sunlight and fancied it was similar in that of the moon, does not exist in the picture. In her light, the "splendid dyes" sink from "warm gules" to sombre purple-grey; "rose-bloom" is deepest crimson, and "amethyst" must come from pink of the palest hue.

Mr. Millais's smaller picture, *The Lions' Den* (498) shows some children playing at wild beasts. Three boys have efficiently wrapped themselves in skin mats: the eldest, with vigorous conception of his part, scowls prettily and makes claws of his little fingers; the younger is contented with a roar; a third crawls on his knees and hands, yowling as a bear. Self-centered almost to selfishness, a little girl, fair-featured, but with vanity of those features written in every line,—a beautiful study of such a child,—lies upon her back, heedless of the boys and all about her, playing with a flower-bell. A solemn grand piano keeps them in; its legs are the sides of the lions' den.—*The First Sermon* (7) we have already described: a red-cloaked damsel has been taken to church for the first time, and, bent with all her sex's will upon decorum, sits prettily prim and charming in steadfastness, yet hardly able to check her eyes from wandering.

Mr. Hook will delight everybody with three pictures, superior to those of last year, which we believe not equal to former productions. The most brilliant is (335), *Leaving at Low-water*, a deep, harbour-inlet of the Scilly Islands; the tide has run a good way off the beach and lies in the sunlight a vast enamelled space, marked with emerald-green and blue pure as the sky it reflects; grows grey where a ripple takes it, flashes with crests of snow that rise, and, as the wind shakes them, fringe of the sea as they are, lazily fall, drag and vanish upon the shingle. In all this luxury of sunlight there goes across the picture a rude stone pier, many-hued with lichens and sea-stains. Just off the beach lies a smack that will go away when the tide makes; towards her wades a sailor with a boy pick-a-back; about to wade also, a young woman takes off her shoes and stockings; two urchins have brought a basket of provisions. *The Sailor's Wedding Party* (219) shows a pic-nic by the sea-shore. The bridal party have come by water to a retired place; they land; one old salt, with a favour in his hat, hands out provisions; another spreads the cloth; a woman lights a fire; while the pair for whom all these preparations are made sit sunned in the light of each other's eyes, making believe to talk: their expressions of happiness are so whole, so intense in the mystery of feeling, that even in the picture the world centres itself round them. Sunny sea-side hills, bare of trees and beaten with many a storm, but almost solemn now in their richness and unity of colour; the fickle, wind-shaken sea, moving, but ever one, and the rugged road that leads from where they sit to the hill-top that the sun is last to be seen from when the day is done, all tend as to one centre—the human looks. This is a landscape or an idyll in colour; perhaps a psalm, if you will, or can, read it; certainly no sentimental thing. Your sentimentalist does not produce such things, but, wearing his heart upon his sleeve, would shudder to paint that loutish sailor bridegroom with the awkward hands, or the girl-bride, with her bright English face burnt in the sun. *Praun Catchers* (176) is the title of a picture showing two boys fishing in a salt pool of the sea-shore; a bare-legged girl comes down the rocks to join them, net on shoulder; all about are rocks, tide-bare and weedy; beyond, a delicious sea, making long, shallow waves, as with the force of some far-off storm, covered with broken reflexions of hills in the distance.

We congratulate Mr. Ward upon having quitted the heavier method of painting adopted in his Royal Commissions; he returns, fortunately, to his gayer manner in the picture *Hogarth's Studio*, 1739 (190), which has a subject admirably suited to Mr. Ward's system of painting and rule of feeling. The scene is a large room where the master of

humour might have painted, at the sign of the Golden Head, the house now the north wing of the Sablonière Hotel, Leicester Square. A bright throng of little ones has been brought there from the Foundling Hospital to see the portrait of Capt. Coram, which Hogarth painted for that institution. The portrait upon an easel. They are gathered about it; one, a chubby, English-looking girl, smart in her white pinner, cap and ribbons, is in the centre of the composition; she peers forward, holding her petticoats with childlike but needless caution, so that they may not touch the canvas. This is a pretty figure, and one of the best Mr. Ward has painted. In various attitudes, expressive of diverse characters, stand the rest of the children, some shy, some bewildered, some lost in admiration, others remarking upon the likeness of the well-known and genial face. One or two, boys, are slyly watching the progress of Mrs. Hogarth in cutting up cakes. Behind the portrait—an ample screen—stand the painter and the sitter, covertly listening to the critics. Other suggestive incidents are given in this excellent and manly picture, that will be popular, and is one which, being solidly painted and free from all sensational qualities, would not only make a good engraving, but be, in its healthiness, fit for engraving. *La Toilette des Morts* (124) is not equal to the last in solidity, but is even more effective. Charlotte Corday, Marat's destroyer, perhaps with too fine a face for that strange woman—David's medal having been probably taken for the literal likeness it is not likely to have been—sits in the attiring-chamber of the dead; a German portrait-painter, who occupied her last hours with a sitting, has placed his completed work before her; behind stands the gaoler, whose office was to cut off her hair. Half turned round in her chair, one hand clasped over the back of the other, interlacing its fingers, and both fast to her knee, she looks earnestly at the picture, with an expression well conceived and very pathetic. In breadth of treatment and massing of colour this work should win high praise: see the black robe upon the floor, the red cloak and white dress, how well and vigorously they are treated. Mr. Ward will do well to correct the drawing of Charlotte Corday's face; it is unsatisfactory, indeed mars the expression.

Mr. Elmore's *Lucretia Borgia* (130) shows that woman according to the popular ideas, with gorgeously-ornamented dress, bold, sensuous and sensual features, exuberant form, her expression marked with passion, the eyes dark-ringed, mouth strong and coarse. She is standing before the entrance of a chamber, draws back the hanging that hid the door, and seems watching some event within, or is about to peep through the opening. In her left hand she grasps a little vial. Behind her stands a bravo, a good presentation of his class, dagger in hand. There is strong perception of character in this work,—see the resolved looks that in themselves betray an irritable character at fret within, the expression of a snake; the eyes have a cruel and heavy look, yet are bold and hard. Many of the textures here, as the velvet robe, are strikingly painted. *A Nun* (324) is the antithetical subject of the companion picture this painter has contributed, such a woman with a book; not a satisfactory work from him.

Mr. Phillip sends *Agua Bendita*, Scene at a Church Porch (23), a study of Spanish character. Before the holy water stoup affixed at the gate of some ancient church two parties of contrasted stations in life have met: a young lady brings her infant, her husband stands behind, looking on; while from the child's fingers a kneeling gipsy woman takes the water, and of course with it the expectation of a blessing. Mr. Phillip's power of dealing with Spanish character and his treatment of the same are too well known for us to need to say that this picture presents all those qualities for which his works are remarkable. In sentiment, free from sentimentality, it expresses all there is to tell in the subject: the mother is proud, with gentle Spanish pride; the child infantine in glee, although, it may be, a little too intelligent for its age and size. In execution the work is broader than usual with the artist, free from the blankness of barely-filled spaces that sometimes mars his work, and while powerful

as ever in colour, tends with unusual healthiness to grey, the management of which was the secret of the power of Mr. Phillip's great master, Velasquez. Mr. Phillips also sends a picture containing portraits of the political leaders of the day, *The House of Commons, 1860* (87),—a rich and bold work. Undoubtedly the public would welcome a little variety in theme and style from this painter.

Mr. F. Goodall continues to profit by his brief residence in the East. His picture of *The Palm Offering* (515) represents an Arab widow, who has come, with some branches of palm in her hand, across the Desert to the grave where her husband lies; she bears upon her shoulder their naked little son, a boy of about three years; he is seated partly upon the shoulder, partly upon the palm of her upraised hand, a common method of carrying male children from place to place. Her dress is blue-black, embroidered; her black veil is thrown back behind the head-dress; her face is therefore bare; upon it it is impossible not to read the artist's power of rendering expression. None of his previous works gave promise of such success in pathetic painting as the half set-in-sorrow, half-subdued features of the woman, which give us the picture's motive admirably. It is customary in the East for widows to come on the Friday after the funerals of their husbands to their graves and there deposit branches of palm, green and fresh,—a custom similar to that which obtains in other parts of the world, with regard to the decoration of graves with flowers. In the East, the Arab lies anywhere, where he may happen to fall it may be; so the painter has shown us the rough sand-heaps of the Desert round about this woman, which is intended to be that part near Cairo. In praising the pathetic expression of this work, we may congratulate the artist upon almost getting rid of a certain varnish and over-smooth look of surface to which his style tended; its dryer and more solid system of production points towards the right direction. An equality of surface is always to be regretted in Art; it deprives painting *per se* of one of its greatest technical charms, and makes a work look too much like a mere picture. *The Opium Bazaar, Cairo* (166), gives a street view of picturesque elements, treated in a low key of solidity in handling and colour. Now, it seems to us that these qualities of execution are most needed to deal with such subjects as an Oriental street furnishes, because variety of surface (which is only to be got by solid treatment), of tone and of colour are the most striking characteristics of such localities, those in pursuit of which the artist goes when he takes them in hand. We cannot, therefore, but regret that Mr. Goodall, with considerable power of execution, has dealt rather weakly with a capital subject. *A Nubian Coffee Bearer* in a Cairo coffee-shop (419) is a small picture, showing a negro, dressed in all the tawdry finery his race delights in, hastening to a customer who demands coffee. There is a good deal of action in this figure, but its surface is objectionable on account of over-sweetness and unity of character. A fourth picture, entitled *An Egyptian Tambourine Girl* (268), completes the list of Mr. F. Goodall's contributions.

Widely removed from similarity in subject, there is some neighbourhood in the style of painting followed by Messrs. Goodall and T. Faed. The last is more solid in his manner; using, it may be, more pigment, his surface is infinitely richer; he is a better colourist, but does not affect to draw so carefully. Of all technical powers, drawing is prized most highly by painters, and should never be contemned while we hope to found or continue a school. As the first adopts a low key for flesh, and sins against the richness of nature, the second of these artists goes to the other extreme. We do not say he exceeds nature in the depth and intensity of his flesh-colouring, but that he localizes his high points or tints too much, and sometimes goes very near fruitiness in its hues. The artists of Edinburgh, where Mr. T. Faed studied, have never recovered from the importation of that luscious over-sweetness of surface, that too rich and juicy application of the pigments, which Wilkie brought home from Spain. In Mr. Faed's hands this method has almost approached a style;

with his weaker contemporaries and countrymen it is a mere manner. Harvey was the most happy in dealing with it, for he occasionally got solidity, depth and surface with colour; but it often led him astray. Its origin appears to be an attempt to follow a noble ideal and combine the luminousness of manner,—of which the picture by Decampa, now in the French Gallery, styled *Valuers and Appraisers*, is amongst the finest modern examples,—with the more solid texture and lighter tone of Velasquez and other Spanish masters. As yet the effort has succeeded only in marking the pictures of Scottish artists with a manner which is often the reverse of sound, learned and delicate in execution. Mr. T. Faed is a humorous painter; like most successful ones, he is often fortunate in tragic presentations, witness his 'From Dawn to Sunset,' here in 1861. Improving in artistic power, he has quitted the sentimental subjects which made his works popular, and dealt with humour or with sorrow; this year he deals with both. *Train up a Child, &c.* (213) shows one of those cottage interiors we know so well. Before the window sits a working man with his little one perched on his knee, and busily sewing on a button to the wrist of her father's shirt; with heedfully compressed mouth she goes to work, while the not less heedful and tender man holds his wrist still, and looks on with pleasure. Another child squats on the floor where the work-box is placed and tumbles over its contents. The young mother stands by the fireplace, in the centre of the picture, and sees the experiment proceed well. All about are the filthy picturesqueness and the rich disorder of a Scotch cottage. *The Silken Gown* (377) has for subject the ancient story of sacrificing a girl to an old but wealthy suitor. She is seated in a chair, at a table; beside her stands the mother, urging her daughter's acceptance of the suitor, and enforcing the case by the sight of a showy silk dress. In an inner room the girl's father and admirer, the last a high-collared old fellow of ridiculous appearance, are seen in deep conversation. The girl's face is expressive in its pathos and its evident resolve to have nothing to do with the old man, his collars or his dresses. A wheel for spinning is beside her; with mechanical action she has drawn an unbroken thread from it.—A third picture by Mr. Faed is *An Irish Orange-Girl* (273),—a strapping wench, with a basket of fruit on her head, standing at the corner of a street. This picture's style is less obnoxious to the charge of over-sweetness than either of the foregoing; it is solid, and has much excellent colour throughout, as well as character and national beauty in the face.

SOCIETY OF PAINTERS IN WATER COLOURS.

THIS Exhibition is the most charming and brilliant that we have seen in the gallery. Compared with the works of twenty, or even ten, years ago, the improvement in technical results is extraordinary. Unable to attain the lucid jewel-like depth of oil, the water-colour painters seem determined to reach the tender inner light and pearly greyness which are the peculiar charms of fresco painting. Their art is fresco in another form and on another ground. Mr. F. Burton and the Messrs. Fripp show ability to deal with fresco in the wonderful luminousness, and, above all, in the delicacy of their perception of grey, the universal harmonizer. *The Town of Llan Ogwen* (No. 24), by Mr. G. A. Fripp,—the *Boy with Game* (254), by Mr. A. D. Fripp,—and, most of all, Mr. F. W. Burton's gloriously painted head of a Greek woman, *Iostephane* (273),—show how nearly the extremes of Art may meet.

The last-named drawing, which is the most attractive item in the Exhibition, represents the head of a very beautiful woman, with pale chestnut hair, wavy, gold in the lights, and green in the reflexions, as such hair is; she is crowned with a garland of violets; a white robe covers her neck and shoulders. The title, no less than the woman's face, suggests the theme. The face turns towards us over the shoulder; the eyes are downcast, their lids flushed as with excess; the lips are full and passion-stained with purple hue; the nose is of the purest Greek form. The drawing of the whole countenance indicates the noblest structure of that

noble race in its square firm lines, full chin, broad jaw and forward brow. The flesh-painting of this work is one of the most complete triumphs of executive art we know: the roundness, brilliancy and delicacy of the work are beyond praise. Mr. Burton has at once put water-colour painting of the figure on a new footing, and higher than it ever stood before. *German Lilacs* (234), by the same, also rejoices in brilliant colour and tone. A German flower-girl kneels in a market-place, with a basket of lilacs before her. The effect is sunlight, admirably rendered; see the texture of her dress, the beautiful harmonies of its green apron, &c., and treatment of the basket's shadow on the last. The flesh a little lacks solidity, but is otherwise beautiful no less in painting than in expression and form.

Mr. A. D. Fripp shows himself as heedful of colour and tone as he has ever been. His *Boy with Game* (254), a lad marching over a moorland with game on his shoulder and in a bag, is not alone a delightful study in Art, but in its truth to nature recalls one of her most exquisite phases. Glowing and misty sunlight, often as it has been painted, has never been more admirably done than here. All things about the figure seem absorbed, not lost, in the delicate veil that harmonizes every hue and renders tender every texture. *Watching the Porpoises* (125) shows a trio of gleeful youngsters clambering about sea-side rocks, under a similar effect of sunlight as in the last, but brighter and therefore warmer. They look out to sea at the gambols of the black fellows. Their expressions are capitably rendered and full of bold humour.—Mr. G. A. Fripp is a master of landscape-painting under a somewhat limited system of practice. Like his brother, he is, or has been of late, a little too restricted in choice of themes. None could wish Welsh mountain scenery by the one, or misty sunlight by the other, to be more exquisitely painted, nevertheless we believe that to run upon one effect and one set of themes is a mistake. By the last *The Town of Llan Ogwen, on the Road from Bangor to Capel Cârigrig* (24) is an admirable picture of a lovely scene: hills shut in the town upon a little plain, across which a swift river has cut a trench; the houses huddle towards the water. Hills are not often so successfully painted as here; notice the exquisite pearly greyness that lies upon their colour, a finely-rendered phase of nature, and sound in Art, as it does not mix with, but overlays their colour. The distant hill-tops are not less beautiful in treatment than are the houses; the rushing river deserves ample study. *Old Windmill, Eastbourne* (110), is a perfect jewel of composition in forms, and, if we may so say, in colour. A boarded, weather-beaten mill stands upon a little knoll; nothing can be more subtle than the gradation and tenderness of tint in this work, nor anything more faithful or simple. By this painter are several other drawings, executed in the same spirit and with like success.

Mr. J. Gilbert's contributions do not this year so much exceed in *bravura* as usual. His *Don Quixote's curious Discourse upon Arms and Letters* (18) shows the hero seated at the table delivering that noble lecture. The people are ranged before him; some of the faces have that felicitousness in rendering character which often distinguishes the painter. The Don himself is excellent. *Malvolio washes off Gross Acquaintance* (29) is a much less fortunate presentation of Shakspearean humour than the last is of Cervantesian. Malvolio is coarse and commonplace, not whimsically stately, as he should be; Maria is not the gay chattering she was. Mr. Gilbert has forgotten that Malvolio had been in office many years, was a sort of a gentleman, had been trusted with all his master's fortune, and lost himself through airy vanity.—Mr. W. Goodall's *Le Reliquaire* (148), an old mendicant showing a decorated begging-box, as usual, fitted with figures of the Virgin, &c., is somewhat sentimental in the expression of the suitor, where there was an opening for humour in the personation, and a little petty in the too pretty faces of the damsels who look at the box; it is, nevertheless, more solidly painted than before, brighter, and shows improved perception of colour; the tones lack depth and clearness.

Mr. J. J. Jenkins's *After Vespers, Brittany* (131), a young Breton countrywoman going home at twilight and coaxing her child to "come along" the road, has a great deal of prettiness and is solid in painting, but is similar in subject to former works of the artist. *The Murmuring Brook* (264), a lady of the French régime wearing a sac, her hair turned back, seated by a rivulet and meditating over a "book of old romance," is pleasantly painted in the artist's solid manner; the flesh is a little too purple: being cooler, it would go better than it now does with her crimson robe. Mr. Jenkins's successful appearance this year as a landscape-painter shows that he has until now neglected a valuable gift. His *Clearing up* (157), after a storm over a flat country, a river smooth and bright running through the picture, is, although a little painty in parts, as the stacked corn on the bank of the stream, capitably done; the sheeny water in its many phases of reflexion is as true as it is beautiful. The slaty clouds are fine in mass and treatment. A little lucidity and transparency of painting will improve this artist's style immensely.—Several of Mr. Oakley's sketches of character deserve examination for their feeling of latent humour, occasional pathos and good expression. See his *Gipsy at a Spring* (102). His *Cottage at Old Windsor* (89), although having one of the most commonplace of themes—a cottage-gate, gable and chimney-stack, &c.—is a bright and pleasant drawing of natural effect of sunlight.—Mr. F. Tayler sends *Hawking* (140), a gathering of sportsmen and villagers about a fallen heron, a large drawing, treated in a manner most unsatisfactory to the student who dislikes mere sketching. His *Woodland Scene, with Dogs and Game* (78) more honourably represents him: its canine character is undeniably good, so far as it goes. On the whole, these works are fitter for a young lady's scrap-book than to cover the walls of an important exhibition of pictures; pictures they are not, lacking colour, thought, heedful drawing, and all the qualities of painting *per se*. Like the works of Messrs. J. D. Harding and Branwhite, these serve to show what was the ordinary level of water-colour art twenty years ago: they are finger-posts now almost left out of sight on the road of study. They serve to show how really able men, if not content to refresh their minds from Nature, but persisting in drawing upon the stores of their own memories, find those stores finite.

Mr. F. Smallfield will recover his position, somewhat imperilled of late, with the capital flesh-painting of No. 210, *Shilly-Shally*,—a young bather who has gone so far towards his bath as to undress and sit on the stream's bank. His nervous expression, the puckered, doubting brow, the hands clasped in fond imagination of a swim, the in-turned knees that seem to shudder, are well studied; the drawing is excellent. More brilliant than this is *Farfallina* (255), the charming picture of a girl trifling with a pair of splendid chrome-coloured butterflies, which, in solemn procession, their glorious vans hoisted and trembling as they go, pass under the narrow gateway her parted fingers make upon the top of a low garden-wall. The serious fancy of the girl's face, her dainty air and graceful attitude are fantastically beautiful. The flesh is good; the Indian feather-robe she wears, in itself a little *outré*, is brilliantly painted, but hardly solid enough to be agreeable or at first sight understood. The artist's *Study of Colchicum, &c.* (302) is delicately coloured.

Among the landscapes here a world of beauty is to be found, and examples of many methods of producing it. On every side are proofs of the growth of the practice of studying from Nature, direct and wholly, and, of the non-success, those drawings which are obviously not so derived, suffer to the eye. Even the power and skill of Mr. Carl Haag cannot persuade us that his panoramic view of *Palmyra* (186) is wholly, or even mainly, true. There is a want of keeping in the substances of parts,—the desert, the ruins and the sky,—which is unsatisfactory; the second seems least solid of the three; the third heaviest; while the first is certainly too much divested of colour to be natural: desert herbage, near a river such as here, is

less like stucco in colour than Mr. Haag paints it. Excusing this work from the claims of nature for portraiture—what else can make it valuable?

Mr. S. P. Jackson is one of the most literal of painters; his pictures are portraits strongly and vigorously taken. Those Yorkshire coast-scenes present the places with admirable fidelity, which, if a little monotonous in effect, is prized at a higher rate than questionable "effects," and desert compositions that smell so strongly of the lamp. Mr. Jackson's *Filey Brigg* (54) is photographic in its truth of forms, and a capital study of atmospheric character. *Dutch Fishing-Boats on Filey Beach* (104) is equally good, and, as the effect requires, brighter. *Filey Bay and Flamborough Head* (163),—five miles of sunny sand, with the mighty chalk cliffs of Speeton at the end, is the best of this painter's contributions, because it is quite as solidly painted as truthful, and a little less hard in handling, having, withal, more colour than the others. The last quality is lacked by Mr. Jackson to make his portraits of localities admirable pictures. *Staithe, Yorkshire* (172), has fine, clear water painting; *Whitby* (201), a craft going into the harbour at high water, is rather like porcelain in handling.

Mr. C. Davidson has many charming drawings: among the best is *From the Church Fields, Reigate* (111), at spring time, a full stream running and rippling in a breeze at the foot of a bright meadow and under just-leaving trees. *Sunlight on the Sea* (25), a cliff study, the sea glittering under sunlight through tender mist; a beautiful effect given with feeling, but hardly enough of the peculiar opalescent colour that gives the charm to it. *Near Nutfield* (60), early spring; a sunny and brilliant study, broad and delicate in treatment, is Mr. Davidson's best work here.—Many of Mr. Dodgson's best studies of summer among foliage are very beautiful. Best among them is *Knowle Park* (267), glades of glorious beeches. His *Whitby Abbey* (246) is beautiful. His *Haunted House* (262) effective; but inferior to the tree studies, whose wealth of foliage is so magnificent.—Mr. B. Foster works on a large and unusual scale. *The Ferry* (145) reminds us of former works, and a favourite effect, sunset; in the centre of the picture a water-course forming a vista, and foliage on either side. A beautiful work under its limited condition.—Mr. A. Glennie's Campagna scenes are effective and suggestive. See his *Torre di Quinto, Via Flaminia* (240), the scorched waste, grey, dun hills and lonely tower.—Mr. Naftel keeps to his ancient love of Guernsey scenery; of his works, No. 13, *St. Peter's-in-the-Wood*, is one of the best studies. The *Ancient City of Pontoni* (39), view from under a pergola on a cliff edge, is bright as ever, and rather broader in effect of colour than *Low Water, Roque de Guet, Guernsey* (34), by the same.—Mr. S. Palmer's poetical sunsets and Turnerian compositions have their old charm, there are many here.—It would be difficult to narrate the beauty of Mr. B. Willis's Sussex meadow and cattle pictures. *A Ploughing Scene* (19) has the perfection of truth in it: it is broad and soft, strong as an enamel, and minute in study (something beyond mere finish) as the work of a Dutch master. *Early Morning* (156), cattle on a water-meadow, is a splendid study of nature just when the new day begins.—How beautiful and perfect are Mr. Hunt's Fruit and other pictures we need not say: this year they are charming as ever, and as numerous.

The landscape painter who establishes himself by this Exhibition is Mr. A. W. Hunt; some of his works are miraculous in truth, brilliancy and colour. *St. Gothard—Two Bridges* (32), one being an iris. The vividness of the iris, the rush of the green-white water and the sunned walls of purple rock, are triumphant in painting. *Barnard Castle* (70), the old tower on lofty Tee's-side. A vista of the brimming river, closed with foliage till the land rises into open, and then half a county of fields and trees, above all the most brilliant summer sky, are lovely components of a masterly and vivid picture. *Rokeby* (192), a moorland stream rushing amongst rocks of sandstone, purple-hued and angular, closed in by trees in summer pride and flecked with sunlight and shade, is very large in style, broader, but hardly so exquisite

as 'Barnard Castle.'—Mr. A. P. Newton has chosen moonlight for a theme this year, his *Madonna della Salute, Venice—Moonlight* (98) is a highly successful and an almost audacious attempt at natural tone in rendering a gondola in solid black at the foreground. It is a beautifully graded picture.—Mr. S. Read's *Cathedral of Toledo* (33), a splendid interior, effective in airy treatment of loftiness and space, lacks greyness to neutralize the glow of light through windows of stained glass, and so offers to the indiscreet enthusiasts who fill our cathedral windows with highly-coloured glass a hint of what they will obtain by persisting to neglect the use of grisaille, which alone produces grey light, and was so wisely employed by Gothic architects of old.

FINE ART GOSSIP.—The exhibition of modern pictures at the British Institution, Pall Mall, closes on Saturday next, the 9th inst.

The sale of Mr. Bicknell's pictures by Messrs. Christie & Manson on Saturday last had hardly a parallel in such matters, either in the importance and Art-value of the items or the magnificent prices they fetched. Such a number of Turner's best works has never been brought to the hammer at once. The most remarkable lots and the prices they obtained are as under. It is understood that the sale was quite unreserved. Messrs. Agnew, of Manchester and London, bought 30,000*l.* worth of pictures; to avoid repetition of their name we give it but once,—each lot to which no purchaser's name is attached was knocked down to them. All prices guineas.—Clint, Coast Scene, 130 (Rippe),—Chambers, Sheerness, 110 (Agnew),—Lawrence, Mrs. Siddons, 140 (Lord Hertford),—Nasmyth, View near Edinburgh, 165 (Gambart),—Callcott, Rochester Bridge and Castle, 490,—Mr. Webster, The Disputed Title, 270,—Chambers, Boats and Shipping, 195,—Mr. A. Johnston, Sunday Morning in Scotland, 135 (Martineau),—Mr. D. Roberts, The Ravine, Petra, 280 (Lloyd),—Mr. F. R. Lee, Scene on the Borders of Dartmoor, 165 (Holmes),—Mr. D. Roberts, Interior of the Church of St. Miguel, 570, Tyre, 350, and Sidon, 360 (Rought),—A Street in Cairo, 505,—Chapel of Ferdinand and Isabella, 260 (Wells),—Melrose Abbey, 260 (Vokins),—Karnac, 320 (Gambart),—Interior of St. Gomar, 1,370 (Wells),—Ruins of Baalbec, 750 (Vokins),—Vandyke, The Duchess de Croy, 51 (?),—Müller, Scene in Devonshire, 300,—Mr. Frost, Musidora, 105,—The Syrens, 294, (Leggatt),—Euphrosyne, 780,—Stothard, illustrations to Boccaccio, lots 21 to 28, respectively 31, 32, 20, 26, 20, (Mackay),—47, 36, (Colnaghi),—and 33 (the same),—Mr. T. S. Cooper, An Interior, Cow and Sheep, 250 (Eaton),—Mr. T. Webster, The Impenitent, 350 (Leggatt),—Gainsborough, A Landscape, with Sheep, 380 (Wallis),—Nasmyth, Land Scene near Epping, 295 (Moore & M'Queen),—Mr. Stanfield, Shipping, French Coast, near St. Malo, 1,230 (Vokins),—Mr. L. Haghe, Choir of the Church of Santa Maria Novella, Florence, 290,—Collins, Early Morning on the Sussex Coast, 960,—Mr. T. Crewick, The Stepping Stones, 250 (Jewell),—Hilton, Triumph of Amphitrite, 270 (Rought),—Gainsborough, Repose, the artist's wedding portion to his daughter, 780 (Woods),—Collins, Selling Fish, 1,170,—Mr. F. Goodall, Raining the Maypole, 600,—Mr. Dyce, Joseph shooting the Arrow of Deliverance, 220 (Herbert),—J. M. W. Turner, Antwerp, Van Goyen looking for a Subject, 2,510,—Helvoetsluys, The "City of Utrecht," 64-gun ship going to Sea, 1,600,—Ivy Bridge, Devon, 880 (Martineau),—Wreckers, Coast of Northumberland, 1,890,—Calder Bridge, Cumberland, 600 (H. Bicknell),—Venice, the Campo Santo, a most glorious picture, 2,000,—Venice, The Giudecca, &c., 1,650, equally good, but hardly so lovely,—Ehrenbreitstein, 1,800,—Port Ruysdael, probably the culmination of the painter's natural style, 1,900,—Palestrina, 1,900 (H. Bicknell),—Müller, The Village of Gillingham, 390 (Leggatt),—Mr. L. Haghe, An Artist in his Studio, 175 (Vokins),—Mr. Linnell, Christ and the Disciples at Emmaus, 285,—Mr. C. Stanfield, Lago di Garda, 820 (Vokins),—Heilstein on the Moselle, 1,500 (Wells),—Pic du Midi d'Ossau, 2,550 (Vokins),—Mr. T. Webster, "Good Night," 1,150,—The

Smile, and The Frown, 1,600 (Flatow),—Sir E. Landseer, Two Dogs, 2,300,—The Highland Shepherd, 2,230,—Sir C. Eastlake, A Contadina Family returning from a Festa; Prisoners with Banditti, 590,—Callcott, An English Landscape, 2,950,—Leslie, The Heiress, 1,200 (Wallis). Sculpture: Mr. Baily, busts of Shakspeare, Locke, Milton and Newton, 106 (Agnew and Graves),—Mr. Gibson, Head of a Nymph, and Bust of Young Augustus, 245. The 145 lots realized 58,600*l.*, an amount enormously in advance of their original cost. The Turners, which brought such magnificent prices, were got from the artist direct at prices varying from 250 to 350 guineas each. Mr. Webster's Smile and Frown cost but 120*l.* each.

MUSIC AND THE DRAMA

VIUEUXTEMPS and ALFRED JAELL are ENGAGED, May 12, at the MUSICAL UNION. J. ELLA, Director.

HERR ERNST PAUER'S THIRD PERFORMANCE OF **PIANOFORTE MUSIC**, in strictly Chronological order, will take place at Willis's Rooms, on MONDAY NEXT, May 4.—The School of Bach, and his Sons Friedemann, Emanuel, Johann and his Pupils. To commence at Three o'clock precisely.—Tickets for the Series, One Guinea; Single Tickets, 5*s.*; may be had of Mr. E. Pauer, 4, Cranley Place, Quaker Square, S.W.; and of E. W. Olivier, 19, Old Bond Street, W.

EWER & CO. beg to announce, that their **FIRST CONCERT** for the **INTRODUCTION OF NEW MUSIC** will take place, at the Hanover Square Rooms, on TUESDAY, May 5, at Three o'clock.—Vocalists: Miss Florence Landon and Madame O'Leary Vining. Instrumentalists: Messrs. Pauer, Salton, Rice, Webb, Witt, Viueuxtemps and Wohlers. Conductors: Mr. Frank Mori and Signor Alberto Raudigger. Invitations will be sent to the London Subscribers of Ewer & Co.'s Library. Tickets to Non-Subscribers, Half-a-Guinea each.—Ewer & Co., Her Majesty's Musicians, 37, Regent Street, London.

MRS. MEREST (late Maria B. Hawes) **SECOND SOIRÉE** will take place on FRIDAY NEXT, May 8, at 7, ADELPHI TERRACE, under Royal and Distinguished Patronage.—Tickets and Programmes to be had of Mrs. Merest, 7, Adelphi Terrace.

THE ROYAL SOCIETY OF MUSICIANS, instituted in 1788, for the Maintenance of Aged and Indigent Musicians, their Widows and Orphans.—Patroness, Her Majesty THE QUEEN.—The **ANNUAL PERFORMANCE** of Handel's **MESSIAH** will take place at ST. JAMES'S HALL, on WEDNESDAY EVENING, May 6, at Eight o'clock. This is the only occasion on which she can possibly sing out of Her Majesty's Theatre and Mdle. Parop. Miss Eliza Hughes and Miss Laocelles; Mr. Sims Reeves, Mr. Whiffin, Mr. T. A. Wallworth, Mr. Santley (by the kind permission of Mr. J. H. Mapleson), Mr. Lewis Thomas, and Mr. P. H. White. Principal Violin, Mr. J. T. Wily; Trumpet Obligato, Mr. T. Harper; Organist, Mr. E. J. Hopkins. Conductor, Prof. W. S. Bennett, Mus.D.—Numbered Stalls in Balcony, or Un-numbered Stalls in Area, 10*s.* 6*d.* each; Balcony, 5*s.*; Area or Gallery, 3*s.*; at the principal Musicians; and at Austin's Ticket Office, 28, Piccadilly.

HERR ADOLPH SCHLOSSER'S CONCERT will take place on THURSDAY EVENING, May 14, at the HANOVER SQUARE ROOMS. Vocalists: Madame Alboni and Herr Reichardt. Instrumentalists: Mr. Blagrove, Signor Patti, Signor Gino Bonardi, M. Ascher, and Herr Adolph Schlosser. Conductors: Messrs. Frank Mori and Benedict.—Tickets, Half-a-Guinea each, to be had at the principal Musicians; and at the Hanover Square Rooms; and of Herr A. Schlosser, 4, Upper George Street, Bryanston Square, W.

Mr. HENRY LESLIE'S CHOIR, THURSDAY, May 21.—ST. JAMES'S HALL, Eight o'clock. Miss Reeves, Arabella Goddard, Parepa,—Stalls, 6*s.*; Family Tickets, to admit Four, 2*s.*; Balcony, 3*s.*; Area, 3*s.*—Admission, 1*s.*; at Addison's, 210, Regent Street; Austin's, 28, Piccadilly; Hanover Square Rooms; and all Musicians.

ROYAL ITALIAN OPERA.—To succeed as a new *Arnaldo*, in 'Guillaume Tell,' after M. Duprez and Signor Tamberlik have stamped that difficult tenor part deep in public favour and recollection, is no easy feat;—and thus we differ from those who discard Signor Caffieri finally, owing to the inequalities of his performance on Thursday evening. How far he was wise, or the reverse, to dare the adventure is another matter; but having, probably, been successful before easy publics in smaller theatres, and being, obviously, neither ripe nor experienced, it would be unfair to reckon with him too severely for a want of self-knowledge; seeing that he must have been engaged, which means encouraged, to attack the difficult character, by those who should have known better.—He has a high tenor voice, sufficient for the execution of the music without trick or the eking out of one register by another. The quality is not disagreeable, so far as can be judged of an organ often out of tune, partly owing to imperfect study, partly owing to the influences of fear.—It is one thing to be shouted for at Novara or Udine, after bawling out one of Signor Verdi's *Cavatimas*—it is another to be able to make a stand in the most stately and liberal opera-house now existing, in Signor Rossini's finest opera.—Nevertheless, passages in the duet and the *largo* in the great *terzett* were not ill sung by him and we are disposed to think that with close study, modesty and patience that might be obtained from Signor Caffieri, which, at present, is not there. He has much, if not

everything, to learn in regard to the stage.—The *William Tell* of M. Faure is finer than ever; in every sense of the word, a noble and complete personification,—without doubt the best on the stage. The *Matilda* of Mdle. Battu is, by many degrees, the best of her performances in England; her *Romance*, in the second act, was sung with true artistic finish. Mdle. Dottini, too, was far better as *Jenny* than as *Adalgisa*, though not replacing Madame Rudersdorff in a part which demands a biting voice. But the performance of the second act (as music without fault or flaw) is well worth "the walk of a winter's night," as the Scotch song says, to any one capable of appreciating perfect musical execution. It is unique and unparagoned; this year, we almost fancy, sweeter, more certain, more imposing than ever.

"Satisfactory" is the epithet which belongs by universal verdict to Madame Fioretti, whose second appearance, as *Gilda* in 'Rigoletto,' was more successful than her former one had been. Though not in the least a tragic actress, she is admirable and complete as a vocalist; and by her voice and method has already won every one's good words. Her real occupation, however, we suspect, will prove to be in comic opera.

That splendid rarity, Tuesday's state visit of the Prince and Princess of Wales to the Royal Italian Opera, falls rather within the province of the *Court Journal* than of the *Athenæum*.—It is a happy innovation (for all who have ears that reject broken English) to give the National Hymn, as it was on Thursday given, with full chorus—and not by frightened and uneasy foreigners, with imperfectly-rehearsed loyalty.

Mdlle. Patti is expected almost immediately. It is said that preparations for the mounting of 'Faust,' on the most sumptuous Covent Garden scale, have been commanded by the management.

CONCERTS.—The concert music of the seven days, to be comprised in the present notice, having been of unusual value and variety, is not to be dismissed briefly.

Musical Society.—*M. Silas's First Symphony*.—This Symphony is a serious work, of too great merit not to be set aside (as was said last week) for express commendation.—Two movements, we are apprised, were written some years ago; these have been revised, and two others added.—It is no light matter in these days to be able to fill so wide a canvas with thoughts, elegant without languor, vigorous without crudity, wrought out with a constructive ease and solidity belonging to the best school of orchestral writing. It has been observed by some that M. Silas must have listened to Beethoven. If there be traces of any of that mighty man's works, however, they are of his three best Symphonies (those in B flat, C minor, and A major), but these reminiscences are so fine, we confess, as to have escaped us;—save possibly in the *Trio* to the *Scherzo*, where the horns are used, as Beethoven used them, felicitously. If the largeness of style recalls a prototype, so much the greater credit to M. Silas. We find no servile imitation. The absence of vulgarity or pettiness is no less praiseworthy.—The movements are these: an *Allegro*, somewhat in the pastoral style, in G major, particularly happy in its second subject,—a marked and quaint *Andante*, to which the same praise may be continued;—an ingenious and elvish *Scherzo*, with the melodious *Trio* aforesaid;—lastly, a *Rondo*, on a spirited subject, relieved by the happy *Canilena* which succeeds it: the orchestration throughout being clear and rich, without heaviness. In short, this is a real and thoroughly good Symphony, which can be heard again and again with something like a certainty of discovering well-fancied and cleverly-wrought details, as well as those large outlines and that general ordinance of a composition which on a first hearing decide its merit.

Crystal Palace Concerts.—Mr. Dannreuther has already proved himself so genuine an artist that his treatment of the great repertory of pianoforte music will be watched with no common interest. Of Beethoven's three great *Concertos* (those in C major and B flat hardly meriting the name), though all have been played, as we have said, to

satiety, that in G major has been the least exhausted;—having been only successfully given in our recollection by Mendelssohn (with his never-to-be-forgotten improvised *cadenzas*), and since his time by MM. Halle and Pauer. It requires no common union of daintiness, solidity and expression—a performer so thoroughly commanding himself and his keyboard as to play freely with the lovely and gracious thoughts lavished everywhere. He must have poetry of style, as well as an exact finger and a rich tone. This day week it was excellently given, with a ripeness, composure and delicacy remarkable in one so young as Mr. Dannreuther;—the success established that of its performer's former appearance.—The English singing of Miss Edith Wynne is, in intention, as good as her Welsh singing. Her voice is sweet, and touching in no common degree. She speaks, too, with clearness and refinement. Her executive power (as shown in Linley's "O, bid your faithful Ariel fly") is as yet limited. She may extend it if it so please her; and supposing this done, she would be one of the most real and fascinating singers of classical music whom this country has ever possessed—to range (can we say more?) with Madame Stockhausen, whose lovely voice, pure method and perfect finish are not yet forgotten.

Herr Pauer's Second Historical Concert was devoted to Scarlatti, Porpora, Martini, Paradisi, Clementi (five memorable Italians: the last, the most influential as regards modern composition for the pianoforte), Cramer, Klengel, Field; Kalkbrenner, Mayer, Herz, Kullak, Willmers; these five being fancifully, rather than justifiably, credited with having written under the Clementi influence. The Sonata by Martini, howsoever learned, proved to be dry;—the one by Paradisi was agreeable, winning and effective; that by Clementi, one of the fifty admirable specimens left by him, though not among his adventurous works, still a model *Sonata*,—and played with perfect finish and style by Herr Pauer,—was one of the two most interesting pieces in the programme. The other, a *Fugue* on Mozart's 'La ci darem,' was, however, even more so, because of the unmerited obscurity into which its author has fallen,—Clementi's pupil, Klengel. This real man of genius held for years the post of organist to the Catholic Church at Dresden, unable to find an issue or a hearing for his compositions (as we heard him remark with a sad patience), though the existence of the same was well known to all the best of his contemporaries. Yet his canons and fugues are unique in the library of modern music for the union of science and beauty which they display. Since Klengel's death they have been published by the enterprising and liberal house of Breitkopf & Härtel at Leipzig, and we shall be surprised if the admiration excited by the specimen introduced by Herr Pauer does not lead to further research into a treasury so rich.

Nothing pleasanter is to be noted in the history of Music, as illustrating the humanities which, according to fable, the art was sent on earth to promote, than the willing cordiality of the violinists all Europe over to produce the quartett of the greatest of modern players, Herr Ernst. It has been given in Paris; the other day at Vienna, under the auspices of Herr Hellmesberger; and it was on Monday evening repeated at the *Popular Concert*, with M. Vieuxtemps for leader. He has never been heard to play with more, if so much, heart and expression. There was, in his performance something apart from the music, and beyond the performer's usual habits and sympathies, well seconded by his comrades. Of the Quartett itself we spoke when it was introduced a year ago.—The pianist was Madame Arabella Goddard, who played Hummel's grand *Sonata* in D major with her usual skill and certainty;—the principal singer was Mr. Sims Reeves, who, among other things, gave a new song by Mr. A. Sullivan.

On Monday evening, too, a concert took place for the benefit of Mr. John Watson, who has been stricken with blindness, while pursuing his profession, that of photography.

The above are not all the concerts of interest which have to be reported on or enumerated. Yesterday week, Herr Sigismund Blumner commenced his series of Chamber Concerts.—On Wed-

nesday one of Dr. Wylde's *New Philharmonic Concerts* was held, for which Herr A. Jaell was announced in Chopin's *Concerto* in E minor, and Mdle. Carlotta Patti as principal singer.—There was a meeting, too, of Mr. Henry Leslie's *Choir*; at which among other music calculated to display its proficiency in the best form, a psalm by Mendelssohn was repeated, and Wesley's superb *Motett*, 'In Exitu Israel.'—On Thursday Mr. Deacon commenced his series of Chamber Concerts.

NEW ADELPHI.—At this house the elaborate dramatic version of 'Aurora Floyd' has surrendered the stage to the more familiar story and older favourite 'Janet Pridie.' Among the reasons for reviving this drama was probably a wish to give an opportunity to Miss Avonia Jones of appearing in the double character of mother and daughter, both named the same, and each the heroine of the prologue and of the drama. As the former, Miss Jones succeeded better than the latter. Her force sustained the burthen of the tragic character, though this would have been all the better for more variety in the tone of the grief, but was misapplied in the part of *Janet Pridie* the daughter, in which more suavity of style is required. The delineation of domestic character in its various phases asks for a corresponding manner in every change of fortune, and calls on the actress to adapt herself to the exigencies of successive and greatly different situations. Peculiar and specific colouring and an ever-varying modification of light and shade are continually put into requisition; but these conditions find no response in the style of Miss Jones. For the part of the drunken hero Mr. Webster is peculiarly fitted. The two periods of the fellow's ignoble career are distinctly marked, and we have a perfectly human representation of an individual life in its good and evil, the latter, however, preponderating, for it is not man in his strength but in his weakness that is exemplified. Mr. Webster acted with singular vigour and animation, and brought out every feature of the portrait most distinctly and effectively. The audience appreciated the skill displayed, but was far from numerous.

WESTMINSTER.—On Monday, the 'Colleen Bawn' was revived with partly a new and effective cast, and commanded a crowded house. The changes made in the representation mainly consist of Mr. Ryder in *Danny Mann*, Mr. F. Robinson in *Hardress Cregan*, Mr. Henry Vandenhoff in *Kyrie Daly*, Mr. Leeson in *Father Tom*, Miss Atkinson in *Mrs. Cregan*, and Miss Rose Leclercq in *Ann Chute*. Mr. and Mrs. Bouicault, of course, reserved to themselves, as usual, the parts of *Myles Na Coppaleen* and *Eily O'Connor*. The scenery presents little that is novel, but is beautifully painted throughout, and the costumes are pleasing as well as appropriate. It was curious to watch the effect of the various turns in the dialogue upon the audience, who appeared to be as susceptible to their influence as on the first night of the performance. We were struck with the remarkably slow development of the action, and yet the security with which the details were produced. There is no doubt the success of the piece is greatly owing to the singular art with which it is constructed.

MUSICAL AND DRAMATIC GOSSIP.—Mr. Mapleson seems for the time being given up to the repetition of familiar operas for Mdle. Titiens, and to the *débuts* of secondary characters. Mdle. Teresa Ellinger has appeared as *Orsini* in 'Lucrezia,' and to-night Mdle. Yradier is to appear as *The Page* in 'Un Ballo in Maschera.'—Mdle. Trebelli is announced for Tuesday next.

At the *Philharmonic Concert* of Monday next Beethoven's 'Egmont' music is to be performed; Mr. A. Matthison will read the connecting text. Madame A. Goddard is to play Prof. Bennett's *Concerto* in F minor; Miss Banks and Signor Della Sedie are the singers bespoken.

Herr Lubeck, whose talent as a pianist we have discussed in former years, is in London again.—Miss Madeline Schiller, mentioned with no common favour by Leipzig Correspondents (another pianist from the Conservatory there), is engaged to play at the last Concert of the Musical Society.

Herr Ernst has passed through London to Malvern—unhappily, still a suffering invalid. We are told, however, that he has all but completed one or two stringed Quartets, in addition to that produced in 1862, and which was repeated at the Popular Concerts on Monday last.

The Report for Germany (printed by Government at Berlin) on the musical instruments of last year's Exhibition is one of the most valuable and interesting musical pamphlets lately given to the press; and, taken conjointly with the papers on the subject by Mr. Pole and M. Fétis, offers a complete view of the state of manufacture of instruments in 1863 of real and permanent interest. The Report is not signed with the name of its author, Herr Pauer.

Private letters from Paris tell of the remarkable sensation excited by the last performances of Gluck's 'Orphée,' with Madame Viardot as the hero of the opera, and her late appearance at the Popular Concerts, so ably conducted by M. Pasdeloup. There is no present chance of such a consummate artist being replaced;—and this seems to have been acknowledged with a warmth strange to the fickle French capital.

'The Catacombs'—Prof. Hiller's new opera—has been "commanded" for the King's birthday at Hanover.

The library of Shakespeare music has received another addition in a setting of 'Othello' by Herr Ambros.

The name of Herr Brahms is just now a good deal heard of in Germany, as belonging to one of the leading composers there; and on the recommendation of correspondents who have specified certain unaccompanied "Marienlieder" (Songs of the Virgin Mary), written for four voices, as calculated by their purity and simplicity to satisfy those whom the abstruse and rhapsodical combinations of much modern German music are calculated to repel;—we have examined them;—but we cannot indorse the recommendation. They seem to us puerile and dull, timidly if not incorrectly written for the voices—in no respect comparable to hundreds of English compositions which could be named; works as much unknown abroad as if Great Britain had no singers nor writers for the voice.

A significant debate the other day took place in the Italian Parliament at Turin. The subject was, "Whether, in the interests of Italian taxpayers, and in the general interest of Italian finance, the Government ought henceforth to withhold the subsidies which the dethroned princes were in the habit of according to the great national opera-houses, to the San Carlo of Naples, the Scala of Milan, the Ducal Theatre at Parma, &c.; whether the singing men, and singing women, and ballet-dancers on these establishments possessed and could make good special vested rights against the State; whether the summary withdrawal of the pecuniary grants would be attended with danger to the peace and order of the community at large; whether, and if at all how soon, this burden might be transferred to the separate municipalities; and finally, whether the splendour and renown of San Carlo and of the Scala are not entitled, and ought not to be still upheld in part by Government subsidies as heretofore, on the ground that Italian music forms no unimportant element of the national glory and greatness?" No immediate settlement of the momentous question was arrived at; but concurrent testimony proves that the subsidies (which have been enormous) have been much misapplied, that the abolition of Opera in Italy as an object of protection would be a measure accompanied by great unpopularity, if not positive danger (especially among a people like that of Naples); yet that the chances of making it depend and thrive by municipal taxation are, to say the least of it, problematical. Whatever be the decision come to, considering the present condition of European politics, creative art, and social intercourse, we fancy that the institution, which was so long the delight of "the idler in Italy," is doomed, beyond the hope of its revival in our time.

Civil Engineer.

London: Waterlow & Sons, 49, Parliament-street, Westminster, and 66, London-wall, E.C.

Now ready, with the Tables, price 6s. post free.

SKETCH of TABLES for the ANALYTIC UNIVERSAL TELEGRAPHY; Composed on the Supposition of Morse's Elements and Signals being Used. By COLONEL D'ESCAZAC DE LAUTURE, K.C.L.H. Morse's telegraph is possessed of two elementary signals: those two elements being joined together in different ways—two, three, or four of them at a time—afford different signals for all the alphabetical letters.

The successive transmission of all the letters of a word is long. Signals for the words themselves could be done: the only difficulty consisted in the immense number of signals required to represent all the words, and all the various forms which more especially the verbs can assume.

These difficulties are removed by the analytic universal method, in which tenses, moods, &c., are rendered by peculiar short signals, a very small number of such signals giving an algebraical grammar of all languages.

In the upper half of a table of less than a square foot all the most useful words are to be found arranged according to their meaning, and thence in the same order in whatever language may be the tables.

The lower part of the same table is filled by one out of various vocabularies, military, commercial, &c., according to the nature of the message to be sent.

Thus with one table of less than a square foot, a telegram is composed three times shorter in elementary signals than by the alphabetical system.

The same will immediately be understood by any man provided with similar tables in his own language. A message sent from Naples by an Italian will be read in German in Vienna, in French in Paris, in English in London. The same can be written as well as sent by telegraph; absolute secrecy being obtained by a change of key.

The analytic universal method gives moreover the means of composing messages unliable not only to decipherment but also to suspicion.

The analytic universal method can be used in connexion with apparatus and signals of any kind; no alterations of instruments, no additional wires, &c., being required.

The system being of the utmost simplicity requires nearly no training.

If it was used in connexion with an automatic machine all possibility of mistakes would be removed, and from nine to twelve telegrams could be sent with one wire in the time actually required for the transmission of one telegram.

A Nautical Code of Signals, composed according to the same method, and truly international, covers, too, less than a square foot.

London: John Camden Hotten, Piccadilly; and all Booksellers.

LITERATURE

Life of the Rev. James Robertson, D.D., Professor of Divinity and Ecclesiastical History in the University of Edinburgh. By the Rev. A. H. Charteris, M.A. (Blackwood & Sons.)

THE story of the youthful struggles of James Robertson from a very humble position to one of the foremost places in the Church of his country, has an abiding interest; while his post as leader of the Moderate minority in the Ten Years' Conflict of the Church of Scotland has little or no interest for anybody but a Scotchman. Who now cares to know, except he be an ecclesiastic of very decided Presbyterian sympathies, of the Veto Act of 1834, of Dr. Cook's motion of 1833, of Lord Aberdeen's Bill, of the Auchterarder case, and of the Marnoch case, and of the Borthwick case, and of the hundred-and-one convolutions and involutions and revolutions of argument and opinion sufficient to puzzle the head of anybody but a stickler for refined reasoning and nice theological criticism? "An impartial history of the Non-Intrusion controversy has yet to be written," says Mr. Charteris, with serene forgetfulness of the ponderous and "highly-impartial" labours of his reverend fathers and brethren, Doctors Buchanan, Bryce and Turner. Nor are the attempts of the censor improvements on the accounts which he censures, except in the one important respect of brevity and terseness. It is impossible for a man with the very best intentions to pursue his opponents with the mild rancour of Christian controversialism through half a volume, as a learned doctor of the Church would through many entire volumes. The quantity of theological fire and smoke, and particularly of smoke, that rose up to heaven all over the Scottish parishes, from "Maiden Kirk to John o' Groats," for ten whole years previous to the birth of the Free Church in 1843, was something which the country had not witnessed since John Knox laid down his load in the High Street of Edinburgh. And if this was so in every nook and corner of lay Scotland, what was it in the clergymen's residences? The quantity of thunder, if not of lightning, that was manufactured in the manse of Dr. Robertson and in that of Dr. Cunningham is something appalling to contemplate, even over twenty oblivious years. No doubt among all the combatants these were the Hector and the Achilles,—each curiously boasting to himself or his friends that he had slain his redoubtable opponent, and dragged his carcase in triumph round the walls of his own private Zion.

Quod genus hoc pugnae, qua victor victus uterque.

Peace to their manes. They are now both beyond censure or applause, and they were men who had more than one noble point in common. They were simple as children both, earnest as Michael himself, both generous as day, and both believed in the omnipotence of logic as a man only can who sees and knows properly nothing else. What was the world made for, if not for controversy? If there is such a thing as a genius for controversy, it appears to us that Dr. Cunningham possessed it in very large measure. Mr. Charteris is wrong in claiming for his hero, "the whole texture of whose reasoning is geometrical," the blue ribbon of the arena, just because the nine tenths of human reasoning neither is nor ought to be geometrical at all. Dr. Robertson was always a good mathemati-

cian, and what he was at the beginning of his career he did not swerve from at the end of it. Dr. Chalmers, who moved about in the thickest of the fight, said, after the most celebrated appearance of these combatants, that it was "the greatest display of intellectual gladiatorship he had ever seen." To do Mr. Charteris justice, after he has soundly rated the majority, or Free Church party, he drops a sympathetic tear over the funeral mounds of both, which is meant to be appropriate, if a little too sentimental to be beautiful. Here it is:—

"The best and greatest men whom the controversy set in opposition are not now numbered with the members of any visible church; but it is our privilege, as Christians, to believe that they are joined in the general assembly and church of the first born. Chalmers, and Cook, and Gordon, and Mearns, and Welsh, and Lee, and many more, are, we rejoice to think, united in that church without spot or blemish, where King and Priest are one. And, although I anticipate it deepens our solemnity to remember that, when a year had shed its showers and snows on the grave of James Robertson, bleak December, which had carried him away, bore from his brethren William Cunningham. They were set face to face in many a fight, and now they rest together. They cherished mutual respect throughout the hard encounters, and ere their labours on earth were closed, when one had retired from public life to study the theology of past ages, and the other had sacrificed learned leisure to the great cause of the evangelization of Scotland, they spoke of each other as was to be expected of true men drinking at a purer source than the muddy waters of controversy. But now, when they see eye to eye, and dwell in the light of God's eternal love, how unworthy must seem to those saints every feeling that erewhile marred the fullness of their Christian brotherhood! Would that we who mourn them could anticipate that union which is the Christian's creed, and, overlooking all our difficulties, unite, as brethren ought, in a strong and constitutional, and thus really 'free,' Church of Scotland."

This book if too largely taken up with mere local controversy, has a dash of sterling humanity in the earlier portions of it. Perhaps there are few countries in the world where there is a greater number of strong, uncouth sons of the moorland sent forth to fight their way to the highest places in the Church and to respected positions in the Universities than the one to which Prof. Robertson belonged. He was by birth one of those rugged, awkward, devout sort of youths which a country so poor and setting so high a value on religious education as Scotland, is sure always to produce in abundance. His father, William Robertson, farmed some fifty acres of moorish land at Ardlaw, in the parish of Pitsligo, where he was born on the 2nd of January, 1803. His mother's name was Barbara Anderson, and, though she had never been at school, she could read her Bible thoroughly, and she and the wife of the ploughman contrived very early to enable her first-born son to do so likewise. It is astonishing what humble, devout heroism was in this man and his wife, enabling them as soon as James was of years to send him to the University, and from that to fame. Talk not to Scottish people of patrons or *protégés*; even the very peasantry, who are as independent as kings, despise such aids, and wish to be left alone to God and good fortune. Such was James Robertson's early fate, such was his environment. His mother and the ploughman's wife were his sole instructors until he was six years of age, when he could stammer through the Proverbs of Solomon and Scot's 'Beauties of Eminent Writers'! Before he had been three years at school, he could construe Cornelius Nepos, and grind out the grammatical forms of Mair's 'Introduction,' with

every little fellow in his native parish of Pitsligo. Schoolfellows, big and little, all gave it up to "wee Robertson." Having at once taken the top of his class, he kept it. His most distinguishing faculty, both now and ten years hence, when he was a student of Prof. Cruikshank's, in Aberdeen, was his unflagging memory, which could grasp up a page of Horace, or the longest involved surd roots with a facility that astonished his instructors. There is one pretty little brotherly story of his school-days which must not be passed over. He was nine years of age when this little adventure occurred, and being the eldest of the family his manliness was early put to the proof. Two little sisters and himself were overtaken one evening by a snow-storm, when, after much consultation by these young heads, it was agreed that the youngest sister should remain in a cottage adjoining the school, while the elder and stronger ones should fight their way home. The two little bundles of clothes began slowly to roll their way through the drift, when the sister who had been left behind began to cry. James suddenly turned, nothing daunted, got her on his back, and the three little bodies, now rolled into two, staggered away homeward through the snow. Though the road was long and his burden nearly as big as himself, he nevertheless accomplished his object manfully. Handling the flail and the reaping-hook alternated with *Æschylus* and the *Calculus* as soon as he could well lift those instruments of labour. As he dusted the grain out from the sheaf on the barn floor, the corns leaped into as many *xs*, *ys* and *z's*, which, by the energies of his brain, he was evolving from some ponderous algebraical equation. During an entire season he thrashed his body into trim for study, and robbed sleep of its dues to devote time to his high mathematical problems. The consequence was, that Prof. Hamilton said that, save one, he was the best student of mathematics he had ever had in Aberdeen during a period of forty years, and the Professor of Philosophy surpassed Hamilton, if possible, in his praises of the ingenuity of Robertson. Soon after going to college, he had the good fortune to succeed in obtaining a bursary, or scholarship, which kept him easily during the rest of his eight years at the University. This was procured for him solely by his own merits. Before he got it, his style of living and expenditure was something remarkable. From 6*l.* to 8*l.* in the six months was all the money he spent, either on himself or on his class-fees. And this included 1*s.* 6*d.* a week, which he and a brother student expended each on a garret room, a bed, a table and two chairs! Of course, all his food and his clothing came from home; but even with this additional consideration, the penury in which he must have worked was harassing. Robertson preached his first discourse in Pitsligo Church, in 1825; and after being successively schoolmaster in his native parish, tutor and librarian in the family of the Duke of Gordon, and headmaster of Robert Gordon's Hospital, he was appointed by his former patron, the Duke, to the parish of Ellon, with a living of 250*l.* a year. Earnest, vigorous, active-minded, he set about his work in a way that proved him to be quite alive to the importance of his office. No doubt he was often too ingenious in his disputative theories even for the hard heads of his Ellon audience. He floundered a good deal in what was to the greater number of them mere metaphysical bathos. He was often inclined to roll his people into heaven or hell on the smooth wheels of a *Q.E.D.*; but with all these shortcomings the whole district felt the power of the man and the wholesome influence

of his character. There was a small plot of land attached to his residence which he farmed with an enlightenment and a vigour that provoked the whole county into rivalry. He was the first in Great Britain to take practical hold of Liebig's suggestion of dissolving bones in sulphuric acid as a capital manure for turnips. Then he disciplined—"heckled," as the word is in Scotland—every member of his parish on the Bible and Shorter Catechism, at least once a year. One old woman, more independent or less devout than her neighbours, asserted that she "wadna gang to be heckled (in the barn), and hae her taes drappin aff wi' the cauld." Thus he lived and worked—busy, eager, devoted to his parish and his Maker.

On the breaking out of the Non-Intrusion controversy, his strong logic, his power of grasping up a question, and of enforcing it by a strange eloquence of voice and manner, at once placed him in the ranks of the Moderate minority, and ultimately gained him a D.D. and a Professorship. Hugh Miller, the celebrated journalist of the Free Church party, gives a highly-graphic description of Robertson in the General Assembly of his Church; and we have two sentences devoted to a description of Hugh in a letter of Robertson's to his wife. "By-the-by, the editor of the *Witness* was this day examined before our Commission. He is a strange-looking, red-haired man, by no means particularly ready in his answers!" The two men loved each other affectionately! Here is the portrait of Robertson, which "hath no touch of malice in't," though Mr. Charteris thinks, in his learned way, that it is mixed up with the "hallucinations of phrenology." The reader must judge of this for himself:—

"Now mark beside the doctor (Cook) a man of a very different appearance—in stature not exceeding the middle size, but otherwise of such large proportions that they might serve a robust man of six feet. We read of ships of the line cut down to frigates, and of frigates cut down to gunboats; here is a very large man cut down to the middle size, and, as if still further to exaggerate the figure, there is a considerable tendency to obesity besides. Hence a very marked uncouthness of outline, with which the features correspond, but it is an uncouthness in which there is nothing ludicrous; it is an uncouthness associated evidently with power, as in the case of Churchill and Gibbon, or in the still better known case of Dr. Johnson. Mark the head. It is of large capacity—one of the largest in the Assembly, perhaps, and of formidable development. The region of propensity is so ample that it gives to the back part of the head a semi-spherical form. The forehead is broad and perpendicular, but low, and partially hidden by a profusion of strong, black hair, largely tinged with grey. The development of the coronal region is well-nigh concealed from the same cause; but judging from the general flatness, it is inferior to that of either the posterior or anterior portions of the head. The features are not handsome; but in their rudely-blocked massiveness there are evident indications of coarse vigour. He speaks, and the voice seems as uncommon as the appearance of the man. There is a mixture of very deep and very shrill tones, and the effect is heightened still further by a strong northern accent. But it rings powerfully on the ear, and in even the remote galleries not a single tone is lost. That man might address in the open air some eight or ten thousand persons; he is the very *beau-ideal* of a vigorous democrat, a popular leader, born for a time of tumults and commotions. * * That uncouth, powerful-looking man, so fitted apparently for leading the masses broken loose, is the great friend and confidant, and so far, at least, as argument and statement are concerned, the grand caterer—flapper, as Gulliver would, perhaps, say—to the Tory Earls of Dalhousie, Haddington and Aberdeen. If nature intended him for a popular leader, never surely was there an individual more sadly misplaced. We have before us the

redoubtable Mr. Robertson, of Ellon, the second name and first man of his party."

After making all allowance for party bias, this will be recognized by every good judge to be a very tolerable picture of a remarkable man. The great disputant ultimately subsided into a quiet Professor of Church History in Edinburgh, from the seclusion of which he was occasionally aroused by the urgent solicitations of the Church. Otherwise, his life from 1843 to its close, in 1860, was almost wholly without one notable event. He continued to read heavy soporific lectures, and the more animated of his students continued to read Tennyson or Maurice, on the back benches, to the end of his career. Altogether, this work of Mr. Charteris, though crude and youthful, gives promise for the future. But he must be more careful; he has given us a single line of errata:—he might have added a score.

New Views on Baldness; being a Treatise on the Hair and Skin. By H. P. Truefitt. (Webster.)

WHEN we remember the injunction in Leviticus, namely, that honour shall be rendered to the face of the aged, and that in presence of the bald other men shall respectfully stand, we are amazed at Mr. Truefitt's audacity; who *pooh-poohs* Mr. Erasmus Wilson, and thinks that baldness is not a condition to be venerated. He is the Dr. Colenso of "practical trichologists," as, in his desire to be simple, he calls hair-dressers; and if there be Episkopoi in his vocation he will certainly be requested to retire from his seat of vantage near Burlington Arcade.

Having "made ourselves exceptionally familiar with abnormalities of the scalp and hair, we derived from the treatment of these peculiar views of our own," says Mr. Truefitt—which he undertakes to explain in the simplest words, so that his wisdom may be understood by all who brush and shave and comb. As we look for these peculiar views in turning over the author's pages, we find some of them startling enough. For instance, we find that there is a certain similarity between Epsom salts and fat, the former being "a compound formed by the union of sulphuric acid and magnesia," while "fat is, in like manner, the resulting product of the union of an organic acid with glycerine." Glycerine therefore is not a constituent of soap, though fat contains it in large quantities. We hardly see how this applies; but then we have the disadvantage of not sharing Mr. Truefitt's "lucidity." He may be right. We should not like to set our poor opinion against that of a professor who declares that—"it is only the most reprehensible ignorance that could attempt to remedy the affections and deficiencies so frequent in the scalp, when unmindful of the complicated organization, the compound properties, and the subtle chemical constitution even of these subsidiary structures."

There is, it seems, a reprehensible ignorance abroad which still more surprises Mr. Truefitt. He is astounded that the public "should not only never concern themselves about the skin, but should rarely ascribe any indisposition to a failure in its functions." In this opinion we would meekly suggest that the professor is in error. He has arrived at this conclusion from patients troubled with the *pediculus vestimentis*, among whom it is not cheerful to find any part of his practice existing.

But, perhaps our practical trichologist does not mean to say exactly what he seems to say, for his exceedingly lucid style is apt to get a little "dark with excess of light," as when he remarks, with much poetical licence, that

"the tear springs *unbidden* to the eye at the call of pity, sympathy, or regret," which of all the caprices of tears is the funniest we have yet heard of. Nevertheless, as Mr. Truefitt finely remarks, "Most of us have had a blister on the chest," which, as a new view of baldness, is more curious still.

Indeed, this last maxim, or whatever the trichologist may call it, seems to his own thinking to take him a little out of the record; and accordingly, we find him plunging anew into his subject, with the question, "What is a bald woman to the most enthusiastic Lovelace?" To which we reply, not being Lovelace, that we do not know; we can only assert for our own parts that

Around the dear ruin each wish of our heart
Would entwine itself verdantly still.

Then again, the novel view which our author next takes with respect to baldness is, that "Authentic records, according to Sir G. Cornwall Lewis, do not extend so far back as the time of our first parents." We fancy there is an authentic record which *does* extend exactly to that very time, and that in denying it, and dragging in Sir George for an authority, the trichologist beats Dr. Colenso and the Zulu hollow! Of course Mr. Truefitt supplies the deficiency of authentic record by intimating that when Eve "affected ivy-leaves" for a head-dress, "this must have been when she was desirous of assuming the appearance of an injured, yet dignified woman." Perhaps it must: Mr. Truefitt ought to know; for he tells us secrets about fair womankind in general which induce us to consider him as a universal Iachimo, who has been irreverently looking into the mysteries of a whole race of sleeping Imogens, and who unscrupulously tells all he saw to a world which ought to blush as it hears.

Turning, however, to new views on baldness in man, Mr. Truefitt playfully calls shaving the beard a "barbarous caprice," but lest you should think him addicted to lightness when treating a serious subject, he immediately defines shaving more magniloquently as "a vain attempt on the part of man to prevent the growth of eight feet of hair from the chin during twenty-five years of his life." That man carries on this vain attempt exactly a quarter of a century is a new idea, which we accept with gratitude, and so receiving it acknowledge "the common physiological tenet," upheld by the author, "that modern science has added to the stock of previous knowledge." Yes, even lunatics may have learnt something in asylums where they must have been admirably kept, with grates barred to fit their heads, and fires blazing for the use of their scalps!—

"Lunatics have been known to put their heads between the bars into a blazing fire, and there remain until the whole scalp was charred to a cinder, and yet so free from pain were the unfortunate creatures, that they have been dragged away while fast asleep, and, when waking, have been altogether unconscious of injury. Yet in these lunatics circulation and growth were adequately carried on."

Equally mad, but more injured, are the "several ladies under our care at this moment who acknowledge that they would consume more than a couple of hours every day in 'cleaning the head.'" This the author deems foolish enough; but contemplating men and things generally as a philosopher, he declares that "of all the inscrutable follies with which the present age is chargeable, surely none can surpass that which centres in the so-called electric brushes." No doubt! but as the folly centred there is inscrutable, we will not venture to look for it.

It is a maxim of Mr. Truefitt's that "there may be a little difficulty now-a-days in telling

a gentleman by his dress." You guess what follows—"the cut of his hair stamps him unmistakably." Mr. Truefitt knows a nobleman, "whom we have attended for many years," and this amiable aristocrat insists that he can tell at a glance Poole's cut in cloth and Truefitt's in hair! Observe the inference to be drawn from "insists." The modest Truefitt has dissented, or feigned dissent; but our nobleman "insists," and my Lord is an authority not to be gainsaid.

Trichology, as we have intimated, leads its professor into little contradictions. "The heads of most people in London," he says sternly, "are never cleaned." We doubt the fact, but would rather not enter upon controversy. If there were not much in this book to prove the contrary, Mr. Truefitt hardly improves the condition of the London head by recommending that "washing should, let it notwithstanding be remembered, not be resorted to more frequently than *once a week*." Then he thinks it is nonsense for people to indulge "in paroxysms of hygienic virtue" against leaden cisterns when they expose their scalps to the action of leaden combs.

Leaden combs will certainly not produce "golden hair," of which our professor speaks admiringly:—

"The fashion of sprinkling the hair with gold leaf has of late years been revived by the Empress Eugénie, the material used for the purpose receiving the elegant appellation of *poudre d'or*. It will be a hint worth remembering for such as covet fair hair, and have scarcely enough of the precious metal to emulate the Emperor and the Empress, that the Germans achieved the desired result, with apparent satisfaction to themselves, by the use of a kind of soap, made of goat's tallow and ashes of beech-wood. This soap, which was called Hessian Soap from being manufactured in the county of Hesse, was much used, if we may credit Martial, to stain the German wigs, in order to give them a 'flame-colour.'"

Although the trichological reading seems to be very extensive, Mr. Truefitt scorns technical words; his delight is to be simple and intelligible. If he uses the recondite word "diseases," he obligingly adds "or cachexies," to enable you to understand it. Baldness is described as Alopecia; and he states, with a scholarly ascension which country gentlemen should appreciate, that "the etymology of the word Epithelium is in itself explanatory."

Altogether, we should say that the subject here treated is a little too much for the author, and is to him what Hans Streningen's long beard was to that Burgomaster who, "one day, having forgotten to tuck it up, trod upon it, and thereby falling down, incontinently killed himself."

Poems and Translations. By Philip Stanhope Worsley. (Blackwood & Sons.)

THE original poems in this volume differ widely from each other in point of merit. 'Phaethon,' the first of the series, is a noble achievement, and far superior to all that follow. It more than fulfils the hopes formed of the writer from his translation of the *Odyssey*, and proves beyond question that we have a new poet in our midst.

It is no detraction from Mr. Worsley's merit to say that his 'Phaethon' at once recalls to us the second book of the *Metamorphoses*. Mythological fable may be regarded as the common property of poets, in which the outline is already determined, and no originality possible but that of treatment. It is not to be denied that the present poem is, in some of its details, similar to that of Ovid. The resemblance, however, is scarcely more than that

which identity of theme enforces; and, considering the fullness with which the Latin poet has worked out the same design, we may congratulate Mr. Worsley upon the distinctness and independence of his work.

At the opening of the poem, the restless ambition of Youth, in the son of Clymene, is finely contrasted with the pensive calm of Wisdom as personified in Apollo—the Wisdom of Experience, which, if it has learnt the secret of its power, has learnt also the limits of Fate to which even the highest power is subject.—

Noble in presence, though a cloud of grief
Hung shadowy-dark upon his brows; all else
Redundant with warm youth; his radiant locks
Fair as a girl's, when stealing shades embrown
The waxy yellow, and the fine glint of gold,
Like fire-dust, sparkles in her sunlit hair;
The while, from underneath his brooding brows,
Flashed eager expectation, mixed with pain
And wonder and delight—a surging sea.
Phaethon by the Sun's great portals stood.

How different the portrait of the son from that of the divine father, who sat

In night-imaginings, clothed with calm
Unutterable, through all his ample heart,
Sated with office and the fiery cares
That haunted his day-labour! For, indeed,
Couched in those large and melancholy eyes,
Brooded an awful emphasis of rest,
That tranquil self-perfection, without pain,
Which, in their far-off maddings, mortal men,
Though eloquently nurtured, find no name
Wherewith to name, not even in sacred verse.

We pass over the earlier details of the well-known legend. Phaethon, deaf to the prayers of Apollo, is about to proceed on his perilous journey. The glorious team is led forth, and the adventurer catches the first glimpse of the dazzling path. For awhile, his rash spirit is overawed. He takes heed to Apollo's warnings touching the guidance of the steeds, and suffers himself to be anointed with a chrisam potent to repel the fiery atmosphere. Then comes the journey, with its varied incidents and terrible catastrophe.—

Then soberly and well did Phaethon
Hoard up and use that warning of the god,
"Slack not the rein, nor from loose watch decline
Thine eyelids"—so he watching slackened not rein,
But, from the godlike increase given to him,
Maintained an equal nerve, though sore afraid;
Nor even thus with all his power had curbed
That chivalry divine, but that the god
Infused a soul more governably mild
For that one voyage, making their defect
Somewhat incline, for easier vassalage,
To his son's lifted virtue. So he passed
Safe on his course, and all the heaven drank light,
And, touched with splendour, wine-dark ocean smiled,
Heaving with ships, black hull and snow-white sail;
And each land went to its accustomed work,
Of peace where peace, and war where there was war,
Nor omen of disaster rose at all,
Till, as he neared the blazing cope of noon,
Where the steeds flagged a little, as is their wont,
For steeper seems a hill just ere the bend—
Even at the point where Nature seems to pause
And listen while the sultry hour goes by—
Flat weariness ached through him, and he thought
How boonless were the boon if this were all;
Nor did he cease repeating to himself,
"How worthless is the boon if this be all!
Broad is the way; the steeds are tame enough."
Till, hungered with hot zeal, he seized the thong;
Then whirled it, curling it beneath the flank
Of the two vanward; thence with sharp recoil
Crossing the arched necks of the hindmost two,
And lo! the sudden insult dug like steel
Into the one heart of the fiery four.
They in a moment knew the vulgar hands
That held them, and their lordly eyes wept fire.
For anger at the ungenerous pilotage;
And each dilated nostril panted fire,
And the sides, heaving through their sleek expanse,
Stared with a noble horror, foaming fire;
While, raving up the causeway, hoof and wheel,
With screams and anvil-thunder, a deafening din,
Rained earthward and to heaven a storm of fire.
So to the summit, from whose brows the team,
Thrice-maddening, prone adown the diamond arc
Swept, and a triple whirlwind of white fire,
Blown skyward, sloped upon the charioteer.

Then Ganges and a troop of Eastern streams
Fled backward, each one to his cradle cave;
Then the tall glaciers of the Polar Zone
Flushed crimson to the roots of their cold realm;
For all the fir-crowned Scandinavian hills
Night-shrouded half the months, tier over tier,
Blazed in the gloomy North, like beacon-hells

Lit for world-wasting Furies who bear down
In convoy, with wild omens of the end.
And all the peopled plains sent up a smoke
Of harvests reaped by fire, and flaming towns,
Till the hot clamour of those masterless wheels
Rang deadlier, mingled with the loud-voiced curse
Of men by myriads overcome with hell.
And a long cry came to the ears of Zeus,
Where in full conclave of the gods he sat;
And, while he doubted, a great rainy heat
Fell slant and sudden on the Olympian walls,
And all the ceiling glared like molten gold,
And the rich cloisters like a forest glowed
Of resinous pines, with every trunk ablaze.

The beauty of this example in its early passages, and its grand intensity as it proceeds, have hardly been surpassed, we think, by any living writer. The gentle instinct of the steeds till unworthy chastisement rouses them to almost human indignation—the suddenness with which they break away from the "ungenerous pilotage"—the swelling tumult of sound and the fires that at once spread and mingle, while the team sweeps

Thrice-maddening, prone adown the diamond arc—form a picture admirable alike for the interest of its particulars and the splendour of its general effect.

No word, perhaps, is more loosely employed than the word "imagination." If any reader would learn its meaning from an instance, we refer him to our extract. He may be surprised to find how devoid it is of set metaphor or illustrative comparison. These ornaments, however attractive, belong to a lower grade of poetry. The imaginative writer does not illustrate his theme—he identifies himself with it. Brilliant as Mr. Worsley's description is, it has little that can be strictly called fancy; far less does it betray that gorgeous indistinctness by which straining weakness often substitutes truth. Every circumstance is clearly and simply told; and, were the incidents possible in themselves, we might suppose that they would happen as here represented. If it be asked, then, wherein an imaginative narrative differs from one of literal reality, we answer, in the addition, in the former case, of the nature that perceives to the objects that are perceived. Imagination does not alter reality, although it glorifies it. Under its dominion the actual is still the actual, but *plus* the poet. He selects, indeed, and thus discards all that is unessential or incongruous; but the keeping thus gained is but the harmony of his own mind reflected upon events which, could they occur at all, would occur as he relates them. To this discriminating power we may add the still higher function by which he imputes to material objects those emotions in himself of which such objects are typical. The faculty first named—that of selection—is admirably shown in the opening lines of our quotation. The treatment is large, as befits the vastness of the scene and the importance of the action. The general features of dawn and advancing day are distinctly conveyed, but nowhere with that minuteness of detail which, however excellent in a subject of narrower interest, would be unsuited to the magnitude of the present. Nor is Mr. Worsley less happy in evincing that noblest quality by which the poet informs outward things with human significance. The tall glaciers that "flush crimson to the roots of their cold realm,"—the fir-crowned hills that blaze, tier over tier, like the beacons of furies,—and the fiery reflection from earth that startles the conclave of gods,—are not mere pictures of material conflagration: they are quick with the imputed life of human agony and terror.

To 'Phaethon' succeeds 'Narcissus,' the subject of which affords less scope for variety of incident and brilliancy of painting. Yet the latter poem has a charm of its own. In perusing it after 'Phaethon,' we seem to exchange the

ardour of summer noon for the pensive beauty of summer twilight. How delicious is the following picture of a woodland glen, with its soft chequered light and mysterious hush!—

And the suns travelled till there came a day,
When, heated from the chase and tired with toil,
Whether of chance, or by some envious Fate
Misguided, he bore on with flagging steps
Unto a pure cold fount, where never bird
Nor mountain-goat frequented, clothed around
With fresh green turf, and secret from the sun.
Thither no devious track of mortal feet
Led through the shady labyrinth of wood;
No sound of shepherds, calling from the bowers
With melody of flute or vocal play,
Made welcome for the weary flocks at noon;
Only the immemorial silences
Kept haunt for ever on those flowery floors,
Where the sweet summers ever came and went,
And went and came, and even from the bees
Year after year their customary spoil
Concealed, as in a secret treasure-house.

In the pieces that follow we find none quite worthy of the writer until we come to 'Erinnys.' Here Mr. Worsley is once more on classic ground, and his power returns. From his remaining poems we could often cite thoughtful and vigorous passages, but the strength is more fitful, the glow paler, the music fainter. After the original poems derived from classic subjects, the most interesting contents of the book are the translations from Greek and Latin poets and the versions of Latin Hymns—the latter being chiefly taken from the compilation made some years since by the Dean of Westminster.

Heinrich von Kleist. Von Dr. Adolf Wilbrandt. (Nördlingen.)

"Mighty poets in their misery dead" is the thought that haunted Wordsworth through one of the most sustained of his works, and to none in the whole confraternity of poets are the words more applicable than to Heinrich von Kleist. There have been many lives of suffering, years of struggle and disappointment, but on none do the clouds seem to have rested so heavily, without a gleam of sunlight. Dr. Wilbrandt has told the story of Kleist's unhappy fate with great clearness, impartial sympathy, that sits well on a biographer, and considerable literary power. In all these points he seems to have more affinity with English biographers than with any German model, and he sketches the place of Kleist's early residence, compiles verbal notices which have dropped from the mouths of Kleist's contemporaries, and gives us a living picture of Kleist himself.

Heinrich von Kleist, the greatest and most unfortunate of the German romantic school, was born in 1776 in Frankfort-on-the-Oder. His parents died while he was still young, and seem to have left no impression on his mind. We are told that his youth was cheerful, that he displayed an intense activity in learning, a fiery spirit that could not be quenched, though the circumstances of his position as well as the surrounding objects were by no means inspiring. Dr. Wilbrandt gives us a picture of Frankfort-on-the-Oder as it was in the last century; instead of open squares, promenades and alleys, gloomy gates, thick walls and moats surrounded the town, which was then considered impregnable; and where now a cheerful park is planted with lime-trees was the old pestiferous graveyard. In his eleventh year, Kleist was sent to Berlin, and some years after entered the Prussian army. In this service he wasted, as he subsequently complained, seven costly years; he felt himself unfit for the army, looked on the military discipline with contempt, considered the officers as drill-sergeants, the soldiers as slaves, and a manœuvring regiment a mere monument of tyranny. In spite of the opposition of all his relatives, he left the army, and betook himself to the serious study of philosophy, at the age of twenty-three. How much soever

the students of literary biography may be pleased at the sight of the young poet leaving the army, the picture that we have of Kleist at this time is not prepossessing. From his letters, as well as from his biographer's acknowledgment, we see that he was in a fair way to become a pedant. He constituted himself professor in his home, erected a desk, and delivered lectures to his family. It was then considered patriotic for every provincial town to preserve its native dialect unimpaired, and as good Prussians Kleist's sisters spoke a most execrable German. The young professor attacked this custom with vigour, and, in spite of the league into which many of the young ladies of Frankfort had entered to defend their *patois*, he came victorious out of the combat. About this time, however, he showed signs of that absence of mind to which he afterwards fell so much a prey: one morning he came home to change his coat, and undressed himself completely instead; and he would frequently break off in the middle of a sentence and remain silent without being aware of the presence of others. But his intercourse with young ladies, though in the character of a professor, brought the natural consequences—he fell in love. The young lady to whom he pledged his heart seems scarcely to have possessed the firmness and skill which all English girls seem to inherit, and by which they guide the most intricate courtship to a satisfactory close. She allowed Kleist to domineer over her; she kept their engagement secret from her parents because he declared that when once they knew of it all the charm had vanished in his eyes; and she remained constant for nearly two years in spite of the strangeness of his conduct. From the very beginning he insisted on absolute submission, would not consent that his betrothed should rejoice at anything which did not refer to him, complained every day of some want of love, and wrote her a long letter every day in the few moments that he was absent from her.

Kleist's engagement had, however, one practical effect—he applied for employment. He took up his quarters in Berlin, and devoted himself to the commencement of an official career, though he owned that he was not suited for official life. In the middle of this a frenzy seized him, and he started off on a mysterious journey to Wurzburg, apparently without an object, and without letting his betrothed into the secret. His biographer conjectures that he went in order to escape from philosophy, and that he felt the germs of poetry within him. The description of Wurzburg that Kleist gives in his letters would certainly confirm the second half of this conjecture; we find there the profusion of similes, the abundance of pathetic fallacies, the strained ecstasy of vision that so often usher in poetry. But the unaccountable way in which Kleist started on this journey, and on another journey to Dresden and Paris the next year, would almost justify a comparison of him to the Lord Bateman of the ballad, as illustrated by George Cruikshank. It is impossible to discover why he flung up his occupation in Berlin, and started suddenly for Paris. We can only ascribe it to the waywardness of his character, to the unaccountable strangeness that guided him, or rather led him astray, through the whole course of his life. "Nothing is regular with me but irregularity," he says in one of his letters; and on the eve of starting for this journey he gives vent to the most gloomy prognostications. "Everything is dark in my future; I know not what to wish or what to hope;" "I seem like a child that has ventured out into the middle of the sea: the wind rises; the boat dashes wildly about in the waves, the thunder stuns every sense: I know not where

to steer, and I feel as if my end was approaching."

He started for Paris with his sister Ulrike, to whom many of the letters in this volume are addressed, and who exercised more than once a decided influence upon him. He pictures Dresden in a few vivid phrases,—the town like a scenic pageant in the midst of an amphitheatre, the country round like a landscape spread out on a carpet, with the circle of hills as an arabesque border. But a long journey through Germany in 1801 gave rise to other than pleasant pictures. The post-carriages were mere waggons, without either cushions or side-doors, and the roads generally impassable. Kleist and his sister bought a carriage in Dresden and travelled with their own horses. Before they came to Frankfort an accident nearly terminated their journey, and gave Kleist an opportunity to indulge in the saddest reflections. The bray of a donkey frightened the horses while they were feeding; they dashed off, and overturned the carriage in which the travellers were sitting. "And thus the lives of two human beings hung on the bray of an ass! If my life had ended at this moment, had I lived for that? For that? Was that, and no more than that, the purpose which heaven had in view for this gloomy, enigmatic, mortal life?" With these questionings running in his brain, the poet was quite unfitted for such a town as Paris. His description of the city, which seems like a vision of the Arabian Nights to those who see it after London, is almost identical with that of Alfieri. It was here that Kleist formed a resolution to renounce the society of man, and retire to some quiet spot in Switzerland where he might pass an idyllic life with his family alone. But his betrothed was not equal to the self-denial, and after a silence of five months Kleist wrote her a farewell letter, which put an end to their engagement.

After a short enjoyment of the idyllic life he had chosen, on an island in the Aar, where it flows out of the lake of Thun, during which he devoted himself to poetry and a Swiss maiden, Kleist gave up his dream of solitude and went to Weimar. He was well received by the great literary triumvirate, though he had only one interview with Schiller and Goethe; but Wieland gave him a home under his roof, and entered warmly into all his projects. Goethe's judgment of Kleist was influenced by the distaste he felt for everything that recalled his early malady,—the same feeling that led him to avoid a sudden intimacy with Schiller, that made him shrink from the hypochondria displayed in Byron. He saw the ghost of Werther in Kleist, and that ghost he had long attempted to lay. Kleist, on the other hand, entertained ideas about himself and Goethe that were scarcely likely to conciliate the elder poet. He desired nothing less—Dr. Wilbrandt has learnt it from a friend of Kleist's—than absolute dominion in German poetry; said openly that he had only one object in view, to be the greatest poet of his nation, and in that purpose not even Goethe should hinder him, and boasted in his excited moods that he would pluck the wreath from Goethe's forehead. Wieland, who took him into his house and treated him like a son, could not fail to observe his strangeness of demeanour, his absence of mind, and his confused mutterings; and Kleist confessed that he was writing a tragedy, which he only desired to complete before his death, but the ideal that floated before him was so lofty that he had destroyed every scene as soon as it was written. Some of these scenes he recited to Wieland from memory, and Wieland was so struck by them that he declared them worthy of the combined genius of Æschylus, Sophocles, and Shakspeare. He

exhorted Kleist to work at the tragedy and complete it as best he could; but the erratic youth, though for a time he followed the advice and showed the warmest gratitude to Wieland, was not to be rescued from his fate. He stole secretly out of Wieland's house, found his way to Paris, where he destroyed all that he had written, and then, wishing only for death, started on foot for Boulogne to join the expedition preparing for the invasion of England. Fortunately, it may seem, though it is doubtful if such an end would not have saved him the subsequent misery of his life, Kleist was rescued by an acquaintance he met on the road from the fate that would, in all probability, have seized him at Boulogne, for he was travelling without a passport, and a Prussian nobleman in similar circumstances had just been shot as a spy.

The shock seems to have sobered Kleist for a time, and a ray of hope dawned upon him. He returned to Berlin, and with great difficulty obtained an official post after being severely reprimanded by the king's adjutant for the life he had led. "I had left the army," Kleist relates in a letter to his sister, "turned my back on the civil service, wandered through foreign countries, tried to settle in Switzerland, made verses, (think of that being made a reproach to me, and in such words!) and so on." However, the king was not inexorable, and Kleist settled down to official work with a promise to his sister to abandon the muse. It is easy to see how long such a promise would be kept; but no sooner was it broken than the poet again resigned his employment, and the battle of Jena coming shortly after deprived him of all support from the state, as well as making his literary profits precarious. The hand of France was heavy upon him from this moment. Venturing to Berlin while it was in the possession of the French he was taken prisoner and confined in the castle of Joux, one of his companions occupying the cell in which Toussaint Louverture died. When set free again, and allowed to return to Germany, Kleist found his country so situated that there was little prospect of a favourable end to his struggle. The booksellers could not pay their usual prices for manuscripts while war was going on; the theatres were all dependent on French pieces, and would not play those of native poets; while Kleist's eccentricities speedily alienated the public, as they had disgusted his personal supporters. He tried tragedy and comedy, stories and newspaper articles, but nothing succeeded with him. One of his pieces was tried in Weimar, and Goethe, who wrote him an excellent letter about it, was not so successful in adapting the play to the stage as in counselling the author. The piece failed, and Kleist revenged himself in ungenerous epigrams on Goethe. He wrote a tragedy on Penthesilea, in which the death of the heroine affected him so deeply that he was found bathed in tears, and could only answer to his friend's inquiry, "She is dead!" But the publisher who bought the tragedy was so dissatisfied with it that he would not advertise it for sale lest people should ask for it. Kleist started a periodical which was to unite all the talents of Germany, and succeed where Schiller's 'Horen' had failed; but it achieved no more than its prototype. Between the battles of Aspern and Wagram, and during the exultation which followed the first great check received by Napoleon in Germany, Kleist endeavoured to found a political paper in Prague with the assistance of some of the leading statesmen of Austria. But Napoleon's second passage of the Danube scattered these projects, and a newspaper that Kleist started in Berlin only hastened his ruin. His nervous

system was so shattered that madness seemed imminent; he said that a friend must either give him up his wife or die by his hand, and meeting the friend shortly after on the bridge, attempted to throw him into the river.

Dr. Wilbrandt devotes a long chapter to the story of Kleist's suicide. It was in November, 1811, that he went with a friend's wife, whose state of mind greatly resembled his own, to a lake on the high road from Potsdam to Berlin, a place where he had once discussed the question of suicide with his friends. The spot is lonely and melancholy, sandy banks surrounding the desolate lake over whose waters the willows hang, and above scattered birches with a dark background of fir and pine. In the distance rises a church-spire, and nearer still the inn in which the two passed the night writing their last farewell to their friends. In the morning they walked from the inn to the lake,—a shot, and then another, were heard; and their bodies were found close together, where Kleist had shot his companion through the heart before blowing out his brains.

History of the Scottish Regiments in the British Army. By Arch. K. Murray. (Ward & Lock.)

COURAGE, according to the maxim of Bonaparte, is a quality born with a man, but which cannot be acquired. So said the soldier. On the other hand, some philosophers have described bravery as being the mere impatience of danger; others have declared that men constitutionally timid may and do possess themselves of courage by an effort of mind. Perhaps the truly brave man is he who, fully conscious of the mortal peril he is commanded to face, goes forward to meet it, calmly if he will, enthusiastically if he may, and accomplishes his duty, fearless of all consequences.

In achievements of this quality, the Scottish regiments do not excel other regiments in the service; but the 97th Lanarkshire Volunteer Guards appear to entertain a different opinion, and they accordingly requested their Major to chronicle the deeds of daring or endurance of the Greys, the Coldstreams and the Scots Fusiliers, the Royal Scots and North British, the King's Own Borderers, the Cameronians and the Light Dragoons, the Scots Brigade, or the old 94th, the Perthshire, the Stirlingshire and the Argyleshire, the 70th, the 90th and the Lanarkshire, the Old Highland, the Black Watch, the Glasgow and the Duke of Albany's, the 74th, the Ross-shire Buffs, and the Cameron, the Gordon and the Sutherland Highlanders. This is a goodly roll of the brave whose deeds are now recorded by the Major of the Lanarkshire Volunteers at the request of his brother officers. It was an evil hour when the request was made, a worse when the Major undertook the office.

Major Murray sets out by a remark not at all to the purpose and in no respect true. It could have been as well said at the end or middle of the book as at the beginning, or inserted in any other work the author might write. It is to this effect: "Nature has been aptly represented as a fickle goddess, scattering her bounties here and there with a partial hand." We know no one who has so represented her. On the contrary, we know how she has been otherwise and more truly represented by the greatest of our didactic poets,—the one who grandly said

All Nature's difference keeps all Nature's peace,
and who allowed so little of fickleness or partiality to this "goddess," as to lead him to exclaim,

Know, Nature's children shall divide her care,
The fur that warms a monarch warm'd a bear.

Leaving the Major to settle this matter with Nature, we quote a passage at once character-

istic of his style, his philosophy, his logic, and above all of his knowledge of history generally, and of military history in particular. The italics are ours:—

"Armies have a very ancient history. Their origin might be traced to the very gates of Paradise. When the unbridled lust and wrathful passions of man were let loose like Furies, to wander forth upon the earth, then it was that lawless adventurers, gathering themselves together into armed bands for hostile purposes, to live and prey upon their weaker brethren, constituted themselves armies. Passing down the stream of time, through the Feudal Age, we find one among the many greater, mightier, wealthier—a giant towering above his fellows—exercised lordship, levied tribute, military and civil, over others as over slaves. These were the days of chivalry,—the Crusades,—when cavalry constituted the grand strength of an army. Here we might begin the history of cavalry as an important constituent in armies, were such our purpose. The comparative poverty of our ancient Scottish nobility prevented them contributing largely to the chivalry of the age. Almost the sole representative we have of our Scottish Cavalry, is the Second Regiment of Royal North British Dragoons, or Scots Greys—a most worthy representative. The wars of the Interregnum in Scotland—the times of Wallace and Bruce—when the feudal lords had nearly all either deserted or betrayed her, introduce us to a new force, more suited to the independent character and patriotism of the Scottish people—the formation of corps of infantry or armed bands of free burghers. These were the fruit, to a large extent, of the Magna Charta in England, and of the struggle for liberty in Scotland. Hence the wars of Edward the Black Prince with France, distinguished by the victories of Poitiers, Agincourt, and Cressy, may be viewed not merely as the epitome of the triumphs of England over France, but more especially as illustrating the success of this new force—represented in the English yeomen, burghers, citizens, and freemen—over the old force, sustained in the chivalry, the cavalry of France. The result of these successive defeats, we find, was most disastrous to France."

We have been accustomed of late to very remarkable disturbances in the atmosphere of history. We have been told that Richard the Third did not kill his nephews, and that Henry the Eighth was rather a tender husband; but we were not prepared for Major Murray's discovery that the Black Prince, and not Henry the Fifth, won the great day at Agincourt. Surely this transfer of glory from Lancaster to Plantagenet is a little unjust to the former! Would it be fair if we were to maintain that Sir Cloudesley Shovel gained the Battle of Trafalgar or that Marlborough won the victory of 1815 at Waterloo? If this be the method by which the Major registers the glories of the Scottish regiments, we may well be doubtful of the few he does chronicle amid the masses of fine writing, droll logic, and of his oracular remarks, which remind us of the words of the poet,—

To observations which ourselves we make,
We grow more partial for th' observer's sake.

Again, as if to render undoubted the right of the Black Prince to the glory of being the victor at Agincourt, the Major calls Poitiers, Agincourt and Cressy successive defeats. If you allow that young Edward at fifteen or sixteen gained the last of these fields in 1346, the Major supposes, it would seem, that he, incontestably, carried off the glory of Agincourt some years previously—Agincourt having been fought in 1415! and that the young hero commenced his career of invincibility at Poitiers, which we used to think was fought ten years after Cressy—namely, in 1366.

If we come down to a later period, we do not find the Major's chronology in a more healthy condition. He states that the Coldstreams were raised by General Monk about the year

1650, "and took their name from their having proceeded from Coldstream on their famous march to restore the 'Merry Monarch,'" adding, "they formed part of the army of General Monk, which, in name (*sic*) of Oliver Cromwell, subdued and occupied Scotland." If the Coldstreams set out in 1650, three years before Cromwell was Lord Protector, to restore the "Merry Monarch," they took about nine years to accomplish their task; but Major Murray satisfactorily accounts for it in his loosely-written paragraph by showing that the same Coldstreams were engaged in subduing Scotland "in name of Oliver Cromwell." The fact is, that the Coldstreams were not raised till nearly ten years after the date "about" given by Major Murray.

When they *did* get the "Merry Monarch," they, "whilst fulfilling their duty, must oftentimes have been forced to witness the dark intrigues of a licentious court." We doubt, however, if the intriguers took a regiment of Guards into their confidence. The Major knows best; and adds, that "their duty, too, required they should guard not merely the sovereign of a great nation, but his *seraglio!*" Fancy the Misses and Myladies all locked up in one house! The guarding of such hussies shocked the Guards, who gladly "welcomed a respite from such irksome duties and the influences of such *evil example on the field of battle!*" This is very satisfactory; and we may add, for the satisfaction of those to whom the modesty of the army is dear, the Major's agreeable remark, that "the Grenadiers and Coldstreams were unwilling witnesses to the *profligacy and lewdness* of the Court." In this last case the *italics* are the Major's, whose anxiety to support character is so great that he even asserts that the Peace of Ryswick was weary of the War. This remarkably pretty figure of speech is thus illustrated:—"In 1697, weary of a war which had been fraught with no decided success on either side, the Peace of Ryswick put an end, for the present, to a further waste of blood and treasure."

It is due, however, to the Major to say that in terseness of expression and power of condensation, he rivals Tacitus. We quote the whole of his account of the battle of Blenheim, at page 58:—

"In the action which followed, the Guards had six officers killed and wounded."

The following is more diffuse, like Livy, but not quite so clear:—

"In 1793 the restless and aggressive spirit which sorely troubled France, developed in the Revolution, once more plunged that nation into war with Britain; nay, not only so, but sending forth her revolutionary incendiaries charged with the subversion of all constitutional government, and seeking to poison the minds of almost every people, her ruthless and frantic demagogues virtually declared war against the whole monarchies of Christendom. Accordingly, a British force, including a portion of the Greys, was sent to the Netherlands under the Duke of York. These were chiefly employed in the sieges of Valenciennes, Dunkirk, Landreies, &c., which preceded the double battle of Tourmay, fought on the 10th and 22nd of May, 1794. The Greys and the other British cavalry easily routed the newly-raised horsemen of the Revolution, which were sadly degenerated from the splendidly-equipped cavalry of the old monarchy—long the terror of Europe, and most worthy foes. The utter bankruptcy of the French nation prevented them from equipping or maintaining a powerful cavalry, and, in consequence, we find the armies of the Revolution at that time very deficient in this branch of the service. Notwithstanding the excellence of his troops, the Duke of York found his position untenable, with such a handful, against the overwhelming hosts of France, which were being daily

augmented by a starving crowd which the Revolution had ruined, and so forced into the army as the only refuge in those unhappy times. The British, retreating into Germany, reached Bremen in 1795, whence the Scots Greys shortly thereafter returned to England."

Of anecdote or incident, the examples are very few; but here is a bit of individuality in the person of Mrs. Davies, who followed the army, in a male dress, or, as the Major puts it, "donning the habiliments of man!"—

"At the battle of Ramilies, after much hard fighting, the regiment succeeded in penetrating into the village of Autreglize, inflicting a dreadful carnage, and were honoured in receiving the surrender of the French 'Régiment du Roi,' with arms and colours. Amid the trophies of the day, the Greys are said to have taken no fewer than seventeen standards. At the close of the battle a very curious circumstance was brought to light, affording an illustrious example of woman's love, fidelity, endurance and heroism. Amongst the wounded of the Scots Greys, a female (Mrs. Davies) was discovered, who, donning the habiliments of man, had enlisted in the regiment, braved the perils of Schellenberg and Blenheim, that in this disguise she might follow her husband, who was a soldier in the First (Royal Scots) Foot, then with the army. Her case at once excited the interest and sympathy of the whole army; and awakening the generosity of the officers, especially of the colonel of her regiment, she was restored to her true position as a woman, lived to be of considerable service as envoy to the army, and at her death in 1789 was buried with military honours in Chelsea Hospital."

Such are samples of this new historical work. We will only add, for the sake of peace among military and literary controversialists, that at Waterloo the "watchword" of the French *Garde* was, "The Guard dies, but never surrenders." The Major adds, "we feel honoured as, regarding their grave on the plains of Waterloo, we shed a tear for the worthy representative of the Guard!" The Major's tears have blinded him a little, perhaps, as to facts.

Wanderings of a Beauty; or, The Real and The Ideal. By Mrs. Edwin James. (Routledge & Co.)

THE title and the author's name will secure a public for this novelette; but beyond its title and author's name, its dedication to Sir Edward Bulwer Lytton and its cover embellished with a likeness of the wandering beauty, who is represented in the act of making eyes at all creation, the *brochure* has few of the qualities that under favourable circumstances contribute to literary success. It lacks sprightliness and piquancy, and its redundancy of French words will not atone for its dullness in the opinion of idlers who open its pages under the influence of that morbid curiosity which induced the New York rowdy to buy Young's 'Night Thoughts.' For the next week or two, however, it will create tattle and laughter in clubs and at dinner-tables. It will be hastily conned and as hastily thrown aside by those who can find music in the cries of drowning men, and enjoy the distant baying of the pack in which an old friend, who has gone to the dogs, is known to be giving tongue. Possibly a few collectors of scandalous memoirs will think the 'Wanderings of a Beauty' worthy of preservation, and will place it on shelves where 'The New Atlantis' and 'The Adventures of Rivella' would not be sought in vain. But it may be safely predicted that the general demand for the book will not be great when three months have seen it smiling on passengers from its niche in the Railway Library.

Of course, the author is not to be held accountable for "what people will say." If unkind critics and scandal-loving readers main-

tain that "the beauty" is Mrs. Edwin James herself, and that the beauty's second husband is the late Member for Marylebone, they must bear the consequences of their own malevolence, and more generous critics must hold the lady guiltless of the bad taste imputed to her by such uncharitable constructions. Half-a-dozen sentences will suffice to show how few are the points of similarity between the author and the heroine of the 'Wanderings,' between the Queen's Counsel and the villain of the tale.

Mrs. Edwin James does not tell the story of her own life, but merely narrates the adventures of her intimate friend, Evelyn Travers. When she is still a simple, guiltless child, not seventeen years of age, Evelyn becomes a "victim of circumstances," and is induced by a worldly mother and a heartless stepfather to marry her first cousin, Capt. Edward Travers, who, on making her acquaintance, is "dressed in the height of fashion, which in England means a well-cut coat, white waistcoat, an irreproachable neck-tie, and well-fitting polished boots." The captain's chief points are, a fine set of teeth, "a most beaming moustache," and a hand that trembles ominously at the breakfast-table. At her wedding "the bride, who was in high beauty, wore over a petticoat of white *glacé* silk a richly-embroidered robe of India muslin, the gift of her husband, who had brought it from India. Her wreath and bouquet were of *real* orange-flowers, and a veil of the most delicate lace enveloped her youthful form as in a cloud." The wedding takes place in May; in the following July, Evelyn writes to her intimate friend from her husband's ancestral seat in Derbyshire, "Do you remember, Mary, how you used to tease me and tell me I was not going to marry a man 'but a pair of moustaches'?" Well, I confess, they may have had a trifle to do with it. But only just imagine my horror; Edward appeared yesterday morning at breakfast shorn of his honours, and on my exclamation of natural disgust, he informed me that his name having appeared in the *Gazette* as having sold out of the army, he was no longer entitled as a civilian to wear moustaches. I never thought my husband *clever*; I knew he did not care for music, nor understand poetry, but I *did* fancy him good-looking; and now, Mary, the worst is come—I actually think him ugly; his long upper lip, robbed of its greatest ornament, has such a sullen, almost sulky expression, when he is serious or asleep, that I actually shudder when I look at him." After ten years of wretchedness, Evelyn is liberated from bondage to the husband whose long upper lip has thus lost its greatest ornament. He drinks till his hand shakes worse than ever,—he drinks himself to death. "Let us," says Mrs. Edwin James, "drop a veil over the closing scenes of the life of one whose deathbed was invaded by the baleful spectres of *delirium tremens*." A lovely widow, with one child, a little girl who is even lovelier than her mother, Evelyn Travers is introduced at the Court of St. James's, and, leaving England, spends the next few years of her life in continental capitals. Wherever she appears lovers fall down and worship her. The number of her adorers is legion. Princes, dukes and patrician soldiers surround her in ball-rooms and wait for her in streets. But such success is not achieved without rousing the envy of malignant observers. Whispers and vile rumours are circulated about the simple, sinless widow. It is even stated that she is "a cast-off mistress of the Count of Syracuse," who paid her many flattering attentions during her stay in Florence. She becomes the mark of "calumny—that pale daughter of envy, engendered by cowardice, and nurtured by hatred and deceit." In short, the lady's reputation is

an object for jests and wicked insinuations. Leaving Italy and her Italian lovers, the lady moves to Paris, where she gathers round her a distinguished society of spirit-rappers, and makes the acquaintance of Sir Percy Montgomery, who becomes her second husband. Of course there are no grounds for fixing the experiences of this pure, stainless, but ill-reputed Evelyn Travers on the lady who, when she gave her hand to Mr. Edwin James, was mentioned in fashionable journals as "a lady well known in continental circles." If people will be so foolish as to insist on the identity of the two characters, theirs will be the folly and theirs must be the shame.

There is even less reason for fixing the character of Sir Percy Montgomery, Bart. on the English barrister whose disinterested devotion to the cause of political liberty induced him to defend Dr. Bernard and seek the friendship of Cavour. Let the reader see how the baronet is introduced in the 'Wanderings':—

"Among the crowd of English sojourning in Paris this winter, there was an old acquaintance of ours—a certain Sir Percy Montgomery, Bart., late M.P. for —shire. Some six months ago, when in London, Sir Percy had visited Evelyn, and we had dined occasionally at his house in Grosvenor Street. Indeed, the baronet had been at that time a warm though unsuccessful admirer of our heroine. Sir Percy was, in appearance, a perfect 'John Bull'; that is to say, he possessed a countenance rubicund and somewhat flat, with no very marked features; figure stout, burly, broad-shouldered, thick-set, you perceived at a glance that the animal nature preponderated in the man; nevertheless, the square and rather massive forehead displayed intellect, and the fine teeth, seen to advantage in a pleasant jovial smile, of not unfrequent occurrence, rendered the personal appearance of our friend, if somewhat coarse, not altogether unpleasing. Let not my readers, however, imagine that the 'John Bull' type is the true type of our countrymen. They will, on referring to a former chapter of this work, find the portrait of an accomplished English gentleman, in our delineation of the young and aristocratic Melville. We have there depicted elegance, manliness, and chivalry, in combination with the splendid physical development, only to be seen in perfection in the Anglo-Saxon race. But to return. Sir Percy was by no means wanting in brains. He had made some sensation in Parliament; and, having had the tact to speak on the popular side of each question, his fluency was greatly appreciated, and he had thus acquired a higher reputation than his (not first-rate) talents perhaps merited. So the *Times* wondered when he resigned his seat; and the *Herald* and other Tory papers were open in their rather uncharitable surmises as to the motives for so sudden and untimely a retreat in the late M.P. Sir Percy having discovered our address at Gallignani's, lost no time in paying his respects to Evelyn, and continued his visits from time to time. Evelyn soon named him my adorer, and said it would not be such a bad match; the baronet was of a good family and reputed rich, though, as some asserted, rich in debts alone. He had, at least, talent, and if I did not object to his lack of personal beauty, and his fifty years, she added, I might do worse than become Lady Montgomery. Ever occupied with receiving and replying to D'Arcy's frequent letters, or in reading, talking, and practising with Ella, my friend paid but slight attention to a former admirer—for whom she had never felt even a passing gleam of sympathy—until one day she received from him a rather melancholy letter; making her in some sort a confidant, the writer threw out dark hints of debts and difficulties which had exiled him from his native land, and adverted mysteriously to envious political rivals, who were endeavouring to work his ruin, and who had, alas! succeeded in putting a present stop to a career which would have otherwise shortly ended in the Cabinet. Much changed for the better, since her acquaintance with Philip d'Arcy, and somewhat hurt and humiliated by the unexpected marriage of

Di Balzano, our heroine opened her heart in pity for the baronet's misfortunes; had not she, too, suffered from envious tongues! had not the slander been to her as 'the worm which never dieth'? Cruel, cruel world! thou art indeed a hard master—offend against thy laws—break thy one commandment, 'Thou shalt not be found out,' and thou art utterly without pity, even to the exclusion of all repentance;—cruel, cruel world! And so Evelyn took compassion on the injured man, and invited him oftener, and sympathized with his griefs, and was in every way kind to him. Thus did circumstances favour his suit."

What is there in this passage to justify a suspicion that Mrs. Edwin James is holding her late husband up to scorn in a work of fiction?

The marriage between Sir Percy and Evelyn results in misery—the scene of their wretchedness being laid in New York. Sir Percy is coarse, brutal, crafty. He is bent on getting his wife's fortune into his hands, and when she persists in keeping the strings of her own purse, his fury bursts beyond the bounds of caution. Of course, such a ruffian cannot be intended for Mr. James!—

"Our heroine had been wedded about three months. Was she blessed in her second union more than in her first marriage? My kind and gentle readers, she was not happy, yet she was content. But had she ever before indulged in any illusions as regards Sir Percy, they must have quickly faded. Even on returning from the church, his bride at his side, not one word of affection did the newly-made husband utter; of himself alone he spoke—his position, his future; but then, to be sure, he was turned of fifty, and, as Byron observes, rather than one husband at that mature age,—

'T were better to have two, at five-and-twenty. This was the beginning of sorrows. Immediately after the breakfast, the impatient bridegroom, anxious, doubtless, to embrace the fair lady he dared now call his own, knocked at the door of her chamber, where, divested of her bridal costume, she was arraying herself in a becoming travelling toilette. When admitted, the grateful lover begged—now guess, dear ladies, I pray, what—why, for the loan of a few hundred francs to pay his bill at the hotel. Rather early, methinks, to usurp marital rights over his wife's purse. Poor Evelyn's next fit of disgust was on the morrow of her bridal, when, in an elegant morning robe of the freshest muslin, her hair braided under the prettiest of caps, she with horror beheld Sir Percy enter the room unwashed, uncombed, unbraced, and perfectly innocent of a clean shirt. Seating himself at the breakfast-table, he commenced feeding, utterly unconscious of having committed an unpardonable crime against good manners. Unfortunate Evelyn! so refined, so fastidious, so exquisitely neat and clean in her personal habits, to be brought to this. 'Oh! what a falling off was there!' Sir Percy united in his own person those opposite defects which in others are usually compensated by corresponding virtues. He was at the same time a spendthrift, and the meanest of men. Hasty and imprudent, yet sly and cunning, with an appearance of frankness, he combined an utter disregard of truth. He seemed to lie for the pleasure of lying. His temper was alike quick, vindictive and revengeful, and his character comprised the opposite qualities of weakness and obstinacy. A general lover of the female sex, he was utterly incapable of individual attachment. It was clear that the baronet had married for money, but finding that his wife contented herself simply with paying their mutual expenses, and refused to place her fortune in his power, he actually began to dislike her, and made no secret of the feeling. One illustration I will give, and this is but a solitary instance of the extraordinary line of conduct pursued by Sir Percy towards her he had so recently sworn to love, protect, and cherish, during the term of their natural life. Angered one night because Evelyn had left him a small portion of his own travelling expenses to pay, he rang up the servants of the hotel at midnight, and though we were to start on the following morning at break of day, he ordered

his luggage to be transported and his bed made in a room at the most distant end of the corridor, thus making himself and his wife of a month the laughing-stock of the hotel. We do not pretend the man was altogether devoid of good impulses; but the evil of his nature was strong—the good feeble. He was ungrateful, heartless, unprincipled. Evelyn had before known only the reverse of the picture; she had been adored, petted, spoiled. How could she conceive so exceptional a character as that of Sir Percy? How bear with him? Dear friends, she did bear with him, and she was not wretched, for she now knew that all trials are the just retribution for past sins committed, past duties unperformed."

Eventually, Evelyn is liberated from her tyrant, not by a judicial decision, but by the discovery that, at the time of his marriage with her, at Paris, he had a wife shut up in a lunatic asylum.

THE AMERICAN QUESTION.

The American Question, and How to Settle it. (Low & Co.)—The American war has produced much wild talk and flighty literature, but of all the mad books to which it has given birth this is the most laughable. The writer is on the Northern side, and would fain bring the quarrel to an end by "an armistice, as proposed in the French despatch, to be followed up by the mediation of England and France," which friendly interference is to result in the severance of Canada from Great Britain, and its establishment as an independent nation, in friendly intercourse with the new Confederates, who, like herself are to adopt the principles of free trade. The chief benefits of such an arrangement would be shared between Canada, the mother country, and the North. Great Britain would be the gainer by finding in Canada a "natural ally"; whilst Canada would be able to protect the Northern States from the grasping policy of the South. "The gain of independence to Canada," says the writer, "would be no loss to Great Britain, but, on the contrary, a great gain in every way as a secured open market, and a self-supporting Sovereign State. On the part of Canada, all the tendencies towards the mother country would be not only preserved, but most materially strengthened,—inasmuch as such a concession would remove all jealousies and other drawbacks to this natural alliance. Canada will look to Great Britain as a natural ally, and each will look to the other as her best customer. Strengthened in position, Canada will be the best protector of the North against any future encroachments of the South, and, in the course of time, all antagonism between North and South may be merged in mutual interest." A delightful humour pervades this proposal that Canada should be declared an independent Sovereign State, so that she may be in a position to protect the States who but the other day were threatening to annex her, as soon as they had crushed the rebellion. "If it be said," observes the author in the last lines of this chapter, entitled "How to Settle it," "that these terms will never be accepted, the only answer to be given is—Try." Without doubt, there are many Northern politicians who would like to try such a settlement. Whether Great Britain might like such an arrangement, and whether Canada might like to try it, are in the writer's estimation questions of trivial importance compared with the consideration of what would be most "pleasant" to the States. Englishmen would gladly see the abolition of Northern protective tariffs, but they are not likely at any time to forget the proverb which teaches that a good whistle may be bought at too high a price.

Two Months in the Confederate States. Including a Visit to New Orleans under the Domination of General Butler. By an English Merchant. (Bentley.)—The "English Merchant" writes under the influence of warm sympathy for the Confederates, but he gives his testimony frankly in favour of the North whenever justice impels him to do so. The best part of his book is that which relates to New Orleans under General Butler's government. "I must add," says the tourist, "that the inexpressible disgust with which the two Butlers were

regarded did not extend to any other Federal officers, or only to very few of them. Brigadier-General Shipley, the Military Governor of Louisiana, and Major Strong were especially spoken of as gentlemen who were fulfilling difficult duties in a gentlemanly manner; and I must confess that the same tribute seemed justly due to all the Federal officers with whom I came in contact. The soldiers also were certainly very well behaved, and free from disorder. I never saw a case of drunkenness or bullying among them while in the city, though all the bar-rooms were open, and the pleasures of the city were accessible to all."

The South as It Is; or, Twenty-one Years' Experience in the Southern States of America. By the Rev. T. D. Ozanne, M.A. (Saunders, Otley & Co.)—Mr. Ozanne is one of those sanctimonious and mealy-mouthed apologists for slavery who have been called into existence by the extravagances of Abolition enthusiasts. "The slave," lips this reverend champion of man's right to treat his brother-man like a beast, "has a life-interest in his master's estate, and therefore knows that, when he becomes either aged or infirm, ample provision is made for his subsistence: in fact, he feels himself to be no insignificant or useless member of a large family; his interests are bound up with those of his owner, the prosperity of the one securing the comfortable support of the other. *Though a bondman, he does not feel like a slave.*" Mr. Ozanne does not trouble himself to set forth in exact terms the difference between the feelings of a bondman and those of a slave.

The Elopement: a Tale of the Confederate States of America. By L. Fairfax. (Freeman.)—The villains of this historic novelette are Yankees; the good people are Southerners. The heroine, Amanda, is a lovely little girl, who is induced to fly from Georgia to New York in order that she may escape from a wicked uncle (a Yankee overseer) who threatens to sell her as a slave. From New York, Amanda returns to the South, and comes to New Orleans whilst it is occupied by the Federal forces under the command of General Felun (or Butler), whose principal subordinate officer is the "forger Jed," who has conceived an odious passion for the helpless maiden. In the last chapter of the story, Amanda is thrown into the New Orleans gaol, where Jed enters her dungeon and attempts to achieve his atrocious purpose. "'It's of no use, girl,' he said, with a leer of satisfaction, 'my triumph's come now. Scream to the winds if you will, but first—' Amanda, alive to her danger, sprang to the unlocked door. Disconcerted for a moment by the unexpected action, as she sought to fly he seized her dress. The light fabric gave way; and, *losing his equilibrium*, he fell backwards. 'Vile coward!' she cried, 'I am not conquered yet! You may inflict tyranny on the women of the South, but the men of my country will speedily avenge the outrage,' and opening the door as he rose again she bounded out into the night, Jed following close upon her. On, on they went, the girl and her pursuer. The shaded moon refused to light her way; still on in darkness she ran, up a paved hillock. On, on came Jed, his heavy footsteps nearer and nearer. With courage augmenting with the prospect of escape, forward she rushed, not knowing whither, and falling over the steep embankment disappeared in the swift waters of the Mississippi. Her wild shriek made Jed pause on the Levee; and then, as if to show him the darkness of his deed, the clouds rifted, and a girlish, moon-silvered form drifted from his view." The story closes with a wail over poor Amanda's untimely death.

OUR LIBRARY TABLE.

The Plain of Troy Described; and the Identity of the Ilium of Homer with the New Ilium of Strabo Proved, by comparing the Poet's Narrative with the Present Topography. By Charles Maclaren. (Edinburgh, Black.)—The first edition of this work was published in 1822; but the present is so altered that it may be called a new book. The author is an enthusiast on the subject, and has devoted years of patient research to its elucidation. The classical scholar will heartily thank him for his labours, and

gladly welcome the volume as an important contribution to the subject of which it treats. It is scholarly, clear, and apparently conclusive. The author has availed himself of the researches of all preceding geographers who have written on the subject; and has himself visited the spots. He believes that the site of the Homeric Ilium is the hill called Hissarlik, three miles and a half from the shore; that the ancient city and acropolis covered the area of half a mile; and that the marsh of Erichthonius was known to Homer, and is identical with the ground between the Menderé and the Kirke Jos, the existing marshes indicating the position which the ancient occupied. The whole is illustrated by maps, sketches, and woodcuts. The treatise is, like a German monograph, exhaustive of the subject. None other can be compared with it in excellence, minuteness of detail, or general accuracy. It deserves to rank as the classical work on the Troad. Whether the writer's views of the Trojan war being a real event, of the unity of the Iliad, the historical character of all that the poem contains, and of Homer's personal acquaintance with the localities, be true, is a question fairly open to debate, and likely to remain unsettled for ever. Mr. Maclaren agrees with Thirlwall and Mure in thinking that Homer's poems were committed to writing by the bard himself. But the opinion of Grote is much more probable, viz., that they were handed down by tradition till about 650 B.C. Sincerely grateful to the author for his valuable monograph, we conclude with the following extract, inspired by enthusiasm for a theme which has been the cherished object of his meditations on the past.—"Hissarlik, if proved to be the true site of Homer's Ilium, becomes consecrated ground, and will be approached with reverential feelings by the educated men of the present, and of all future generations. It is indissolubly associated with the earliest portion of the literary treasures bequeathed to us by the ancient world. The poet's rock of Ilium will always be peopled with heroic memories, as in times past it has been the birthplace of noble thoughts, which have influenced the fortunes of mankind. Who can doubt that the lessons of patriotism and heroism taught by Homer, contributed to nerve the arms of the men who stemmed the tide of eastern barbarism at Plataea and Marathon? It is not alone the immortal 'Lays' of the Iliad and Odyssey that shed a glory over the now desolate hill. The file of Tragic writers, from Æschylus to Seneca, imbibed the principles of their art from Homer, and borrowed his characters of gods and heroes, while the painters and sculptors embodied these in the noblest forms of humanity. Ilium was for a considerable period to the Heathen world, what Jerusalem is now to the Christian, a 'sacred' city which attracted pilgrims by the fame of its wars and its woes, and by the shadow of ancient sanctity reposing upon it. Without abusing the language of figure, we may say, that a voice speaking from this hill three thousand years ago, sent its utterances over the whole ancient world, as its echoes still reverberate over the modern."

The Flower of Christian Chivalry. By Mrs. W. R. Lloyd. With Illustrations by J. D. Watson. (Hogg & Sons.)—The book to which Mrs. Lloyd has given this fanciful title contains meagre sketches of Bernard of Menthon, St. Bernard of Clairvaux, Savonarola, Philippe Pinel, the Abbé de l'Épée and the Abbé Sicard, Patrick Hamilton, Andrew Melville, Bishop Bedell, Granville Sharpe, Henry Martyn and Henry Kirke White. The memoirs display neither originality nor vigour of thought; but their author hopes they may be found useful as "a remedy for a prevailing evil of the day." As the lady does not expressly name the evil which is thus alluded to, we infer from the deep and even oppressive tranquillity of her pages that she is bent on raising a counter-influence to "sensation" literature. Mr. Watson's illustrations are good enough for a volume which is certainly not above the average standard of works for children.

Lessons of Love; or, Aunt Bertha's Visit to The Elms: a Story for Children. By Emma Marshall. (Seeley & Co.)—During the absence of Mr. and Mrs. Prescott, Aunt Bertha takes up her residence at "The Elms," and holds the Prescott children in gentle, womanly guardianship until papa and

mamma, at the close of the volume, return from the South of Europe, where they have been staying for the sake of Mr. Prescott's health. The children are hearty, natural children, and the story, which abounds with incidents and is pervaded by a healthy tone, will be popular with those for whom it is especially written. As a gift-book for little girls, 'Lessons of Love' may be cordially recommended.

A Story of Carn Brea, Essays and Poems. By John Harris, Cornish Miner. (Hamilton, Adams & Co.)—In many parts of 'A Story of Carn Brea' the reader encounters the same simplicity of thought and gracefulness of expression which made us call attention to the earlier publications of the Cornish miner. As a writer of verse, John Harris has earned a place by the side of Robert Bloomfield. Of the prose essays published in this volume, we cannot speak favourably.

An Interpreting Concordance of the New Testament, showing the Greek Original of every Word; with a Glossary explaining all the Greek Words of the New Testament, and giving their Varied Renderings in the Authorized Version. By the Rev. Jas. Gall. (Edinburgh, Gall & Inglis.)—Here another Concordance is added to the list of those already existing. Ingenuity and pious zeal have found helps for the English reader of the New Testament of which former generations little dreamed. The plan of the present work comes nearest that of 'The Englishman's Greek Concordance,'—a book that has helped many students to a pretty good knowledge of the Christian records. It consists of two parts, a concordance and glossary. By means of the former the student finds the original Greek of the English words; by the latter he ascertains its meaning, and gets a key to the passage in which it occurs. An example will best show the use and application of the work:—"Abase, tapeinoō, Matthew xxiii. 12, exalt himself shall be a—ed; Luke xiv. 11, and xviii. 14, shall be a—ed; Philipp. iv. 12, know both how to be a—ed; 2 Cor. xi. 7, in a—ing myself that ye." In the glossary is next found "Tapeinoō [tapeinos], to bring low, humble, abase." From this example the reader will see that the book is intended solely for those who are unacquainted with the Greek original, whom it puts as near as possible in the position of scholars familiar with the latter. The execution is good. No pains seem to have been spared. The work is full and accurate, embracing everything that comes within the purpose of the compiler. But it is merely for the received text. The texts of Griesbach, Lachmann and Tischendorf are ignored. And we suspect that, like 'The Englishman's Greek Concordance,' the book before us has grown out of the belief that the *ipsissima verba* of the New Testament are truly and infallibly inspired. However this be, the Concordance is likely to be useful to a very large class of Scripture readers, who, though ignorant of Greek, are desirous to find out the true import of the words in the Authorized Version, when the English language did not enable the translators sufficiently to define or express it. Hence it will promote the intelligent study of the New Testament to a certain extent—little indeed in the eyes of the scholar: but it was not made for such.

Clippings from Manuscript: Prose and Verse. By J. H. Powell. (Pitman.)—Instead of clipping his manuscripts, and putting selected scraps before the public, Mr. Powell should have thrown them on the fire, and turned away from their ashes with a brave resolve to get the better of his vain ambition to figure as an author. His verse is better than his prose, but the best of it is not worthy of insertion in the "Poet's Corner" of a provincial paper. In his essay on 'Dancing' the author observes, "Ladies, more delicately constituted than gentlemen, render themselves predisposed to unhealthy influences. They very often dance till the dawn of morn, and then, in a state of extreme perspiration, take cold, which not unfrequently brings on a fatal climax." Such being Mr. Powell's view of the perils of dancing, well may he exclaim, "Away forever with the midnight public places known as ball-rooms, where all that is decent is made to blush, and virtue expires, as the taper, consumed in the wick, waning by degrees in the silent, solemn night." It appears that Mr. Powell has read

papers, made up of such trash as the above extracts, to "the members of literary societies."

Our Reprints include a new edition of *Lady Morgan's Memoirs* (Allen), entitled the second, though it is in strict fact, we understand, the third. A note explains that the volumes have been revised, and many small clerical errors, especially in the quotations, corrected. We have also on our table Mr. William Longman's *Fourth and Fifth Lectures on the History of England* (Longman).—Vols. XXVI. and XXVII. of the Reprint of *Punch* (Bradbury & Evans).—Mr. Lever's *Davenport Duan and The Fortunes of Glencore* have been added to Messrs. Chapman & Hall's 'Select Library,—*The Young Doctor*, by the Author of 'Sir Arthur Bouverie, &c. (Clarke).—*The Transportation of Criminals: being a Report of the Discussion at the Special Meeting of the National Association for the Promotion of Social Science*, Edited by J. R. Fowler and W. Ware, jun. (Faithfull).—*Scpticism*, by the Rev. W. C. Magee (Hodges, Smith & Co.).—*A Century of Experiments on Secondary Punishments*, by the Hon. C. B. Adelerley (Parker, Son & Bourn).—*Special Hospitals*, by Dr. Martin (Richards).—*Return of the Principal Operations on the Eye performed in the Calcutta Eye Infirmary*, by Dr. Martin (Richards).—*Illustrations of the Use of the Ophthalmoscope*, by Dr. Martin (Churchill).—*Fourteen Months in American Bastiles* (Mackintosh).—*Stories from the Lips of the Teacher*, Retold by a Disciple (Whitfield).—*Indian Annexation: British Treatment of Native Princes* (Trübner & Co.).—*On the Danger of Hasty Generalization in Geology*, by A. Bryson (Neill & Co.).—*An Introductory Chapter to the History of Scotland during the First Sixty Years of the Seventeenth Century*, by J. Moncrieff (Hamilton).—and Mr. Beresford Hope's *Lecture on the Social Influence of the Prayer-Book* (Ridgway). In Second Editions we have to announce *The Types of Genesis Briefly Considered as Revealing the Development of Human Nature*, by Andrew Jukes (Longman).—*Observations on the Treatment of Convicts in Ireland, with some Remarks on the same in England*, by Four Visiting Justices of the West Riding Prison at Wakefield (Simpkin).—*Date Obolum Lancastria*, by F. E. G. (Bell & Daldy).—*The Spirit of the Bible; or, the Nature and Value of the Jewish and Christian Scriptures Discriminated*, by E. Higginson (Whitfield).—*The Mystery of Money Explained* (Walton & Maberly).—*Helen Lindsay; or, the Trial of Faith*, by Ellen Barlee (Faithfull).—and *Sacred Minstrelsy*, by the Rev. M. Margoliouth (Wertheim). We have a Third Edition of *Oracles from British Poets*, by James Smith (Virtue & Co.).—and a Twelfth Edition of Mr. Justin Brenan's *Composition and Punctuation* (Virtue & Co.).

LIST OF NEW BOOKS.

Able to Save, by Author of 'The Pathway of Promise,' fc. 8vo. 2/6
Allart's Treatise on Modern Median Lithotomy, fc. 8vo. 5/6 cl.
Arrows in the Dark, by Author of 'Aid and Done,' post 8vo. 10/6
Barren Honour, by the Author of 'Guy Livingstone,' new edit. 3/6
Barwell's Cure of Clubfoot without cutting Tendons, fc. 8vo. 3/6
Bayly's Treatise on Commercial Correspondence, 12mo. 3/1
Bechstein's Natural History of Game Birds, new edit. post 8vo. 3/6
Berjeau's Varieties of Dogs in Old Sculptures, Pictures, &c. 10/6
Boyle's Court and April, 1862, roy. 18mo. 8/6 cl.
Brown's Lectures on the Gospel according to St. John, 2 vols. 2/4
Brown's (R.) Poetical Works, Vol. 1, new edit. fc. 8vo. 7/1 cl.
Bullock's History of Modern Europe, 18mo. 3/1 cl.
Burton's Book-Hunter, 2nd edit. 18mo. 7/6 hf. bd.
Bushnell's God in Christ, 2nd English edit. cr. 8vo. 3/6 cl.
Cambridge School and College Texts, Besant's Hydrostatics, 4/1 cl.
Cheltenham's A Field-full of Wonders, fc. 8vo. 1/1 bds.
Christian Year (The), 7th edit. fc. 8vo. 7/6 cl.
Clarke's Objects for the Microscope, 2nd edit. post 8vo. 3/6 cl.
Cunningham's Moses Right and Bishop Colenso Wrong, fc. 8vo. 3/6
Dick's Christian Philosopher, 25th edit. post 8vo. 6/1 cl. gt.
Dinkinson's Lectures on Book of Common Prayer, 3 ed. fc. 8vo. 5/1 cl.
Dinkinson's Songs in the Night, fc. 8vo. 3/1 cl. limp.
Dinkinson's Solis Graes in Euripidis Tragediis, 4 vols. 8vo. 36/1 cl.
Dying Command of Christ by Author of 'God is Love,' &c. 12mo. 2/6
Elliott's Words for Workers and other Poems, fc. 8vo. 5/1 cl.
Family Herald, The, Vol. 20, 4to. 7/8 cl.
First Friendship, A, from Fraser's Magazine, 1 vol. cr. 8vo. 7/6 cl.
Galbraith & Houghton's Manual of Arithmetic, 4 ed. fcap. 8vo. 3/6
Goethe's Egmont, a Tragedy, with Vocabulary by Lehahn, 2 ed. 8vo. 3/6
Golden Rule, by Author of 'A Trap to Catch a Sunbeam,' n. ed. 3/6
Goodwin's Problems, &c. to Elementary Mathematics, 3 ed. 8vo. 5/6
Grant's Letty Hyde's Lovers, or the Household Brigade, fc. 8vo. 3/6
Hall's Key, Dr. J. J. Works, n. ed. revised by Wynne, 10/6, 8vo. 106/1
Havet's Complete French Class Book, new edit. cr. 8vo. 6/6 cl.
Huti's Solutions to Goodwin's Problems, &c. 3 ed. revised, 8vo. 9/1 cl.
James's Wanderings of a Beauty, fc. 8vo. 1/1 swd.
Jefferson's Life in Down, 3rd edit. revised, 3 vols. post 8vo. 31/6 cl.
Jones's Christianity and Common Sense, 8vo. 6/1 cl.
Kennedy's First Grade Freehand Drawing Book, square 16mo. 1/8 cl.
Kenneth, or the Rear-Guard of the Grand Army, 4th edit. fc. 8vo. 5/6
Lenox-Conyngham's Eiler & Helvig, a Danish Legend, 8vo. 3/6 cl.
Looy and 'Christians' Wainwright, &c. fc. 8vo. 3/6 cl.
Lupton's Chemical Treatise, 8vo. 4/6 cl.
Lutfullah's Autobiography, edit. by Eastwick, n. ed. fc. 8vo. 3/6
M'Donald's Natural Phenomena, the Genetic Record, fc. 8vo. 5/1 cl.
Miall's Politics of Christianity, 8vo. 3/6 cl.
Milman's History of the Jews, 3rd edit. 3 vols. 8vo. 36/1 cl.
Moore's Defence of the Queen's English, 8vo. 1/1 cl.
Moore's Visit to Russia in the Autumn of 1862, post 8vo. 7/6 cl.
Muir's Original Sanskrit Texts on People of India, Pt. 4, 8vo. 15/1 cl.

Noad's Chemical Analysis, Pt. 1, Qualitative, cr. 8vo. 6/1 of.
Owen's Snowed up, 3 vols. post 8vo. 31/6 cl.
Parker's Ballads and Songs, 12mo. 5/1 cl.
Penfold's Union Assessment Committee Act, with Notes, 12mo. 3/1
Pilgrim Lays, Second Series, 32mo. 1/6 cl.
Principles of Charitable Work, post 8vo. 4/1 cl.
Poe's Poetical Works, ed. by Hannay, new ed. fc. 8vo. 3/6 cl. gt.
Richardson's Rural Handbooks, 'Criswick's Weather Guide,' 1/1 swd.
Saunders's Manual of Musketry Instruction, n. ed. cr. 8vo. 3/1 cl.
Scripture Reading Lessons for Children, by a Lady, 2nd ser. 3/1 cl.
Shilling-Volume Lib.: 'Collins's Matilda the Dane,' fc. 8vo. 1/1 swd.
Sieveking's (Amelia W.) Life, edit. by Winkworth, post 8vo. 13/1 cl.
Smith's Lectures on the Pentateuch, 2 ed. fc. 8vo. 4/6 cl.
Spencer's First Principles, 2nd thousand, 8vo. 16/1 cl.
Stowe's Agnes of Sorrento, new edit. fc. 8vo. 3/6 bds.
Stuart's Outlines of Mental and Moral Science, 2nd ed. 18mo. 5/6
Taken upon Trust, 3 vols. post 8vo. 31/6 cl.
Tate's Modern Cambist, 12th edit. 8vo. 19/1 cl.
Thompson's Practical Lithotomy and Lithotripsy, 8vo. 9/1 cl.
Trap to Catch a Sunbeam, cheap edition, in packets of 12, 1/6
Trench's 3 Sermons, Subjection of the Creature to Vanity, 8vo. 3/1
Westrop's 28 Sacred Songs, with Symphonies for Pianoforte, 1/1 swd.
Wilmston's Bible Exercises, &c. for Schools & Families, 4th ed. 1/6
Wilson's (Th., D. D., Ld. Bp. of Sodor & Man) Life, by Keble, 3 v. 2/1
Wings and Stings, a Tale for the Young, by A. L. O. E. fc. 8vo. 3/1
Winalow's The Man of God, or Spiritual Religion Explained, 2/6 cl.
Withering's British Plants by Macgillivray, 11th edit. 10/6 cl.
Worth her Weight in Gold, cr. 8vo. 2/6 cl.
Wright's Psalms and Hymns for Public Worship, 2nd ed. 18mo. 1/1
Young's History of Ireland, 12mo. 3/1 cl.

ORIGIN OF SPECIES.

Down, Bromley, Kent, May 5.

I hope that you will grant me space to own that your Reviewer is quite correct when he states that any theory of descent will connect, "by an intelligible thread of reasoning," the several generalizations before specified. I ought to have made this admission expressly; with the reservation, however, that, as far as I can judge, no theory so well explains or connects these several generalizations (more especially the formation of domestic races in comparison with natural species, the principles of classification, embryonic resemblance, &c.) as the theory, or hypothesis, or guess, if the Reviewer so likes to call it, of Natural Selection. Nor has any other satisfactory explanation been ever offered of the almost perfect adaptation of all organic beings to each other, and to their physical conditions of life. Whether the naturalist believes in the views given by Lamarck, by Geoffroy St. Hilaire, by the author of the 'Vestiges,' by Mr. Wallace and myself, or in any other such view, signifies extremely little in comparison with the admission that species have descended from other species and have not been created immutable; for he who admits this as a great truth has a wide field opened to him for further inquiry. I believe, however, from what I see of the progress of opinion on the Continent, and in this country, that the theory of Natural Selection will ultimately be adopted, with, no doubt, many subordinate modifications and improvements.

CHARLES DARWIN.

THE ANTIQUITY OF MAN.

Brookwood Park, Alresford, April 27, 1863.

SUPPOSE Columbus to assure us that no man, beast or bird existed on the continent of America. "How do you know?" say we. "Have you been all over the continent?"—"No, I never even landed."—"Then how do you know?"—"I dredged the sea, and, though I found lots of sea shells, I found no remains of man, or beast, or bird. So, of course, none of these can exist on the continent." On receiving such an answer, we should, I conceive, treat Columbus as a fool or a madman. And if so, how ought we to treat those who, using the same argument, tell us that as no remains of land animals are found in marine strata, no land animals existed on the land from the denudation of which these marine strata were formed? Which is most probable, that the continents were inhabited during the deposit of the Silurian beds, or that Asaphus Tyrannus tyrannized for countless ages alone over this magnificent terraqueous globe? Drop fifty thousand dead bodies into the sea at Brighton, not one of them would go out to sea. Their bones would be ground on the shore. So that, as I asserted in 'Rain and Rivers' years ago, man, land animals and birds might have existed for ages before the first marine strata were formed, without our finding a vestige of them in these marine strata.

The most ancient museums in which the remains of man, land animals and birds can be stored, are land formations, such as drift, alluvium, filled-up lakes and caverns. But these and their contents must be modern, since they vanish by denudation *pari passu* with the surface of the land. Infinitely ridiculous are the ideas of geologists on the forma-

tion of these museums of land-animal remains. For instance, we are gravely assured in a review of Lyell's 'Antiquity of Man,' that, because at the mouth of the Somme a freshwater deposit exists thirty feet below the level of the sea, the land must have been thirty feet higher than it is now when this deposit was formed. The simple fact is, that the river, which first formed the estuary, has since filled it up with the *débris* brought to it by the wash of rain in lengthening and broadening the valley of the Somme,—no change of level of the sea or land has happened. In many places along our south coast estuaries are choked up by travelling beaches. The fresh water soaks out through the beach. But the tide cannot soak in through the beach quickly enough to rise in the old estuary to near its height. Peat and marsh land rapidly accumulate: and then firm ground by the overflow of the flooded streams. So that trees grow far below high-water level. The erosion of the shore by the sea goes on. The shingle-bank is driven back inland, and overwhelms the trees. The shingle is again driven inland, and the roots of the trees and the peat are by degrees found out at sea below high-water mark. Then comes a geologist who points to the so-called subterranean or submarine forest, as a proof that the land is sinking, when, perhaps, neighbouring raised beaches show that it is rising. Such a submarine forest may be seen near Pevensey. Another close to St. Leonards. Another near Torquay, and a dozen more on our south coast. Again, to form a drift-bed or to move a boulder or erratic block the late geologist must have a "cataclysm," as he calls a flood, or "a wave of translation," or "a great advancing wave from the north," or icebergs. True that *nous avons changé tout cela*, and the present geologist substitutes for these that most monstrous assumption a "glacial epoch." Now the great majority of drift-beds are simply old sea-shores or lake-shores, and erratic blocks and boulders are the result of the travelling of beaches, which has been totally overlooked and ignored.

If the reader will examine our south coast he will find that the chalk flints of Dover travel to the Land's End, and that boulders of the igneous rocks of Cornwall travel to Dover. And this same mixture may be seen in the ancient raised beaches. As the wind blows the wave goes, and as the wave goes the beach goes. Boulders might travel thousands of miles in the same direction; they do travel backwards and forwards thousands of miles, and they never cease to travel till they are ground to sand. This is the origin not only of our drift-beds, but of the vast regions of sand, sandstone and conglomerate formations. Place pounded sugar and small lumps on the top of the sugar-basin and shake it. The fine sugar sinks between the large lumps, which rise to the surface. So, on the beach, the large boulders being uppermost are first struck by the wave, and they travel most rapidly. This may be observed between two "groins," which are most philosophical contrivances to arrest the travelling of beach. The finer the drift the further it goes out on the shore. But nothing goes out to sea, except mud, that is, except what water can hold in suspension. This cannot sink till it reaches deep, still water, below the movement of the waves. But the mouth of every river and of every valley is an outlet for mud as well as for water. In the form of muddy water the old Continent takes passage to the sea, hereafter, like Aladdin's lamp, to be changed for a new one, by the hoisting of subterranean heat. It is only fire which keeps our heads above water. The terraces of Glen Roy are ancient lake-shores. The Spean, in cutting its course between Ben Nevis and the opposite ridge, lowered the barrier of the lakes, drained them, and they successively stood at the different levels indicated by the terraces. Lyell recognizes this principle of aqueous erosion as a universal principle. He can see it at work throughout the Old World and the New World, in the ancient lakes of Auvergne in France, in the valley of the Dranse in Switzerland, in the valley of the Anio in Italy, and in the lakes of America. Why, then, can he not see it in Glen Roy?

Drift is also formed by land floods. But the

gravel in the bed of the valley of the Somme and of other chalk valleys, though it may be called *drift*, has in reality never been *driven*. The two chalk sides of the valley were once joined, and were surmounted with tertiary strata. The erosion of rain has cut the valley through these strata, and in doing so has dropped the flints contained in them to the bed of the valley. This gravel may be called the *residuum* of denudation. Such valleys should be depicted by five symmetrical stripes. Two outside stripes of clay; two inside stripes of chalk, and a central stripe of gravel and alluvium. If this is not the true history of the formation of such chalk valleys, if they are igneous cracks, how got the *angular* gravel in their beds? The power of denudation is by no means appreciated. All geologists follow the illustrious Lyell in his dictum, that denudation and deposit are equal, and are the measure one of the other. So they would be if deposits were never denuded. But denudation is almost always employed on deposits, and past denudation exceeds existent deposits by an infinite multiple. Everything at the surface of the earth which is not living is decaying. Every flint is inclosed in a surface of decay. The whole earth is inclosed in a surface of decay; for soil is decayed subsoil, and on this decay all organic life, vegetable and animal, depends. Soil is perpetually forming and perpetually washing by rain down the hill-sides, along the valleys to the sea. No one could look at the so-called *alluvial* gold in the International Exhibition without seeing that it had once been the so-called *matrix* gold. Now what released the gold from its quartz matrix, from its almost adamantine prison? Simply the decay of the quartz by the atmosphere. And what carried the gold into the alluviums? The wash of rain. Now these alluviums extend for hundreds of miles and are hundreds of feet in depth, and all the earth contained may be worth washing for gold. The collections of china clay (which is from the felspar of decayed granite) also show the effect of small constant causes multiplied by time.

In the lower Denmark peat the Scotch fir is found; above this the oak; while the present growth is beech. This change of growth is attributed to a change of climate, but it only requires a change of soil. Now, soils are always changing, owing to the denudation of the whole surface of the earth by rain. Bagshot Heath is now a sand and Scotch fir country. When the Bagshot sand has vanished it will be a clay and oak country. When the London clay and plastic clay have vanished it will be a chalk and beech country. But no change of climate is required. Plants come and go according to soils, not according to Forbes's glacial epoch. Heath grows on the Bagshot sand to the north of the chalk Hog's-back, and on the green sand to the south of the chalk Hog's-back, but no heath grows on the intermediate chalk Hog's-back. Is this owing to the glacial epoch, according to Forbes, or is it simply that heath will grow on sand and will not grow on chalk?

A flooded stream, confined by the sides of a gullet, drives rocks before it. At its mouth the waters spread and drop their load of rocks. The wiseacre geologist dubs the heap of rocks a moraine of an ancient glacier!

GEORGE GREENWOOD, COLONEL.

FREE TRADE IN THEATRES.

If I am to believe a number of advertisements which have been inserted in the daily newspapers for the last few weeks, London will soon be in possession of a new and improved theatre. This model house is to be erected in or near the Haymarket, and is to be part of a scheme which includes the buying of the Westminster-Lambeth Theatre, formerly known as Astley's, and the erection of a manufactory for scenery and stage-machinery on the banks of the river, immediately opposite the Houses of Parliament. The capital of the company which proposes to do all this is to be £25,000., in five thousand shares of 25*l.* each, and the manager is to be Mr. Dion Boucicault, who is to receive one-third of the net profits of the undertaking as payment for his services. Whether the two theatres are to be supplied with any other dramas than the manager's popular and unpopular

adaptations is not stated on the face of the prospectus; but I may presume that all Mr. Boucicault's American pieces will be played out before the houses fall back upon the usual translations from the French.

The prospect of having a new and really comfortable theatre at the west end of London is so cheering that I would not willingly say one word against the enterprise. When Mr. Boucicault was at the Adelphi he did all he could to spoil the noble balcony of that theatre, by squeezing in an extra row of seats, which Mr. Webster would do well to remove; but he has atoned, in some measure, for this offence, by his re-construction of Astley's Theatre. Though I am not disposed to regard Mr. Boucicault as the greatest dramatist of the age, or the only possible model manager, I can see that his energy and revolutionary ideas may make him very useful as a theatrical reformer. Already the prospect of enlightened competition is having its effect on certain metropolitan lessees, and Mr. Buckstone has, at last, announced his intention of re-modelling the Haymarket Theatre. The dress-circle of that historical house has long been worse than the stocks. Many a time I have crouched between its crowded seats, and, looking down into its snug pit, have mentally exclaimed—

I have been there, and still would go:
'Tis quite a little Heaven below!

The announcement of this new Joint-Stock Theatre Company can hardly fail to alarm the upholders of the present theatrical monopoly. The calmness with which the promoters of the company discuss the details of their enterprise, unfold its plan, and calculate its future profits, without a single reference to the all-powerful and fastidious Lord Chamberlain, must seem almost impious to those who believe in the wisdom of a theatrical censorship. The cause of this irreverent boldness can only be explained by one of two suppositions. One supposition is that the directors of the company, with their ten or eleven titled patrons, have a thorough contempt for the Lord Chamberlain's authority in dramatic matters; and the other supposition is, that they have considerable backstairs influence with the guardian angel of the drama.

The new theatre, which will doubtless soon be built and licensed, in a market already crowded with places of amusement, will show the folly of entrusting the supply of playhouses to a court servant. Every argument that could be brought forward by official timid dabblers in free-trade who think the line of freedom ought not to be drawn at theatres—and secret sympathisers with everything that looks like an imitation of French social government—might be used to stop the opening of this theatre. Allusion might be made to Mr. Buckstone's theatre, to the great Opera House, with its Bijou Theatre which is so seldom let, to the St. James's Theatre, which is so slowly earning a character as a successful playhouse, and to the number of music-halls and acrobatic arenas in the neighbourhood. Without even touching upon the Strand with its three playhouses, or mentioning Drury Lane and Covent Garden, it might easily be shown that the supply of West-end theatres is fully equal to the demand, and the Lord Chamberlain might give the same refusal of a licence to the New Theatre Company which he has so often given to projectors of new playhouses in the same district, and seem to be consulting the public good in so doing. By turning his back, however, upon these plausible obstructive arguments, and promising his support to an enterprise which is ushered into the world under the imposing patronage of two dukes, two marquises, five earls, one baronet and an honourable colonel, he will most assuredly lay himself open to the charge of favouritism. It will be seen that no such "patrons" are wanted for a theatre until it is in full working order, and then only to take stalls and boxes, like common people with plenty of money. The fact that they sit in state over this unborn playhouse, will be held to mean something more than a mere attraction for shareholders.

I have every reason to believe that Lord Sydney, the present Lord Chamberlain, is a very sensible nobleman, alive to the injustice and absurdity of his theatrical censorship. He

scarcely requires to be told that an officer of the royal household can do no more good by regulating the supply of theatres and looking over plays, than by regulating the supply of pastry-cooks and looking over tarts and cheesecakes. If one or more capitalists think proper to risk their money in building a place for the performance of stage-plays in a particular locality, there is no more reason why they should ask a Lord Chamberlain's permission to do so than if they were going to invest their capital in a steambot. They know they can build a music-hall, a gallery for "entertainments," or a circus for ground and lofty tumbling, without such a courtly sanction, and they cannot understand why it is required for a common playhouse.

The British drama is now quite old enough to do without courtly leading-strings, and the licensing of plays with the licensing of theatres ought to be swept away together. The literature of the stage is generally a quarter of a century behind its age in quality, but its purity is always up to the moral level of the hour. No censor of plays ever yet made audiences more decent, or added a grace to dramatic productions beyond the reach of art. The plays that are not in harmony with the feeling of the time are never produced, although they can be performed without any consultation with the Lord Chamberlain and his servants. The dramas frequently adapted from the French are open to serious objections; but here the dramatic critics of the press are always in advance of the Court censor. While he licenses mechanically—afraid, no doubt, of making his office unpopular—they analyze and condemn, and do more to improve public taste than a hundred Lord Chamberlains. Instigated by Court feeling, or probably by diplomatic instructions, the Court censor may sometimes strike out an unpalatable political allusion; but the moment he has done so he must feel the feebleness of his influence. His power only extends to London, and not even there is it respected. The words that he has striven to smother will stare him in the face from a thousand newspapers and prints, howl into his ear in a hundred platform-speeches and music-hall songs, and even be introduced on the stage by a bold, irresponsible, gagging comedian. The censorship of plays is a hollow mockery, that is neither useful nor ornamental; and I can hardly wonder that high-minded people, when they hold the office, are the first to turn against it.

J. H.

THE ROYAL ACADEMY.

ONE of the grievances to which the Royal Academicians have hitherto clung has, to some extent, been removed. Candidates for admission as Associates have always been compelled to attend at the Academy in the month of May, and inscribe their names in a book kept there. Many a high-spirited artist has been kept out of the Society by this regulation, because he considered it such an indignity that he never would submit to it; or else he ultimately became disgusted with, and avoided the annual humiliation imposed upon him of thus soliciting to be permitted to compete for the honour of being elected an Associate of the Royal Academy. What valid reason is it possible to assign for thus practically compelling an artist, either annually, or even once, to solicit the consideration of his professional claims by the Royal Academicians? Surely the fact of a man sending his works for exhibition at the Academy might and ought to be deemed sufficient evidence of his desirability to be elected an Associate. Can it be doubted that the honour would be enhanced to the recipient from the fact of its having been conferred without any solicitation upon his part? It may be well to remind the Royal Academicians that the existence of their most questionable *monopoly* of the professional honours and powers they enjoy depends exclusively on the will and pleasure of the Crown. Also, that, in fact, they are but trustees appointed for promoting British Art. They well know how galling the regulation has always been considered, and how keenly sensitive most artists are. Consequently we submit that in deference to the feelings of the non-members of the Academy the *whole* of the regulation in question ought to be entirely abolished.

But it seems the Royal Academicians have not been able to screw up their courage sufficiently to adopt such a radical reform as that. They have contented themselves with a partial abatement of the nuisance. Accordingly, in the usual notice at the commencement of the Exhibition Catalogue for this year we find it announced that exhibitors of this or last year "may become candidates by inscribing their names, or communicating by letter to the Secretary, during the month of May." The italics denote the alteration. Surely greater prominence ought to have been given to what every artist must consider so important a concession to the non-members of the Academy. Such as it is, however, we hail this reform as one of the first fruits of Lord Elcho's Commission to ascertain whether any, and if so, what, changes it might be desirable to make in the present position of the Royal Academy, to render it more useful in promoting Art and developing public taste. The artistic profession and the public look to the results which it is hoped will arise from the labours of Her Majesty's Commissioners. It is high time that the traditional ideas of that little clique who practically carry on the government of the Royal Academy, and hold the profession at their mercy, should be expanded. The existing extent of that profession, and the rapidly-increasing interest of the public in works of fine art, alike necessitate such reforms in the constitution and management of the Society and its Exhibition as will afford confidence and satisfaction not only to the great body of British artists, who are non-members of the Academy, but likewise to those who take an interest in the progress of the fine arts.

COPYRIGHT IN ENGRAVINGS AND PHOTOGRAPHS.

Mr. Gambart's industry and perseverance in defending his copyright property have been crowned with remarkable success. Our readers will remember that, some few months since, an action was tried before Mr. Justice Willes, which had been brought by Mr. Gambart for piracy of his two copyright engravings, 'The Light of the World,' and 'The Horse Fair,' by making and selling small photographic copies made from prints taken from these engravings. Mr. Gambart obtained the verdict, with ten pounds damages; but, upon a question of law being raised, whether copying the prints in question by means of photography and selling such copies, is prohibited within the meaning of the Engraving Acts, the learned Judge reserved leave to the defendant to take the opinion of the Court of Common Pleas upon that point. On Saturday last, the question was argued before the Lord Chief Justice Erle, and three other of the Judges, who were unanimously of opinion that Mr. Gambart was entitled to retain the verdict he had obtained.

This decision is of unusual interest and importance to a considerable number of persons. It remedies the mischief of which the print-publishers have so long and bitterly complained,—inasmuch as it clearly establishes that making, selling, or publishing any photographic copy of a copyright engraving or lithograph of any description, if done without the consent of the proprietor of such copyright, renders the offender liable to the pains and penalties defined by the Engraving Acts. The decision thus directly affects the interests of every painter, engraver, photographer, print and photograph seller throughout the United Kingdom. Taken in conjunction with the Act of last session, which, it should be remembered, for the first time created a copyright in pictures and drawings, the decision gives a security to the proprietors of copyrights in British engravings which they have never hitherto enjoyed. The increased value of pictures and engravings, resulting from that security against the piracy of artistic property will, we trust, be productive of the most beneficial results in the arts of designing and engraving.

It may be useful, at this time especially, to remind artists and the purchasers of their works of the protection the law now enables them to acquire for their copyright property. Under the Act of last session, the exclusive copyright in any original painting, drawing, and photograph may

be effectually protected in every case where such work was not sold or disposed of before the 29th of July, 1862. If a work has been executed upon commission, then the copyright belongs to the employer, and not to the artist. If, on the other hand, it was not executed upon commission, then the copyright is the property of the artist; but such copyright will become public property, unless at or before the time when such artist first sells or disposes of his work he agrees, in writing, with the purchaser thereof, as to the sale or reservation of the copyright. If the artist reserves it, the agreement must be signed by the purchaser; and if the latter is to have the copyright, then the agreement must be signed by the artist or by his agent.

But in no case can any legal proceedings for the infringement of such copyright be maintained against a pirate unless that copyright has been registered at Stationers' Hall before the act of piracy complained of has been committed. Hence the necessity of registering every original painting, drawing, and photograph as soon as possible. It only remains to add, upon this part of the subject, that by the agreement above mentioned an artist may effectually reserve his copyright for all purposes of engraving, where the bargain is that the purchaser shall have the copyright, by stipulating in the agreement that the purchaser shall grant the artist or his nominee an exclusive licence to engrave the work in question.

To acquire copyright under the Engraving Acts, an engraving or lithograph in which such right is claimed must have been actually made in some part of the United Kingdom; and the name of the proprietor of the copyright and date of first publication of the print must be truly stated upon the plate or block, &c., and printed on every print taken from such plate, &c.

All engravings and lithographs not executed within the United Kingdom, are unprotected by the Engraving Acts. The only exception to this rule exists in favour of works of that description under our International Copyright Acts, where such works have been first published in any foreign State with which Her Majesty has entered into a copyright convention. Thus, engravings and lithographs first published in France, Prussia, and several other States, may be protected here as to the copyright in them; but to acquire that protection, unfortunately, as the law now exists, a double set of conditions must be performed: first, the name of the proprietor, and date of first publication in the foreign State, must be engraved and printed exactly the same as if the print were first published in the United Kingdom; and secondly, the print must be registered and a copy deposited at Stationers' Hall, London, within three months after the first publication of such print abroad. Unless all these conditions are performed, the copyright is utterly lost in the British dominions. We call attention to these facts, as they are of much consequence to the proprietors of foreign copyright engravings, whose property therein may with impunity be injured by the photographic or any other process of copying, unless the formalities we have pointed out are accurately performed.

OUR WEEKLY GOSSIP.

The following are the names of the fifteen selected out of the whole number of forty-five candidates whom the Council of the Royal Society recommend to the Fellows for election. Mathematicians and chemists appear to be in favour this year, and no one will complain that the list is overdone with M.D.s. Three of the names we observe represent painting, architecture and literature. The day fixed for the election is Thursday, June 4.—E. W. Cooke, Esq., W. Crookes, Esq., J. Fergusson, Esq., F. Field, Esq., Rev. R. Harley, J. R. Hind, Esq., C. W. Merrifield, Esq., Prof. D. Oliver, F. W. Pavey, M.D., W. Pimgelly, Esq., H. E. Roscoe, Esq., Rev. G. Salmon, D.D., S. J. A. Salter, Esq., Rev. A. P. Stanley, D.D. and Col. F. M. Eardley Wilmott, R.A.

At their meeting, on the 30th ult. the Royal Society elected Prof. Heinrich Gustav Magnus, of Berlin, one of their fifty foreign members. The

qualifications of the new Member are of a high order. In the *Abhandlungen* of the Berlin Academy of Sciences and in Poggendorff's *Annalen* have appeared his numerous papers on mineral, organic and animal chemistry, on capillary attraction, on the properties of gases and vapours, on hydraulics, heat, magnetism and voltaic electricity: a wide range, truly.—Jacob Steiner was to have been elected also on the same evening, but the aged mathematician died before the day arrived. His last hours were cheered by the news imparted to him by his friends that the Council of the Royal Society had nominated him for election.

Mr. Sorby's paper—read last week, at the Royal Society—is one of those which mark a new step in scientific progress. Those few among geologists who regard the dynamics of their science have been able for some years past to appreciate Mr. Sorby's methods of research and his carefully-drawn conclusions. There is merit in showing the structural origin of rocks as well as in searching for fossils. The title of the paper in question, 'On the direct Correlation of Mechanical and Chemical Forces,' is a pregnant indication of the theory therein developed. It clears away difficulties, and throws light on phenomena hitherto inexplicable; those, for instance, in which mechanics and chemistry appear to have an equal share. It has long been known that pressure has an important effect on the solubility of salts. Mr. Sorby, by filling the tubes with which he experiments at a very low temperature, and placing them afterwards in proper situations, is enabled to keep the solutions which they contain, under a pressure of from 2,000 to 3,000 pounds to the square inch, for weeks or months continuously, and to watch the results. The pressure is measured and indicated by a capillary tube inclosed within the principal one. The researches of Mr. Hopkins and Prof. W. Thomson have made us acquainted with the effects of pressure on fusion and freezing, and there appears to be an intimate connexion between them and the experiments here under notice. Mr. Sorby has proved that if a salt contract in dissolving it is more soluble under pressure, and that if it expand it is less soluble. The law, as might be anticipated, varies with the nature of the salt. For common salt it may be stated thus: the extra quantity dissolved varies directly and simply as the pressure. On comparing sulphate of copper with ferridcyanide of potassium under the same pressure, it is found that one quantity dissolved of the former is ten times that of the latter; and there is a still greater variation of the mechanical equivalents. Reasoning upon the interesting facts brought out by this investigation, Mr. Sorby concludes that the experiments "indicate that in some cases pressure causes a slower and in others a quicker chemical action. And I think it probable," he continues, "that further research will show that pressure weakens or strengthens chemical affinity according as it acts in opposition to or in favour of the change in volume, as though chemical action were directly convertible into mechanical force, or mechanical force into chemical action, in definite equivalents, according to well-defined general laws, without its being necessary that they should be connected by means of heat or electricity." Apply these principles, and it seems easy to explain peculiarities in the structure of metamorphic rocks—to account for slaty cleavage—for some of the phenomena of crystallization, that is, the direction in which the crystals are formed, and for the impressions made by one limestone-pebble in another, as seen in the "Nagelfluhe"—the latter a much-debated question amongst the geologists of Switzerland, Germany and France. In due time we shall have to record a further development of the theory, of which, as Mr. Sorby remarks, his present paper is to be regarded as a preliminary notice only.

A special Exhibition of Sculptures in Ivory will be open to Members of the Archæological Institute, at the apartments of the Institute, from Monday, June 1, to Saturday, June 13, inclusive.

A good deal of private comedy—as well as some personal vexation—has come of the doings of the Royal Academy Council and Hanging Committee this year. When 1,600 pictures crowd in for places it is impossible for the most genial and considerate

of councils to hang them all; but we have rarely heard so many complaints of rejection, especially in landscape works. It is no secret that among the rejected pictures are two fine landscapes by Mr. John Brett, a View at Florence and a Scene at Dorking, or that many persons of the finest knowledge and taste have been crowding all this week to the artist's studio in the Temple to see these works, and to ask the "reason why." Lord Overstone, one of the Trustees of the National Gallery, has bought the Florence which the Academy thought unworthy of its walls.

Geologists who are familiar with the idea of geological phenomena worked out through periods of inconceivable duration will, perhaps, be able to appreciate Mr. E. B. Hunt's argument on the growth and chronology of the great Florida reef. After stating the dimensions of the reef, Mr. Hunt proceeds: "Taking the rate at twenty-four years to the foot, we shall have for the total time $24 \times 250 \times 900$, on the data as stated; or, we find the total period of 5,400,000 years as that required for the growth of the entire coral limestone formation of Florida."

While awaiting the next mail from Egypt, it may interest geographers to consider the strong probability of important aid having been rendered to Speke's expedition by the adventurous traveller Mr. Baker. It will be recollected that the motive with which Mr. Petherick was sent by the Royal Geographical Society to Gondakoro, was to remove the risk of Speke's emerging at that desolate spot from the unexplored regions of the interior, without means of subsistence or transport, and therefore wholly unable to reach Khartûm. Petherick's expedition failed, but Mr. Baker, who is exploring on his own account, left Khartûm on December the 1st, 1862, with boats for Gondakoro. He calculated on reaching that place by January the 20th, or in fifty days. The monsoon changes from the north to a quarter favourable for the descent of the White Nile early in February. If, therefore, Baker found Speke encamped at Gondakoro and lent him his boats, Speke would be able to start for Khartûm within a fortnight or three weeks of Baker's arrival. This interval, added to the fifty days more or less required for the return voyage, and to the forty days occupied by the post from Khartûm to Alexandria, would exactly reach to the date of the telegram. The advantages of a meeting between Speke and Baker would be mutual; the latter would obtain important information from the former, and would doubtless be able to engage some valuable accessions to his party from among Speke's attendants.

On Thursday next, May 14, Mr. Charles Goodwin will read a paper at the Society of Antiquaries, 'On some Papyri and Samaritan Manuscripts brought over from Egypt by Mr. Stuart Glennie.'

On Tuesday, that delicate artist, M. Levassor, appeared at the Dudley Gallery in his favourite characters, and received a hearty welcome from his English admirers. Our old friends, "Le Mari au Bal" and "La Mère Michel au Théâtre Italien," were as fresh and piquant as when we saw them for the first time in Paris, half a generation ago. A new scene was announced—"Le Mal de Mer,"—but that also proved to be an old favourite of the French stage; and, however perfect as a work of Art, is better adapted for a Parisian than a London audience. Englishmen know the Channel: the idea of making the steamer French, the sufferer English, is too violent an outrage on probability, even for farce.

Messrs. Hurst & Blackett announce the following new works for publication during the present month:—"Lost and Saved," by the Hon. Mrs. Norton,—"Travels on Horseback in Mantchu Tartary; being a Summer's Ride beyond the Great Wall of China," by George Fleming, with illustrations,—'Adventures and Researches among the Andamans,' by Dr. Mouat, with illustrations,—and 'Respectable Sinners,' by Mrs. Brotherton.

The Rev. Hill Wickham, editor of Dr. Whalley's Memoirs, wishes to inform Mrs. Siddons's daughter, our Correspondent, that if she had read the work instead of the critique, her anger would, in his opinion, have been modified; and that if she had perused all the correspondence which the Memoirs

brought before him, she would have praised him for reticence.—"Allow me," says Mr. Wickham, in conclusion, "to offer to the lady through your journal, on her application to Mr. Bentley, my publisher, some letters of her own to Dr. Whalley, written in the heyday of youth, which I think she had better possess."

Acting upon the suggestion contained in the *Athenæum* of the 11th ult., Messrs. Routledge have made arrangements with the French publisher for an English edition of 'Les Aventures d'un Chien de Chasse.' The book will be translated by Mr. Edmund Routledge.

The Anniversary Meeting of the Camden Society was held on Saturday May 2, the Marquess of Bristol in the chair. The Annual Report refers to the Society's efforts for opening the Register of Wills in Doctors' Commons for the use of literary inquirers, which has been conceded by Sir Cresswell Cresswell in respect to all wills of a date anterior to the year 1700. A volume of Wills of Members of the Royal Family; Eminent Prelates and Noblemen; persons who played important parts during the great Civil War; well-known Poets, Painters and Musicians; Divines and Philosophers; and, lastly, of some distinguished ladies, has been issued. The following works have been added to the list of suggested publications:—"Vindication of the Government of Queen Elizabeth in the matter of the Execution of Mary Queen of Scots," from a MS. in the possession of Sir Thomas Winnington, Bart., M.P.,—"Letters of Charles II., from the Originals in the possession of the Marquess of Bristol. The Report of the Auditors showed a considerable balance in hand; and the places of the retiring Members of Council were filled by the names of Lord Farnham, Sir Frederic Madden and William Salt, Esq.

Messrs. Longman & Co. have issued No. 3 of their 'Wall-Maps of England and Wales,' edited by Walter M'Leod, and drawn and engraved by E. Weller. This map exhibits the geology of England and Wales. It is handsomely printed and plainly coloured: a very good school map.

Mr. David Nasmyth has published, for the use of schools, a 'Chart of the History of England,' exhibiting the principal events, civil, military, religious, intellectual and social, from 55 B.C. to 1860. This chart appears in two forms: as a volume, and as a map. The plan is very ingenious, but a little intricate, we should think, for boys. The history is divided into square spaces, like a game, for the centuries and years. If anybody could remember the facts stated in these spaces he would have at command a good deal of popular information. There is, of course, a 'Table of the Contemporary Sovereigns of Europe, from William the Conqueror to Queen Victoria.'

Mr. Collier has completed the twelfth part, and first volume, of his 'Illustrations of Early English Popular Literature,' by the reprint of a copy of verses on the Massacre of Protestants in France. Mr. Collier thinks his original is unique: at all events, that it is unknown to collectors and bibliographers. It is a poor production in itself; yet a certain interest lies in its doleful and exaggerated wailings. It was certainly worth ink and paper, and a corner in this unpretending volume.

Mr. Freeman has published a couple of 'Chronological Charts of European History,' drawn out by Mr. Bishop. One represents the dynasties and events of the fifteenth and sixteenth centuries, the other those of the seventeenth and eighteenth centuries.

"It would be a kind of sacrilege to draw aside the veil by which the depth and intensity of those feelings were shrouded from the public gaze," said Lord Palmerston, in reference to the grief Her Majesty suffers under, when proposing the vote of 50,000*l.* towards the expense of the Albert Memorial. Every man of feeling has owned this long ago, and felt indignant at the producers of certain photographic compositions representing the home sorrows of the Royal Family, indecent intrusions on its sacred griefs. We have compositions showing Her Majesty and Family grouped round a bust of the Prince Consort, in a sentimental tableau,

The very deathbed of the nation's friend has not been respected. The Queen is shown all over the country in photography, pathetically posed, with a widow's cap, and a prayer-book or the Prince's literary works. We cannot hope that a man who can do such things will listen to a word of protest; but let the buyer of his productions think how he would feel on being asked to peep through a keyhole at any such scenes as these invented photographs are supposed to represent.

Many people hear of distances in thousands of yards—a usual measure of artillery distances—and have very little power of reducing them at once to miles. Now, four miles are ten yards for each mile above 7,000 yards, whence the following rule: the number of thousands multiplied by 4 and divided by 7 give miles and sevenths for quotient and remainder, with only at the rate of ten yards to a mile in excess. Thus 12,000 yards is 48 7ths of a mile, or 6 miles and 6 7ths of a mile: not 70 yards too great. Again, people measure speed by miles per hour, the mile and the hour being too long for the judgment of distance and time. Take half as much again as the number of miles per hour, and you have the number of feet per second, too great by one in 30. Thus 16 miles an hour is 16 + 8, or 24 feet per second, too much by 24 30ths of a foot.

Our readers will remember that in the account of the voyage of the Austrian frigate *Novara* round the earth, it was mentioned that, by special agreement with the Colonial Government of New Zealand, one of the members of the scientific corps accompanying the expedition, Dr. von Hochstetter, remained in that colony. He resided there for nine months, engaged in researches into the geology, geography and natural history of that Great Britain of the South, and he now announces from Vienna, to which city he has returned, the publication of the results of his sojourn, which will necessarily be of much greater interest to us here and to our colonists in New Zealand than to the general public on the Continent. The purely scientific portion of his labours is to be embodied in the 'Scientific Results of the *Novara* Expedition,' now publishing by the Austrian Government, and will form a distinct monograph on New Zealand; but he has in the press also a volume on New Zealand, giving an account of his stay in, and his journeys through the colony, so much of the results of his scientific labours as are interesting to the general educated public, together with the history of the islands and the colony, a collection of the legends, proverbs and poetry, and an account of the mythology of the Maoris, the history of the recent Maori-King movements, and much statistical information. Baron Cotter had shortly before his death made all the preparations for bringing out this work in a style worthy rather of the enthusiasm with which Dr. von Hochstetter regards everything relating to New Zealand, than the interest which the subjects can possibly create in Germany, and it is to be hoped an English publisher will make an arrangement to give us a translation. The volume is to be illustrated by above one hundred wood engravings and several maps, which have been constructed by Petermann from the author's materials.

ROYAL ACADEMY OF ARTS.—THE EXHIBITION of the ROYAL ACADEMY is NOW OPEN.—Admittance from Eight till Seven, 1*o.*; Catalogue, 1*o.*

JOHN PRESOTT KNIGHT, Esq., R.A., Secretary.

SOCIETY OF PAINTERS IN WATER COLOURS.—THE FIFTY-NINTH ANNUAL EXHIBITION is NOW OPEN, at their Gallery, 5, Pall Mall East (close to the National Gallery), from Nine till Dusk.—Admittance, 1*o.*; Catalogue, 6*d.*

JOSEPH J. JENKINS, Secretary.

INSTITUTE OF PAINTERS IN WATER COLOURS (founded in 1831 as the New Society of Painters in Water Colours).—THE ANNUAL EXHIBITION is NOW OPEN.—Gallery, 53, Pall Mall, opposite Marlborough House.

JAMES FAHEY, Secretary.

FRENCH GALLERY, 130, Pall Mall.—THE TENTH ANNUAL EXHIBITION of PICTURES, the contributions of Artists of the French and Flemish Schools, is NOW OPEN.—Admission 1*o.*; Catalogue, 6*d.*

LEVASSOR EN VISITE.—SCÈNES ET CHANSONS COMIQUES.—Tuesday, Thursday, and Saturday Evenings, at Half-past Eight, assisted by Mlle. Faisseire and M. Rey. Piano-forte, M. Roosenboom, Dudley Gallery, Piccadilly.—Seats, Unreserved, 3*o.*; Stalls, numbered, 7*o.*; a few Fautouils, 10*o.* 6*d.* each; Mitchell's Royal Library, 33, Old Bond Street, W.

THE BLACK BRUNSWICKER, painted by JOHN EVERETT MILLAIS, A.R.A., is NOW ON VIEW at Moore, & Queen's Co's, 10, Fenchurch Street, E.C.—Admission by private Address Card.

MRS. FANNY KEMBLE'S READINGS OF SHAKESPEARE. MONDAY, WEDNESDAY and FRIDAY EVENINGS, at Half-past Eight, DUDLEY GALLERY, Piccadilly.—Monday, May 11, 'King John'; Wednesday 13th, 'Midsummer Night's Dream'; Friday, 15th, 'Romeo and Juliet.'—Seats (Unreserved), 3s.; Stalls (Numbered), 5s.; a few Fauteuils, 7s. each, which may be obtained at Mitchell's Royal Library, 38, Old Bond Street, W.

MR. HENRY NICHOLLS'S RECITALS OF THE RECENT POETS and HUMORISTS, at the Hanover Square Rooms, on MONDAY EVENING, May 25, at Eight, including Macaulay's 'Horatius'; Tennyson's 'Locksley Hall'; Poe's 'Bells'; Hood's 'Miss Kilmansegg'; and 'Desert Born'; 'Ingold's'; 'Rupert the Fearless'; and 'Lord of Thoulouse, &c.'—Admission, 3s., 2s., and 1s.—Hamlet, at the Pavilion, Brighton, THIS MORNING, May 9, at Three.—Communications, 16, Howard Street, Strand.

Mr. EDMUND YATES'S INVITATIONS, at the EGYPTIAN HALL.—The Evening—The Spirit-Rappers.—The Seaside.—Mr. HAROLD POWER will be of the Party.—Every Evening at Eight, except SATURDAY, then at Three.—Stalls, 3s.; Area, 2s.; Balcony, 1s.—Egyptian Hall, Piccadilly.

SCIENCE

SOCIETIES.

ROYAL.—April 30.—Gen. Sabine, President, in the chair.—Prof. Heinrich Gustav Magnus, of Berlin, was elected a Foreign Member.—The following papers were read: 'On Spectrum Analysis, with a Description of a large Spectroscope, having nine Prisms, and Achromatic Telescopes of Two-Foot Focal Power,' by Mr. J. P. Gassiot.—'On the Direct Correlation of Mechanical and Chemical Forces,' by Mr. H. C. Sorby.

GEOLOGICAL.—April 22.—Sir P. De M. G. Egerton, Bart., V.P., in the chair.—N. Kendall, Esq., Major F. J. Rickard, and C. E. Spooner, Esq., were elected Fellows.—M. A. Favre, F. Ritter von Hauer, M. Hébert, E. Beyrich, and Dr. F. Sandberger, were elected Foreign Correspondents.—The following communications were read: 'On the Gneiss and other Azoic Rocks, and on the superjacent Palaeozoic Formations of Bavaria and Bohemia,' by Sir R. I. Murchison.—'Notice of a Section at Mocktree,' by R. Lightbody, Esq., communicated by J. W. Salter, Esq.

ASIATIC.—May 4.—Sir H. C. Rawlinson, Director, in the chair.—H. P. Le Mesurier, Esq., was elected a Non-Resident Member.—Two papers by the Rev. Jules Ferrettes were read by that gentleman: one 'On some Syriac-speaking Villages still found to exist in Anti-Lebanon,' and the other 'On a New and Cheap System of Printing the Vowels and Diacritical Signs in Arabic,' using but a single row of types for each line of print, and conforming to the established rules of caligraphy.

SOCIETY OF ANTIQUARIES.—May 7.—F. Ouvry, Esq., Treasurer, in the chair.—A notice was read from the President, authorizing Sir J. Boileau, Bart., to act as his deputy, or Vice-President, in the room of the Marquess of Bristol.—S. Palmer, Esq. M.D., exhibited three caskets, an oak cabinet, and a padlock, with remarks.—The Secretary read a series of letters of Sir Thomas Wotton, and also a letter from Henry the Eighth to Mr. Secretary Knight, dated 1527.

BRITISH ARCHAEOLOGICAL ASSOCIATION.—April 22.—T. J. Pettigrew, V.P., in the chair.—J. W. Walton, Esq. was elected an Associate.—Dr. Palmer announced the discovery of a Roman villa of some extent at Ealing Farm, about a mile and a-half from Well House, Berks.—Dr. Palmer also announced the discovery of a camp hitherto unrecorded on the Hampshire chain of hills, whence various coins of Probus, Licinius and Carausius had been discovered.—Mr. Vere Irving, Vice-President, exhibited, on the part of Mr. Greenfields, an interesting group of Antiquities discovered in the parish of Leamahago, in Lanarkshire, consisting of a Celtic coin of silver, which may be compared with the Channel Island type, and belongs to those originally struck in Armorica. A few years since a large number were found in Jersey, and have been figured in Donop's account of that hoard.—A bronze figure of a horse and a small bronze bell were also exhibited; the former of Etruscan character, and the latter four-sided, with a loop by which it could be attached to the neck of a sheep.—There were also exhibited portions of light red

earthen pottery, imperfectly kiln-baked, and a stud or button of canal coal.—Mr. Syer Cuming read 'Some Notes in relation to the Costume of a Figure of Mother Shipton,' lately exhibited to the Association.—Prof. Buckman exhibited various antiquities lately found in Gloucestershire at Corinium.—Mr. T. Wright exhibited a Roman padlock or spring bolt, and a Spanish lock of about 200 years since, showing the mode of its operation.—Three large iron lances or spears were exhibited from a hoard of upwards of 120, found in a field at Bourton-on-the-Water, one of which measured no less than 34 inches in length.—A flint celt or axe-blade was exhibited by Mr. White.

ARCHEOLOGICAL INSTITUTE.—May 1.—Lord Lyttelton, in the chair.—Prof. Willis gave a lecture on the Cathedral of Worcester, supplementary to that delivered by him at the last meeting of the Institute in that city.—Mr. W. W. E. Wynne exhibited the famous "Llyfr du," or Black Book of Caermarthen, formerly preserved in the Abbey at that town, but now forming part of the well-known Hengwrt collection, the property of Mr. Wynne. Mr. Duffus Hardy and Sir Frederic Madden had pronounced the MS. to be in the handwriting of the twelfth century, and their opinion has been confirmed by internal evidence.—Mr. O. Morgan exhibited, and gave some account of, three remarkably fine steel locks of Nuremberg work, of the fifteenth and sixteenth centuries. They are enriched with patterns of elegant design, formed by etching and engraving on the metal. The largest lock, which is of the best tempered steel, consists of no less than 159 pieces. He brought also a "scratch-back," of the last century, and a curious steel for striking a light with flint, of the sixteenth century.—Mr. Lewis L. Dillwyn exhibited an oval medallion in bronze-gilt of Oliver Cromwell, the execution of which is very fine.—Mr. Bernhard Smith brought an Asiatic sabre with European mountings, the blade of which is covered with figures chased out of the solid steel: the sword was taken in its present condition from the body of a slain Afghan chief. He exhibited also an early Asiatic pistol, with match-lock, rudely ornamented with brass bosses and floriated studs, from the collection of the late Gen. Codrington; and two kuttars or daggers with figures chased out of the solid, and having their guards diapered with silver.—Mr. T. Selby Egan exhibited a diptych and a crucifix, both containing relics.—Mr. F. Nethercliff exhibited a "Magna Charta de Foresta," 9 Hen. III., with well-preserved seal attached.—The Very Rev. Canon Rock placed on the table a curious bronze ornament, recently found in North Wales.—Mr. E. Waterton brought a crucifix obtained in Aix-la-Chapelle; it is in wood, of the sixteenth century, and of fine German workmanship. He also exhibited four remarkable rings that have been recently added to the Waterton collection; three curious seals; and two silver ring fibule, both nielloed.—Two pistols, from the Museum of the Royal Military Repository at Woolwich, were exhibited by Mr. J. Hewitt, one of them being of the end of the sixteenth century, and the other of the beginning of the seventeenth. Both are highly enriched with chasing and inlaying with silver, and the ironwork of one is damascened in silver and gold: both have wheel-locks. The decorations on the stock are chiefly hunting and hawking subjects.—Mr. Hewitt believed the arms to have been made not for war but for the chase; and as a curious illustration of the employment of such pistols in the chase, he produced a detached wheel-lock, with an engraving of a mounted hunter, accompanied by his hounds and his foot servant, about to discharge just such a pistol as one of those exhibited at a stag and hind which he had overtaken.—Messrs. Dulau & Co. laid on the table a copy of Libri's 'Monuments Inédits' just published by them.

INSTITUTION OF CIVIL ENGINEERS.—May 5.—J. Hawkshaw, Esq., President, in the chair.—At the monthly ballot the following candidates were elected.—Mr. J. Blount and Capt. V. de Medeiros, as Members; and Messrs. E. Appleton, R. T. Mallet, and Capt. F. J. Bolton, as Associates.

—The paper read was 'On American Iron Bridges,' by Mr. Zerah Colburn.

ROYAL INSTITUTION.—April 24.—The Duke of Northumberland, President, in the chair.—Mr. Herschel delivered a discourse 'On Luminous Meteors.' The term includes fireballs, shooting-stars and aërolites. Lightning in the lower air presents no analogy to the phenomena of fireballs. Were the occurrence of globe lightning sufficiently proved and its origin explained, it would be contrary to analogy to infer a similar origin for meteors. The height of fireballs has been known since the time of Montanari in Italy, and Wallis in England, in 1676, and was calculated by Halley in 1714 and 1719, and again by Pringle in 1758. The calculation of eleven large fireballs most recently reported to the British Association, as passing over England during the years 1861-63, shows their first appearance to be at heights from 30 to 196 miles above the earth, and their points of disappearance from 15 to 65 miles above the earth. Their velocities are from 23 to 60 miles per second. In illuminating power they resembled globes of inflamed coal-gas, from 14 to 50 feet in diameter. In many fireballs a ball of bluish light alone is seen, and this has been explained by Mr. Brayley and Dr. Haidinger to be air heated by compression, as in a fire-syringe, before a parcel of solid matter entering the air with immense velocity from planetary space. The heat of the flame, as in the oxy-hydrogen lime-light, produces intense light by volatilizing the solid materials of the aërolite. Mr. Herschel suggested that the same heat might dissociate the oxides of the meteoric surface, and by lining the track with mixed blast and fuel of a spontaneously inflammable nature, cause the sparks and tufts of ruddy light and the phosphorescent streaks which occasionally endure for many minutes or even for an hour after the passage of a meteor. In illustration of this phenomenon, the phosphorescence of sulphurous acid was exhibited, when a luminous current of electricity through the gas was suddenly stopped. The storm of stars occasionally seen in great magnificence on the mornings of the 13th of November was first shown to be periodic by Prof. Denison Olmsted in America in 1836; but the more constant shower in the evenings of August the 10th was pointed out in England by Mr. T. M. Forster in 1827 by the publication of a MS. calendar of the last century, preserved at Corpus Christi College, Cambridge, where that day and the 18th of August are called by the writer (probably a monk) "stellibund" and "meteorode." M. Quetelet, at Brussels, in 1836, and Prof. Herrick, at New-haven (U.S.), aware of the unconcealed periodicity of the November shower, pointed independently to the second week of August as an epoch of annual return; and the diligent researches of Prof. Herrick proved the 10th to have been uniformly remarkable for shooting-stars during a long course of years in the last century and this. Four observations from two different stations determine the path of a single shooting-star, and their heights and velocities were so determined by Brandes and Benzenberg, at Göttingen, in 1798. Such observations were originally proposed to the Royal Society of England by J. Lynn, Esq., in 1727, and have been repeated, since the time of Benzenberg, by Quetelet, at Brussels, in 1824, and later, by Prof. Heis, at Aix-la-Chapelle, Bessel, Feldt, Erman, Schmidt, Secchi, and other continental astronomers. The heights and velocities of shooting-stars are quite similar to those of fireballs, and, like those, descending downwards towards the earth. Like shadows from a straight candle-shade, the parallel streams of meteor showers appear to radiate from a fixed point among the stars. In November the radiant point rises at midnight, but in August it belongs to the circumpolar heavens. Like fireballs, shooting-stars are therefore, probably, asteroids or minute morsels revolving in zones about the sun. The most remarkable meteors are aërolites and aërosiderites, stones and iron masses precipitated from the air. A fireball always precedes these occurrences, and a report or detonation, some minutes before the stones precipitate themselves with thundering noise upon the earth. Specimens from 111 such catastrophes are exhibited at the British Mu-

seum, and 79 specimens of iron masses of similar origin. The stones are small, clay-like or tuffaceous blocks, of one to a hundred pounds or more in weight, inclosing grains and crystals of volcanic minerals, and particles of metallic and pyritic iron alloyed with nickel, and glazed with a thin enamel-like crust of the molten substance, proving their momentary exposure to flame of very intense heat since the fragments were broken from their native rocks and hurled against the earth. They are picked up too hot to be handled. They have an exceedingly uniform specific gravity, and agree in the presence of iron, nickel, and phosphorus in their composition. Von Schreibers, at the fall of Stauern ascribed to the stones a four-sided or three-sided pyramidal figure, but this has not been substantiated by more recent falls. Widmanstätten perceived upon the polished surfaces of the irons, etched with acid, the crystalline figures which bear his name, and most recently the structure of the stones has been examined by microscopic sections of their substance as well as by chemical and crystallographical descriptions of the parts. In illustration of the history of these stones, Prof. Tyndall exhibited upon the white screen numerous thin sections of their substance, prepared by Prof. Maskelyne, at the British Museum, for the microscope. A lunar-volcanic, or "lunar-ballistic," theory has been proposed for their origin from their common specific gravity most nearly equal to that of the moon, and from the scarcity of free oxygen which their composition betrays. But their high velocity renders a planetary, asteroidal motion round the sun more probably the native path in which they are intercepted by the earth. To illustrate the phenomena of the aurora, brilliant-coloured discharges of electricity were passed through exhausted glass tubes and cells, when the transporting power of the magnet upon these currents was shown by their curvature and rotation about the magnetic poles. Observers were requested to communicate their observations of fireballs freely to the British Association, in the hope of deciding before long the laws of their return.

May 1.—*Annual Meeting*.—The Duke of Northumberland, President, in the chair.—The Annual Report of the Committee of Visitors for the year 1862 was read and adopted.—The amount of contributions from members and subscribers in 1862 amounted to 3,079l. 13s.; the receipts for subscriptions to lectures were 560l. 14s.; the total income for the year amounted to 4,630l. 8s. 1d.—On December 31, 1862, the funded property was 29,341l. 2s. 2d.; and the balance at the bankers, 804l. 3s. 4d., with six Exchequer Bills of 100l. each.—The following gentlemen were elected as officers for the ensuing year:—*President*, the Duke of Northumberland; *Treasurer*, William Pole, Esq.; *Secretary*, Henry Bence Jones, M.D.; *Managers*, Sir W. G. Armstrong, the Rev. J. Barlow, Sir J. P. Boileau, Bart., G. Busk, Esq., G. Dodd, Esq., Sir G. Everest, J. P. Gassiot, Esq., Sir H. Holland, Bart., Sir R. I. Murchison, J. Nasmyth, Esq., W. F. Pollock, Esq., R. P. Roupell, Esq., Lord Wensleydale, C. Wheatstone, Esq., Col. P. J. Yorke; *Visitors*, Hon. and Rev. S. Best, G. J. Bosanquet, Esq., A. Boyd, Esq., J. W. Brett, Esq., B. E. Brodhurst, Esq., J. C. Burgoyne, Esq., Montagu Chambers, Esq., G. F. Chambers, Esq., C. D. Griffith, Esq., M. P., Capt. F. Gausson, K. Macaulay, Esq., E. Packe, Esq., Earl of Rosse, Earl Stanhope, G. Tomlins, Esq.

May 4.—W. Pole, Esq., Treas. and V.P., in the chair.—The Secretary announced that the President had nominated the following *Vice-Presidents* for the ensuing year:—Sir W. G. Armstrong, W. Pole, Esq., *Treasurer*, the Rev. J. Barlow, Sir H. Holland, Bart., Sir R. I. Murchison, and Lord Wensleydale.—J. Graham, M.D. and C. Howard, Esq. were elected Members.—The following Professors were re-elected:—W. T. Brande, Esq., Professor of Chemistry, J. Tyndall, Esq., Professor of Natural Philosophy, and E. Frankland, Esq., Professor of Chemistry.

SOCIETY OF ARTS.—April 29.—Sir T. Phillips, Chairman of Council, in the chair.—The paper read was 'The Varieties of Combustible Minerals used Economically, considered in reference to their

Geological Position and Relative Value for certain Purposes,' by Prof. D. T. Ansted.

MEETINGS FOR THE ENSUING WEEK.

| | |
|--------|--|
| MON. | Geographical, 8.—'Arrival of Expedition at Khartoum, from Zanzibar'; Landborough's Traverse of Australia; Madagascar, Lieut. Oliver. |
| TUES. | Acting, 7.—Syr-Egyptian, 7.—'Ophi-Lid of Men-kara, Mycerinus of the Greeks,' Mr. Marsden. Royal Institution, 3.—'Sound,' Prof. Tyndall. Engineers, 8.—'American Iron Bridges,' Mr. Colburn; 'Communication between London and Dublin,' Mr. Watson. |
| WED. | Zoological, 9.—'Derbyan Eland, Western Africa' and 'Equatorial Elephant and Gorilla,' Mr. Reade; 'Mammals and Birds, Madagascar,' Dr. Solator. Archæological Association, 4.—Annual General. Graphic, 8. Society of Arts, 8.—'Excrementitious Matter,' Dr. Thudichum; 'System of Earth Sewage,' Rev. H. Moule. Microscopical, 8. |
| THURS. | Antiquaries, 8.—Royal Institution, 3.—'Geology,' Prof. Ansted. |
| FRI. | Philological, 8.—'Anniversary,' 'Umbrian Words,' Prof. Newman. Royal Institution, 8.—'Molecule of Water,' Dr. Odling. |
| SAT. | Floral, 4.—'Promenade,' 'Umbrian Words,' Prof. Newman. Royal Institution, 3.—'Language,' Prof. Max Müller. |

FINE ARTS

ROYAL ACADEMY.

Mr. Leighton contributes four pictures. The largest represents the Meeting of Elijah with Ahab and Jezebel (No. 382) at the door of Naboth's vineyard. As the text seems to suggest, the prophet is shown meeting the king and queen at the door of the vineyard. Face to face with them in the ill-got place stands the threatener of judgment, the irate prophet in his angriest mood. They recoil before him, the woman drawing up proudly with a menacing look, and gathering her robe about her; the conscience-stricken king bending his head and saluting the man of God. The figure of Elijah is grandly severe in manner, but lacks the dignity that is beyond and above mere severity. The design, drawing and manner of this picture are large and painter-like. *An Italian Cross-bow Man* (528) is the title of a half-length life-size figure of a soldier, with a cross bow upon which his hands rest; he wears a black dress and cap of the same; behind him hangs upon the wall a perished hand of some destroyed enemy or some dead friend he has sworn to avenge. The face is stern, and may be read either way. The whole of this work is remarkable for solid painting. *A Girl with a Basket of Fruit* (408) is fair as the old Greek blood could make her through generations of refinement and vigour. In brilliant sunlight she passes along by some palace wall; such a one of purest alabaster, with ground of dead gold or mosaic, being behind her; over it is the splendour of Ionian daylight sky, deep pure blue. The exquisitely beautiful flesh-painting this picture shows should win applause from artists and lovers of nature; it is admirable. All about the fair girl seems to be a world of sunniness and sensuous delight: the sun, her face, her delicate robe, the splendid fruit, the white and gilded wall, the very wasp that hums about the basket, tell of warm summer. *A Girl Feeding Peacocks* (429), by the same, is a large picture, exquisite in its treatment of colour, its delicate forms, the brilliancy of daylight, the beauty of the lady herself in the dawn of womanhood, and the regal magnificence of the birds, whose plumage is seen in full radiance about her. The damsel's head has a chaste, clear air; her slender figure is delicately drawn; one of her arms, raised on high, scatters grain to the birds taken from a basket held in the other. The simple graciousness of her pose is delightful.

Mr. Holman Hunt's portrait of *The Right Hon. Stephen Lushington* (613) will please few who look for mere attractiveness and facile tricks of execution in a portrait. It is, nevertheless, a solid, noble, subtle and faithful study of character, such as a portrait should be; a masterpiece of manly execution, which, although it may have stiffened, so to say, in the very strenuousness of the painter's grasp, and lack air in its gradations of parts of the figure, has rendered the spirit of the man with extraordinary felicity, showing the artist's intense study of character. In the background are some fine phases of colour. *The King of Hearts* (146) is a little boy in a masquerade costume, standing on a lawn with a ball, such as is used for garden bowls, in his hand; behind him is pitched a mimic lance, with a shield or,

bearing the cognizance, a heart *gules*, upon it. The landscape background of this, a trim garden, with great tree-boles at intervals, is extremely brilliant and solid; the grass a capital study of nature. Despite its brilliancy and solidity, this picture looks, and is, over-laboured. This shows itself in some blackness of the shadows.

Mr. Cope has sent two pleasant pictures of children, as usual; the best is No. 46, *A Music Lesson*, a boy at a piano heedfully touching its keys under the guidance of an elder sister; his face, with its earnestness of expression and pleasant English character, is capably rendered; without peculiarity, it has the interest of a portrait. The whole of this work is solidly and honestly painted; would be improved if a little less uniform in texture; the wooliness, less than hitherto, however, with the artist, is a defect. The shortcoming is more marked in No. 221, *Morning Lessons*, which shows great improvement in colour on the part of the painter; some phases of that quality are really excellent, the solidity of the handling helps this out. A lady with a boy on her knee, guiding his hand to form letters on a slate; both figures fresh and fair; the musical pupil of the former work sits here again, with knitted brow and clenched fingers, conning a terrible "sum."—We gladly interrupt our progress with subject-pictures to call attention to an admirable portrait, by Mr. Sandys, of *Mrs. Susanna Rose* (53), hung near Mr. Cope's 'Music Lesson,' the painter-like and brilliant qualities of which are highly to be appreciated. A lady in a cap with blue ribbons, the flesh, the genial character, brightness, and sound, not at all hard, finish of this work are remarkable.

We cannot praise the soundness and solidity of Mr. Frith's *Juliet* (100). This work, if not painted under pressure, may mark the effect of strain upon a style never very robust, which is happy only in bright and clear treatment, and redeems its want of painter-like love of tone, of colour, and variety of surface by the dexterity of the workman's handling. The shadows of the flesh are dirty; the effect of light upon the face, that of a young woman looking at a moonlit landscape from a terrace or open window, is inexplicable: moonlight produces no such colour on flesh, still less can daylight cause those cold black shadows we see; while lamp-light is put out of the question by the colour of the lights. If this be Shakespeare's Juliet, as the Catalogue says, the artist has more completely failed in rendering her character than in executing a not uncommon theme. Surely Juliet was not this ringletted girl, fresh from a boarding-school, clad in white satin, and posed at a window. Mr. Frith, no doubt, meant to style his picture 'Study after the Opera.'

Mr. Elmore's picture, *Lucrezia Borgia* (130), gains in strength and vigour each time we look upon it. It is worthy, for those qualities, in the place of honour this year.—Mr. A. H. Burr, if vigour of painting, great powers of dealing with pathos and with humour, can attract attention, should win a name this year. His *Scene from 'Dora'* (250), where Dora and Mary "peeped and saw the boy set up betwixt his grandsire's knees"; although a little thin in parts, shows so great an advance upon the pictures the artist sent here last year, that we hope the best from him. He is happy in avoiding the over-sweet, almost treachery, method of painting that former works promised, and which so much lowers the artistic value of Scotch painters' works in general. The pathos of this work is beyond question. At a table sits the old man, with the child standing between his knees. His lined and wrinkled face, that had kept its hardness for so long, his habitually hard eyes, set mouth, set still in its old lines, but quivering, his eyes, that disdain to weep, but are suffused and red, while memory of the boy's father and the sunny days of old comes back in his mind, are subtle readings of expression and the heart; not less fine is the old man's attitude, bent forward in the chair, his face upon his hand. The figures of the two women are good, but unequal in merit; that of Mary, the withered, anxious mother, with the lank and falling hair, remnant of her old beauty as it is, streaming in loose ringlets from under her battered hat, her

poor, pinched face, her lean and hungry look, has a pathos far beyond most pictures. The effect of firelight is truer than it looks, but not quite true.

—Mr. J. Burr sends a picture, strangely like the last, of a capital subject, treated with valuable power of rendering humour. This is *A Travelling Tinker* (425). Such an one has come to a cottage-door, and seated himself to inspect the condition of a small copper-kettle that is submitted to him by the young and buxom housewife, whose heirloom it may be; his expression of doubt, almost amounting to conviction, that the utensil will not be worth mending, to be seen in the peering eyes, one half closed, and the mouth a-skew, is capital. Hardly inferior is that of the wife, who leans forward to hear the verdict. She holds by the hand her second little son, an inquisitive youth, who has come forward holding to his mouth a wooden-spoon, his birth-gift no doubt, and stares with all the force of a pair of grey eyes. A nurse-girl and other children are also admirable for character.

The Morning of St. Valentine (157), by Mr. J. C. Horsley, a young girl looking at herself in a toilette-glass, while a letter is brought to her, is prettier than usual with the painter, and the face not merely pretty. Quite as frivolous and commonplace as usual, however, is the same gentleman's picture, *Attack and Defence* (306), some pages, in "olden" costumes, storming the window of a boudoir, which young ladies defend. There is no real "go" in this pretty thing.

Mr. G. Jones is nowhere this year. We cannot, of course, take into account a single Scripture subject, that one from the First Book of Kings, embodying a strong wind, an earthquake, "and, after the earthquake, a fire" (805); and two small landscapes, named *Andernach* (179) and *Dieppe* (309).—Mr. Frost has many pictures, but they differ so little from former works, that we need only state the fact.—Mr. A. Cooper is not less prolific; six examples come from him, among them various horses, Circassian women, and the artist's idea of how Cromwell looked at Marston Moor (307), a very strange conception of the matter.—Mr. G. Patten has only one work, a portrait (293).—Mr. Witherington has four pictures, which do not distinguish themselves from his ordinary productions.—Mr. Dobson contributes three works. Of these the best is *At the Well* (308), a very good but rather uninteresting study. More important, but even less effective in its appeal to human feelings, is the picture of *The Holy Family returned from Egypt* (340), a Germanish composition, which shows, by contrast with the painter's homely German themes, how much he misuses his powers in painting such as this last. There are in it the well-known figures—the ineffably innocent but weakly-formed children; their fixed eyes, that seem to look so much, and, being easy to do, mean so little. There is in it also that peculiar conventional skin-tint one expects from Mr. Dobson when he paints Scripture.

Mr. J. F. Lewis's single picture, No. 158, is a reproduction of the famous water-colour drawing, *The Frank Encampment in the Desert*, in oil, of a smaller size, and gaining in some respects by its translation into the new material. It is fuller in colouring, free from chalkiness, and therefore less scattered and glittering in effect. At the same time, it is less purely bright, less jewel-like. Every one knows that the subject represents Lord Castlereagh with his Arab and other attendants encamped near Mount Sinai. The whole composition is a little stiffly posed, the figures somewhat self-conscious in air.—Mr. P. F. Poole paints for colour, for rich effects and surface; he does not often imitate the qualities of detail, but contents himself by giving the pictorial suggestions of their nature and character, with a felicity and dash peculiarly his own. He generally moves us at once by the mystery and gorgeousness of his works, and their subdued splendour. Many times—as in the 'Last Scene of Lear,' at this Exhibition a few years since (1858),—he has done so by the impressive pathos of his designs. A commonplace design Mr. Poole often redeems by colour; he never, however, succeeded less in doing so than in the work before us, No. 191, a Greek lover, owner of flocks and herds innumerable, wooing his mistress.

The skin-clad herdsman leans rather awkwardly upon a bank of earth, and appeals to the damsel of his choice, who has quitted the stone hut of her ancestors, which has so small a door that she must kneel to pass in. As usual, the subject is expressed less by the figures than by the landscape, a richly hued land of rugged hills, many-folded, treeless, stark.

Mr. Marks's humorous contribution, *How Shakespeare Studied* (261), has a great deal of character. The execution of this work we look upon as indicating a transition in the painter's system. It is a little thin and flat in the figures, and lacks brightness of colouring. It is, nevertheless, finer in surface, less hard and merely quaint than we have had from him ere now. It will not attract so much attention as did 'The Franciscan Sculptor and his Model.' Shakespeare, rather a coarse presentation, is seated in the porch of an Elizabethan inn, watching the "humours" of a knot of folks standing in the street before him. An old city legal authority, probably the original of Dogberry before he had his "losses," is enlightening an audience consisting of a vapouring knight and a swash-buckler sort of fellow. By Shakespeare's feet is a dog, an ill-drawn animal, but an apt companion to him, not, we believe, previously suggested by any authority.

Mr. J. Clark's painting, *After Work* (122), will recall to many, if they can see it at all in its ignominious position near the floor, his admirable 'Sick Child.' To our minds it is by no means equal to that work, nor to more recent productions of the painter. Rather clearer in painting, and evidently aiming at colour, this present example is inferior to its predecessors, inasmuch as it is less solid, less happy in relief and less thoughtful in the rendering of many textures. Painted in a thinner manner, it looks smoother and more finished than others were, but is not really so, because it is flatter than they were. We regret to see signs of a less sound handling throughout this work than we hoped to find. The design itself is good, and, although there is sameness in the characters, hence a family likeness to well-known productions of Mr. Clark's, the expressions are as happy as ever. A workman is reading from an illustrated journal for the edification of his little son, who sits upon his knee. The grandmother, with a half-deaf air, listens from her seat next the fire. The curly-headed children Mr. Clark has made us so familiar with are here again, pleasantly enough.—Mr. Crowe has taught us to look every year for something from him illustrating Johnson and his friends. Last year's 'De Foe in the Pillory' (an excellent picture) was, therefore, rather a disappointment. The artist has found a subject in Goldsmith, *Brick Court, Middle Temple, 1774*, (359), a work which shows great improvement upon its predecessors in painting and in drawing.

Mr. Watts's *Ariadne* (523) has intense pathos in it. The lover of Theseus, lorn of him, has come to sit upon the sea-shore to watch the watery path he took and scan the horizon, in vain hope of his sail arising there again. By her face we should read that she has just left a night's revel with the Wine-god. Her looks are sad and worn; her head languidly bent. In her hand she holds the clue, its long end trails upon the ground; prone upon its back lies a young panther, playing with the cord; otherwise she is alone. The silver-gray of earliest morning has filled the valleys among the hills of the Greek land behind her; it falls clear and chill upon the sea that dashes impatiently in the front. This is one of the best of Mr. Watts's pictures. Its delicate yet solid tones, strength and expressive poetry are welcome to all lovers of Art. In painting the little girl's head styled *Virginia* (270) the same artist has evidently aimed at unusual solidity and force,—an attempt, it may be, not carried far enough, for he has not been quite successful. Beautiful in execution and colour as the work is, it lacks completeness and grace of handling.

We cannot congratulate Mr. M. Stone upon an improvement in execution or feeling for the higher qualities of Art. His *On the Road from Waterloo to Paris* (345) has a really fine subject, marred by a reminiscence of Delaroche's Portrait of Napoleon at Fontainebleau—that well-known and effective picture which, through its affected fixture of

the eyes, is only just on the honest side of clap-trap and sentimentality. Napoleon, with a profile of the portrait in question, not well drawn, and therefore losing all the real nobleness of the original, is seated here in a poor cottage, fixedly staring at the fire. One faithful amongst the many faithless has drawn before him a loose grey coat, but not disturbed the reverie of his master. This figure is capitally put in, and tells its tale. Behind comes a buxom young mother, babe in arms, as if she would offer it to the Emperor's aid: a cleverly-introduced, showy, and popular figure. The sentiment of the same is, however, stagey and commonplace. To the woman's apron comes the perennial boy, hiding his face—while an equally trite youngster, of rougher nature, struts, drum in hand, ready for another Waterloo. Independent of the sentimentality of all this, there is in the execution of the picture even less completeness and care than we have before remarked in this artist's works. In both respects this picture is inferior to Mr. Stone's 'The Sword of the Lord and of Gideon,' here a year or two ago, and a picture of great promise.

One of the interesting pictures is Mr. Yeames's *Meeting of Sir Thomas More with his Daughter after his Sentence to Death* (522). The scene is in a courtyard after Sir Thomas had left the place of trial for that of his brief imprisonment. Margaret Roper broke through the guards and is seen struggling with two of them; her arms are spread out wide towards her father, who has turned round for a last embrace of one he loved so well. Her action, without violence, is full of passion, her expression most pathetic; that of her father, quieter and graver, is sad, loving and noble. His face is pale, worn with age and study, yet most with recent anxiety and the impress of fate; saddened but not subdued, and full of tenderness. Excellently supporting the emotions of these two is the designing of the subordinate figures; the children Margaret has left stand behind, a girl kneeling, a boy eagerly bending forward as to follow. The various and admirably defined actions and expressions of the soldiers, their officer, and the few persons gathered about the spot are high testimonies to the painter's keen perception of his subject. A little dry in execution, and somewhat flat, this work is solidly painted, well drawn, and treated with careful heed of truth in costume.

—Mr. Calderon has gained solidity of painting in his *Scene in the English Ambassador's House in Paris, on the Day of the Massacre of St. Bartholomew* (378). Those who had taken refuge there are gathered, some, men, about the window, and are looking into the street below. The women, two or three, are in attitudes of distress near the front of the picture; between the two groups the ambassador, Walsingham, is pacing to and fro, with head bent down in thought. We feel that this work, notwithstanding its great technical merit, lacks passion and action. Walsingham was not the man to pace uselessly about a room in such an emergency. The men, among whom, by the way, was Raleigh (whom we should have hoped to recognize in the picture), seem rather spectators of a street-row than of so horrible a business as the Bartholomew.

True to Death, is the title of a very cleverly designed little picture (565), by Mr. C. Goldie. It represents the death of Sir C. Lucas, who, with Sir G. Lisle, "gallant officers both," had surrendered at the taking of Colchester, August 28, 1648, and were selected for death as traitors to the Commonwealth. The story is, that Lucas opened his coat to receive the bullets of the firing-party, and fell instantly at the discharge, whereupon Lisle rushed forward, kissed his comrade's body and braved his own death. The last is seen kneeling over the slain man in a passion of grief. Behind—this is the most excellent portion of the picture—is the rank of Parliamentary soldiers, admirably designed in various attitudes, some reloading their pieces, others at ease. It is a very difficult thing to design well so many figures in one line, as here seen. The heads of the two Royalists are too large; their attitudes are well considered and expressive. Other more distant persons are not so well conceived; the landscape is trivial and the walls of the city, with the gate, shown in the picture are poor to the last degree. Another work by this artist, *Joan of Arc* (182), will reward examination.

Mr. R. B. Martineau's *The Last Chapter* (568), a lady kneeling before the fire on an autumn evening eager by its red light to finish the last pages of an enthralling novel, lacks beauty of feature to make the event interesting to us, but its solid, faithful and powerful execution mark the artist's ability. It is not often we get firelight so skilfully rendered as Mr. Martineau has it here, to an effect that is large and broad, which in ordinary hands becomes spotty and heavy.—Mr. R. S. Stanhope's picture, *Juliet and the Nurse* (624), deserves a much better place than it has. Notwithstanding slight evidences of inexperience in painting, and something of the like in composition, this work tells its tale with great spirit and success. It is carefully studied, without the ordinary stiffness of labour, and promises highly of the artist's future. Mr. Stanhope has an excellent perception of colour and a love of rich tone; the last would express itself better in his work than it does if he adopted a more solid manner than he now follows.—Mr. J. B. Burgess's humorous scene at *A Spanish Post Office* (351) has points of spirit and lively character, which Mr. Phillip himself does not attempt, and is therefore not to be blamed for not exhibiting. This picture represents the delivery of letters to a crowd of Spanish folks who manifest emotions the Spaniard of Art seldom gives way to. The Spaniard of pictures is really a rather dreary individual, the men much engaged in strutting about, the women simpering or silyly flirting, and altogether such as critics have long suspected to be solemn shams, quite other than the flesh and blood countrymen of Don Quixote. For the pleasant glimpse into their real life given by this picture we are grateful to Mr. Burgess. A capital group occupies the front: an old fellow, seated, reads a letter; he chuckles over its news, scraping his chin with one hand and gleefully thrusting his tongue sideways between his lips. Over his shoulder leans his wife; she points to the passages that strike her fancy. A demonstrative woman, with a letter from her husband clasped to her breast, rejoices; a boy begs of her joy. Behind, a *cura* reads a letter to one of his parishioners; there are other incidents expressed. This work lacks the brilliancy of Mr. Phillip's style; it is less exuberant in form, colour and the *physique* of the personages represented. Full of expression, it lacks beauty; yet is solidly enough painted to show that the liveliness of the artist's perception of character might easily extend itself to his manner of working, and afford us a pleasant, because humorous and unsentimental, addition to the painters of Spanish character. It is not less true now than when Dr. Johnson said it, that "there is a good deal of Spain that has not been perambulated." The Doctor's advice to Boswell, "I would have you go thither," might be offered to painters of our own day.

SCULPTURES AT THE HORTICULTURAL GARDEN.

ON Tuesday last the Royal Horticultural Society's Garden was opened, with the addition of a considerable number of sculptures, mostly the work of English artists. The row of statues placed upon the upper terrace was not uniform in the high quality and merit of some of its items. With Mr. E. Davis's *Wedgewood* (No. 114) every one feels satisfied.—Mr. Weekes's *Marquis of Welleley* (116) is a curiously old-fashioned statue, weak and trite; no representation of that able and energetic man. We say this subject to correction, if the office of sculpture is not to represent the person commemorated by its works, first, by characteristic portraiture, given with strength; secondly, by character, vigour, and beauty of line, and expressively learned execution.—Mr. E. B. Stephens's *Sir T. D. Acland* (117) answers to most of the requirements we suggest as proper to the art. It is an excellent portrait, spirited, free, composed so as to show well in many views, and deals very successfully with modern costume, simply by treating it honestly and without anatomical display.—Mr. W. F. Woodington's *T. Steele, Esq.* (118), colossal, by missing the honest truth of modern costume, and endeavouring to make anatomy where there should be nothing but drapery, has a pair of legs of regrettable character. Apart from this, the head is badly placed on the

shoulders, and looks too small; the body is so ill-balanced, that its centre is removed from the centre of gravity, and consequently the figure would fall if left alone, or, in life, the man be painfully constrained to maintain his attitude.—The most prominent work on the terrace is Mr. Durham's colossal statue, in bronze, of *The Queen, with the Attributes of Peace* (126), the original crowning statue for the Memorial of the Great Exhibition, 1851.—Mr. Foley's *Mannockjee Nes Scrwanjee Petit* (119), for Bombay, is a beautiful statue of a Parsee gentleman, as simple and graceful as is conceivable, life-like without emotion, and sound in design. Further on is *Goldsmith* (121), for Dublin, an excellent work. In the conservatory, and worthily in the place of honour, is the same artist's *Youth at a Stream* (23), one of the most beautiful of modern sculptures. Elsewhere is an unsatisfactory statue by Mr. Thrupp, *A Boy making a Plute* (7), which does not possess those qualities sculpture demands even from the least ambitious of its professors.—execution, surface and finish. Mr. T. Earle's *Hyacinthus* (10) is a graceful and spirited statue. Mr. C. Marshall's *Young Briton* (29) substitutes stage action for passion, and gives but an unsculpturesque idea of the subject.—A British mother inciting her son to war by relating his father's deeds, or her own wrongs. The boy's figure is fairly executed, but his expression is melo-dramatic; the woman's face fails to impress one with sympathy or respect,—it lacks beauty as much as dignity. Mr. Lawlor's *Titania* (53), notwithstanding its incompleteness, is spirited and pretty. Mr. Farrell's *Nymph and Cupid* (62) is a roughly-wrought but dashing group, probably intended for garden decoration. It is not judicious on the part of Mr. C. G. Adams to exhibit here his colossal busts of *Wellington* and *Charles Napier* (84 and 90); close to the eye their rude execution, lack of spirit, expression, and even of likeness, are painfully manifest.

FINE-ART GOSSIP.—In the corridors of the Parliament House, where Messrs. Ward and Cope have painted, the architect, never favourable to pictorial art being employed on the walls of his building, and, indeed, avowedly averse to wall-pictures of any kind being placed there, had filled the windows with heraldic glass, through which the sunlight falling, played strange pranks with the pictures, and manifestly injured their effect. The artists have remonstrated against the injustice of allowing these heraldic productions to remain, and enforced their case by recalling the practice of ancient architects, who did not scatter bright-hued glass indiscriminately over a huge building, as has been done at Westminster. The case of Mr. Maclise was the most grievous, for his 'Interview of Wellington and Blucher,' in the Royal Gallery, was, at times, nothing but a field for the gambols of red lions, dragons and what not. At last something has been done, and the interesting monsters which erst flourished in the corridors have been replaced by glass of *grisaille* character. Let us hope Mr. Maclise may receive like attention from the authorities as has been vouchsafed to Messrs. Ward and Cope.

The sale, by Messrs. Christie & Manson, of the collection of works of Art made by the late Mr. Bicknell, one portion of which was reported in our last, has been completed. The most noteworthy lots and the prices obtained for them were as under: all water-colour drawings, and all prices guineas.—Copley Fielding, *A Lake Scene, with Figures and Cattle, Sunset*, 45 (Agnew).—J. M. W. Turner, four early works, 1. *Winchester Cross*; 2. *Ruins in Italy*; 3. *Bay of Naples*; 4. *Lake of Nemi*, 95 (various).—Count d'Orsay, *Portrait of Turner, sketched at an evening party, pen and ink, one of the most fortunate likenesses, though caricatured*, 50 (Agnew).—Mr. H. Gastineau, *St. Michael's Mount, Cornwall*, 62 (Jones).—De Wint, *View near a Stackyard*, 45 (Ray).—the same, *Corn Harvest*, 104 (Sir J. Hippesley).—R. Dadd, *Miniature Oval, Group of Turks*, 35 (Agnew).—Prout, 1. *Amiens*; 2. *Porch of a Cathedral*, 212 (Vokins).—De Wint, *Small Landscape with Cattle*, 32 (Ray).—Mr. W. Hunt's *Black and White Grapes, a Basket, a Plum and*

a Cherry, 50 (Vokins).—Mr. C. Stanfield, *Honfleur, Mouth of the Seine*, 104 (Herbert).—Copley Fielding, *Bridlington Harbour, with Shipping*, 530 (Wells).—the same, *Rivaux Abbey*, 460 (Vokins).—De Wint, *A River Scene, Canterbury Meadows*, 270 (Herbert).—Copley Fielding, *Bowhill Downs, near Chichester*, 392 (Wallis).—Mr. J. D. Harding, *Berncaste, on the Moselle*, 230 (Wells).—J. M. W. Turner, *Himalaya Mountains, and the companion drawing, both engraved*, 330 (Vokins).—The *Lighthouse at Havre, moonlight*, 105 (Moore).—The *Lake of Geneva, from the Jura, Mont Blanc in the distance*, 141 (Grindlay).—*Lighthouse of the Hève, mouth of the Seine*, 103 (Colnaghi).—Mr. D. Roberts, *Hôtel de Ville, Louvain; Baalbec, Temple of the Sun; and a Street in Cairo*, 277 (Wells).—Mr. W. Hunt, *Peasant Girl seated in a Chair*, 101 (Agnew).—Copley Fielding, *Rivaux Abbey, evening*, 630 (Vokins).—S. Prout, *Baal, 70* (Agnew).—J. M. W. Turner, *The Righi*, 296 (Agnew).—Copley Fielding, *Traeth Mawr, North Wales*, 420 (Wells).—Mr. W. Hunt, *Greengages and Hips*, 60 (Vokins).—Copley Fielding, *Loch Katrine*, 260 (Wells).—S. Prout, *A Street Scene in Padua*, 60 (Grundy).—Mr. D. Roberts, *The Great Square at Tetuan, from the Jew's town, during the celebration of the marriage ceremonies of the son of the Governor of Ash-Ash*, 1833, 410 (Wells).—This was the first day's sale of water-colour drawings, and realized 7,465*l.*—Second day's sale, Mr. C. Stanfield, *Sunderland, said to have been executed in two hours*, 135 (Colnaghi).—H. Bone, *An Enamel, after Reynolds, The Infant Academy*, 75 (Agnew).—Mr. W. Hunt, *The Tambourine Girl*, 190 (Holmes).—S. Prout, *Verona*, 60 (G. Smith).—De Wint, *Corn Harvest*, 250 (Graves).—H. Bone, *Lady Cockburn and her Sons, after Reynolds, enamel*, 105 (Wells).—S. Prout, *Interior of a Cathedral*, 106 (Agnew).—The same, *Old Buildings and a Bridge over a River*, 71 (Agnew).—Mr. J. F. Lewis, *The Mantilla*, 56 (Vokins).—S. Prout, *La Place de la Pucelle, Rouen*, 140 (Wells).—De Wint, *Gleaners disturbed, Scene in a Cornfield*, 365 (Graves).—S. Prout, *Porch of Chartres Cathedral*, 120 (Agnew).—Mr. W. Hunt, *A Peasant Girl, seated, with a Basket*, 183 (Agnew).—S. Prout, *Old Houses at Amiens, the Cathedral in the distance*, 76 (Crofts).—C. Fielding, *Shakespeare's Cliff*, 69 (Agnew).—S. Prout, *Ulm*, 121 (Agnew).—C. Fielding, *Langdale Pikes, Westmorland*, 350 (Wells).—Mr. J. Nash, *The Cartoon Gallery, Knowle, and Interior of Chastleton, Oxon*, 70 (Grundy).—J. M. W. Turner, *Castle of Elz, on the Moselle; Rouen, and Château Gaillard*, 160, 200, and 170 (Agnew).—Mr. D. Roberts, *The Seminario and Cathedral of St. Iago, from the Paseo de Sta. Susanna*, 250 (Wells).—J. M. W. Turner, *Lake of Lucerne*, 180 (Colnaghi).—C. Fielding, *Crowborough Hill, Sussex*, 760 (Wells).—Mr. W. Hunt, *A Bunch of Grapes, Peaches and Rose Slips*, 112 (Agnew).—The Pilkington Collection of Drawings, by Turner, was sold to Mr. Wells at the following prices for each item:—Scarborough Castle, *Boys Crab-fishing*, 250.—*Mowbray Lodge, Ripon, Yorkshire, Earl Ripon's Seat*, 510.—*Grouse Shooting, the Moor, with portrait of the artist, the dogs painted by Stubbs*, 430.—*Woodcock Shooting, Scene on the Chiver*, 510. The third day's sale brought 8,315*l.* 10*s.*

MUSIC AND THE DRAMA

MUSICAL UNION.—TUESDAY, May 12, Half-past Three.—Two, C Minor, op. 9, Violin, Viola and Violoncello, Beethoven; Quintet, E flat, Piano-forte, &c. op. 44; Schumann, Quintet, B flat, op. 87, Mendelssohn, Solos, Piano-forte; Executants, Vierrtempe, Ries, Webb, Haun, and Piatti, Pianist, Jaell.—Visitors' Admissions, Half-a-Guinea each, to be had of Cramer & Co.; Chappell & Co.; Olivier & Co.; Austin, at St. James's Hall; and Ashdown & Farry, 18, Hanover Square. J. ELIJA, Director.

HERR ADOLPH SCHLOSSER'S CONCERT will take place on THURSDAY EVENING, May 14, at the HANOVER SQUARE ROOMS. Vocalists: Madame Alboni and Herr Reichardt. Instrumentalists: Mr. Biagrove, Signor Piatti, Signor Giulio Regondi, M. Ascher, and Herr Adolph Schlosser. Conductors: Messrs. Frank Mori and Benedict.—Tickets, Half-a-Guinea each, to be had at the principal Music-sellers; at the Hanover Square Rooms; and of Herr A. Schlosser, 4, Upper George Street, Bryanston Square, W.

Mr. HENRY LESLIE'S CHOIR, THURSDAY, May 21.—ST. JAMES'S HALL.—Sims Reeves, Arabella Goddard, Parpa.—Stalls, 6*s.*; Family Tickets, to admit Four, 21*s.*; Balcony, 3*s.*; Area, 2*s.*—Admission, 1*s.*; at Addison's, 210, Regent Street; Austin's, 28, Piccadilly; Hanover Square Rooms; and all Music-sellers.

MR. DEACON'S SECOND SEANCE OF CLASSICAL INSTRUMENTAL MUSIC will take place on THURSDAY, May 21, at 16, Grosvenor Square (by permission of Messrs. Colliard), commencing at three o'clock.—Family Tickets, to admit Three, One Guinea; Single Tickets, Half-a-Guinea; to be had of Mr. R. W. Olivier, 19, Old Bond Street; or of Mr. Deacon, 79, Welbeck Street, Cavendish Square, W.

MR. WALTER MACFARREN'S MORNING CONCERT OF PIANOFORTE MUSIC. Hanover Square Rooms, June 6.—Reserved Seats, 10s. 6d.—1, Osnaburgh Street, N.W.

ROYAL ITALIAN OPERA.—The arrivals of Signor Tamberlik, who appeared on Saturday in 'Guillaume Tell,' and of Signor Mario, who is to appear in 'Il Barbiere' this evening, bring the Italian Opera two long steps nearer to completeness than it has till now stood. The reign of neither tenor can be much further prolonged; but as yet no successor presents himself. Meanwhile, the first-named gentleman adds another to the list of those who, like Rubini, have only become highly-finished artists after their voices have passed the meridian line. A certain fever of style and irregularity of phrasing brought hither and long retained by Signor Tamberlik have entirely disappeared. This day week, in spite of recent fatigue and indisposition, his delivery of the arduous part of *Arnoldo* in 'Guillaume Tell' was more refined and complete than we have heard it, only separated by a short interval from that of M. Duprez.—Mdlle. Fioretti made a third advance in public favour on Tuesday evening, in that repulsive and weak opera, 'La Traviata'; which drama nevertheless, with all its sins and sob's, still holds "the town,"—to judge from the effect produced. *Violetta's* music could not be better sung than by its new representative, who is an honest, competent and finished artist. She showed a fine intelligence in the third act, by singing it with an enfeebled and faltering *timbre* of voice, thus giving a reality to the scene, by musical artifices, far more effective than any trick of cough or morbid symptom, such as the first *Violetta*, in England, employed so prodigally. The personal elegance of Madame Bosio has not been granted by nature to Mdlle. Fioretti; but her demeanour and acting showed throughout a thorough understanding of what was to be presented,—and in the last act, more. The long death-scene was pathetically rendered, without grimace or exaggeration, and told to its audience as well as it has yet told. We had not credited the lady with so much feeling. She has now, however, her public with her, as Tuesday's warm and sincere applause must have proved to her, and will probably sing, and possibly act, with more ease and animation in every new part which she undertakes. It is a pleasure to meet a real artist, after having encountered so many pretenders.—Signor Naudin, as *Alfredo*, was too fierce and boisterous; there was something too much of brigand fury in his scenes of passion. *Giorgio*, the father, was enacted by Signor Colonnese; his first appearance here. He is young, we apprehend; he is very tall, he has a potent bass and baritone voice, which, we fancy, may need training, after all allowance has been made for the nervousness of one accustomed to easy success at home, when confronted with this London audience of ours. As a whole, the scenic, orchestral and choral execution of this opera could not be surpassed. Every good point in Signor Verdi's music was wrought out with a ripeness, spirit and force, that almost clad music essentially feeble and sketchy with firm character and glowing colour.

CONCERTS.—Very fine was the May-day performance of Mendelssohn's 'Athalie' music at the Crystal Palace, by a force of 2,500 singers and players. The chorus was unimpeachable both as to tone and tune; the orchestra was select and strong, giving greater pomp and mastery to the 'War March' than we imagine it has ever been before invested with. The addition of the organ at the close produced an effect of almost overwhelming power. The *sol*i parts were taken by Miss Parepa, Miss Martin and Madame Sainton-Dolby. In short, the performance was possibly as good as could have been obtained. But the music, besides being heard at an inevitable disadvantage when it is disconnected from the stage, is orchestrally too delicate and intricate for so vast a locality. Again, the necessities of the stage and the number of words laid out by the poet have made an animated and syllabical form of setting

necessary, to which the most penetrating single voice or the clearest conceivable declaimer could not do justice in the Sydenham space. After 'Athalie' was ended the success of the unaccompanied part-song by Mendelssohn was such as to suggest to the managers of these grand entertainments how to avoid a difficulty in making up their programmes. Surely mixed choral and orchestral concerts could be composed of such variety as to compensate for the absence of music finer in detail if not smaller in scale,—of single songs, in short. The two Exhibition March-Overtures were performed. M. Auber's was even more heartily relished than it was in 1862. The quiet attention of the vast audience throughout was a thing as singular to witness as it is pleasant to commemorate.

Madame Lind-Goldschmidt sang very finely in Handel's 'L' Allegro' yesterday week, taking, among her other duties, the Nightingale Song (one of Handel's best bird-songs), and the exquisite "Hide me from day's garish eye,"—one of the many examples (the song, "O Lord, whose mercies numberless," from 'Saul,' is another) proving that Handel was as complete a master of the couplet style as the most popular ballad-monger of to-day. Madame Goldschmidt also sang "Oft on a plot of rising ground," which has been usually allotted to a tenor; and Mr. Montem Smith the Laughing Song, which used to be one of Mr. Phillips's baritone show-pieces. Madame Lemmens-Sherrington was the other *soprano*, Miss Lascelles was the *contralto*, and Mr. Weiss the bass.

Herr Pauer's *Historical Concerts*.—Though the specimens by Kuhnau (a fine ancient composer, to whom due justice has never been done), Mattheson and Krebs, produced at the third of these valuable and interesting concerts, were all worth hearing as so many novelties,—the predominant interest of the morning centred itself in the music of the Bach family, the members of which have never, it may be averred, been met as a group in England till now. Father Sebastian's *Partita* in B flat, though not unknown, has been little played. A lovelier suite of pieces does not exist,—the *Courante* and *Sarabande* being the most beautiful movements; a wonderful life, too, is given to the *Gigue* by the hand-crossing figure, intended for an instrument with two "decks" of keys, and thereby made difficult to the pianist of to-day. To such perfection did the patriarch bring his style, that all other music in its form comes off as second-best. How his sons, William, Friedemann and Emmanuel, broke away from it, the one as widely differing from the other as though they had not been brothers, was shown by two charming specimens: the first, a Polonoise, by Friedemann, as fresh as if it had been written yesterday, has almost as much sentiment as if it had been signed by Chopin or Moniusko. Nor does the *Sonata* by Emmanuel Bach bear much more trace of age. Compared with the more mechanical productions of later lesson-makers, such as Alberti, Nicolai, and even Ignace Pleyel (whose reputation died of his over-pretentiousness), this capital work becomes doubly precious; proving what has been said, but has been till now too much a saying lost in empty air, that there is hardly a form wrought out by the Haydns, Mozarts and Beethovens which is not indicated in these charming and individual works. The music by Christian (the fourth) Bach is weaker than that of his father and brothers, but still has a humour of its own. More impracticable things have succeeded than a series of Bach recitals, devoted to a family so rich in power and variety.

At his fourth concert Herr Pauer will deal with French music, and, among other pieces, introduce a Duet for two pianofortes, in which he will be joined by Mr. Dannreuther.

Messrs. Ever & Co. gave on Tuesday last the first of two concerts, for the express purpose of introducing foreign music new to the English public. The programme comprised, among other things, a Pianoforte *Trio* by Herr Bargiel—not worth much, though built on distinct themes; songs by Franz, Schumann, Viotta (the last a quaint, sacred air we should like to hear again), Mariani; and part-songs by Röhr, Radecke and Marchetti;—small pianoforte trifles by Herren Kiel (whose 'Requiem' has excited a certain sen-

sation in Germany), Hiller (whose nocturne, 'Zur Guitarre,' is charming and characteristic), Schulhoff and Pauer. On these it is impossible to dwell, because we have to speak of the most important and best novelty of the morning, the *Setett* by Herr Brahms. This places the talent of the composer in a more favourable point of view than it has hitherto seemed to us to occupy; because in all its four movements—an *allegro*, an *andante*, a *scherzo* and a *rondo*—the ideas are unborrowed, distinct and beautiful, and the treatment is ingenious. The work, it is true, as a whole, wants contrast. The first and last movements are too closely alike in character; the elegance of the *finale* (and it is very elegant) cloy's. Then, Herr Brahms is monotonous, after the fashion of the school in which he has graduated. Its members do not, apparently, recognize effect unaccompanied by strain. Their organ (to use a technical phrase) must always have all its stops drawn. They cannot for a single note dispense with a full chord; and the whole thereby produced becomes heavy from the excess of richness. We may return to this matter, having now good reason to look for the future compositions of Herr Brahms; meanwhile, suffice it to state that this *Setett* is the most reasonable and individual work from young Germany which we have as yet heard.

In addition to the concerts reviewed, may be mentioned as having lately taken place those by *Madame Angelo*, Mdlle. Bondy and *Mrs. Stewart Howard*. The last lady appears as a singer of Scotch songs.—The pressure of the time, too, obliges us to be content with merely announcing the benefit-concert of that zealous and well-experienced artist, *Mr. C. Salaman*.

The Royal Society of Musicians gave its annual performance of 'The Messiah' on Wednesday evening, conducted by Dr. Bennett. The singers were Mdlles. Titiens, Parepa and Lascelles; Messrs. Sims Reeves, Santley, Thomas and Wallworth.

PRINCESS'S.—This theatre has now passed into the sole management of Mr. George Vining; and, on Monday, Mr. and Mrs. Charles Kean commenced an engagement of eleven nights, prior to their intended departure for Australia. The tragedy of 'Hamlet' was selected for the occasion, and was, as usual, well acted. Mr. Kean, as the princely Dane, hit off the salient points in the style which distinguishes his performance of the character, and was applauded by a crowded house. Mrs. Kean's impersonation of the guilty Queen was grand and impressive. Mr. Henry Marston, as the Ghost, most solemnly and measuredly intoned the fine poetical speeches of which the part is composed. On Tuesday the tragedy of 'Othello' was revived; and on Wednesday 'Louis the Eleventh.' These are farewell performances, and have attached to them a peculiar interest for the audience of a theatre with which the name of Kean was so long identified.

CITY OF LONDON.—Mr. Falconer's drama of 'Peep o' Day' has been transferred to this theatre, where it has been reproduced with new scenery in a very complete manner. Mr. Oscar Byrne has been engaged for the *ballet* arrangements; and the characters are, for the most part, well supported. Mr. J. F. Young is efficient as *Harry Kavanagh*, Mr. Charles Verner as *Barney O'Toole*, Mr. George Weston as *Capt. Howard*, and Miss Augusta Clifton as *Kathleen*.

SURREY.—The tragedy of 'Hamlet' was performed on Monday at this house, the meditative hero being supported by Mr. Creswick, who is here fulfilling a starring engagement. On the 23rd, the theatre will re-open under the management of Mr. Henry Loraine.

MUSICAL AND DRAMATIC GOSSIP.—We read of still another *National Association for the Encouragement of Music* starting under good auspices; the first step of which is to invite a competition of choirs, to be held at the Crystal Palace on the 4th of July, announcing a list of prizes as follows:—For choirs above 100 actual members, 200*l.*, 75*l.*, 25*l.*; for choirs below 100 actual members, 100*l.*, 50*l.*, 30*l.*, 20*l.* Every competing choir must num-

ber at least forty members; and, it is added, that "unless at least eight large choirs and twenty small choirs are entered, there will be no competition for the respective classes of prize."

Madame Trebelli Bettini appeared at *Her Majesty's Theatre* on Tuesday last, in 'Il Barbiero.'—Of Signor Schira's new opera, 'Niccolò da Lapi,' we shall speak in detail next week.

The first of eight *Matinées*, which M. Halle will give—devoted, we fancy, to miscellaneous piano-forte music—will take place on Friday next.

The *New Philharmonic Society*, apparently determined to rest its claims to favour on its singers, announces Mdlle. Fioretti and Signor Tamberlik for its next concert. Mr. I. F. Barnett is to be the pianist.—M. Jaell will play at the Crystal Palace to-day.

Mr. Benedict, for his coming concert, to be held on June the 1st, advertises three unpublished compositions by Weber.

Signor Gardoni is coming to London this year, only to sing in concerts.

The reports and advertising columns of the journals make it evident that music is breaking through the Chinese wall at last in this country, though somewhat capriciously, as must be always the case where "private judgment," and not authority as by Act of Parliament established, decides on the plan of operations. The other night, we perceive, the "Society for the Encouragement of the Fine Arts" gave point and spirit to its *Conversazione* by a reading of a translation of 'Antigone,' with a performance of Mendelssohn's music.

Madame Vera-Lorini, pleasantly remembered here as Mdlle. Sophie Vera, and who has been lately singing with great success at Barcelona, is now in London.

A sale of stringed instruments of more than ordinary importance will be held by Messrs. Puttick & Simpson, on Thursday next.

Herr Franz Lechner was commissioned to write the music for the inauguration of the Schiller statue at Munich, which was fixed to take place to-day.

The *Allgemeine Musikalische Zeitung* mentions that a new opera, 'Anna von Bretagne,' has been produced at Gotha.—Handel's 'Judas' will be performed during June at a musical festival in Schwerin.—The same journal's Roman correspondence announces that Dr. Liszt is actively occupied in founding a concert society there for the revival of sacred and profane classical music.—A new organ of some pretensions, by a builder (Herr Graunzig) of Dantzig, has been erected at Marienwerder, in Western Prussia.

The days of government assistance to foreign Italian opera-houses seem to approach their end. The rumour that the theatre in St. Petersburg is to be transferred to private hands gains ground.—The Fenice Theatre at Venice is to be shut during this summer.—The management of the Teatro San Carlo at Naples is not to be entrusted to our Mr. Mapleson, but to a M. Vonwiller.

M. Benazet appears determined to make Baden-Baden more musical than ever this year. He promises, first, two months of French comic opera; after this some representations of Gluck's 'Orphée,' with Madame Viardot; later, Italian opera, with Madame Charton-Demeur and Mdlle. Battu as his *prime donne* and Signor Naudin as his tenor. The clever working German company from Karlsruhe will sing there every Wednesday evening.

A Mass, by Signor Roberti, to be produced to-morrow morning at the Brompton Oratory, and a Sunday or two later at the chapel in Farm Street, is spoken of by those who should know as a Service beyond ordinary merit in the serious Italian style. We may hear more of its composer, since we are told that, besides sacred, he has also written quartet music.

M. Arnault, the author of tragedies esteemed in their day, 'Regulus' (in which Talma figured), 'Catherine de Médicis,' 'Gustave Adolphe' and 'Pertinax,' the last two failures, died the other day, in Paris, at a great age—almost, if not altogether, forgotten by the present generation.

Drury Lane Theatre is closed.

TO CORRESPONDENTS.—J. A. D.—S. B.—W. B.—D. I. N.—V. H.—H. M.—received.

PROFESSOR HUXLEY'S NEW WORK.

Price 6s. 8vo. cloth, with 35 Woodcut Illustrations,

EVIDENCE as to MAN'S PLACE in NATURE; or,

ESSAYS on—

I. THE NATURAL HISTORY of the MAN-LIKE APE. II. THE RELATIONS of MAN to the LOWER ANIMALS. III. ON SOME FOSSIL REMAINS of MAN.

By THOMAS HENRY HUXLEY, F.R.S.

WILLIAMS & NORGATE, London and Edinburgh.

DR. DAVIDSON ON THE OLD TESTAMENT.

Now complete, in 3 vols. 8vo. with Index, price Two Guineas,

AN INTRODUCTION to the OLD TESTAMENT, Critical,

Historical, and Theological; containing a Discussion of the most important Questions belonging to the several Books.

By SAMUEL DAVIDSON, D.D. LL.D.

"The conclusions at which he has arrived are the matured judgments of a vigorous, well-stored and unbiased mind, anxious only to ascertain and declare the truth."—*Athenæum*.

"There is no other work as yet in the English language at all approaching it in value for the use of the *bono fide* theological student in the department which it covers."—*Westminster Review*.

WILLIAMS & NORGATE, London and Edinburgh.

This day is published, 8vo. cloth, price 16s. 6d.

THE TUBINGEN SCHOOL and its ANTECEDENTS: a Review of the History and Present Condition of MODERN THEOLOGY. By R. W. MACKAY, M.A., Author of 'The Progress of the Intellect,' 'A Sketch of the History of Christianity,' &c.

Price 12s. 8vo. cloth.

HOMER'S ODYSSEY, translated into English Dramatic Blank Verse. By the Rev. T. B. NORGATE.

"Valuable for its vigour and general faithfulness."—*Spectator*.
"A translation which the scholar will compare with interest and pleasure—the schoolboy will find acceptable; and it will be a boon to the English reader, presenting to him in the most perfect form the peculiarities of Homer's idiom."—*Proseic Journal*.
"A very close and generally accurate version. We have compared it closely and critically with the Greek in many places, and we can therefore commend it for its fidelity as well as for its general diction."—*Home and Foreign Review*.

LITERATURE

The History of the Jews, from the Earliest Period down to Modern Times. By Henry Hart Milman, D.D., Dean of St. Paul's. 3 vols. Third edition, thoroughly revised and extended. (Murray.)

ANOTHER book on Jewish history, and that too from the pen of a Dean. The records of the Old Testament, as far as they supply memorials of the Jews, must be treated reverently or irreverently, critically or otherwise, by the student of the Bible. English scholars have begun to look attentively into the old Hebrew books, and to state their views of them. This is an omen for good, since the Bible, sacred as it is, addresses itself to rational men, and supposes an inner harmony between itself and their deepest nature. It is especially encouraging to see dignitaries of the Church expressing their sentiments about the fortunes of the chosen people of God, as they are related in holy books, in the spirit of sagacious inquirers, not of dogmatists ready to denounce honest thinkers who may arrive at conclusions different from their own. The leaders in theological learning should be the persons who fill the highest offices in the Church,—men of intellectual as well as practical ability. At a time when a thorough knowledge of the language in which the Hebrew Bible was written is rare in England, it is pleasant to welcome the works of those who write with no polemic purpose, but as sincere lovers of truth. To this class, Dean Milman belongs. He is a Christian scholar, of wide and generous sympathies, sagacious, shrewd, far-seeing, tolerant, who has won for himself a great and deserved reputation by his History of Latin Christianity, a work of which England has reason to be proud.

The volumes before us are the new edition of a book published upwards of thirty years ago, not a new work. We regret this, because we are confident that the author could now have produced a better, had he not been re-editing the three volumes originally published in Murray's Family Library. The first volume, containing the ancient portion of the Jewish history drawn from the Biblical records, is nearly the same as before; the second and third volumes, bringing down the history, through the Middle Ages, to recent times, are considerably lengthened. Even here, however, the Dean is too sketchy and brief. A little German lengthiness would have been of great benefit—more of the internal history of Judaism than the external—more about the principal writers and teachers than mere historical events. Thus, R. Saadia is dismissed in two or three sentences; and Moses Maimon himself is inadequately treated. The aim of the author is to produce a clear, concise and readable history, more popular than profound, unencumbered with details and discussions irrelevant to essential matters. But the History is professedly based on critical results; so that it exhibits nothing contrary to the best scholarship, in the author's judgment.

Dean Milman is an historian of a high order. Where the materials are less ancient, less fragmentary than the Biblical, not Oriental or Hebraic, he writes with the pen of a master. Hence the third volume is the best; the second next to it in merit. Here we peruse his pages with pleasure, finding few things to question and much to approve. In the first volume he does not appear to the same advantage, especially in the notes now appended for the first time, because they show that he is not a good critic. He is

acute and sagacious, but lacks a good knowledge of Hebrew, and is therefore wrong in many of his judgments. Nor is he aware of the literature of his subject on every occasion. With Graetz's 'Geschichte der Juden,' of which five volumes have appeared, he seems unacquainted. Yet it is the latest and the best—superior to Jost's, which has been of so much service to the English scholar. The name of Rapoport he only knows so far as to mis-spell. Even Buxtorf's name shares the same fate. So, too, Archbishop Laurence is always metamorphosed into Lawrence; Ghillany into Guillany; and Avenzace, or Ibn-Bag'a, into Aben Pace. In many respects his judgment is biassed or apparently prejudiced, so that he does not characterize writers and their books very justly. The partiality of friendship has blinded his mind in more instances than one. He has no proper estimate of the peculiar excellencies that belong to critics, or has paid so little attention to their works as to know almost nothing of their merits. Thus Zunz is "the indefatigable," "the industrious," while Munk is credited with "profound Hebrew learning, wide range of philosophical inquiry, and perspicuous language." Had these judgments on the two Hebrew scholars been reversed, they would have been near the truth. Of Ewald he speaks in terms occasionally severe, and in more instances than one pronounces a theory of his wild or arbitrary which is unquestionably right. He also refers to a "masterly article on Job, by the Rev. J. Cook" (F. C. Cook), in the 'Dictionary of the Bible,' and asserts that neither he nor any other writer had dwelt sufficiently on the most remarkable characteristic of that poem, though Mr. Froude and Dr. Davidson, not to speak of Hirzel and others, have brought out that very characteristic to full view. Movers's work on the Phœnicians "contains everything which true German industry and comprehensiveness can accumulate," &c. The "industry" of Zunz and Movers, along with the "masterly" article of Mr. Cook, is sufficiently absurd, because it so happens that the latter is seriously defective and erroneous. In short, with general modesty of tone, the worthy Dean sometimes expresses himself dogmatically enough. He has positiveness as well as diffidence of manner. We hold his conclusions on critical points to be of no value where they differ from results which the higher criticism has already attained, and regret that some of the notes should have been written. What is correct in them has been better said before; what is new, or contrary to the safe results of the higher criticism, had been better omitted; for the author has sometimes undertaken to overthrow in a note what has been built up with irresistible argument. He is not the man, however, to turn back the tide of criticism on the books of the Pentateuch, or to unsettle various things which he tries to disturb.

We have little doubt that readers will be anxious to see Dean Milman's opinions on the points now so warmly agitated in the theological world; and, therefore, we shall give such extracts as may fairly put them in possession of his *stand-point*, as the Germans would say. On the truth or error of his views, it is not our province to pronounce a judgment. One thing is evident, that many of them have not been taken up lightly or adhered to unthinkingly:—

"The views adopted by the author in early days he still conscientiously maintains. These views, more free, it was then thought, and bolder than common, he dares to say not irreverent, have been his safeguard during a long and not unreflective life against the difficulties arising out of the philosophical and historical researches of our times; and from such views many, very many, of the best

and wisest men whom it has been his blessing to know with greater or less intimacy, have felt relief from pressing doubts, and found that peace which is attainable only through perfect freedom of mind. Others may have the happiness (a happiness he envies not) to close their eyes against, to evade, or to elude these difficulties. Such is not the temper of his mind. With these views, he has been able to follow out all the marvellous discoveries of science, and all those hardly less marvellous, if less certain, conclusions of historical, ethnological, linguistic criticism, in the serene confidence that they are utterly irrelevant to the truth of Christianity, to the truth of the Old Testament, as far as its distinct and perpetual authority and its indubitable meaning."

After quoting from Paley's 'Evidences' what he terms his "wise observations" on the relation of the New Testament to the Old, and the nature of the sanction given by Christ and his Apostles to the latter, he says:—

"Those who are not perfectly satisfied with what seem to me the wise observations of Paley, may perhaps, on calm consideration, acquiesce in a theory of this kind, a theory (not a new one) which, while it preserves the full authority of the sacred records in all which is of real importance to religion and leaves undisturbed the devotional reading of the Scripture, relieves it from all the perplexities which distract the inquiring mind. (Such devotional reading I should be the last willingly to repress, and devotion will intuitively choose and dwell exclusively on the religious parts of the sacred writings.) The revelation of moral and religious truth is doubtless the ultimate, I should say the sole, end of the Bible; nor is it difficult, according to ordinary common sense and to the moral instinct or judgment vouchsafed to man, to separate and set apart moral and religious truth from all other human knowledge. For the communication of such truth, lawgivers, prophets, apostles, were gifted. This was their special mission and duty. This, as far as His character of TEACHER, was that of the Saviour himself. Lawgivers, prophets, apostles, were in all other respects men of like passions (take the word in its vulgar sense) with their fellow-men; they were men of their age and country, who, as they spoke the language, so they thought the thoughts of their nation and their time, clothed those thoughts in the imagery, and illustrated them from the circumstances of their daily life. They had no special knowledge on any subject but moral and religious truth to distinguish them from other men; were as fallible as others on all questions of science, and even of history, extraneous to their religious teaching. If this had not been the case, how utterly unintelligible would their addresses have been to their fellow-men! Conceive a prophet, or psalmist, or apostle, endowed with premature knowledge and talking of the earth and the planetary system according to the Newtonian laws; not 'of the sun going forth as a bridegroom to run his course.' Conceive St. Stephen or St. Paul stopping in the midst of one of his impassioned harangues, and setting right the popular notion about the Delivery of the Law, or the time of the sojourn of the Israelites in Egypt. They spoke what was the common belief of the time according to the common notions of things and the prevalent and current views of the world around them, just as they spoke the Aramaic dialect; it was part of the language: had they spoken otherwise, it would have been like addressing their hearers in Sanscrit or English. This view has been sometimes expressed by the unpopular word *accommodation*—a bad word, as it appears to imply art or design, while it was merely the natural, it should seem inevitable, course of things. Their one paramount object being instruction and enlightenment in religion, they left their hearers uninstructed and unenlightened as before, in other things; they did not even disturb their prejudices and superstitions where it was not absolutely necessary. Their religious language, to work with unimpeded persuasiveness, adapted itself to the common and dominant knowledge and opinions of the time. This seems throughout to have been

the course of Providential government: Lawgivers, prophets, apostles, were advanced in religious knowledge alone. In all other respects society, civilization, developed itself according to its usual laws. The Hebrew in the wilderness, excepting as far as the Law modified his manners and habits, was an Arab of the Desert. Abraham, excepting in his worship and intercourse with the One True God, was a nomad Sheik. The simple and natural tenor of these lives is one of the most impressive guarantees of the truth of the record. Endowed, indeed, with premature knowledge on other subjects, they would have been in a perpetual antagonism and controversy, not merely with the moral and religious blindness, with the passions and idolatrous propensities of the people, but with their ordinary modes of thought and opinion and feeling. And as the teachers were men of their age in all but religious advancement, so their books were the books of their age. If these were the oracles of God in their profound religious meaning, the language in which they were delivered was human as spoken by human voices and addressed to human ears. The moral and religious truth, and this alone, I apprehend, is the 'Word of God' contained in the Sacred Writings. I know no passage in which this emphatic term is applied to any sentence or saying which does not convey or enforce such truth."

With respect to the chronology and numbers of the Bible, he asserts—

"I confess my conclusion is, that there is neither present ground nor future hope for any precise or trustworthy chronology; and I am content to acquiesce in ignorance, where knowledge seems unattainable. The only result which I am disposed to venture on historic grounds (the geological question I leave to the geologists, who, as far as I am concerned, have full scope for their calculations) is, that the Law and polity of Moses are of much later date in the history of mankind than is commonly thought. This in itself can raise no religious objection, which will not apply, and much more strongly, to the time of the coming of Christ. With the chronology is closely connected the question of the numbers in the Hebrew Scriptures, to which I cannot but think that more than due weight has been lately assigned. I will observe that, if accuracy in numbers is to determine the historical credibility and value of ancient writers, there must be a vast holocaust offered on the stern altar of historic truth. Josephus must first be thrown upon the hecatomb, without hope of redemption. Bishop Thirlwall and Mr. Grote must lead up, with averted eyes, the firstborn of Grecian History. The five million and a quarter in the army of Xerxes, must destroy all faith in the whole account of the Persian invasion by our venerable Herodotus. Diodorus, with all that we know of Ctesias and that class, must follow. Niebuhr and Sir George Lewis, if they agree in nothing else, must agree in the sacrifice of Livy. I must confess that I have some fear about Cæsar himself. At all events, there must be one wide sweep of, I think, the whole of Oriental history. Beyond all people, indeed, the Jews seem to have had almost a passion for large numbers. Compare Chronicles with Kings: the later compiler almost invariably rises above the older. Josephus soars high above both. But what is Josephus to the Rabbins? Only turn from the siege and capture of Jerusalem by Titus to that of Bithur under Hadrian! There were, indeed, peculiar reasons why the Jews should be tempted to magnify their numbers, especially at the time of the Exodus. The current argument against them, at Alexandria and elsewhere, seems to have been that they were a miserable and insignificant horde of lepers, cast out of Egypt in scorn and contempt. Their national pride would be tempted, not merely to the legitimate boast of the wonders of their Exodus, but to magnify their importance from a distinguished tribe to a powerful nation. The habit of swelling their numbers would grow and become inveterate. Above thirty years ago, I expressed my opinion that the numbers as they appear in our present sacred books were untenable; all further inquiry has confirmed me in this view. Maintain the numbers as they stand, I see no way, without one vast continuous miracle, out of the

difficulties, contradictions, improbabilities, impossibilities. Reduce them, and all becomes credible, consistent and harmonious. By the natural multiplication of the family, or even tribe of Jacob, during their longer or shorter sojourn in Egypt (without good Bishop Patrick's desperate suggestion, that the Hebrew mothers were blessed with six children at a birth), the nation of Jacob's descendants at the Exodus becomes numerous enough to be formidable to their masters; but not such a vast horde as to be unmanageable in its movements and marches, too vast to form one camp, to be grouped together at the foot of Sinai, to pass forty years, with only occasional miraculous supplies (all of which we hear in the record), to be at first repelled from the Holy Land, to appear afterwards as the conquerors, but not unresisted conquerors."

In harmony with these observations he frequently questions numbers in the Hebrew text, as the 500,000 men which Jeroboam lost in battle with Abijah, p. 337.

Here is a note respecting inspiration:—

"There is a difficulty as to the theory of the strict verbal inspiration of the Old Testament, out of which I see not how a Christian is to find his way. Is it the Hebrew or the Greek LXX., of which every sentence, phrase, word, syllable, is thus inspired? Every one knows, or ought to know, how much they differ, not only in the sense, but in omissions and additional passages, found in one, not in the other. It will be said, of course the Hebrew. But the writers of the New Testament, when their citations are verbally accurate, usually quote the LXX. For three or four centuries till the time of Jerome, the LXX. was the Old Testament of the Church. Till Jerome, no one of the Christian Fathers, except perhaps Origen, knew Hebrew. All this time then the Christian world was without the true, genuine, only inspired Scripture. For above ten centuries more the Church was dependent on the fidelity and Hebrew knowledge of Jerome, for the inspired Word of God. Luther must have been, in this view, a greater benefactor to mankind, than his fondest admirers suppose, by his appeal to the Hebrew original: and was Luther an infallible authority for every word and syllable!—1863."

On the documents in the Pentateuch, we have the following brief and unsatisfactory deliverance:—

"No one in the least versed in the later criticism of the Hebrew records can be ignorant how closely connected is the use of the various appellations of the Godhead with the questions of the age and authorship of those records. In some passages the name El, or Elohim, in others Jehovah, is exclusively or almost exclusively used. Hence different writers have been inferred, Elohist, as they are called, or Jehovistic; and this, as in many of those passages subtle criticism pretends also to have discovered other diversities of style, thought, and language, is deemed to indicate a different age. But on the other hand the anomalies are great, and seemingly irreconcilable. The name Elohim is found in Jehovistic passages, Jehovah has forced its way into Elohist. Sometimes, though rarely, the names intermingle, and may seem to contest for superiority. I trust it is no presumptuous modesty if I assert that I am satisfied with no theory which I have yet encountered. Without questioning some of the more manifest, and it seems to me undeniable discrepancies or antagonisms of these and other appellations of the Godhead (as, for instance, in the two parallel accounts of the creation), still, from Astruc, who first observed the singular fact (Astruc was a physician of French descent about the year 1753) to Bleek, the latest of the more profound German scholars, I have read nothing approaching to certitude. This whole question, however, concerns the critic, perhaps the theologian, more than the historian. I was unwilling, nevertheless, to pass it over altogether without notice, or to dismiss it summarily with the contemptuousness of ignorance. Bunsen, I may add, than whom no one was more competent to review the whole controversy, writes thus:—'Auch hat bisher noch keiner der scharfsinnigen

und gelehrten Verfolger der hypothese von Elohist und Jehovist, Vorelohist und der gleichen, seinen Nachfolgern genügt.' Bibelwerk, ix., p. 294."

Notwithstanding this quotation from Bunsen, who separates the Elohist and Jehovistic portions in Genesis, Dean Milman does not scruple to speak of Exodus xxiv. 10, 11, as Elohist, and of xxxiii. 20, as Jehovistic, apparently to account for their contradiction.

With respect to the Pentateuch, he affirms:

"I can have no doubt that the statute-book of Moses, with all his particular enactments, still exists, and that it recites them in the same order, if it may be called order, in which they were promulgated."

The long note appended to this passage cannot be extracted here; but it is meant to give the learned writer's own sentiments. It lacks, however, his usual clearness, and leaves us in doubt as to what is the law of Moses, or, at least, what he means by it.

Of Jacob's mysterious wrestling, he says:—

"Awful respect for the divine nature—maintained, as above observed, throughout the Biblical history of Abraham, induces us to adopt, with some learned writers, the notion, that this contest took place in a dream, as Josephus says, with a phantasm."

Dean Milman is a firm believer in miracles, as will be seen from his remarks in the Preface—remarks characterized by sound sense and moderation. Hence on the passage of the Red Sea, he states:—

"Wherever the passage was effected, the Mosaic account cannot, by any fair interpretation, be made consistent with the exclusion of preternatural agency. Not to urge the literal meaning of the waters being a wall on the right hand and on the left, as if they had stood up sheer and abrupt, and then fallen back again,—the Israelites passed through the sea, with deep water on both sides; and any ford between two bodies of water must have been passable only for a few people at one precise point of time. All comparisons, therefore, to marches like that of Alexander, cited by Josephus idly, and in his worst spirit of compromise, are entirely inapplicable."

As to the Book of Deuteronomy, he asserts that the alterations and modifications of the law

—"if they do not clearly point to, at least are in no way inconsistent with the old theory—that it was composed towards the close of the wanderings, before the entrance into the Holy Land."

The following account of Ezra and subsequent men, relative to the books of the Old Testament, is apocryphal to a large extent, and incorrect:

"In the mean time Ezra, who had been superseded in the civil administration by Nehemiah, had applied himself to his more momentous task—the compilation of the Sacred Books of the Jews. Much of the Hebrew literature was lost at the time of the Captivity; the ancient Book of Jasher, that of the Wars of the Lord, the writings of Gad and Iddo the Prophet, and those of Solomon on Natural History. The rest, particularly the Law, of which, after the discovery of the original by Hilkiah, many copies were taken; the historical books, the poetry, including all the prophetic writings, except those of Malachi, were collected, revised, and either at that time, or subsequently, arranged in three great divisions: the Law, containing the five Books of Moses; the Prophets, the historical and prophetic books; the Hagiographa, called also the Psalms, containing Psalms, Proverbs, Ecclesiastes, and the Song of Solomon. Job, Daniel too, are now found among these Ketubim. At a later period, probably in the time of Simon the Just, the books of Malachi, Ezra, Nehemiah, and Esther were added, and what is called the Canon of Jewish Scripture finally closed."

Without pointing out many inaccuracies which it is not difficult to meet with, we quote

the following passage as a fair specimen of the author's style and manner. It relates to Frank, an adventurer, who organized a sect about the middle of the last century:—

"Frank and his followers, a very few years later, assumed the name of Zoharites. The founder astonished the whole of Germany, by living in a style of Oriental magnificence, encircled by a retinue of obsequious adherents. No one knew, or knows to this day, the source of the enormous wealth with which the state of the man was maintained during his life, and his sumptuous funeral conducted after his death. The early life of Jacob Frank did not forebode this splendour. He was born in Poland; in his youth he had been a distiller of brandy, and wandered into the Crimea, thence into Turkey, where he acquired great fame as a Cabalist. He returned to Podolia in his thirty-eighth year, and gathered together the wrecks of the followers of Sabbathai Sevi. He was persecuted by the Talmudists, revenged himself by throwing himself under the protection of the Bishop of Kaminiak, publicly burned the Talmud, announced himself a believer in the Zohar, and promulgated a new creed. Yet for a time he attempted to maintain his lofty intermediate eclecticism. But those were not the days, nor was Poland the country, in which men could safely halt between two opinions. The Bishop, his protector, died. The Rabbins, his deadly enemies, denounced him at Warsaw to the Government and to the Papal Nuncio, as an apostate Jew and a heretic Christian. His creed was certainly neither pure Judaism nor orthodox Christianity. The Zoharites began to see the fires of persecution already prepared for them, and themselves at the stake. They set forth for Turkey. As the first pilgrims entered Moldavia, the stern Kadi was as intolerant of men neither Jews, nor Christians, nor Mussulmen, as the Christians. They were left to be plundered by the populace. Those who remained behind openly embraced the Catholic faith, yet retained their secret Judaism. Many were detected, and sent forth, with their beards half-shaved, to the scorn and insult of the people. Some were condemned to hard labour. Yet many succeeded in concealing their doubtful opinions, intermarried, founded families, and attained rank and honour in Warsaw. Frank himself was imprisoned in the fortress of Czentschow. When this fortress was taken by the Russians he was set free. He travelled as ostensibly a Catholic Christian, but levying vast sums of money from his countrymen through Poland, Bohemia, Moravia. The new creed leant towards Christianity rather than Islamism. It rejected the Talmud, but insisted on a hidden sense in the Scriptures. It admitted the Trinity and the Incarnation of the Deity, but preserved an artful ambiguity as to the person in whom the Deity was incarnate, whether Jesus Christ or Sabbathai Sevi. As, however, the great head of this sect, Jacob Frank, afterwards openly embraced Christianity, and attended mass, he scarcely belongs to Jewish History. Suffice it to say that this adventurer lived in Vienna, in Brunn, and in Offenbach, with a retinue of several hundred beautiful Jewish youth of both sexes; carts containing treasure were reported to be perpetually brought in to him, chiefly from Poland—he went out daily in great state to perform his devotions in the open field—he rode in a chariot drawn by noble horses; ten or twelve Hulans in red and green uniform, glittering with gold, rode by his side, with pikes in their hands, and crests on their caps, eagles, or stars, or the sun and moon. Water was always carefully poured over the place where he had paid his devotions. He proceeded in the same pomp to church, where his behaviour was peculiar, but grave and solemn. His followers believed him immortal, but in 1791 he died; his burial was as splendid as his mode of living—800 persons followed him to the grave. But with his body the secret of his wealth was interred; his family sank into a state of want, and almost beggary. In vain they appealed to the credulity, to the charity of their brethren; they fell into insignificance, and were obliged to submit to the ordinary labours of mortal life."

Many of Dean Milman's opinions will astonish good critical scholars, such as those on Proverbs, Ecclesiastes, and, above all, Deuteronomy. He affirms truly that his Preface may not please the extreme of either party; neither will his book, for he is both conservative and liberal in his views—a strange compound,—sometimes having the appearance, at least, of being afraid to say out all he thinks, sometimes decided in the maintenance of the old, sometimes plainly asserting that the old cannot stand. Hence the reader is disappointed and pleased by turns. A want of clearness has occasionally struck us; and hastiness in writing may be plainly seen. We strongly suspect that the learned author has not spent sufficient time over his book, but that he has decided grave questions in an off-hand style,—questions requiring much more linguistic knowledge and critical skill than he possesses. But we almost forget that the book is not one for scholars. Why then does the author introduce critical questions and discuss them in his way? We appreciate his descriptive power very highly. His reading is extensive; he thinks independently, and has a large amount of shrewd sense. But his critical judgments must be read with caution. We distrust their correctness, and often differ from them widely. Indeed, many of his views are already antiquated among the masters of Biblical criticism. Thirty years ago they might have passed current; but progress has been made since then. The Dean himself has gone forward; though ecclesiastical dignitaries are wont to move slowly, lest they should not move safely.

A Defence of the Queen's English. By G. Washington Moon. (Hatchard & Co.)

In a recent number of *Good Words* the Dean of Canterbury, Dr. Alford, wrote an article exposing many cases of solecism, slip-slop, and affectation, under the title, 'A Plea for the Queen's English.' It was a lively, well-written essay, and perfectly intelligible. Mr. Moon has appointed himself *custos custodis*, and professes to find that the Dean himself indulges in faults as bad as those which he writes to correct. We do not agree with Mr. Moon: we find the Dean as correct as his censor, while he is far more intelligible. Many of the criticisms refer to the placing of words; to the order in which the phrases occur. We all know that our modern languages, when they have undergone loss of inflexions to the extent which is seen in English, are dependent for clearness upon the arrangement of the words. Very frequently the misplacement of a phrase will make a serious ambiguity; in many cases the sense obtrudes itself upon the mind in such manner that the misplacement is not observed until a critic points it out. When the words are placed later than precision requires, little mischief is done: the worst writers of English are those who raise an ambiguity which can only be laid by what follows. Mr. Moon really puzzles us in this way; which the Dean never does. We shall quote one example. There are two distinct uses of "as," followed by a disjunction. If we say "As men are good or bad," we cannot tell the meaning of the first word until we see what is to come. It may be "As [seeing that] men are good or bad, people should be careful with whom they associate"; or it may be "[According] as men are good or bad, they are worthy of reward or of punishment." Mr. Moon has the following sentence: "... As example is for good or for evil, so will a language gain in strength . . . or will become weak . . ." We began to construe this sentence with *as* in the sense of "seeing that," and were obliged to go back: Mr. Moon ought to

have said "according as." The proof of the pudding is in the eating: this one lapse gave us more trouble than we found in the whole of the Dean's article.

Mr. Moon has no objection to the Dean's criticisms: he thinks them good, but conveyed in inaccurate English. But he does not tell us this without an inaccuracy of his own. He says, "I do not find fault with the critical remarks of your essay." He should have said "in your essay"; the critical remarks were those of the Dean. Such solecism is not very uncommon, perhaps: but Mr. Moon should have placed himself above such a slip before he set himself the task of teaching Dr. Alford his mother tongue.

Some of Mr. Moon's corrections amount to nothing. The Dean says, "A man does not lose his mother now in the papers, but has a bereavement." The objection to this phrase is that "now" should have come after "not." Mr. Moon puts "now" in a worse place than the Dean, for he makes the correction thus—"According to the papers now a man does not lose his mother." His objection is to a man losing his mother in the papers; he is afraid of the idea being suggested that a mother, if a small one, might have fallen into the *Times*, and been lost among the advertisements. The Dean's error is slight, Mr. Moon's is considerable. One offends against the logic of form, the other offends against the logic of ideas.

Again, the Dean says, "What a history, it has been well said, is this earth's atmosphere, seeing that all words spoken from Adam's first till now are still vibrating on its sensitive and unresting medium." No one will say that this is good English, but no one can deny that it is intelligible. Mr. Moon first asks whether the vibrating medium is Adam's first? There is no ambiguity here: English would not, by any forcing, bear Mr. Moon's construction. He goes on thus—"And then first what? First child, or first word? Of course the latter; still, what nonsense; from a word till a time! From Adam's first till now." Now though a monthly nurse can never hear of a woman's "first" without thinking of her eldest child, Mr. Moon, in spite of his name, has no more right to bring in a child than a residence, seeing that no child has been mentioned. Why did he not ask whether Paradise was meant? As to the objection about passing from a word to a time, there is little in it. Our very best writers use such forms as "from the Revolution till now,"—"from the Creation till now." "The time of" is understood. Is all elision to be rejected?

With regard to the order of words, it is not grammar, but the state of association, which requires one arrangement or another. We have heard of "Wanted a young man to take care of a horse of the Methodist persuasion." This, no doubt, is wrong: it should be "Wanted a young man of the Methodist persuasion to take care of a horse." But why is one form wrong, the other right? It is not a question of grammar. Each is grammatically correct. It is a question of sense. The gentleman who says he wishes to engage a young man to take charge of a horse of the Methodist persuasion talks nonsense, uses words out of their accepted meanings. A horse cannot be of the Methodist persuasion. After all, the best order of words is that which leaves the least ambiguity, though a sentence in which the meaning has to be inferred from comparison of ideas may still be supremely beautiful. Take the lines:—

Oh! it came o'er my soul like the sweet south
That breathes upon a bank of violets,
Stealing and giving odour.

The meaning of the third line becomes clear by inference; the "sweet south" settles it. We are greatly in need of a grammar which shall distinguish between what is *formal* and what is *real*. Every attempt to treat English construction as guided by rules of pure form produces absurdities. The battle of the Norman and Saxon tongues, still undecided, would alone render an orthodox system unattainable.

Lost and Saved. By the Hon. Mrs. Norton. 3 vols. (Hurst & Blackett.)

Mrs. Norton has been neither a hasty nor a prolific writer. She has given the world much from the garden of her mind; but her offerings have all been from the best at her disposal. It has been her wont to place before readers her choicest flowers and rarest fruit; but she has never laid herself open to a charge of utilizing every sprig and blossom of her fancy, after the fashion of those industrious book-makers who seek material for their art in every dinner or drive they take, and never enter a ball-room without keeping their publisher's requirements steadily in view. Several years have passed away since the appearance of 'Stuart of Dunleath,' and now its author gives us another work of prose fiction which, begun in days of gladness and continued under the shadow of death, has been slowly perfected with the patient labour that is the artist's best comforter in periods of sorrow. "In the old happy days," observes Mrs. Norton in her dedicatory letter to the Earl of Essex, "when your girl and my boy rode laughing races through the woods of Wiesbaden, and you and I took more cheerful walks than I can ever take again; when your beautiful and pleasant sisters were 'new friends,' and we all hoped to make but one family, I jested with you as to your notions of charm and perfection in woman, and told you I would some day create a heroine on that model, and bring her to grief in a novel. The real griefs and heavy anxieties of life have overshadowed both our homes since those days, and both those young voices are silent for ever, whose music we thought would linger with us, till we ourselves were insensible to earthly sounds. From this cause, and many other disturbing causes, the work begun so long ago has only lately been brought to a conclusion."

The story thus pathetically introduced bears a strong family likeness to 'Stuart of Dunleath,' in the prevailing sadness of its tone, and in the means by which the reader's commiseration is roused for the wrongs and sorrows of the heroine; but 'Lost and Saved' surpasses the earlier story in strength, delicacy, and that quality which is technically termed "finish." Moreover, the gloom of the tale is relieved by a light, airy, racy humour, the want of which is the chief defect of 'Stuart of Dunleath.' The artistic grace and ease of the opening pages may be studied with profit by the most practised novelists. The way in which the author enters upon her task is the way of a beautiful and clever woman who, entering a room with the purpose of winning a stranger to her cause, commences the interview with quiet smile, and playful speech and wayward mirth, and does not allow her object to appear until she has her hearer well in hand, when in a trice he is surprised into adopting her views, and discovers that all her preliminary idleness and by-play were regulated by design. Novelists, before now, have lounged, and lolled, and sauntered into their stories; but we know of no imaginative writer who has gossiped his way into his subject with such exquisite tact as Mrs. Norton displays in her light, sunny, picturesque reminiscences of the neighbourhood about

Tenby, where Beatrice Brooke, the heroine of 'Lost and Saved,' in all the freshness and beauty and purity of girlhood, is found by her betrayer, Montagu Treherne. Offering a needless apology for lingering about the sandy beds of Capt. Brooke's garden, the storyteller says:—

"I cannot bear to hurry past even the few stormy and wet days that came rather to vary than to mar their pleasures. Shut in the pleasant prison of the enchanting little 'Home'—or in the well-furnished library-room at Lewellyn Lodge; or going out perhaps in a gleam of storm-sunlight to see the great fresh waves dash upon the shore, and the ships bend and dip their sails like sea-birds' wings in the tyrannous blast; and then run up the well-known rocky stair from the sands beneath, with the rain dripping from the light waterproof cloaks and round hats of the girls, and the fresh cool bloom of colour deepening in their cheeks. Days when poor Beatrice thought that since the demigods of heathendom there surely never had been anything like Montagu seen upon earth; and Montagu, on his part, considered, that whether in her simple riding-habit, on her cream-coloured Hanoverian pony,—or in her little fishing-boots and short linsey-woolsey petticoat,—or in floating white muslin dress and simply braided hair, or plain straw-hat, under the drooping shadow of whose brim her lovely eyes shone like sunlight from under a forest bough—he had never seen so enchanting a creature! And most people would have been of Treherne's opinion. Beatrice was not only beautiful—not only had that nameless grace which goes by the name of 'charm'—not only was she playful and coaxing (poor English synonyms for the French terms *caressante* and *foldtre*), but quick, ardent and sensitive; capable of all sacrifice for those she loved; capable of all energy for that which she desired to attain; full of eagerness; full of enthusiasm; pitiful and tender. Something of a rarer earnestness was in her than in others, and warned you while she spoke, like a flame. It is in vain to argue the matter: there is as much difference of sensation in different persons as there is difference in their physical strength or intellectual capacities. One can't draw,—another can't sing,—and a third *can't feel*. There are apathetic creatures to whom passionate love, wild grief, aching compassion, are mysteries as great as magic. Disturbed; embarrassed; incredulous; with a strong repugnance to what they call 'a scene,'—they shrink like sea-anemones, and draw in the cold flabby feelers of their minds at any evidence of emotion in others. Beatrice was the reverse of all this. She enjoyed more, she suffered more, she felt more, than a great proportion of her fellow-creatures. Life thrilled through her, as you may see it thrill, in the delight of sunshine, through a butterfly's closed wings. And to such as she, in whom the visible world and the life of sensation predominate, the temptations of this world are the most powerful. Her heart ached, the tears rushed into her eyes, at some touching picture or some mournful song. The breath of a warm spring day, the scent of flowers, the purple of the distant hills, the freshness of the waves dashing in upon the shore, filled her with vague yearning. With her gentle sister and loving father nothing of all this had been controlled; nor, with her joyous kindly pliant temper, did it seem to them that anything required controlling. They delighted in her,—as she in them. She was the pet of the 'Home.' She had lived a shadowless life. Not even an illness had ever come to bring languor to that eager brow, or weakness to that alert and graceful form. Who can wonder with all this that Beatrice was merry? Merry she was, and witty too."

Such is the Tenby life of the victim and her seducer,—of Beatrice Brooke, the daughter of a retired army captain, and Montagu Treherne, heir to an earldom and a distinguished ornament of an exclusive "set" in London's world of fashion. We will not diminish the reader's interest by minutely repeating each step of the complicated drama, but will confine our remarks to that part of Beatrice's story which is shadowed

forth in the title. Duped by a sham marriage, the girl does not discover the true nature of her position until she is about to become a mother. The scenes are admirably managed in which her shame is detected by her family, and the immediate consequences of the revelation are set forth; but most readers will experience a shock of disapprobation at the course pursued by the girl when she is aware of her degradation. Terrified, broken in spirit, and believing herself cast off by her family, she consents to live with Montagu, as his mistress, until he shall be able to make her his wife without a serious loss of worldly position. Of course, love for her child is a chief motive to this surrender of womanly dignity and honour; but the consideration is insufficient to justify the sacrifice, and we hold that the novelist has made a mistake in letting her heroine sink so low before saving her. In due course the "arrangement" of the lovers meets an appropriate end. Carried away by dissipation and hardened by systematic self-indulgence, Montagu grows weary of his toy, and frankly tells her so. She is an old glove; and throwing her aside with a shameless brutality, which we should deem unusual even amongst seducers, he leaves England to court the smiles of a married woman, and soothes his conscience for his conduct to Beatrice by asking a friend to send her back to Tenby, and by offering to make her a liberal allowance of money. Then the girl awakens to a full sense of her degradation, and resolves to sink no lower. Outcast though she is, she will not throw away the last tatters of self-respect with which she strives to cover her disgrace. The cries of her baby boy save her from the sin of self-murder; for *him* she must live and work. Then comes the fearful task of self-recovery; and the courage and calmness with which the delicate girl, gently nurtured and ill prepared to hold her own in the battle of life, goes forth to win the means of existence for her child, restore her to that place in the reader's sympathies which she forfeited by consenting to live with a man whom she knew to be her betrayer. But her salvation is not altogether effected by her own exertions. Friends, the good angels of the story, come to her aid; and, at the close, she not only enjoys the world's regard, but is happily married.
